A large tree (*Helper*). *Leaves* $4\frac{1}{4}$ by 1 in., base obtuse or rounded, coriaceous; midrib and nerves impressed above, prominent beneath; petiole $\frac{1}{2}$ in. *Racemes* axillary, and 10–15 crowded at the ends of the branchlets, 20–40-flowered, when young densely spicate; pedicels later sometimes attaining $\frac{1}{2}$ in.; bracteoles $\frac{1}{12}$ in., ovate, glabrous. *Calyx-tube* $\frac{1}{24}$ in., teeth $\frac{1}{16}$ in., ovate, glabrous. *Petals* $\frac{1}{8}$ in. *Stamens* 40. small. *Fruit* not known.—Kurz mistook the fruit of a Nicobar *Symplocos* (*S. Nicobarica*) for that of this species.

27. ***S. nicobarica***, *Clarke*; leaves broadly oblong shortly acuminate serrulate coriaceous nearly glabrous, fruiting racemes 2–3 in. nearly glabrous, fruits ovoid-conic. *S. leiostachya*, *Kurz For. Fl.* ii. 144, partly.

NICOBARS; Kamorta, *Kurz*.

Young branchlets fulvous-hirsute. *Leaves* 5 by $1\frac{1}{2}$ in., base rhomboid, obscurely fulvous-pilose on the midrib beneath; nerves prominently raised beneath, not quite parallel; petiole $\frac{1}{2}$ – $\frac{2}{3}$ in. *Racemes* stout; lower pedicels $\frac{1}{4}$ in. *Fruit* $\frac{1}{2}$ by $\frac{1}{4}$ in., smooth; calyx-rim as wide as the upper part of the fruit, teeth erect. *Embryo* straight.—Flowers not known. From the fruit this appears to be allied to *S. racemosa*, Roxb.

28. ***S. cerasifolia***, *Wall. Cat.* 4434; leaves oblong acute at both ends crenate pilose on the midrib beneath, spikes $1\frac{1}{2}$ in. villous, calyx-teeth large, fruit ellipsoid large. *A. DC. Prodr.* viii. 257.

PENANG; *Wallich. MALACCA*; *Maingay* (Kew Distrib. n. 962).

Branchlets glabrescent. *Leaves* $5\frac{1}{2}$ by $1\frac{1}{2}$ in., coriaceous; nerves very oblique, distant, obscure above, elevated beneath; petiole $\frac{1}{2}$ in. *Spikes* solitary, axillary and crowded, subterminal; bracts $\frac{1}{4}$ in., ovate, very hairy; pedicels 0; bracteoles caducous. *Calyx-tube* $\frac{1}{16}$ in., subglabrous; teeth $\frac{1}{10}$ in., ovate, subacute, pilose. *Petals* $\frac{1}{8}$ in. *Stamens* 30. *Disc* and lower part of style with a few hairs. *Fruit* 1 by $\frac{1}{2}$ in., smooth; calyx-rim $\frac{1}{2}$ in. broad. *Embryo* straight.

29. ***S. rubiginosa***, *Wall. Cat.* 4432; leaves large obovate-oblong acute, nerves parallel much raised beneath, spikes 2 in. silky-villous, fruit ellipsoid small. *A. DC. Prodr.* viii. 257.

PENANG; *Wallich. MALAY PENINSULA*: *Griffith* (Kew Distrib. n. 3652). *MALACCA*; *Maingay* (Kew Distrib. n. 955).

Branchlets rusty-hirsute. *Leaves* $10\frac{1}{2}$ by $4\frac{1}{4}$ in., cuneate at the base, minutely toothed, rubiginous-villous on the nerves beneath, or ultimately glabrous, coriaceous; secondary nerves transverse, subparallel, not strongly reticulated; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in. *Spikes* axillary, subremote; bracts and bracteoles subsimilar, $\frac{1}{2}$ – $\frac{1}{4}$ in., ovate, densely villous. *Calyx* sessile, closely silky-villous, tube $\frac{1}{16}$ in.; lobes $\frac{1}{16}$ in., elliptic, subacute. *Petals* $\frac{1}{2}$ – $\frac{1}{4}$ in. *Stamens* 30. *Disc* and style glabrous. *Fruit* $\frac{1}{3}$ by $\frac{1}{4}$ in., smooth; calyx-rim $\frac{1}{2}$ in. wide, teeth erect. *Embryo* straight.

30. ***S. crassipes***, *Clarke*; leaves large elliptic-lanceolate subtentire glabrous short-petioled, racemes $\frac{1}{2}$ in. rusty-villous.

MALACCA; Mount Ophir, *Maingay* (Kew Distrib. n. 960).

Branchlet glabrous. *Leaves* $6\frac{1}{2}$ by 3 in., base rounded subcordate or obtusely rhomboid, stoutly chartaceous; nerves distinct, distant, irregular, not at all parallel; petiole $\frac{1}{8}$ – $\frac{1}{6}$ in., very thick. *Raceme* 4-flowered, axillary; pedicels hardly $\frac{1}{2}$ in.; bracteoles 3, $\frac{1}{10}$ in., ovate, rufous-villous. *Calyx* rufous-villous, tube $\frac{1}{16}$ in.; teeth $\frac{1}{12}$ in., ovate. *Petals* $\frac{1}{8}$ in. *Stamens* 30. *Ovary* 3-celled; disc minutely fulvous-pilose. *Fruit* unknown.

31. **S. rigida**, *Clarke* (not of *Wall.*); leaves large lanceolate narrowed at both ends subentire coriaceous glabrous, spikes 2 in. pubescent. *Doxomma rigidum*, *Miers* in *Trans. Linn. Soc. ser. ii. Bot. i. 104*. *Barringtonia rigida*, *Clarke* in *Hook. f. Fl. Brit. Ind. ii. 510*.

MALACCA; *Maingay* (Kew Distrib. n. 767, 965).

A large tree (*Maingay*); branchlets glabrous. *Leaves* 12 by $3\frac{1}{2}$ in., early glabrate; nerves 13 pairs, much elevated beneath, subparallel; petiole $1\frac{1}{2}$ in. *Spikes* approximated among the penultimate leaves of the branch, erect, ultimately thick rigid; bracts and bracteoles similar, $\frac{1}{4}$ in., ovate, densely grey hairy without. *Calyx-tube* $\frac{1}{15}$ in., glabrescent; teeth $\frac{1}{10}$ in., ovate, densely grey hairy. *Petals* $\frac{1}{8}$ in. *Stamens* 60. *Disc* glabrous. *Fruit* (imperfectly ripe) nearly 1 by $\frac{1}{2}$ in., oblong-ellipsoid; calyx-rim $\frac{1}{6}$ in. wide, teeth erect.—There may still be a doubt whether *Doxomma rigidum* (*Maingay*, n. 767) is the fruiting state of *Symlocos* sp. (*Maingay*, n. 965) in good flower; the petioles are longer, the fruiting spike extraordinarily thickened; but it is the fruit either of *Maingay*, n. 965, or some closely allied species.

*** *Species of the Deccan Peninsula* (see also 12. *S. racemosa*).

32. **S. monantha**, *Wight* *Ic. t. 1236*; leaves lanceolate acute or acuminate at both ends glabrous, flowers solitary axillary sessile or very shortly pedicelled. *Bedd. For. Man. 150*.

SHEVAGHERRY HILLS; *Wight*. TINNEVELLY Mts.; *Beddome*.

A leafy, very ramous shrub (*Wight*); branchlets soon glabrate. *Leaves* $1\frac{3}{4}$ by $\frac{2}{3}$ in., base cuneate or subobtusely, subentire or minutely toothed, nerves inconspicuous; petiole $\frac{1}{6}$ in. *Peduncles* $0\frac{1}{10}$ in.; bracteoles small, sometimes numerous. *Calyx-tube* $\frac{1}{20}$ in., minutely tomentose, teeth $\frac{1}{20}$ in., elliptic. *Petals* $\frac{1}{3}$ in., or more. *Stamens* 40. *Disc* minutely hairy. *Fruit* not seen.

33. **S. anamallayana**, *Bedd. Ic. Pl. Ind. Or. t. 116*, and *For. Man. 150*; leaves broadly elliptic subobtusely glabrous, flowers solitary peduncled. *S. uniflora*, *Bedd. in Trans. Linn. Soc. xxv. 219*, not of *Benth.*

ANAMALLAYS, alt. 5–6000 ft.; *Beddome*.

A small tree (*Beddome*); glabrous or the margins of the calyx-lobes minutely pubescent. *Leaves* $1\frac{3}{4}$ by 1 in., base obtuse or rounded, serrulate, rigidly chartaceous; nerves distant, secondary distinctly reticulated; petiole $\frac{1}{8}$ – $\frac{1}{6}$ in. *Peduncles* $\frac{1}{4}$ – $\frac{1}{2}$ in., slender, solitary (or, ex *Beddome*, sometimes 2–3 together) in axils; bracts 0; bracteoles $\frac{1}{8}$ in., lanceolate, caducous, at the base of the calyx-tube. *Calyx-tube* $\frac{1}{16}$ in.; teeth $\frac{1}{24}$ in., triangular. *Petals* $\frac{1}{6}$ in. *Stamens* 40. *Disc* glabrous. *Fruit* not seen.

34. **S. microphylla**, *Wight* *Ic. t. 1232*; leaves elliptic obtuse or scarcely acute serrulate almost glabrous, spikes very short dense fulvous-villous, disc and style pilose. *Bedd. For. Man. 150*.

NILGHERRIES; *Gardner*; *Avalanche*, *Wight*.

A ramous bush, 6 ft. high (*Wight*); branchlets rufous-villous. *Leaves* attaining $2\frac{1}{2}$ by $1\frac{1}{2}$ in. (in *Wight*'s examples), obtuse at the base, rigidly coriaceous, adpressedly fulvous pilose on the midrib beneath or glabrate; primary nerves 8 pairs, strong, reticulations distinct; petiole $\frac{1}{4}$ in. *Spikes* $\frac{1}{4}$ – $\frac{3}{4}$ in.; bracts $\frac{1}{4}$ in., ovate, fulvous-villous. *Calyx* nearly glabrous, tube $\frac{1}{16}$ in., lobes $\frac{1}{12}$ in., ovate. *Petals* $\frac{1}{8}$ – $\frac{1}{2}$ in. *Stamens* 50. *Style* sparsely fulvous-pilose; disc shortly closely pilose. *Fruit* not known.

35. **S. macrocarpa**, *Wight ms.*; leaves oblong narrowed at both ends glabrous, spikes short dense rusty-pubescent, calyx-tube pubescent, fruit large long-ellipsoid.

SOUTH DECCAN PENINSULA; Courtallum, *Wight, herb*, nn. 467, 469.

Branchlets stout, rusty. *Leaves* attaining 8 by $2\frac{1}{2}$ in., slightly crenulate, chartaceous; primary nerves 9 pairs, conspicuous but not thick, secondary nerves distinct beneath; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in. *Spikes* $\frac{1}{2}$ – $1\frac{1}{2}$ in., stout; bracts $\frac{1}{2}$ in., spatulate obovate, rusty-pubescent; flowers crowded. *Calyx-tube* $\frac{1}{10}$ in., teeth more than $\frac{1}{2}$ in., lanceolate. *Petals* $\frac{1}{2}$ in. *Stamens* 40. *Disc* and style glabrous or nearly so. *Fruit* $1\frac{1}{4}$ by $\frac{3}{4}$ in., smooth, round; calyx-rim $\frac{1}{2}$ in., broad, teeth patent.—Examples in young fruit may be distinguished from *S. Beddomei* by the short stout spikes, and the shorter petioles.

36. **S. Gardneriana**, *Wight Ic. t.* 1231; leaves elliptic cuneate at both ends villous beneath, nerves numerous strong subparallel, calyx-tube densely hairy, fruits hairy. *Bedd. Fl. Sylv. t.* 237.

SOUTH MALABAR MTS., alt. 4–7500 ft.; Nilgherries, Travancore, Anamallays, &c., frequent.

A small tree; branchlets thick, villous. *Leaves* $4\frac{1}{2}$ by 2 in., slightly crenulate, coriaceous; nerves 10 pairs; petiole $\frac{1}{2}$ in., stout, rusty-villous. *Spikes* 2 in., stout fulvous-villous; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., ovate, densely villous, caducous; flowers sessile or the lower pedicels attaining $\frac{1}{2}$ in. *Calyx-tube* $\frac{1}{12}$ in., teeth $\frac{1}{2}$ in., oblong, densely silky. *Petals* $\frac{3}{8}$ – $\frac{1}{2}$ in., round. *Stamens* 60. *Disc* shortly densely villous. *Fruit* $\frac{1}{2}$ – $\frac{3}{4}$ in., cylindric, densely villous; calyx-rim $\frac{1}{2}$ in. wide, teeth patent.—Easily distinguished by the very hairy fruit. *Beddome's* figure represents the fruit of *Gardneriana*, but the leaves of a plant since sent to Kew as a new species. This latter has leaves more rounded at the base and more acute bracts than *S. Gardneriana*.

37. **S. Hohenackeri**, *Clarke*; leaves elliptic cuneate at both ends villous beneath, nerves numerous strong subparallel, calyx-tube glabrous. *Eriobotryæ* vel *Photiniæ* affinis, *Miq. in Pl. Hohenack.* n. 456.

MERCARA in CANARA, *Hohenacker*.

Hohenacker's example (in flower) resembles *S. Gardneriana* in every point but the conspicuously glabrous calyx-tube, the calyx-teeth being densely silky. It has hence been supposed a simple-spiked var. of *S. kurgensis*, n. 11; but it so closely resembles *S. Gardneriana* that further material may show it a mere variety thereof.

38. **S. Beddomei**, *Clarke*; leaves elliptic or oblong narrowed at both ends gland-serrulate glabrous, spikes long fulvous-villous, calyx-tube glabrous teeth sparsely pilose, fruit ovoid. *S. reticulata*, *Grah. Cat. Bomb. Pl.* 104. *Symplocos* sp., *Herb. Wight*, n. 62. *Hopea racemosa*, *Dalz. & Gibs. Bomb. Fl.* 140.

WESTERN GHATS; from the Concan to Kurg, frequent.

Perhaps only a variety of *S. racemosa*; but the leaves are less coriaceous, the nerves more numerous (9 pairs), more distinct, the crenatures stronger, the inflorescence spicate, scarcely racemose; but the greatest difference is in the fruit, which is ovoid, $\frac{1}{2}$ by $\frac{1}{2}$ in. (that of *S. racemosa* is much narrower, not wider towards the base).

VAR. *glabrata*; flowering spikes nearly glabrous, fruit subcylindric. *Symplocos*, n. 32, *Herb. Ind. Or. Hk. f. & T.*—Kurg; *G. Thomson*.—Leaves glabrous from the bud; calyx-teeth glabrous; lower pedicels in fruit attaining $\frac{1}{2}$ in.; fruits $\frac{1}{2}$ – $\frac{3}{4}$ by $\frac{1}{2}$ in.

VAR. *flagellaris*; spikes in young fruit $5\frac{1}{2}$ in. long slender wavy, otherwise as var. *glabrata*.—Bombay Presidency; *Dalzell*.

39. **S. foliosa**, *Wight Ic. t.* 1234; leaves elliptic or oblong serrulate from the base glabrous, spikes fulvous-villous, calyx-tube glabrous. *S. nervosa*, *Wight Ic. t.* 1235; *Bedd. For. Man.* 149, not of *A. DC.*

NILGHERRIES, alt. 5-7500 ft.; *Wight, Gardner, Hohenacker* common about Ootacamund, *Beddome*.

A large tree (*Beddome*); branchlets soon glabrate. *Leaves* $8\frac{1}{2}$ by $1\frac{1}{2}$ - $1\frac{1}{2}$ in., acuminate or shortly acute, base cuneate or obtuse; serratures regular, close; nerves 9 pairs, prominent beneath; petiole $\frac{1}{2}$ in. *Spikes* $1-1\frac{1}{2}$ in.; bracts caducous. *Calyx-tube* $\frac{1}{10}$ in., teeth $\frac{1}{10}$ in., oblong, glabrous or sparsely pilose. *Petals* $\frac{1}{2}$ in. *Stamens* 40. *Disc* and style glabrous. *Fruit* $\frac{1}{2}$ by $\frac{1}{2}$ in., broadly cylindric, smooth; calyx-rim scarcely $\frac{1}{2}$ in. wide.—Distinguished from all other Indian species by the leaves being serrulate from the very base. The examples marked by *Wight* *S. nervosa* are identical with those marked by him *S. foliosa*, as *Beddome* divined; but *Wight's S. nervosa* is not *DeCandolle's* (as *Beddome* presumed), and the name *S. nervosa* has been so misapplied that the undisputed one of *S. foliosa* is adopted here for this well-marked species.

40. *S. rosea*, *Bedd. in Trans. Linn. Soc.* xxv. 219; leaves elliptic-oblong sharply acuminate serrate glabrous, racemes 1-3 in. very hairy as is the calyx, flowers rose-coloured, fruit puberulous. *Bedd. Ic. Pl. Ind. Or.* t. 115, and *For. Man.* 150.

ANAMALLAYS, alt. 2-4000 ft., *Beddome*.

A large shrub; young branches petioles and inflorescence hairy. *Leaves* 5-8 by $1\frac{1}{2}$ - $2\frac{1}{2}$ in.; petiole $\frac{1}{2}$ in. *Bracts* deciduous. *Calyx-lobes* acute, half as long as the corolla. *Fruit* $\frac{1}{2}$ in., oblong.—Description copied from *Beddome*.

VAR. *glabrior*; calyx-tube glabrous, fruit glabrous. *S. racemosa*, *Herb. Wight, not of Roxb.*—Courtallum and Cochin; *Wight*.—*Leaves* obovate-lanceolate, chartaceous; nerves 6-7 pairs, slender, distinct not parallel. *Pedicels* (in fruit) $\frac{1}{2}$ in. *Calyx-rim* (in fruit) nearly $\frac{1}{2}$ in., wide (as wide as the summit of the fruit). *Wight's* examples fit *Beddome's* picture so well, that this is probably not even a variety.

41. *S. acuminata*, *Bedd. Ic. Pl. Ind. Or.* t. 117, and *For. Man.* 150; leaves obovate-lanceolate acuminate glabrous, racemes slender few-flowered slightly hairy, calyx glabrous, flowers $\frac{1}{2}$ in. diam.

MALABAR; Wynaad, very common on the Brumagherries, alt. 6000 ft., and on the Tirriroot Peak, *Beddome*.

A small tree, or large shrub; young shoots, peduncles and bracts minutely hairy, otherwise quite glabrous. *Leaves* 4 by $1\frac{1}{2}$ - $1\frac{3}{4}$ in., base attenuated, subentire. *Racemes* 1-2 in.; pedicels $0-\frac{1}{10}$ in. *Calyx-lobes* rounded or subacute, half as long as the corolla.—Not seen; description taken from *Beddome*.

42. *S. pulchra*, *Wight Ic.* t. 1230 (*not good*); leaves oblong acuminate brown-hirsute on both surfaces, racemes 1-2 in., flowers 1-4 large. *Bedd. For. Man.* 149.

NILGHERRIES; Sispara Ghat, alt. 3-4000 ft., *Gardner, Wight, Beddome*.

A shrub; branches densely fulvous-hirsute. *Leaves* $4\frac{1}{2}$ by $1\frac{3}{8}$ in., base rounded, denticulate, chartaceous; nerves 7 pairs, distinct, very oblique; petiole $\frac{1}{2}$ - $\frac{1}{4}$ in. *Peduncles* patently rufous-hirsute; pedicels $0-\frac{1}{2}$ in.; bracteoles $\frac{1}{2}$ - $\frac{1}{2}$ in., linear, hirsute. *Calyx-tube* $\frac{1}{10}$ in., sparsely pilose; teeth $\frac{1}{8}$ in., ovate, glabrescent. *Petals* $\frac{1}{2}$ - $\frac{1}{2}$ in., elliptic. *Stamens* 50-60. *Disc* densely pilose.—*Wight's* figure omits the thick, long, spreading brown hairs of the branches, leaves, and peduncles; it is hence very likely to mislead.

43. *S. obtusa*, *Wall. Cat.* 4424; glabrous, leaves obovate-elliptic obtuse subentire coriaceous, spikes 1-4 in., flowers large. *A. DC. Prodr.* viii. 255; *Wight Ic.* t. 1233, and *Ill.* t. 151 b.; *Thwaites Enum.* 185; *Bedd. For. Man.* 149.

SOUTH MALABAR; Nilgherries and Anamallays, alt. 5-8000 ft., common. CEYLON; alt. 5-8000 ft., frequent.

A tree. *Leaves* $1\frac{1}{2}$ by $\frac{3}{4}$ in., or larger (attaining 7 by $3\frac{1}{2}$ in. in some Ceylon varieties),

base attenuated, margin often reflexed; nerves distant, irregular, distinct beneath; petiole long, often $\frac{1}{2}$ in. in the small-leaved varieties. *Bracts* caducous; pedicels 0, or (rarely) $\frac{1}{10}$ in. *Calyx-tube* $\frac{1}{10}$ in., teeth $\frac{1}{12}$ in., round, prominent. *Petals* $\frac{1}{2}$ in. *Stamens* 50–60. *Disc* glabrous. *Fruit* $\frac{1}{2}$ by $\frac{1}{4}$ in., ovoid-cylindric, smooth; calyx-rim $\frac{1}{5}$ in., broad, teeth prominent.—The varieties enumerated by Thwaites do not differ much from the type, but vary greatly as to the size of the leaves.

**** *Species of Ceylon* (see also n. 43. *S. obtusa*).

44. ***S. læta***, Thwaites Enum. 184; glabrous, leaves elliptic-lanceolate acute at both ends, spikes 1–2 $\frac{1}{2}$ in. *Bedd. For. Man.* 151.

CEYLON; elevated parts of the Central Province, Thwaites.

A tree. *Leaves* 2 by $\frac{3}{4}$ in., minutely toothed. *Spikes* often peduncled; bracts small, caducous; bracteoles 0; lower pedicels 0, rarely 0– $\frac{1}{10}$ in. *Calyx-lobes* $\frac{1}{16}$ in., round. *Petals* $\frac{1}{4}$ – $\frac{1}{5}$ in. *Stamens* 30. *Fruit* more than $\frac{1}{4}$ in., ellipsoid.—Otherwise resembling *S. obtusa*, from which it differs in its acute leaves and smaller flowers.

VAR. *pedicellata*; pedicels longer, attaining sometimes $\frac{1}{3}$ in.—Ceylon; Thwaites, n. 165.

45. ***S. bractealis***, Thwaites Enum. 185; glabrous, leaves elliptic-oblong scarcely acute, spikes 1–2 in., bracts ovate glabrous ciliate, bracteoles large persistent. *Bedd. For. Man.* 151.

CEYLON; elevated parts of the Central Province, Walker, Thwaites.

A tree. *Leaves* 2 by 1 in., base obtuse or subacute, closely minutely serrulate, coriaceous; nerves 6 pairs, prominent beneath, secondary distinct; petiole $\frac{1}{2}$ in. Rhachis of the *spike* glabrous or sparingly fulvous-pilose. *Bracts* $\frac{1}{4}$ in. and upwards; bracteoles $\frac{1}{6}$ in., sometimes persistent under the ripe fruit. *Calyx-tube* $\frac{1}{16}$ in., lobes $\frac{1}{12}$ in., round. *Petals* $\frac{1}{2}$ in., obovate. *Stamens* 60. *Disc* glabrous. *Fruit* $\frac{1}{2}$ by $\frac{1}{2}$ in., ellipsoid, narrowed at both ends.

VAR. *revoluta*, Wight & Gardner; leaves exceedingly coriaceous, margins revolute.—Ceylon.

46. ***S. versicolor***, Clarke; glabrous, leaves oblong acuminate at both ends subentire chartaceous, spikes 1–2 in., bracts and bracteoles small glabrous ciliate. *S. rufescens*, Thwaites Enum. 184; *Bedd. For. Man.* 150, not of H. B. K.

CEYLON; Ambagamowa District, Thwaites.

Branchlets when young glabrous; reddish when dried. *Leaves* 4 by 1 $\frac{1}{2}$ in., drying with red blotches; nerves distant, indistinct; petiole $\frac{1}{2}$ in. *Spikes* glabrous; bracts $\frac{1}{2}$ in., ovate, deciduous; bracteoles $\frac{1}{16}$ in., oblong, more ciliate, subsistent. *Calyx-tube* $\frac{1}{16}$ in., glabrous, teeth $\frac{1}{16}$ in., scarcely ciliate on the margin. *Petals* $\frac{1}{2}$ in. *Fruit* unknown. Probably allied to the two preceding rather than to *S. spicata* as Thwaites supposed.

47. ***S. acuta***, Thwaites Enum. 186; leaves elliptic-lanceolate acuminate subentire glabrescent except the nerves beneath, racemes small villous, calyx glabrous with rounded lobes. *Bedd. For. Man.* 151.

CEYLON; Saffragam District, alt. 2000 ft., Thwaites (C.P. 2681, partly).

A tree; young branches fulvous-villous at the tips. *Leaves* 3 $\frac{1}{2}$ by 1 $\frac{1}{2}$ in., base cuneate or subobtusate, adpressedly fulvous-pilose on the nerves beneath, coriaceous; nerves 8 pairs, obscure above, strongly raised beneath; petiole $\frac{1}{2}$ in. *Racemes* $\frac{1}{4}$ –1 in.; bracts $\frac{1}{2}$ in., ovate, fulvous-pilose, deciduous; pedicels $\frac{1}{10}$ in.; bracteoles $\frac{1}{12}$ in., lanceolate, ciliate. *Calyx-tube* $\frac{1}{24}$ in., teeth $\frac{1}{10}$ in., scarcely pubescent on the margins. *Petals* $\frac{1}{2}$ in. *Fruit* unknown; that described by Thwaites belongs to *S. cuneata* (mixed with C.P. 2681)

48. ***S. cuneata***, Thwaites Enum. 186; leaves elongate-lanceolate at-

tenuate at both ends subentire glabrous except the nerves beneath, racemes small villous, calyx densely silky with oblong lobes.

CEYLON; *Moon*; Pasdoon Corle at no great elevation, *Thwaites* (C.P. 2920 and part 2681).

A tree; branchlets fulvous-villous. *Leaves* $5\frac{1}{2}$ by $1\frac{1}{4}$ in., adpressedly fulvous-pilose on the nerves beneath, coriaceous; nerves 8 pairs, obscure above, strongly raised beneath; petiole $\frac{1}{4}$ in. *Racemes* 1 in.; bracts $\frac{1}{2}$ in., ovate, deciduous; pedicels $\frac{1}{12}$ in.; bracteoles $\frac{1}{12}$ in., ovate. *Calyx-tube* $\frac{1}{10}$ in., teeth $\frac{1}{8}$ in. *Corolla* not seen. *Disc* and style glabrous. *Fruit* $\frac{1}{2}$ by $\frac{1}{8}$ in., long-cylindric, softly villous; calyx-rim as wide as the upper part of the fruit; teeth enlarged, $\frac{3}{8}$ – $\frac{1}{2}$ in. long, lanceolate.

49. ***S. hispidula***, *Thwaites Enum.* 186; leaves oblong-elliptic acuminate hispid beneath, racemes 1–4 in., bracts ovate hispid, calyx-tube and fruit softly hairy. *Bedd. For. Man.* 151. *S. subcordata*, *Wight ms.*

CEYLON; alt. 3–5000 ft., *Wight, Walker, Thwaites.*

A tree; branchlets with patent, fulvous, bristly hairs. *Leaves* $3\frac{1}{2}$ by 2 in., from cuneate-oblong acuminate to cordate-orbicular shortly acute, obscurely crenate, fulvous-hirsute or glabrate above, patently hispid at least on the nerves beneath; nerves 7 pairs; petiole $\frac{1}{10}$ – $\frac{1}{4}$ in., usually short. *Racemes* lax, irregular; bracts $\frac{1}{2}$ in., hispid; pedicels 0– $\frac{1}{8}$ (rarely $\frac{1}{4}$) in.; bracteoles $\frac{1}{2}$ in., subacute, hispid. *Calyx-tube* $\frac{1}{10}$ in., lobes $\frac{1}{10}$ in., ovate, obtuse, glabrescent upwards. *Petals* $\frac{1}{2}$ in., round. *Stamens* 50. *Disc* hairy. *Fruit* $\frac{1}{2}$ – $\frac{3}{4}$ by $\frac{1}{8}$ in., cylindric; calyx-rim as wide as the fruit, teeth enlarged, lanceolate, suberect.—Readily separated from the neighbouring Ceylon species by the hairy fruit; but may be only a form of *S. pulchra*.

50. ***S. jucunda***, *Thwaites Enum.* 186; leaves cordate-oblong attenuate subentire rufous-hirsute beneath, racemes $1\frac{1}{2}$ in. rufous-hirsute, bracts linear rufous-hirsute, calyx-tube and fruit pilose. *Bedd. For. Man.* 151.

CEYLON; Deltotte and Saffragam, alt. 3–4000 ft., *Thwaites.*

A tree; branchlets densely patently rufous-hirsute. *Leaves* $3\frac{1}{4}$ by $1\frac{1}{4}$ in., tapering from near the base, chartaceous, glabrous above; primary nerves 9 on each side the midrib, springing nearly at right angles therefrom; petiole $\frac{1}{8}$ – $\frac{1}{6}$ in. *Fruit* $\frac{1}{2}$ in., cylindric (*Thwaites*).—Nearly allied to *S. hispidula*, *Thwaites*, but differs in the nervation of the leaves and the linear bracts.

51. ***S. angustata***, *Clarke*; leaves small oblong-lanceolate acuminate entire adpressedly fulvous-pilose on the nerves beneath, racemes 1–2 $\frac{1}{2}$ in. fulvous-pilose very slender, calyx glabrous. *S. elegans* var. *angustata*, *Thwaites Enum.* 186, partly.

CEYLON; Newera Ellia, *Macrae*; Jatagama, *Thwaites* (C.P. 78).

Branchlets adpressedly shortly rufous-pilose. *Leaves* 2 by $\frac{2}{3}$ in., acute, base obtuse or rounded, glabrous except the nerves beneath, coriaceous; nervation irregular, not prominent; petiole $\frac{1}{8}$ – $\frac{1}{6}$ in. *Racemes* sometimes slightly compound; bracts $\frac{1}{16}$ in.; pedicels 0– $\frac{1}{8}$ in.; bracteoles $\frac{1}{16}$ in., hairy, persistent. *Calyx-tube* $\frac{1}{16}$ in., teeth $\frac{1}{16}$ in., round. *Petals* $\frac{1}{8}$ in. *Fruit* $\frac{1}{3}$ by $\frac{1}{8}$ in., ovoid-cylindric smooth; calyx-rim nearly as wide as the upper part of the fruit, teeth somewhat enlarged, suberect.

52. ***S. latiflora***, *Clarke*; leaves oblong acuminate serrulate hispid on the nerves beneath, racemes $\frac{1}{2}$ – $1\frac{1}{2}$ in. villous bracteate, calyx-tube glabrous, flowers large. *S. hirsuta*, *Wight & Gardn. in Thwaites Enum.* 185, excl. var. β ; not of *A. DC.*

CEYLON; alt. 5–8000 ft., *Walker, Gardner, Thwaites.*

A tree; branchlets fulvous-hispid. *Leaves* $3\frac{1}{4}$ by 1 in., base obtuse or rounded, serrulate nearly to the base, chartaceous; nerves 7 pairs, irregular; petiole $\frac{1}{4}$ in. *Bracts* $\frac{1}{2}$ in., ovate, villous; pedicels 0– $\frac{1}{10}$ in.; bracteoles $\frac{1}{10}$ in., ovate, villous. *Calyx-tube* $\frac{1}{12}$ in., teeth $\frac{1}{10}$ in., round. *Petals* $\frac{1}{2}$ in., round. *Stamens* 80–100. *Disc* and

style glabrous. *Fruit* $\frac{1}{4}$ by $\frac{1}{8}$ – $\frac{1}{5}$ in., ellipsoid, smooth; calyx-rim scarcely $\frac{1}{10}$ in., broad; lobes $\frac{1}{2}$ in., patent.

53. **S. minor**, *Clarke*; leaves small elliptic subobtusely serrulate hispid on the nerves beneath, racemes $\frac{1}{2}$ – $1\frac{1}{2}$ in. patently fulvous-hirsute, calyx-tube glabrous. *S. hirsuta*, *Thwaites Enum.* 185, var. β minor, mostly. *S. elegans*, *Thwaites l. c.*, var. β , partly.

CEYLON; *Macrae*, *Walker*, *Gardner*, *Thwaites* (C.P. 273, 155).

Leaves $1\frac{1}{4}$ by $\frac{3}{4}$ in., obtuse or very suddenly acute, base rounded, coriaceous, margin recurved, nervation strong beneath. *Bracts* caducous. *Fruit* $\frac{1}{2}$ by $\frac{1}{5}$ in., cylindric smooth; calyx-rim as wide as the top of the fruit.—Allied to *S. latiflora*, and treated as a variety of it by *Thwaites*, but there are no examples intermediate between the two forms.

VAR. *eugenioides*, *Champ. ms.*; branchlets adpressedly fulvous-pilose at the tips only, leaves very small glabrous or nearly so, racemes scarcely $\frac{1}{2}$ in. long 1–2- (rarely 4-) flowered nearly glabrous.—Ceylon, *Walker*; Horton Plains, *Champion*.

VAR. *glabrescens*, *Thwaites ms.*; branchlets early glabrous, leaves coriaceous, racemes short few-flowered densely fulvous-villous.—Ceylon; Central Provinces, alt. 6000 ft., *Thwaites*.—Resembles *S. microphylla*. Placed with *S. minor* by *Thwaites*, but differs in the glabrousness of the leaves, and dense fulvous hairy spikes.

54. **S. elegans**, *Thwaites Enum.* 185, var. *a only*; leaves broadly elliptic acutely acuminate adpressed rufous-hirsute on the midrib beneath, racemes $\frac{1}{2}$ – $1\frac{1}{2}$ in. slender rufous-hairy, calyx glabrous. *Bedd. For. Man.* 151.

CEYLON; alt. 5–7000 ft., *Champion*, *Thwaites*.

Possibly a var. of *S. latiflora*, *Clarke*. *Leaves* 2 by 1 in., base rounded, slightly crenate-serrate. *Racemes* more slender, bracts narrower, flowers smaller than in *S. latiflora*.

55. **S. hebantha**, *Thwaites ms.*; leaves elliptic acuminate subentire glabrescent, spikes 1–3 in. densely villous, calyx-tube glabrous teeth silky.

CEYLON; Songalla, *Thwaites* (C.P. 3918).

Branchlets villous. *Leaves* $3\frac{1}{2}$ by 2 in., base rounded, coriaceous, sparsely pilose on the nerves beneath; nerves 7 pairs, conspicuous beneath, sub-parallel; petiole $\frac{2}{3}$ in. *Spikes* stout, dense; bracts more than $\frac{1}{4}$ in., ovate, densely hairy.—This may be a Ceylon form of *S. Beddomei*; but differs in the leaves rounded at the base, less crenate.

56. **S. cordifolia**, *Thwaites Enum.* 187; leaves large cordate elliptic nearly sessile glabrous, spikes stout densely villous crowded near the ends of the branches, calyx-tube glabrous teeth villous. *Bedd. For. Man.* 151.

CEYLON; alt. 6–7000 ft., *Macrae*, &c.

A tree; branchlets thick. *Leaves* 6 by $2\frac{1}{2}$ in. (sometimes much larger), scarcely acute, rounded or attenuate at the base but always cordate at the petiole, minutely denticulate, coriaceous; nerves 13 pairs, distinct beneath; petiole $0\frac{1}{2}$ in. *Spikes* 2–4 in., often 8–12 quasi-fasciculate at the ends of the branches; bracts $\frac{1}{4}$ – $\frac{1}{3}$ in., ovate, villous. *Calyx-tube* $\frac{1}{10}$ in., teeth $\frac{1}{2}$ in. *Petals* $\frac{1}{4}$ in., elliptic. *Stamens* 60. *Disc* hairy. *Fruit* $\frac{1}{2}$ by $\frac{1}{4}$ in., cylindric; calyx-teeth enlarged, triangular, densely hairy.

57. **S. apicalis**, *Thwaites Enum.* 187; leaves large obovate-lanceolate acuminate glabrous, spikes 1–2 in. hirsute, calyx-tube hairy. *Bedd. For. Man.* 151.

CEYLON; *Moon*; Reigam Corle and between Ratnapoora and Galle at no great elevation, *Thwaites*.

Subarboreous (*Thwaites*); branchlets hairy, afterwards nearly glabrous. *Leaves* clustered at the end of the branchlets or the lower sometimes whorled, 13 by 5 in.,

base attenuated, sometimes very shortly cordate at the petiole, nearly entire, stoutly chartaceous; nerves 13 pairs, prominent beneath; petiole $\frac{1}{10}$ – $\frac{1}{2}$ in. Bracts $\frac{1}{2}$ in., ovate, black-hirsute, subpersistent. Fruit more than $\frac{1}{2}$ by $\frac{1}{5}$ in., cylindric, villous finally glabrescent; calyx-rim as wide as the fruit, teeth $\frac{1}{2}$ in., triangular, acute, suberect, villous.

58. **S. marginalis**, *Thwaites Enum.* 187; leaves elliptic acute coriaceous densely ferruginous-hirsute on the nerves beneath, spikes 3–6 in. densely ferruginous-hirsute, calyx-tube and young fruit densely ferruginous-hirsute. *Bedd. For. Man.* 151.

CEYLON; Ambagamowa District, *Thwaites*.

A tree; branchlets stout, densely ferruginous-hirsute. Leaves 6 by 3 in., base obtuse or rounded, subentire, rugose, glabrous above; nerves 13 pairs, very prominent and thick beneath; petioles $\frac{1}{4}$ – $\frac{1}{2}$ in. Spikes very stout; bracts deciduous. Disc villous. Fruits (half-ripe) $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid; calyx-teeth $\frac{1}{5}$ in., elliptic.

59. **S. coronata**, *Thwaites Enum.* 187; leaves large oblong or elliptic narrowed at both ends serrulate fulvous-villous on the nerves beneath, spikes 1–3 in. fulvous-villous, calyx-tube and young fruit softly villous. *Bedd. For. Man.* 152.

CEYLON; alt. 2–4000 ft., *Macrae*, &c.

A tree. Leaves attaining 12 by $3\frac{1}{2}$ in., attenuate downwards but shortly cordate at the petiole, closely but minutely serrulate, coriaceous; nerves 13 pairs, much elevated beneath, reticulations very prominent beneath; petiole $\frac{1}{2}$ – $\frac{1}{4}$ in. Spikes dense with flowers nearly to their base; bracts $\frac{1}{2}$ in., ovate, villous, subpersistent. Calyx-tube $\frac{1}{16}$ in.; teeth $\frac{1}{10}$ in., oblong, densely silky. Petals $\frac{1}{5}$ in., appear to have been red or purple. Stamens 50. Fruit (half-ripe) $\frac{1}{2}$ by $\frac{1}{4}$ in., ovoid, hairy; calyx-teeth $\frac{1}{2}$ in., suberect.

VAR. *obovata*; leaf 7 by $4\frac{3}{4}$ in. broadly obovate.—Ceylon.

SUBGENUS II. **Ciponima** (including **CORDYLOBLASTE**). Petals distinctly connate, tube often elongate; flower-buds obovate-oblong or clavate. Filaments adnate to the corolla throughout the tube, and often produced as a free tube. Calyx-tube produced much above the ovary, free, with short lobes.

60. **S. pendula**, *Wight Ic. t.* 1237; glabrous, leaves elliptic subentire, peduncles $\frac{1}{2}$ – $\frac{1}{3}$ in. 1-flowered pendulous in bud, corolla-tube $\frac{1}{2}$ in. *Bedd. For. Man.* 152.

MALABAR and TRAVANCORE MTS.; alt. 4–6000 ft., common, *Wight*, *Beddome*.

A tree. Leaves $2\frac{1}{2}$ by 1 in., obtuse, base cuneate, coriaceous; nerves irregular, distinct beneath; petiole $\frac{1}{5}$ in. Peduncles solitary or 1–3 together; bracteoles $\frac{1}{4}$ in., minutely ciliate. Calyx-tube $\frac{1}{2}$ in., lobes scarcely $\frac{1}{24}$ in. Corolla in bud $\frac{1}{3}$ in. Stamens 40–60; no free staminal tube. Disc and style glabrous. Fruit not seen.

61. **S. pauciflora**, *Wight ms.*; nearly glabrous, leaves elliptic subentire, peduncles $\frac{1}{4}$ – $\frac{3}{4}$ in. 1-flowered always erect, corolla-tube $\frac{1}{2}$ in. *S. pendula*, *Thwaites Enum.* 184.

CEYLON; *Wight*, &c.; alt. 5–8000 ft., abundant, *Thwaites*.

Perhaps only a Ceylon form of *S. pendula* as *Thwaites* supposes, but the peduncles are always much longer and slenderer, at no time pendulous, often several-flowered with very long pedicels, not rarely rusty-pubescent. Fruit (unripe) $\frac{1}{2}$ by $\frac{1}{2}$ in., cylindric, curved.

62. **S. sessilis**, *Clarke*; glabrous, leaves obovate-oblong obtuse subentire, flowers solitary sessile or subsessile erect, corolla-tube $\frac{1}{2}$ in.

TRAVANCORE MTS., *Beddome*.

Differs from *S. pendula* in the erect, smaller flowers; from *S. pauciflora* in the

want of peduncles; considered a var. of *S. pendula* by Beddome (*For. Man.* 152), but ranked as a species by Benth. (*Gen. Pl.* ii. 669).

63. **S. Henscheli**, *Benth. in Gen. Pl.* ii. 669; leaves elliptic-oblong narrowed at both ends subentire ultimately nearly glabrous, racemes small ashy silky, corolla-tube $\frac{1}{8}$ – $\frac{1}{4}$ in. subglabrous. *Cordyloblaste Henscheli, Moritzi in Bot. Zeit.* 1848, 606.

MALACCA; Mt. Ophir, *Griffith* (Kew Distrib. n. 3644), *Lobb.*

Branchlets sparsely pilose. *Leaves* 4 by $1\frac{3}{4}$ in., sometimes obscurely pubescent beneath, coriaceous; nerves irregular, indistinct; petiole $\frac{1}{4}$ in. *Racemes* $\frac{1}{4}$ – $\frac{1}{2}$ in. diam., 1–5-flowered; bracts minute; pedicels 0– $\frac{1}{8}$ in. *Calyx-tube* $\frac{1}{8}$ in., grey-silky, lobes scarcely $\frac{1}{24}$ in. *Corolla* in bud $\frac{1}{8}$ by $\frac{1}{8}$ in. *Stamens* 40–60; staminal tube $\frac{1}{10}$ in., free. *Disc* villous; style $\frac{1}{3}$ – $\frac{1}{2}$ in., glabrous, stigma large capitate. *Fruit* not seen.

VAR. *hirtistylis*; flowers rather larger, style hirsute.—Mt. Ophir; *Maingay* (n. 2586, herb. prop.).

64. **S. Maingayi**, *Benth. in Gen. Pl.* ii. 669; leaves elliptic narrowed at both ends sparsely pubescent beneath, racemes dense ferruginous hairy, corolla-tube 1 in. silkily white-tomentose without.

MALACCA; *Maingay* (Kew Distrib. n. 961).

Branchlets stout, rusty-hirsute. *Leaves* $4\frac{1}{2}$ by 2 in., subentire, coriaceous; nerves irregular, indistinct; petiole $\frac{1}{4}$ in. *Racemes* 1 in., stout; bracts $\frac{1}{2}$ in., ovate, ferruginous-hairy; pedicels 0– $\frac{1}{2}$ in.; bracteoles minute. *Calyx-tube* $\frac{1}{2}$ in., hairy, teeth $\frac{1}{10}$ in. *Corolla-tube* narrow, glabrous within; lobes $\frac{1}{2}$ in., elliptic. *Stamens* 40–60, staminal tube $\frac{1}{2}$ in., free, dividing into 20 ligulate lobes. *Disc* and style hairy. *Ovary* 3–5-celled with 1 pendulous ovule in each cell (*Maingay*). *Fruit* $1\frac{3}{4}$ by $1\frac{1}{4}$ in., obovoid, obtuse, glabrescent; endocarp very thick, woody; calyx-rim $\frac{1}{2}$ in. wide, less than one-tenth the width of the upper part of the fruit.

2. STYRAX, Linn.

Trees and shrubs. *Leaves* elliptic-lanceolate. *Flowers* in lax little-divided axillary and terminal racemes, or subsolitary axillary; bracts inconspicuous. *Calyx* campanulate, free or slightly adnate to the base of the ovary, truncate or 5-toothed. *Corolla-tube* short, lobes 5, elliptic-oblong, imbricate (in the Indian species). *Stamens* 10, 1-seriate at the summit of the corolla-tube, filaments short; anthers large, linear. *Ovary* nearly free, at first 3-celled, later often 1-celled; style subulate, stigma capitate; ovules few in each cell. *Fruit* globose or ellipsoid, seated on the cupuliform or patelliform calyx, toughly chartaceous (in the Indian species), breaking up irregularly. *Seeds* rarely 2 (many in *S. polysperma*), erect, testa chartaceous or indurated, albumen plentiful fleshy; embryo straight, cotyledons broad.—Species 60, in the warmer regions of Eastern Asia and America.

S. Finlaysonianum, Wall. Cat. 4403, A. DC. Prodr. viii. 261, with subentire nearly glabrous leaves (*S. odoratissimum*, Champ. in Hook. Kew. Journ. iv. 304) was collected probably in Cambodia, and is not known as an Indian plant.

1. **S. serrulatum**, Roxb. Fl. Ind. ii. 415; leaves elliptic acuminate serrulate glabrous or with scattered stellate hairs beneath, pedicels and calyx closely white-tomentose, corolla $\frac{1}{2}$ in., style glabrous. Wall. Cat. 4402; A. DC. Prodr. viii. 267; Hk. f. in Bot. Mag. t. 5950, syn. excl.; Kurz in Journ. As. Soc. 1877, pt. ii. 237, and For. Fl. ii. 142. *S. Porterianum*, Wall. Cat. 4401; A. DC. l.c. *S. floribundum*, Griff. Notul. iv. 287.

EASTERN INDIA; alt. 3–7000 ft., frequent; from Nipal and Bhotan to Pegu and Penang.

A tree, sometimes 40 ft. high, or more often a shrub; young branches stellately pubescent. *Leaves* 3 by $1\frac{1}{2}$ in., often widest at or above the middle, base acute or rounded on the same branch, glabrous, rarely setulose above, stellately pubescent and soon glabrate beneath, chartaceous, prominently reticulate; petiole $\frac{1}{2}$ in. *Peduncles* axillary solitary, 2-3-fasciculate, or in small racemes, or (by the suppression of the leaves) subpaniculately racemed 3-5 in. long at the ends of the branchlets; pedicels $\frac{1}{2}$ in. *Calyx* (at flower time) $\frac{1}{2}$ in. broad, minutely 5-toothed or truncate. *Corolla*-lobes elliptic, subacute, tomentose without, white. *Filaments* hairy, attached $\frac{1}{2}$ in. above the corolla-base. *Fruit* $\frac{1}{2}$ by $\frac{1}{3}$ in., ellipsoid, white- or fulvous-tomentose; splitting up irregularly, calyx in fruit enlarged cupuliform $\frac{1}{4}$ in. wide embracing the lower quarter of the fruit.

VAR. agrestis; calyx-tube brown-hirsute with spreading hairs. *Cyrta agrestis*, *Ham. in Wall. Cat.* 4402.—Sikkim, Bhotan and Assam.

VAR. virgatum; leaves tapering acuminate usually widest below the middle, flowering-calyx $\frac{1}{2}$ - $\frac{1}{4}$ in. wide, corolla $\frac{1}{3}$ - $\frac{2}{3}$ in., segments wider. *S. virgatum*, *Wall. Cat.* 4400; *A. DC. Prodr.* viii. 267; *Kurz in Journ. As. Soc.* 1877, pt. ii. 237, and *For. Fl.* ii. 142. *S. grandiflorum*, *Griff. Notul.* iv. 267, and *lc. Pl. Asiat.* t. 423.—From Sikkim and Bhotan to Pegu. Distrib. South China, Japan.—*S. japonicum*, *Sieb. & Zucc. Fl. Jap.* i. 53, t. 23, united with this in *Bot. Mag.* t. 5950, somewhat differs in the glabrescent calyx and pinkish flowers.

2. **S. Hookeri**, *Clarke*; leaves elliptic acuminate serrulate setulose on the nerves above with scattered stellate hairs beneath, pedicels and calyx loosely fulvous-tomentose, corolla $\frac{1}{2}$ - $\frac{3}{4}$ in., style densely stellate-pubescent. *Styrax* sp., *Gamble Darjeeling List*, 54.

SIKKIM and BHOTAN; alt. 6-7000 ft., frequent, *Hook. f.*, &c.

Perhaps only an extreme form of *S. serrulatum*, var. *virgatum*, but the flowers are much larger sometimes 1 in. long; the calyx at flower-time is more than $\frac{1}{4}$ in. broad, lax. *Fruit* as of *S. serrulatum*.

3. **S. ? crotonoides**, *Clarke*; leaves broad-oblong shortly acuminate at both ends subentire coriaceous stellately pubescent beneath, fruit $\frac{3}{4}$ by $\frac{2}{3}$ ellipsoid indehiscent supported by a woody cupuliform calyx. *Crotoni affinis* sp., *Wall Cat.* 7848.

SINGAPORE; *Wallich*.

Branches rusty-stellate-pubescent. *Leaves* 5 by $2\frac{1}{4}$ in., glabrous above, almost tomentose, with very close rusty-stellate hairs beneath; nerves 9 pairs, prominent beneath; petiole $\frac{1}{2}$ in. *Fruits* with hard white tomentum (ripe but broken up and the seeds gone).—This agrees, as to leaves and fruit, closely with *S. suberifolium* (*Hk. & Arn. Bot. Beechey Voy.* 196, t. 40), but has much larger leaves and fruits.

4. **S. Benzoin**, *Dryand. in Phil. Trans.* 1787, 308, t. 12; leaves elliptic acuminate subentire closely stellately tomentose beneath, pedicels and calyx closely white-tomentose, corolla $\frac{1}{2}$ in., style glabrous. *Blume Bijl.* 671; *Roeb. Fl. Ind.* ii. 416; *A. DC. Prodr.* viii. 261; *Bentl. & Trim. Med. Pl.* iii. t. 169.

MALACCA; *Griffith, Maingay*.—DISTRIB. Malaya.

A small tree, resembling *S. serrulatum* in the inflorescence and flowers. *Fruit* $\frac{1}{2}$ in. diam., globose, densely white tomentose.

5. **S. rugosum**, *Kurz in Journ. As. Soc.* 1871, pt. ii. 51, and *For. Fl.* ii. 141; leaves elliptic acuminate serrulate densely stellately white-tomentose beneath, pedicels and calyx roughly tomentose, corolla $\frac{1}{2}$ in., style stellately tomentose at base.

MARTABAN; alt. 4-6000 ft., *Brandis*.

A tree; branchlets floccosely rusty-tomentose. *Leaves* 3 by $1\frac{1}{4}$ in., base obtuse, stellately pubescent or finally glabrous above, coriaceous, reticulate beneath; petiole $\frac{1}{2}$ in. *Flowers* axillary, and quasi-racemed towards the ends of the branches, pen-

dulous; peduncle $\frac{1}{10}$ in.; bracteoles linear, sometimes $\frac{1}{2}$ in. *Calyx* rusty floccose-tomentose, subspathaceous, irregularly lobed and often serrate. *Corolla* closely tomentose without. *Filaments* villous. *Fruit* not seen.

6. **S. polysperma**, Clarke; leaves broadly oblong acute obscurely crenate glabrous, corymbs many-flowered scabrous, corolla $\frac{1}{4}$ – $\frac{1}{2}$ in., fruit 5–8-seeded.

KHASIA MTS.; Griffith; Mahadeo, alt. 3000 ft., H. f. ♂ T.

Branches glabrous. *Leaves* 6 by $2\frac{1}{2}$ in., base cuneate or rhomboid; petiole $\frac{1}{2}$ in. *Corymbs* subterminal, repeatedly dichotomous, flowers nearly sessile. *Corolla* densely tomentose without. *Style* obscurely 3-lobed. *Fruit* $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid, subacute, imperfectly 3-celled; cells 2–1-seeded; testa stoutly chartaceous.—A most remarkable plant; the glabrous leaves and compound dichotomous inflorescence have caused fruiting examples to be referred to *Cordia*. The fruit is altogether unlike that of any other *Styrax*, and may indicate a new genus.

ORDER XCII. OLEACEÆ. (By C. B. Clarke.)

Trees, or scandent or erect shrubs, unarmed. *Leaves* opposite (in a few *Jasminums* alternate), simple 3-foliolate or pinnate, entire or toothed; stipules 0. *Inflorescence* mostly in trichotomous cymes or panicles, terminal or axillary, rarely fascicled or racemose. *Flowers* hermaphrodite often dimorphous, sometimes polygamous or dioecious, regular. *Calyx* small, truncate or 4- (sometimes 5–9-) lobed, rarely 0. *Corolla* monopetalous, rarely 4–9-petalous or 0, tube long or short, imbricate or valvate in bud. *Stamens* 2 (in Indian species), inserted on the corolla, or (in the polypetalous or apetalous genera) hypogynous, filaments usually short; anthers dehiscing usually on the margin or subextrorsely. *Ovary* free, 2-celled; style short or long, stigma simple or 2-lobed; ovules 1–2 (rarely 3–4) in each cell, attached to the inner angle near the apex or base. *Fruit* a loculicidal capsule, or indehiscent, or a berry or drupe. *Seeds* solitary (or 2) in each cell, erect or pendulous; testa thin or bony, albumen fleshy horny or 0; embryo straight, radicle superior or inferior.—DISTRIB. Species 280, in the tropical and temperate regions.

A shrub, collected by Helfer in Tenasserim or the Andamans (Kew Distrib. n. 3694) is supposed to belong to this Order; the imperfect specimens are here described.

Branches round; wood loose, soft; bark white, smooth. *Leaves* opposite, 10 by $3\frac{1}{2}$ in., cuneate at both ends, entire, softly hairy on the nerves beneath, coriaceous, whitened beneath, primary nerves 12 on each side the midrib, prominently inarching; petiole $\frac{1}{4}$ in., hairy, very turgid. *Panicles* 1 in., axillary, reduced almost to racemes, minutely pubescent; bracts 0 or minute; pedicels hardly any. *Ovary* (in young fruit) superior, 2-celled; cells 2-ovuled?.

TRIBE I. **Jasmineæ**. *Corolla-lobes* much imbricate. *Seeds* erect; albumen 0; radicle inferior.

Scandent shrubs; fruit baccate 1. JASMINUM.
Erect small tree; capsule bipartite 2. NYCTANTHES.

TRIBE II. **Syringææ**. *Fruit* dry, loculicidal. *Seeds* pendulous, winged, radicle superior.

Corolla-lobes imbricate; fruit woody, pyriform 3. SCHREBERA.
Corolla-lobes valvate; fruit small, cylindric 4. SYRINGA.

TRIBE III. **Fraxinææ**. *Fruit* samaroid. *Petals* valvate or 0.

Trees; leaves pinnate 5. FRAXINUS.

TRIBE IV. **Oleineæ**. *Fruit* a drupe or berry. *Corolla* small. *Radicle* superior (except *Myxopyrum*).

* *Corolla-lobes imbricate*; *seeds albuminous*.

Flowers fascicled or in very short racemes 6. OSMANTHUS.

** *Corolla-lobes valvate or petals distinct in pairs or 0*.

Petals in pairs or distinct or very shortly united into a tube, inflorescence axillary 7. LINOCIERA.

Corolla tubular or 0, inflorescence axillary except in *O. glandulifera* 8. OLEA.

Panicles terminal 9. LIGUSTRUM.

Large scandent shrubs, leaves 3-nerved 10. MYXOPYRUM.

1. JASMINUM, Linn.

Shrubs, scandent or erect. *Leaves* opposite or alternate, simple 3-foliolate or unequally pinnate; petiole nearly always articulated. *Cymes* 3- or 2-chotomous, simple or flowers rarely solitary; bracts linear and small, or ovate, sometimes petaloid. *Calyx* 4-9-fid, tube funnel-shaped rarely subcylindric, teeth linear long or short or 0. *Corolla* salver-shaped, white pink or yellow, tube narrow, lobes 4-10, patent, imbricate in bud. *Stamens* 2, included in the corolla-tube, filaments very short; anther oblong, connective usually shortly produced and triangular. *Ovary* 2-celled; style cylindric, stigmas 2 linear, long or short or subcombined; ovules 2 in each cell, near the base. *Berry* didymous, or often, by suppression, simple; carpels globose ellipsoid or elongate. *Seed* in each carpel 1, rarely 2, erect, exalbuminous; radicle inferior.—**DISTRIB.** Species 90, in the tropics or warm temperate parts of the Old World.

* *Leaves all simple*.

† *Calyx pubescent*. (The series proceeds from the species with long to those with short calyx-teeth.)

The species are generally dimorphic, having a long- and a short-styled form: Wight founded two species on this solitary character out of *J. auriculatum*. It has not been found practicable to use characters drawn from the style and stigma in the discrimination of the species.

1. **J. Sambac**, Ait. *Hort. Kew.* i. 8; leaves short-petioled ovate nearly glabrous, cymes lax few-flowered, bracts small, calyx-teeth subulate. *Bot. Reg.* t. 1; *Bot. Mag.* t. 1785; *Wall. Cat.* 2868; *DC. Prodr.* viii. 301; *Wight Ic.* t. 704; *Dalz. & Gibs. Bomb. Fl.* 137; *Brand. For. Fl.* 311; *Kurz For. Fl.* ii. 153, in *Journ. As. Soc.* 1877, pt. ii. 242. *J. fragrans*, *Salisb. Prodr.* 12. *J. undulatum*, *Willd. Sp. Pl.* i. 36, not of *Ker.* *J. Zambac*, *Roxb. Hort. Beng.* 2, *Fl. Ind.* ed. *Carey & Wall.* i. 87. *J. quinqueflorum*, *Heyne; Wall. Zeyl.* t. 58, fig. 2. *Mallica*, *Asphota* and *Sup-tula*, *Jones in As. Research.* iv. 245.

BENGAL to CEYLON and BIRMA; alt. 0-2000 ft., common.—**DISTRIB.** Much cultivated throughout India, and in the tropics of both hemispheres.

Scandent; branchlets pubescent. *Leaves* opposite or sometimes ternate, thinly membranous, varying from 1 to 5 in., sometimes on the same bush, acute or obtuse, base cuneate or rounded, nerves beneath pubescent or glabrous, primary often tufted in the axils beneath, secondary nerves distinct; petiole $\frac{1}{2}$ in. *Cymes* about 3-flowered

(or many-flowered in cultivation), pubescent; pedicels $0\frac{1}{4}$ in., usually distinct; bracts $0\frac{1}{4}$ in., linear; flowers white, fragrant. *Calyx-teeth* $\frac{1}{2}$ in., pubescent (in cultivation often nearly glabrous). *Corolla-tube* $\frac{1}{2}$ in.; lobes $\frac{1}{2}$ in., oblong, acute or obtuse, or in cultivation orbicular. *Ripe carpels* 1-2, globose, $\frac{1}{4}$ in. diam., black, surrounded by the suberect subulate calyx-teeth.

VAR. 1. *Sambac proper*; corolla-tube not twice the length of the calyx.

VAR. 2. *Heyneana*, Wall. Cat. 2871 (sp.); leaves small, corolla-tube 2-5 times as long as the calyx-teeth.—Deccan Peninsula; Heyne.—*Leaves* $1\frac{1}{2}$ in. *Calyx-teeth* $\frac{1}{16}$ – $\frac{1}{8}$ in. *Corolla-tube* $\frac{1}{2}$ in. *Style* sometimes as long as corolla-tube (unlike any in *J. Sambac* type, but in this polymorphic genus, little reliance can be placed on this character). Forms of *J. Sambac* approaching this var. are in cultivation in Bengal; it appears from Rottler's herb. to have been (as Wallich records under Wall. Cat. 2871) the typical *J. undulatum*, Heyne, and therefore of Linnæus, Willd., and the older authors. It is probably a cultivated var. of *J. Sambac* as none of the examples appear to be native ones.

2. ***J. undulatum***, Ker in Bot. Reg. t. 436, not of Willd.; leaves short-petioled ovate-lanceolate pubescent on the nerves beneath, cymes dense often hardly exceeding the uppermost leaves, calyx-teeth $\frac{1}{2}$ – $\frac{1}{2}$ in. subulate pubescent. DC. Prodr. viii. 302, syn. excl. *J. amplexicaule* and *J. aristatum*, Wall. Cat. 2853 and 2875; DC. Prodr. l. c. 306, 314. *J. scandens*, Griff. Itin. Notes, 102, not of Vahl.—*Jasminum* sp. n. 597, Griff. Itin. Notes, 36. *Jasminum* sp. n. 33, Herb. Ind. Or. H. f. & T.

SIKKIM, BHOTAN and KHASIA, alt. 1-5000 ft., common; Griffith, H. f. & T., &c.—DISTRIB. South China to Hongkong.

Scandent; branchlets hairy. *Leaves* $2\frac{1}{2}$ by 1 in., acute, base rounded often cordate, obscurely hairy or usually glabrescent except the nerves beneath; secondary nervation obscure; petiole $\frac{1}{2}$ in. *Cymes* capitate, often on short lateral branches; pedicels $0\frac{1}{16}$ in., pilose or nearly glabrous; bracts 0, or 1-3 ovate-lanceolate among the flowers, the two subtending leaves green, often 1 in. long. *Flowers* white, somewhat fragrant. *Corolla-tube* $\frac{3}{4}$ in., lobes $\frac{1}{4}$ in., oblong, acute. *Carpels* 1-2, globose, $\frac{1}{4}$ in. diam., black, surrounded by the suberect subulate calyx-teeth.

3. ***J. pubescens***, Willd. Sp. Pl. i. 37; hairy, leaves ovate acute, cymes dense often hardly exceeding the uppermost leaves, calyx-teeth $\frac{1}{5}$ – $\frac{2}{3}$ in. subulate densely villous. Roxb. Hort. Beng. 3, and Fl. Ind. ed. Carey & Wall. i. 90; Don Prodr. 105; DC. Prodr. viii. 302; Dalz. & Gibs. Bomb. Fl. 138. *J. hirsutum*, Willd. l. c. 36; Smith Exot. Bot. ii. 117, t. 118; Bot. Reg. t. 15; Bot. Mag. t. 1991; Wall. Cat. 2852; Wight Ic. t. 702; Brand. For. Fl. 312; Kurz For. Fl. ii. 164, and in Journ. As. Soc. 1877, pt. ii. 242. *J. multiflorum*, Roth Nov. Sp. 6 (?); Andr. Bot. Rep. t. 496; DC. l. c. 303. *J. congestum*, Wall. Cat. 2874; DC. l. c. 314. *J. bracteatum* (by error *fractiatum*), Wight Ic. t. 1248; Dalz. & Gibs. Bomb. Fl. 138. *Nyctanthes pubescens*, Retz Obs. v. 9. *N. multiflora*, Burm. Fl. Ind. 5, t. 3, fig. 1. *Mogorium pubescens*, Lamk. Dict. iv. 213.

INDIA, from the HIMALAYA to CEYLON and TENASSERIM, alt. 0-3000 ft., common.—DISTRIB. Birma, China.

Scandent; branchlets, pedicels and calyx densely fulvous-villous. *Calyx-teeth* with patent yellow hairs erect or curved in fruit. Otherwise as in *J. undulatum*, Ker, which has more acuminate, less hairy leaves.—*Nyctanthes hirsuta*, Linn. Sp. Pl. 8 is generally taken for this and the name *hirsutum* preferred, but Linnæus founded his plant on Rheede Hort. Mal. vi. t. 48, which is not *J. pubescens*. Rheede Hort. Mal. vi. t. 54 is usually quoted for *J. pubescens*, but from the shape of the leaves it seems more likely to be *J. Rottlerianum* or *J. Thwaitesii*. The name *J. multiflorum*, Roth, has been much disputed: Roth says he took it from Heyne, but Heyne's original plant with the ticket descriptive of *J. multiflorum*, in his handwriting, is preserved in Herb. Wight, and is *J. Rottlerianum*. This however could not have been

the plant described by Roth, as he says the bracts were linear. The example of *J. multiflorum* in Herb. Roxb. is *J. pubescens*.

VAR. *bracteata*, Roxb. Hort. Beng. 3, Fl. Ind. ed. Carey & Wall. i. 92 (sp.); leaves somewhat bifarious, bracts linear small, calyx-teeth $\frac{1}{2}$ – $\frac{3}{4}$ in., corolla-tube $\frac{1}{4}$ – $\frac{3}{4}$ in. Wall. Cat. 2867; DC. Prodr. viii. 305.—Penang; Wallich.—DISTRIB. Sumatra.—This was supposed allied to or a var. of *J. bifarium*, from which it does not much differ but by the longer calyx-teeth. The corolla-tube, which is figured as very short in Roxburgh's drawing, is $\frac{3}{4}$ in. in some of Wallich's specimens.

4. *J. coarctatum*, Roxb. Hort. Beng. 3, and Fl. Ind. ed. Carey & Wall. i. 91; leaves elliptic acute nearly glabrous, petioles jointed, flower-heads solitary or subpaniculate, bracts prominent white ovate-lanceolate, calyx-teeth linear hairy. DC. Prodr. viii. 308; Kurz For. Fl. ii. 153, and in Journ. As. Soc. 1877, pt. ii. 242. *J. reticulatum*, Wall. Cat. 2869; DC. l. c. 303.—Jasminum, n. 34, Herb. Ind. Or. Hk. f. & T.

FROM ASSAM TO PEGU, alt. 0–3000 ft., frequent; Wallich, Griffith, &c.

Scandent; branchlets hairy. Leaves $4\frac{1}{2}$ by 2 in., usually acuminate, base obtuse or rounded, midrib above pilose or glabrous, often tufted in the axils of the nerves beneath, membranous, secondary nervation somewhat prominent; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in. Cymes dense, many-flowered, rusty-pubescent; bracts $\frac{1}{2}$ –1 in., petaloid, acuminate, often ciliate or pilose. Flowers white. Calyx-teeth $\frac{1}{2}$ – $\frac{3}{4}$ in. Corolla-tube 1–1 $\frac{1}{4}$ in.; lobes $\frac{1}{2}$ – $\frac{3}{4}$ in., oblong, acute. Carpels $\frac{1}{2}$ by $\frac{1}{2}$ in., and upwards.

5. *J. Rottlerianum*, Wall. Cat. 2865; leaves elliptic acute softly hairy on both surfaces or glabrate, petioles jointed, flower-heads solitary or subpaniculate, bracts prominent white ovate-lanceolate, calyx-teeth linear hairy. DC. Prodr. viii. 305; Wight Ic. t. 1249; Dalz. & Gibs. Bomb. Fl. 138. *J. hirsutum*, Wall. Cat. 2852, C. *J. bracteatum*, Heyne in Herb. not of Roth. *J. pubescens* and *hirsutum*, Mig. in Herb. Hohenack. not of Willd.

MTS. OF THE DECCAN PENINSULA; from the Concan to Travancore, alt. 2–5000 ft., frequent; Heyne, &c.

Scandent; branchlets, inflorescence and bracts villous. Leaves often subcordate at the base, adult very villous. Corolla-tube 1 in., and more in Wight's examples. Fruit-carpels $\frac{1}{2}$ by $\frac{1}{2}$ in.—This type form looks, from its hairiness, very distinct from *J. coarctatum*.

VAR. *glabrior*; adult leaves glabrous or nearly so, inflorescence shortly pubescent, corolla-tube $\frac{3}{4}$ in. slender.—Travancore; Wight.—This is referred by Wallich to *J. Rottlerianum*, and there are examples intermediate in hairiness; but it is very difficult to say how it differs from *J. coarctatum*, except that the flowers are rather smaller. Kurz (For. Fl. ii. 153, and in Journ. As. Soc. 1877, pt. ii. 242) has a *J. Rottlerianum* from Pegu, with adult leaves nearly glabrous, and the corolla-tube only $\frac{1}{2}$ in. long; this plant cannot therefore resemble very closely the typical *J. Rottlerianum*, which has a tube 1–1 $\frac{1}{4}$ in.; but possibly *J. coarctatum* and *Rottlerianum* should be united.

VAR. *Thwaitesii*; leaves oblong acuminate nearly glabrous, corolla-tube 1–1 $\frac{1}{4}$ in., carpels $\frac{1}{4}$ in. diam. globose. *J. rigidum*, Thwaites Enum. 190, not of Zenk.—Ceylon; Thwaites, C. P. n. 1809. Nilgherries, alt. 4–7000 ft., frequent, Clarke.—Branchlets terete, pubescent. Leaves sometimes cordate at the base. Bracts several, ovate-lanceolate, whitish. Calyx-teeth $\frac{1}{2}$ – $\frac{3}{4}$ in., linear.—This is a very difficult plant as may be guessed from Thwaites referring his specimen (though much twining) to *J. rigidum*. It does not differ much from *J. Rottlerianum*, var. *glabrior* (of which the fruit has not been seen): its small fruit is very unlike that of *J. coarctatum*.

6. *J. Griffithii*, Clarke; leaves large oblong-elliptic acuminate pilose beneath, heads dense many-flowered, bracts linear small or the uppermost leaves whitened, calyx-teeth long subulate patently fulvous-pilose.

MALACCA; Griffith (Kew Distrib. n. 3704) and Maingay (n. 998).

Scandent; branchlets patently fulvous-villous. Leaves $6\frac{1}{2}$ by $2\frac{3}{4}$ in., base obtuse or

cordate, coriaceous; nerves impressed above, much raised and fulvous-villous beneath, strongly tufted in their axils, prominently inarching, secondary obscure; petiole $\frac{1}{4}$ in. *Inflorescence* fulvous-pilose, subbracteate, but the upper leaves (even $3\frac{1}{2}$ in. long) whitened. *Calyx-teeth* $\frac{1}{2}$ in. *Corolla-tube* $\frac{3}{4}$ in., slender; lobes $\frac{1}{4}$ in., elliptic, acute. *Fruit* not seen.

7. **J. Maingayi**, *Clarke*; leaves long-petioled elliptic-lanceolate glabrous, flower-heads dense pubescent, bracts small linear or 1-2 ovate-lanceolate, calyx-teeth long linear pubescent.

PENANG; *Maingay* (Kew Distrib. n. 1000).

Scandent; branchlets pilose. *Leaves* 5 by 2 in., acute, base obtusely rhomboid, coriaceous; nerves 6-8 pairs, conspicuous, very oblique, not inarched, secondary obscure; petiole $\frac{1}{3}$ - $\frac{1}{2}$ in. *Cymes* paniced, sometimes more compound and lax; pedicels $\frac{1}{16}$ - $\frac{1}{6}$ in.; bracts mostly linear, $\frac{1}{16}$ - $\frac{1}{8}$ in., a few foliaceous bracts $\frac{3}{4}$ in. long occur. *Calyx-tube* $\frac{1}{2}$ in., campanulate; teeth $\frac{1}{4}$ - $\frac{1}{2}$ in. *Corolla-tube* $\frac{3}{4}$ in.; lobes $\frac{1}{2}$ in., elliptic, acute. *Carpels* $\frac{3}{8}$ by $\frac{1}{4}$ in., ellipsoid.

8. **J. malabaricum**, *Wight* *Ic. t.* 1250; leaves subcordate ovate suddenly acuminate nearly glabrous, cymes compound hairy, calyx-teeth long linear hairy, corolla-tube elongate. *J. glabellum*, *Wall. Cat.* 2857, partly.

DECCAN PENINSULA; on the Ghats, from the Concan southwards, common, *Wight*, &c.

Scandent; branchlets pubescent. *Leaves* $4\frac{1}{4}$ by 3 in., broadest near the base, membranous; nerves 9 pairs, distinct beneath, lower patent; petiole often 1 in. *Cymes* compound, trichotomous, not dense, many- (often 40-50-) flowered, branches ascending; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in., subulate; pedicels $\frac{1}{4}$ in. *Calyx-teeth* $\frac{1}{4}$ in., subulate, acute. *Corolla-tube* $\frac{1}{2}$ - $\frac{2}{3}$ in.; lobes $\frac{1}{2}$ in., oblong, very acute. *Fruit* not seen.—*Wight* first named this plant *J. cuspidatum*, but abandoned the name on finding that Roth had applied it to a very different species. *Wight's* figure does not show the very acute petals, which are conspicuous in his examples.

VAR. *Lawii*; leaves ovate-lanceolate gradually acuminate, corolla-lobes nearly 1 in. long very narrow.—Concan; *Law*?.—These specimens have been referred to *J. erectiflorum* which has glabrous cymes and calyx-teeth, and a less compound inflorescence.

9. **J. arborescens**, *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 94; arborescent, leaves subcordate or ovate acute, finally glabrous, cymes trichotomous hairy, calyx-teeth short linear subclavate pubescent divaricate, basal sinus wide, corolla-lobes not much shorter (often longer) than the tube. *Wall. Cat.* 2856; *Wight Ic. t.* 699; *DC. Prodr.* viii. 303; *Brand. For. Fl.* 311. *J. montanum*, *Roth Nov. Sp.* 5; *DC. l. c.* 308. *J. arboreum*, *Roem. et Sch. Mant.* i. 90.

TROPICAL NORTH-WEST HIMALAYA; Terai of Oudh and Kumaon; frequent. DECCAN PENINSULA, from Rajmahal to Ceylon; in the hot lower hills, alt. 500-3000 ft., common.

A large shrub or scrubby tree; branchlets hairy. *Leaves* 4 by $2\frac{1}{2}$ in., shortly acuminate, widest near the base, subcordate or the upper ovate or elliptic, young hairy and often tomentose on both surfaces; nerves distinct beneath, lower divaricate; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* usually 12-20-flowered, not dense; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{4}$ in. *Calyx-teeth* $\frac{1}{10}$ - $\frac{1}{6}$ in., their narrowest part one-third of the way up. *Corolla-tube* $\frac{1}{2}$ in.; lobes $\frac{3}{4}$ in., lanceolate, acute. *Carpels* (generally solitary) $\frac{1}{2}$ by $\frac{1}{4}$ - $\frac{1}{2}$ in., unsymmetric, ellipsoid, black.

VAR. *latifolia*, *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 93 (sp.); scandent. *Wall. Cat.* 2855; *DC. Prodr.* viii. 308; *Wight Ic. t.* 703; *Dalz & Gibs. Bomb. Fl.* 138; *Brand. For. Fl.* 311.—Base of the Himalaya, from Kumaon to Bengal.

VAR. *montana*, *Roth Nov. Sp.* 5 (sp.); leaves elliptic cuneate scarcely rounded at

the base, calyx minutely pubescent. *DC. Prodr.* viii. 308. *J. punctatum*, *Wall. Cat.* 2877; *DC. l. c.* 303.—*J. glabellum*, *Wall. Cat.* 2857, partly.—Deccan Peninsula; Patna.

10. ***J. Roxburghianum***, *Wall. Cat.* 2870; leaves elliptic-oblong softly hairy, cymes trichotomous very hairy, calyx-teeth minute narrowly triangular villous, corolla-lobes usually as long as the tube. *DC. Prodr.* viii. 314.

MALABAR GHATS, *Ritchie*; Bababoodun Hills, *Law*.

Perhaps a var. of *J. arborescens*, but much more hairy, and with shorter calyx-teeth. *Leaves* not acuminate, sometimes obtuse, base broadly cuneate or scarcely rounded, mature softly hairy on both surfaces. *Cyme* somewhat lax, many-flowered. *Calyx* densely fulvous-villous teeth $\frac{1}{20}$ – $\frac{1}{10}$ in. *Corolla* and fruit as in *J. arborescens*.

11. ***J. syringæfolium***, *Wall. Cat.* 2861; leaves ovate-lanceolate acuminate glabrous, cymes lax trichotomous minutely pubescent, calyx-teeth short linear erect pubescent, corolla-lobes shorter than the tube. *DC. Prodr.* viii. 306.

TENASSERIM, Amherst and Tavoy; *Wallich, Packman*. ASSAM; *Griffith*.

Scandent; branchlets glabrescent. *Leaves* 4 by $1\frac{1}{2}$ in., broadly cuneate or the lower leaves rounded at the base, coriaceous; nerves 3–5 pairs, prominent beneath; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in., mostly pubescent. *Cymes* terminal and axillary, 12–20-flowered; bracts $\frac{1}{4}$ in., linear; pedicels $\frac{1}{8}$ – $\frac{1}{6}$ in. *Calyx-teeth* $\frac{1}{16}$ – $\frac{1}{12}$ in. *Corolla-tube* $\frac{2}{3}$ in.; lobes scarcely $\frac{1}{2}$ in., narrow, acute. *Fruit-carpels* $\frac{2}{3}$ by $\frac{1}{2}$ in., unsymmetric, ellipsoid.—Kurz (*Journ. As. Soc.* 1877, pt. ii. 242) refers this species to *J. scandens*, which has the cymes much denser, the calyx-teeth divaricate, the corolla-tube shorter.

12. ***J. bifarium***, *Wall. Cat.* 2866; leaves oblong acuminate minutely pubescent or glabrous, cymes subcapitate, calyx-teeth short linear erect pubescent, corolla-tube longer than its lobes. *DC. Prodr.* viii. 306. *J. bracteatum*, *Wall. Cat.* 2867. *J. nummularoides*, *Blume Mus. Lugd. Bat.* i. 275.

PENANG; *Wallich, Maingay*.—DISTRIB. Malaya to Borneo.

Scandent; branchlets hairy or nearly glabrous. *Leaves* 2 by $\frac{3}{4}$ in. (sometimes much larger), bifarious, base truncate; nerves 5 pairs, often pubescent, secondary obscure; petiole $\frac{1}{2}$ in. *Cymes* 6–12-flowered, usually subsessile between the two uppermost leaves; bracts $\frac{1}{2}$ in., linear; pedicels $0\frac{1}{8}$ in. *Calyx-teeth* $\frac{1}{16}$ – $\frac{1}{10}$ in. *Corolla-tube* $\frac{3}{4}$ in.; lobes scarcely $\frac{1}{2}$ in., elliptic, acute. *Carpels* $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid.

VAR. *glabra*; leaves larger elliptic rhomboid or rounded at the base glabrous often drying reddish not bifarious, calyx-teeth $\frac{1}{8}$ – $\frac{1}{6}$ in. *J. Lessertianum*, *DC. Prodr.* viii. 304 *ex descr.*—Malacca and Singapore, frequent; *Wallich, Walker, &c.*—DISTRIB. Malaya.—This is one of Horsfield's plants, and believed to be *J. glabrum*, *Horsf.*; *Blume Bijl.* 679: but whether *J. glabrum*, *Willd.*, is doubtful.

13. ***J. scandens***, *Vahl Symb.* iii. 2; leaves ovate-lanceolate glabrous or nearly so, cymes subcapitate pubescent, calyx-teeth short linear pubescent divaricate or recurved in flower, corolla-tube scarcely $\frac{1}{2}$ in. *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 88; *Wall. Cat.* 2850; *DC. Prodr.* viii. 306; *Kurz For. Fl.* ii. 155, and in *Journ. As. Soc.* 1877, pt. ii. 242, *syn. excl.* *J. lætum*, *Wall. Cat.* 2859; *DC. l. c.* 306. *Nyctanthes scandens*, *Retz Obs.* v. 9.

BENGAL and PEGU, in the plains, common; and in the adjacent lower hills of SIKKIM, ASSAM, KHASIA, CACHAR and CHITTAGONG.

Scandent; branchlets pubescent. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{2}$ in., acuminate, base rounded, pubescent on the nerves beneath or glabrous, coriaceous; nerves few, remote; petiole $\frac{1}{4}$ in. *Cymes* dense, often on short axillary branches; bracts $\frac{1}{2}$ in., linear, but the cyme frequently subsessile between the two uppermost leaves; pedicels $0\frac{1}{10}$ in. *Flowers* white, often tinged pink, very fragrant. *Calyx-teeth* $\frac{1}{12}$ – $\frac{1}{8}$ in. *Corolla-tube* shorter than in the preceding species and somewhat broader; teeth $\frac{1}{4}$ – $\frac{1}{2}$ in., oblong, acute. *Carpels* $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid.

14. ***J. decussatum***, Wall. Cat. 2860; leaves ovate-lanceolate hairy, flowers in clusters upon compound trichotomous villous cymes, calyx-teeth short linear recurved villous, corolla-tube about $\frac{1}{4}$ in. DC. Prodr. viii. 306; Kurz For. Fl. ii. 151, and in Journ. As. Soc. 1877, pt. ii. 241.

PEGU and TENASSERIM, frequent; Wallich, Griffith, &c.

Scandent; branchlets villous. Leaves 4 by $1\frac{1}{2}$ in., acuminate, base obtuse, mature hairy at least beneath, coriaceous; nerves few, remote; petiole $\frac{1}{2}$ in. Cymes terminal compound, and on short-lateral branches; bracts $\frac{1}{2}$ in., linear; pedicels 0 or $0-\frac{1}{2}$ in. Calyx-teeth $\frac{1}{10}$ in. Corolla smaller than in any of the preceding species; lobes $\frac{1}{4}$ in., narrowly lanceolate. Carpel $\frac{1}{3}$ by $\frac{1}{4}$ in., ellipsoid.

†† *Calyx glabrous* (the series proceeds from the species with long to those with short calyx-teeth).

15. ***J. cordifolium***, Wall. Cat. 2858; leaves cordate-lanceolate acuminate glabrous, cymes crowded many-flowered, calyx-teeth subulate, corolla-tube nearly 1 in. G. Don Gen. Syst. iv. 60; DC. Prodr. viii. 304. *J. erectiflorum*, DC. Prodr. viii. 308; Wight Ic. t. 1251.

NILGHERRIES; Gardner, Wight; Canoor, alt. 6000 ft., Clarke.

Scandent, glabrous. Leaves 4 by $1\frac{1}{2}$ in., coriaceous; nerves 7 pairs, the lowest divaricate, secondary obscure; petiole $\frac{1}{2}-\frac{3}{4}$ in. Cymes often 20-flowered, shortly repeatedly trichotomous; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{2}$ in. Calyx-teeth $\frac{1}{6}-\frac{1}{2}$ in. Corolla-lobes $\frac{3}{4}$ in., elliptic, acute. Carpels nearly $\frac{1}{2}$ by $\frac{1}{2}$ in., ellipsoid.—G. Don says the leaves are 3-nerved, the cymes pubescent, which will not apply to the present (nor to any Nilgherry) species; Wight has noted in his Herb. that *J. erectiflorum*, A. DC., is *J. cordifolium*, Wall.

16. ***J. anastomosans***, Wall. Cat. 2863; leaves elliptic-lanceolate acuminate glabrous imperfectly 3-nerved, cymes 1-5-flowered axillary, calyx-teeth long linear, corolla-lobes very long narrow. DC. Prodr. viii. 305; Kurz For. Fl. ii. 152, and in Journ. As. Soc. 1877, pt. ii. 242. *J. stenopetalum*, Lindl. in Bot. Reg. t. 918, in adnot.; DC. l.c. 304; Blume Mus. Bot. i. 272. *J. trinerve*, Roxb. Hort. Beng. 3, and Ic. Ined. in Herb. Kew., and Fl. Ind. ed. Carey & Wall. i. 91; Wall. Cat. 2848 A, chiefly, not of Vahl. *J. laurifolium*, Wall. Cat. 2847 A, chiefly, not of Roxb.—*Jasminum* sp. n. 32, Herb. Ind. Or. H. f. & T.

BHOTAN; Dalimkote, Gamble. KHASIA; Griffith. CACHAR; Keenan. SILHET; Chattuck, H. f. & T. PEGU; Wallich, &c., frequent.

Scandent, glabrous. Leaves 4 by $1\frac{1}{2}$ in., very acute, base obtuse sometimes cordate, membranous; lowest pair of nerves strong, carried along the margin, upper slender, distinct, resembling the secondary; petiole $\frac{1}{4}$ in. Cymes slender, on short lateral branches sometimes leafy, but more frequently altogether axillary; bracts $\frac{1}{4}$ in., linear; pedicels $\frac{1}{2}$ in. Calyx-teeth $\frac{1}{2}-\frac{3}{4}$ in. Corolla-tube $\frac{2}{3}$ in., lobes 7-10, often 1 in. Carpels $\frac{1}{2}$ by $\frac{1}{2}$ in., ellipsoid; calyx-teeth in fruit often thickened, divaricate, stellate.

VAB. *silhetsensis*, Blume Mus. Bot. i. 271 (sp.); corolla-lobes a little shorter than the tube. *J. trinerve*, Wall. Cat. 2848, chiefly.—*J. trinerve*, Vahl, is defined as having the corolla-lobes only half as long as the tube; but, after all the labours of Blume, it may be a question whether the Indian plant is other than a form of it, as Roxburgh considered.

17. ***J. subtriplinerve***, Blume Mus. Bot. i. 272; leaves elliptic-lanceolate acuminate glabrous 3-nerved, cymes 1-7-flowered axillary and terminal, calyx-teeth linear, corolla-lobes oblong acute shorter than the tube. *J. trinerve*, Wall. Cat. 2848, partly.

SIKKIM, ASSAM, KHASIA, SILHET, CACHAR, alt. 0-4000 ft., frequent; Wallich, Griffith, H. f. & T., &c.

Closely allied to *J. anastomosans*. Leaves coriaceous, distinctly 3-nerved, the basal primary pair of nerves often carried near the margin nearly to the tip of the

leaf, other nerves obscure. *Flowers* usually 3, sometimes all solitary and terminal. sometimes in compound many-flowered cymes; pedicels not exceeding $\frac{1}{2}$ in., by which the species is known from all forms of *J. laurifolium*. *Calyx-teeth* $\frac{1}{4}$ in., shorter than in *J. anastomosans*, glabrous in the Sikkim examples, minutely scabrid-pubescent in the Khasian. *Corolla-tube* $\frac{3}{4}$ in., lobes $\frac{2}{3}$ by $\frac{1}{4}$ in.

18. **J. nobile**, *Clarke*; leaves ovate-lanceolate acuminate, cymes few-flowered lax, corolla very large, calyx-teeth linear acute.—*Jasminum*, n. 26, *Herb. Ind. Or. H. f. & T.*

MOULMEIN; Thoungyeen, alt. 5000 ft., *Lobb*; Donnatoung, alt. 4000 ft., *Parish*.

Scandent, glabrous. *Leaves* $3\frac{1}{4}$ by $1\frac{1}{4}$ in., base obtuse or almost rounded, coriaceous, obscurely 3-nerved; petiole $\frac{1}{2}$ in. *Cymes* terminal and on shortened axillary branches, peduncled or sub-sessile, 3-5-flowered; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in., thickened. *Calyx-teeth* $\frac{1}{4}$ in. *Corolla-tube* 1 in., lobes $1\frac{1}{4}$ by $\frac{1}{4}$ – $\frac{1}{2}$ in., oblong acute. *Fruit* not seen.

19. **J. laurifolium**, *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 91; leaves oblong or narrow-elliptic acuminate 3-nerved, cymes few-flowered lax, calyx-teeth linear long, corolla-lobes long narrow. *Wall. Cat.* 2847, partly; *DC. Prodr.* viii. 303; *Kurz For. Fl.* ii. 152, and in *Journ. As. Soc.* 1877, pt. ii. 241. *J. angustifolium*, *Ker in Bot. Reg.* t. 521, not of *Vahl*.

KHASIA MTS., *De Silva, H. f. & T.* (cultivated in Ceylon, Kumaon, Mauritius, &c.).

Scandent, glabrous. *Leaves* $2\frac{1}{2}$ by $\frac{3}{4}$ in., base obtuse or rounded, coriaceous, definitely 3-nerved in the cultivated examples, more membranous and anastomosing nerves more distinct in the native; petiole $\frac{1}{2}$ in. in the wild, $\frac{1}{4}$ in. in the cultivated plant. *Cymes* 3-5-flowered, terminal or long-peduncled and axillary; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{3}$ – $\frac{1}{2}$ in., not much thickened. *Calyx-teeth* $\frac{1}{4}$ in. *Corolla-tube* $\frac{3}{4}$ in., lobes $\frac{2}{3}$ by $\frac{1}{2}$ in. *Fruit* not seen.—*Ker*, whose figure of this species is excellent, nevertheless says he could not distinguish it from *J. angustifolium* (by which *Ker* meant *J. sessiliflorum*); it has 3-nerved leaves, the corolla-lobes much longer.

VAR. brachyloba, *Kurz* l. c.; calyx-teeth $\frac{1}{10}$ – $\frac{1}{8}$ in.—*Birma*; *Griffith* (*Kew Distrib.* n. 3712); Martaban and Tenasserim Hills, frequent (*Kurz*).

VAR. sublinearis; leaves 5 by $\frac{1}{2}$ in., calyx-teeth $\frac{1}{8}$ in.—*Tavoy*; *Helper* (*Kew Distrib.* n. 3710).

20. **J. adenophyllum**, *Wall. Cat.* 2876; leaves elliptic-oblong acuminate penninerved, cymes lax few-flowered, calyx-teeth very long linear. *DC. Prodr.* viii. 314.

KHASIA MTS.; *De Silva*.

Scandent, glabrous. *Leaves* 5 by $1\frac{1}{4}$ in., base cuneate; primary nerves 8 pairs, subequally distant, the lowest short; petiole $\frac{1}{2}$ in., not (or very obscurely) jointed. *Peduncles* 1-flowered (in the scanty examples); bracts obsolete; pedicels 1 in. *Calyx-teeth* $\frac{1}{2}$ in., and upwards. *Corolla* and fruit not seen.—The imperfect examples represent a species, apparently closely allied to *J. laurifolium*, but the nervation of the leaves is altogether different.

21. **J. sessiliflorum**, *Vahl Enum.* i. 29; leaves small ovate, cymes few-flowered, pedicels short, calyx-teeth linear long, corolla medium-sized tube hardly so long as the narrow lobes. *DC. Prodr.* viii. 307. *J. angustifolium*, *Wall. Cat.* 2873, partly, not of *Vahl*.

MADRAS; Nundidroog, Chingleput, *Rottler*, &c. CEYLON; *Thwaites*.

Scandent, ramous; branchlets often minutely pubescent. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in. (those of the shortened flowering lateral branchlets hardly half so large), shortly acute or subobtuse, base obtuse or almost rounded, glabrous; nerves few, obscure; petiole $\frac{3}{8}$ – $\frac{1}{2}$ in. *Cymes* usually 3- or 1-flowered, sessile; pedicels 0– $\frac{1}{2}$ in. *Calyx-teeth* $\frac{1}{4}$ in., glabrous or obscurely scabrid-pubescent. *Corolla-tube* $\frac{1}{2}$ in., lobes $\frac{1}{2}$ – $\frac{1}{2}$ by $\frac{1}{10}$ in., acute. *Fruit* not seen.

22. **J. angustifolium**, *Vahl Enum. i.* 29; leaves small ovate, cymes few-flowered, pedicels long, calyx-teeth linear short, corolla largeish lobes lanceolate. *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall. i.* 95; *Wall. Cat.* 2873, partly; *Wight Ic.* t. 698; *DC. Prodr.* viii. 303. *J. vimineum*, *Willd. Sp. Pl. i.* 36. *J. triflorum*, *Pers. Syn. i.* 7. *Nyctanthes angustifolia*, *Linn. Sp. Pl.* 8. *N. viminea*, *Retz Obs.* v. 9. *N. triflora*, *Burm. Fl. Ind.* 4, t. 2. *Mogorium vimineum*, *Lamk. Dict.* iv. 213. *M. triflorum*, *Lamk. Ill.* 23, t. 6, fig. 2.—*Rheede, Hort. Mal.* vi. t. 53.

DECCAN PENINSULA and CEYLON; in the lower hills, frequent.

Scandent, ramous; branchlets minutely pubescent or almost villous. *Leaves* $1\frac{1}{4}$ by $\frac{1}{2}$ in. (those of the lateral branchlets half as large), acute, base obtuse or almost rounded, glabrous; nerves few, obscure; petiole $\frac{1}{8}$ in. *Cymes* usually 3-1-flowered; pedicels $\frac{1}{4}$ – $\frac{3}{4}$ in. *Calyx-teeth* $\frac{1}{8}$, rarely $\frac{1}{6}$ in., glabrous or very nearly so. *Corolla-tube* $\frac{1}{2}$ – $\frac{3}{4}$ in.; lobes $\frac{2}{3}$ by $\frac{1}{3}$ in. *Carpels* $\frac{1}{2}$ by $\frac{1}{4}$ in., unsymmetric, ellipsoid.—In the habit and leaves this species closely resembles *J. sessiliflorum*, with which it has been mixed from the days of Rottler.

23. **J. Ritchiei**, *Clarke*; leaves ovate or elliptic shortly acuminate glabrous, cymes few-flowered lax, pedicels long, calyx-teeth linear short, fruit-carpels large globose.

WESTERN GHATS and CEYLON, in the hills frequently collected; Nilgherries, *Wight, Gardner*; Bababoodun Hills, *Law*; Belgaum, *Ritchie, &c.*

Scandent, ramous, glabrous or nearly so. *Leaves* attaining $4\frac{1}{2}$ by $1\frac{3}{4}$ in., base broadly cuneate; nerves 5-6 pairs, prominent, often tufted in the axils; petiole $\frac{1}{8}$ in. *Cymes* very lax, often subpaniculate, 3-9-flowered; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{4}$ –1 in. *Calyx-tube* campanulate, often somewhat ribbed; teeth $\frac{1}{8}$ in. and upwards, linear or shortly oblong, sometimes minutely ciliate-scabrid. *Corolla-tube* $\frac{3}{4}$ in., lobes $\frac{2}{3}$ in., narrow. *Carpels* $\frac{1}{2}$ in., very accurately spherical.—Named *J. angustifolium* by Wight and Ritchie, from which in flower it does not differ much but by the larger leaves; the fruits are unusual.

VAR. purpurea, *Heyne* in *Herb. Rottler* (sp.); leaves more obtuse sometimes roundish.—Bababoodun Hills, *Rottler*. Ceylon, *Wight*.

24. **J. Wightii**, *Clarke*; glabrous, leaves oblong-lanceolate long-acuminate, cymes trichotomously compound lax, calyx-teeth shortly linear, corolla-tube $\frac{1}{2}$ in. lobes $\frac{2}{3}$ in.

Bolimputty near COIMBATORE; *Wight*, n. 1762.

Branches flexuose. *Leaves* $3\frac{1}{2}$ by $\frac{3}{4}$ in., or some more ovate, attenuate into the petiole, penninerved; nerves obscure; petiole $\frac{1}{4}$ – $\frac{3}{4}$ in. *Cymes* terminal; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{6}$ – $\frac{1}{3}$ in. *Calyx-teeth* $\frac{1}{8}$ in. *Corolla-lobes* $\frac{1}{8}$ – $\frac{1}{6}$ in. wide, acute. *Fruit* not seen.—The leaves are punctate beneath, the cyme somewhat divaricated, the calyx-teeth separated by a very wide sinus. It may be allied to *J. arborescens* var. *montana*, but it is very glabrous.

25. **J. rigidum**, *Zenker Pl. Ind.* 5, t. 6; glabrous, leaves ovate or elliptic shining, cymes few-flowered dense sessile, calyx-teeth linear rigid erect, corolla-tube elongate longer than the lobes. *DC. Prodr.* viii. 305; *Wight Ic.* t. 1247; *Thwaites Enum.* 190, in part. *J. myrtophyllum*, *Zenker Pl. Ind.* 6, t. 7; *DC. l. c.* 304. *J. ligustrifolium*, *Wall.*; *Bojer Hort. Maurit.* 204; *DC. l. c.* 305, not of *Lamk.* *J. cuspidatum*, *Rottler*; *Spreng. Syst.* i. 30; *Wall. Cat.* 2872. *J. Perrottetianum*, *DC. l. c.* 304, ex descr. *J. triflorum*, *Heyne* in *Herb. Rottler*, not of *Pers.*

DECCAN PENINSULA and CEYLON, alt. C-5000 ft.; common.

A rigid, dense, shrub, hardly scandent. *Leaves* 2 by $\frac{3}{4}$ in., upper acute at both ends, not acuminate, lower ovate, coriaceous; nerves reticulating, slender but often subprominent on the upper surface; petiole $\frac{1}{6}$ in. *Cymes* 3-1-flowered; pedicels 0– $\frac{1}{8}$

in. *Calyx-teeth* $\frac{1}{8}$ in. *Corolla-tube* 1 in.; lobes $\frac{2}{3}$ by $\frac{1}{8}$ in., oblong, acute. *Fruit* not seen.

VAR. *tetraphis*, Wight & Gardn. in Calc. Journ. Nat. Hist. vi. 55 (sp.); subsucculent, leaves larger, cymes with more flowers.—Nilgherries; *Gardner, &c.*—Leaves puberulo-punctate beneath. May this be *J. Perottetianum*, *A. DC. Prodr.* viii. 304?

26. *J. trichotomum*, Heyne; *Roth. Nov. Sp.* 6; leaves ovate-lanceolate glabrous or minutely rusty-pubescent beneath, cymes trichotomous compound lax glabrous or nearly so, calyx-teeth minute triangular-subulate, corolla smallish. *Wall. Cat.* 2879; *DC. Prodr.* viii. 308. *J. intermedium* and *J. Gardnerianum*, *Wight in Herb.*

MADRAS; Rayacottah, Heyne; Nilgherries, Gardner, Wight.

Scandent, ramous; branchlets glabrous. *Leaves* $2\frac{1}{4}$ by 1 in., not acuminate, base broadly cuneate or almost rounded; nerves 7 pairs, secondary obscure; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Cymes* terminal, often paniculate, divaricate; bracts $\frac{1}{20}$ in., lanceolate; pedicels $\frac{1}{8}$ – $\frac{1}{2}$ in. *Calyx* glabrous, teeth in Heyne's type example 0– $\frac{1}{25}$ in., rarely attaining $\frac{1}{15}$ in. *Corolla-tube* $\frac{1}{4}$ in.; lobes $\frac{1}{2}$ in., narrow acute. *Carpels* $\frac{1}{4}$ in., ellipsoid, black. —Allied to *J. arborescens* (var. *montana*), as noted by Heyne on the original plant of Rottler. Roth's description does not agree well with this type, and has puzzled all authors.

27. *J. latipetalum*, Clarke; glabrous, leaves narrow-lanceolate coriaceous, cymes few-flowered lax, calyx-teeth minute lanceolate, corolla large lobes $\frac{1}{2}$ – $\frac{1}{2}$ in. broad.

MOULMEIN; Thoung-gyeen, alt. 5000 ft., Lobb.

Scandent. *Leaves* 5 by $\frac{3}{4}$ in., elongate, acuminate, base obtuse, almost rounded, very thick; nerves 20 pairs, horizontal, obscure; petiole $\frac{1}{4}$ – $\frac{1}{3}$ in., not (or very obscurely) jointed. *Cymes* 1–5-flowered, terminal; bracts $\frac{1}{8}$ in., lanceolate; pedicels $\frac{1}{2}$ in. *Calyx-teeth* $\frac{1}{20}$ in. *Corolla-tube* 1– $1\frac{1}{4}$ in., slender; lobes $\frac{3}{4}$ in., obovate-oblong, obtuse. *Fruit* not seen.

28. *J. attenuatum*, Roxb. *Hort. Beng.* 3; glabrous, leaves oblong acuminate, cymes lax slender, calyx subhemispheric teeth minute, corolla-tube $\frac{2}{3}$ – $\frac{3}{4}$ in. *Wall. Cat.* 2864; *DC. Prodr.* viii. 309; *Kurz For. Fl.* ii. 151, and in *Journ. As. Soc.* 1877, pt. ii. 241.

KHASIA Mts. and adjacent part of ASSAM, alt. 500–4000 ft., frequent; Wallich, Griffith, H. f. & T., &c. MARTABAN, alt. 5–7000 ft. (Kurz).

Scandent. *Leaves* $6\frac{1}{2}$ by 2 in., base cuneate or subobtuse, membranous; nerves 12 pairs, obscure; petiole $\frac{1}{2}$ in. *Cymes* axillary and terminal, slender; bracts $\frac{1}{2}$ in., lanceolate; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in., slender. *Calyx-teeth* $\frac{1}{20}$ in. *Corolla* bright-red, pink or white; lobes $\frac{1}{2}$ in., lanceolate, acute. *Fruit-carpels* $\frac{1}{2}$ by $\frac{1}{2}$ in., ellipsoid.

29. *J. glandulosum*, Wall. *Cat.* 2849; glabrous, leaves elliptic acuminate, cymes slender lax few-flowered, calyx-tube cylindric-campanulate teeth minute, corolla-tube 1– $1\frac{1}{4}$ in. slender lobes $\frac{3}{4}$ –1 in. linear. *DC. Prodr.* viii. 304; *Royle Ill.* 268; *Brand For. Fl.* 312. *J. nepalense*, Spreng. *cura post.* 12; *DC. l. c.* 308. *J. dichotomum*, Don *Prodr.* 105, not of Vahl. *J. Hamiltonii*, G. Don *Gen. Syst.* iv. 67. *J. laurifolium*, Gamble *Darjeeling List*, 55, not of Roxb.

SUBTROPICAL HIMALAYA, alt. 2–6000 ft., from Kumaon to Bhotan; frequent. KHASIA Mts., alt. 2–4000 ft., frequent.

Scandent. *Leaves* 3 by $1\frac{1}{2}$ in., base obtuse or rounded; nerves 7 pairs, distinct, often tufted in the axils beneath, inarching; petiole $\frac{1}{2}$ in. *Cymes* axillary and terminal, 1–3-flowered; bracts $\frac{1}{10}$ in., linear; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in., slender. *Calyx-tube* $\frac{1}{2}$ by $\frac{1}{10}$ in., lobes $\frac{1}{20}$ in. *Corolla* white, scarcely yellow while fading; lobes $\frac{1}{2}$ – $\frac{1}{2}$ in. broad. *Carpels* $\frac{3}{4}$ by $\frac{1}{2}$ in., elongate ellipsoid.—This has been confounded with the Australian *J. simplicifolium* (Benth. *Fl. Austral.* iv. 296), which has a much shorter calyx-tube,

a less slender corolla, and fruit carpels not half as long; and is only known in cultivation in India.

30. **J. subglandulosum**, Kurz in *Trimen Journ. Bot.* 1875, p. 329, and *For. Fl.* ii. 151; glabrous, leaves large obovate-oblong shortly acuminate, racemes axillary very lax, calyx broad teeth very short, corolla-tube $\frac{1}{2}$ – $\frac{2}{3}$ in., lobes half as long obovate-oblong blunt.

SOUTH ANDAMAN; Kurz. PEGU and TENASSERIM, in the tropical forests not infrequent (Kurz).

Scandent. Leaves 7 by $2\frac{3}{4}$ in., base obtusely cuneate, membranous; nerves 10 pairs, secondary distinct. Flowers white; bracts minute, subulate. Carpels $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid.—Description chiefly from Kurz, as his example is very imperfect; the inflorescence appears strictly cymose, as in the two preceding species; there is nothing in the material or description to show that it differs from *J. attenuatum* but in the somewhat larger leaves.

31. **J. smilacifolium**, Griff. ms.; glabrous, leaves large ovate acute coriaceous 3-nerved, cymes axillary and terminal stout compound, calyx-teeth short thick triangular, flowers and fruits large.

MALACCA; Griffith (Kew Distrib. n. 3698), Maingay.

A large climber. Leaves 7 by $3\frac{3}{4}$ in., base obtuse or almost cordate, very thick, secondary nerves thin distinct; petiole $\frac{3}{4}$ in. Cymes 5–20-flowered, not lax; bracts $\frac{1}{10}$ in., lanceolate; pedicels $\frac{1}{8}$ – $\frac{1}{4}$ in. Calyx-teeth $\frac{1}{16}$ in. Corolla white tinged with pink, tube $\frac{3}{4}$ –1 in., lobes $\frac{3}{4}$ by $\frac{1}{2}$ in., acute. Carpels 1 by $\frac{1}{2}$ – $\frac{2}{3}$ in.; pedicels often greatly enlarged, $\frac{1}{2}$ in. diam. below the fruit.—This has been supposed a var. merely of *J. crassifolium*, Blume, which however has smaller obscurely 3-nerved leaves, and the cymes much slenderer, with pedicels often $\frac{3}{4}$ in.

** Leaves (some of them) compound: in *J. auriculatum* and *brevilobum* often in appearance simple, the lateral leaflets being only occasionally present and then exceedingly small. (The series proceeds from the less- to the more-compound-leaved species.)

32. **J. auriculatum**, Vahl *Symb.* iii. 1; leaves mostly simple ovate some 3-foliate the lateral leaflets mere auricles, cymes compound many-flowered, corolla-tube $\frac{1}{4}$ – $\frac{1}{2}$ in. Roxb. *Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 96; Wall. *Cat.* 2854; Bot. *Reg.* t. 264; DC. *Prodr.* viii. 309, *syn. excl.*; Wight *Ic.* t. 700. *J. affine* and *ovalifolium*, Wight *Ic.* tt. 1255, 1256.

DECCAN PENINSULA and CEYLON, common (cultivated in Scinde, North-west India, Bengal, Siam and Mauritius).

Scandent; pubescent or villous, sometimes nearly glabrous. Leaves (when simple and the terminal leaflets) 1 by $\frac{3}{4}$ in., shortly acute or hardly acuminate, base obtuse or rounded, ashy-pubescent sometimes glabrescent; nerves few, lowest oblique; lateral leaflets when present rarely exceeding $\frac{1}{6}$ in. diam. Cymes terminal, paniculate, grey-pubescent; bracts $\frac{1}{6}$ in., linear; pedicels 0 – $\frac{1}{5}$ in. Calyx-teeth minute, narrowly oblong. Corolla-lobes $\frac{1}{4}$ in., elliptic. Carpels $\frac{1}{2}$ in. diam., globose, black.—The *J. mauritianum*, Bojer, reduced to *J. auriculatum* by Baker (*Fl. Maurit.* 220) has the leaves subequally 3-foliate, the corolla-tube nearly 1 in. *J. affine*, Wight, with the style half as long as corolla-tube, and *J. ovalifolium*, Wight, with the stigmas exerted, are dimorphic forms.

33. **J. brevilobum**, A. DC. *Prodr.* viii. 307; leaves mostly simple ovate, some 3-foliate the lateral leaflets mere auricles, cymes sessile subcapitate, corolla-tube $\frac{2}{3}$ –1 in. *J. nilagiricum*, Pl. *Hohenack.* n. 1007.

MTS. of the DECCAN PENINSULA; Nilgherries, Pulneys, &c., alt. 3–6000 ft., frequent; Gardner, Wight, &c.

Resembling *J. auriculatum*; usually villous or subtomentose, sometimes only

sparingly pubescent. Terminal *leaflets* often cordate; the lowest primary nerves divaricate. *Cymes* terminal, 3-10-flowered, dense. *Flowers* altogether larger than in *J. auriculatum*; lobes often $\frac{1}{2}$ by $\frac{1}{8}$ in. *Carpels* larger, $\frac{1}{4}$ in. diam. and upwards.

34. **J. flexile**, *Vahl Symb.* iii. 1; glabrous, leaves opposite nearly all 3-foliolate, leaflets elliptic or ovate acute coriaceous distinctly nerved, cymes lax axillary and terminal upper elongate paniculate longer than the leaves, corolla-tube $\frac{2}{3}$ -1 in. *Wall. Cat.* 2881; *DC. Prodr.* viii. 310; *Wight Ic.* t. 1253.—*Burm. Thes. Zeyl.* t. 58, fig. 1.

DECCAN PENINSULA and CEYLON, in the lower hills, frequent.

Scandent. Terminal *leaflet* $4\frac{1}{2}$ by $1\frac{1}{2}$ -2 in., base rounded or obtuse; primary nerves 6 pairs, inarching. *Panicles* 4-8 in. long, or the lower short few-flowered, branches opposite alternate or whorled; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{8}$ - $\frac{1}{4}$ in. *Calyx-teeth* minute. *Corolla* white, lobes $\frac{1}{2}$ by $\frac{1}{2}$ in., acute or obtuse. *Carpels* $\frac{1}{4}$ by $\frac{1}{4}$ in., ellipsoid.—Heyne named three examples of this in *Herb. Rottler*: *J. acuminatum*, *J. azoricum* and *J. travancorense*. The Timor *J. parviflorum*, Decne., is said to have much smaller flowers, but it must be very nearly allied.

VAR. *ovata*, *Wall. Cat.* 2882 (sp.), chiefly; leaflets obtusely cuneate at the base, axillary cymes short few-flowered, pedicels $\frac{1}{8}$ in. *J. attenuatum*, *Wall. Cat.* 2864, B, not of *Roxb.*—Khasia; *Wallich.*—This is possibly a var. of *J. lanceolaria*, *Roxb.*; it has leaves distinctly nerved, the flowers rather smaller.

VAR. *Hookeriana*; terminal leaflet 4 by $2\frac{1}{2}$ in. membranous, corolla large with broad lobes.—*Jasminum* n. 41, *Herb. Ind. Or. H. f. & T.*—Khasia; *Hook. f. & T.*—This seems exactly half-way between *J. flexile* and *J. caudatum*, having the broad leaflets of the former, the membranous texture and flowers of the latter.

35. **J. caudatum**, *Wall. Cat.* 2884; glabrous, leaves opposite nearly all 3-foliolate, leaflets lanceolate or ovate-lanceolate caudate-acuminate membranous distinctly nerved, cymes lax, corolla-tube $\frac{3}{4}$ -1 $\frac{1}{4}$ in. *Lindl. in Bot. Reg.* 1842, t. 26; *DC. Prodr.* viii. 310. *J. ovatum*, *Wall. Cat.* 2882, in part.

KHASIA, alt. 0-4000 ft., frequent; *Wallich, H. f. & T., &c.* MISHMEE; *Griffith.*

Only distinguishable from *J. flexile*, var. *Hookeriana*, by the narrower more caudate leaves. The cyme is usually slenderer, the corolla longer, the tube attaining $1\frac{1}{4}$ in., the lobes $\frac{3}{4}$ by $\frac{1}{3}$ in.

36. **J. lanceolaria**, *Roxb. Fl. Ind. ed. Carey & Wall.* i. 97; glabrous, leaves opposite nearly all trifoliolate, leaflets elliptic shortly acuminate very thick, nerves obscure, cymes compound rigid thick-branched, corolla-tube 1 in. *DC. Prodr.* viii. 310. *J. lanceifolium*, *Roxb. Hort. Beng.* 3?

KHASIA and JAINTIA MTS., alt. 3-5000 ft., frequent; *Griffith, H. f. & T., &c.*

A large climber. *Leaflets* 4 by $1\frac{1}{2}$ in., acute, base obtusely cuneate. *Cymes* compound, trichotomous; bracts $\frac{1}{2}$ in., linear; pedicels $0\frac{1}{2}$ in., thick, still thicker in fruit. *Calyx-teeth* minute. *Corolla* large, white; lobes attaining $\frac{3}{4}$ by $\frac{1}{2}$ in. *Carpels* $\frac{1}{2}$ - $\frac{1}{2}$ in. diam., subglobose.—Easily recognised by the very thick leaflets and stout cymes. This has been identified by Benth. (*Fl. Hongk.* 216) with *J. paniculatum*, *Roxb.*, a Chinese plant, which has the corolla far smaller (tube $\frac{1}{2}$ in., lobes $\frac{1}{4}$ in.), the cyme less stout, the leaflets obtuse.

37. **J. heterophyllum**, *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 99; leaves alternate simple and 3-foliolate, leaflets ovate-lanceolate glabrous, cymes very compound minutely pilose, corolla yellow tube $\frac{1}{2}$ - $\frac{1}{2}$ in. *Wall. Cat.* 2883; *Don Prodr.* 106; *Wall. Pl. As. Rar.* iii. 47, t. 275; *DC. Prodr.* viii. 312; *Loud. Arb.* 655, t. 1274.

NIPAL; *Wallich, Scully.* MISHMEE; *Griffith.*

Scandent. *Leaves* 5 by $2\frac{1}{4}$ in. (lateral leaflets, when present, smaller), base rounded or cordate, somewhat coriaceous, nerves irregular but distinct beneath. *Cymes* mostly terminal, 10-90-flowered, branches alternate; bracts $\frac{1}{2}$ in., linear; pedicels $0\frac{1}{2}$ in.

Calyx small, minutely pubescent, teeth minute. *Corolla-lobes* $\frac{1}{4}$ in., elliptic, acute. *Carpels* $\frac{1}{3}$ by $\frac{1}{4}$ in., ellipsoid.

38. **J. calophyllum**, Wall. Cat. 2889; leaves opposite and alternate subequally 3-foliolate, leaflets broadly ovate glabrous, cymes compound trichotomous minutely pubescent, corolla-tube $\frac{3}{4}$ in. DC. Prodr. viii. 310; J. courtallense, Wight Ic. t. 1252.

SOUTH DECCAN PENINSULA; Nilgherries, Wight, Foulkes; Courtallum, Wight.

Scandent. Leaflets 2 by $1\frac{1}{2}$ in., obtuse or shortly acute, base rounded truncate or subcordate, membranous, shining, nerves slender. Cymes 10–50-flowered, branches alternate and opposite; bracts minute; pedicels 0– $\frac{1}{2}$ in. *Calyx* nearly glabrous, subtruncate. *Corolla-lobes* $\frac{1}{4}$ – $\frac{1}{2}$ in., elliptic, obtuse. *Carpels* $\frac{1}{2}$ in., ellipsoid.

39. **J. dispernum**, Wall. Cat. 2886, and in Roxb. Fl. Ind. ed. Carey & Wall. i. 99, and Pl. As. Rar. iii. 46, t. 274; leaves opposite 3–5-foliolate, leaflets cordate-lanceolate glabrous sub-3-nerved, cymes somewhat dense puberulous or pubescent running into terminal panicles, corolla-tube $\frac{1}{2}$ in. Don Prodr. 106; DC. Prodr. viii. 310; Brand. For. Fl. 312.

TEMPERATE HIMALAYA; alt. 2–8000 ft., from Kashmir to Bhotan, common. KHASIA Mts., alt. 3–6500 ft., common.

Scandent. Terminal leaflet $3\frac{1}{2}$ by $1\frac{1}{2}$ in., acuminate, coriaceous; lateral leaflets 1 or often 2 pairs, smaller. Cymes when axillary 10–20-flowered; upper leaves often gradually reduced to bracts $\frac{1}{5}$ in. long, whence arises a terminal elongate panicle 60–100-flowered; proper bracts $\frac{1}{10}$ in.; pedicels 0– $\frac{1}{2}$ in. *Calyx* glabrous or minutely puberulous, teeth $\frac{1}{25}$ in., short-triangular. *Corolla* white; lobes $\frac{1}{4}$ – $\frac{1}{3}$ in., broadly elliptic. *Carpels* $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid.

40. **J. humile**, Linn.; DC. Prodr. viii. 313; glabrous or puberulous, leaves alternate 3-foliolate or pinnate, leaflets rhomboid oblong coriaceous, cymes somewhat dense, calyx-teeth very short, corolla yellow tube $\frac{1}{2}$ – $\frac{2}{3}$ in. Bot. Reg. t. 350. J. chrysanthemum, Roxb. Hort. Beng. 3, and Fl. Ind. ed. Carey & Wall. i. 98. J. revolutum, Sims in Bot. Mag. t. 1731; Bot. Reg. t. 178; Don Prodr. 106; Wall. Cat. 2887; Lodd. Bot. Cab. t. 966; DC. l. c. 312; Wight Ic. t. 1258; Loud. Arb. 655, t. 1275; Brand. For. Fl. 313; Boiss. Fl. Orient. iv. 42. J. bignoniaceum, Wall. Cat. 2888; DC. l. c. 313. J. Wallichianum, Lindl. in Bot. Reg. t. 1409. J. inodorum, Jacquem.; Dcne. in Jacq. Voy. Bot. 139, t. 143; DC. l. c. 312.—*Jasminum*, n. 3, Hardwicke in As. Research. vi. 349.

SUBTROPICAL HIMALAYA, alt. 2–5000 ft., from Kashmir to Nipal, common. BHOTAN; Griffith. SOUTH INDIA AND CEYLON, alt. 2–6000 ft., common.—DISTRIB. Cabul (cultivated widely).

An erect rigid, ramous shrub. Leaflets 2 by $\frac{3}{4}$ –1 in., or $\frac{1}{2}$ by $\frac{1}{4}$ in., very variable in size, usually smaller when more numerous, acute or obtuse at both ends; nerves inconspicuous. Cymes 10–20-flowered; bracts minute; pedicels $\frac{1}{8}$ – $\frac{3}{4}$ in. *Calyx* glabrous or nearly so; teeth $\frac{1}{16}$ in., triangular-oblong. *Corolla-lobes* $\frac{1}{3}$ by $\frac{1}{5}$ in. *Carpels* $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid.

41. **J. pubigerum**, Don Prodr. 106; softly densely villous, leaves alternate 3–7-foliolate, leaflets ovate or oblong, cymes dense, calyx-teeth $\frac{1}{20}$ – $\frac{1}{10}$ in. densely villous, corolla-tube $\frac{3}{4}$ in. DC. Prodr. viii. 312, excl. var. β .

NORTH-WEST INDIA; Royle.

An erect shrub, in habit closely resembling *J. humile* and perhaps a var. thereof, but there are no examples intermediate in hairiness. Branches dense, villous. Leaflets $1\frac{1}{2}$ –2 in., from suborbicular to oblong, closely villous on both surfaces. Cyme nearly sessile, 15-flowered, very villous. *Calyx-teeth* linear, short but much longer than in *J. humile*.—Perhaps a garden plant.

42. **J. officinale**, Linn.; *DC. Prodr.* viii. 313; glabrous or nearly so, leaves opposite pinnate, leaflets rhomboid oblong acute, calyx-teeth linear long, corolla white tube $\frac{2}{3}$ in. *Bot. Mag.* t. 31; *Brand. For. Fl.* 313; *Boiss. Fl. Orient.* iv. 43.

KASHMIR; alt. 3-9000 ft., frequent.—DISTRIB. Cabul, Persia (often cultivated in India, China, Europe, &c.).

* *Branches* very long, weak, requiring support, hardly scandent. *Cymes* terminal, 1-10-flowered, often leafy; bracts $\frac{1}{2}$ in., linear; pedicels 0- $\frac{2}{3}$ in. *Calyx-teeth* $\frac{1}{2}$ - $\frac{2}{3}$ in., sometimes as long as the corolla-tube, sometimes (in the same plant) not half so long. *Corolla-lobes* $\frac{1}{2}$ by $\frac{1}{4}$ in. *Carpels* $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid.

43. **J. grandiflorum**, Linn.; *DC. Prodr.* viii. 313; glabrous or nearly so, leaves opposite pinnate, leaflets rhomboid-oblong, calyx-teeth linear long, corolla white tube $\frac{2}{3}$ in. *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 98; *Bot. Reg.* t. 91; *Wall. Cat.* 2885; *Wight Ic.* t. 1257; *Brand. For. Fl.* 313; *Kurz For. Fl.* ii. 150, and in *Journ. As. Soc.* 1877, pt. ii. 242. *J. aureum*, *Don Prodr.* 106; *DC. l. c.* 314?—*Rheede Hort. Mal.* vi. t. 52.

SUBTROPICAL NORTH-WEST HIMALAYA, alt. 2-5000 ft.; frequent, wild (fide *Brandis*; elsewhere in India often cultivated).

Branches subpendent, angular, hardly requiring support. *Calyx-teeth* about $\frac{1}{4}$ in., rarely half as long as the corolla-tube. *Corolla-lobes* attaining $\frac{1}{2}$ in.—Otherwise hardly distinguishable from *J. officinale*.

EXCLUDED SPECIES (not British Indian).

J. EXTENSUM, *Wall. Cat.* 2862; *DC. Prodr.* viii. 308; *Kurz For. Fl.* ii. 150.—Birma.

J. LIGUSTRIFOLIUM, *Wall. ms.*; *Bejer Hort. Maurit.* 204, *DC. Prodr.* viii. 305.—Birma, beyond the British frontier.

J. TUBIFLORUM, *Roxb. Cat. Pl.* (1813), *Fl. Ind. ed. Carey & Wall.* i. 96.—This is supposed to be the origin of *J. SOLENANTHUM*, *DC. Prodr.* viii. 306, founded on a specimen cultivated in the Mauritius. Malay Islds.

J. ORLONGUM, *Burm. Fl. Ind.* 6, t. 3, fig. 2; *DC. Prodr.* viii. 312.—Java.

2. NYCTANTHES, Linn. in part.

A small tree. *Leaves* opposite, ovate. *Flowers* in small, sessile, bracteate heads disposed in terminal trichotomous cymes. *Calyx* ovoid-cylindric, subtruncate, finally split or deciduous. *Corolla* salvershaped; tube cylindric, yellow; lobes 4-8, imbricated in bud, patent, white. *Anthers* 2, subsessile near the top of the corolla-tube. *Ovary* 2-celled; style cylindric, very shortly bifid; ovule 1 in each cell, erect, basal. *Capsule* orbicular, compressed parallel to the partition, ripe separating into 2 subdiscoid carpels. *Seed* erect, orbicular, flattened, testa thin, albumen 0; cotyledons flat, radicle inferior.

N. Arbor-tristis, Linn.; *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 85; *Wall. Cat.* 2846; *Bot. Reg.* t. 399; *Lamk. Ill.* t. 6; *DC. Prodr.* viii. 314; *Bot. Mag.* t. 4900; *Bedd. Soc.* 1877, pt. ii. 240. *Parilium Arbor-tristis*, *Gaertn. Fruct.* i. 234, t. 51. *Scabrita scabra*, Linn.; *Vahl Symb.* ii. 28; *Gaertn. Fruct.* ii. 265, t. 138. *S. triflora*, Linn. *Mant.* i. 37.—*Rheede Hort. Mal.* i. t. 21. *Sephalica*, *Jones in As. Research.* iv. 244.

CENTRAL INDIA, alt. 1-3000 ft., common, to Bundelkund and Burdwan; reappearing in the Oudh and North-west Terai (cultivated throughout India, and in both hemispheres).

Erect, 30 ft., but often forming coppice, scabrid-pilose. *Leaves* $4\frac{1}{2}$ by $2\frac{1}{2}$ in., acute, base rounded or cuneate; petiole $\frac{1}{2}$ in., not articulated. *Flowers* 3-7 in each head, sweet-scented; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in., elliptic. *Calyx* $\frac{1}{5}$ in. *Corolla-tube* $\frac{1}{4}$ - $\frac{1}{3}$ in.; lobes $\frac{1}{5}$ - $\frac{1}{4}$ in., elliptic. *Capsule* $\frac{3}{4}$ in. long and broad by $\frac{1}{8}$ - $\frac{1}{6}$ in. thick.

3. SCHREBERA, Roxb.

A tree. *Leaves* opposite, unequally pinnate. *Flowers* in terminal 2-3-chotomous compound cymes; bracts small. *Calyx* tubular-campanulate, irregularly 4-7-lobed. *Corolla* salvershaped; tube cylindric; lobes imbricate in the bud, 4-7, patent. *Stamens* 2, near the top of the corolla-tube; filaments short. *Ovary* 2-celled; style cylindric, shortly 2-lobed; ovules 3-4 in each cell, pendulous from its apex. *Capsule* obovoid, 2-celled, loculicidally 2-valved, woody. *Seeds* pendulous, winged, albumen 0; cotyledons plano-convex or contorted, radicle superior.—DISTRIB. Species 4; 1 Indian, 3 African.

S. swietenoides, Roxb. *Cor. Pl.* ii. t. 101, and *Fl. Ind. ed. Carey & Wall.* i. 109; minutely pubescent or glabrous, leaves 5-7-foliolate, cymes many-flowered, capsule 2 in. pearshaped. *Wight Ill.* t. 162; *Trattin. Arch.* i. 29, with plate; *DC. Prodr.* viii. 675; *Bedd. Fl. Sylv.* t. 248; *Brand. For. Fl.* 305; *Kurz For. Fl.* ii. 156, and in *Journ. As. Soc.* 1877, pt. ii. 243.

TROPICAL HIMALAYA; Kumaon Terai. DECCAN PENINSULA, alt. 1-4000 ft. PEGU; widely diffused, but not abundant.

A tree, 40-50 ft. *Leaflets* 4 by 2 in., ovate, acute, mature glabrous; petiolules $\frac{1}{2}$ in. *Cyme* often 100-flowered; bracts $\frac{1}{2}$ in., linear, or obsolete; pedicels 0- $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in., irregularly 5-lobed, somewhat 2-lipped or subtruncate, minutely pilose or glabrescent. *Corolla* white with brown marks; tube $\frac{1}{4}$ - $\frac{1}{2}$ in.; lobes $\frac{1}{5}$ - $\frac{1}{4}$ in., elliptic. *Anthers* subexserted. *Capsule* 2 by $1\frac{1}{2}$ in., obovoid, obtuse, very woody. *Seeds* usually 3-4 in each cell; cotyledons contorted.

VAR. *pubescens*, Kurz in *Flora*, 1872, p. 398 (sp.); leaves pubescent, cyme villous. —Jubbulpore; Kurz.—A variety of *S. swietenoides* according to Kurz himself in *Journ. As. Soc.* 1877, pt. ii. 243, who says that the capsules are much smaller.

4. SYRINGA, Linn.

Shrubs. *Leaves* opposite, simple or (in cultivation) pinnate. *Panicles* terminal; bracts small or 0. *Calyx* small, campanulate, irregularly toothed or subtruncate, persistent. *Corolla* salvershaped; tube narrow-cylindric; lobes 4, patent, elliptic, induplicate-valvate in bud. *Stamens* 2, near the top of the corolla-tube; filaments short; anthers oblong, laterally dehiscent. *Ovary* 2-celled; style cylindric, included, 2-partite or subsimple; ovules 2 in each cell, pendulous from its apex. *Capsule* oblong, subterete, loculicidally 2-valved. *Seeds* pendulous, compressed, winged, albuminous; cotyledons flat, radicle superior.—DISTRIB. Species 6 (or 11 ex Dcne.), from Eastern Europe to Japan.

1. **S. persica**, Linn.; *DC. Prodr.* viii. 283; leaves 1 in. ovate-lanceolate or lanceolate glabrous, flowers numerous scarcely fascicled. *Bot. Mag.* t. 486; *Wall. Cat.* 2832; *Brand. For. Fl.* 306; *Rev. Hort.* 1878, p. 571-2, with fig.; *Dcne. in Nouv. Arch. Mus.* 2, ii. 42; *Boiss. Fl. Orient.* iv. 38.

WEST KASHMIR; alt. 8000 ft., possibly wild; frequently cultivated in India.—DISTRIB. Persia.

A glabrous shrub. *Leaves* acute, rarely obtuse, sometimes pinnatifid or sub-pinnate, base cuneate; petiole $\frac{1}{2}$ in. *Panicles* compound, glabrous; bracts from $\frac{1}{2}$ in. lanceolate to $\frac{1}{2}$ in. linear, usually inconspicuous; pedicels $\frac{1}{12}$ - $\frac{1}{5}$ in. *Calyx* $\frac{1}{2}$ in., teeth short, triangular. *Corolla* lilac or white; tube $\frac{1}{4}$ in., lobes $\frac{1}{5}$ in. *Capsule* $\frac{1}{2}$ - $\frac{1}{2}$ by $\frac{1}{8}$ in., terete, 4-ribbed.—Persian Lilac.

2. **S. Emodi**, *Wall. Cat.* 2831; leaves 2-5 in. elliptic or ovate glabrous whitened beneath, panicles dense, flowers often fascicled. *Royle Ill.* 267, t. 65, fig. 2; *DC. Prodr.* viii. 283; *Bot. Reg.* 31 (1845), t. 6; *Brand. For. Fl.* 306; *Decne. in Nouv. Arch. Mus.* 2, ii. 40.

SUBALPINE HIMALAYA, alt. 9-12,000 ft., from Kashmir to Kumaon, frequent; *Wallich, Falconer, &c.*

A large shrub. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{2}$ in., acute at both ends, secondary nerves prominently reticulating beneath; petiole $\frac{1}{2}$ - $\frac{2}{3}$ in. *Panicles* dense-flowered; bracts lanceolate, deciduous, usually inconspicuous; pedicels often 0, sometimes $\frac{1}{8}$ in. *Calyx* $\frac{1}{2}$ in., subtruncate, minutely pubescent or nearly glabrous. *Corolla* purplish or white; tube $\frac{1}{4}$ in.; lobes $\frac{1}{2}$ in. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in., terete, 2-grooved, acute.

5. **FRAXINUS**, *Linn.*

Trees. *Leaves* opposite, unequally pinnate. *Inflorescence* terminal or on shortened axillary buds falsely axillary. *Flowers* small, polygamous or dioecious, paniced, racemose or subfascicled; bracts caducous. *Calyx* small, 4-toothed, or 0. *Petals* 0, or 2-4, free or connate in pairs at the base, narrow-oblong, induplicate-valvate in bud. *Stamens* 2, attached near the base of the petals or subhypogynous, filaments short or long. *Ovary* 2-celled; style short or long, bifid; ovules in each cell 2, pendulous from its apex. *Capsule* samaroid, compressed contrary to the partition, produced into a wing, 1-seeded, indehiscent. *Seed* pendulous, oblong; albumen fleshy; cotyledons flat, radicle superior.—**DISTRIB.** Species 30, in the north temperate regions of both hemispheres.

SECT. I. Ornus. *Petals* 2-4. *Flowers* paniced, mostly hermaphrodite.

1. **F. floribunda**, *Wall. Cat.* 2836, and in *Roxb. Fl. Ind. ed. Carey & Wall.* i. 150, and *Pl. As. Rar.* iii. 47, t. 277; leaflets elliptic-lanceolate serrate membranous, secondary nerves reticulated, samaras 1-1 $\frac{1}{2}$ in. very narrow obtuse or emarginate. *Don Prodr.* 106; *DC. Prodr.* viii. 275; *Brand. For. Fl.* 302, t. 37. *F. urophylla*, *Wall. Cat.* 2835; *DC. l. c.* *Ornus floribunda*, *Dietr. Sp. Pl.* i. 249; *Loud. Arb.* 653, t. 1270. *O. urophylla*, *G. Don Gen. Syst.* iv. 57.

TEMPERATE AND SUBALPINE HIMALAYA, alt. 5-11,000 ft., from Kashmir to Bhotan; *Wallich, Griffith, &c.* KHASIA MTS., alt. 4-5000 ft.; *De Silva, H. f. & T.*

A large tree. *Leaflets* 3-4 pairs, 4 by $1\frac{1}{4}$ in., acutely acuminate, serratures close shallow (in the Khasian *F. urophylla* more distant and coarse), glabrous, when young pilose on the nerves beneath; petiolules $\frac{1}{4}$ in. *Pedicels* $\frac{1}{2}$ in., in tufts on the branches of the panicle. *Calyx* $\frac{1}{16}$ - $\frac{1}{24}$ in.; teeth acutely triangular in the typical Kumaon plant, hardly any in the East Himalayan. *Corolla-lobes* $\frac{1}{2}$ - $\frac{1}{2}$ in., linear-oblong. *Filaments* $\frac{1}{12}$ in. *Style* short; stigma long, deciduous. *Samara* $\frac{1}{8}$ in. wide upwards, narrowed to the width of the seed at base.—*F. retusa*, *Champ.* (according to *Benth. Fl. Hongk.* 214), differs in the retuse samara and the subtruncate calyx; but, if these characteristics are specific, the East Himalayan and Khasian examples must be referred to *F. retusa*. The Hongkong *retusa* differs however in the smaller samara, which when fully ripe is less than 1 in. The flowers appear to grow larger westward; in *Wallich's* type example of *F. floribunda* the petals are fully $\frac{1}{2}$ in.

2. **F. Griffithii**, *Clarke*; leaflets elliptic obtusely acuminate entire coriaceous, secondary nerves obscure, samaras 1 in. very narrow obtuse or emarginate.

MISHMEE; "summit of a high mountain," *Griffith* (*Kew Distrib.* n. 3677).

Griffith's example is in ripe fruit, and is perhaps a var. of *F. floribunda*, but differs more from it and from *F. retusa* than these do from each other. The leaflets are very thick, acuminate, rostrate, rounded and sometimes widened at the tip.

SECT. II. **Fraxinaster**. *Petals* 0. *Flowers* polygamous or dioecious. *Pedicels* in fruit racemed or subfascicled.

3. **F. excelsior**, *Linn.*; *DC. Prodr.* viii. 276; leaflets 2-5 pairs all sessile or nearly so, calyx in all the flowers obsolete, pedicels in fruit racemed. *Engl. Bot.* t. 1692; *Lamk. Ill.* t. 858, fig. 1; *Brand. For. Fl.* 303; *Boiss. Fl. Orient.* iv. 39. *F. heterophylla*, *Vahl Enum.* i. 53 (and several others). *F. Moorcroftiana*, *Wall. Cat.* 2834; *DC. l. c.* 275, not of *Brandis*. *Ornus Moorcroftiana*, *G. Don Gen. Syst.* iv. 57.

TEMPERATE WEST HIMALAYA and WESTERN TIBET, alt. 4-9000 ft.; Ladak; *Moorcroft*; from Kashmir, frequent; *Jacquemont*; *Jamu* and *Kishtwar*, *T. Thomson*.—DISTRIB. From the Caucasus westwards to Britain.

A large tree. *Leaflets* 4 by $1\frac{3}{4}$ in., elliptic, acuminate, serrate sessile or very nearly so, midrib beneath glabrous or minutely pubescent. *Flowers* in short racemes, fascicled near the tips of the branches, appearing before the leaves; male and hermaphrodite alike without perianth. *Filaments* very short. *Racemes* in fruit 1-6 in., pendulous; pedicels $\frac{1}{4}$ in.; samaras $1\frac{2}{3}$ by $\frac{1}{4}-\frac{1}{3}$ in., narrowed gradually to both the obtuse ends.—In the absence of flowers *Brandis* hesitates about identifying this with *F. excelsior*, but the tree is plentiful in Kashmir hills and exactly like the common Ash.

4. **F. xanthoxylodes**, *Wall. Cat.* 2833; leaflets 3-5 pairs lowest petiolulate, calyx 0 in the male flowers small in the hermaphrodite, pedicels in fruit in very short racemes or subfascicled. *DC. Prodr.* viii. 275; *Brand. For. Fl.* 304; *Boiss. Fl. Orient.* iv. 41. *F. Moorcroftiana*, *Brand. For. Fl.* 304, not of *Wall.* *Ornus xanthoxylodes*, *G. Don Gen. Syst.* iv. 57.

TEMPERATE HIMALAYA; from Kashmir to Kumaon, alt. 3-9000 ft., abundant in places (*Brandis*).—DISTRIB. Cabul and Beloochistan.

A tree 25 ft., or more often a shrub. *Leaflets* 2 by $\frac{3}{4}$ in., hardly acuminate, crenulate-serrate, glabrous, or often slightly hairy near the base of the midrib beneath; lowest petiolules usually $\frac{1}{8}$ in., distinct, sometimes subobsolete. *Flowers* appearing before the leaves in dense heads, brown from the woolly bracts. *Filaments* short; anthers oblong. *Racemes* in fruit $\frac{1}{2}$ in., or the pedicels $\frac{1}{4}$ in., appearing fascicled. *Calyx* in fruit often $\frac{1}{10}$ in., obtuse, striated lengthwise or not. *Fruit* $1\frac{1}{2}$ by $1\frac{1}{4}$ in.—The Cabul examples of *Griffith* have the samara $\frac{1}{2}$ (sometimes very nearly $\frac{1}{3}$) in. broad. *F. dimorpha*, *Coss & Dur.*, from Algiers, does not appear to differ except in all the leaflets being sessile or very nearly so.

6. **OSMANTHUS**, *Lour.*

Evergreen shrubs or trees, glabrous. *Leaves* opposite, entire or serrate. *Flowers* axillary and terminal, fascicled or in very short racemes; hermaphrodite or polygamous. *Calyx* 4-toothed or -lobed. *Corolla-tube* short or long; lobes 4, elliptic, obtuse, imbricated. *Stamens* 2, subsessile on the corolla-tube. *Ovary* 2-celled; style short or cylindric, 2-lobed or subentire; ovules 2 in each cell, pendulous from its apex. *Drupe* ovoid or globose; endocarp bony or crustaceous. *Seeds* pendulous, usually solitary, albumen fleshy; radicle superior.—DISTRIB. Species 8, extending from the N.W. Himalaya through China and Japan to Western N. America.

The character of this genus is here considerably widened from that of *Gen. Pl.* (ii. 677), to include *O. suavis*, *King*.

1. **O. fragrans**, *Lour. Fl. Cochinch.* i. 29; leaves lanceolate acuminate, calyx minute, corolla less than $\frac{1}{8}$ in. tube very short. *DC. Prodr.* viii. 291. *Olea fragrans*, *Thunb. Fl. Jap.* 18, t. 2; *Roxb. Hort. Beng.* 3, and *Fl. Ind. ed.*

Carey & Wall. i. 104; *Wall. Cat.* 2810; *Bot. Mag.* t. 1552; *Blume Mus. Bot.* i. 316; *Brand. For. Fl.* 309. *O. acuminata*, *Wall. Cat.* 2809; *DC. l.c.* 285.

TEMPERATE HIMALAYA, alt. 4-7000 ft., from Gurwhal to Sikkim; *Wallich, H. f. & T.*, &c. KHASIA MTS.; *Griffith, Lobb.* (According to Brandis only planted in Gurwhal and Kumaon).—DISTRIB. China, Japan, cultivated.

A small tree or a shrub. *Leaves* 7 by 2 in., entire in the wild plants, often serrated in the cultivated, coriaceous; petiole $\frac{2}{3}$ in. *Pedicels* $\frac{1}{4}$ – $\frac{3}{4}$ in., densely fascicled, often in the upper axils, rarely terminal. *Calyx* less than $\frac{1}{10}$ in., 4-toothed. *Corolla* divided nearly to the base; lobes oblong. *Drupe* $\frac{3}{4}$ by $\frac{1}{2}$ in., ellipsoid.—The fruit is only known from the Kumaon tree (a cultivated plant, ex *Brandis*). The cultivated *O. fragrans* is not known to produce fruit elsewhere.

2. *O. suavis*, *King in Herb. Calc.*; leaves lanceolate acute, calyx $\frac{1}{8}$ – $\frac{1}{6}$ in. deeply 4-lobed, corolla-tube $\frac{1}{8}$ – $\frac{1}{4}$ in. *Olea* sp., *Griff. Itin. Notes*, 156, n. 785.

SUBALPINE HIMALAYA; Sikkim and East Nipal, alt. 9-10,000 ft., Tonglo and Kalapookree, *J. D. H., King*; Bhotan *Griffith*.

A bush, 12 ft., or a small tree (*King*). *Leaves* $3\frac{1}{2}$ by 1 in., acute, base cuneate, minutely crenate-serrate, coriaceous; petiole $\frac{1}{2}$ in. *Pedicels* 0– $\frac{1}{4}$ in., in dense axillary and terminal fascicles. *Flowers* polygamous. *Calyx-lobes* oblong, obtuse, microscopically pubescent. *Corolla-tube* $\frac{1}{4}$ in. and upwards (both in the male and hermaphrodite flowers) in *King's* specimens; in *Griffith's* varying from $\frac{1}{10}$ to $\frac{1}{5}$ in. (in flowers male or nearly male); corolla-lobes $\frac{1}{2}$ in., strongly imbricated in the bud. *Anthers* subsessile near the top of the tube, elliptic, acute. *Style* $\frac{1}{8}$ in., tip bifid. *Drupe* $\frac{1}{2}$ – $\frac{3}{4}$ by $\frac{1}{4}$ – $\frac{1}{2}$ in., ellipsoid; endocarp thin, crustaceous. *Albumen* copious, fleshy.—*Griffith* made a long MS. note on this species: it does not agree well with *Osmanthus* to which *King* refers it, but there appears no other place for it unless a new genus.

7. LINOCIERA, Swartz.

Shrubs or trees. *Leaves* opposite, entire. *Flowers* in axillary (rarely terminal) panicles or cymes, often in small terminal fascicles; bracts at the divisions small. *Calyx* small, 4-fid. *Petals* 4, long or short, nearly free, or cohering by pairs, or very shortly connate, induplicate-valvate in bud. *Stamens* 2; filaments short; anthers elliptic, dehiscing on the margin. *Ovary* 2-celled; style short, stigma obscurely bifid or entire; ovules 2 in each cell, pendulous from its apex. *Drupe* ellipsoid (rarely globose); endocarp bony or crustaceous. *Seed* usually solitary, pendulous, testa thin, albumen fleshy plentiful or 0; radicle superior.—DISTRIB. Species 40, in the tropics of both hemispheres.

Olea only differs by having the corolla more distinctly tubular. Many authors place the albuminous species in *Olea*, and the exalbuminous in *Linociera*; but the albumen is unknown in so many species that this arrangement is inconvenient, while it throws into different genera the very long-petaled species closely allied in every point except the albumen.

SECT. I. **Eulinociera.** *Seeds* albuminous (*Petals* elongate).

1. *L. malabarica*, *Wall. Cat.* 2828; leaves broadly oblong hardly acuminate, flowers in small clusters, calyx-lobes grey-pilose, petal $\frac{1}{4}$ in. linear-lanceolate connected in pairs, ovary pilose. *DC. Prodr.* viii. 297; *Wight Ic.* t. 1246; *Dalz. & Gibs. Bomb. Fl.* 179. *Chionanthus malabarica*, *Bedd. For. Man.* 154, and *Fl. Sylv.* t. 239, fig. in corner.

DECCAN PENINSULA; from the Concan, *Dalzell*, to Courtallum, *Wight*; frequent.

A small tree. *Leaves* 4 by $1\frac{3}{4}$ in., subobtusely or very suddenly narrowed to an obtuse apex, base cuneate, glabrous, coriaceous, nerves obscure; petiole $\frac{1}{4}$ in. *Peduncles* short, axillary, fascicled, numerous, grey-pilose, sparingly panicked; bracts $\frac{1}{30}$ in., ovate, grey-pilose. *Calyx-lobes* $\frac{1}{24}$ in., ovate, grey-pilose on the back.

Petals white. *Style* shortly bifid. *Drupe* $\frac{1}{3}$ – $\frac{1}{2}$ by $\frac{1}{4}$ – $\frac{1}{3}$ in., ellipsoid; endocarp thin, crustaceous. *Testa* thin, albumen plentiful.

2. ***L. Wightii***, *Clarke*; leaves elliptic acuminate or rostrate, flowers in small clusters, calyx-lobes glabrous on the back ciliate, petals $\frac{1}{2}$ in. linear-lanceolate connected in pairs often for one-third their length, ovary glabrous. *Olea linocieroides*, *Wight Ic. t.* 1241; *Bedd. For. Man.* 152.

DECCAN PENINSULA; Courtallum; *Wight*. Tinnevely Ghauts, alt. 1–3000 ft., *Beddome*.

A small tree. *Leaves* 4 by $1\frac{1}{2}$ in., base obtusely cuneate, coriaceous, nerves obscure or somewhat plainly inarching; petiole $\frac{1}{2}$ in. *Peduncles* short, axillary, clustered, glabrous, sparingly panicle; bracts $\frac{1}{30}$ in., ovate, glabrous. *Calyx-lobes* $\frac{1}{4}$ in., ovate. *Drupe* $\frac{1}{3}$ – $\frac{1}{2}$ by $\frac{1}{4}$ – $\frac{1}{3}$ in., ellipsoid; endocarp thin, crustaceous. *Testa* thin, albumen plentiful.—Hardly differs from *L. malabarica*, but by the points specified in the diagnosis. *Wight's Herbarium* contains the ripe fruit, which is as depicted by him.

SECT. II. ***Ceranthus***. *Seeds* exalbuminous. (Several species, in which the seed is not known may prove to be *Oleas*.)

3. ***L. purpurea***, *Vahl Enum. i.* 47; leaves obovate-oblong obtuse coriaceous, panicles very small closely pubescent, petals 4 subequal $\frac{1}{10}$ in., drupe $\frac{1}{2}$ – $\frac{3}{4}$ in. ellipsoid. *Wall. Cat.* 2829; *DC. Prodr. viii.* 297. *Chionanthus zeylanica*, *Linn.*; *Thwaites Enum.* 188; *Roxb. Fl. Ind. ed. Carey & Wall. i.* 107; *Bedd. For. Man.* 154. *Thouinia nutans*, *Linn. f. Suppl.* 89.

CEYLON; common in the hotter parts of the island.

A small tree; branchlets minutely pubescent. *Leaves* $2\frac{1}{2}$ by 1 in., tip very obtuse or rounded, base attenuate, nerves slightly impressed beneath distinctly inarching; petiole $\frac{1}{2}$ in. *Panicle* $\frac{1}{2}$ –1 in., somewhat dense, grey-pubescent; lower bracts $\frac{1}{2}$ in., lanceolate, upper $\frac{1}{30}$ in., ovate. *Calyx* very small. *Ovary* glabrous.

VAR. *dichotoma*, *Wall. Cat.* 2825 (sp.); leaves elliptic or oblong subacute at both ends very coriaceous nerves less distinct, panicles 1–4 in. lax nearly glabrous, petals $\frac{1}{2}$ – $\frac{3}{4}$ in. *DC. Prodr. viii.* 297.—Ceylon.

4. ***L. albidiflora***, *Thwaites Enum.* 189; leaves elliptic shortly suddenly rostrate coriaceous, panicles small nearly glabrous, petals 4 subequal $\frac{1}{6}$ – $\frac{1}{4}$ in. and upwards, drupe $\frac{1}{2}$ – $\frac{3}{4}$ in. *Chionanthus axillaris*, *R. Br. Prodr.* 523 ?.

CEYLON; alt. 1–3000 ft., abundant, *Thwaites*.—DISTRIB. Australia.

A small tree; nearly glabrous. *Leaves* $2\frac{1}{2}$ by $1\frac{1}{2}$ in.; nerves beneath slightly impressed, distinctly inarching. *Panicles* $\frac{1}{2}$ –1 in.; bracts $\frac{1}{30}$ in., ovate, minutely ciliate-pubescent. *Calyx* $\frac{1}{20}$ in., glabrous; lobes minutely ciliate-pubescent. *Petals* pale yellow (*Thwaites*). *Ovary* glabrous.—This seems hardly specifically distinct from *L. purpurea* if in that species we include the larger flowered *L. dichotoma*. *Beddome (For. Man. 154)* reduces it with confidence to *L. malabarica*; but (apart from the presence of albumen) *L. malabarica* has the flowers in small capitate clusters at the extremities of peduncles much longer than the heads themselves. The example communicated from Australia by F. Mueller appears identical with the Ceylon specimens; F. Mueller is very probably right in supposing it to have been *Chionanthus axillaris*, R. Br., but the diagnosis of Brown is very short.

VAR. *rostrata*, *Thwaites Enum. Pl. Zeyl.* 189 (sp.); fruit 1 by $\frac{1}{2}$ in.—Ceylon; Hinidoon Corle, *Thwaites*.—Except in the somewhat larger fruit, *Thwaites' examples* of this appear identical with his *L. albidiflora*.

5. ***L. leprocarpa***, *Thwaites Enum.* 189; leaves oblong acuminate coriaceous, panicles small minutely glandulose-pilose, drupe ovoid large. *Chionanthus leprocarpa*, *Bedd. For. Man.* 154.

CEYLON; Central Province, alt. 3–4000 ft., rather rare, *Thwaites*.

Appears closely allied to *L. purpurea*. *Leaves* $5\frac{1}{2}$ by $1\frac{1}{2}$ in., base narrowly cuneate,

very thick; nerves beneath somewhat obscure, inarching. *Fruit* 1 by $\frac{2}{3}$ in., rough, blotched, fide *Thwaites*, but when dry does not differ in this respect from the neighbouring species.—*Thwaites's* example is not in flower; nor does *Thwaites* explicitly state that the seed is exalbuminous.

VAR. *courtallensis*; leaves elliptic-oblong subacute hardly acuminate drying reddish. *Chionanthus courtallensis*, *Bedd. For. Man.* 154.—*Courtallum*, *Wight*. Tinnevely Ghats; *Beddome*.—A good-sized tree (*Beddome*), glabrous. *Leaves* $7\frac{1}{2}$ by $2\frac{1}{2}$ in., nerves beneath subobscurely inarched. *Panicles* $\frac{1}{2}$ –1 in., usually reduced to 3–5 subsimple racemes fascicled in each axil, glabrous. *Petals* scarcely $\frac{1}{8}$ in. *Drupe* unknown.—The flowers of this have been in the Herbarium matched with the fruit of *L. leprocarpa*; the identification must be uncertain until further material is received.

6. *L. intermedia*, *Wight Ic. t.* 1245; glabrous, leaves elliptic-oblong acute at both ends secondary nerves prominent, panicles compound somewhat dense, petals $\frac{1}{8}$ in. narrowly oblong, drupe $\frac{2}{3}$ by $\frac{1}{2}$ in. *Chionanthus intermedia*, *Bedd. Fl. Sylv. t.* 239.

NILGHERRIES, alt. 1–6000 ft.; *Wight, Hohenacker, &c.* **ANAMALLAYS**; alt. 5000 ft., *Beddome*.

A large tree, *Beddome*, more often small. *Leaves* $6\frac{1}{2}$ by $2\frac{1}{2}$ in., chartaceous; nerves 10 pairs, reticulations many prominent; petiole $\frac{1}{2}$ –1 in. *Panicle* 2–5 in.; branches compressed; bracts $\frac{3}{10}$ in., ovate; pedicels often hardly any. *Calyx* $\frac{1}{10}$ in., lobes ovate glabrous. *Petals* 4, shortly united at the base, obscurely disposed in pairs. *Ovary* glabrous.—*Chionanthus picrophloia*, *F. Muell. Fragm. iii.* 139, t. 24, does not appear to differ; the inflorescence in the picture is subcapitate, but in the specimens is densely paniculate, as in *L. intermedia*.

VAR. *Roxburghii*; panicles smaller, drupes scarcely $\frac{1}{2}$ in., seed exalbuminous. *Olea paniculata*, *Roxb. Catal. Pl.* (1813), and in *Fl. Ind. ed. Carey & Wall.* i. 104. *O. Roxburghii*, *Spreng. Syst. i.* 34; *Wight Ic. t.* 735, not of Wall. *O. Roxburghiana*, *Roem. et Sch. Mant. i.* 77; *DC. Prodr. viii.* 286; *Dalz. & Gibs. Bomb. Fl.* 159; *Bedd. For. Man.* 153.—Orissa and Circars, *Roxburgh*. Chota Nagpore, alt. 2–5000 ft.; *J. D. H., &c.* Western Ghats; *Dalzell, Beddome, &c.*—Sumbulpore; *Griffith*. Siwaliks; *Edgeworth*. At 4500 ft. alt. this is a gnarled tree 25 ft. high. The examples of *Griffith* and *Edgeworth* have narrower (obovate-lanceolate) leaves. *Linociera*? oblonga, *Wall. Cat.* 2843, from Ava, appears the same, but the example consists of very young fruits and leaves only.

7. *L. pauciflora*, *Clarke*; glabrous, leaves large elliptic-oblong somewhat acuminate coriaceous, panicles very small. *Olea pauciflora*, *Wall. Cat.* 2812, letter a only; *DC. Prodr. viii.* 288, partly.

PENANG; *Wallich*.

Leaves $7\frac{1}{2}$ by $2\frac{1}{2}$ in., shortly obtusely acuminate, base cuneate; nerves 11 pairs, subprominent beneath, secondary nerves obscure; petiole $\frac{1}{4}$ in. *Panicles* reduced to subsimple erect spikes 1 in. *Flowers* in bud, seem likely to be small. *Drupe* not seen.—This could hardly be distinguished from *L. leprocarpa*, var. *courtallensis*, but by the subsolitary racemes. If, however, as *Wallich* supposed, the next variety is really its young fruit, it must be altogether different.

VAR. *evolutior*; nerves more distinct, petioles 1– $1\frac{1}{2}$ in., panicles in young fruit 2–6 in. compound lax, branches stout angular, pedicels thickened. *L. pauciflora*, *Wall. Cat.* 2812, b only.—Penang; *Wallich*. Tenasserim or Andamans, *Helfer*.—The seeds are immature but probably exalbuminous.

VAR. *palembanica*; leaves as of *L. pauciflora*, *Wall. a*, panicles 2–5 in. compound, petals $\frac{1}{10}$ in. elliptic-oblong, fruits not seen. *Chionanthus palembanica*, *Miq. Fl. Ind. Bat. Suppl.* 558; *Kurz For. Fl. ii.* 159, and in *Journ. As. Soc.* 1877, pt. ii. 243.—Andamans; *Kurz, Helfer*.—*Kurz* says the drupe is 1– $1\frac{1}{2}$ in., ovoid to oblong. In one branch of *Helfer's* the petioles vary from $\frac{1}{4}$ to $\frac{3}{4}$ in. The upper bracts are sometimes $\frac{1}{2}$ in., subfoliaceous, both in *Miquel's* and *Helfer's* examples.

8. ***L. terniflora***, Wall. Cat. 2845; leaves oblong acuminate coriaceous, nerves inarching distinct on both surfaces, flowers in small heads in small pubescent panicles, petals $\frac{1}{2}$ – $\frac{1}{6}$ in. united in pairs, ovary pilose. *DC. Prodr.* viii. 297. *Olea terniflora*, Kurz For. Fl. ii. 157, and in *Journ. As. Soc.* 1877, pt. ii. 244.

BIRMA; on the Saluen, Wallich; Pegu—Yomah, Kurz.

Innovations fulvous-pilose. Leaves $6\frac{1}{2}$ by 2 in., sometimes more elliptic, glaucous-green, narrowed at both ends, apex obtuse; nerves 3 pairs, impressed above; petiole $\frac{1}{2}$ in. Panicles 1–3 in., divaricate with few heads, grey-pubescent; heads often 3-flowered. Calyx $\frac{1}{5}$ in.; lobes broad, patent, thin, ciliate-pubescent. Petals united about one-third their length. Ovary minutely pilose; style twice as long as the ovary, pilose below. Drupe $\frac{1}{2}$ by $\frac{1}{4}$ in.; seed exalbuminous in Kurz's own example, who nevertheless removes the species to *Olea*.—Setting aside the albumen, the species appears closely allied to *Linociera malabarica*.

VAR. *acuminata*, Wall. Cat. 2844 (sp.); primary nerves obscure somewhat impressed beneath not prominently inarched, petals united in pairs for half their length, ovary densely pilose, style much shorter than the ovary. *DC. Prodr.* viii. 298. *Linociera* sp. n. 6, *Herb. Ind. Or. H. f. & T.*—Birma; on the Saluen, Wallich; Moulemein; Griffith (Kew Distrib. n. 3689); Chittagong; *H. f. & T.*

9. ***L. insignis***, Clarke; leaves large obovate-lanceolate, panicles compound pubescent, petals 4 nearly free oblong-linear. *Chionanthus insignis*. *Miq. Fl. Ind. Bat. Suppl.* 559. *Ch. montanus*, Kurz For. Fl. ii. 159, and in *Journ. As. Soc.* 1877, pt. ii. 243, not of Blume.

TENASSERIM, Helfer (Kew Distrib. n. 3688); Martaban, alt. 1–2000 ft., rather rare, Kurz.—DISTRIB. Sumatra.

A small tree (Kurz); innovations ashy-pubescent. Leaves $9\frac{1}{2}$ by $2\frac{3}{4}$ in., shortly acuminate, base attenuated, glabrous; nerves 12 pairs, prominent beneath, secondary obscure; petiole $1\frac{1}{4}$ in. Panicles 2–4 in., ashy-pubescent; bracts $\frac{1}{2}$ in., linear, some $\frac{3}{4}$ in., subfoliaceous, often added; pedicels often hardly any. Calyx $\frac{1}{5}$ in., pubescent; lobes deep, almost acute. Petals $\frac{1}{2}$ – $\frac{1}{6}$ in., oblong, margins much incurved. Ovary microscopically pilose; style as long as the ovary, terminated by 2 short lobes. Drupe 1 in. (Kurz); the fruit in the examples seen is very imperfectly ripe, but seems likely to be larger.—*Chionanthus macrocarpa*, Blume (Mus. Bot. i. 319), has drupes $1\frac{1}{2}$ by $\frac{3}{4}$ in. and obtuse petals, but the leaves and inflorescence are exceedingly like the present plant. Kurz supposes the Tenasserim plant to be *Chionanthus montana*, Blume (altered to *Ch. monticola* in Mus. Bot. i. 317), but the plentiful examples communicated show this to be a totally different species with much smaller leaves and very small glabrous panicles.

10. ***L. minutiflora***, Clarke; leaves obovate-oblong subacute, panicles compound, calyx nearly glabrous, petals $\frac{1}{2}$ in. free narrowly oblong. *Chionanthus minutiflora*, Kurz For. Fl. ii. 159, and in *Journ. As. Soc.* 1877, pt. ii. 243.

MARTABAN HILLS; east of Tounghoo, Brandis.

Leaves $4\frac{1}{2}$ by $1\frac{1}{2}$ in., base cuneate, coriaceous; nerves few, slender, prominent beneath, secondary obscure; petiole $\frac{1}{4}$ in. Panicles 3–4 in., minutely ashy-pubescent, branches in flower long slender; bracts $\frac{1}{16}$ in., linear; pedicels hardly any. Calyx $\frac{1}{16}$ in.; lobes ovate, glabrous or puberulous. Ovary glabrous; style very short. Drupe not seen.—The examples from Kurz's herbarium are very imperfect; they appear closely allied to *L. laxiflora*, Blume (common in Malaya), which has, however, a very pubescent calyx.

11. ***L. macrophylla***, Wall. Cat. 2826; leaves large long-petioled oblong acute distinctly nerved, panicles compound dense less than one-third as long as the leaves glabrous, pedicels 0– $\frac{1}{2}$ in., petals $\frac{1}{2}$ in. nearly free oblong, drupe $\frac{3}{4}$ by $\frac{1}{2}$ in. *DC. Prodr.* viii. 297. *Chionanthus macrophylla*, Kurz For. Fl. ii. 159, and in *Journ. As. Soc.* 1877, pt. ii. 243.

SILHET; *Wallich*. ASSAM; *Griffith, Jenkins*. KHASIA; *Griffith*.

A small tree; glabrous or nearly so. *Leaves* 8 by $2\frac{1}{4}$ in. (sometimes $9\frac{1}{2}$ by 4 in.), acute at both ends, chartaceous, often punctate on the upper surface; nerves 10–13 pairs, secondary distinct; petiole 1– $1\frac{1}{4}$ in. *Panicles* 1– $1\frac{1}{2}$ in. in the type specimens, 1–4 in. in cultivated ones; bracts minute. *Calyx* glabrous. *Petals* obtuse, margins little incurved. *Ovary* glabrous; style short. *Fruit* elongate ellipsoid, on greatly thickened pedicels; endocarp crustaceous; testa thin; albumen 0.

VAR. attenuata; panicle more lax, in fruit slenderer with pedicels less thickened. *L. tenuiflora*, *Wall. Cat.* 2827; *DC. Prodr.* viii. 298. *Olea attenuata*, *Wall. Cat.* 2839; *DC. l. c.* 286. *Chionanthus ramiflora*, *Roxb. Hort. Beng.* 3, and *Fl. Ind. Carey & Wall.* i. 106; *Benth. Fl. Austral.* iv. 301. *Phillyrea ramiflora*, *Roxb. Ic. Ined.*—Pegu and Tenasserim; *Wallich, Griffith*. Andamans; *Kurz*.—DISTRIB. Ava, Malaya, Tropical Australia.—This has been placed as a variety of *L. intermedia*, Wight, and it does not greatly differ but by the smaller flowers and the much slenderer panicle.—*L. ramiflora*, *Wall. Cat.* 2824 (*DC. l. c.* 297), cultivated specimen, is remarkable for the intricately divaricately ramous panicle, the pedicels being nearly all $\frac{1}{2}$ to $\frac{1}{4}$ in. The whole series only differs in the development of the panicle, and (slightly) in the size of the flowers; and perhaps *L. intermedia*, *macrophylla* and *ramiflora* (with their varieties) form but one species, extending over Southern and Eastern India, Malaya and Australia.

SPECIES NOT SEEN.

L. COTINIFOLIA, *Vahl*; *DC. Prodr.* viii. 297; is founded on *Pluk. Alm.* t. 241, fig. 4, which represents a Ceylon shrub with leaves very villous beneath and 5-merous flowers, and is therefore not of the genus.

L. ? LORANTHIFOLIA, *Wall. Cat.* 2842, from Amherst, has only twigs and a few leaves which resemble those of *Salvadora persica*.

L. MUELLERI, *Van Heurck Pl. Nov.* 124, collected by Griffith near Malacca, is perhaps *Bouea microphylla*, *Griff.*; *J. D. Hook. Fl. Brit. Ind.* ii. 21. (It has 4 stamens).

CHIONANTHUS ? GHIERI, *Gaertn.*; *DC. Prodr.* viii. 295; from Ceylon, of which the leaves and flowers are unknown, remains obscure.

NOTELEA POSUA, *Don Prodr.* 107; leaves opposite elliptic-oblong acuminate, peduncles axillary drooping clustered 1-flowered, calyx-teeth equal, stigma capitate.

NIPAL; Narainhetty, *Hamilton* (fide *Don*). Probably a *Linociera*.

Leaves 4–5 by $1\frac{1}{2}$ –2 in. *Petals* 4, ovate united at the base in pairs by the filaments. *Drupe* with subchartaceous endocarp.—Copied from *Don*.

8. *OLEA*, *Linn.*

Trees or shrubs. *Leaves* opposite, entire or toothed. *Flowers* small, hermaphrodite diceious or polygamous, in axillary or terminal panicles; bracts minute. *Calyx* small, 4-toothed or 4-lobed. *Corolla-tube* short; lobes 4, induplicate-valvate, or 0. *Stamens* 2, on the corolla-tube or subhypogynous, filaments short; anthers oblong. *Ovary* 2-celled; style short, stigma ovate or shortly 2-lobed; ovules 2 in each cell, subpendulous or attached laterally to the septum. *Drupe* ellipsoid or subglobose, endocarp bony or crustaceous, usually 1-seeded. *Seed* pendulous, albumen fleshy; radicle superior.—DISTRIB. Species 35 in the Old World, from the North Temperate Zone to South Africa and New Zealand.

1. *O. cuspidata*, *Wall. Cat.* 2817; leaves oblong, nerves beneath entirely obscured by felted ferruginous scales, panicles short axillary, flowers bisexual corolloid, ovary glabrous, drupe $\frac{1}{2}$ in. ellipsoid. *DC. Prodr.* viii. 285; *Brand. For. Fl.* 307, t. 38; *Boiss. Fl. Orient.* iv. 36. *O. ferruginea*, *Royle Ill.* 257, t. 65, fig. 1.

NORTH WEST HIMALAYA and KASHMIR, alt. 2–6000 ft., frequent. DISTRIB. Cabul, Beloochistan.

A tree, 30 ft., glabrous, not spinous. *Leaves* $2\frac{1}{4}$ by $\frac{3}{4}$ in., narrowed at both ends, usually obtuse or subacute, sometimes cuspidate, very coriaceous; midrib prominent beneath, scales of the lower surface circular peltate closely toothed; petiole $\frac{1}{2}$ – $\frac{1}{3}$ in. *Panicles* 1–2 in., minutely scaly; flowers perfect, but many with reduced ovary are functionally male. *Calyx* $\frac{1}{10}$ in., subtruncate, glabrous. *Corolla* deeply divided; lobes $\frac{1}{10}$ in., elliptic, obtuse. *Endocarp* bony.—This was supposed a var. of the Wild Olive by Dr. Stewart; Brandis says it differs by the more lax inflorescence, the upper surface of the leaves glossy, not dull grey, the lower surface reddish instead of white, smaller fruit, the absence of spines, and a more distinctly marked heartwood. The cuspidation of the leaves, distinct in Wallich's specimen, and relied on by Boissier as a diagnostic mark, proves variable in the Indian plant.

2. *O. glandulifera*, Wall. *Cat.* 2811; leaves rhomboid-lanceolate entire, nerve-axils glandular, secondary nerves distinctly reticulating, panicles mostly terminal glabrous or nearly so, flowers bisexual corolloid, ovary glabrous or nearly so, drupe $\frac{1}{2}$ in. ovoid. *DC. Prodr.* viii. 285; *Wight Ic.* t. 1238; *Bedd. Fl. Sylv.* t. 238; *Brand. For. Fl.* 309, excl. syn.

NORTH-WEST HIMALAYA, alt. 2–6000 ft., from Kashmir to Nipal. Mts. of SOUTH INDIA; *Wight, Beddome, &c.*

A tree, 20–60 ft.; glabrous or nearly so. *Leaves* 4 by 2 in., acuminate, base cuneate, margin undulate; petiole $\frac{2}{3}$ in. *Panicles* nearly always terminal, some smaller in the penultimate axils sometimes added, 2–5 in. diam., broad, compound; pedicels $0\frac{1}{2}$ in. *Calyx* minute, 4-lobed, glabrous or obscurely pubescent on the margin. *Corolla* deeply divided, lobes $\frac{1}{2}$ in., elliptic, obtuse. *Anthers* broad, large. *Ovary* glabrous or (fide *Wight*) minutely hairy. *Endocarp* bony.

3. *O. dioica*, Roxb. *Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 105; leaves elliptic-lanceolate toothed or entire coriaceous, secondary nerves obscure, panicles axillary glabrous, flowers dioecious males with corolla females without, ovary glabrous or with hard tomentum, drupe $\frac{1}{2}$ – $\frac{2}{3}$ in. ellipsoid often subacute. *Wall. Cat.* 2814; *Wight Ill.* t. 151; *DC. Prodr.* viii. 286; *Dalz. & Gibs. Bomb. Fl.* 159; *Bedd. For. Man.* 154; *Kurz For. Fl.* ii. 157, and in *Journ. As. Soc.* 1877, pt. ii. 244. *O. Wightiana*, Wall. *Cat.* 2815. *O. Heyneana*, Wall. *Cat.* 2823; *DC. Prodr.* viii. 288.

In the lower hills, from ASSAM and BENGAL throughout the DECCAN PENINSULA; common. CHITTAGONG HILLS; *Roxburgh*.

A tree 30–60 ft.; glabrous. *Leaves* $5\frac{1}{2}$ by $2\frac{1}{2}$ in., base cuneate; nerves 10 pairs, elevated beneath; petiole $\frac{1}{2}$ in. *Panicles* 2–6 in., very compound, shining (female usually smaller); pedicels $0\frac{1}{2}$ in. *Calyx* minute; lobes ovate, glabrous or margin obscurely pubescent. *Corolla* of the males deeply lobed; lobes $\frac{1}{10}$ in., elliptic, obtuse; of the females wanting in the examples seen (*Kurz* says present). *Endocarp* crustaceous.—*O. Wightiana*, Wall., is a form from Assam with large leaves but shorter subglobose drupes; in the typical *O. dioica* the drupes are often subacute.

4. *O. maritima*, Wall. *Cat.* 2813; branchlets hairy, leaves elliptic-lanceolate entire or toothed coriaceous, secondary nerves obscure, panicles axillary hairy, flowers dioecious, drupe $\frac{1}{2}$ in. globose. *G. Don Gen. Syst.* iv. 49; *DC. Prodr.* viii. 288. *Pachyderma javanicum*, Blume *Byd.* 682. *Stereoderma javanicum*, Blume; *DC. l. c.* 290. *Tetrapilus brachiatus*, Lour. *Fl. Cochinch.* 611. *Notelæa Zollingeriana*, Teijs. & Binn. *Cat. Hort. Bog.* 122.

MALACCA and SINGAPORE; Wallich, Griffith, &c., frequent.—DISTRIB. Malaya, Cochinchina.

A small tree. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{2}$ in., base cuneate, glabrous; petiole $\frac{1}{2}$ in. *Panicles* 1–4 in., compound; bracts minute or a few $\frac{1}{2}$ – $\frac{3}{4}$ in. narrow lanceolate, caducous; pedicels $0\frac{1}{2}$ in. *Calyx* minute; lobes ovate, pubescent. *Corolla* (in the males) $\frac{1}{12}$ – $\frac{1}{10}$ in., divided deeply; lobes elliptic, obtuse; of females not seen. *Endocarp* somewhat bony.—Without fruit, this greatly resembles *Olea dioica*, but the branchlets

and panicles have many minute soft spreading hairs. Wight supposed it to be *Olea microcarpa*, Vahl (i.e. *Phillyrea indica*, Lour. *Fl. Cochinch.* 19), but Loureiro says his plant had terminal inflorescence, so that it should more probably be one of the globose-fruited *Ligustrums* allied to (or identical with) a Khasia or Chinese species.

5. *O. dentata*, Wall. Cat. 2840; branchlets hairy, leaves oblong-lanceolate toothed or entire coriaceous, secondary nerves obscure, panicles axillary large hairy, flowers dioecious, corolla in both sexes campanulate shortly 4-fid. DC. *Prodr.* viii. 286; Kurz *For. Fl.* ii. 157, and in *Journ. As. Soc.* 1877, pt. ii. 245.

BRITISH BIRMA; Griffith and Helfer (Kew Distrib. n. 3690), Parish, &c.; Martaban and Tenasserim, alt. 2–3000 ft., frequent (Kurz).

A tree, 40–60 ft. (Kurz). Leaves 5 by $1\frac{1}{4}$ in., base cuneate or subobtusate, glabrous or sometimes hairy beneath; nerves slender, often subimpressed beneath; petiole $\frac{1}{4}$ in. Panicles (both male and female) 3–6 in., brachiate; bracts small, linear or $\frac{1}{2}$ – $\frac{3}{4}$ in., very narrow, hairy; pedicels $0\text{--}\frac{1}{16}$ in., with flowers in threes. Calyx minute; lobes ovate, pubescent. Corolla $\frac{1}{4}$ – $\frac{1}{2}$ in., almost tubular-campanulate, subequally 4-lobed. Ovary glabrous; style 0; stigma subtruncate. Drupe not seen.—This plant has been mixed with *O. maritima*, from which it hardly differs but by the campanulate shortly-divided corolla, and with *Linociera ternifolia*, in which the corolla is nearly divided into 2 bifid petals and the panicle much smaller.

VAR. *salicifolia*, Wall. Cat. 2821 (sp.); panicles much less hairy, pedicels $\frac{1}{8}$ – $\frac{1}{6}$ in. subumbelled, corolla $\frac{1}{8}$ in., drupes $\frac{1}{2}$ by $\frac{1}{4}$ in. narrow ellipsoid, endocarp bony, seed albuminous. DC. *Prodr.* viii. 286.—Khasia; Wallich, Griffith; at the Bor-pani, H. f. & T.—This is placed with *O. dentata* by Kurz, the leaves are remarkably similar, and one of Griffith's Mergui examples in flower seems nearer the Khasia *O. salicifolia* than the Birma *O. dentata*; but the seeds of *O. dentata* remain unknown, and may prove to be exalbuminous, when the species will stand near *Linociera terniflora*.

6. *O. Gamblei*, Clarke; leaves oblong acuminate entire coriaceous, panicles axillary obscurely pubescent, flowers dioecious both males and females without corolla, drupes $\frac{3}{4}$ by $\frac{1}{2}$ in.

TROPICAL SIKKIM HIMALAYA; J. D. H.; near Punkabari, Gamble.

Nearly glabrous. Leaves $4\frac{1}{2}$ by $\frac{1}{2}$ in., parallel-sided, long acuminate, base cuneate; nerves obscure; petiole $\frac{1}{4}$ in. Panicles $2\frac{1}{2}$ in., brachiate; bracts minute; pedicels $0\text{--}\frac{1}{8}$ in. Calyx less than $\frac{1}{30}$ in., subtruncate. ciliate. Anthers subsessile, oblong, large. Ovary glabrous; style short, stigma short bifid. Fruit sometimes nearly 1 by $\frac{1}{2}$ in.; endocarp bony. Seed albuminous.—One or two hermaphrodite flowers (without corolla) are seen at the base of the female panicles. The New Zealand *O. apetalæ* has broader less acuminate leaves and shorter, far less compound, subracemose panicles.

7. *O. polygama*, Wight Ic. tt. 1239, 1240; glabrous, leaves broadly elliptic suddenly shortly acuminate coriaceous, secondary nerves obscure, panicles axillary, flowers male and hermaphrodite all petaline. Bedd. *For. Man.* 154. O. Gardneri, Thwaites Enum. 188; Bedd. *For. Man.* 154.

NILGHERRIES; Sispara, Gardn.; Wight. CEYLON; alt. 7000 ft., Walker, Thwaites.

A small tree. Leaves $2\frac{1}{2}$ by $1\frac{1}{4}$ in., obtuse, mucronate, base cuneate; nerves 8 pairs, subimpressed beneath; petiole $\frac{1}{2}$ in. Panicles 1– $2\frac{1}{2}$ in.; male on one tree, female-hermaphrodite on another; bracts inconspicuous; pedicels $\frac{1}{10}$ – $\frac{1}{8}$ in., subumbelled. Flowers as of *O. dioica*. Drupe not seen.—This differs from *O. dioica* slightly; the leaves dry reddish with subincurred margins, the nerves are not elevated beneath the panicles are smaller; it looks like a high-level, somewhat stunted *O. dioica*.

9. **LIGUSTRUM**, Linn.

Shrubs or trees; branchlets often lenticellate. *Leaves* opposite, entire, glabrous when mature, except in *L. nepalense*, var. *vestita*. *Panicles* terminal, sometimes with foliaceous bracts in the lower part, flowers white or nearly so. *Calyx* small, truncate or shortly 4-toothed. *Corolla* funnelshaped, tube long or short; lobes 4, induplicate-valvate. *Stamens* 2, on the corolla-tube, filaments short; anthers oblong or rounded. *Ovary* 2-celled; style longish, stigma subclavate oblong hardly 2-fid. *Drupe* 1-3-seeded; endocarp chartaceous or thin. *Albumen* fleshy; radicle superior.—**DISTRIB.** Species 25, from Europe throughout Asia to Australia.

* *Drupe longer than broad.*

1. ***L. robustum***, Blume *Mus. Bot.* i. 313; branches very lenticellate, leaves elliptic narrowed at both ends, nerves slender irregular, panicle large hairy, corolla-tube as long as the calyx, drupe $\frac{1}{2}$ by $\frac{1}{3}$ in. *Dcne. in Nouv. Arch. Mus.* 2, ii. 29, not of Brand. or Bedd. *L. pubescens*, Wall. *Cat.* 2841; *Pl. As. Rar.* iii. 44; *DC. Prodr.* viii. 294. *L. punctatum*, Griff. *Notul.* iv. 741. *Phillyrea robusta*, Roxb. *Hort. Beng.* 3, and *Fl. Ind. ed. Carey & Wall.* i. 101. *Olea robusta*, Wall. *Cat.* 2822; *Kurz For. Fl.* ii. 158, and in *Journ. As. Soc.* 1877, pt. ii. 244. *Visiania robusta*, DC. l. c. 289; *Deless. Ic. Sel.* v. t. 44. *V. sumatrana*, Mig. *Fl. Ind. Bat.* ii. 549.

EAST BENGAL PLAIN; Silhet, Dacca, Chittagong, &c.; abundant near the base of the hills. **PEGU**; *Kurz*.—**DISTRIB.** Birma, Malaya.

A tree, attaining 60 ft.; usually a large shrub. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{2}$ in., membranous; nerves somewhat distant, difficult to count from their irregularities and interposed scarcely less distinct other nerves; petiole $\frac{1}{2}$ in. *Panicles* often 12 by 10 in., pubescent or almost villous; bracts 0; bracteoles $\frac{1}{30}$ in., linear; pedicels (in flower) $0-\frac{1}{8}$ in., the flowers all scattered not clustered. *Corolla* small, white. *Style* long, or (fide Griffith) hardly any (is the species dimorphic?). *Drupe* cylindric, often curved and more or less glaucous.—Many of the species that follow are difficult to separate from this; and, when it is said that this East Bengal plains plant is not *L. robustum* of Brandis, all that is intended is that the long-fruited Silhet species (Roxburgh's type) has not been sent from the North-west Himalaya. Dr. Brandis may very probably be right in thinking plants he has seen there to be not specifically distinct.

VAR. khasiana; panicle smaller denser, pedicels in flower 0, drupe $\frac{1}{4}-\frac{1}{3}$ by $\frac{1}{8}-\frac{1}{6}$ in. very glaucous. *Ligustrum* sp. n. 5, *Herb. Ind. Or. H. f. & T.* *Olea*, n. 445, *Griff. Notul.* iv. 29.—Khasia, alt. 4000 ft.; *Griffith, H. f. & T.*, &c.—A stunted small tree, perhaps a high-level form of the plains' *L. robustum*, but appears more distinct than species admitted by authors. In Griffith's examples the fruiting panicle in *L. robustum* type is diffuse with scattered fruit, in var. *khasiana* it is close erect rigid with erect fruits and 4-angled lenticellate branches; the fruits are scarcely more than half the size of those of *L. robustum*. But the series *Ligustrum*, n. 5, *H. f. & T.*, includes an example gathered at Chela (alt. 1000 ft.) which is intermediate in character.

2. ***L. Walkeri***, *Dcne. in Nouv. Arch. Mus.* 2, ii. 27; branches lenticellate, leaves elliptic acuminate, nerves slender irregular, panicle large compound minutely pubescent, corolla-tube hardly as long as the calyx, drupe $\frac{1}{4}$ by $\frac{1}{6}$ in. *L. ceylanicum*, *Dcne. in Nouv. Arch. Mus.* 2, ii. 30. *L. robustum*, *Thwaites Enum.* 188.

Ceylon; ascending to 5000 ft., frequent; *Walker, Thwaites* (n. 475, 494, &c.). **NILGHERRIES**; *Herb. Ind. Or. H. f. & T.*, n. 5, partly.

Very near *L. robustum*, and perhaps only the Ceylon form of it as Thwaites considered; the drupes, however, are very much shorter, broader, and somewhat obovoid, the panicle is more obscurely pubescent, the leaves rather more coriaceous. *Decaisne*

refers the Nilgherry portion of *Ligustrum*, n. 5, *H. f. & T.*, to his *L. confusum*, which is certainly erroneous; it is either *L. Walkeri* or closely allied thereto.

VAR. *tubiflora*; corolla-tube twice as long as the calyx. *Olea Roxburghii*, *Wall. Cat.* 2816 B only.—Deccan Peninsula; Belgaum, *Dr. Ritchie*; Herb. Heyne, *Wallich*.—Corolla-tube much slenderer than in *L. neilgherrense*, *Wight*; anthers exsert.—These are very doubtful plants; *Ritchie*'s has a bracteate panicle, and subovate leaves, but the drupe is as of *L. Walkeri*.

3. *L. Roxburghii*, Clarke; branches lenticellate, leaves ovate-lanceolate acuminate coriaceous, panicle stout pubescent, flowers clustered, corolla-tube broad as long as the calyx, drupe $\frac{1}{2}$ by $\frac{1}{2}$ in. *L. Candolleum*, *Blume Mus. Bot.* i. 315, not of *Dene*. *L. robustum*, *Bedd. For. Man.* 154, not of *Blume*. *L. compactum*, *Dene. in Nouv. Arch. Mus.* 2, ii. 23, not of *H. f. & T.* *Olea Roxburghii*, *Wall. Cat.* 2816, not of *Spreng.* nor of *Wight*. *Visiania robusta*, *Wight Ic. t.* 1242. *Phillyrea terminalis*, *Herb. Roxb.*

MTS. of the DECCAN PENINSULA, alt. 4-7000 ft., very common.

A small tree. *Leaves* $3\frac{1}{2}$ by $\frac{1}{2}$ in., base obtuse; nerves 8 pairs, slender but well-defined and somewhat regular; petiole $\frac{1}{2}$ in. *Panicles* often 8 by 6 in., brachiate; bracts lanceolate, foliaceous or 0; pedicels hardly any, clusters of flowers often somewhat whorled. *Corolla* $\frac{1}{2}$ in., much larger than in *L. robustum*; tube sometimes considerably exceeding the calyx.—*Blume* founds his species on *Wall. Cat.* 2816 E, which he (by error) supposes to have come from Nipal. *Dcaisne* has not included *Wight*'s icon, t. 1242, in his monograph; but he has named the specimens belonging to that picture, *L. compactum*, perhaps because of the distinct regular nervation of the leaves, which is similar. This species has been known as "the stout Nilgherry form of *L. robustum*," but it differs as much from *L. robustum* of *Silhet* as does any Indian *Ligustrum*. The confusion which has enveloped this species arises from its having been named by *Wight Phillyrea paniculata*, *Roxb.*, which is = *Ligustrum lucidum*, *Aiton* = *Olea clavata*, *Don* = *O. Roxburghii*, *Spreng.* (*Wight Ic. t.* 735), a Chinese plant, cultivated both at Calcutta and in Europe, closely allied to *L. Roxburghii*, but having the panicle glabrous.

4. *L. neilgherrense*, Wight Ic. t. 1243, not of *Dene*.; leaves ovate acute coriaceous, panicle dense, branches glabrous lenticellate, corolla-tube twice as long as the calyx, drupe $\frac{1}{2}$ by $\frac{1}{2}$ in. *L. Candolleum*, *Dene. in Nouv. Arch. Mus.* 2, ii. 28, not of *Blume*. *Olea Roxburghii*, *Wall. Cat.* 2816, E only.

MTS. of the DECCAN PENINSULA, frequent; Dindygul, Nilgherries, Bababoodun Hills, &c.

United (very probably correctly) with *L. Roxburghii* by *Beddome*; it differs in the larger flowers (corolla-tube $\frac{1}{2}$ in.) and in the glabrous panicle, the branches of which are quadrangular lenticellate in fruit, instead of round and hairy as in *L. Roxburghii*. The leaves also are not acuminate, often subobtus, sometimes orbicular ($2\frac{1}{2}$ by 2 in.).—*Dcaisne* has marked a typical example of this from Herb. *Wight* (flower and fruit) *L. compactum*; the Kumaon *L. compactum* has a shorter corolla-tube with reflexed lobes more closely-nerved acuter leaves, and a very different-looking less rigid fruit-panicle with compressed flexuose branches.

VAR. *obovata*, Dene. in Nouv. Arch. Mus. 2, ii. '22; leaves subobtus, corolla rather shorter.—MTS. of the DECCAN PENINSULA**.—Cannot be satisfactorily distinguished from *L. neilgherrense*.**

5. *L. Perrottetii*, A. DC. in DC. Prodr. viii. 294; branches rarely lenticellate, leaves smallish elliptic acute at both ends, panicles thyrsoid minutely pubescent, corolla-tube nearly twice the calyx, drupe $\frac{1}{2}$ by $\frac{1}{2}$ in. *Wight Ic. t.* 1244; *Bedd. For. Man.* 153, and *Anal. Gen.* t. 19, fig. 5; *Dene. in Nouv. Arch. Mus.* 2, ii. 32.

MTS. of the DECCAN PENINSULA, frequent; Nilgherries, Pulneys, *Wight*, *Gardner*, &c.

Leaves 2 by $\frac{3}{4}$ in., coriaceous; *nerves* 7 pairs, oblique to the midrib, slender or obscure. *Panicles* 3 by $1\frac{1}{2}$ in., rigid; branches in fruit 4-angled, stout.—This differs little from *L. Roxburghii* but by the non-lenticellate branches and smaller leaves, and is placed under *L. Roxburghii* by Beddome.

6. **L. Decaisnei**, *Clarke*; branches lenticellate, leaves small elliptic acute at both ends, panicles small obscurely pubescent, corolla small tube scarcely as long as the calyx. *L. neilgherrense*, *Dcne. in Nouv. Arch. Mus.* 2, ii. 32, *not of Wight*. *Ligustrum* sp. n. 3, *Herb. Ind. Or. H. f. & T.*

NILGHERRIES.

Leaves $1\frac{1}{2}$ by $\frac{2}{3}$ in. *Panicles* 2 by $1\frac{1}{2}$ in.—This appears as though a form of *L. Walkeri* with smaller leaves and panicles, but is founded on a plant once collected, the fruit unknown.

VAR. microphylla, *Wight in Herb. (sp.)*; leaves $2\frac{1}{4}$ by $\frac{2}{3}$ in. lanceolate, panicles glabrous, berry $\frac{1}{4}$ by $\frac{1}{8}$ in.—South Deccan; Shevagherry Hills and Courtallum, *Wight*.—*L. microphyllum*, *Bedd. For. Man.* 154, from Coorg, is described with small leaves and pubescent panicle-branches, and is therefore perhaps nearer *L. Decaisnei* type. *L. Walkeri* only differs in its large diffuse panicles.

7. **L. compactum**, *H. f. & T.*; *Brand. For. Fl.* 310; glabrous, leaves elliptic-lanceolate, nerves 12–20 pairs subdistinct, panicle pyramidal compound, corolla-tube as long as the calyx, fruit nearly $\frac{1}{2}$ by $\frac{1}{5}$ in. *Dcne. in Nouv. Arch. Mus.* 2, ii. 23 (*as to the Kumaon examples*). *Olea compacta*, *Wall. Cat.* 2819. *DC. Prodr.* viii. 287.

TEMPERATE HIMALAYA, alt. 5000 ft.; Kumaon, *Wallich, Thomson, Strachey & Winterbottom*.

Branches sparingly (or not) lenticellate. *Leaves* 4 by $1\frac{1}{2}$ in., acute, base cuneate or rounded, coriaceous; petiole $\frac{1}{4}$ in. *Panicles* 4 in. long and broad; bracts 0; bracteoles minute; flowers clustered, subsessile. *Corolla-tube* very short; lobes reflexed, or sometimes corolla-tube considerably exceeding the calyx. *Panicle* dense with fruit; branches compressed, flexuose. *Drupe* often curved.

8. **L. Massalongianum**, *Vis. Pl. Nov. Orto Padova*, 27, t. 4; leaves linear-lanceolate, panicles small dense very hairy, corolla-tube narrow twice as long as the calyx, drupe $\frac{1}{4}$ by $\frac{1}{8}$ in. *Dcne. in Nouv. Arch. Mus.* 2, ii. 19. *Olea robusta*, *γ. angustifolia*, *Wall. Cat.* 2822. *Ligustrum* n. 8, *Herb. Ind. Or. H. f. & T.*

KHASIA; alt. 3–5000 ft., *Wallich, H. f. & T., &c.*

A small shrub; branchlets lenticellate, densely leafy. *Leaves* 3 by $\frac{1}{2}$ in., tapering at each end, coriaceous; nerves few, distant; petiole $\frac{1}{2}$ in. *Panicles* 1–2 in.; bracts $\frac{1}{2}$ in., linear, caducous; bracteoles inconspicuous; flowers clustered, subsessile, small. *Berry* glaucous, exceedingly like that of *L. robustum*, var. *khasiana*, of which this may be a narrow-leaved form.

VAR. Lindleyi; leaves 1 in. lanceolate, corolla-tube hardly longer than the calyx, style short, drupe $\frac{1}{2}$ in. broad. *L. robustum*, *Wall. Cat.* 2822, *γ only*. *Olea Lindleyi*, *Wall. Cat.* 6305; *DC. Prodr.* viii. 288. *Ligustrum* sp., n. 1175, *Griff. Itin. Notes*, 81.—Khasia, alt. 3–4000 ft.; *Griffith, H. f. & T., &c.*—Perrottet's Nilgherry plant referred here by Decaisne was perhaps *L. Decaisnei*, var. *microphylla*.

** *Drupe* globose.

9. **L. confusum**, *Dcne. in Nouv. Arch. Mus.* 2, ii. 24; branches lenticellate, leaves elliptic-lanceolate, panicles pubescent bractless, flowers clustered subsessile, corolla-tube as long as the calyx, berry $\frac{1}{2}$ in. diam. *L. robustum*, *Wall. Cat.* 2822, *β only*. *Ligustrum* sp., nn. 1247, 408, 1247, *Griff. Itin. Notes*, pp. 86, 123, 157. *Ligustrum* n. 9, *Herb. Ind. Or. H. f. & T.*

SIKKIM; Lachen and Lachoong, *J. D. H.*; Kulhait, alt. 5000 ft., *Clarke*. BHOTAN; alt. 5500 ft., *Griffith*. KHASIA, alt. 3-5000 ft., common, *Griffith, H. f. & T.*, &c.

A small tree; sometimes 40 ft. in Sikkim. *Leaves* $3\frac{1}{2}$ by $\frac{3}{4}$ in., usually obtuse or rounded at the base, coriaceous; nerves slender or distinct; petiole $\frac{1}{8}$ in. *Panicles* 1-5 in.; bracts 0 or linear, caducous; bracteoles minute. *Corolla* $\frac{1}{4}$ in., wider than in *L. robustum*.—This previous to Decaisne's memoir, was confounded with *L. robustum* which (except as to the fruit) it greatly resembles. In flower it differs from the Bengal typical *L. robustum* in the more obtusely-based leaves, the sessile crowded flowers, and the broader corolla. It only differs from *L. spicatum* in the absence of persistent leaflike bracts in the panicle. Simons' specimen is named *L. compactum* by Decaisne, but it has a pubescent panicle, and the leaves do not show the prominent numerous nerves characteristic of *L. compactum*.

VAR. *macrocarpa*; berry $\frac{1}{2}$ in. diam. and upwards. Khasia; Nunklao, alt. 4000 ft., *Clarke*.

10. ***L. nepalense***, *Wall. Cat.* 2830, and in *Roxb. Fl. Ind. ed. Carey & Wall.* i. 150, and *Pl. As. Rar.* iii. 44, t. 270; branches lenticellate, leaves elliptic-lanceolate, panicles large pubescent, bracts leaflike coriaceous persistent, flowers clustered sessile, corolla-tube as long as the calyx, drupe $\frac{1}{6}$ in. diam. *DC. Prodr.* viii. 294, excl. var. β ; *Dene. in Nouv. Arch. Mus.* 2, ii. 26. *L. spicatum*, *Ham.*; *Don Prodr.* 107; *Loud. Arb. Brit.* 630, t. 1220. *L. bracteolatum*, *Don Prodr.* 107; *DC. l. c.*; *Brand. For. Fl.* 310; *Dene. l. c.* 34. *L. Wallichii*, *Blume Mus. Bot.* i. 315; *Dene. l. c.* 29. *L. parviflorum*, *Visiani: Dene. in Nouv. Arch. Mus.* 2, ii. 26. *L. kumaonense*, *Dene. l. c.* 28. *Olea grandiflora*, *Wall. Cat.* 2820. *Visiania grandiflora*, *DC. l. c.* 289.

TEMPERATE HIMALAYA, alt. 4-7000 ft.; Gurwhal to Nipal, frequent.

Only separable from *L. confusum* by the bracts interspersed among the panicle branches being petiolate, often $1\frac{1}{2}$ by $\frac{1}{2}$ in., coriaceous, persistent. The type examples of *L. nepalense* and *grandiflorum* in herb. Wallich, and of *L. kumaonense* in herb. Strach. & Winterb. all exhibit these bracts, which are not seen in the Khasian *L. confusum*.—*L. nepalense*, β var. *glabra* (*Bot. Mag. t.* 2921), is *L. lucidum*, and received from the Calcutta garden, it is not an Indian plant.

VAR. *vestita*, *Wall. Cat.* 6304 (sp.); leaves villous beneath. *DC. Prodr.* viii. 294. --Nipal.

11. ***L. Myrsinites***, *Dene. in Nouv. Arch. Mus.* 2, ii. 33; leaves small elliptic, racemes small few-flowered nearly glabrous, drupe scarcely $\frac{1}{8}$ in. diam. *L. Uva-ursi*, *Dene. l. c.* 34. *Ligustrum* n. 10, *Herb. Ind. Or. H. f. & T.*

KHASIA, alt. 4-5000 ft.; Mairung, *Griffith* (*Kew Distrib. n.* 3683); Moflong, Moleem and Upper Kalapani, *J. D. H.*, *Simons*.

A small ramous shrub; branchlets hairy. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ by $\frac{1}{4}$ - $\frac{1}{2}$ in., glabrous, coriaceous; nerves obscure; petiole $\frac{1}{8}$ in. *Panicles* (nearly always reduced to racemes) 3-10-flowered, less than $\frac{1}{2}$ in. diam. in flower; rhachis verrucose hardly hairy; flowers sessile; in the penultimate axils are often added solitary short-pediceled flowers (or raceme with foliaceous bracts in its lower part). *Corolla* $\frac{1}{8}$ in., tube a little longer than the calyx.

10. MYXOPYRUM, *Blume*.

Large scandent shrubs; branches 4-angular. *Leaves* opposite, large, coriaceous, 3-nerved, entire or toothed. *Flowers* small, yellowish, numerous in axillary and terminal trichotomous panicles; bracts minute or 0. *Calyx* acutely 4-lobed. *Corolla-tube* longer than the calyx; lobes 4, concave, oblong or spatulate, induplicate-valvate in bud. *Stamens* 2, on the corolla-tube, filaments short; anthers ovate. *Ovary* 2-celled; style hardly any, stigma 2-lobed; ovules 1-2 in each cell, attached near the base at the inner angle (anatropal, *sic*

Blume). *Fruit* 1-seeded globose, or sometimes 2-seeded obovoid; pericarp crustaceous. *Testa* thin, albumen horny; radicle inferior.—**DISTRIB.** Species 3, East Himalaya to South Madras and Malaya.

1. ***M. smilacifolium***, *Blume Mus. Bot.* i. 320; leaves ovate or oblong acute entire or toothed, fruit $\frac{1}{2}$ in. diam. *Kurz For. Fl.* ii. 160, and in *Journ. As. Soc.* 1877, pt. ii. 245. *Ligustrum laurifolium*, *Roxb. Hort. Beng.* 3. *Chionanthus* ? *smilacifolia*, *Wall. in Roxb. Fl. Ind. ed. Carey & Wall.* i. 108. *Chondrospermum smilacifolium*, *Wall. Cat.* 2837; *Wight Ill.* t. 151, b. D; *DC. Prodr.* viii. 301. *Ch. coriaceum*, *Wall. Cat.* 2838; *DC. l.c.*

SIKKIM TERA; J. D. H. ASSAM, SILHET, CACHAR, CHITTAGONG, PEGU, PENANG. SOUTH DECCAN PENINSULA; Anamallay Mts., *Beddome*.—**DISTRIB.** Malaya, Admiralty Islands.

Nearly glabrous. *Leaves* 6–9 in., from narrow-oblong to cordate-ovate, acuminate, base cuneate or rounded, entire slightly toothed or closely serrate on the same branch; petiole $\frac{1}{2}$ in. *Panicles* 4–8 in., peduncled; branches somewhat lax in fruit. *Corolla* $\frac{1}{2}$ in.

2. ***M. nervosum***, *Blume Bijl.* 683; *Mus. Bot.* i. 320, t. 51; leaves oblong or elliptic acute entire or toothed, berries $\frac{2}{3}$ in. diam. *DC. Prodr.* viii. 290.

MALACCA; Maingay.—**DISTRIB.** Sumatra, Java.

Leaves 8 by $3\frac{1}{2}$ in., base cuneate or rounded, very coriaceous. *Panicles* minutely pubescent in flower, very rigid, brachiate in fruit.—Maingay's plant here described differs from *M. smilacifolium*, only in its very stout habit and large berries. Whether it is Blume's *M. nervosum* is uncertain, as that has no ripe fruit.

ORDER XCIII. SALVADORACEÆ. (By C. B. Clarke.)

Trees or shrubs, nearly glabrous, olive-grey, unarmed or spinous. *Leaves* opposite, entire. *Flowers* clustered or paniced, small, dioecious or polygamodimorphic. *Calyx* free, campanulate or ovoid, 3–5-fid. *Corolla* shortly campanulate or petals free, 4-merous, imbricate in bud. *Stamens* 4, on the corolla-tube or hypogynous, alternate with the corolla-segments; filaments free or connate into a tube. *Ovary* free, 1-2-, or imperfectly 4-celled; style short, stigma 2-fid or subentire; ovules 1–2 in each cell, erect from its base, anatropous. *Berry* or *drupe* mostly 1-seeded. *Seed* erect, globose, exalbuminous.—**DISTRIB.** Species 8–9, in tropical and subtropical Asia, Africa, Madagascar and Malaya.

Distinguished from the Indian species of *Oleaceæ* by their 4 stamens.

Petals free. Stamens monadelphous. Ovary 1-celled, 1-ovuled . . .	1. DOBERA.
Corolla gamopetalous. Stamens on corolla-tube. Ovary 1-celled,	
1-ovuled	2. SALVADORA.
Petals free. Stamens free. Ovary 2- (or falsely 4-) celled . . .	3. AZIMA.

1. DOBERA, Juss.

A glabrous tree. *Leaves* opposite, entire. *Flowers* small, polygamo-dioecious, clustered on the branches of an axillary inflorescence, trichotomous in the males, subsimple in the females. *Calyx* ovoid, irregularly valvate, 3–5-toothed. *Petals* 4 (or 5), narrowly-oblong, free, imbricate. *Stamens* 4 (or 5), filaments connate into a tube; anthers lanceolate, dehiscing laterally or subextrorsely. *Scales* 4–5 outside the staminal tube, alternate with the stamens. *Ovary* 1-celled (*Bth.* &

Hk.), 4-5-celled (*Hochst.*), 2-celled (*Forsk.*); style short, stigma obtuse undivided (*Bth. & Hk.*), 2-fid (*Forsk.*); ovule solitary, erect (*Bth. & Hk.*). Fruit subglobose. Seed erect, globose, exalbuminous.

The true place of this disputed genus cannot be settled until material is received which shall decide the structure of the young ovary. The younger flowers at Kew appear all male (or functionally male); in these the imperfect style is obscurely 2-lobed, and the ovary seems 2-celled as *Forsk.* states. From *Hochstetter's* description it seems probable that he had very young fruit containing one 1-seeded cell and traces of other abortive cells. As he tried to make the order of the tree *Meliaceæ*, he may have over-counted the abortive cell.

D. Roxburghii, *Planch. in Ann. Sc. Nat.* 3, x, 101. *D. coriacea* and *glabra*, *A. DC. Prodr.* xvii, 31. *Tomex glabra*, *Forsk. Fl. Egypt-Arab.* 32. *Schizocalyx coriaceus*, *Hochst. in Flora*, 1844, Beil. 2. *Blackburnia oppositifolia* (error for *B. monadelpha*), *Roxb. Fl. Ind. ed. Carey & Wall.* i. 435, *vide Planch. l.c.*

BOMBAY; *Capt. Geburne*.—DISTRIB. Arabia, Abyssinia.

A fine tree (*Hochst.*). Leaves $3\frac{1}{2}$ by $1\frac{1}{2}$ in., elliptic, acute, mucronate or obovate-obtuse (on the same branch in the Indian specimen), coriaceous; petiole $\frac{1}{8}$ – $\frac{1}{6}$ in. Panicles $1\frac{1}{2}$ –3 in.; bracts 0; bracteoles $\frac{1}{30}$ in., ovate, close to the calyx. Calyx $\frac{1}{10}$ in., ovate-cylindric, subspathaceous; teeth usually 5, one much broader. Petals $\frac{1}{5}$ in., white, free, 4 in the Indian plant, but placed slightly unsymmetrically, sometimes 5 in the African (*Hochst.*). Stamens 4 in the Indian specimen (sometimes 5 in the African), filaments united for two-thirds their length into a subquadrangular tube Berry $\frac{1}{4}$ in. diam.; endocarp crustaceous.—There is no *Blackburnia oppositifolia*, *Roxb.* Planchon no doubt meant *B. monadelpha*, *Roxb.*, with which the description fairly agrees.

2. SALVADORA, Linn.

Shrubs or trees. Leaves opposite, entire. Flowers small, hermaphrodite or (mostly) functionally unisexual, racemose or spicate on the branches of terminal or axillary panicles; bracts minute. Calyx campanulate; lobes 4, imbricate. Corolla campanulate; tube with 4 small teeth (sometimes subobsolete) between the bases of the filaments; lobes 4, imbricate. Stamens 4, on the corolla, alternate with its lobes. Ovary 1-celled; style 0, stigma truncate; ovule 1, erect basal. Drupe globose, supported by the slightly enlarged calyx, and subpersistent corolla; endocarp crustaceous. Seed erect, globose, exalbuminous.—DISTRIB. Species 2; Eastern Africa, Arabia and India.

1. **S. persica**, Linn.; *A. DC. Prodr.* xvii, 28; glabrous, leaves ovate or oblong obtuse, panicles axillary or terminal compound, flowers pedicelled, drupes scattered. *Vahl Symb.* i. 12, t. 4; *Lamk. Ill.* t. 81; *Roxb. Cor. Pl.* i. 26, t. 26, and *Fl. Ind. ed. Carey & Wall.* i. 404; *Wall. Cat.* 1042; *Lemaout & Dene. Traité Bot.* 453, with fig.; *Dalz. & Gibs. Bomb. Fl.* 312; *Baill. in Adans.* ix. 289, t. 10, fig. 4–8; *Brand. For. Fl.* 315; *Boiss. Fl. Orient.* iv. 43. *S. Wightiana*, *Planch.*; *Thwaites Enum.* 190; *Bedd. Fl. Sylv.* t. 247. *S. indica*, *Wight Ill.* ii. 229, t. 181. *Cissus arborea*, *Forsk. Fl. Egypt-Arab.* 32. *Embelia Grossularia*, *Retz Obs.* iv. 24.

INDIA, alt. 0–1500 ft., in the drier climates; from the Punjab and Scinde to Patna; and in the Circars and North Ceylon; often planted elsewhere.—DISTRIB. Arabia, Syria, E. Africa.

A small, glaucous tree Leaves $1\frac{3}{4}$ by $\frac{3}{4}$ in., somewhat fleshy; petiole $\frac{1}{2}$ in. Panicles 2–5 in., often very compound, numerous in the upper axils; flowers scattered. Calyx $\frac{1}{20}$ in., lobes ovate. Corolla $\frac{1}{10}$ in., almost 5-partite. Filaments short, anthers ovate. Drupe $\frac{1}{2}$ in. diam.

2. ***S. oleoides***, *Dene. in Jacquem. Voy. Bot.* 140, t. 144; glabrous, leaves narrowly lanceolate acute, panicles mostly reduced to axillary fascicles of short spikes, drupes clustered. *A. DC. Prodr.* xvii. 28; *Brand. For. Fl.* 316, t. 39. *S. Stocksii*, *Wight Ill.* ii. 229, and *IC. t.* 1621. *S. indica*, *Royle Ill.* 319. *S. persica*, *T. And. in Journ. Linn. Soc. v. Suppl.* i. 29.

PUNJAB and SCINDE, in the plains; frequent.—DISTRIB. Aden.

Leaves 2 by $\frac{1}{2}$ in.; petiole $\frac{1}{8}$ in. *Panicles* many, axillary, mostly of sessile clustered spikes 1–1 $\frac{1}{2}$ in.; rhachises after the flowers have dropped rough from the crowded scars. *Drupes* $\frac{1}{8}$ in., subsessile, often touching each other.—Closely allied to the preceding species, but well distinguished by Brandis. Wight's *S. Stocksii* is figured from a flowering example which has the panicles rather more compound than usual.

EXCLUDED SPECIES.

SALVADORA, *Wall. Cat.* 7530, is *Olar nana*, but there is a loose sheet without locality, date or name numbered also 7530, which is *Salvadora oleoides*.

3. **AZIMA**, *Lamk.*

Rambling shrubs, with axillary spines. *Leaves* opposite, entire *Flowers* small, dioecious, axillary, sessile, or on a little-branched panicle in clusters or umbels; bracts 0 or leaflike; bracteoles linear, small. *Calyx* campanulate, 4-fid or irregularly 2–4-lobed. *Petals* 4, oblong, imbricate in bud. *Stamens* 4, alternate with the petals, hypogynous, filaments linear; anthers ovate. *Ovary* 2-celled; stigma subsessile, large, 2-fid; ovules 2–1 in each cell, erect, basal. *Berry* globose, 2–1-seeded, endocarp membranous. *Seed* globose, exalbuminous.—DISTRIB. Species 3–4, in Trop. and S. Africa and Asia.

1. ***A. tetracantha***, *Lamk. Dict.* i. 343, and *Ill.* t. 807; rigid, leaves elliptic acute, flowers axillary clustered, calyx minutely hairy, berries sessile. *Wight & Gardn. in Calc. Journ. Nat. Hist.* vi. 49–55, t. 1; *Wight Ill.* ii. t. 152; *Dalz. & Gibs. Bomb. Fl.* 143. *Monetia barlerioides*, *L'Hérit. Stirp. Nov.* i. t. 1; *Gaertn. Fruct.* t. 225; *Roxb. Fl. Ind.* iii. 765; *Wall. Cat.* 7492. *Fagonia montana*, *Miq. in Pl. Hohenack.* n. 761.

DECCAN PENINSULA and CEYLON; “one of the commonest shrubs of Coromandel, growing in all situations;” *Roxburgh, &c.*—DISTRIB. S. and Subtrop. Africa and Madagascar.

Glabrous, or branchlets hairy. *Leaves* 1 $\frac{1}{2}$ by $\frac{3}{4}$ in., mucronate or spinescent, base cuneate, glabrous, rigid; petiole $\frac{1}{8}$ in.; spines $\frac{1}{4}$ – $\frac{3}{4}$ in., 1–2 in each axil. *Flowers* in axillary clusters scarcely $\frac{1}{2}$ in. diam.; upper leaves often reduced or obsolete, so that the branches end in naked spikes on which the flowers are whorled. *Calyx* $\frac{1}{10}$ in. *Petals* $\frac{1}{2}$ in. *Ovary* 2-celled; cells 2-ovulate, or (ex Wight & Gardner) more often 1-ovulate. *Berry* $\frac{1}{4}$ in. diam., usually 1-seeded.

2. ***A. sarmentosa***, *Benth. in Gen. Pl.* ii. 681; rambling, leaves ovate obtuse mucronate, flowers paniced, calyx glabrous, berries pedicelled. *Actegeton sarmentosa*, *Blume Bijl.* 1143; *A. DC. Prodr.* xvii. 30. *Monetia Brunoniana*, *Wall. Cat.* 7493. *M. laxa*, *Planch. in Ann. Sc. Nat.* 3, x. 191. *M. sarmentosa*, *Baill. in Adans.* ix. 289, t. 10, fig. 1–3. *Salvadora Madurensis*, *Dene. in Jacquem Voy. Bot.* 140.

PROME; *Kurz* (n. 3036).—DISTRIB. Birma, Malaya, Philippines.

Branchlets glabrous. *Leaves* 2 $\frac{1}{2}$ by 1 $\frac{1}{2}$ in., broadly ovate, base obtuse, rigid, glabrous; petiole $\frac{1}{8}$ in.; axillary spines $\frac{1}{4}$ in., 2 in each axil. *Panicles* axillary, in fruit 1–3 in.; bracts minute; pedicels in fruit 0– $\frac{1}{3}$ in. *Flowers* as of *A. tetracantha*. *Ovary* imperfectly 4-celled, 4-ovuled. *Berry* $\frac{1}{4}$ in. diam.

ORDER XCIV. **APOCYNACEÆ.** (By J. D. Hooker.)

Erect or twining shrubs, rarely herbs or trees. *Leaves* opposite or whorled (scattered in *Cerbera* and *Plumeria*), quite entire, exstipulate. *Flowers* in terminal or axillary cymes, hermaphrodite, regular. *Calyx* inferior; lobes 5, rarely 4, imbricate, often glandular within at the base. *Corolla* rotate or salver-shaped; lobes 5, rarely 4, spreading, contorted and often twisted in bud, very rarely valvate. *Stamens* 5, rarely 4, on the tube throat or mouth of the corolla. filaments usually short; anthers oblong linear or sagittate, conniving, connective sometimes adhering to the stigma; cells 2, dehiscing lengthwise, sometimes produced downwards into an empty spur; pollen granular. *Disk* annular, cupular or lobed, or of glands, or 0, sometimes concealing the ovary. *Ovary* 1-celled with 2-parietal placentas, or 2-celled with axile placentas, or of 2 distinct or partially connate carpels; style simple or divided at the base only; top thickened; stigma 2-fid, acute or obtuse. *Ovules* in each cell 2, or few or many and 2- ∞ -seriate, rarely solitary. *Fruit* a dry or fleshy drupe, berry, or samara, or of 2 drupes, berries or follicles. *Seeds* various, often winged, or with a terminal pencil of long silky hairs (*Coma*); albumen hard fleshy, or scanty or 0; embryo straight, cotyledons flat, concave, convolute or contorted, radicle usually superior.—**DISTRIB.** Species about 900, chiefly tropical.

TRIBE I. *Carisseæ.* *Anthers* included, free from the stigma; cells rounded at the base. *Ovary* of 2 wholly combined carpels, 1-2-celled. *Fruit* large, usually fleshy or pulpy within. *Seeds* without wing or pencil of hairs. *Corolla-lobes* overlapping to the left in all.

* *Ovary* 1-celled, with parietal ovules.

Fruit indehiscent. Albumen 0	1. WILLOUGHBEIA.
Fruit 2-valved. Albumen horny	2. CHILOCARPUS.

** *Ovary* 2-celled, with axile ovules.

Flowers 4-merous. Erect shrubs. Seeds exalbuminous	3. LEUCONOTIS.
Climbing shrubs. Corolla-mouth with lobed scales	4. MELODINUS.
Climbing slender unarmed shrub. Corolla-mouth naked	5. WINCHIA.
Erect or stout climbing armed shrubs	6. CARISSA.

TRIBE II. *Plumeriæ.* *Anthers* included, free from the stigma, cells rounded at the base. *Ovary* of 2 distinct carpels united by the style. *Fruit* various. *Seeds* peltate. *Corolla-lobes* overlapping to the left except in *Ochrosia*.

SUBTRIBE 1. *Rauwolfiæ.* *Calyx* eglandular within. *Carpels* 1-2, rarely 4-6-ovuled. *Fruit* of 2 1-seeded drupes or berries, rarely moniliform (of superposed drupes).

Leaves usually whorled. Disc present. Albumen even	7. RAUWOLFIA.
Leaves usually whorled. Disc 0. Albumen ruminate	8. AXYLIA.
Leaves opposite. Disc 0. Albumen smooth	9. HUNTERIA.

SUBTRIBE 2. *Cerberæ.* *Calyx* glandular within. *Carpels* 2-, rarely 4-ovuled; ovules on opposite sides of a thick placenta. *Drupe*s or berries 1-seeded, or 2-seeded, the seeds separated by the enlarged placenta.

Leaves scattered, alternate. Corolla funnel-shaped	10. CERBERA.
Leaves opposite. Corolla salver-shaped, lobes overlapping to the right	11. OCHROSIA.
Leaves opposite. Corolla salver-shaped	12. KOPSIA.

SUBTRIBE 3. **Euplumeriæ**. *Calyx* glandular within. *Carpels* 6-∞-ovuled. *Fruit* (in the Indian genera) of 2 follicles.

* *Ovules* 2-seriate.

Disc annular or obscure. Seeds winged. Leafless shrub . . . 13. RHAZYA.
Disc of 2 scales. Seeds truncate at both ends . . . 14. VINCA.

** *Ovules* ∞-seriate.

Erect trees. Leaves scattered, alternate. Seeds winged . . . 14*. PLUMERIA.
A climber. Leaves opposite or whorled. Seeds winged . . . 15. ELLERTONIA.
Erect trees or shrubs. Leaves whorled. Seeds comose.
Style distinct . . . 16. ALSTONIA.
Erect trees. Leaves whorled. Seeds winged. Style 0 . . . 17. DYERA.
Erect trees. Leaves opposite. Seeds comose. Style short . . . 18. HOLARRHENA.

SUBTRIBE 4. **Tabernæmontanæ**. *Calyx* glandular within. *Carpels* ∞-ovuled. *Fruit* fleshy or coriaceous, dehiscent or not.

Erect trees or shrubs . . . 19. TABERNÆMONTANA.

TRIBE III. **Echitidæ**. *Anthers* included or exserted, conniving in a cone around the top of the style and adherent to it by a point on the connective; cells produced downwards into a subulate empty spur. *Ovary* of 2 distinct carpels united by the style. *Fruit* of 2 follicles. *Seeds* comose at one or both ends.—Exceptions, see *Parsonsia*.

SUBTRIBE 1. **Parsonsiæ**. *Corolla* rotate or salver-shaped, throat naked, except *Wrightia*. *Anthers* more or less exserted.

Corolla-lobes valvate. *Carpels connate in flower* . . . 20. PARSONSIA.
Corolla rotate, mouth naked. Connective thickened at the back . . . 21. VALLARIS.
Corolla salver-shaped, mouth naked . . . 22. POTTSIA.
Corolla rotate or salver-shaped, mouth with scales . . . 23. WRIGHTIA.

SUBTRIBE 2. **Neriæ**. *Corolla-throat* broad, with 5-10 scales. *Anthers* included.

Shrubby, erect. Leaves whorled. Corolla-lobes short. Follicles erect . . . 24. NERIUM.
Shrubby or twining. Leaves opposite. Corolla-lobes long or tailed. Follicles spreading . . . 25. STROPHANTHUS.
Herbaceous. Leaves opposite. Corolla-lobes short. Follicles slender . . . 26. APOCYNUM.

SUBTRIBE 3. **Euechitidæ**. *Corolla* various, mouth naked. *Anthers* included.

* *Corolla-lobes* valvate, overlapping to the left.

Flowers small or minute. Corolla urceolate, lobes valvate . . . 27. URCEOLA.
Flowers small. Corolla subcampanulate, lobes overlapping . . . 28. PARAMERIA.

** *Corolla-lobes* overlapping to the right.

a. *Corolla* very large.

Immense climbers, corolla bell- or funnel-shaped . . . 29. BEAUMONTIA.
Lofty climbers. Corolla salver-shaped . . . 30. CHONEMORPHA.

β. *Corolla* minute, urceolate, lobes very short.

Ovary exserted from the disc. Seeds beaked . . . 31. ECDYSANTHERA.

γ. *Corolla small or medium-sized, salver-shaped, lobes nearly straight or slightly twisted to the left in bud.*

- Ovary hidden in the disc. Seeds slender 32. *BALISSEA*.
 Ovary hidden or not in the disc. Seeds ovate or oblong 33. *AGANOSMA*.

δ. *Corolla small, salver-shaped, lobes sharply twisted to the left in bud, tips not deflected.*

- Ovary hidden in the disc. Seeds slender 34. *EPIGYNUM*.
 Ovary exerted from the disc. Seeds beaked 35. *RYNCHODIA*.
 Ovary exerted from the disc. Seeds not beaked 36. *TRACHELOSPERMUM*.
 Ovary hidden in the disc. Seeds ovate, beaked 37. *ANODENDRON*.

ε. *Corolla small, salver-shaped, lobes sharply twisted to the left in bud, with the tips deflected.*

- Seeds ovate, beaked 38. *ICHNOCARPUS*.
 Seeds ovate, not beaked 39. *MICRECHITES*.

TRIBE I. **CARISSEÆ.**

1. **WILLOUGHBEIA**, Roxb.

Glabrous shrubs, often climbing by the peduncles becoming tendrils. *Leaves* opposite, petiole short. *Flowers* in axillary cymes. *Calyx* short, 5-lobed. *Corolla* salver-shaped, tube nearly glabrous within, mouth naked or with fleshy glands alternating with the lobes; lobes overlapping to the left, nearly straight in bud. *Stamens* included in the tube, and filaments very short; anthers ovate or lanceolate, cells rounded at the base. *Disc* 0. *Ovary* 1-celled; style short, top obconic or urceolate, stigma curved or columnar; ovules many, ∞-seriate on 2 parietal placentas. *Berry* large, globose or ovoid, many-seeded, pericarp hard. *Seeds* imbedded in pulp, ellipsoid, albumen 0; cotyledon thick, plano-convex.—*DISTRIB.* Species 8-10, Malayan and East Asiatic.—All supposed to yield Caoutchouc.

The species with glands on the corolla-mouth may form a different genus. I have seen no tendrils on these.

* *Mouth of corolla naked.*

1. **W. coriacea**, Wall. *Cat.* 1620, and *Pl. As. Rar.* iii. 45; glabrous, leaves elliptic or elliptic-lanceolate subacute or obtusely acuminate thickly coriaceous very shining above, base acute, nerves 8-14 pairs strong arched interspaces not reticulated, corolla-lobes linear-oblong longer than the globose tube. *A. DC. Prodr.* viii. 321.

SINGAPORE; *Wallich, Lobb. MALACCA; Griffith, Maingay* (Kew Distrib. 1048).

Branches stout, bark black; tendrils slender, branched. *Leaves* 4-5 by 1-2½ in., drying greenish above and red beneath, very smooth, secondary nerves very faint; petiole stout, ¼-½ in. *Flowers* densely crowded, sessile in sessile cymes, ½ in. long; bracts persistent. *Calyx* very thick, subhemispheric; lobes short, rounded, ciliate. *Corolla* thickly coriaceous, lobes twice as long as the tube. *Ovary* broad, acute; style short, top obovoid, stigma conical. *Seeds* ¾ in. long.

2. **W. edulis**, Roxb. *Cor. Pl.* iii. t. 280, and *Fl. Ind.* ii. 57; glabrous, leaves oblong or obovate-oblong obtusely acuminate or caudate thinly coriaceous, base acute, nerves many pairs nearly straight ascending interspaces reticulated, corolla-lobes linear-oblong longer than the subcylindric tube. *Wall. Cat.* 1618,

and *Pl. As. Rar.* iii. 45; *A. DC. Prodr.* viii. 321; *Kurz For. Fl.* ii. 165. *W. martabanica*, *Wall. Cat.* 1619, and *Pl. As. Rar.* iii. 45, t. 272; *A. DC. l.c.*; *Kurz l.c.* *Hunteria?*, *Wall. Cat.* 9066. *Pacourea Gudara*, *Herb. Ham.*; *Wall. Cat.* 4465.

ASSAM; at Gualpara, *Hamilton*. SILHET; *De Silva*. CACHAR; *Keenan*. CHITTAGONG; *Roxburgh*, &c. PEGU; *McClelland*. MARTABAN; *Wallich*. MALACCA; *Griffith*.—DISTRIB. BORNEO.

"An immense climber; tendrils long, branched; bark $\frac{1}{2}$ in. thick" (*Roxburgh*). *Leaves* 4-7 by $1\frac{1}{2}$ - $2\frac{1}{2}$ in., greenish or brown when dry and polished above, paler beneath, margins waved; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* shortly stoutly peduncled, few-fl.; bracts rounded, deciduous; pedicels very short. *Calyx* thick, subglobose; lobes short, rounded, ciliolate. *Corolla-tube* $\frac{1}{2}$ in., inflated in the middle, lobes three times as long. *Anthers* subsagittate; filaments short. *Ovary* ovoid, acute; style very short, stigma conical. *Berry* "size of a lemon, subovoid, rind thick smooth friable. *Seeds* many in soft pulp mixed with cottony fibres, size of a garden bean; outer coat fleshy, inner thin friable," *Roxb.*—Yields much caoutchouc. Fruit edible. *Kurz*, who keeps *W. edulis* distinct from *W. martabanica*, gives no other characters than "berry ovate smooth" in the former, and "berry globular wrinkled in the latter."—Assuming the usual variety in the size and form of such fruits in *Apocynaceæ*, and attributing the wrinkles to age, nothing is left whereby to distinguish these plants, of which the specimens in *Wallich's Herbarium* are identical.

3. *W. ceylanica*, *Thwaites Enum.* 191; glabrous, leaves elliptic obtusely acuminate base acute margins waved nerves very many pairs horizontal interspaces reticulated, cymes sessile or peduncled, corolla-lobes linear-oblong much longer than the tube. *Beddome For. Fl., Anal. Gen.* xx. fig. 4. *Chilocarpus ceylanicus*, *Wight Ic.* t. 1288. *Winchia cirrhifera*, *Gardner ms.*

CEYLON; in forests ascending to 4000 ft., *Gardner*, &c.

A climbing shrub with long branched tendrils, bark of branches black. *Leaves* 3-4 by $1\frac{1}{2}$ -2 in., very coriaceous, when dry very dark brown and polished above, light red-brown beneath; nerves straight, with a recurrent one from the intramarginal between every pair of primaries; petiole $\frac{1}{2}$ in. *Cymes* usually peduncled, few or many-fl.; bracts ovate, obtuse; pedicels short. *Calyx* small, lobes short rounded, ciliolate. *Corolla-tube* very short, lobes three times as long. *Anthers* lanceolate, filaments nearly as long, very broad and fleshy at the base. *Ovary* very broad, depressed-flagon-shaped; style rather slender, stigma elongate, obpyriform. *Fruit* "4-5 in. diam., spherical or subpyriform, fleshy, yellow-red. *Seeds* $\frac{3}{4}$ by $\frac{1}{2}$ in., oblong, compressed, testa membranous, cotyledons fleshy, reddish," *Thwaites*.

4. *W. firma*, *Blume Mus. Bot.* i. 154; glabrous, leaves elliptic or elliptic-lanceolate very coriaceous shining above obtusely acuminate base acute, nerves 10-15 pairs nearly straight interspaces hardly reticulated, cymes sessile dense-flowered, corolla-lobes linear-oblong longer than the inflated tube, berry pyriform. *Miquel Fl. Ind. Bat.* ii. 390. *W. Burbidgei*, *Dyer in Kew Gard. Rep.* 1880, 44, 46.

SINGAPORE; jungles near the Botanical Gardens, *H. Murton*.—DISTRIB. Sumatra, Borneo.

A large climber; branches stout, obtusely angled, bark smooth. *Leaves* very variable, 3-6 by 1-3 in., very coriaceous, usually dark brown and polished above, or on both surfaces when dry; midrib very stout beneath; nerves slender but prominent, reticulations very indistinct. *Flowers* about $\frac{1}{2}$ in. long. *Calyx-lobes* ovate, obtuse, obscurely ciliate. *Corolla-tube* inflated in the middle; lobes narrow. *Anthers* ovate, acute, filaments short. *Ovary* ovoid, acute; style short. *Fruit* in Bornean specimens as large and of the form of a good sized pear, 4 inches long, orange-yellow, pericarp thick. *Seeds* 1 in. long.—There may be more than one species under this name. The Javan specimens referred to it by *Miquel* have much fewer nerves in the

leaf. Burbidge has made in Borneo excellent drawings of the whole plant in flower and fruit. In both Singapore and Borneo it is said to yield the "Gutta Singarip."

5. **W. grandiflora**, *Dyer in Herb. Kew.*; quite glabrous, leaves elliptic or orbicular tip and base rounded very thickly coriaceous pale, nerves 4-7 pairs very strong arching interspaces with distant reticulations, cymes densely many-fl., corolla-lobes very large oblong much longer than the slender tube.

MALACCA; *Maingay* (Kew Distrib. 1047).—DISTRIB. Borneo.

A very stout climber, with woody tendrils, branches as thick as a goose-quill. Leaves 3-5 by 3-3½ in., very pale yellowish-red and rather shining above when dry, beneath cinnamon coloured and soft to the touch, with midrib and nerves very distinct but not prominent; petiole stout, ½-1 in. Cymes very dense-fl.; flowers shortly and stoutly pedicelled. Calyx broad, lobes rounded. Corolla nearly 1 in. long before expansion, tube ½ in., very slender, swollen towards the base, lobes ¾-1 in. long, tip rounded. Anthers lanceolate, base cordate, filaments slender. Ovary minute, broadly conical; style very short, base conical, top urn-shaped; stigma slender, as long as the style.

6. **W. tenuiflora**, *Dyer in Herb. Kew.*; shoots and cymes pubescent, leaves elliptic-oblong or oblanceolate obtusely acuminate base acute, nerves 20-30 pairs very slender nearly horizontal interspaces nerveless, petiole slender.

MALACCA; *Maingay* (Kew Distrib. 1049).

Branches with black bark. Leaves 3-4 by 1-1½ in., thinly coriaceous, dark brown and hardly shining above when dry, pale brighter brown beneath but without reticulations between the nerves, margins flat; petiole ½-¾ in. Cymes numerous, rusty puberulous, subsessile, dense-flowered; bracts small, rounded. Calyx-lobes rounded. Corolla-tube ½ in. long, slender, hairy within, globose near the base just above the calyx; lobes narrowly linear-oblong, obtuse. Anthers cordate-lanceolate, filaments short slender. Ovary hemispheric, top almost truncate; style very short, stigma large, elongate conic. Fruit 4 in. long, "pyriform, abounding in caoutchouc; pericarp thick, leathery. Seeds many, naked, cotyledons pink fleshy" (*Maingay*).

** Mouth of the corolla with tubercles or scales. (Tendrils not seen.)

7. **W. oblonga**, *Dyer in Herb. Kew.*; branches very stout, leaves elliptic obtuse or suddenly obtusely contracted at the tip opaque above, base acute, nerves 10-15 pairs arched interspaces reticulated, cymes sessile dense-fl.. corolla-lobes linear-oblong longer than the rather long tube, berry oblong.

MALACCA; *Maingay* (Kew Distrib. 1089).

A long flexuose shrub (*Maingay*). Branches woody, obtusely angled, rough, with close-set small lenticels, bark pale. Leaves 3-6 by 1½-3 in., base usually rounded, thickly coriaceous; when dry dark brown and opaque on both surfaces; petiole stout. ¼ in. Cymes very small, sessile, pedicels very short. Calyx-lobes short, oblong, strongly ciliate. Corolla-tube ⅝ in., rather slender, inflated in the middle, lobes twice as long, with glands or tubercles at the sinus. Berry many-seeded, pericarp leathery. Seeds 2-seriate, imbedded in firm pulp; cotyledons large, fleshy (*Maingay*).—Abounds in tenacious milky juice.

8. **W. flavescens**, *Dyer in Herb. Kew.*; quite glabrous, leaves elliptic obtusely acuminate base subacute or rounded, nerves numerous nearly horizontal very slender interspaces reticulated, cymes sessile many-fl., corolla-tube very short, tubercles at the mouth small lobulate. Chilcarpus flavescens, *Kew Gard. Report*, 1880, 47.

SINGAPORE; in jungles near the Botanic Gardens, *H. Murton*. "A large climber; stem 8 in. diam." (*Murton*).

Branches stout, smooth, divaricate, somewhat compressed, nodes swollen, bark brown. Leaves 3-4 by 1½-2¼ in., thickly coriaceous, dirty brown and opaque above when dry, brighter and paler yellowish-brown beneath, nerves very distinct though slender;

petiole $\frac{1}{4}$ – $\frac{1}{2}$ in., stout. *Cymes* numerous, 1 in. diam., branches divaricate; bracts very minute; flowers pedicelled, 4–5-merous. *Calyx* small, lobes broadly ovate. *Corolla-tube* inflated, quite glabrous within; lobes slightly falcate, forming an oblong bud narrower than the tube, which they nearly equal in length. *Anthers* shortly ovate, twice as long as the filaments. *Ovary* distinctly 1-celled with parietal many-ovuled placentas. *Fruit* unknown.

DOUBTFUL SPECIES.

9. *W. RUFESCENS*, *Dyer in Herb. Kew.*; leaves elliptic or elliptic-oblong or -lanceolate, obtuse, very coriaceous, shining above, red-brown when dry beneath, nerves 16–20 pairs very slender, slightly arched, interspaces reticulated.

MALACCA, *Maingay* (Kew Distrib. 1092).

Branches divaricate, thickened at the nodes, bark black; tendrils not seen. *Leaves* $2\frac{1}{2}$ –3 by 1–1 $\frac{1}{4}$ in., dirty brown above, bright-brown beneath; petiole $\frac{1}{4}$ in. *Fruit* (unripe) globose, nearly 2 in. diam.

2. **CHILOCARPUS**, *Blume.*

Milky sarmentose shrubs. *Leaves* opposite, nerves horizontal close. *Flowers* small, in axillary cymes. *Calyx* short, 5-lobed, eglandular. *Corolla-tube* cylindrical, throat naked; lobes 5, broad, overlapping to the left, twisted to the right. *Stamens* at or below the middle of the tube; anthers lanceolate, acute, cells rounded at the base. *Disc* 0. *Ovary* 1-celled, placentas 2 parietal; style short, stigma ovoid or conical, tip obscurely 2-toothed; ovules many, 2-seriate on each placenta. *Berry* fleshy, at length 2-valved. *Seeds* imbedded in pulp, or in a granular substance, compressed or thick, grooved or excavated at the hilum, albumen copious, horny, equable or ruminant; cotyledons flat, radicle elongate. —DISTRIB. Species 8, Malayan and Australian.

* *Pedicels bracteate at the base only; flowers very small, in lax panicked cymes; tube of corolla inflated in the middle* (fruit unknown).

1. **C. atro-viridis**, *Blume Mus. Bot. i.* 153; glabrous, leaves oblong obtusely caudate, nerves very numerous nearly horizontal straight slender. *Miquel Fl. Ind. Bat. ii.* 393. *C. malabaricus*, *Beddome Ic. Pl. Ind. Or. t.* 175. *Hunteria? atro-viridis*, *Wall. Cat.* 1614; *A. DC. Prodr. viii.* 351. *Winchia atro-viridis*, *Kurz For. Fl. ii.* 170.

MALAYAN PENINSULA; Tavoy, *Gomez*; Mergui, *Griffith*, *Parish*. MALABAR; *Beddome*.

Branches slender; bark smooth, sparsely lenticellate. *Leaves* $3\frac{1}{2}$ –6 by $1\frac{1}{2}$ –2 in., thinly coriaceous, base acute, green and opaque when dry above, paler green beneath, minutely dotted and with a recurrent nerve from the marginal one between every pair of primaries; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in., slender. *Cymes* 2–4 in., on slender pedicels; branches trichotomous, spreading, slender; flowers pedicelled, 3-nate or subumbellate; bracts minute. *Calyx-lobes* rounded, with white margins. *Corolla* $\frac{1}{2}$ in. long, tube inflated in the middle, glabrous externally, pubescent at the mouth and base of the stamens within; lobes short, falcate, broadly notched on one side, inflexed and forming a globose bud. *Anthers* subsessile, oblong. *Ovary* acute. *Fruit* unknown. —The *C. denudatus*, *Blume*, of Java, may prove to be the same as this.

** *Pedicels with many imbricate bracts; flowers very small; fruits capsular.*

2. **C. enervis**, *Hook. f.*; leaves oblong or elliptic-lanceolate obtuse or obtusely apiculate narrowed into a slender petiole nerveless, fruit 4 in. ellipsoid narrowed to an obtuse point base contracted into a short stipes, pericarp very thick.

MALACCA; *Maingay* (Kew Distrib. 1044).

Scandent; branches stout, smooth, swollen at the nodes. *Leaves* 3 by 1–1 $\frac{1}{2}$ in.,

very thickly coriaceous, brown and opaque above when dry, brighter brown beneath, midrib stout; petiole $\frac{1}{2}$ in. *Flowers* unknown. *Fruit* on a very stout woody pedicel with remains of minute persistent bracts in spiral series, bright orange coloured; pericarp very thick, dehiscent, pulp coarsely granular. *Seeds* very numerous, irregularly broadly oblong, ends rounded, hilum excavated, testa smooth, albumen solid horny.

3. **C. decipiens**, *Hook. f.*; glabrous, leaves elliptic-oblong or -ovate obtusely acuminate, base acute, nerves very numerous slender nearly horizontal, fruit linear-oblong cylindric rounded at both ends, pericarp woody.

MALACCA; *Maingay* (Kew Distrib. 1060 and 1043, *C. atro-viridis*).

Leaves 3–3½ by 1–1½, hardly shining above and greenish when dry, beneath pale brown minutely dotted; nerves very slender but prominent on both surfaces; petiole $\frac{1}{2}$ in. *Cymes* rather slender, dichotomously branched; flowers not seen. *Fruit* 1½–2½ by $\frac{1}{2}$ – $\frac{2}{3}$ in., on a stout pedicel bearing numerous minute bracts in spirals. *Seeds* large, “albumen horny, dull white, cotyledons blood-red, fleshy, convolute” (*Main-gay*).—The foliage resembles *C. atro-viridis*, but there are no recurrent nerves between the primaries.

*** *Pedicels bracteate at the base only; flowers long; tube of corolla inflated towards the base.*

4. **C. Maingayi**, *Dyer in Herb. Kew.*; glabrous, leaves elliptic-oblong obtuse base acute, nerves numerous slightly arched strong beneath, cymes long very stout, pedicels subverticillately branched.

MALACCA; *Maingay* (Kew Distrib. 1046).

A climber; branches stout, smooth, shining, swollen at the nodes. *Leaves* 3–4 by 1–2 in., coriaceous, opaque, dull yellowish green when dry on both surfaces; nerves 20–30 pairs, with a recurrent one from the intramarginal between each pair; petiole $\frac{1}{2}$ in., very stout. *Cymes* elongate, erect; peduncles very stout, 1–3 in., bearing superposed pairs of very short branches, the crowded flowers of which give them a somewhat whorled appearance; flowers $\frac{3}{4}$ in. long, sessile or stoutly pedicelled. *Calyx-lobes* rounded, short. *Corolla-tube* very slender, with a ring of hairs below the anthers within; lobes inflexed and forming an ovoid bud much broader than the tube, when expanded $\frac{1}{2}$ in. long, ovate-lanceolate, narrowed into long points. *Anthers* small, ovate, longer than the slender filament. *Ovary* acute, “1-celled with 4 parietal placentas,” *Maingay*. *Fruit* “spherical and obtusely conoid, coriaceous, fleshy, capsular, orange-yellow. *Seeds* very many, immersed in angular bright yellow masses (pulp), mixed with delicate arachnoid fibres, subquadrate, curved on one surface, deeply channelled on the other; testa cartilaginous, bright brown; albumen horny; embryo axile; cotyledons semi-oval, flat, white” (*Maingay*).

3. **LEUCONOTIS**, *Jack.*

Erect milky evergreen shrubs. *Leaves* opposite, nerves distant. *Flowers* in peduncled axillary cymes, 4-merous. *Calyx* 4-lobed or -partite, eglandular or minutely glandular within. *Corolla* salver-shaped, tube dilated in the middle, throat naked; lobes 4, short, overlapping to the left. *Stamens* 4, in the middle of the tube, included, anthers linear, cells rounded at the base. *Disc* 0. *Ovary* 2-celled; style short, top thickened, stigma 2-toothed; ovules 2, laterally affixed in each cell. *Berry* ovoid or globose. *Seeds* 1–3, imbedded in pulp, ovoid-oblong, testa membranous, albumen 0; cotyledons thick, fleshy, inner faces irregular, radicle short superior.—DISTRIB. Species 6, Malayan (not Javan).

* *Calyx 4-partite, segments long linear.*

1. **L. eugenifolius**, *A. DC. Prodr.* iii. 3: 1; shoots petioles and nerves

beneath rusty-puberulous, leaves opaque above oblong obtusely caudate base obtuse, nerves 8-10 pairs united by a strong intramarginal one, cymes few-flid. *Miquel Fl. Ind. Bat.* ii. 398. *L. cuspidatus*, *Blume Mus. Bot.* i. 112: *Miquel l. c.* 398. *Melodinus*? *eugenifolius*, *Wall. Cat.* 1616.

PENANG; *Wallich*.—DISTRIB. Sumatra, Borneo.

Branches strict, obscurely angled, bark smooth. *Leaves* 3-4 by $1\frac{1}{4}$ - $1\frac{1}{2}$ in., tip $\frac{1}{2}$ in. long, very narrow, pale or dark greenish-brown when dry above, beneath much paler yellow-brown and minutely dotted and with strong horizontal nerves; petiole slender, $\frac{1}{3}$ - $\frac{1}{2}$ in. *Cymes* erect; peduncle 1 in.; bracts linear; pedicels short; flowers erect, nearly $\frac{1}{2}$ in. long. *Sepals* very narrow, erect, deciduous in fruit. *Corolla* coriaceous, tube as long or half as long again as the calyx, pubescent within; lobes short, puberulous on both surfaces. *Anthers* sessile, elongate-lanceolate. *Ovary* deeply grooved, narrowed into the grooved style, stigma oblong, 2-fid. *Fruit* "the size of a gooseberry," *Don*.

** *Calyx* 4-lobed, lobes short rounded.

2. **L. Griffithii**, *Hook. f.*; glabrous, leaves elliptic obtusely acuminate shining above base rounded or subacute, nerves 5-7 pairs very faint, cymes shortly stoutly peduncled glabrous, flowers densely crowded sessile or shortly pedicelled.

MALACCA; *Griffith, Maingay* (Kew Distrib. 1051, *L. anceps*?). ? SINGAPORE; *T. Anderson*.

Branches obscurely angled, lenticellate. *Leaves* 3-5 by $1\frac{1}{2}$ -2 in., thickly coriaceous, pale brown when dry, beneath paler still and very opaque chocolate-brown, and minutely dotted or not, intramarginal nerve very faint; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* erect, peduncle shorter and stouter than the petiole; branches very short, thick and crowded; bracts small, broad; flowers $\frac{1}{2}$ in. long. *Calyx* small, lobes rounded. *Corolla* thickly coriaceous, tube cylindric, glabrous within and without; lobes short, rounded forming an ovoid bud broader than the tube. *Anthers* sessile, narrowly lanceolate, acuminate. *Fruit* $1\frac{1}{2}$ in. long, broadly ellipsoid. *Seeds* $\frac{1}{2}$ in. long, oblong, compressed, smooth.—Very near *L. anceps*, *Jack.*, but which has long-peduncled puberulous cymes with long-pedicelled flowers. *Anderson's* Singapore specimens have the leaves opaque above, and broader, but the flowers appear to be identical.

3. **L. Maingayi**, *Dyer in Herb. Kew.*; quite glabrous, leaves oblong abruptly obtusely acuminate shining above, nerves 6-10 pairs slender arched, base acute or rounded, cymes very shortly and very stoutly peduncled glabrous few-flowered, flowers sessile or stoutly pedicelled.

SINGAPORE; *Maingay* (Kew Distrib. 935).

Characters very much those of *L. Griffithii*, but a much stouter plant; leaves coriaceous but very dark brown, with stronger nerves beneath and longer petioles, 1- $1\frac{1}{4}$ in. long; peduncle of cymes $\frac{1}{4}$ - $\frac{1}{2}$ in., and $\frac{1}{8}$ - $\frac{1}{4}$ in. diam.; calyx much larger, as broad as the peduncle of the cyme; bracts triangular, thickly coriaceous.

4. **MELODINUS**, *Forst.*

Evergreen, erect or climbing shrubs. *Leaves* opposite. *Cymes* terminal and axillary, flowers rarely 4-merous, white or pale pink. *Calyx* 5-partite, eglandular within. *Corolla* salver-shaped, mouth with thick cleft or lobed scales; lobes overlapping to the left. *Anthers* included, subsessile, lanceolate, cells rounded at the base. *Disc* 0. *Ovary* 2-celled, acute; style short, stigma thick 2-fid; ovules many in each cell. *Berry* globose, pericarp coriaceous or hard. *Seeds* many, imbedded in pulp, albumen fleshy; cotyledons thin, radicle short.—DISTRIB. About 15 species, East Asiatic, Malayan, Australian and Pacific.

* *Flowers in terminal paniced cymes. Corolla-lobes oblong or rounded, quite entire.*

1. **M. monogynus**, *Roxb. Fl. Ind.* ii. 56; leaves oblong or oblong-lanceolate acute or obtuse base acute or rounded, corolla-tube $\frac{1}{2}$ – $\frac{3}{4}$ in., lobes as long oblong. *A. DC. Prodr.* viii. 329; *Wall. Cat.* 1603; *Wight Ic.* t. 394; *Bot. Reg.* t. 834; *Bot. Mag.* t. 2527. *Echaltium piscidium*, *Wight Ic.* t. 242, excl. fig. of fruit. *Nerium piscidium*, *Roxb. Fl. Ind.* ii. 7, excl. descr. of fruit.

SIKKIM HIMALAYA; at Bartning, alt. 4500 ft. (leaves only), *Clarke*. ASSAM, SILHET and the KHASIA Mts., common, ascending to 4000 ft. PENANG; *Maingay*.

A tall milky climber, branches smooth. *Leaves* 5–6 by $1\frac{1}{2}$ –2 in., pale brown when dry and shining above, nerves many but not close, very slender, arching; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Panicles* puberulous, sometimes 12 in. long, brachiate, drooping; flowers usually 3-nate, nearly white, fragrant; pedicels long or short; bracts caducous. *Calyx-segments* $\frac{1}{6}$ in., broad, ciliolate. *Corolla-tube* villous or bearded within, lobes obtuse. *Fruit* globose, obscurely 4-angled, size and colour of an orange; pericarp coriaceous. *Seeds* numerous. Roxburgh erred in describing the scales of the corolla as being undivided.

2. **M. khasianus**, *Hook. f.*; leaves linear-lanceolate acuminate at both ends membranous, cymes short few-fl., corolla-tube $\frac{1}{6}$ in., lobes rounded.

KHASIA Mts.; Moflong wood, &c., alt. 5–7000 ft., *Griffith, J. D. H. & T. T.*

A smaller plant in all its parts than *M. monogynus*, with leaves $2\frac{1}{2}$ –5 by $1\frac{1}{2}$ –1 in., and more membranous, very much smaller flowers with a short corolla-tube and rounded lobes, and with the fruit only $\frac{1}{2}$ in. diam.

** *Flowers small in axillary cymes or fascicles. Corolla-lobes very obliquely 2-lobed or 2-fid at the tip.*

3. **M. orientalis**, *Blume Bijl.* 1026, and *Mus. Bot.* i. 155, fig. 411; quite glabrous, leaves oblong or elliptic-oblong obtusely acuminate base acute, nerves very numerous nearly horizontal very slender, cymes shortly peduncled few-fl., corolla $\frac{1}{2}$ in. lobes short obliquely ovate bicuspidate, scales closing the mouth very thick fleshy lobulate. *Miquel Fl. Ind. Bat.* ii. 395, t. 34; *A. DC. Prodr.* viii. 330; *Kurz in Journ. As. Soc.* 1877, ii. 250, in note. *Hunteria?* cuspidata, *Wall. Cat.* 1609; *A. DC. l.c.* 350. *Alyxia?* cuspidata, *Wall. Herb. Chilocarpus cuspidatus*, *Benth. in Gen. Pl.* ii. 698 (under *Hunteria*).

PENANG; *Wallich, Phillips, Maingay* (Kew Distrib. 1043/2, *Chilocarpus suaveolens*).—DISTRIB. Java, Sumatra.

Branches smooth, rather slender, bark very dark. *Leaves* 4–5 by $1\frac{1}{2}$ –2 in., thinly coriaceous, greenish brown and shining above when dry, pale yellow green beneath, margins a little undulate; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in. *Cymes* with very short stout peduncles; flowers crowded; bracts rounded, persistent. *Calyx* small, lobes rounded. *Corolla* very thickly coriaceous, tube swollen in the middle, lobes forming a globose bud; lobes shorter than the tube. *Fruit* “large, yellow” (*Maingay*).

4. **M.? micranthus**, *Hook. f.*; quite glabrous, leaves elliptic-lanceolate obtusely acuminate base acute nerves remote very slender, cymes subsessile many-flowered, corolla $\frac{1}{2}$ – $\frac{3}{4}$ in. long, lobes short unequally obtusely 2-lobed, scales closing the mouth 2-lobed.

MALACCA; *Maingay* (Kew Distrib. 1090).

Branches smooth rather slender; bark black. *Leaves* 3–6 by $1\frac{1}{2}$ –2 in., coriaceous, dark brown and shining when dry above, paler bright brown beneath, margins somewhat undulate; petiole $\frac{1}{2}$ in. *Fascicles* of flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam.; bracts broad, short, deciduous. *Calyx* very small, lobes rounded. *Corolla* coriaceous, tube much swollen in the middle; lobes short, forming a globose bud, obliquely 2-fid, sinus broad,

longer lobule ciliate or toothed at the tip. *Anthers* narrowly lanceolate, acuminate. *Fruit* unknown.—Maingay observes that this resembles a *Melodinus*.

5. **WINCHIA**, A. DC.

A slender twining evergreen shrub. *Leaves* 3 in a whorl. *Flowers* small, in terminal paniculate cymes. *Calyx* small, 5-lobed, eglandular within. *Corolla* salver-shaped, tube nearly cylindric; lobes rounded, velvety, overlapping to the left; throat villous. *Anthers* above the middle of the tube, included, subsessile, cells rounded at the base, dehiscing almost throughout their length. *Disc* 0. *Ovary* short, 2-celled, top rounded glabrous; style short, stigma with a calyp-triform base; ovules in several series, placentas on the septum. *Fruit* not seen.

W. calophylla, A. DC. *Prodr.* viii. 326; *Kurz For. Fl.* ii. 170; *Deless- Ic. Sel.* v. t. 46. *Alyxia*? *calophylla*, Wall. *Cat.* 1607. *A. glaucescens*, G. *Don Gen. Syst.* iv. 97 (descript. incorrect).

MARTABAN; Wallich.

Leaves 2-4 in., oblong-lanceolate, obtusely caudate, acuminate, base acute, very shining above and dark olive brown when dry, pale beneath, margins waved, coriaceous; nerves very numerous, close and horizontal; petiole slender, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* glabrous, rounded, shortly peduncled, 1-2 in. diam.; bracts minute; pedicels short. *Calyx* campanulate, lobes rounded, ciliolate. *Corolla-tube* $\frac{1}{2}$ - $\frac{1}{4}$ in., four times longer than the calyx, inflated below the top; lobes short, white with velvety hairs.

6. **CARISSA**, Linn.

Spinous, densely branched, usually erect shrubs. *Leaves* opposite, small, coriaceous. *Flowers* in terminal and axillary peduncled 3-chotomous cymes. *Calyx* 5-partite, glandular within or not, segments acute. *Corolla-tube* cylindric, throat naked, lobes overlapping to the right (in the Indian species). *Stamens* at the top of the tube, included; anthers lanceolate, cells rounded at the base. *Disc* 0. *Ovary* 2-celled; style filiform, stigma fusiform or columnar, minutely 2-fid; ovules 1-4 in each cell, rarely more. *Berry* ellipsoid or globose, 2- (or by abortion 1-) celled. *Seeds* usually 2, peltately attached to the septum, albumen fleshy; cotyledons ovate.—DISTRIB. Species about 20, African, Asiatic and Australian.

The Indian species of this genus are very difficult of definition, and are probably reducible to one or two very variable plants. The tickets of Wallich's specimens in Herb. Linn. Soc. have been, I fear, much misplaced.

* *Spines straight.*

1. **C. Carandas**, Linn.; A. DC. *Prodr.* viii. 332; shrubby or arborescent, quite glabrous except the puberulous cymes, leaves $1\frac{1}{2}$ -3 in. oblong rounded broadly ovate or obovate shining above, tip rounded or obtuse, nerves numerous, corolla $\frac{3}{4}$ -1 in. long, ovary 4- or 8-ovuled, berry $\frac{1}{2}$ -1 in. ellipsoid 4- or more-seeded. Wall. *Cat.* 1677, partly; Roxb. *Cor. Pl.* i. 55, t. 77, and *Fl. Ind.* i. 687, and ed. Wall. & Carey ii. 523; Wight *Ic.* t. 426, and in Hook. *Comp. Bot. Mag.* i. 276, t. 12; Lamk. *Ill.* t. 118, fig. 1; Lodd. *Bot. Cab.* t. 663; Brand. *For. Fl.* 320; Gibs. *Cat. Bomb. Pl.* 116; Dalz. & Gibs. *Bomb. Fl.* 143; Kurz *For. Fl.* ii. 169; Beddome *Fl. Sylv.* 156, t. 19, fig. 6. *C. congesta*, Wight *Ic.* t. 1289.

Throughout the drier sandy or rocky soils of INDIA, native or cultivated; from the Punjab to Ceylon, Birma and Malacca.—DISTRIB. Java, Timor.

A large shrub or small gnarled tree with many dichotomous, rigid, spreading

branches; axils and nodes with 2 simple or forked thorns, sometimes 1-2 in. long. *Leaves* subsessile, $1\frac{1}{2}$ -3 by $1-1\frac{1}{2}$ in., rather thinly coriaceous, base rounded or retuse, tip rarely mucronate. *Cymes* terminal, peduncle stout, $\frac{1}{4}$ -1 in.; bracts minute; flowers crowded, white or pale rose-coloured, odorous. *Calyx-segments* subulate-lanceolate, acute, puberulous and ciliate. *Corolla-tube* $\frac{3}{4}$ in., glabrous or puberulous with swollen throat and lobes pubescent, lobes lanceolate, acute, about half as long as the tube. *Ovary-cells* 4-ovuled. *Drupe* $\frac{1}{4}$ -1 in. long, ellipsoid, red then black, polished, 4- or more-seeded.

Var. congesta, Beddome Fl. Sylv. Anal. Gen. 156; ovarian cells 2-ovuled. *Kurz in Journ. As. Soc.* 1877, ii. 250. *C. congesta*, *Wight Ic.* t. 1289.—Mt. Aboo, *Stocks*; Kurg, the Wynaad and Birma.

2. ***C. spinarum***, *A. DC. Prodr.* viii. 332; suberect, shrubby, glabrous or branches cymes and leaves beneath finely puberulous, leaves $\frac{1}{2}$ -1 $\frac{1}{2}$ in. elliptic ovate or rounded acute mucronate or apiculate rarely obtuse many or few-nerved shining above, corolla $\frac{1}{2}$ in. long, ovary 4-ovuled, berry $\frac{1}{4}$ in. subglobose. *C. diffusa*, *Roxb. Fl. Ind.* i. 689, and *ed. Wall. & Carey*, ii. 524; *A. DC. l. c.*; *Wight Ic.* t. 427; *Wall. Cat.* 1678, partly; *Brand. For. Fl.* 321; *Kurz For. Fl.* ii. 169; *Beddome Fl. Sylv.* t. 157.

Drier parts of INDIA; from the Punjab Himalaya, which it ascends to 6000 ft. in Murree, to Ceylon and Birma.

Probably a state of *C. Carandas* as suggested by Brandis, than which it is a smaller plant with shorter and more slender spines, more acute leaves and a smaller berry.

Var. hirsuta; more pubescent. *C. hirsuta*, *Roth Nov. Sp.* 128; *A. DC. Prodr.* viii. 333; *Kurz For. Fl.* ii. 169; *Dalz. & Gibs. Bomb. Fl.* 143. *C. villosa*, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 525; *Grah. Cat. Bomb. Pl.* 116. *Wight Ic.* t. 437. Not uncommon.

3. ***C. paucinervia***, *A. DC. Prodr.* viii. 333; suberect, shrubby, glabrous except the puberulous petioles and cymes, leaves $1-1\frac{1}{2}$ in., elliptic-oblong or lanceolate acute at both ends very coriaceous not shining, nerves 2-3 pairs very oblique, corolla $\frac{1}{2}$ - $\frac{3}{4}$ in., berry $\frac{1}{2}$ in. ellipsoid. *Wight Ic.* t. 1290. *C. diffusa*, *Wall. Cat.* 1678, in part. *C. Carandas*, var. *paucinervia*, *Beddome Fl. Sylv. Anal. Gen.* 156; *Kurz in Journ. As. Soc.* 1877, ii. 250.

LOWER BENGAL; Monghir, *Hamilton in Herb. Wall.* NILGHERRY Mts.; at the Kaitia Falls, *Wight*, &c. ? *C. salicina*, *Lamk.*; *A. DC. l. c.*

A small ramous shrub, with the habit of *C. diffusa*, and probably, as Beddome conjectures, a variety of that species, but very distinct in appearance, more densely leafy, the leaves less shining than in its congeners and yellower when dry. *Peduncles* very short, 3-5-fld. *Corolla-lobes* very narrow.—I suspect a mistake as to the Monghir locality and that Wallich's specimens are mislabelled.

** *Spines decurved.*

4. ***C. macrophylla***, *Wall. Cat.* 1679; shrubby, erect; quite glabrous except the puberulous cymes, leaves 2-4 in. ovate or elliptic-ovate acute or acuminate many-nerved, cymes sessile, corolla 1 in., berry $\frac{3}{4}$ -1 in. ellipsoid. *A. DC. Prodr.* viii. 332. *C. inermis*, *Vahl Symb.* iii. 43; *A. DC. l. c.* 335. *C. lanceolata*, *Dalz. in Dalz. & Gibs. Bomb. Fl.* 143. *C. Dalzellii*, *Beddome For. Fl. Anal. Gen.* 157. *C. mitis*, *Heyne mss.*

DECCAN PENINSULA; Kurg, *Heyne*; the Concan, at Ramghat, *Dalzell*; Courtallum, *Roth*, *Wight*.

A large shrub, thorns very strong, curved, $1-1\frac{1}{2}$ in., and branches dark brown. *Leaves* shortly petioled, drying dark brown. *Flowers* as in *C. Carandas*, but lobes of corolla longer and narrower. *Calyx-lobes* longer and more slender, almost filiform in the Courtallum specimens, which have smaller leaves.—I cannot doubt this being

Vahl's *C. inermis*, described by him from a spineless branch, which justifies the abandonment of his name *inermis*.

5. *C. suavissima*, *Beddome mss.*; climbing, quite glabrous, leaves 2–3 in. broadly ovate acute or acuminate many-nerved, cymes sessile, corolla 1 in. long, berry 2 in. long.

DECCAN PENINSULA; mountains of the Madura district, *Beddome*.

This closely resembles *C. macrophylla*; but differs in the slender climbing habit, very small spines, broader paler leaves, the perfectly glabrous flowers and large berries. Col. *Beddome* describes it as a lofty climber with milky and most delicious fruit.

TRIBE II. PLUMERIEÆ.

7. *RAUWOLFIA*, *Linn.*

Glabrous (the Indian) shrubs. *Leaves* 3–4-nately whorled, rarely opposite; nerves slender, remotely arched, axils glandular. *Peduncles* alternating with the terminal leaves, becoming lateral. *Calyx* 5-fid or -partite, eglandular within. *Corolla* salver-shaped, tube cylindric, mouth constricted, throat usually hairy within; lobes broad, overlapping to the left. *Stamens* included at or above the middle of the tube; anthers small, acute, cells rounded at the base. *Disc* large, cup-shaped or annular. *Carpels* 2, distinct or connate; style filiform, stigma broad calyptriform at the base, tip 2-fid; ovules 2, collateral in each carpel. *Ripe carpels* drupaceous, distinct or connate, usually 1-seeded. *Seeds* ovoid, albumen fleshy; cotyledons flat.—*DISTRIB.* Species about 40, chiefly tropical American.

* *Corolla-tube* slender, inflated a little above the middle.

1. *R. serpentina*, *Benth. in Gen. Pl.* ii. 697; leaves elliptic-lanceolate or obovate acute or acuminate, nerves 8–12 pairs, cymes long-peduncled rounded rarely racemose fruiting erect, sepals short lanceolate, corolla-tube long slender shortly globosely inflated above the middle, drupes $\frac{1}{4}$ in. broadly obliquely ovoid. *Kurz For. Fl.* ii. 17. *Ophioxylon serpentinum*, *Linn.*; *A. DC. Prodr.* viii. 342; *Bot. Mag. t.* 784; *Jones in As. Research.* iv. 308; *Roxb. Fl. Ind. i.* 694, and *ed. Carey & Wall.* ii. 530; *Wight Ic. t.* 849; *Grah. Cat. Bomb. Pl.* 116; *Dalz. & Gibb. Bomb. Fl.* 144; *Bedd. For. Fl. Anal. Gen.* 156; *Miq. Fl. Ind. Bat.* ii. 404. *O. trifoliatum*, *Gaertn. Fruct.* ii. 129, t. 109, fig. 2; *Miquel l.c.* *O. obversum*, *Miquel l.c.* 405. *Tabernæmontana cylindracea*, *Wall. Cat.* 4451.—*Rheede Hort. Mal. t.* 47; *Burm. Fl. Zeyl. t.* 64.

TROPICAL HIMALAYA and plains near the foot of the hills from Sirkind, *Edgeworth*, and Moradabad, *Thomson*, to Sikkim. The KHASIA Mts., ascending to 4000 ft.; ASSAM, PEGU, TENASSERIM, and in the DECCAN PENINSULA, along the Ghats to TRAVANCORE and CEYLON.—*DISTRIB.* JAVA.

A small shrub, 6–18 in., rarely 2–3 ft. high, bark white, rarely lenticellate. *Leaves* 3–7 by $1\frac{1}{2}$ – $2\frac{1}{2}$ in., green when dry, very pale beneath, narrowed into a short petiole. *Cymes* 1–2 in. diam., many-flowered; peduncle 2–5 in., stout, branches and pedicels red; bracts obsolete; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in.; flowers white or pinkish, nearly 1 in. long. *Calyx* small. *Corolla-tube* often curved; lobes not one-quarter the length of the tube, margins undulate; throat hairy. *Drupes* black, endocarp slightly rugose.

2. *R. peguana*, *Hook. f.*; leaves oblong or oblong-lanceolate acuminate, cymes sessile branched from the base branches divaricate, calyx-lobes ovate acute, corolla-tube slender inflated in the middle.

PEGU; *Kurz*.

Branches rather slender, not lenticellate. *Leaves* opposite and three in a whorl,

3-5 by $1\frac{1}{2}$ - $1\frac{3}{4}$ in., very membranous; nerves 7-10 pairs, very faint. *Cymes* with the main branches an inch long widely divaricating from the base, some decurved; flowers pedicelled, $\frac{1}{2}$ - $\frac{2}{3}$ in. long. *Calyx* very small, many times shorter than the corolla-tube. *Corolla-lobes* very small. *Fruit* not seen.—This is closely allied to *R. serpentina*, differing in the inflorescence, smaller flowers, and calyx.

** *Corolla-tube broad, inflated at the top.*

3. *R. densiflora*, Benth. in *Gen. Pl.* ii. 697; leaves obovate or oblanceolate acuminate, nerves 8-16 pairs, cymes short- or long-peduncled or corymbose erect or spreading in fruit, sepals elongate subulate-lanceolate half the length of the broadly tubular corolla-tube which is inflated at the top, drupes $\frac{1}{2}$ - $\frac{1}{3}$ in. obliquely ellipsoid. *Ophioxylon neilgherrense*, *Wight Ic.* t. 1292; *Dalz. & Gibs. Bomb. Fl.* 144. *O. ceylanicum*, *Wight Ic.* t. 1291. *O. macrocarpum*, *Wight l. c.* iv. part 2, 1. *O. densiflorum*, *Thwaites Enum.* 191; *Beddome For. Fl. Anal. Gen.* 156, t. 20, fig. 2. *Tabernæmontana densiflora*, *Wall. in Bot. Reg.* t. 1273; *A. DC. Prodr.* viii. 373. *T. parviflora*, *Herb. Heyne in Wall. Cat.* 4453.

KHASIA MTS.; alt. 1-4000 ft.. *J. D. H. & T. T.* DECCAN PENINSULA, on the Western Ghats; from the Concan southwards, alt. about 6000 ft. CEYLON, ascending to 6000 ft.

A larger shrub than *R. serpentina*; branches copiously lenticellate. *Leaves* often 4 in a whorl, very variable in size, 4-10 by 2-3 in., and number and stoutness of nerves. *Cymes* often numerous, dichotomously branched, branches and pedicels erect; flowers rose-red or white, $\frac{1}{2}$ in. long. *Calyx-lobes* $\frac{1}{6}$ - $\frac{1}{4}$ in. *Corolla-lobes* rounded, nearly as long as the tube. *Drupe*s very rugose.

VAR. ? *macrophylla*; leaves broader 8-10 by $2\frac{1}{2}$ - $3\frac{1}{2}$ in. very membranous, cymes very short branched from the base, flowers not seen, fruit as in the type. *Tabernæmontana subcapitata?*, *Herb. Ind. Or. H. f. & T.*—Khasia Mts., alt. 2000 ft., at Nowgong.

4. *R. microcarpa*, *Hook. f.*; leaves small oblanceolate acuminate, nerves 8-10 pairs, cymes short branched from the base, drupes ovoid $\frac{1}{4}$ in. long. *Tabernæmontana microcarpa*, *Wall. Cat.* 1581.

BIRMA; Taongdong (road to Ween-dow), *Wallich*.

The specimens are most wretched, consisting of two fragments of branches with 3 or 4 broken leaves and a fruiting cyme from which the solitary drupe (much eaten by insects) is detached.

5. *R. decurva*, *Hook. f.*; leaves small oblanceolate acuminate, cymes shortly peduncled decurved few-flowered, calyx-lobes lanceolate half as long as the broad corolla-tube which is inflated at the top, drupes $\frac{1}{4}$ in.

DECCAN PENINSULA; Canara and the Concan, Poonah, *Stocks*; Mundeel, *Ritchie*.

A shrub, 6 ft.; branches stout, dichotomous, lenticellate, leafy at the tips only. *Leaves* 4 in a whorl, in crowded whorls, $1-1\frac{1}{2}$ by $\frac{1}{2}$ - $\frac{2}{3}$ in., drying brownish-green. *Cymes* short, peduncle $\frac{1}{2}$ -1 in., 2-6-flowered, sometimes branched from the base; flowers $\frac{1}{2}$ in. long, white to pink. *Calyx-lobes* lanceolate, half the length of the corolla-tube. *Corolla-lobes* rounded, almost as long as the tube.—This may be a state of *R. densiflora*, but if so it is a very singular one, easily distinguished by the small leaves crowded at the tips of the woody branches, the decurved peduncles, and small flowers.

6. *R. micrantha*, *Hook. f.*; leaves elliptic-lanceolate or oblanceolate acuminate, cymes with long slender erect peduncles few-flid., calyx-lobes triangular-ovate, corolla very small tube slightly swollen at the top, lobes small, drupes $\frac{1}{2}$ in. obliquely ovate acute. *Ophioxylon micranthum*, *Wight mss.*

MALABAR; *Wight*.

Branches rather slender, with minute lenticels. *Leaves* opposite and 3 in a whorl,

3-5 by 1-2 in., very membranous, drying yellowish green, narrowed into an often slender petiole; nerves 10-12 pairs, very slender. *Peduncle* $1\frac{1}{2}$ -2 in., branches few, slender, short, divaricate; bracts minute, subulate; flowers $\frac{1}{2}$ in. *Calyx-lobes* about one-quarter the length of the corolla-tube. *Corolla* membranous, tube broad, lobes (unexpanded) very small. *Drupes* connate to the middle.

7. **R. Beddomei**, *Hook. f.*; leaves oblanceolate acuminate, cymes with very long slender horizontal peduncles, branches few divaricate, flowers racemed, calyx-lobes triangular-ovate, corolla small, tube slightly swollen at the top, lobes small, drupe $\frac{1}{2}$ in. gibbously ovate acuminate. *Tabernæmontana verticillata*; *Beddome For. Fl. Anal. Gen. xx. fig. 3.*

TRAVANCORE; *Beddome*.

Branches very slender; bark ciliate, minutely lenticellate. *Leaves* 3-6 by $1\frac{1}{2}$ - $1\frac{3}{4}$ in., very membranous; nerves 15-20 pairs, very slender, spreading, nearly straight. *Peduncle* 3-5 in.; horizontal or decurved; branches 1-2 in., divaricate, very slender, forked, the long arms bearing racemes of flowers $\frac{1}{2}$ in. long, like those of *R. micrantha*. *Drupe* solitary, much flattened.—Allied to *R. micrantha*, differing in the leaves with more numerous straighter nerves, the very long peduncles and racemose flowers and large drupes.

DOUBTFUL SPECIES.

OPHIOXYLON BELGAUMENSE, *Wight Ic. iv. part ii. 2* (under *O. neilgherrense*); shrubby, erect, leaves elliptic-oblong obtuse or acuminate, corymbs long-peduncled compact many-fld., flowers on rather long pedicels, calyx 5-cleft, lobes dilated broad imbricating somewhat truncate, corolla-tube long slender, lobes forming a round capiculum in bud, stamens about the middle of the tube.—Belgaum, *Lav.* I find no specimen of this in Wight's Herbarium; but for the calyx it seems identical with *R. serpentina*.

R. PULAPARIA, *Roxb.*; *Smith in Rees's Cyclop. xxix.*; *A. DC. Prodr. viii. 341*; leaves 3 in a whorl, 3-4 by $1-1\frac{1}{2}$ in. elliptic-lanceolate subacute, nerves very numerous nearly horizontal, cymes terminal, peduncle curved stout $\frac{1}{2}$ in., pedicels and bracts downy, calyx-lobes small ovate acute downy, corolla-tube many times longer than the calyx swollen at the top glabrous, lobes short rounded.—A Calcutta garden plant, probably the W. Indian *R. nitida*, L. I have made up the description from Roxburgh's coloured figure and Smith's description, having no specimen.

8. **ALYXIA**, *Br.*

Shrubs. *Leaves* 3-4-nately whorled, rarely opposite, nerves faint. *Flowers* small, in axillary or subterminal cymes. *Calyx* short, 5-partite, eglandular within. *Corolla* salver-shaped, tube cylindric, throat naked; lobes overlapping to the left. *Stamens* at or above the middle of the tube; anthers lanceolate, base of cells rounded. *Disc* 0, or obscure. *Carpels* of ovary 2, distinct; style filiform, top oblong, urceolate or capitate, tip pointed or shortly 2-fid; ovules 2-6, 2-seriate in each carpel. *Fruit* of 1-2 drupes or berries, 1-seeded or with 2-4 1-seeded joints. *Seeds* ovoid or oblong, grooved or excavated ventrally, albumen horny, ruminant; cotyledons thin, radicle superior.—*DISTRIB.* Species about 30, tropical Asiatic, Malayan, Australian and Polynesian.

1. **A. gracilis**, *Benth. in Gen. Pl. ii. 697*; glabrous, twining, leaves opposite and 3 in a whorl elliptic oblong or lanceolate obtusely caudate, nerves very many faint horizontal, flowers small in long peduncled very slender branched panicles. *Hunteria*? *gracilis*, *Wall. Cat. 1613*; *A. DC. Prodr. viii. 350*.

SIKKIM HIMALAYA; in the Terai, alt. 1-2000 ft., *J. D. H. KHASIA Mts.*, alt. 2-4000 ft., *De Silva, H. f. & T.*

Branches slender; bark pale, often warted. *Leaves* 3-6 by $1-1\frac{1}{2}$ in., shining above, green when dry, paler beneath, base acute; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Cymes* 2-4 in., branches spreading, very slender; bracts small, ovate, acute. *Calyx-lobes* $\frac{1}{16}$ in.,

ovate, acute. *Corolla-tube* about twice as long as the calyx; lobes oblong, obtuse, as long as the tube. *Ripe carpels* $\frac{3}{4}$ in. long, stoutly stipitate, ellipsoid, obtuse, smooth.—*Habit* of a *Chilocarpus*.

2. **A. coriacea**, Wall. in Roxb. *Fl. Ind. ed. Wall. & Carey*, ii. 541, and *Cat.* 9065; bark red-brown, leaves opposite very coriaceous obovate obtuse shining above nerves ascending, cymes very short and shortly peduncled, bracts and calyx-lobes obtuse. *Hunteria*? *coriacea*, Wall. *Cat.* 1610.

PENANG; Wallich, Porter.

Branches very stout. *Leaves* 2-4 by 1-1 $\frac{1}{2}$ in., narrowed into the petiole, yellow-brown when dry, nerves raised in the upper surface, beneath opaque dull yellow with the nerves very faint; petiole $\frac{1}{2}$ - $\frac{2}{3}$ in. *Cymes* $\frac{1}{2}$ in., few fld., bracts very small. *Flowers* $\frac{1}{8}$ in. long. *Calyx* very coriaceous, lobes $\frac{1}{16}$ in., acute, ciliate. *Corolla-tube* inflated in the middle, constricted at the mouth, with 5 2-lobed glands, lobes small, oblong falcate. *Fruit* not seen.

3. **A. lucida**, Wall. in Roxb. *Fl. Ind. ed. Wall. & Carey*, ii. 540; bark red-brown, cymes and shoots pubescent, leaves opposite or 3-4 in a whorl obovate obtuse or acute very pubescent shining above and almost so beneath, nerves nearly horizontal, cymes very short and shortly peduncled, corolla $\frac{1}{2}$ in. long. *A. Gynopogon*, Wall. *Cat.* 1605.

SINGAPORE; Wallich. MALACCA (cultivated); Maingay.

Branches very stout, young 4-angled. *Leaves* 3-4 by 1-1 $\frac{1}{2}$ in., pale, hard and thick when dry, narrowed into a very short petiole; nerves hardly raised on either surface. *Cymes* $\frac{1}{2}$ in. long, on thick peduncles, rarely longer than the petioles; bracts oblong, pubescent; flowers yellow, fragrant. *Calyx* deeply 5-cleft, segments acute. *Corolla-tube* $\frac{1}{2}$ in., pubescent within; lobes as long, oblong. *Ovary* villous. *Ripe carpels* $\frac{1}{2}$ in. long, broadly elliptic, smooth, stipitate.

4. **A. pilosa**, Miquel *Fl. Ind. Bat.* ii. 408; branches leaves beneath and cymes softly pubescent or tomentose, leaves 3-4 in a whorl elliptic-lanceolate very coriaceous shining above, nerves very many horizontal, cymes shortly peduncled, flowers villous.

MALACCA; Mt. Ophir (*Herb. Hook.*).—DISTRIB. Sumatra, Borneo.

Branches stout; bark pale. *Leaves* 3-5 by 1-1 $\frac{1}{2}$ in., drying green, narrowed into short stout petioles $\frac{1}{4}$ in., midrib stout beneath; nerves very close, faint on both surfaces. *Peduncle* equalling or shortly exceeding the petiole, very stout, bracts small; flowers subsessile, crowded, $\frac{1}{2}$ in. long. *Calyx-segments* ovate-lanceolate, obtuse, erect, one-fourth shorter than the corolla. *Corolla-tube* coriaceous, narrowly campanulate above, hairy within and without, lobes very short, rounded, glabrous within. *Fruit* not seen.—I am a little doubtful about the Malacca locality of this plant, that given above is in Sir W. Hooker's handwriting on the sheet; that on a specimen, evidently of the same collecting, in Bentham's Herbarium, is marked "Penang, Hooker, 1857."

5. **A. pumila**, Hook. f.; dwarf, glabrous, leaves opposite or 3 in a whorl elliptic-lanceolate obtusely acuminate very coriaceous shining above, nerves very many horizontal, cymes subsessile few-fld.

MALACCA; Mt. Ophir, Lobb, Maingay (Kew Distrib. 1053).

A small slender shrub (apparently scandent, Maingay); branches slender, young 4-angled with granulate red bark. *Leaves* 1-2 by $\frac{1}{2}$ - $\frac{1}{2}$ in., drying greenish, narrowed into slender petioles, $\frac{1}{4}$ in., midrib prominent beneath, nerves very close and faint on both surfaces. *Cymes* 3-6-fld.; peduncle very short; bracts minute; flowers shortly pedicelled, quite glabrous, $\frac{1}{4}$ in. long. *Calyx-segments* small, ovate-lanceolate, thick, subacute. *Corolla-tube* inflated below the constricted mouth, throat villous within; lobes small, rounded. *Fruit* $\frac{1}{4}$ in. long, between globose and ellipsoid, apiculate, pedicel slender.

6. **A. odorata**, *Wall. Cat.* 1606; bark red, leaves opposite and 3 in a whorl, elliptic or obovate obtuse or obtusely acuminate shining above with numerous raised nearly horizontal nerves, ripe carpels fleshy. *A. DC. Prodr.* viii. 347; *Miquel Fl. Ind. Bat.* ii. 408.

TENASSERIM; between Chappedong and Amherst, *Wallich*.

Leaves 3-5 by $1\frac{1}{2}$ -2 in., narrowed into the very short petiole, yellow when dry; nerves almost imperceptible beneath. *Flowers* not seen. *Ripe carpels* $\frac{3}{4}$ in. long, stipitate, ellipsoid.—This differs from *A. stellata* in the coriaceous foliage and larger carpels. A piece of the old wood in Wallich's Herbarium is covered with smooth scaling very dark-brown bark. *Kurz (in Journ. As. Soc.* 1877, ii. 251) refers this to *A. stellata*, but the fruit is very much larger than that of his own description of the latter species.

7. **A. stellata**, *Roem. & Sch. Syst.* iv. 439; quite glabrous, bark very white quite glabrous, leaves 3-4 in a whorl elliptic-lanceolate or oblong or obovate obtuse or obtusely acuminate shining above, nerves numerous very slender nearly horizontal, cymes shortly peduncled nodding paniced, corolla-tube $\frac{1}{2}$ in. long. *Roxb. Fl. Ind.* i. 699, and *ed. Wall. & Carey*, ii. 539. *A. DC. Prodr.* viii. 346; *Wall. Cat.* 1604. *Gynopogon stellatum*, *Labill. Ser. Austr.-Caled.* 30, t. 34; *Kurz For. Fl.* ii. 176.

TENASSERIM and the ANDAMAN ISLANDS.; *Kurz*. PENANG; *Wallich*.—DISTRIB. Malay Archipelago, Pacific Islds.

A shrub; branches slender, smooth. *Leaves* 2-5 by $1-1\frac{1}{2}$ in., thinly coriaceous, green when dry, pale beneath, narrowed into a petiole $\frac{1}{4}$ in. long. *Cymes* short but effuse; bracts short, ovate; flowers very shortly pedicelled, pure white. *Calyx* deeply 5-lobed, lobes acute. *Corolla-tube* cylindric, slender, lobes short, rounded. *Ripe carpels* ellipsoid, stipitate, "size of a cherry," *Roxb.*, or "of a small pea," *Kurz*, yellowish, sometimes with a second superposed.—I am not convinced of the identity of this with the original species of New Caledonia, which has more obovate leaves.

8. **A. fascicularis**, *Benth. in Gen. Pl.* ii. 698 (under *Hunteria*); bark pale warted, leaves opposite or 3 in a whorl elliptic-oblong or lanceolate obtusely caudate shining above with numerous parallel very slender raised nerves, cymes very shortly peduncled decurved dense-fld. glabrous or puberulous, corolla-tube $\frac{1}{2}$ in. long. *Hunteria*? *fascicularis*, *Wall. Cat.* 1612; *A. DC. Prodr.* viii. 350.

KHASIA MTS.; *De Silva*; Churra, alt. 4000 ft., *H. f. & T.*

A woody climber, branches slender or stout. *Leaves* 3 $3\frac{1}{2}$ by $1-1\frac{1}{2}$ in., coriaceous, green or pale brown when dry; nerves very faint beneath; petiole distinct, $\frac{1}{4}$ in. *Cymes* $\frac{3}{4}$ -1 in. long, dense-fld.; flowers racemose, very shortly peduncled; bracts acute. *Calyx-lobes* ovate, acute. *Corolla-lobes* small, rounded. *Fruit* not seen.—The short corolla at once distinguishes this from *A. stellata*.

9. **A. ceylanica**, *Wight Ic.* t. 1293; glabrous, branches slender, leaves opposite or 3 in a whorl broadly elliptic obtusely caudate membranous not shining, nerves distant arched, flowers solitary or 2-3-nate long pedicelled, carpels often moniliform. *Thwaites Enum.* 191; *Beddome For. Fl.* 158, t. 20, fig. 5.

CEYLON; Ambagamowa district, alt. 1-2000 ft., *Walker, &c.*

Shrubby, erect?; branches dichotomous, 4-angled. *Leaves* 2-3 by $1-1\frac{1}{2}$ in., drying green, base narrowed into a short slender petiole, midrib slender; nerves 8-10 pairs, extremely faint and slender. *Pedicels* $\frac{1}{2}$ in., straight, slender. *Calyx-lobes* lanceolate, acute, many times shorter than the corolla. *Corolla* yellowish, tube $\frac{1}{2}$ in., very slender, funnel-shaped above, glabrous without, villous within; lobes lanceolate, acuminate, half the length of the tube. *Carpels* fleshy, scarlet, sometimes of one dimidiate-oblong compressed pedicelled 1-seeded segment, $\frac{1}{2}$ - $\frac{3}{4}$ in. long, some-

times of 2-4 similar superimposed ones.—Very dissimilar from the other species, if indeed congeneric.

DOUBTFUL SPECIES.

GYNPOGON BREVIFLORUM, Kurz *For. Fl.* ii. 177; glabrous throughout, scandent. leaves 2-3 in. opposite or in whorls of 3 oblong lanceolate to lanceolate obtusely caudate base acuminate thinly coriaceous, nerves parallel obsolete, petiole 2-3 in. (? lines), cymes axillary and terminal short sessile, trichotomous, pedicels glabrous; very short, flowers small; calyx-lobes lanceolate acuminate, corolla-tube $\frac{1}{2}$ in., lobes shorter, drupes ellipsoid pointed glabrous, pedicel slender.—Upper Tenasserim and Martaban, in tropical forest, alt. 2000 ft.—The above description is condensed from Kurz's. I have seen no specimens.

9. **HUNTERIA**, Roxb.

Glabrous trees. *Leaves* opposite, coriaceous, shining, nerves very slender. *Flowers* small in terminal axillary or subterminal cymes. *Calyx* small, 5-lobed, eglandular. *Corolla* salver-shaped, tube cylindric, throat annulate, lobes overlapping to the left. *Stamens* above the middle of the tube; anthers oblong-lanceolate, cells rounded at the base. *Disc* 0. *Carpels* 2, distinct; style filiform, top thickened, stigma shortly 2-fid; ovules 2-4 in each carpel. *Fruit* of 2 ovoid or oblong, oblique or recurved fleshy berries, 1-seeded or 2-celled by the intruded placenta, and 2-seeded, not pulpy within. *Seeds* ovoid or oblong, albumen fleshy; cotyledons thin, radicle straight.—*DISTRIB.* 3 Indian species.

H. corymbosa, Roxb. *Fl. Ind.* i. 695, and *ed. Carey & Wall.* ii. 53; leaves lanceolate or oblong-lanceolate obtuse or obtusely caudate shining above, cymes short terminal and axillary. *A. DC. Prodr.* viii. 350; *Wight Ic.* t. 428. II. zeylanica, *Gard. Thwaites Enum.* 191; *Bedd. For. Fl.* ii. t. 265. II. ? lanceolata, *Wall. Cat.* 1611; *A. DC. l. c.* A. Roxburghiana, *Wight Ic.* t. 1294; *Thwaites Enum.* 192; *Bedd. l. c. Anal. Gen.* 158. *Cameraria zeylanica*, *Retz Obs.* iv. 24; *A. DC. l. c.* 389. *Gynopogon lanceolatum*, Kurz *For. Fl.* ii. 177. *Tabernæmontana salicifolia*, *Wall. Cat.* 1580. *T. parviflora*, *Herb. Heyne*.

DECCAN PENINSULA; Coromandel coast, Roxburgh, &c.; Tinnevely Ghats, *Beddome*; Courtallum, *Heyne*, &c. TAVOY; *Wallich*, Roxburgh. PENANG; *Wallich*, *Phillips*. CEYLON; *König*, &c.

A tree; branches slender, smooth. *Leaves* very variable, 4-6 by $\frac{3}{4}$ -2 in., very coriaceous, narrowed into the petiole, pale yellow-brown when dry; nerves very numerous, slender, spreading, with close intermediate reticulations; tip sometimes $\frac{1}{2}$ in. long; petiole $\frac{1}{4}$ - $\frac{3}{4}$ in. *Cymes* shortly peduncled, shortly corymbosely branched; bracts minute: flowers pedicelled, white. *Calyx-lobes* ovate, acute. *Corolla-tube* $\frac{1}{4}$ in., limb about $\frac{1}{3}$ in. diam.; lobes short, obliquely ovate-oblong. *Ripe carpels* size of a cherry, globose, pedicelled, pulpy, orange-coloured, 2-seeded.—Some Deccan specimens, figured by Wight as *H. Roxburghiana*, and which includes *Wallich's Tabernæmontana salicifolia*, have very narrow leaves.

10. **CERBERA**, Linn.

Small glabrous trees. *Leaves* alternate, long, nerves slender horizontal and parallel. *Flowers* large, white or red, in terminal cymes. *Calyx* 5-partite, eglandular, segments long. *Corolla* funnel-shaped, tube short, throat ribbed or with pubescent scales; lobes broad, overlapping to the left. *Stamens* included; anthers lanceolate, apiculate, cells rounded at the base. *Disc* 0. *Carpels* 2, distinct; style filiform, top dilated, stigma 2-lobed; ovules 4 in each carpel, on the faces of a thick placenta. *Fruit* of 1 (rarely 2) globose ovoid or ellipsoid 1-2-seeded carpels; pericarp very thick, fibrous and woody. *Seeds*

broad, compressed, peltately attached to the placenta, albumen 0; cotyledon thin, radicle very short.—**DISTRIB.** 4 maritime species, Madagascar, tropical Asia, and the Pacific.

C. Odollam, *Gaertn. Fruct.* ii. 193, t. 124; leaves lanceolate or oblanceolate or linear-obovate acute or abruptly acuminate narrowed into the stout petiole. *A. DC. Prodr.* viii. 353; *Wight Ic.* t. 441; *Roxb. Fl. Ind.* i. 692, and in *ed. Carey & Wall.* ii. 527; *Grah. Cat. Bomb. Pl.* 116; *Brand. For. Fl.* 322; *Kurz For. Fl.* ii. 171; *Bedd. For. Fl. Anal. Gen.* 157. *C. Manghu*, *Linn. partly*; *Wall. Cat.* 1582, in *Roxb. Fl. Ind. ed. Wall. & Carey*, ii. 529; *Bot. Mag.* t. 1845. *C. lactaria*, *Ham.*; *A. DC. l. c.* *C. laurifolia*, *Lodd. Bot. Cab.* t. 989, *Tanghinia Odollam, lactaria and laurifolia*, *G. Don Gen. Syst.* iv. 98.—*Rheede Hort. Mal.* i. t. 39.

Salt swamps, or on the coasts of INDIA and CEYLON.—**DISTRIB.** Malay Archipelago, China, Australia, Pacific Islds.

A small tree or large shrub, branches very thick. *Leaves* 3–8 by 1–2 in., leathery, black when dry, shining above, nerves very slender; petiole stout, $\frac{1}{2}$ –1 $\frac{1}{2}$ in. *Cymes* large; peduncle 2–6 in., stout, branches corymbose; bracts ovate, deciduous; flowers white, shortly pedicelled. *Calyx-lobes* $\frac{1}{2}$ –1 in., lanceolate, acuminate, revolute. *Corolla-tube* $\frac{1}{2}$ in., mouth red, limb 1–3 in. diam., lobes falcately triangular-obovate, acute. *Ripe carpel* ovoid, 2–4 in. long.—Omitted in Dalzell & Gibs. *Bomb. Flora*, but stated by Graham to be native of the South Concan.

11. OCHROSIA, Juss.

Trees. *Leaves* whorled, rarely opposite or scattered; nerves very numerous, slender, spreading. *Cymes* terminal, at length lateral, peduncled. *Calyx* 5-partite, eglandular, segments obtuse. *Corolla* salver-shaped, tube cylindric, throat naked, lobes overlapping to the right. *Stamens* above the middle of the tube, included; anthers lanceolate, cells rounded at the base. *Disc* 0, or obscure. *Carpels* 2, distinct; style filiform, top oblong, stigma 2-fid; ovules 2–6, 2-seriate in each carpel on each side of a prominent placenta. *Fruit* of 2 (rarely 1) spreading drupes; endocarp hard, thick, usually dorsally compressed and ventrally grooved. *Seeds* solitary, or 2 separated by the placenta, flattened, albumen 0 (or fleshy?); cotyledons large, flat; radicle short, superior.—**DISTRIB.** Species 12, Mascarene Islands, Malay Archipelago, Australia and the Pacific.

O. borbonica, *Gmel.*; *A. DC. Prodr.* viii. 356; glabrous, leaves in whorls of 3–4 obovate narrowed into the petiole polished above, tip rounded. *Thwaites Enum.* 192. *O. salubris*, *Blume Mus. Bot.* i. 158; *Kurz For. Fl.* ii. 172. *Cerbera parviflora*, *Wall. Cat.* 1584. *C. salutaris*, *Lour.*; *Blume Bijl.* 1033.

Tidal forests of the ANDAMAN ISLDS., *Kurz*, of SINGAPORE, *Wallich*, and CEYLON.—**DISTRIB.** Java, Seychelle and Mascarene Islds.

An evergreen tree, 20 ft. high, branches very stout. *Leaves* 6–16 by 2–6 in., coriaceous, yellow when dry, nerves nearly straight; petiole $\frac{1}{2}$ –2 in. *Cymes* stoutly peduncled, branches short, thick, corymbose; lower bracts sometimes leafy; flowers white, shortly thickly pedicelled. *Calyx-lobes* very coriaceous, ovate. *Corolla-tube* $\frac{1}{2}$ in., limb $\frac{1}{2}$ in. diam. *Ripe carpels* “ellipsoid-oblong, about 2 in. long” (*Kurz*).—I have seen no fruit, and have refrained from quoting synonyms, the specimens of the genus, being difficult to procure, are insufficient for complete identification; but I suspect that this species extends under various names from the Mauritius to Australia and the Fiji Islands.

12. **KOPSIA**, Blume.

Glabrous trees or shrubs. *Leaves* opposite, narrowed into very short petioles. *Flowers* in terminal cymes. *Calyx* small, 5-partite, segments with glandular tips, eglandular within. *Corolla* salver-shaped, tube very slender, throat hairy, lobes overlapping to the right. *Stamens* near the top of the tube, included; anthers acute, cells rounded at the base. *Disc* of 2 glands alternating with the carpels. *Carpels* 2, distinct; style filiform, thickened at the top, stigma short; ovules 2 on each carpel, 1 on either side of a thick placenta. *Fruit* of 2 obovoid or obliquely quadrate coriaceous or rather fleshy carpels, each 1-celled and -seeded or 2-celled by the intruded placenta and 2-seeded. *Seeds* oblong, albumen 0; cotyledons not thick.—**DISTRIB.** Species 4, Malayan.

1. **K. fruticosa**, A. DC. *Prodr.* viii. 352; leaves elliptic or elliptic-lanceolate obtusely caudate shining above, nerves 10–13 pairs, cymes subsessile, bracts ovate acute, corolla-tube inflated at the top. *Bot. Mag.* t. 4220. *Calpicarpium Roxburghii*, G. Don *Gen. Syst.* iv. 100; *Wight Ic.* t. 431; *Kurz For. Fl.* ii. 178. *Cerbera fruticosa*, Ker, *Bot. Reg.* t. 391; *Roxb. Fl. Ind.* i. 691, and *ed. Wall. & Carey*, ii. 526; *Wall. Cat.* 1583.

PEGU, MARTABAN and TENASSERIM; Wallich, &c., often planted.—**DISTRIB.** Java, Borneo.

A large evergreen shrub. *Leaves* 4–8 by $1\frac{1}{2}$ –3 in., thinly coriaceous, green when dry, shining above, paler beneath; nerves slightly arched, reticulations distinct. *Cymes* short, nearly flat-topped; peduncle very short, stout; branches short, thick; bracts $\frac{1}{12}$ in. *Calyx-segments* $\frac{1}{12}$ in., ovate. *Corolla* pink, tube $1\frac{1}{2}$ in., limb $1\frac{1}{2}$ –2 in. diam., mouth red. *Ovary* villous. *Ripe carpels* usually solitary, 1-seeded, urn-shaped, $\frac{1}{2}$ –1 in. long, obliquely truncate, pubescent, veined; pericarp thin, greenish purple.

2. **K. macrophylla**, Hook. f.; leaves oblong obovate or elliptic-oblong obtusely caudate opaque above, nerves 18–20 pairs, cymes subsessile, bracts imbricate boat-shaped obtuse, corolla-tube inflated in the middle.

SINGAPORE; Lobb.

Leaves 5–9 by 2–3 in., thinly coriaceous, green above, paler beneath; nerves as in *K. fruticosa*; petiole hardly any. *Cyme* with a short stout peduncle and a few thick branches 1 in. long, clothed with small broad bracts. *Calyx-lobes* rounded. *Corolla-tube* 1 in., very slender, limb $1\frac{1}{2}$ in. diam., lobes obovate. *Fruit* not seen.—This resembles *K. fruticosa*, but differs conspicuously in the long opaque leaves, shorter petioles, imbricate bracts, and corolla-tube with the stamens in the middle.—I have seen only one specimen.

3. **K. pauciflora**, Hook. f.; leaves elliptic or elliptic-lanceolate obtusely caudate shining above, nerves 6–8 pairs, cymes sessile reduced to a very short simple rachis, bracts ovate obtuse, corolla-tube inflated at the top.

MALACCA; Mt. Ophir, Maingay (Kew Distrib. 1056).

Leaves yellow-green when dry, 4–6 by $1\frac{1}{2}$ –2 $\frac{1}{2}$ in., firmly but thinly coriaceous, yellow beneath; petiole $\frac{1}{4}$ in. *Cyme-rachis* $\frac{1}{4}$ – $\frac{1}{2}$ in. long, quite sessile, loosely clothed with bracts. *Calyx-lobes* broad, obtuse. *Corolla-tube* $1\frac{1}{2}$ –2 in., very slender; lobes 1 in., linear-oblong, longer and narrower than in the two preceding species. *Fruit* not seen.—This is referred by Maingay (mss.) to Blume's *K. flavida* of New Guinea, which is described as having intensely green leaves and cymose flowers.

13. **RHAZYA**, Dcne

Glabrous erect shrubs. *Leaves* alternate, thick, nerves obscure. *Flowers* in dense terminal cymes, corymbs or thyrsi. *Calyx* short, 5-partite, eglandular.

Corolla salver-shaped, tube cylindric, with reflexed hairs beneath the stamens within, throat constricted hairy; lobes 5, short, broad, overlapping to the left. *Stamens* above the middle of the tube, included; anthers lanceolate, cells rounded at the base. *Disc* annular or obscure. *Carpels* 2, distinct; style filiform, top broad thickened, stigma sometimes furnished with a reflexed membrane, top 2-globose; ovules many, 2-seriate in each carpel. *Follicles* 2, erect, slender. *Seeds* many, subterete or angled and compressed, truncate or winged above and below, albumen fleshy ruminant; cotyledons oblong, thick, radicle superior.—**DISTRIB.** 2 species, Arabian and Indian.

R. stricta, *Decaisne* in *Ann. Nat. Sc. ser. 2*, iv. 81, and in *Jacquem. Voy. Bot.* t. 111; leaves elliptic-lanceolate acute coriaceous, corolla-lobes ovate mucronate. *A. DC. Prodr.* viii. 386; *Brandis For. Fl.* 322; *Boiss. Fl. Orient.* iv. 47.—*Apocyn. Wall. Cat.* 7478.

SCINDE; *Stocks*; in the Trans-Indian territory, common; Salt-range, *Fleming*; Peshawur, *Stewart*.—**DISTRIB.** Afghanistan, Beluchistan, Arabia.

A small glabrous very stout erect sparingly branched leafy shrub. *Leaves* 3-4 by $\frac{1}{2}$ - $\frac{3}{4}$ in., yellowish and leathery when dry, sessile. *Flowers* in short axillary, stoutly branched cymes, shortly and stoutly pedicelled; bracts subulate, persistent. *Corolla-lobes* acute. *Corolla* white, tube $\frac{1}{4}$ in., upper half inflated. *Follicles* erect, parallel, 2-3 by $\frac{1}{4}$ in., slightly compressed, thinly coriaceous. *Seeds* $\frac{1}{2}$ in. long, angularly compressed, shortly winged.—There is no specimen of this on the sheet in Wallich's Herbarium to which his ticket, No. 7478, is attached, but the note on that ticket is "*Apocyn. (ex Royleo in cujus Herbar. ad sunt specim. et icon. pict.) viminea, subaphylla, Doab Hindostania, 1825,*" leaves no doubt as to the plant meant; added to which the icon alluded to, made by Royle's artists, is in the Kew collection of drawings.

14. **VINCA**, *Linn.*

Erect or procumbent herbs or shrubs. *Leaves* opposite. *Flowers* solitary, axillary. *Calyx* 5-partite, eglandular, segments narrow. *Corolla* salver-shaped; tube cylindric, with usually reflexed hairs below the stamens; throat constricted, hairy or thickened; lobes broad, overlapping to the left. *Stamens* above the middle of the tube, included; anthers various. *Disc* of 2 large glands. *Carpels* 2, distinct; style filiform, top thick, stigma annulate viscid sometimes with a reflected membrane, tip minute penicillate; ovules 6 or more, 2-seriate in each carpel. *Follicles* 2, slender, erect or spreading. *Seeds* subcylindric, truncate at both ends, hilum lateral, albumen fleshy; cotyledons ovate, radicle long superior.—**DISTRIB.** About 10 species, European, Indian, American, and Madagascarian.

V. ROSEA, *Linn.* (*V. Gulielmi Waldemarii*, *Klotzsch* in *Reise Pr. Waldem. Bot.* t. 70); a West Indian plant, is much cultivated about pagodas, &c.; it has obovate leaves and rosy flowers $1\frac{1}{2}$ -2 in. diam.

V. pusilla, *Murr.* in *Act. Goett.* 1772, 66, t. 2, fig. 1; annual, erect, glabrous, branched from the base, leaves lanceolate acuminate, flowers very small subsessile, sepals filiform. *A. DC. Prodr.* viii. 382; *Dalz. & Gibs. Bomb. Fl.* 144. *V. parviflora*, *Retz Obs.* ii. n. 33; *Roxb. Fl. Ind.* ii. 1. *Catharanthus roseus*, *G. Don Gen. Syst.* iv. 95.—*Rheede Hort. Mal.* ix. t. 33.

WESTERN HIMALAYA; Garwhal, alt. 2000 ft., *Str. & Winterb.*; **UPPER GANGETIC PLAIN**, *Royle*, &c. Throughout the **DECCAN**, common.

An erect, pale-green annual, 1-2 ft. high; stem and branches acutely 4-angled. *Leaves* $1\frac{1}{2}$ -2 $\frac{1}{2}$ by $\frac{1}{3}$ - $\frac{3}{4}$ in., membranous, acuminate, margins minutely scabrid, stipular glands subulate; petiole $\frac{1}{4}$ in. or less, slender. *Flowers* $\frac{1}{4}$ in. long, on short pedicels, white. *Corolla* mouth narrow, hairy; throat glabrous, thickened. *Follicles* 2-3 in., very slender, diverging, straight, membranous. *Seeds* $\frac{1}{10}$ in., linear-oblong, cylindric, rounded at both ends; testa black, many-ribbed, ribs rough.

14*. **PLUMERIA**, Linn.

Erect trees; branches very thick. *Leaves* scattered, elongate, nerves numerous, horizontal. *Flowers* large, in terminal 2-3-chotomous cymes; bracts many, broad, deciduous. *Calyx* small, 5-fid, eglandular within; lobes broad, obtuse. *Corolla* salver-shaped, throat naked, lobes overlapping to the left, rarely to the right. *Stamens* near the base of the tube; anthers obtuse, cells rounded at the base. *Disc* 0, or lining the calyx-tube. *Carpels* 2, distinct; style short, stigma 2-lobed; ovules ∞ -seriate in each cell. *Follicles* linear-oblong or ellipsoid. *Seeds* oblong or lanceolate, plano-convex, winged, albumen fleshy, thin; cotyledons oblong or ovate-cordate.—**DISTRIB.** About 40 species, all natives of tropical America.

P. acutifolia, *Poiret*; leaves oblong acute at both ends. *A. DC. Prodr.* viii. 392; *Wall. Cat.* 1636; *Wight Ic. t.* 471; *Brand. For. Fl.* 323; *Kurz For. Fl.* ii. 179; *P. acuminata*, *Roxb. Fl. Ind.* ii. 20; *Bot. Reg. t.* 114; *Bot. Mag. t.* 3952.

Cultivated and naturalised in many parts of INDIA.

A small tree with crooked trunk and rough bark; branches swollen and leafy at the tips. *Leaves* 8-12 in.; petiole 1-1½ in., 1-glandular at the top. *Flowers* many, fragrant, pink externally, white within. *Follicles* about 5 in. long, cylindric.

15. **ELLERTONIA**, *Wight*.

Glabrous climbing shrubs. *Leaves* opposite or 3-4-nately whorled, coriaceous. *Flowers* slender, in subterminal cymes. *Calyx* small, deeply 5-fid, eglandular. *Corolla* salver-shaped, tube cylindric; throat constricted, naked; lobes 5, narrow, overlapping to the left. *Stamens* in the middle of the tube, filaments ciliate; anthers lanceolate, cells obtuse at the base. *Disc* 0. *Carpels* 2, distinct; style filiform, top ovoid or oblong, sigma linear, 2-fid; ovules many in each carpel, 2- ∞ -seriate. *Follicles* 2, linear or narrowly linear-oblong, terete, spreading. *Seeds* 2-seriate, oblong, flattened, peltately attached, winged above and below, albumen scanty; cotyledons thin, radicle superior. Species 2, an Indian and ? a Madagascarian.

E. Rheedii, *Wight Ic. t.* 1295.—*Rheede Hort. Mal.* ix. t. 14.

MALABAR and the **CONCAN**; at Quilon, *Wight*; Warree country, *Stocks, Gibson*.

Branches twining, slender, terete, *Leaves* 3-5 by 1-2 in., elliptic or oblong, obtusely acuminate, of a peculiar blue-gray hue beneath when dry, coriaceous; nerves 10-12 pairs, very slender, spreading; petiole ¼ in. *Cymes* clustered, few-fid., 1-2 in. long, 2-3-chotomously branched; bracts subulate, persistent; pedicels short. *Sepals* ovate, acuminate. *Corolla-tube* ½ in., very slender, inflated in the middle; lobes lanceolate, acuminate. *Ovary* elongate; style slender, stigmas long. *Follicles* 2-4 by ½ in., horizontally divaricate, sessile, straight or slightly curved, acute, coriaceous, inner coat separable. *Seeds* 1½ in., disc elliptic, wings quite straight, tips rounded.

16. **ALSTONIA**, Br.

Trees or erect shrubs. *Leaves* 3-4-nately whorled, rarely opposite. *Flowers* in subterminal corymbose cymes. *Calyx* short, 5-lobed or -partite. *Corolla* salver-shaped, tube cylindric; throat naked, annulate or with reflexed hairs; lobes overlapping to the right or left. *Stamens* near the top of the tube, included; anthers subacute. *Disc* annular, lobed or truncate or 0. *Carpels* 2 distinct; style filiform, top ovoid or oblong, stigma minute or 2-toothed; ovules many, ∞ -seriate in each carpel. *Follicles* 2, linear, slender. *Seeds* oblong or linear, flattened, peltately attached, often ciliate, albumen scanty; cotyledons oblong, flat, radicle superior.—**DISTRIB.** Species about 30, tropical Asiatic, Malayan, Australian, and Polynesian.

SECT. I. **Pala.** *Leaves* with close parallel nervation, usually obtuse. *Corolla-lobes* overlapping to the left.

1. **A. scholaris**, *Brown in Mem. Wern. Soc. i. 75*; leaves 4-7 in a whorl obovate or elliptic-oblong white beneath, base acute, tip obtuse rounded or obtusely acuminate, cymes peduncled or sessile capitate, flowers pubescent, follicles very long and slender. *A. DC. Prodr. viii. 408*; *Wight Ic. t. 422*; *Gräh. Cat. Bomb. Pl. 115*; *Dalz. & Gibs. Bomb. Fl. 145*; *Brand. For. Fl. 325*; *Kurz For. Fl. ii. 183*; *Beddome For. Fl. 325, t. 242*; *Wall. Cat. 1644*. *Echites scholaris*, *Linn. Mant. 55*. *E. Pala*, *Ham. ex Spreng. Syst. i. 633*; *A. DC. l. c. 477*.—*Rheede Hort. Mal. i. t. 45*.

Drier forests of INDIA; in the tropical region of the WESTERN HIMALAYA from the JUMNA eastwards to ASSAM, and southwards to CEYLON, SINGAPORE and PENANG.—DISTRIB. Malay Archipelago, tropical Australia and Africa.

An evergreen tree 40-60 ft., "at times 80-90" (*Brandis*); trunk tall, base often buttressed; branches whorled; juice milky bitter. *Leaves* 4-8 by 1-2½ in., very coriaceous, whitish beneath; nerves 30-60 pairs, horizontal, joining an intramarginal one; petiole stout, ¼-½ in. *Cymes* umbellately branched; peduncle 1-3 in., rarely 0, very stout; branches numerous, stout; flowers subcapitate, greenish-white. *Corolla* ⅓-½ in. diam., throat villous, lobes rounded. *Disc* 0. *Ovary* hirsute. *Follicles* 1-2 ft., pendulous in clusters, only ½ in. diam., terete. *Seeds* ½ in. long, slender.

2. **A. spathulata**, *Blume Bijl. 1037*; quite glabrous, leaves 3-5 in a whorl obovate-cuneate tip rounded concolorous beneath, cymes peduncled and pedicelled flowers quite glabrous.—*A. DC. Prodr. viii. 410*; *Miquel Fl. Ind. Bat. ii. 437*. *A. cuneata*, *Wall. Cat. 1645 (habitat wrong)*.

MALACCA; in marshes, *Griffith, Maingay* (Kew Distrib. 1068).—DISTRIB. Java, Borneo.

Leaves 1½-4 in., very coriaceous, brown on both surfaces when dry, shining above, opaque beneath; nerves 20-30 pairs, horizontal; petiole very short. *Cymes* small, umbellately branched; bracts short. *Calyx-lobes* orbicular. *Corolla-tube* ¼ in., lobes elliptic, throat villous. *Disc* small. *Ovary* glabrous. *Follicles* 5-7 in. long, slender.

SECT. II. **Blaberopus.** *Leaves* with close parallel nerves, membranous, acute or acuminate. *Corolla-lobes* overlapping to the left. *Disc* of 2 ligulate glands alternating with the carpels. *Follicles* 3-6 in., broadest in the middle.

3. **A. venenatus**, *Brown in Mem. Wern. Soc. i. 75*; quite glabrous, leaves 4-6 in a whorl narrowly lanceolate finely acuminate, follicles stipitate and long-beaked. *Wall. Cat. 1647*; *Lodd. Bot. Cab. t. 186*; *Wight Ic. t. 436*; *Dalz. & Gibs. Bomb. Fl. Suppl. 52*; *Beddome For. Fl. Anal. Gen. 160*. *Blaberopus venenatus*, *A. DC. Prodr. viii. 411*. *Echites venenata*, *Roxb. Ic.*

DECCAN PENINSULA, NILGHERY HILLS; alt. 3-4500 ft., Courtallum, Dindygul on high hills.

A shrub 6-8 ft. *Leaves* 4-8 by ½-1¼ in., narrowed into a slender short petiole, midrib stout, nerves very slender and close. *Cymes* subumbellate, the flowers often racemose on the branches. *Calyx* very small, lobes triangular-ovate, acute. *Corolla-tube* 1 in., very slender, swollen at the top, limb ⅔-1 in. diam.; lobes oblong, obtuse. *Ovary* ovoid; style slender, top barrel-shaped, stigma 2-fid. *Follicles* 4-5 by ½ in., sword-shaped, coriaceous, smooth, narrowed into a stalk ½-1 in. long, and into a straight beak as long. *Seeds* more than ½ in. long, linear-oblong, flat, hairs short.—Fig. 6 of Wight's plate represents the pod of *A. neriifolia*.

4. **A. neriifolia**, *Don Prodr. 131*; branchlets and leaves beneath pubescent, leaves opposite or 3-4 in a whorl narrowly lanceolate finely acuminate, follicles sessile beaked. *Wall. Cat. 1646*. *Blaberopus neriifolius*, *A. DC. Prodr. viii. 411*. *B. Sebusii*, *Van Huerck & Muell. Arg. in Plant. Nov. Herb. Van Heurck, fasc. ii. 188*.

TROPICAL HIMALAYA; Nipal, Wallich, near the Sikkim frontier, on dry rocks, J. D. H. BHOTAN; Griffith.

Very similar to *A. venenata*, but the leaves are more coriaceous, always more or less pubescent beneath, and much fewer in a whorl, with usually long (sometimes $\frac{1}{2}$ in.) subulate interpetiolar glands; the foliicles are longer (4-7 in.), more slender, straighter, and sessile; the seeds are smaller and narrower.—*B. Sebusii*, Van H. & Muell. Argan., is founded on Griffith's Bhotan specimen, in which the leaves and flowers are those of *A. nerifolia*, but the pods, which are separate, belong to *A. venenata*.

SECT. III. **Dissuraspermum.** Leaves with distant nerves. Corolla-lobes overlapping to the right. Disc annular. Follicles long, slender, cylindric.

5. ***A. macrophylla***, Wall. Cat. 1648; leaves 6-12 in. oblanceolate or elliptic-lanceolate obtusely acuminate pubescent or glabrous beneath, nerves 16-20 pairs, cymes numerous large terminal sessile or peduncled with slender spreading many-flowered branches, corolla-tube glabrous throat villous. *A. DC. Prodr.* viii. 409. *A. costata*, Wall. Cat. 1649, not of Br.

PENANG; Wallich, Maingay (Kew Distrib. 1066/2, 1070/2).—DISTRIB. JAVA, Timor. Philippine Islds.

Leaves thinly coriaceous, $2\frac{1}{2}$ -3 in. broad, shining above, rather paler beneath; nerves spreading, about $\frac{1}{2}$ in. apart; base narrowed into a stout petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. long. Cymes copious, lax, pubescent; bracts 0; flowers small. Calyx campanulate, lobes short obtuse. Corolla-tube $\frac{1}{8}$ in., mouth contracted; lobes rounded, pubescent, thick. Disc annular. Ovary ovoid, acute, glabrous. Follicles very numerous, slender, pendulous, 12-18 by $\frac{1}{4}$ in., terete, membranous. Seeds slender, $\frac{1}{4}$ in. long.

6. ***A. angustifolia***, Wall. Cat. 1650; leaves glabrous obovate or oblanceolate obtusely acuminate or obtuse, nerves 10-15 pairs, cymes numerous branched densely pubescent many-flowered, peduncle and branches stout, calyx urceolate lobes very short, corolla-tube densely pubescent throat villous. *A. DC. Prodr.* viii. 409.

SINGAPORE; Wallich, T. Anderson. MALACCA and PENANG; Griffith, Maingay (Kew Distrib. 1066, 1067, 1070, 1070/1, 1070/2).

A tall tree (Maingay), leaves much smaller and more coriaceous than *A. macrophylla*, always quite glabrous, with fewer nerves and longer petioles ($\frac{3}{4}$ -1 in.) and with denser more pubescent cymes and flowers. Penang specimens have very broad leaves, 6-7 by 3 in.

SPECIES OF DOUBTFUL POSITION.

7. ***A. Kurzii***, Hook. f.; a tree 80-100 ft., quite glabrous; leaves whorled, 4-7 in. long, oblong to obovate-oblong, tip retuse or rounded, base acute or obtuse, coriaceous, glaucous beneath; nerves parallel, numerous, slender; flowers small, white, densely cymulose; pedicels short and stout; cymelets shortly peduncled, whorled, forming a long peduncled, glabrous axillary panicle; foliicles linear. *A. spectabilis*, Kurz For. Fl. ii. 183, not of Brown.—Forests of the Andaman Islds., Kurz.

This is obviously not Brown's *A. spectabilis*, which is probably closely allied to *A. macrophylla*. In Journ. As. Soc. 1877, ii. 254, Kurz says of this, "hardly specifically distinguishable from *A. scholaris*."

8. ***A. GRANDIFOLIA***, Miquel Fl. Ind. Bat. Suppl. 555; leaves 5-7 in a whorl, unequal, 12-16 by 4-5 in., narrowly obovate or oblanceolate, obtusely apiculate, glaucous beneath, midrib stout, nerves 20 pairs strong; petiole very stout, 2 in.—Singapore, T. Anderson.—Of this I have seen only two leaves, which precisely agree with Miquel's from Sumatra.

17. **DYERA**, Hook. f.

Glabrous trees. Leaves whorled, petioled. Flowers small, in terminal and axillary umbellately branched cymes. Calyx hemispheric, shortly 5-lobed, eglandular within. Corolla salver-shaped, tube short; lobes overlapping to

the left. *Stamens* 5, in the middle of the tube, included, filaments very short; anthers oblong, obtuse, upper half empty fleshy, base obtusely 2-lobed. *Disc* annular, obscure. *Ovary* short, broadly conic, obtuse, top pubescent, 2-celled, cells many-ovuled; style 0, stigma 2-cleft, minute, sessile, pyriform, lobes appressed. *Follicles* very large long thick, straight, cylindric, obtuse, connate at the base, reflexed, furfuraceous. *Seeds* (unripe) flattened, winged.—Species 3, Malayan.

1. **D. costulata**, Hook. f.; leaves rounded at the base, cymes shortly peduncled, corolla-lobes about as long as the tube. *Alstonia* ? *costulata*, Miquel Fl. Ind. Bat. Suppl. 556.

MALACCA; Griffith, Maingay (Kew Distrib. 1097).—DISTRIB. Sumatra.

A tree; branches very stout. *Leaves* 6–8 in a whorl, 2–4 by $1\frac{1}{2}$ –3 in., broadly elliptic or oblong, rounded at both ends, hard and coriaceous, shining above, glaucous beneath; nerves 12–16 pairs, strong, nearly straight, almost horizontal or ascending, reticulations prominent above; petiole $\frac{1}{2}$ –1 in. *Cymes* numerous, twice umbellately branched, glabrous; peduncles 2–3 in.; pedicels short; flowers very small. *Calyx-lobes* rounded, coriaceous. *Corolla-tube* $\frac{1}{10}$ in. long, glabrous, lobes linear-oblong. *Follicles* 9–12 by $1\frac{1}{2}$ in., “covered with minute crenated ferruginous squamulæ” (Maingay).—A most remarkable plant, evidently allied to *Alstonia*, though from the seeds being imperfectly known, its exact affinity cannot be stated. The huge follicles are borne on a woody peduncle nearly $\frac{1}{2}$ in. diam., their bases are entirely connate, and though quite straight they are sharply deflexed, when ripe they gape wide, and the inner shining parchment-like coat becomes irregularly torn, forming a fringe to the coriaceous outer. An allied species from Borneo, collected by Low, Lobbo, and Beccari, has longer leaves (6–9 by 1–2 in.) with the base narrowed into the petiole and numerous (20–30) pairs of nerves.—All the species are said to yield gutta Jelatang.

2. **D. laxiflora**, Hook f.; leaves narrowed to the rounded or subacute base, cymes long peduncled, corolla-lobes four times as long as the tube.

SINGAPORE; Murton, Cantley.

Closely allied to *D. costulata*, but with much larger leaves, sometimes 8 in long, petioles $1\frac{1}{2}$ –2 in. *Peduncles* of cyme very slender, 3–5 in., pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in. *Corolla-lobes* linear, $\frac{1}{2}$ in. long.

18. **HOLARRHENA**, Br.

Trees or shrubs. *Leaves* opposite, membranous. *Flowers* white, in terminal or subaxillary many-flowered corymbose cymes. *Calyx* 5-lobed or -partite, usually glandular within, lobes small. *Corolla* salver-shaped, tube slender cylindric, throat contracted naked; lobes oblong, overlapping to the left. *Stamens* near the base of the tube; anthers oblong-lanceolate, mucronate, cells rounded at the base. *Disc* 0. *Carpels* 2, distinct; style short, filiform, stigma oblong-fusiform, top entire or 2-toothed; ovules many in each carpel. *Follicles* 2, elongate, spreading and incurved, terete. *Seeds* linear or oblong, compressed, concave, tipped with a deciduous coma; funicle in the concavity, albumen scanty; cotyledons broad, complicate, radicle short, superior.—DISTRIB. Species 7 or 8, tropical Asiatic and African.

1. **H. antidysenterica**, Wall. Cat. 1672; glabrous pubescent or tomentose, leaves shortly petioled elliptic oblong ovate or ovate-oblong obtusely acuminate. *A. DC. Prodr.* viii. 413; *Brand. For. Fl.* 326, t. 40; *Bedd. Fl. Sylb. Anal. Gen.* xx. fig. 6; *Kurz For. Fl.* ii. 182; *Dalz. & Gibbs. Bomb. Fl.* 145; *Beddome For. Fl. Anal. Gen.* 160, t. 20, fig. 6. *H. Codaga*, *G. Don Gen. Syst.* iv. 78; *A. DC. l. c.*; *Kurz For. Fl.* ii. 183; *Wight Ic.* 1297. *H. pubescens*, Wall. Cat. 1673; *A. DC. l. c.* *H. malaccensis*, *Wight Ic.* t. 1298. *Echites antidysenterica*, Roxb. *Wrightia antidysenterica*, *Grah. Cat. Bomb. Pl.* 114, excl. some syns. *Chonemorpha* ? *antidysenterica*, *G. Don l. c.*; *Wight Ic.* t.

439. ? *H. villosa*, Ait. ex Loud. in Steud. Nomencl.—Rheede Hort. Mal. i. t. 47.

TROPICAL HIMALAYA; ascending to 3500 ft., from the Chenab westwards, and throughout the drier forests of INDIA to TRAVANCORE and MALACCA.

A small deciduous tree, bark pale. *Leaves* 6–12 by $1\frac{1}{2}$ –5 in., base obtuse rounded or acute; nerves 10–14 pairs, strong, arched; petiole 0– $\frac{1}{4}$ in. *Cymes* 3–6 in. diam., corymbose, sessile, terminal; bracts small, ciliate; pedicels slender. *Flowers* inodorous, white, 1–2 in. diam., puberulous. *Sepals* acuminate. *Corolla-tube* very slender, $\frac{1}{4}$ – $\frac{1}{2}$ in.; lobes as long, oblong, tip round. *Follicles* 8–16 by $\frac{1}{2}$ in., very slender, parallel, terete, coriaceous, obscurely torulose, usually with small long white spots. *Seeds* $\frac{1}{2}$ in., narrowly linear-oblong, glabrous, coma 2 in., brown.

2. *H. mitis*, Br. in Mem. Wern. Soc. i. 62; glabrous, leaves lanceolate or linear-lanceolate obtuse. A. DC. Prodr. viii. 413; *Thwaites Enum.* 194; *Beddome For. Fl. Anal. Gen.* 161.

CEYLON; not uncommon up to 1500 ft.

A medium-sized tree (*Thwaites*). *Leaves* 3–5 by $\frac{1}{2}$ –1 in., shining above, paler beneath, nerves about 10 pairs; petiole $\frac{1}{4}$ in. *Cymes* axillary and terminal, many-fld. *Corolla-lobes* narrowly linear. *Follicles* upwards of a foot long.—A specimen of this is in the Wallichian Herbarium without name or number, ticketed as from Herb. Finlayson; probably erroneously, as Finlayson collected only in Siam.

19. **TABERNÆMONTANA**, Linn.

Trees or shrubs. *Leaves* opposite. *Flowers* white in axillary terminal cymes. *Calyx* 5-lobed or -partite, glandular within, rarely eglandular. *Corolla* salver-shaped, tube cylindric, usually slender, inflated in the middle or top; lobes overlapping to the left. *Stamens* at or above the middle of the tube, filaments short or 0; anthers sagittate or base obtuse, acuminate. *Disc* 0. *Carpels* 2, distinct; style short or long, top urceolate ovoid or clavate, stigma short or long 2-lobed; ovules usually many, and ∞ -seriate in each carpel. *Fruit* of 2 ovoid or oblong or reniform, smooth or ribbed 1-many-seeded, dry or fleshy follicles. *Seeds* buried in pulp, ovoid-oblong, subterete or compressed, grooved down one face, smooth striate or rugose, albumen fleshy equable or ruminate; cotyledons ovate, radicle short or long.—**DISTRIB.** About 110 species in all tropical regions.

* *Calyx* 5-lobed to the middle, lobes obtuse, eglandular or with glands on their inner faces at the base. *Corolla-lobes* globose in bud.

† *Branches* stout; *leaves* large coriaceous; *peduncles* and *pedicels* very stout. *Calyx* large. *Corolla-tube* cylindric, stout.

1. **T. dichotoma**, Roxb. Hort. Beng. 20, and Fl. Ind. ii. 21; glabrous, leaves coriaceous oblong or obovate- or linear-oblong tip rounded, base acute, nerves horizontal, petiole stout, cymes long-peduncled few-fld. A. DC. Prodr. viii. 366; *Wight Ic.* t. 433; *Wall. Cat.* 1570; *Thwaites Enum.* 192; *Bot. Reg.* 1841, t. 53. *Cerbera dichotoma*, Lodd. Bot. Cab. t. 1516. C. Manghas, Linn., partly (*Thwaites*). *Tanghinia dichotoma*, G. Don Hort. Brit. ed. 3, 461.—*Burm. Thes. Zeyl.* t. 70, fig. 1.

DECCAN PENINSULA; common in the Western Ghats, *Beddome*. CEYLON; very common in the warmer parts of the island (*Thwaites*).

A small tree; branches very stout, woody, cylindric; buds resinous. *Leaves* 4–8 by 1–2 in., pale yellow-brown when dry, midrib very stout, nerves 16–22 pairs; petiole $\frac{1}{4}$ – $\frac{3}{4}$ in., base semialexicaul. *Peduncle* 2–5 in., bracts 0. *Calyx* hemispheric, very thick, lobes semicircular. *Flowers* scarcely fragrant. *Corolla* white, tube $\frac{3}{4}$ –1 in., yellow, cylindric, swollen at the very base, limb white, 2–3 in. diam., mouth contracted; lobes broadly oblong, falcate, obtuse. *Anthers* half-way down the tube.

Follicles usually solitary, 4-5 by 1-2 in., recurved, oblong, narrowed at both ends, dorsally concave, ventrally 2-ribbed, orange-yellow. *Seeds* many, $\frac{3}{4}$ in. long, buried in scarlet pulp.—Though mentioned by Roxburgh and Beddome as a Malabar plant, I have seen no specimen from continental India. It is remarkable as being the only Ceylon species of this common Indian and tropical genus. The *T. dichotoma*? of Gibson's Catalogue of Bombay Plants is probably *T. Heyneana*.

2. **T. Heyneana**, Wall. in *Bot. Reg. under t.* 1273, and *Cat.* 1573; glabrous, leaves linear-oblong or -lanceolate obtusely acuminate, base acute, nerves 12-16 pairs arched, cymes peduncled many-fl. *A. DC. Prodr.* viii. 376. *T. intercedens*, Van Heurck & Mull. *Arg. Plant. Nov. Herb. Van Heurck*, 166. *T. recurva*, *Herb. Hohenack.* 1847, not of Roxb.

WESTERN GHATS; from the Concan, southwards, common.

Branches very stout, with pale smooth bark, grooved when dry. *Leaves* 3-8 by 1-2½ in., coriaceous, dark brown and shining above when dry, paler beneath, midrib and nerves beneath stout; petiole $\frac{1}{2}$ - $\frac{1}{2}$ in., base dilated. *Peduncle* 1-2 in.; pedicels $\frac{3}{4}$ -1 in.; bracts obsolete. *Calyx* very coriaceous; lobes hardly ovate, obtuse. *Corolla-tube* 1 in., cylindric, stout, swollen at the top, limb 1 in. diam.; lobes globose in bud, falcately oblong, obtuse, crisped. *Ovary* very short; style filiform, top obconic, stigma forked. *Follicles* very variable. $\frac{1}{2}$ -1 in. long, sessile, slightly recurved, shortly sausage-shaped, not keeled or ribbed, beaked or not. *Seeds* 2 or more, $\frac{1}{2}$ in. long.

3. **T. corymbosa**, Roxb. *Fl. Ind.* ii. 25; glabrous, leaves elliptic-oblong or lanceolate or oblanceolate obtuse or obtusely acuminate, nerves 10-16 pairs very spreading, cymes peduncled many-fl. *A. DC. Prodr.* viii. 376; Wall. *Cat.* 1772, and *Bot. Reg. under t.* 1273.

PENANG; Wallich, Phillips. SINGAPORE, Anderson, Murton.—DISTRIB. Java.

Very similar to *T. Heyneana*, but with smaller and more crowded flowers on slenderer pedicels, more obtuse leaves with straighter nerves. *Branches* stout; bark pale, smooth, grooved when dry. *Leaves* 3-7 by 1½-2½ in. (in one specimen of Wallich's 12 by 4 in.), coriaceous, opaque, greenish or brown above when dry, pale beneath; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* shortly peduncled, much branched; bracts obsolete; pedicels $\frac{1}{2}$ in. *Calyx* very coriaceous, lobes rounded. *Corolla-tube* $\frac{1}{2}$ in., cylindric, swollen at the top; lobes falcately oblong, globose in bud. *Ovary* elongate-conical; style stout, stigma fusiform. *Follicles* not seen.—This is certainly very near *T. javanica*, Miquel, but differs in the longer pedicels, suppression of bracts, and in the corolla-tube being dilated not in the middle, but at the top, as also in the stigma not being 2-fid; the latter character is however a very deceptive one, as the tearing away of the stigma from the anthers often mutilates it. *T. sphaerocarpa* of Java is another close ally.

4. **T. hirta**, Hook. f.; cymes pubescent, leaves elliptic-ovate or -oblong long acuminate, nerves 10-15 pairs arched, cymes peduncled many-fl.

MALACCA; Maingay.

Leaves 4-8 in., coriaceous, almost caudate, base acute; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Cymes* almost hirsute, with short close-set spreading hairs, peduncle branches and pedicels stout. *Calyx* coriaceous, sometimes 7-lobed, lobes semicircular, eglandular. *Corolla* glabrous, tube $\frac{1}{2}$ in., stout, cylindric; lobes short, globose in bud. *Ovary* elongate; style slender, top urn-shaped, stigma small fusiform. *Follicles* strongly recurved, 1-1½ by $\frac{1}{2}$ - $\frac{3}{4}$ in., terete, not ribbed keeled or beaked. *Seeds* $\frac{1}{2}$ in., few or many.—The specimens are very indifferent of this very distinct species.

†† *Branches* rather slender; leaves membranous; calyx small; corolla-tube slender.

5. **T. coronaria**, Br. in *Hort. Kew.* ed. 2, ii. 72; glabrous, leaves in each pair unequal elliptic-oblong obovate or oblanceolate obtusely acuminate or caudate, peduncles solitary or in pairs in the forks of the branches dichotomous 1-8-fl., corolla-tube swollen below the middle, follicles recurved. *A. DC.*

Prodr. viii. 373; *Roxb. Fl. Ind.* ii. 23; *Wall. Cat.* 1568; *Wight Ic.* t. 477; *Brand. For. Fl.* 322; *Dalz. & Gibs. Bomb. Fl.* 144; *Bedd. For. Fl. Anal. Gen.* 159; *Lodd. Bot. Cab.* t. 406. *T. divaricata*, *Blume Bijl.* 1626; *Kurz For. Fl.* ii. 174. *Nerium divaricatum*, *Linn. Sp. Pl.* 306. *N. coronarium*, *Jacq. Coll.* i. 138, t. 52; *Bot. Mag.* t. 1861.—*Jasminum zeylanicum*, &c., *Burm. Fl. Ind.* t. 39.

Cultivated throughout INDIA; from the N.W. Himalaya in Kumaon, eastwards and southwards.—Native country unknown.

A shrub, 6–8 ft., much dichotomously branched, bark pale. *Leaves*, the larger 4–6 by 1–1½ in., glossy, rather coriaceous, green when dry, pale beneath, margins waved, nerves 6–8 pairs, narrowed into a petiole ¼–½ in., axils of petioles glandular. *Peduncles* 1–2 in., pedicels slender; bracts 0 or minute. *Flowers* pure white, often double, fragrant. *Calyx-lobes* broadly ovate, acute. *Corolla-tube* ½–1 in., glabrous, dilated slightly below the middle, limb 1–1½ in. diam.; lobes obliquely ovate, obtuse, margins curled; mouth with 5 glands. *Anthers* inserted below the middle of the tube. *Ovary* glabrous. *Follicles* 1–3 in., spreading and recurved, sessile or contracted into a sort of stalk at the base, turgidly oblong, beaked or not, 3-ribbed. *Seeds* 3–6, oblong, striated; aril red, fleshy.

6. ***T. graciliflora***, *Wall. Cat.* 1576, and in *Bot. Reg.* under t. 1273; glabrous, leaves oblong-lanceolate obtusely acuminate or caudate, nerves 11–16 pairs, cymes very long-peduncled, bracts obsolete, corolla-tube 1 in. very slender, lobes narrow, follicles ½ in. turgid 1–2-seeded. *Kurz For. Fl.* ii. 175. *T. Colignonæ*, *Van Heurck & Muell. Pl. Nov. Van Heurck*, 170.

MARTABAN and MOULMEIN; *Wallich, Griffith.*

Branches with pale bark. *Leaves* 4–7 by 1–2 in., membranous, narrowed into a slender petiole ¼–½ in. *Peduncle* sometimes equalling the leaves; branches of cyme slender, divaricate, pedicels short. *Calyx* very small; lobes rounded, ciliolate. *Corolla-tube* dilated above the middle, twice as long as the lobes. *Ovary* of two very slender carpels; style filiform, tip obconic, stigma forked. *Follicles* turgid, smooth, with a short upcurved beak or 0. *Seeds* ½ in.

7. ***T. subcapitata***, *Wall. Cat.* 1579, and in *Bot. Reg.* under t. 1273; leaves elliptic-oblong or lanceolate obtusely acuminate or caudate, nerves 8–12 pairs, cymes shortly peduncled small many-fld., bracts obsolete, corolla-tube ½ in., lobes small rounded, throat villous. *A. DC. Prodr.* viii. 373.

TAVOY; Gomez. PEGU and TENASSERIM (*Kurz*). MERGUI; *Griffith.*

An evergreen shrub. *Leaves* 4–7 by 1½–3 in., very membranous, midrib and nerves slender; petiole slender, ¼–½ in. *Peduncle* 1–1½ in.; branches crowded, dichotomous, very short. *Calyx* small; lobes broadly ovate, obtuse. *Flowers* white. *Corolla* rather funnel-shaped above, lobes about half as long as the tube. *Ovary* ovoid, acute; style filiform, tip clavate, stigma fusiform. *Follicles* “obliquely oblong, about ¾ in. long, narrowed into a thick long stalk and compressed into a sterile truncate appendage, terminating in a falcate point; glabrous, 1–2 seeded,” *Kurz*.

8. ***T. peduncularis***, *Wall. Cat.* 1575, and in *Bot. Reg.* under t. 1273; glabrous, leaves oblong-lanceolate obtusely caudate-acuminate, nerves 12–20 pairs spreading, peduncles very long and slender, cyme-branches divaricate, pedicels capillary, corolla-tube ½ in. curved limb small, follicles ½ in. stipitate 1-seeded. *A. DC. Prodr.* viii. 376.

PENANG; Porter, Maingay (*Kew Distrib.* 1060/2).

A small shrub. *Leaves* 4–6 by 1½–2½ in., membranous, nerves close, tips usually very long, base acute; petiole slender, ¼–½ in. *Peduncle* 4–5 in., wiry; branches few, filiform, widely divaricate. *Calyx* small, lobes rounded. *Corolla-lobes* very small, mouth glabrous. *Ovary* of two long narrow carpels; style filiform, top clavate, stigma 2-fid. *Follicles* turgid, obtusely beaked, not ribbed.

** *Calyx* 5-partite, segments eglandular or glandular at the base.

+ *Calyx-segments* broad, foliaceous, deciduous.

9. **T. crispa**, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 24; glabrous, leaves elliptic or elliptic-oblong or -obovate obtusely acuminate margins wrinkled, cymes long-peduncled, bracts minute, sepals rounded subacute. *A. DC. Prodr.* viii. 371, excl. syn. *Rheede & Linnæus; Wall. Cat.* 4450; *Wight Ic.* t. 470; *Bedd. For. Fl. Anal. Gen.* 159. *T. alternifolia*, *Roxb. Fl. Ind.* ii. 24; *Kurz For. Fl.* ii. 174, not of *Linnæus*.

ANDAMAN ISLANDS; frequent along the coast, *Kurz*.

Habit and foliage of *T. coronaria*, but leaves often much larger, sometimes 10 by 5 in., with more numerous and more spreading nerves; petiole very short. *Cymes* many-fld.; peduncle 1-4 in.; pedicels long, $\frac{1}{2}$ -1 in. *Sepals* $\frac{1}{2}$ in. diam., obtuse or apiculate, sometimes cordate. *Corolla-tube* very slender, $\frac{1}{2}$ - $\frac{3}{4}$ in., swollen at the top; limb 1 in. diam., lobes obovate, margins crisped, ovoid and acute in bud. *Ovary* ovoid, narrowed into the slender style, which is elongate, urceolate at the top, with a 2-fid stigma. *Follicles* "1 in., sessile, acute, recurved, ventrally 3-keeled, 3-6-seeded" (*Roxburgh*).—This species, which differs from all others in the remarkable calyx, has long been in confusion, and though cultivated in India from a very early period, it was only quite lately that its native country was known. This is the Andaman Islands. *Beddome* indeed says that it is common in the Western Ghats; but I have seen no specimens and suspect some error. *Roxburgh* accurately describes it, but strangely confounded it with *T. alternifolia* of *Linnæus* (*Sp. Pl.* 211). Under the latter plant (*Fl. Ind.* ii. 25) he quotes *Linnæus'* and *Rheede's Curata pala*, and says "the leaves being in this opposite, made me change the Linnæan specific name *alternifolia* for *crispa*, on account of its curled petals." A glance at *Rheede's* figure of *Curata pala*, upon which *Linnæus* founded his *T. alternifolia*, shows that it has nothing to do with this, but is probably *T. coronaria*. *Kurz*, also neglecting to refer to *Rheede*, restores the Linnæan name of *alternifolia*, and does not even refer to *Roxburgh's crispa*, though his description perfectly agrees with that author's. Lastly, *Linnæus* and *Roxburgh* are both wrong in the citation of *Rheede* for *Curata pala*—it is part i. t. 47 (*Linnæus* say 45, and *Roxburgh* 46).

†† *Calyx-segments* narrow, acute or acuminate, persistent.

10. **T. recurva**, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 26; glabrous, leaves elliptic-oblong obtusely acuminate subcaudate, cymes short-peduncled recurved few- or many-fld., bracts subulate persistent, sepals very unequal lanceolate ciliolate, corolla-tube slender swollen above, follicles turgid many-seeded. *A. DC. Prodr.* viii. 371; *Wall. Cat.* 1569, and in *Bot. Reg.* under t. 1273; *Wight Ic.* t. 476; *Kurz For. Fl.* ii. 174. *T. gratissima*, *Lindl. in. Trans. Hort. Soc.* vii. pt. i. 55, and *Bot. Reg.* t. 1084.

CHITTAGONG; *Roxburgh*; Flagstaff Hill, *J. D. H. & T. T.* PEGU and TENASSERIM (*Kurz*).

A small shrub; bark smooth. *Leaves* 2-6 by 1-2 $\frac{1}{2}$ in., membranous; nerves 6-8 pairs, slender, arched; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* with stout peduncle $\frac{1}{2}$ -1 in., branches stout; bracts rather persistent; flowers drooping, fragrant. *Sepals* $\frac{1}{2}$ - $\frac{3}{4}$ in. *Corolla-tube* $\frac{3}{4}$ in.; limb 1-1 $\frac{1}{2}$ in. diam., lobes falcately obovate, forming an ovoid acute bud. *Ovary* elongate, narrowed into the filiform style with oblong tip and forked stigma. *Follicles* $\frac{1}{2}$ -2 in., sessile, hardly recurved, very turgid, terete, not keeled.

11. **T. rostrata**, *Wall. Cat.* 1578, and in *Bot. Reg.* under t. 1273; glabrous, leaves elliptic-oblong or -lanceolate obtusely acuminate pale beneath, cymes short-peduncled, bracts persistent, sepals ovate acute, corolla-tube swollen in the middle, follicles sessile lanceolate long-beaked acutely keeled few-seeded. *A. DC. Prodr.* viii. 371; *Kurz For. Fl.* ii. 174.

AVA; banks of the Irawaddy, *Wallich*.

Shrubby, bark smooth. *Leaves* 3-6 by 1 $\frac{1}{2}$ -2 in., membranous; nerves 7-10 pairs,

slender. *Cymes* few-fl'd., peduncle $\frac{1}{4}$ –1 in., bracts small, pedicels very short. *Sepals* small, $\frac{1}{10}$ in. *Corolla-tube* 1 in., very slender, lobes falcately linear-oblong. *Filaments* slender. *Ovary* narrowed into a style much shorter than the tube, stigma large, 2-partite. *Follicles* $\frac{1}{2}$ –1 by $\frac{1}{8}$ – $\frac{1}{2}$ in., 2–4-seeded, beak straight or upcurved.

12. **T. calycina**, *Wall. Cat.* 1577, and in *Bot. Reg.* under t. 1273; glabrous, leaves elliptic-lanceolate obtusely acuminate, cymes short-peduncled, bracts subulate persistent, sepals linear-lanceolate acuminate very unequal, corolla-tube swollen above, ovary very short. *Kurz For. Fl.* ii. 173.

TENASSERIM; *Gomez*.

Foliage similar to that of *T. rostrata*, but petioles rather longer; pedicels very short indeed; bracts sometimes linear-oblong and almost leafy in texture; sepals very much longer, one-third as long as the corolla-tube, which is very slender, $\frac{2}{3}$ in. long and swollen at the top; ovary not elongate, but almost hemispheric.—I have seen but one specimen.

13. **T. malaccensis**, *Hook. f.*; glabrous, leaves elliptic-obovate or -lanceolate obtusely acuminate or caudate, cymes sessile or shortly peduncled few-fl'd., pedicels slender, bracts 0, sepals unequal subulate-lanceolate acuminate, corolla-tube slender inflated at the top, lobes narrow, follicles turgid recurved beaked 3-keeled few- or many-seeded.

MALACCA; *Griffith, Maingay* (Kew Distrib. 1061, 1062).

A small shrub. *Branches* slender, very smooth. *Leaves* in flowering specimens 3–4 by 1–1 $\frac{1}{2}$ in., very membranous, in the fruiting specimens shorter and broader in proportion sometimes nearly orbicular; nerves very slender, 6–8 pairs; petiole $\frac{1}{4}$ in. *Cymes* very slender and few- or many-flowered, pedicels $\frac{1}{4}$ –1 in.; flowers small. *Corolla-tube* $\frac{2}{3}$ in., lobes about as long, crumpled. *Ovary* short, top rounded; style long, filiform. *Follicles* $\frac{3}{4}$ –1 $\frac{1}{2}$ in., more or less recurved.

14. **T. membranifolia**, *Kurz For. Fl.* ii. 175; glabrous, leaves elliptic-lanceolate caudate-acuminate very membranous, not paler beneath, cymes subsessile, bracts obsolete, sepals very small subulate, corolla-tube very slender inflated below the middle, lobes linear-lanceolate much shorter than the tube.

MARTABAN; forests east of Tounghoo, *Kurz*.

An evergreen shrub, 3–4 ft. (*Kurz*). *Leaves* 3–5 by 1–1 $\frac{1}{4}$ in., tips very long, curved, nerves 7–8 pairs, very slender. *Cymes* short, many-flowered; pedicels long or short. *Sepals* subequal. *Corolla-tube* $\frac{3}{4}$ in., lobes linear-lanceolate, acute, half as long as the tube or less, forming very long narrow buds. *Ovary* ovoid, acute; style filiform, top elongate-clavate, truncate, stigma slender. *Follicles* not seen.

DOUBTFUL AND EXCLUDED SPECIES.

T. FINLAYSONIANA, *Wall. Cat.* 4452, without flower or fruit, is probably a native of Siam, and is indeterminate.

T. INDICA, *Willd. Herb. in Steudel Nomenclator*, cannot be determined without a reference to Willdenow's herbarium.

T. MACROCARPA, *Jack.*, is a native of Sumatra; and *T. MONOCARPA*, *Steudel Nomenclator*, is obviously a misprint for the same.

T. PERSICARIEFOLIA, *Willd., Roxb. Fl. Ind.* ii. 27, is a Mauritian plant.

T. OPHIORHIZOIDES, *Kurz For. Fl.* ii. 175; a glabrous shrub, 2–4 ft., leaves 3–5 in. obovate-oblong to broadly lanceolate shortly acuminate sessile or tapering into a petiole of 2–3 lines membranous pale beneath, cymes 2–3 rarely more in the forks of the upper branches, subsessile or shortly peduncled few-fl'd., pedicels 1–1 $\frac{1}{2}$ lines, bracts and bractlets minute deciduous, calyx 5-cleft very short, segments hardly 1 line lanceolate acute, corolla-tube about 4 lines rather thick, apex inflated, lobes hardly half as long as the tube.—Hill forests of Martaban, alt. 3–5000 ft. frequent.—I have seen no specimen.

T. WALLICHIANA, *Steudel Nomenclator* (*T. parvifolia*, *Roxb. Fl. Ind.* ii. 25; *Wight Ic.* t. 393, by error pauciflora in letterpress), is a native of Sumatra.

20. **PARSONSIA**, Br.

Twining shrubs. *Leaves* opposite. *Flowers* small, white, in terminal or axillary dichotomous cymes or thyrsi. *Calyx* 5-partite, glandular within or naked, or with 5 scales. *Corolla* salver-shaped, tube short, cylindric or globose, throat naked; lobes overlapping to the right. *Stamens* inserted in the tube, filaments often twisted; anthers half-exserted, acute, conniving over and adhering to the stigma, cells spurred and empty below. *Disc* of 5 lobes or scales. *Ovary* 2-celled; style filiform, top dilated, truncate, stigma columnar or elongate-conical, cells many-ovuled. *Fruit* cylindric, carpels at length separating from the two placentas. *Seeds* linear or oblong, tip narrowed and penicillate, albumen scanty; cotyledons linear-oblong, flat, radicle superior.—**DISTRIB.** 12 species of tropical Asia, Australia and New Zealand.

P. spiralis, Wall. Cat. 1631; quite glabrous, leaves ovate oblong or oblong-lanceolate base acute rarely rounded or cordate, cymes axillary corymbose. *A. DC. Prodr.* viii. 402; *Kurz For. Fl.* ii. 180. *P. oblonga*, Wall. Cat. 1632; *A. DC. l. c.* *P. pauciflora* and *P. acuminata*, Wall. Cat. 1633, 1634. *Helygia javanica*, Blume Bijl. 1043. *Heligme javanica*, *A. DC. l. c.* 425. *H. Rheedei*, Wight Ic. t. 1303; *Dalz. & Gibs. Bomb. Fl.* 146. *H. spiralis*, Thwaites Enum. 193. *Spirostemon spiralis*, Griff. Notul. iv. 80, t. 411, fig. 1. *Aganosma cancanensis*, Hook. Ic. Pl. t. 841.

SILHET; Wallich. PEGU, TENASSERIM, MALACCA, SINGAPORE and PENANG. WESTERN GHATS; from the Concan southwards. CEYLON, ascending to 3000 ft.—**DISTRIB.** Malay Archipelago, China.

An evergreen twiner. *Leaves* 3-7 by $1\frac{1}{2}$ - $3\frac{1}{2}$ in., coriaceous, pale when dry; nerves 6-8 pairs, arched; petiole $\frac{1}{3}$ -1 in. *Cymes* 2-3 in. diam.; peduncle stout, half as long as the leaves; bracts small. *Sepals* ovate, very thick, obtuse, equalling the corolla-tube. *Corolla* $\frac{1}{2}$ in. diam., coriaceous; lobes linear-oblong, obtuse. *Fruits* 7 by $\frac{3}{4}$ in., or shorter, elongate, linear-lanceolate, acuminate, quite cylindric, at length separating into 2 coriaceous follicles. *Seeds* $\frac{3}{4}$ in., slender, glabrous; coma as long.

TRIBE III. **ECHITIDÆ.**21. **VALLARIS**, Burm.

Twining shrubs. *Leaves* opposite, minutely dotted. *Flowers* white, in subaxillary or axillary or supra-axillary dichotomous cymes, or fascicled. *Calyx* 5-partite, glandular or not within, segments narrow. *Corolla* salver-shaped, tube short, throat naked; lobes broad, overlapping to the right. *Stamens* at the top of the tube, filaments very short clavate; anthers exserted, conniving in a cone adherent to the stigma, connective with a large dorsal gland, cells with rigid basal spurs. *Disc* various. *Carpels* 2, at first connate, many-ovuled; style filiform, pubescent, stigma thick obscurely annulate. *Fruit* oblong, acuminate, carpels at length separating. *Seeds* 2-seriate, ovate, acuminate or beaked, compressed, tip comose, albumen scanty; cotyledons flat thin, radicle superior.—**DISTRIB.** Species 5 or 6, tropical Asiatic and Malayan.

* *Flowers* cymose. Twining shrubs.

1. **V. Heynei**, Spreng. Syst. i. 635; leaves elliptic or oblong or linear-oblong acuminate pellucid-dotted, cymes pubescent. *A. DC. Prodr.* viii. 400; *Dalz. & Gibs. Bomb. Fl.* 144. *V. dichotoma*, Wall. Cat. 1621; Griff. Notul. iv. 77; *A. DC. l. c.*; Thwaites Enum. 192; Brand. For. Fl. 327; Kurz For. Fl. ii. 181; Wight Ic. t. 438. *Echites dichotoma*, Roxb. Fl. Ind. ii. 19. *Peltanthera solanacea*, Roth Nov. Sp. 132.

TROPICAL HIMALAYA; Nipal, Wallich; Kumaon, ascending to 5000 ft., Edgeworth. DECCAN PENINSULA; from the Concan southwards. SILHET, BIRMA, CEYLON. (Commonly cultivated in India).

A tall climbing shrub, bark pale; the axils of the petioles glandular. *Leaves* $1\frac{1}{2}$ –4 by $\frac{3}{4}$ – $1\frac{1}{2}$ in., glabrous or pubescent, petiole $\frac{1}{2}$ – $\frac{3}{4}$ in. *Cymes* 3–10-fl., sessile or peduncled, dichotomous, much shorter than the leaves, sometimes racemose with a twining rachis; peduncles and pedicels slender, the latter often decurved; flowers pure white, $\frac{2}{3}$ in. diam., fragrant. *Sepals* ovate-oblong, obtuse, equalling the short corolla-tube. *Corolla-limb* spreading. *Disc* ciliate. *Filaments* linear, villous; anthers woolly. *Style* pubescent. *Follicles* 6 by 2 in., straight, tapering from a rounded base to a stiff point, "splitting into 4 valves when dry" (Roxb.); pericarp thick, fibrous. *Seeds* 1 in., ovate, beaked, with a tuft of hairs at the hilum; coma very long.—I have seen no seeds; Kurz states that the follicles are always solitary.

2. V. Pergulana, Burm. Fl. Ind. 81; leaves large broadly elliptic or obovate or rounded abruptly shortly acute membranous, cymes glabrous or puberulous.—*A. DC. Prodr.* viii. 399; *Wight Ic.* t. 429; *Hook. Ic. Pl.* t. 153 (*V. Pergularia* by error). *V. ovalis, Miquel Fl. Ind. Bat.* ii. 427. *Pergularia glabra, Linn. Mant.* 53. *Emericia Pergularia, Roem. & Sch. Syst.* iv. 401. *Echites hircosa, Roxb. Fl. Ind.* ii. 18.—*Rumph Amb.* v. 51, t. 29, fig. 2.

BENGAL; scarce, Roxburgh. MALACCA; cultivated, Maingay. CEYLON (*Thwaites*).—DISTRIB. Java, Malay Islands, Timor.

A climbing shrub; bark pale; axils of the petioles glandular. *Leaves* 4–7 by 3–4 in., glabrous or puberulous beneath; petiole $1\frac{1}{2}$ in. *Cymes* much more lax-flowered and glabrous than in *V. Heynei*. *Flowers* with a disagreeable goat-like smell. *Sepals* ovate-lanceolate, acute.—*Thwaites* doubts this being distinct from *P. Heynei*, which makes me doubt his having the true plant in Ceylon. *Miquel's V. ovalis* is undoubtedly the same species, as an examination of *Horsfield's* specimens, on which it was founded, proves. I doubt the species being British Indian. I have seen no native specimens, and Roxburgh's habitat of Bengal is not confirmed.

** *Flowers fascicled. Shrubs not twining.*

3. V. Maingayi, Hook. f.; branches stout, bark black, leaves very coriaceous elliptic-lanceolate obtusely acuminate shining above, nerves 5–6 pairs, corolla $\frac{1}{2}$ in. diam., lobes obliquely ovate obtuse puberulous, mouth contracted puberulous.

MALACCA; Maingay (Kew Distrib. 1084).

A large tree (*Maingay*). *Branches* curving, bark closely ringed with cracks. *Leaves* $3\frac{1}{2}$ – $4\frac{1}{2}$ by $1\frac{1}{2}$ in., tapering at both ends, very dark brown above, pale brown beneath, nerves strong but not prominent, black when dry; petiole very short, black. *Flowers* 4–8 in a small peduncled fascicle; pedicels very unequal, $\frac{1}{6}$ – $\frac{1}{2}$ in., rather stout. *Sepals* broadly ovate, 2 outer eglandular, 3 inner with 5 glands in all (*Maingay*). *Corolla-tube* much longer than the sepals, $\frac{1}{2}$ in. long, swollen in the middle, mouth much contracted, hairy within; lobes not much twisted in bud, but strongly overlapping. *Anthers* half-exserted, with a large subcordate gland at the base behind, villous opposite to it in front. *Disc* of broad rounded glabrous glands. *Ovary* hairy towards the tip; style slender, top slightly dilated. *Fruit* unknown.

4. V. lancifolia, Hook. f.; branches slender, bark pale, leaves narrowly lanceolate acuminate, nerves very numerous close and slender, corolla $\frac{1}{4}$ in. diam., lobes obliquely foliate obtuse, mouth broad villous.

MALACCA; Maingay (Kew Distrib. 1102).

A much branched woody shrub, apparently erect and not twining; branches tubercled with lenticels, twigs smooth. *Leaves* 2–3 by $\frac{1}{4}$ – $\frac{1}{2}$ in., narrowed at both ends, much so to the very slender points, pale brown, rather membranous; petiole slender, $\frac{1}{4}$ – $\frac{1}{2}$ in. *Flowers* 3–5 on a very short axillary peduncle; pedicels very slender, $\frac{1}{4}$ in., with minute bracts at the base. *Sepals* triangular, very small, ciliate, minutely

glandular at the base (*Maingay*). *Corolla-tube* funnel-shaped, $\frac{1}{12}$ in. long, limb $\frac{1}{4}$ in. diam., lobes inflexed at the tip in bud. *Anthers* half-exserted, with a narrow lanceolate gland on the back.

DOUBTFUL SPECIES.

V. ASSAMICA, *Griff. Notul.* iv. 77; this agrees fairly well with the character of *V. Heynei*, but I find no specimens of this species in Griffith's herbarium from Assam. His habitat is woods at Bishenath.

V. ? ANCEPS, *Wall. Cat.* 1622; *A. DC. Prodr.* viii. 400 (*without description*); from Tavoy. This is not a *Vallis*, but is in too imperfect a state for determination. *Kurz* (*Journ. As. Soc.* 1877, ii. 254) says that it seems hardly referable to *Apocynæ*.

22. **POTTSIA**, *Hook. et Arn.*

An evergreen climber. *Leaves* opposite, nerves distant. *Flowers* in lax terminal and axillary panicked cymes. *Calyx* small, 5-partite, glandular within. *Corolla* salver-shaped, tube cylindric; throat constricted, naked; lobes overlapping to the right. *Stamens* at the top of the tube, filaments hairy; anthers exserted, sagittate, conniving over and adhering to the stigma, cells with basal empty spurs. *Disc* deeply 5-fid, lobes lanceolate, much longer than the ovary. *Carpels* 2, distinct, villous, many-ovuled, included in the disc; style slender, thickened in the middle and top, stigma conical. *Follicles* elongate, slender, beaded. *Seeds* linear, elongate, coma deciduous, albumen copious; cotyledons linear, flat, radicle superior.—*DISTRIB.* Species 2 or 3, Eastern Asiatic and Malayan.

P. cantonensis, *Hook. & Arn. Bot. Beech. Voy.* 199, t. 43; *Benth. Fl. Hongk.* 222; *Kurz For. Fl.* ii. 190. *P. Hookeriana*, *Wight Ic.* t. 1306 bis. *P. ovata*, *A. DC. Prodr.* viii. 442. *Parsonsia ovata*, *Wall. Cat.* 1630. *Teysmannia laxiflora* and *Hookeriana*, *Miquel Fl. Ind. Bat.* ii. 455, 456, and *Parapottsia*, *Addenda*, 1080. *Vallis laxiflora*, *Blume Bijl.* 1043. *Euthodon paniculata*, *Griff. Notul.* iv. 84; *Ic. Pl. Asiat.* t. 458, fig. 2.

SILHET; *De Silva*. ASSAM; *Jenkins*. CACHAR; *Keenan*, TENASSERIM; *Kurz*. MALACCA; *Maingay*.—*DISTRIB.* Java, S. China.

Branches slender, smooth, cylindric; twigs puberulous. *Leaves* 3–4 by $1\frac{1}{2}$ –2 in., elliptic-ovate or ovate, acuminate, base rounded or subcordate, nerves 4–6 pairs; petiole slender, 1– $1\frac{1}{2}$ in. *Cymes* drooping, long-peduncled, very many-fld.; branches slender, ultimate with racemose flowers; pedicels slender, $\frac{1}{2}$ in.; bracts minute, ovate. *Sepals* broadly ovate, obtuse. *Corolla* $\frac{1}{4}$ – $\frac{1}{2}$ in., glabrous, rose-coloured, tube broad obtusely angled, lobes short ovate. *Follicles* 1 ft., flexuous, smooth, thinly coriaceous. *Seeds* 1 in., very slender, glabrous, coma as long.—Griffith in his generic character of *Euthodon* describes the throat of the corolla as without scales; in the specific he mentions 5 glands in the sinus of the lobes; these I do not find in his specimens.

23. **WRIGHTIA**, *Br.*

Shrubs or small trees, with often slender cord-like branches. *Leaves* opposite. *Flowers* red, white or yellow, in terminal or subaxillary sessile cymes. *Calyx* short, 5-partite, with glands or scales inside. *Corolla* salver-shaped, tube cylindric, usually short, throat with 1–2 series of usually fimbriate scales; lobes overlapping to the left. *Stamens* at the top of the tube, filaments short dilated; anthers exserted, sagittate, conniving around and adhering to the stigma, cells spurred at the base. *Disc* 0. *Carpels* 2, free or connate, many-ovuled; style filiform, stigma ovoid with usually a toothed basal ring. *Follicles* linear, erect, connate or distinct. *Seeds* linear, compressed, tip narrowed naked, base with a deciduous coma, albumen scanty or 0; cotyledons broad, convolute, radicle

short, superior.—DISTRIB. Species about 12, tropical African, Asiatic and Australian.

W. religiosa, *Benth. in Gen. Pl. ii. 713* (*Echites religiosa*, *Teijsm. & Binnend. Hort. Bogor. 126*); cultivated at Malacca (*Herb. Maingay*), is a native of Siam. It is a small tree with elliptic leaves $\frac{1}{2}$ – $1\frac{1}{2}$ in. long, capillary peduncles and pedicels, and small flowers without coronal scales.

* *Calyx-segments half the length of the short corolla-tube or shorter.*

1. *W. tinctoria*, *Br. in Mem. Wern. Soc. i. 73*; glabrous, leaves elliptic-ovate or -lanceolate or obovate-oblong obtusely acuminate or caudate, coronal scales fimbriate. *A. DC. Prodr. viii. 406*; *Wall. Cat. 1625*; *Wight Ic. t. 444*; *Dalz. & Gibs. Bomb. Fl. 145*; *Brand. For. Fl. 324*; *Grah. Cat. Bomb. Pl. 114*; *Kurz For. Fl. ii. 193*; *Bedd. Fl. Sylv. t. 241*; *Bot. Reg. t. 933*. *Nerium tinctorium*, *Roxb. Hort. Beng. 19*, and *Fl. Ind. ii. 4*.

CENTRAL INDIA and throughout the WESTERN PENINSULA. BIRMA (*Kurz*).—DISTRIB. TIMOR (*Hort. Mus. Paris*).

A small tree, twigs glabrous or puberulous. *Leaves* 3–5 by $1\frac{1}{2}$ in.; nerves 6–12 pairs, faint till the leaves are old, then strong beneath; base acute or rounded; petiole very short. *Cymes* sometimes 5 in. diam., with slender spreading dichotomous branches; bracts minute; flowers white, $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. *Sepals* ovate, obtuse. *Corolla-lobes* linear-oblong, scales linear scattered. *Stamens* large. *Follicles* 6–18 in. or more, cylindric, slender, smooth, tips adhering. *Seeds* $\frac{2}{3}$ in., glabrous except for the coma, linear.—Foliage very variable. I have seen no Birmese specimen. The Timor plant is undoubtedly the same.

VAR. *Rothii*; branches and leaves beneath puberulous. *W. Rothii*, *G. Don Gen. Syst. iv. 86*; *A. DC. Prodr. viii. 406*; *Wight Ic. t. 1319*. *W. tinctoria*, *Roth Nov. Pl. Sp. 121*.—Deccan Peninsula.

2. *W. angustifolia*, *Thwaites Enum. 193*; glabrous, leaves lanceolate obtuse, coronal scales ligulate tips lacerate. *Beddome For. Fl. Anal. Gen. 160*.

CEYLON; Dambool and Trincomalee, *Gardner*.

A small tree; branches slender. *Leaves* $1\frac{1}{2}$ –4 by $\frac{1}{2}$ – $\frac{3}{4}$ in., almost black when dry, nerves 6–12 pairs; petiole very short. *Cymes* and flowers as in *W. tinctoria*, but the coronal scales very different, as long as the anthers, and lacinate at the tip only. *Fruit* unknown.

3. *W. tomentosa*, *Roem. & Schultes Syst. iv. 414*; densely tomentose, leaves elliptic caudate-acuminate, base acute, cymes many-flowered, corolla-lobes linear-oblong, coronal scales short obtuse entire or lobulate. *A. DC. Prodr. viii. 404*; *Wall. Cat. 1628*; *Wight Ic. t. 443*, and *III. ii. t. 154*; *Dalz. & Gibs. Bomb. Fl. 145*; *Brand. For. Fl. 323*; *Grah. Cat. Bomb. Pl. 114*; *Beddome For. Fl. Anal. Gen. 159*. *W. mollissima*, *Wall. Cat. 1627*; *Pl. Rar. ii. t. 126*; *Kurz For. Fl. ii. 192*. *W. Wallichii*, *A. DC. l.c. 405*; *Dalz. & Gibs. l.c.*; *Kurz l.c.*; *Wight Ic. t. 1296*; *Beddome l.c. 160*. *W. Coraia*, *Wall. Cat. under 1615*; *A. DC. Prodr. viii. 407*. *W. Hamiltoniana*, *Wall. Cat. 4461*. *Hunteria eugenifolia*, *Wall. Cat. 1615*. *Nerium tomentosum*, *Roxb. Fl. Ind. ii. 6*. *N. Coraia*, *Hb. Ham. N.?* tinctorium, *Hb. Ham.*—*Rheede Hort. Mal. ix. t. 3, 4*.

TROPICAL INDIA; from the Indus eastwards and southwards to Ceylon, Birma and Penang, ascending to 2000 ft. in the Himalaya, and to 4000 in the Nilgherries.

A small usually crooked deciduous-leaved tree, bark corky. *Leaves* 3–6 by $1\frac{1}{2}$ – $2\frac{1}{2}$ in., often tomentose on both surfaces, dark brown when dry, nerves 10–14 pairs; petiole $\frac{1}{4}$ in. *Cymes* peduncled, corymbose, many-flid.; flowers 1 in. diam., yellowish with orange coronal scales. *Sepals* half as long as the corolla-tube, rounded. *Corolla-lobes* linear- or obovate-oblong, coronal scales very variable. *Anthers* white. *Follicles* 6–12 by $\frac{1}{2}$ in., connate into a cylinder, with a deep groove on each side till maturity, rough with tubercles. *Seeds* slender, $\frac{1}{2}$ – $\frac{2}{3}$ in., coma pure white.—There is

some obscurity about the colour of the flower of this species, possibly indicating different species, or a change during life. In Thwaites' figure of the Ceylon plant they are in one pale yellowish-red, in another of the same cyme a deep blue purple. In a drawing of Royle's they are nearly pure white, in another they are all pale rosy; in Wight's Illustrations (of *W. mollissima*) they are a dingy pale reddish. Brandis, who remarks on this subject and on the various accounts of the scent of the flowers, suggests that they may change colour after expansion.

4. *W. coccinea*, Sims, *Bot. Mag. t.* 2696; glabrous or pubescent, leaves elliptic or elliptic-lanceolate obtusely caudate-acuminate base acute, cymes few-fl'd., corolla-lobes rounded, coronal scales large broad rounded undivided. *A. DC. Prodr.* viii. 407; *Wall. Cat.* 1626; *Grah. Cat. Bomb. Pl.* 114; *Kurz For. Fl.* 193; *Lodd. Bot. Cab. t.* 894; *Wight Ic. t.* 442. *Nerium coccineum*, Roxb. *Fl. Ind.* ii. 2.

SILHET; Roxburgh, *De Silva*. CHITTAGONG HILLS (*Kurz*).—DISTRIB. Philippine Islds.

A timber tree; bark of shoots white, shining. *Leaves* 3-5 by 2-2 $\frac{3}{4}$ in.; membranous, dark brown when dry, nerves 6-12 pairs; petiole very short. *Cymes* 3-4 fl'd.; peduncle and pedicels very short; bracts large; flowers 1 in. diam., dark red. *Sepals* rounded, $\frac{1}{4}$ in. diam., almost as long as the corolla-tube. *Corolla* thick, almost fleshy; scales crimson, obscurely crenate. *Anthers* very hairy at the back. *Follicles* "linear, as thick as the little finger, glabrous, corky-lenticellate" (*Kurz*).

5. *W. lævis*, Hook. f.; glabrous, leaves elliptic or oblong caudate-acuminate shining above; cymes few-fl'd., corolla-lobes oblong, coronal scales fimbriate from the base.

MALACCA; Mt. Ophir, Maingay (*Kew Distrib.* 1065).

Branches slender, bark pale. *Leaves* 3-5 by 1-2 in., thin in texture; nerves 4-5 pairs, arched; petiole very short. *Cymes* puberulous, peduncled, pedicels rather stout; flowers about $\frac{1}{2}$ in. diam. *Sepals* rounded, ciliolate. *Corolla* rather fleshy. *Follicles* 7-8 in., very slender. *Seeds* very long, 1 $\frac{1}{2}$ in., slender, glabrous.

** *Calyx-segments much shorter than the corolla-tube*

6. *W. zeylanica*, Br. in *Mem. Wern. Soc.* i. 73; glabrous, leaves elliptic or elliptic-lanceolate ovate or obovate acuminate, cymes axillary and terminal, coronal scales lacinate. *A. DC. Prodr.* viii. 407; *Thwaites Enum.* 193; *Gaertn. Carp.* ii. 172, t. 117; *Wall. Cat.* 4460; *Bedd. For. Fl. Anal. Gen.* 160. *W. antidysenterica*, Br. l. c.; *A. DC. l. c.* *Nerium zeyanicum* and *antidysentericum*, Linn. *N. divaricatum*, Herb. *Madr.*—*Burm. Fl. Zeyl.* 23, t. 12, fig. 2.

CEYLON; "common in the south of the island," Thwaites.

A small tree, branches dichotomous. *Leaves* 3-5 by 1 $\frac{1}{2}$ -2 in.; nerves 6-10 pairs; petiole very short. *Cymes* few-fl'd., shortly peduncled, glabrous. *Sepals* ovate, obtuse. *Corolla-tube* very slender, $\frac{3}{4}$ -1 in., limb 1-1 $\frac{1}{2}$ in. diam., white, puberulous, lobes obovate; coronal scales as long as the stamens. *Follicles* 7 in., pericarp thin. *Seeds* $\frac{3}{4}$ in. long, linear oblong.

24. *NERIUM*, Linn.

Erect glabrous shrubs. *Leaves* 3-4-nately whorled, rarely opposite, narrow, coriaceous; nerves slender, very close. *Flowers* large, in racemose cymes. *Calyx* 5-partite, glandular within, segments narrow. *Corolla* funnel-shaped, tube cylindric, throat campanulate with 5 broad toothed scales; lobes overlapping to the right. *Stamens* at the top of the tube, included, filaments short; anthers sagittate, conniving around and adhering to the stigma, tips filiform, cells with long spurs furnished with twisted hairs, appendages rigid. *Disc* 0. *Carpels* 2, distinct, many-ovuled; style filiform or thickened above the middle, stigma with a basal reflected lobed membrane surmounted by 5 tubercles, tip

subglobose. *Follicles* elongate, cylindric, straight, hard, appressed. *Seeds* oblong, villous, coma terminal caducous, albumen fleshy; cotyledons flat, thickish, radicle superior.—DISTRIB. Species 2 or 3, Mediterranean region, N. Asian and Japanese.

N. odorum, *Soland. in Hort. Kew.* ed. i. v. i. 297; flowers scented, appendages of the corolla cleft into 4-7 linear segments, spurs of anthers linear twice as long as the cells. *Boiss. Fl. Orient.* iv. 48; *A. DC. Prodr.* viii. 420; *Roxb. Fl. Ind.* ii. 2; *Brandis For. Fl.* 328; *Grah. Cat. Bomb. Pl.* 114; *Targ. Tozz. Rap.* 28, 29, t. 3; *Wall. Cat.* 1624; *Bot. Mag.* 1799, 2032; *Bot. Reg.* t. 74 (*fl. double*). *N. odoratum*, *Lamk. Encycl.* iii. 456. *N. latifolium* and *N. indicum*, *Mill l. c. ed.* 8.—*Rheede Hort. Mal.* ix. t. 1, 2.

WESTERN HIMALAYA; from Nipal westwards, ascending to 6500 ft. in Murree.—CENTRAL INDIA. SCIND.—DISTRIB. Afghanistan, Japan.

A large erect stout shrub. *Leaves* 4-6 in., linear-lanceolate, thickly coriaceous, acuminate, midrib very stout; nerves numerous, slender, horizontal; petiole very short. *Flowers* 1½ in. diam., sweet-scented, rose white or yellow. *Sepals* subulate-lanceolate. *Follicles* 6-9 in.—Very similar to and perhaps only a variety of the common *N. Oleander* of the Mediterranean region, which extends eastwards to Persia.

25. STROPHANTHUS, DC.

Small trees or shrubs, often climbing. *Leaves* opposite. *Flowers* usually large, in terminal cymes. *Calyx* 5-partite, glandular within. *Corolla* funnel-shaped, tube short, throat large, campanulate, with 10 free or connate scales; lobes overlapping to the right, produced into long or short tails, rarely ovate acute. *Stamens* at the top of the tube, included, filaments short; anthers sagittate, tips filiform, conniving around and adhering to the stigma, cells spurred at the base. *Disc* 0. *Carpels* 2, distinct, many-ovuled, glabrous; style filiform, rugose, with cellular papillæ, tip dilated, stigma columnar or conical, simple or 2-fid. *Follicles* oblong or elongate, hard, spreading (parallel in *S. Jackianus*). *Seeds* compressed, fusiform, narrowed into a feathery tail, or with a sessile coma, base with a deciduous tuft of hairs.—DISTRIB. Species about 18, tropical Asiatic and African, and 1 S. African.

* *Lobes of the corolla exceeding the throat in length.*

1. **S. dichotomus**, DC. in *Bull. Soc. Phil.* iii. 123; glabrous, leaves elliptic-oblong or obovate obtuse acute or apiculate, cymes few-fl., tails of corolla-lobes 5-7 in. *A. DC. Prodr.* viii. 417; *Miquel Fl. Ind. Bat.* ii. 441. *S. scandens*, *Roem. & Sch. Syst.* iv. 412. *L. longicaudatus* and *Griffithii*, *Wright Ic.* t. 1299, 1300; *Kurz For. Fl.* ii. 191. *S. pentaphyllus*, *Griff. Notul.* iv. 78. *S. caudatus*, *Kurz in Journ. As. Soc.* 1877, ii. 257. *S. Horsfieldianus*, *Miquel Fl. Ind. Bat.* ii. 442. *Echites caudata*, *Burm. Fl. Ind.* 68, t. 26. *Nerium caudatum*, *Lamk. Dict.* *N. scandens*, *Lour. Fl. Coch.* i. 143 (*ex A. DC.*).

TENASSERIM (*Kurz*). MALACCA; *Griffith, Maingay*. SINGAPORE and PENANG (drawings).—DISTRIB. JAVA.

An erect shrub. *Branches* stout; bark dark, dotted with lenticels. *Leaves* 3-5½ by 2-3 in., rather coriaceous, glossy above; nerves 6-8 pairs, spreading, arching and joining far within the margin; petiole ½ in. *Cymes* much shorter than the leaves, dichotomous. *Sepals* subulate from an ovate base. *Corolla-tube* and *throat* ¾-1 in. long, whitish, tails purple; scales cleft to the base. *Anther-tips* very long and slender. *Follicles* not seen (as taken from a drawing, very large, divergent, 8 by 2 in., broadest at the very base where united, tapering to a broad rounded point, terete smooth green).

2. **S. Wallichii**, *A. DC. Prodr.* viii. 418; glabrous, leaves elliptic-oblong or obovate acuminate cuspidate or obtuse, cymes many-fl., tails of corolla-

lobes 2-3 in. *S. dichotomus*, *Wall. Cat.* 1641; *Wight Ic.* t. 599; *Lodd. Bot. Cab.* t. 759; *Grah. in Maund. Bot.* iii. t. 150. *S. dichotomus*, γ *coromandelianus*, *Ker in Bot. Reg.* t. 469 *in obs.* ? *S. caudatus*, *Kurz For. Fl.* ii. 193. *Nerium caudatum*, *Roxb. Fl. Ind.* ii. 9; *Burm. Fl. Ind.* t. 26.

KHASIA MRS., *De Silva*. CHITTAGONG; at Seetakoond, *J. D. H. & T. T. (cult.?)*. CERCARS; on the mountainous parts of the coast, *Roxburgh*. ? TENASSERIM; *Kurz*.

A climber. bark lenticellate. *Leaves* waved, shining, 2-3 by $1\frac{1}{2}$ -2 in., rather thin, nerves 5-6 pairs; petiole $\frac{1}{2}$ in. *Cymes* sometimes 6 in. diam., spreading, loosely dichotomously branched from the base; branches slender; bracts $\frac{1}{2}$ - $\frac{1}{3}$ in., narrowly lanceolate, spreading and recurved. *Sepals* subulate-lanceolate. *Corolla-tube* $\frac{1}{2}$ in., swollen at the base, pink in *Roxburgh's* drawing and *Kurz's* description, yellow with faint reddish stripes in the figures of *Maund* and *Loddiges*. *Anther-tips* very long and slender.

** *Lobes of the corolla not or hardly exceeding the throat.*

3. ***S. Wightianus***, *Wall. Cat.* 4459; quite glabrous, leaves elliptic obtuse, cymes many-fld., tails of corolla-lobes $\frac{1}{4}$ - $\frac{1}{2}$ in. *Wight Ic.* t. 1301. *Cameraria zeylanica*, ?? *Hb. Wight (ex Wall. l. c.)*.

MALABAR and TRAVANCORE; *Rottler*; near Quilon, *Wight*.

A climbing shrub, bark closely warted with lenticels. *Leaves* 2-3 by $1-1\frac{1}{2}$ in., thinly coriaceous, nerves 6-7 pairs; petiole very short. *Cymes* repeatedly dichotomously branched from the base, 2-3 in. high and broad, corymbiform; bracts and sepals ovate, acute. *Corolla-tube* $\frac{1}{2}$ - $\frac{1}{2}$ in. long; inflated at the base; lobes rather longer, gradually narrowing into the linear obtuse tail; scales very prominent. *Anther-tips* very long and slender. *Follicles* (from *Wight's* drawing) 6 by 1 in., of the shape of those of *S. dichotoma*, warted all over. *Seeds* with a long beak ending in a filiform longitudinally plumose bristle.

4. ***S. brevicaudatus***, *Wight Ic.* t. 1302; quite glabrous, leaves elliptic or oblong finely acuminate margins crisped, corolla-lobes broadly ovate acute. *Kurz For. Fl.* ii. 191. *Cercocoma singaporia*, *Wall. Cat.* 1623. *A. DC. Prodr.* viii. 432.

MALACCA; *Griffith, Maingay*. SINGAPORE; *Lobb*. MERGUI (? *Kurz*).—DISTRIB. Borneo.

A straggling shrub, branches minutely warted. *Leaves* 2-4 by $1-1\frac{1}{2}$ in., dark brown when dry, opaque on both surfaces, nerves 6-8 pairs; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Cymes* dichotomously branched from the base; branches stout, short; bracts (often numerous and empty) and sepals broadly ovate acute. *Corolla* almost salver-shaped; tube $\frac{1}{2}$ in. long, limb about as broad. *Filaments* hairy; anthers with very slender points about equalling the cells. *Style* hairy. *Follicles* 8 by $\frac{2}{3}$ in., base broad, middle slightly turgid, then tapering to a long hard point, terete, smooth. *Seeds* not ripe, shortly pilose at the lower end (*Maingay*).—*Kurz* states this species is reputed to grow at Mergui.

5. ***S. Jackianus***, *Wall. Cat.* 1643; leaves linear-oblong obtusely acuminate scaberulously pubescent beneath, cymes axillary very few-fld., corolla-lobes $\frac{1}{2}$ in. linear obtuse about equalling the broad subcylindric throat, seeds very slender. *A. DC. Prodr.* viii. 419.

PENANG; *Jack*.

Branches slender, with dark-brown bark, twigs scaberulous. *Leaves* 3-4 by $1-1\frac{1}{2}$ in., minutely scaberulous above, nerves numerous; petiole very short. *Cymes* very shortly peduncled, 2-3-fld.; pedicels short; flowers nodding. *Sepals* ovate-lanceolate, acuminate. *Corolla* puberulous, tube hardly any, throat more cylindric than campanulate. *Follicles* a foot long, very slender, parallel, cylindric, 2-partite when ripe, the segments opening flat, pericarp thinly coriaceous, polished within. *Seeds* $\frac{1}{2}$ in. long, narrowly fusiform, glabrous, coma white, three times as long.—I have seen

only Wallich's very mutilated flowers, shrivelled leaves, dehiscent pods and seeds, which latter entirely resemble those of a *Wrightia*.

26. *APOCYNUM*, Linn.

Erect herbs or undershrubs. *Leaves* opposite. *Cymes* terminal and lateral; flowers small. *Calyx* 5-fid, eglandular within; lobes acute. *Corolla* campanulate, 5-fid, with 5 processes between the stamens; lobes overlapping to the right. *Stamens* near the base of the corolla, included; anthers sagittate, acute, conniving and adnate to the stigma, cells with basal spurs. *Disc* fleshy, 5-lobed. *Carpels* 2, distinct, many-ovuled, half sunk in the disc, to which they are adnate by the back; style short or 0, stigma subglobose, tip 2-lobed. *Follicles* slender. *Seeds* small, oblong, with a terminal caducous coma, albumen scanty, cotyledons flat.—**DISTRIB.** Species 5, of the north temp. zone.

A. venetum, Linn.; *A. DC. Prodr.* viii. 400; *Boiss. Fl. Orient.* iv. 48.

WESTERN TIBET; Shayuk valley, alt. 8000 ft. (without flower or fruit), *Thomson*. —**DISTRIB.** N. Asia, from the Caucasus to China, Persia, Asia Minor, Greece, Dalmatia.

Stem and branches slender, smooth, cylindric. *Leaves* 2-3 by $\frac{1}{2}$ – $\frac{3}{4}$ in., linear-oblong or oblong-lanceolate, apiculate, entire or crenulate; nerves very slender; petiole very short. *Cymes* small, erect, subcorymbose; bracts subulate. *Flowers* erect, $\frac{1}{2}$ in. diam., purplish, puberulous. *Carpels* with pubescent tips. *Follicles* 4 in. —Though I have seen neither flower nor fruit, I cannot doubt this being the common *A. venetum*.

27. *URCEOLA*, Roxb.

Climbing shrubs. *Leaves* opposite, nerves distant. *Flowers* small, in dense corymbosely paniced cymes. *Calyx* 5-partite, eglandular within. *Corolla* urceolate or subglobose, throat naked; lobes short, valvate. *Stamens* at the base of the corolla; anthers sagittate, conniving over and adhering to the stigma, cells spurred at the base. *Disc* cupular or annular, truncate or 5-lobed. *Carpels* 2, distinct, longer than the disc, truncate, hirsute, many-ovuled; style short, top obconic; stigma subannulate, conoid. *Follicles* spreading, thick and acuminate, or elongate and contracted or not between the seeds. *Seeds* oblong or linear, compressed, villous, tip contracted bearded with long persistent brown hairs, and crowned with a long white deciduous coma, albumen scanty; cotyledons thin, radicle short.—**DISTRIB.** Species 7 or 8, Malayan.

SECT. I. *Urceola* proper. *Follicles* straight, even, horizontally divergent. *Calyx* longer than the corolla, 2 interior segments much smaller than the others.

1. ***U. elastica***, Roxb. in *As. Res.* v. 167, with figure (excl. fruit); branches robust, leaves beneath and inflorescence finely rusty pubescent, leaves elliptic abruptly acuminate thickly coriaceous, nerves 10–12 pairs very strong, cymes very dense-fld., bracts subulate, calyx-segments lanceolate recurved, follicles cylindric. *A. DC. Prodr.* 358; *Wight Ic.* t. 473 (excl. figures and descriptions of fruit). *Tabernæmontana elastica*, Spreng. *Syst. Veg.* i. 639. ? *Vabea gummi-fera*, Poir. *Dict. Suppl.* v. 409.

MALACCA and PENANG; Roxburgh, Wallich, Griffith, Maingay (Kew Distrib. 1058, 1091).—**DISTRIB.** Sumatra.

A stout climber. *Leaves* 4–6 by 2–3 in., red-brown when dry, softly pubescent beneath, glabrous above with impressed nearly horizontal nerves; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Cymes* numerous, paniced at the ends of the branches, long-peduncled; flowers in compound corymbs, very densely packed. *Calyx* $\frac{1}{2}$ in. long, exceeding the ovoid pubescent corolla, which is glabrous within except a tuft of reflexed hairs between

the stamens. *Anthers* acuminate. *Style* obconoid, with a small conoid stigma. *Follicles* 6 by $\frac{1}{2}$ in., quite straight, horizontal, cylindric, acuminate. *Seeds* linear, $\frac{3}{4}$ in., softly villous, coma copious, four times longer.—The fruit figured and described by Roxburgh, A. DC., and Wight as that of *U. elastica* is *Orchipeda fœtida*, Blume, a plant cultivated in India. Wallich's *U. elastica* (Cat. 1617), from Penang, is an Asclepiadaceous plant without flower or fruit.

2. ***U. Maingayi***, Hook. f.; quite glabrous except the inflorescence, leaves elliptic abruptly acuminate thickly coriaceous, pale beneath, nerves 6–10 pairs strong, cymes finely pubescent, calyx-segments oblong obtuse recurved, follicles cylindric.

SINGAPORE, *Maingay* (Kew Distrib. 1083).

Habit and brown colour of *U. elastica*, but the leaves are quite glabrous and apparently glaucous beneath, with fewer more arched nerves not impressed above. The cymes are smaller, fewer and laxer-flowered; the calyx-segments much broader and very obtuse; the anthers and style are the same in both, but the follicles are much more slender in *A. Maingayi*.

3. ***U. lucida***, Benth. in Gen. Pl. ii. 716; quite glabrous except the inflorescence, leaves elliptic abruptly acuminate shining on both surfaces, nerves 8–12 pairs, cymes lax-flid. finely pubescent, bracts subulate, calyx-segments broadly oblong, follicles short gradually acuminate from a broad base. *Chavannesia lucida*, A. DC. Prodr. viii. 444. Echites? *lucida*, Wall. Cat. 1670.

PENANG; Wallich. ? MALACCA; Griffith. RANGOON; McLelland.

Branches slender; bark nearly black, smooth. *Leaves* 3–5 in., rigidly coriaceous, red-brown when dry; nerves arched, strong beneath; petiole slender, $\frac{1}{2}$ –1 in. *Cymes* long-peduncled; peduncle and branches very slender; bracts subulate; flowers very minute, $\frac{1}{10}$ in. long. *Corolla* as in the preceding species. *Anthers* truncate. *Ovary* hairy at the tip only; style elongate with an obconoid top surmounted by subulate stigma. *Follicles* 4 in. long, $\frac{1}{4}$ in. diam. above the narrowed base, rigid, like poignards. *Seeds* $\frac{1}{3}$ – $\frac{1}{2}$ in., linear-oblong, silky, coma 4–5 times longer.—Griffith's plant is in very young flower and may be another species; it has larger leaves with fewer and very slender nerves. The Rangoon specimens have caudate-acuminate leaves, larger bracts and hispidulous flowers. Kurz (in Journ. As. Soc. 1877, ii. 255) refers this to *U. esculenta*.

4. ***U. malaccensis***, Hook. f.; quite glabrous except the inflorescence, leaves elliptic or ovate-oblong obtusely caudate-acuminate coriaceous, nerves 4–6 pairs slender, cymes shortly peduncled dense-flid., bracts puberulous oblong obtuse, calyx-segments linear-oblong obtuse recurved, "follicles elongate filiform."

MALACCA; *Maingay* (Kew Distrib. 1098, ? 1082).

Branches smooth; bark dark brown. *Leaves* 2–4 by 1–1 $\frac{1}{2}$ in., smooth on both surfaces; nerves arched, nervules obscure; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Cymes* chiefly axillary; peduncle glabrous, shorter or longer than the leaves; bracts $\frac{1}{2}$ – $\frac{1}{4}$ in., recurved, much larger than in the foregoing species; flowers hoary rather than pubescent. *Corolla* as in the preceding species. *Anthers* obtuse. *Ovaries* hirsute; style obconic, surmounted with an obpyriform stigma. *Follicles* described by Maingay as "elongate filiform divaricate. *Seeds* oval, compressed, pilose at the apex."

5. ***U. esculenta***, Benth. in Gen. Plant. ii. 715; leaves elliptic caudate-acuminate coriaceous, quite glabrous, nerves 9–11 pairs strong, follicles lanceolate from a contracted peduncle-like base. Kurz For. Fl. ii. 184. *Chavannesia esculenta*, A. DC. Prodr. viii. 444; Strettell, note on *Caoutchouc* (Rangoon, 1874, with figure). Echites? *esculenta*, Wall. Cat. 1671. *E. lucida*, ? Don Gen. Syst. iv. 75.

MARTABAN and TAVOY; Wallich. Common all over PEGU (Kurz).

*Branches and leaves quite glabrous. Leaves 4-6 by 2-2½ in., acute at both ends or obtuse at the base, shining above; nerves red, slightly arched. Flowers "minute, white; corymbs apparently short; long-peduncled, glabrous in the axils of the upper leaves, or terminal" (Kurz). Follicles 5 by ½ in., quite straight, pointed, narrowed into a stout stalk ½ in. long, thickly coriaceous when dry and hard. Seeds elliptic-lanceolate, villous, ½ in. long; coma white, four times as long.—The leaves a good deal resemble those of *U. brachysepala*, but are longer, and the nerves are more numerous. Fruit eatable.*

SECT. II. **Dittormos.** *Follicles flexuous, distantly torulose. Calyx shorter than the corolla; segments erect, subequal.*

6. ***U. torulosa*, Hook. f.**; glabrous except the inflorescence, leaves oblong or oblong-lanceolate acuminate, nerves 6-10 pairs slender, cymes pubescent, follicles very slender swollen over the remote seeds.

MALACCA; *Maingay* (Kew Distrib. 1080, 1086).

*Branches slender, smooth (in flower). Leaves 4-7 by 1½-2 in., red-brown when dry, thinly coriaceous. Cymes long-peduncled; bracts lanceolate; flowers not quite mature, ⅓ in. long. Calyx-segments oblong-lanceolate. Corolla as in the preceding section. Anthers subacute. Ovary hairy; style obconic, with a conoid stigma of the same length. Follicles 2-2½ ft. long, thinly coriaceous, smooth, terete, swellings ¾ in. long, often 1 in. apart, long ellipsoid. Seeds elliptic-lanceolate, villous, top bearded with persistent hairs; coma twice as long.—The follicles resemble those of *Parameria glandulifera*.*

7. ***U. brachysepala*, Hook. f.**; glabrous except the puberulous flowers, leaves elliptic obtusely acuminate, nerves 6-8 pairs strong, cymes long-peduncled, peduncles and branches compressed, bracts subulate, sepals much shorter than the subglobose shortly 5-lobed corolla.

MALACCA; *Maingay* (Kew Distrib. 1079, 1080).

Branches rather stout; bark red-brown. Leaves 4-5 by 1½-2½ in., firmly coriaceous, red-brown when dry, nervules distinct on both surfaces. Peduncles 6-8 in., glabrous, red when dry, branches jointed at the nodes; branches and pedicels slender, glabrous; flowers very small, ⅙-⅓ in. long. Calyx-segments erect, ovate. Corolla pubescent, inflated; lobes obtuse, glabrous within, except a tuft of hairs between the stamens. Anthers subacute. Ovary twice as long as the disc, cylindric, hirsute; style cupular, stigma large obpyriform. Follicles not seen.

DOUBTFUL SPECIES.

URCEOLA?; branches and leaves glabrous; bark black when dry; leaves 2-2½ by ¾-1½ in., elliptic- or ovate-lanceolate obtusely acuminate, narrowed into the petiole, firmly coriaceous, pale brown shining above, nerves 3-4 pairs very slender ascending, follicles horizontal 6-8 by ¼ in. slightly curved cylindric from the base, narrowed at the apex, hard; seeds ½ in., very slender narrowed into a filiform process longer than the body, on which the fine pale brown hairs of the coma are placed. Probably an undescribed genus.—MALACCA; *Maingay* (Kew Distrib. 1069).

28. **PARAMERIA**, Benth.

Evergreen glabrous climbing shrubs. *Leaves opposite, rarely 3-nately whorled. Flowers small, in broad lax terminal panicles. Calyx small, 5-fid or -partite, glandular within. Corolla sub-campanulate, throat broad naked, lobes obliquely obovate or obcuneate, wrinkled, overlapping to the left. Stamens at the base of the corolla, filaments short; anthers sagittate, acute or apiculate, conniving over and adhering to the stigma, cells spurred at the base. Disc of 5 connate scales. Carpels 2, distinct, longer than the disc, many-ovuled; style short, top obconoid, stigma conoid. Follicles long, slender, distantly torulose.*

Seeds linear or oblong, compressed, hairy, crowned with a deciduous pencil and persistent ring of hairs, albumen scanty; cotyledons thin, radicle superior, short.—**DISTRIB.** Species 2–3, Indian and Malayan.

1. ***P. glandulifera*, Benth.** in *Gen. Plant.* ii. 715; glabrous except the cymes, leaves coriaceous elliptic oblong or obovate obtuse acute or acuminate shining above, nerves 5–6 pairs arching very oblique, cymes in terminal and axillary brachiate panicles. *Kurz For. Fl.* ii. 189. *Ecdysanthera glandulifera*, A. DC. *Prodr.* viii. 443; *Wight Ic.* t. 1307 (*E. Griffithii*, in text). *E. barbata*, Mig. *Fl. Ind. Bat.* ii. 451. *Echites glandulifera* and *monilifera*, Wall. *Cat.* 1660, 1659; *G. Don Gen. Syst.* iv. 75. *Parsonsia barbata*, Bl. *Bijd.* 1042.

MARTABAN; Wallich, *Parish*; on the borders of tidal forests, *Kurz*. MALACCA; Griffith, *Maingay* (Kew Distrib. 1077, 1093). SINGAPORE; Lob. ANDAMAN ISLDS.; Kurz.—**DISTRIB.** Java, Borneo, Philippine Islds., Cambodia.

Branches stout or slender. *Leaves* 3–5 by $1\frac{1}{2}$ –2 in., sometimes 3-nately whorled, smooth, nerves very slender; petiole very short, $\frac{1}{8}$ – $\frac{1}{4}$ in. Terminal panicle of *cymus* often 5–6 in. broad, pyramidal, axillary ones short; branches spreading, 3-chotomous, puberulous, pedicels short, or sometimes long and slender when the flowers are collected into globose umbellules; bracts minute; flowers $\frac{1}{4}$ in. diam. *Calyx-segments* small, ovate, one-quarter the length of the broad obtusely angled corolla-tube. *Corolla-lobes* about equalling the tube. *Anthers* acute and apiculate. *Ovary* somewhat hairy; style obconic. *Follicles* 6–12 in., very slender, flexuous, glabrous, pericarp thinly coriaceous; swellings over the seeds sometimes 1 in. apart, elliptic-lanceolate. *Seeds* $\frac{1}{4}$ in. long, oblong-lanceolate, contracted at the tip, pubescent, coma three times as long, white. The follicles resemble those of *Urceola*.—Wight is mistaken in describing and figuring the overlapping of the corolla-lobes as to the right. Blume describes the axils of the nerves of the leaf and corolla-throat as bearded in *Parsonsia barbata*, characters which I do not observe in the Indian specimens.

2. ***P. polyneura*, Hook. f.**; glabrous except the cymes, leaves membranous elliptic-oblong or elliptic obtusely acuminate, nerves 8–10 pairs arching very oblique, cymes in terminal brachiate panicles.

TENASSERIM; Lob. MALACCA; Griffith, *Maingay* (Kew Distrib. 1078).

Habit of *P. glandulifera*, but leaves very membranous with numerous nerves, cymes always terminal and anthers not apiculate. *Follicles* not seen.

29. **BEAUMONTIA**, Wall.

Evergreen climbing trees or shrubs. *Leaves* opposite, membranous; nerves distant, arched. *Flowers* very large, white, in terminal cymes; bracts leafy. *Calyx* 5-partite, glandular or not within. *Corolla-tube* very short, throat large, bell- or funnel-shaped, naked; lobes broad, overlapping to the right. *Stamens* at the top of the tube, included in the throat; filaments thickened at the top; anthers horny, sagittate, conniving over and adhering to the stigma; cells spurred at the base. *Disc* deeply 5-lobed. *Ovary* 2-celled, cells many-ovuled; style filiform, top clavate, stigma fusiform. *Fruit* long, thick, woody, at length dividing into 2 horizontally spreading follicles. *Seeds* compressed, ovoid or oblong, top contracted, crowned with a pencil of hairs; cotyledons thin or thick, radicle short superior.—**DISTRIB.** Species 4, Indian and Malayan.

1. ***B. grandiflora*, Wall.** *Tent. Fl. Nep.* 15, t. 7; *Cat.* 1629; leaves glabrous or tomentose beneath, calyx-lobes 1–2 in. long, corolla between tubular and bell-shaped much shorter than the tube. A. DC. *Prodr.* viii. 404; *Kurz For. Fl.* ii. 179; *Bot. Reg.* t. 911; *Bot. Mag.* t. 3213. ? *B. longiflora*, Lodd. *Bot. Cab.* 183. *Echites grandiflora*, Roxb. *Hort. Beng.* 20, and *Fl. Ind.* ii. 14 (excl. fruit).

EASTERN HIMALAYA; from Nipal (*Wallich*) to Sikkim, ascending to 4000 ft. SILHET and CHITTAGONG.

Stem woody, very stout and climbing high. *Shoots* rusty-pubescent. *Leaves* 7-12 by 3-7 in., glabrous above, rarely tomentose beneath; obovate-oblong, abruptly acuminate; nerves 7-16 pairs, arching; petiole $\frac{1}{2}$ -1 in. *Cymes* few- or many-fl'd., pedicels and calyx tomentose. *Calyx-lobes* very variable, from oblong-lanceolate to obovate or oblanceolate, acuminate. *Corolla* 3-5 in. long, glabrous or pubescent; lobes 1 in. rounded, except the tip. *Anthers* $\frac{3}{4}$ in. long. *Ripe carpels* very variable in length and breadth, turgid, densely fleshy, green, with a thick hard spongy yellowish polished endocarp. *Seeds* $\frac{3}{4}$ in. long, coma twice as long.

2. **B. Jerdoniana**, *Wight Ic. t.* 1314, 5; leaves nearly glabrous beneath, calyx-lobes $\frac{3}{4}$ -1 in. long, corolla between broadly campanulate and funnel-shaped, lobes acuminate, follicles 10 by $1\frac{1}{2}$ in. cylindric.

DECCAN PENINSULA; on the Western Ghats from the Concan southwards, *Wight*, &c. This so closely resembles *B. grandiflora* in all respects but the corolla, the rather smaller size of all its parts, and the form of the follicles, that I suspect it will have to be ranked as a variety.

3. **B. khasiana**, *Hook. f.*; leaves obovate or elliptic acuminate tomentose beneath, calyx-lobes $\frac{1}{2}$ in., corolla broadly campanulate, lobes equalling the tube and throat rounded not acuminate.

KHASIA Mts.; Nungklow, *Lobb*.

The general habit of this is that of *B. grandiflora*, but the old leaves are broader, 8-10 by 4-4 $\frac{1}{2}$ in., more elliptic, the peduncle and pedicels are much longer, and the flowers very short; the corolla-tube and throat are together not 2 in. long, whilst the limb is 4 in. in diameter, with quite rounded lobes. It is very near the Javanese *B. multiflora*, *Teijsm & Binn.*, which is intermediate between this and *B. Jerdoniana* all may be varieties of one, but without the fruit this cannot be determined.

30. CHONEMORPHA, *G. Don*.

Climbing stout shrubs. *Leaves* opposite, broad; nerves distant, arching. *Flowers* large, white, in lax terminal and pseudo-axillary cymes. *Calyx* 5-cleft or -partite, with a ring of glands within. *Corolla* salver-shaped, tube very short; throat long, tubular, naked; lobes broad, obliquely obtusely, overlapping to the right, twisted sharply to the left. *Stamens* at the top of the tube, filaments short, broad, villous; anthers sagittate, elongate, pungent, conniving over and adhering to the stigma, cells shortly spurred below. *Disc* thick, annular or cupular. *Carpels* 2, distinct, many-ovuled; style filiform, base cleft, top globose or hemispheric, stigma conoid or subclavate. *Follicles* long, straight, hard, parallel, 3-gonous. *Seeds* ovoid or oblong, flat, shortly beaked, coma long, albumen thin; cotyledons oblong flat, radicle short.—DISTRIB. Species 2, Indian and Malayan.

1. **C. macrophylla**, *G. Don Gen. Syst. iv.* 76; calyx 5-lobed. *A. DC. Prodr. viii.* 430. *Wight Ic. t.* 432; *Brandis For. Fl.* 328; *Kurz For. Fl. ii.* 187. ? *C. grandiflora*, *G. Don l.c.* *C. mollis*, *Miquel Fl. Ind. Bat. ii.* 444, ex *Kurz in Journ. As. Soc.* 1877, ii. 257. *Echites macrophylla*, *Roxb. Fl. Ind. ii.* 13; *Wall. Cat.* 1657. *E. grandis*, *Wall. Cat.* 1658; *Grah. Cat. Bomb. Pl.* 113; *Dalz. & Gibs. Bomb. Fl.* 147. ? *E. macrantha*, *Spreng. Syst. i.* 632; *A. DC. l.c.* 477. *Epichysianthus macrophyllus*, *Voigt Hort. Suburb. Calc.* 523.—*Rheede Hort. Mal. ix. t.* 5, 6.

Moist forests throughout INDIA; from Kumaon in the HIMALAYA, ascending to 4500 ft., to Travancore, Ceylon, Malacca and the Andaman Islds.—DISTRIB. Java, Sumatra.

Branches glabrous, puberulous, or pubescent, soft, stout. *Leaves* 6–18 by 5–18 in., ovate elliptic obovate or orbicular, acute or cuspidate, base acute rounded or cordate, glabrous pubescent or tomentose beneath; nerves 10–12 pairs; petiole $\frac{1}{2}$ –2 in., stout or slender. *Cymes* on long or short stout pedicels; bracts ovate, acute. *Calyx* $\frac{1}{2}$ – $\frac{1}{2}$ in., coriaceous, terete, base truncate; lobes rounded or subacute. *Corolla* white, 2–3 in. diam., lobes $\frac{1}{3}$ – $\frac{1}{2}$ in. diam.; mouth glabrous, throat with 5 villous bands within. *Stamens* $\frac{1}{2}$ in. *Follicles* 12–18 by $\frac{3}{4}$ –1 in. *Seeds* $\frac{3}{4}$ in.

2. *C. Griffithii*, Hook. f.; calyx 5-partite.

SIKKIM HIMALAYA and KHASIA MTS., alt. 2–4000 ft., Griffith, &c.

Branches often hispid. *Leaves* smaller than in *C. macrophylla*. *Flowers* quite as large, but differing so much in the calyx as to suggest its belonging to a different genus. *Fruit* unknown.

DOUBTFUL SPECIES.

C. MALABARICA, G. Don Gen. Syst. iv. 76 (excl. syn. E. Pala). Echites malabarica, Lamk. Dict. ii. 342; A. DC. Prodr. viii. 477.—Pal. Valer, Rheede Hort. Mal. ix. t. 12.

C. VESTITA, G. Don Gen. Syst. iv. 76. Echites vestita, Roem. & Sch. iv. 394; A. DC. Prodr. viii. 477. E. tomentosa, Roth Nov. Sp. 137, non Vahl.—This is possibly *Wrightia tomentosa*.

31. *ECDYSANThERA*, Hook. et Arn.

Climbing glabrous shrubs. *Leaves* opposite, acuminate, nerves distant. *Flowers* minute, in terminal trichotomous paniced cymes. *Calyx* small, 5-partite, glandular or not within. *Corolla* suburceolate, throat naked, lobes very short, obtuse, overlapping to the right. *Stamens* at the base of the corolla; anthers sagittate, conniving over and adhering to the stigma, cells spurred at the base. *Disc* annular. *Carpels* 2, distinct, longer than the disc, many-ovuled, hairy; style short, top large cupular, stigma obpyriform. *Follicles* spreading, terete, acuminate. *Seeds* few, oblong or linear, compressed, tip narrowed with a long coma and a short persistent ring of hairs, albumen scanty; cotyledons thin, radicle short superior.—DISTRIB. Species 4 or 5, Malayan and Chinese.

E. micrantha, A. DC. Prodr. viii. 442; leaves glabrous ovate-lanceolate obtusely acuminate, nerves 3–5 pairs, cymes long-peduncled glabrous or puberulous. E. brachiata, A. DC. Prodr. viii. 443; Kurz For. Fl. ii. 189. Echites? micrantha and brachiata, Wall. Cat. 1667, 1668.

SIKKIM HIMALAYA (alt. 3–5000 ft.), ASSAM, SILHET, KHASIA MTS. (alt. 2–4000 ft.), CACHAR, AVA HILLS, Kurz.

A very tall climber; branches slender, pendulous, pustular, ultimate sometimes puberulous. *Leaves* 2–7 by 1–2 in., thinly coriaceous; nerves very oblique, slender; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Cymes* brachiata; bracts minute; flowers $\frac{1}{36}$ to $\frac{1}{12}$ in. long; pedicels slender or short. *Calyx* not half the length of the corolla, segments ovate. *Corolla* glabrous within and without, lobes falcate, spreading. *Anthers* obtuse. *Follicles* 3–4 in., $\frac{3}{4}$ in. broad near the base, horizontal, slightly incurved, narrowed from above the base to the point, thickly coriaceous with a shining crustaceous endocarp. *Seeds* $\frac{3}{4}$ in. long, elliptic-lanceolate, compressed, pubescent, bearded at the constricted tip, coma three times as long.

32. *BAISSEA*, A. DC.

Climbing shrubs. *Leaves* opposite; nerves distant, straight. *Flowers* small, in dense or lax axillary or terminal paniced or corymbose cymes. *Calyx* small, 5-partite, glandular or not within; segments obtuse. *Corolla* salver-shaped, lobes overlapping to the right, not twisted (in the Indian species). *Stamens* below the middle of the corolla; anthers sagittate, conniving over the stigma and adhering to it, cells shortly spurred at the base. *Disc* cup-shaped. *Carpels* 2, distinct, sunk in the disc, many-ovuled; style short, top cup-shaped, stigma

columnar. *Follicles* long. *Seeds* long, linear, truncate or narrowed (not beaked) at both ends, glabrous, tipped with a deciduous coma, albumen not thick; cotyledons linear, flat, radicle short.—**DISTRIB.** Species 7, a Cingalese, a Malayan, and 5 African.

1. **B. acuminata**, *Benth. in Gen. Pl.* ii. 719; leaves oblong obtusely caudate-acuminate pale beneath glabrous, cymes terminal and axillary corymbose puberulous shorter or longer than the leaves. *Oleghornia acuminata* and *cymosa*, *Wight Ic.* t. 1310, 1312; *Walp. Ann.* iii. 43; *Thwaites Enum.* 194.

CEYLON; common in the central province, alt. 3000 ft.

A slender climber. *Leaves* 3–4 by 1–1½ in., rather thin; nerves quite horizontal, very slender; petiole $\frac{1}{4}$ – $\frac{1}{3}$ in. *Cymes* trichotomous, peduncle slender; pedicels short. *Flowers* $\frac{1}{2}$ in. long. *Calyx* about half as long as the calyx-tube, glands between the sepals connate in pairs. *Corolla* glabrous or puberulous; lobes oblong or linear obtuse; tube and throat hairy within. *Follicles* 6–10 by $\frac{1}{2}$ in., cylindric, smooth. *Seeds* $\frac{1}{4}$ in., slender, narrowed at both ends.—The corolla-lobes are much too short, and rounded in Wight's figure.

2. **B. malaccensis**, *Hook. f.*; leaves oblong or elliptic obtusely caudate-acuminate pale beneath glabrous, cymes terminal and axillary paniculate glabrous longer than the leaves.

MALACCA; *Maingay* (Kew Distrib. 1094).

Very closely allied to *B. acuminata*, but more slender, leaves smaller, 2 by $\frac{3}{4}$ –1½ in., more membranous, whiter beneath, cymes more panicled than corymbose; the flowers are almost identical, except that the glands are solitary between the sepals according to Maingay's mss. *Fruit* not seen.

33. **AGANOSMA**, *G. Don.*

Stout evergreen climbers. *Leaves* opposite. *Flowers* in terminal tomentose cymes, large or middle-sized. *Sepals* narrowly lanceolate, acuminate, with subulate glands at the base, rarely oblong ovate. *Corolla* salver-shaped, tube very short; throat long, cylindric, with bearded longitudinal bands behind the anthers; lobes lanceolate linear-oblong or broad and rounded, overlapping to the right and nearly straight in bud. *Stamens* at the base of the throat, included; anthers sagittate, rigid, conniving over the stigma and adnate to it, cells spurred at the base. *Disc* 5-lobed, cupular. *Carpels* 2, distinct, tips hirsute, rarely glabrous, many-ovuled; style short, top urn-shaped, truncate, stigma columnar. *Follicles* short or long, terete, straight or curved, linear. *Seeds* ovate or linear-oblong, flattened, glabrous, not beaked, albumen scanty; cotyledons oblong, radicle short.—**DISTRIB.** Species 5, Indian and Malayan.

The very different aestivation of the corolla requires the separation of this genus from *Ichnocarpus*.

SECT. I. **Amphineurion**, *A. DC.* *Sepals* ovate-oblong, acute. *Ovary* glabrous, half sunk in the disc. *Follicles* very long, cylindric.

1. **A. marginata**, *G. Don Gen. Syst.* iv. 77; glabrous or branches and leaves beneath pubescent, leaves oblong acute acuminate or caudate, nerves very strong beneath inarching within the margin, cymes lax, corolla glabrous, tube rather longer than the acute calyx-segments, lobes linear obtuse. *Wight Ic.* t. 425; *A. DC. Prodr.* viii. 433; *Kurz For. Fl.* ii. 186. *A. acuminata*, *G. Don. l. c.*; *Wight Ic.* t. 424; *A. DC. l. c.* 434. *A. macrocarpa*, *A. DC. l. c.* 434. *Echites marginata*, *Roxb. Fl. Ind.* ii. 15; *Wall. Cat.* 1661. *E. acuminata*, *Roxb. l. c.* *E. macrocarpa*, *Wall. Cat.* 1662. *E. reticulata*, *Boj. Hort. Maur.*

211. *E. apoxys*, *Voigt Hort. Sub. Calc.* 522. ? *E. cristata*, *Roth Nov. Pl.* 135. ? *Chonemorpha cristata*, *G. Don l. c.* 76.

From SILHET and CHITTAGONG to MALACCA and SINGAPORE.—DISTRIB. Java, Sumatra, Philippine Islds.

A stout scandent or subscandent shrub. *Leaves* 2-4 by $\frac{3}{4}$ -1 $\frac{1}{2}$ in., coriaceous, hard, polished above, dark brown when dry; petiole $\frac{1}{4}$ in. *Cymes* chiefly axillary; peduncle slender, 1-2 in.; bracts deciduous; flowers white. *Corolla-tube* $\frac{1}{4}$ - $\frac{1}{2}$ in., slender; lobes twice as long, mouth glabrous, throat not dilated. *Ovary* glabrous. *Follicles* 6-18 by $\frac{1}{2}$ in., straight or flexuous, cylindric. *Seeds* linear-oblong.

SECT. II. *Meladenia*, *A. D. C.* *Calyx* large; lobes long, ovate or lanceolate. *Ovary* wholly included in the tubular 5-lobed disc.

2. *A. caryophyllata*, *G. Don Gen. Syst.* iv. 77; leaves ovate or elliptic acute obtuse or acuminate glabrous or tomentose beneath, nerves 3 pairs very oblique, cymes lax pubescent, sepals linear-lanceolate glandular within, corolla-lobes obliquely orbicular, ovary hairy at the tip, follicles 3-5 in.—*A. D. C. Prodr.* viii. 432; *Dalz. & Gibs. Bomb. Fl.* 113; *A. Blumei*, *Wight Ic. t.* 1305, not of *A. D. C.* *Echites caryophyllata*, *Wall. Cat.* 1651; *Bot. Mag. t.* 1919. ? *E. Heynei*, *Spreng. Syst.* i. 632. *E. dichotoma*, *Roth Nov. Pl.* 136. *Chonemorpha dichotoma*, *G. Don Gen. Syst.* iv. 76; *A. D. C. l. c.* 477.

LOWER BENGAL; Monghir, *Hamilton*; common on rocks at Risikund, *Wallich*. DECCAN PENINSULA, *Heyne*, &c.

A large climber, stem very stout, shoots pubescent. *Leaves* 4-5 by 2-2 $\frac{1}{2}$ in., coriaceous, base rounded acute or subcordate, nerves strong beneath and all running towards the point; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Cymes* terminal, lax, white-tomentose; pedicels shorter than the calyx-lobes, which are hoary without. *Corolla-tube* and *throat* both cylindric, subequal; limb 1 $\frac{1}{2}$ in. diam. *Ovary* pubescent; style slender, top urceolate, stigma columnar, to the tip of which the anthers are attached. *Follicles* stout, nearly $\frac{1}{2}$ in. diam., pericarp thickly coriaceous. *Seeds* (unripe) ovate-oblong, $\frac{1}{2}$ in. long, flat.—I have retained Roxburgh's specific name for this plant, because it is that of his Herbarium, of Rottler's Herbarium, of the Botanical Magazine, of the Calcutta Botanic Gardens, and of DeCandolle's Prodrum; but it is not the *Echites caryophyllata* of Roxburgh's Flora, which is *A. calycina*, and is described as having subglobular cymes; nor of his drawing, repeated by Wight (*Ic. t.* 440), which agrees with his description and represents the leaves as having many spreading veins and ovate acute corolla-lobes and glabrous ovary. Nor have I quoted Rheede's figure (*vii. t.* 55) which is referred to as *E. caryophyllata* in the Botanical Magazine; nor Rheede's "Kemetti Valli" (*ix. t.* 14, not 135 as quoted by Roxburgh), which Roxburgh cites for his *caryophyllata*, as neither of these is a good representation of this or any other plant, and they both differ totally from Roxburgh's and the Bot. Mag. figure and description. Though evidently a commonly (cultivated?) plant in India, its only presumably native habitat is the Monghir one given above; its few red nerves and rounded corolla-lobes at once distinguish it from its congeners.

3. *A. gracilis*, *Hook. f.*; branches very slender, leaves elliptic oblong acuminate membranous glabrous, nerves 8-10 pairs, very slender arching, cymes terminal corymbose glabrate, peduncles and pedicels long slender, sepals 1 $\frac{1}{2}$ in. hoary eglandular, corolla-tube $\frac{3}{4}$ in., lobes 1 $\frac{1}{2}$ in. obliquely oblanceolate.

SIKKIM HIMALAYA, alt. 2-4000 ft.; *J. D. H.* KHASIA MTS., alt. 1-3000 ft.; *Lobb*

A very beautiful and distinct species, at once distinguishable by the slender stem and branches, membranous leaves, few-flowered spreading glabrous cymes, very long sepals, and long narrow calyx-lobes.

4. *A. calycina*, *A. D. C. Prodr.* viii. 432; branches stout, leaves elliptic or oblong-lanceolate acuminate glabrous, nerves 7-10 pairs arching slender, cymes terminal lax densely rusty-tomentose, peduncle and pedicels stout, sepals

$\frac{3}{4}$ –1 in. eglandular, corolla-tube $\frac{1}{2}$ in., lobes ovate acute, ovary glabrous. *Kurz For. Fl.* ii. 186. *A. Roxburghii*, *G. Don ex Wight Ic.* t. 440. *A. Wallichii*, *G. Don Gen. Syst.* iv. 77. *Echites calycina*, *Wall. Cat.* 1653. *E. caryophyllata*, *Roxburgh Fl. Ind.* ii. 11 (and drawings copied by *Wight*, t. 440).

TAVOY; *Gomez, Kurz.*

Branches pubescent. *Leaves* 3–4 in., coriaceous; petiole $\frac{1}{2}$ in. *Cymes* many-fl., tomentose. *Sepals* very narrow, rusty tomentose. *Corolla-tube* hoary, slender, cylindric, base hardly dilated, narrowed upwards to the mouth, villous within. *Ovary* quite glabrous; style elongate-clavate, truncate, stigma columnar. *Fruit* unknown.—I have under *A. caryophyllata* stated my reasons for retaining that name for the plant of *Roxburgh's Herbarium*, and thus avoiding an involved synonymy and the necessity of giving it a new name.

5. *A. cymosa*, *G. Don Gen. Syst.* iv. 77; glabrous or shoots and leaves beneath softly tomentose, leaves elliptic-oblong or oblong-lanceolate acute or finely acuminate, nerves 5–7 pairs, cymes dense rounded densely tomentose, sepals $\frac{1}{4}$ – $\frac{1}{2}$ in., corolla-tube $\frac{1}{8}$ – $\frac{1}{2}$ in., lobes $\frac{1}{4}$ – $\frac{1}{2}$ in. ovate acuminate, ovary hirsute.

SILHET; *Roxburgh, &c.* DECCAN PENINSULA; common from Bombay to Travancore, *Heyne, &c.*

A stout rambling climber, very variable in size and habit, of which I am unable to distinguish the following forms specifically.

VAR. 1. *cymosa proper*; shoots tawny-tomentose, leaves 4–5 by 2–2 $\frac{1}{2}$ in. elliptic or oblong abruptly acuminate glabrous or sparsely hairy above, pubescent or tomentose beneath, nerves 7–9 pairs, sepals $\frac{1}{2}$ in., corolla-lobes $\frac{1}{4}$ in. long.—*A. cymosa*, *G. Don l.c.*; *A. DC. Prodr.* viii. 433. *Echites cymosa*, *Roxb. Fl. Ind.* ii. 16; *Wight Ic.* t. 395; *Wall. Cat.* 1654, *in part.*—Silhet.

VAR. 2. *lanceolata*; shoots tawny tomentose, leaves 4–5 $\frac{1}{2}$ by 1–1 $\frac{1}{2}$ in. oblong lanceolate finely acuminate margins and midrib beneath sparsely hairy, nerves 7–9 pairs, sepals $\frac{1}{2}$ in., corolla-lobes $\frac{1}{2}$ in. broad, follicles 3 by 3 $\frac{1}{2}$ in. sessile linear-falcate, seeds ovate-lanceolate glabrous.—*Echites cymosa*, *Wall. Cat.* 1654, *in part* (specimens from Calcutta Botanic Gardens).

VAR. 3. *conferta*; shoots puberulous or hoary, leaves 2–3 by 1 $\frac{1}{2}$ –2 in. elliptic-oblong acute obtuse or apiculate rarely acuminate, quite glabrous on both surfaces, nerves 3–4 pairs, flowers as in var. 2. *Echites conferta*, *Wall. Cat.* 1655.—Deccan Peninsula, *Herb. Heyne.*

VAR. 4. *elegans*; shoots puberulous or glabrate, leaves 1 $\frac{1}{2}$ –2 $\frac{1}{2}$ by $\frac{3}{4}$ –1 $\frac{1}{2}$ acute obtuse or acuminate, nerves 3–5 pairs, sepals $\frac{1}{4}$ – $\frac{1}{2}$ in., corolla-lobes $\frac{1}{8}$ – $\frac{1}{4}$ in., “follicles 5–9 by $\frac{1}{2}$ in., terete, hairy at length glabrate, seeds linear-oblong shortly beaked glabrous” (*Thwaites*). *Aganosma elegans*, *G. Don l.c.*; *A. DC. Prodr.* viii. 433; *Wight Ic.* t. 1304; *Thwaites Enum.* 194. *A. Doniana*, *Wight Ic.* t. 1306 (a small-flowered form); *Dalz & Gibs. Bomb. Fl.* 146. *Echites elegans*, *Wall. Cat.* 1656. *E. bracteata*, *Herb. Heyne in Wall. Cat.* under 1656.—Deccan Peninsula and Ceylon.

DOUBTFUL SPECIES.

A. LÆVIGATA, *Grah. Cat. Bomb. Pl.* 113 (*Rheede Hort. Mal.* ix. t. 9); without description. *S. Concan.* Is probably *Parsonsia*.

34. **EPIGYNUM**, *Wight.*

Climbing shrubs. *Leaves* opposite, nerves distant, arching. *Flowers* hoary, in dense subcapitate corymbose or open paniculate cymes. *Calyx* small, 5-fl., lobes acute. *Corolla* salver-shaped, tube long, throat villous; lobes overlapping to the right, twisted to the left, or nearly erect. *Stamens* below the middle of the tube; anthers sagittate, acuminate, conniving around and hardly adhering to the stigma, cells spurred at the base. *Disc* lining the calyx-tube, fleshy, 5-lobed. *Carpels* 2, distinct, many-ovuled, dorsally adnate to the disc and surmounted by its 5 connivent lobes; style long or short, top obovate or cupular,

stigma thick. *Follicles* distinct, long, linear, terete. *Seeds* elongated, compressed (crowned with a wing or pencil of hairs?).—**DISTRIB.** Species 4 or 5, Malayan Peninsula and Borneo.

1. **E. Griffithianum**, *Wight Ic. t.* 1308; leaves elliptic acute at both ends glabrous, cymes rusty-pubescent, flowers $\frac{1}{2}$ in. long, corolla pubescent, lobes in bud slightly twisted. *Kurz For. Fl. ii.* 184. *Legouixia amabilis*, *Muell. Argan. in Van Heurck Pl. Nov.* 146.

MERGUI; *Griffith, Kurz.*

Branches slender, puberulous towards the tips. *Leaves* 2-3 by $\frac{3}{4}$ -1 $\frac{1}{4}$ in., membranous, brown when dry, narrowed into the short petiole. *Cymes* branched from the base or peduncled, 1-1 $\frac{1}{2}$ in. diam.; branches $\frac{1}{2}$ in.; flowers crowded; pedicels very short. *Calyx* $\frac{1}{2}$ the length of the narrow corolla-tube. *Corolla-limb* $\frac{3}{4}$ in. diam.; lobes obovate, glabrous within, throat and tube hairy within. *Fruit* not seen.

2. **E. Maingayi**, *Hook. f.*; leaves elliptic subacute and cymes softly tomentose beneath, flowers 1 in. long, corolla tomentose, lobes in bud nearly straight.

MALACCA; *Maingay* (*Kew Distrib.* 1088).

Branches slender, young tomentose. *Leaves* 3 $\frac{1}{2}$ -4 $\frac{1}{2}$ by 1 $\frac{1}{2}$ -2 in., minutely puberulous above, with yellowish tomentum beneath; petiole $\frac{1}{4}$ in., tomentose. *Cymes* shortly peduncled; flowers very shortly pedicelled, corymbose. *Calyx* $\frac{1}{2}$ the length of the corolla-tube. *Corolla-lobes* rounded, tomentose on one half of the back; tube and throat pubescent within and without. *Follicles* 6-8 by $\frac{1}{4}$ - $\frac{3}{8}$ in., slender, cylindric, flexuous, tomentose. *Seeds* not ripe.

3. ?**E. lævigatum**, *Hook. f.*; leaves elliptic-lanceolate acuminate quite glabrous, flowers $\frac{1}{2}$ in. long, corolla glabrous, lobes strongly twisted in bud. *Echites lævigata*, *Wall. Cat.* 1669.

SILHET; at Pundua? (*Wallich*).

Perfectly glabrous throughout; branches slender, dark brown. *Leaves* 4-5 by 1 $\frac{1}{2}$ in., thinly coriaceous, polished above; petiole $\frac{1}{2}$ in. *Flowers* in peduncled axillary trichotomous paniced cymes, rather crowded towards the ends of the long horizontal branches; bracts ovate. *Calyx-lobes* ovate-lanceolate, with a small glandular tooth in the sinus between each lobe. *Corolla-tube* $\frac{1}{6}$ in., twice as long as the calyx; lobes linear-oblong, twice as long as the tube. *Carpels* sunk in the cupular 5-lobed disc, and attached to it by their backs; style very short, stigma large. *Fruit* not seen.—A fruiting specimen of what may be this species was collected in Cachar by Keenan; the follicles are 3-4 in. by $\frac{1}{4}$ in., horizontal, terete, gradually narrowed from the base to the acute point, exactly as in *Anodendron*, but the seeds are slender and not beaked.

DOUBTFUL SPECIES.

?**E. PARVIFLORUM**, *Hook. f.*; quite glabrous, leaves 5-6 by 1 $\frac{1}{2}$ -2 in., elliptic-lanceolate, acuminate at both ends, nerves 5-6 pairs very oblique, petiole $\frac{1}{2}$ in., flowers in lax brachiate axillary and terminal cymes, peduncle branches and pedicels slender, calyx very small, corolla pale yellow, tube short, limb $\frac{1}{2}$ in. diam., lobes falcately lanceolate acuminate, stamens towards the base of the tube, ovary sunk in the 5-lobed disc, style very short, top cup-shaped, stigma conical. *Echites parviflora*, *Roxb. Fl. Ind. ii.* 20.

NORTHERN CIRCARS; *Roxburgh*.

I have described this from Roxburgh's drawings; it appears closely allied to *E. ? lævigatum*.

35. **RHYNCHODIA**, *Benth.*

A lofty climbing evergreen shrub. *Leaves* opposite, broad, membranous, nerves distant. *Flowers* in lax broad axillary or subterminal paniced cymes.

Calyx 5-partite or -fid, glandular within. *Corolla* salver-shaped, throat contracted, villous; lobes large, broad, obliquely obtuse, overlapping to the right, twisted to the left. *Stamens* in the middle of the tube, filaments broad short: anthers sagittate, conniving round and adhering to the stigma, cells shortly spurred below. *Disc* annular, 5-fid. *Carpels* 2, distinct, glabrous, longer than the disc, many-ovuled; style filiform, top clavate truncate, stigma columnar. *Follicles* elongate, narrow, compressed. *Seeds* ovate or oblong, compressed, beak slender, tipped by a deciduous coma.

R. Wallichii, *Benth. in Gen. Pl.* ii. 720; glabrous, leaves elliptic ovate or oblong cuspidate or caudate-acuminate, cymes dichotomous loose, peduncles and pedicels slender. *Rhynchospermum Wallichii* and *R. ellipticum*, *A. DC. Prodr.* viii. 431. *Echites rhynchosperma*, *Wall. Pl. As. Rar.* i. 43, t. 49; *Cat.* 1665. *E. elliptica*, *Wall. Cat.* 1666. *Echites verticalis*, *Herb. Ham.* Cercomoma *Wallichii*, *Miq. Fl. Ind. Bat.* ii. 445; *Kurz For. Fl.* ii. 187.

SIKKIM HIMALAYA, alt. 2500 ft.; *Treutler. SILHET; De Silva.* ASSAM; *Masters. CACHAR; Keenan.* MARTABAN, TENASSERIM and AVA; *Wallich, Kurz.*

Branches distantly tubercled. *Leaves* 5-9 by 2-4 in., base acute, rounded or rarely cordate; petiole slender, 1 in. *Cymes* 2-4 in. diam.; flowers white, fragrant; peduncle 1-3 in. *Calyx-lobes* ovate-lanceolate, half as long as the corolla-tube. *Corolla* glabrous, except round the mouth; tube $\frac{1}{4}$ in., 5-angled; limb 1 in. diam.; lobes narrowly obovate. *Follicles* 12-18 by $\frac{3}{8}$ - $\frac{3}{4}$ in., smooth. *Seeds* 1 in., beak as long as the body, hairs rather longer, white.—This genus might well form a section of *Trachelospermum*.

36. TRACHELOSPERMUM, Lemaire.

Climbing shrubs. *Leaves* opposite, nerves distant. *Flowers* white or purplish, in lax terminal or pseudo-axillary cymes. *Calyx* small, 5-partite, glandular or scaly within. *Corolla* salver-shaped, mouth constricted; lobes oblique, overlapping to the right, twisted to the left. *Stamens* above the middle of the tube, tips included or exerted, filaments short, broad; anthers conniving over and adhering to the stigma, cells spurred at the base. *Disc* annular or of oblong glands. *Carpels* 2, distinct, many-ovuled; style short, top cupular, stigma columnar. *Follicles* elongate, slender, incurved, terete. *Seeds* linear, not beaked, coma long, albumen copious; cotyledons linear, flat, radicle short.—DISTRIB. Species 8, East Asiatic and Malayan.

* *Cymes in the upper axils, long-peduncled. Corolla-tube slender, much longer than the calyx.*

1. **T. fragrans**, *Hook. f.*; leaves elliptic-lanceolate obtusely acuminate, cymes loosely paniced, peduncles and pedicels slender, sepals ovate or lanceolate, corolla-lobes at base and mouth pubescent, anthers included. *Ichnocarpus fragrans*, *Wall. Cat.* 1675; *A. DC. Prodr.* viii. 435; *Brand. For. Fl.* 327. I. ? inflata, *Herb. Ham. in Wall. l.c.* *Blaberopus lucidus*, *A. DC. l.c.* 411. *Alstonia lucida*, *Don Prodr.* 231.

TEMPERATE and SUBTROPICAL HIMALAYA; from Kumaon, ascending to 5,700 ft. to Bhotan, exclusive of Sikkim. ASSAM; Muku hills, *Simonds.* CACHAR; *Keenan.*

A tall climber, shoots and petioles sometimes pubescent. *Leaves* 3-5 by 1-1 $\frac{1}{2}$ in.; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Peduncles* 1-3 in., very slender, stout, angular, trichotomously branched. *Sepals* $\frac{1}{4}$ - $\frac{1}{2}$ the length of the corolla-tube. *Corolla* white, tube slender, with the throat $\frac{1}{4}$ - $\frac{1}{2}$ in.; lobes obtuse, obliquely truncate. *Disc-glands* quadrate. *Ovary* glabrous, acute. *Follicles* 4-9 by $\frac{1}{4}$ in., incurved and converging, cylindric, acuminate, narrowed at the base; pericarp thinly coriaceous, smooth, pale. *Seeds*

$\frac{3}{4}$ in. long, slender, compressed, obtuse at both ends, pale, smooth, coma as long, white.

2. **T. gracillipes**, *Hook. f.*; glabrous, leaves elliptic acute, cymes loosely paniced, peduncle and pedicels capillary, calyx-segments ovate or lanceolate, corolla-lobes and throat glabrous, anther-tips exserted.

KHASIA and JYNTEA Mts.; *Lobb.* ASSAM; Gowahatty, *Simons*.

Very similar to *T. fragrans*, but differing in the form of the leaf point, in the more slender cymes, and notably in the glabrous corolla and exserted anther-tips.

** *Cymes short-peduncled, in numerous axils. Corolla-tube short.*

3. **T. axillare**, *Hook. f.*; quite glabrous, leaves oblanceolate obovate or elliptic-oblong abruptly caudate-acuminate, cymes very shortly peduncled, sepals rounded, shorter than the glabrous corolla. *Rhynchospermum* 5, *Herb. Ind. Or. Hook. f. & T.*

SIKKIM HIMALAYA; alt. 4-6000 ft., *J. D. H.*

A stout arboreous climber. *Leaves* 3-5 by 1-1 $\frac{1}{2}$ in., rather coriaceous, tip $\frac{1}{2}$ in. long. *Cymes* 1 in. diam.; peduncle $\frac{1}{2}$ in., pedicels rather longer, stout. *Sepals* puberulous, half the length of the corolla-tube. *Corolla* dull purple; tube angular, $\frac{1}{2}$ in. long; lobes linear-oblong, nearly straight, obtuse; mouth and throat glabrous. *Stamens* included. *Glands* glabrous. *Ovary* pubescent; style very short, stout. *Follicles* 6-8 by $\frac{1}{2}$ in., curved, cylindric, tomentose. *Seeds* slender, $\frac{3}{4}$ in. long; coma 2 in., copious, pale brown.—*Buds* more obtuse and lobes less twisted to the left than in the typical species.

37. **ANODENDRON**, *A. DC.*

Climbing glabrous shrubs. *Leaves* opposite, nerves distant arched. *Flowers* in axillary or axillary and terminal slender paniced wide spreading cymes. *Calyx* 5-cleft; segments obtuse, eglandular within. *Corolla* salver-shaped, mouth contracted; lobes narrow, overlapping to the right, twisted to the left. *Stamens* below the middle of the tube; anthers sagittate, conniving round and adherent to the stigma, cells shortly spurred at the base. *Disc* cupular. *Carpels* 2, distinct, sunk in the disc, and attached to it by their backs at the base, many-ovuled; style very short, top cupular, stigma thick conic. *Follicles* diverging, acuminate, hard. *Seeds* ovoid or oblong, compressed, beaked, tipped with a long coma.—*DISTRIB.* Species 7, Asiatic and Malayan.

1. **A. paniculatum**, *A. DC. Prodr.* viii. 444; quite glabrous, leaves large elliptic or oblong obtusely cuspidate thinly coriaceous, nerves 12-15 pairs, calyx-lobes obtuse. *Dalz. & Gibs. Bomb. Fl.* 147; *Thwaites Enum.* 194; *Kurz For. Fl.* ii. 188; *Wight Ic.* t. 1309, *fruit and seeds only*. Echites paniculata, *Roxb. Fl. Ind.* ii. 17; *Wight Ic.* t. 396. E. coriacea, *Wall. Cat.* 1586. E. manubriata and polyantha, *Wall. Cat.* 1663, 1664. *Gymnema nepalense*, ? *Grah. Cat. Bomb. Pl.* 120 (ex *Dalz. & Gibs.*).—*Rheede Hort. Mal.* ix. t. 8.

From SILHET to MARTABAN. DECCAN PENINSULA; on the Western Ghats from the Concan southwards. CEYLON; common up to 2000 ft.—*DISTRIB.* Java, Timor, Philippine Islds.

An immense climber. *Leaves* 4-8 by 1 $\frac{1}{2}$ -3 in.; petiole $\frac{1}{2}$ in. *Cymes* 2-10 in. long and broad, repeatedly 3-chotomously branched; branches brachiate, filiform; flowers 3-nate; pedicels short; bracts ovate. *Calyx-lobes* minute. *Corolla* $\frac{1}{2}$ in. long, yellowish white, lobes twice as long as the tube, narrow, falcate, obtuse, throat villous. *Stigma* subsessile. *Follicles* 5-6 in., straight, narrowed from a base $\frac{3}{4}$ in. diam. to the obtuse point, terete, woody. *Seeds* few, 1 $\frac{1}{4}$ in. long, flat; beak long slender; coma white, 2 in. long.

2. **A. Candolleianum**, *Wight Ic. t.* 1309 (*excl. fruit and seeds*); quite glabrous, leaves elliptic obtusely cuspidate thickly coriaceous, nerves 8-10 pairs, petiole 1 in., calyx-lobes acute. *Miquel Fl. Ind. Bat. ii.* 455. *A. rubescens*, *Teijsm. & Binnend. Cat. Hort. Bogor.*

MALACCA; *Capt. Wight, Maingay* (Kew Distrib. 1087).—DISTRIB. Borneo.

Very similar in inflorescence and flowers to *A. paniculatum*, but petioles longer, leaves very different in texture, sepals acute, corolla-throat nearly glabrous, style distinct, stigma smaller, follicles much thinner-walled, acute, and seeds (unripe) apparently much more slender,

3. **A. rhinosporum**, *Thwaites Enum.* 195; quite glabrous, leaves coriaceous elliptic-oblong or -lanceolate obtuse or obtusely acuminate, nerves very slender, petiole $\frac{1}{2}$ in., flowers $\frac{1}{10}$ in. long.

CEYLON; Ambagamowa and Matuvatte districts, *Thwaites*.

A much smaller and narrower-leaved plant than either of the foregoing, with a smaller panicle. *Leaves* 2-4 by $\frac{1}{2}$ -1 $\frac{1}{2}$ in.; petiole $\frac{1}{3}$ - $\frac{1}{2}$ in. *Follicles* 3-5 in. *Seeds* 1 in.

4. **A. pauciflorum**, *Hook. f.*; quite glabrous, leaves oblong or oblong-lanceolate obtusely acuminate, nerves very slender, cymes small short axillary puberulous few-fl., flower $\frac{1}{2}$ in. long.

PENANG; *Maingay* (Kew Distrib. 1101).

Branches smooth, glabrous. *Leaves* 4-5 by 1 $\frac{1}{2}$ -2 in., red-brown when dry; nerves 8-10 pairs, slightly arched, very slender; petiole $\frac{1}{2}$ in., stout. *Cymes* much shorter than the leaves; peduncle stout, $\frac{1}{2}$ -1 in.; bracts ovate, crowded; pedicels very short. *Calyx-lobes* obtuse. *Corolla* glabrous, lobes acute in bud, strongly twisted: tube about equalling the linear-lanceolate falcate obtuse lobes; throat pubescent. *Style* and stigma together pyriform, seated on the glabrous carpels. *Follicles* 4-5 by $\frac{3}{4}$ -1 in., horizontal, straight, tapering from a rounded base to the subacute points, terete, smooth, pericarp thick. *Seeds* $\frac{2}{3}$ in. long, ovoid, beaked, flat, glabrous; coma three times as long, brown.

38. ICHNOCARPUS, Br.

Climbing shrubs. *Leaves* opposite, nerves distant. *Flowers* small or minute, in long terminal and axillary paniculate cymes. *Calyx* 5-fid, glandular or not within. *Corolla* salver-shaped, throat contracted or villous; lobes narrowed to the obtuse point, overlapping to the right, upper half deflexed in bud. *Stamens* at or below the middle of the tube; anthers sagittate, conniving over and adhering to the stigma, cells spurred at the base. *Disc* free, 5-lobed. *Carpels* 2, distinct, exserted from the disc, many-ovuled, hairy; style short, top obconic, stigma columnar. *Follicles* spreading or divaricate, slender and subterete or rigid and compressed. *Seeds* narrowed at the tip, coma deciduous, albumen copious; cotyledons long, flat, radicle short, superior.—DISTRIB. Species 5 or 6, Indian, Malayan and Australian.

1. **I. frutescens**, Br. in *Hort. Kew. ed. 2, ii.* 69; glabrous or branches and leaves beneath more or less softly tomentose, leaves elliptic oblong or lanceolate acute, cymes pubescent, corolla-tube glabrous, mouth villous. *Benth. Fl. Austral. iv.* 315; *Wight Ic. t.* 430, *Wall. Cat.* 1674; *Brand. For. Fl.* 327; *Grah. Cat. Bomb. Pl.* 113; *Dalz. & Gibs. Bomb. Fl.* 147; *Kurz For. Fl. ii.* 185. *I. radicans*, *Wall. Cat.* 1676. *I. dasycalyx*, *Miquel Fl. Ind. Bat. ii.* 449. *I. leptodictyus*, *F. Muell. Fragmenta*, vi. 118. *Echites frutescens*, *Wall. Cat.* 1674. *Apocynum frutescens*, *Linn.*—*Lyama*, *Roxb. in As. Res. i.* 261.—*Burm. Fl. Zeyl.* 23, t. 12, fig. 1.

WESTERN HIMALAYA; Sirmore to Nepal, alt. 1-2000 ft. UPPER GANGETIC PLAIN; from Delhi to BENGAL, ASSAM, SILHET, CHITTAGONG, BIRMA, the DECCAN PENINSULA and CEYLON.—DISTRIB. Java, Australia.

An extensive climber. *Leaves* very variable, 2-3 by $\frac{3}{4}$ -1 $\frac{1}{2}$ in.; petiole $\frac{1}{2}$ in. *Cymes* 1-3 in., axillary and in terminal panicles, rusty-pubescent; branches short, trichotomously divided or 3-flowered; pedicels longer or shorter than the corolla. *Calyx-lobes* ovate, obtuse or subacute, eglandular. *Corolla* about $\frac{1}{2}$ in. diam., purplish, twice as long as the calyx; lobes twice as long as the tube, falcate, acuminate, mouth and margins sparingly bearded. *Disc-glands* 5, erect, slender, capitate, much longer than the hairy ovary. *Style* very short. *Follicles* 3-6 by $\frac{1}{2}$ in., very slender, cylindrical, curved, acute, "sometimes moniliform as in *Ecdysanthera*," Kurz, divergent at an acute angle; pericarp thinly coriaceous. *Seeds* $\frac{1}{2}$ in., very slender, not beaked; coma as long, scanty, white.—*I. radicans*, Wall., is the young state of the plant.

VAR. parvifolia; leaves 1-1 $\frac{1}{2}$ by $\frac{1}{2}$ in. oblong or linear-oblong, cymes shorter.—Coimbatore, Wight, &c.

2. *I. ovatifolius*, A. DC. Prodr. viii. 435; glabrous or branches and leaves beneath more or less tomentose, leaves orbicular elliptic-oblong or ovate obtuse acute or cuspidate, peduncle and pedicels pubescent, corolla-tube pubescent, mouth puberulous. *I. affinis*, *Herb. Ind. Or. H. f. & T.* Echites affinis, *Roem. & Sch.* *I. latifolia*, *Herb. Ham. in Wall. Cat. 1652.* *Springia indica*, *Muell. & Van Heurck in Plant. Nov. Van Heurck, 143.*

SILHET and KHASIA Mts.; alt. 1-4000 ft. MALACCA; *Griffith, Maingay* (Kew Distrib. 1075, 1103).—DISTRIB. Sumatra, Borneo, Celebes, Philippine Islds.

Very closely allied to *I. frutescens*, and perhaps a variety of that plant, but besides the characters indicated the leaves are much larger and broader, and the disc-glands are not capitate.—The flowers occur in a monstrous state (through insect-puncture), the corolla being enlarged below into a globose form $\frac{1}{2}$ in. diam., crowned with a rigid erect tubular beak. This state occurs in Wallich's Herbarium, under No. 2015, from Tavoy (which number should apply to a *Dendrobium*), and it is Maingay's 1103 (Kew Distrib.) from Malacca.

3. *I. pubiflorus*, Hook. f.; glabrous, with rusty-tomentose cymes, leaves elliptic obtusely acuminate, cymes very shortly peduncled dense-flowered, calyx-segments oblong equalling the glabrous corolla-tube, corolla-throat pubescent, lobes linear-oblong, base gibbous.

KHASIA Mts.; *Griffith* (a solitary specimen).

Branch stout glabrous, bark dark brown. *Leaves* 3 by 1 $\frac{1}{2}$ in., rather coriaceous; petiole $\frac{1}{2}$ in. *Cymes* $\frac{3}{4}$ - $\frac{1}{2}$ in. long and broad, branched from near the base, peduncle pedicels and bracts densely tomentose; flowers $\frac{1}{4}$ in. long, corolla as broad. *Calyx* cleft to the base into linear-oblong segments. *Corolla-tube* short; lobes obliquely ovate, obtuse. *Anthers* acuminate. *Ovary* villous above, glabrous below.

39. MICROCHITES, *Miquel*.

Climbing shrubs. *Leaves* opposite, nerves distant. *Flowers* very small, in axillary and terminal lax thyrsoid or brachiate panicle cymes. *Calyx* small, 5-fid or -partite, glandular within, segments obtuse. *Corolla* campanulate or salver-shaped, tube short; lobes falcate, overlapping to the right, very oblique, upper half deflexed in bud. *Stamens* near the bottom of the tube, filaments short; anthers sagittate, conniving around and adhering to the stigma, cells spurred at the base. *Disc* annular or cupular, entire or lobed. *Carpels* 2, longer than the disc, distinct, many-ovuled, hirsute; style short, top turbinate or globose, stigma clavate. *Follicles* spreading or recurved, hard, subterete. *Seeds* oblong, compressed, not beaked; coma terminal, caducous.—DISTRIB. Species 4, Malayan.

1. *M. polyantha*, *Miq. Fl. Ind. Bat.* ii. 456; leaves elliptic oblong or oblong-lanceolate obtuse or obtusely acuminate glabrous, nerves numerous very slender nearly straight, cymes puberulous short axillary and in terminal racemes. flowers $\frac{1}{2}$ in. long, corolla subcampanulate glabrous. *Tabernæmontana polyantha*, *Blume Bijl.* 1029; *A. DC. Prodr.* viii. 376.

MALACCA; *Maingay* (Kew Distrib. 1081). ANDAMAN ISLDS.; *Kurz.*—DISTRIB. Java.

Branches slender, obscurely angled. *Leaves* 2–3 by 1–1 $\frac{1}{4}$ in., narrowed at both ends; nerves 10–15 pairs, with intermediate still more slender ones, very spreading, but not horizontal; petiole $\frac{1}{2}$ in. *Cymes* very shortly peduncled, about $\frac{1}{2}$ in. diam., few-fld.; bracts minute; pedicels short, stout, and calyx densely pubescent; flowers $\frac{1}{2}$ in. long. *Calyx-lobes* round. *Corolla* glabrous, subcampanulate, lobes about equaling the throat, falcately lanceolate, very oblique, mouth bearded. *Anthers* acute. *Ovary* much longer than the disc, hirsute; style short, stigma conical.

2. *M. elliptica*, *Hook. f.*; leaves elliptic- or oblong-lanceolate obtusely or acutely acuminate, nerves numerous very slender nearly straight, cymes elongate glabrate, flowers $\frac{1}{2}$ in. long, corolla salver-shaped. *Rhynchospermum* 4, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; alt. 4–6000 ft., *J. D. H.* KHASIA MTS.; *Griffith*, alt. 3–4000 ft., *H. f. & T.*

Very similar to *M. polyantha*, but leaves narrower, 4–6 by 1–1 $\frac{3}{4}$ in., more acuminate, cymes usually longer, with distant short branches, flower larger, corolla more salver-shaped, the lobes more obliquely falcate, upper deflexed half narrow obtuse; style longer, its top more globose. *Follicles* (unripe) red, 5–6 by $\frac{1}{2}$ in., horizontal or recurved, subcylindric, broadest at the base, gradually narrowed thence to the point, pericarp hard and fleshy. *Seeds* very immature, $\frac{1}{2}$ in. long, narrowly oblong, glabrous; coma long.—The branches sometimes root copiously.

ADDENDA AND ERRATA, VOL. III., PART III.

P. 5. *Viburnum sambucinum* is a Javanese, not a Japanese plant.

P. 221. Subtribe V. CONYZEÆ. The ray-flowers are white or yellow.

P. 232. Under *D. Roylei*, for *Fullaronia* read *Fullartonia*.

P. 244. Under *E. longicaule*, for *Milkania* read *Mikania*.

P. 256. In generic character of *Microglossa*, for ligule "minute, white" read minute or small, white or lilac.

P. 257. Under *M. albescens*, line 4, after corymb insert "ligule lilac slender."

P. 260. BLUMEA. Since the printing of this genus Mr. Clarke has visited the Candollean Herbarium in Geneva, and communicated to me the following notes on such of the species described in De Candolle's Prodomus as appeared to him (without having the Wallichian Collection to compare) not to accord, wholly or in part, with the descriptions in this Flora. In respect of these discrepancies large allowance must be made for the fact that, in so critical a genus, the specimens sent by Wallich to DeCandolle do often differ considerably from those at the Linnean Society. The numbers are those of the Prodomus, vol. v. p. 433, &c.

3. *B. tenella*. Prodr. p. 433. The Timor plant is quite unlike any Indian one; the Madras one may be referable to *B. bifoliata*.

5. *B. anagallidifolia*, Prodr. p. 433. Is rather *B. amplexans* than *bifoliata*, the leaves being nearly entire.

11. *B. Chamissoniana*, Prodr. p. 434, from Luzon; and 17. *B. Leschenaultiana*, p. 435, are typical *B. Wightiana*.

18. *B. lactucæfolia*, Prodr. p. 435. The Birman plant is *B. lacera*; the Luzon one *B. laciniata*.

20. *B. lacera*, var. *Wallichii*, p. 435, consists of *B. lacera*, *Wightiana*, *glomerata*, and an *Frigeron*.

28. *B. cichoriifolia*, Prodr. p. 437, and *B. crepidifolia* l. c. (*B. laciniata*, *Ham. in Wall. Cat.* 3084), are both *B. laciniata*.

39. *B. senecioides*, Prodr. p. 439 (*Conyza senecioides*, *Ham. in Wall. Cat.* 3102), is a form of *B. membranacea* resembling *B. virens*, but with more viscous bracts; it is the same as *B. hymenophylla*.

47. *B. membranacea*, Prodr. p. 440; and 51. *B. cuneifolia*, p. 441 (*Conyza cuneifolia*, *Wall. Cat.* 3101, from Martaban), are probably *B. lacera*.

48. *B. viscosula*, Prodr. p. 441, and *B. hispidula*, are the same as *B. paucifolia*, as is probably *B. subsimplex*, and all referable to vars. of *membranacea*.

56. *B. holoserica*, Prodr. 442, and *B. gracilis*, 443, are forms of *lacera*.

58. *B. fasciculata*, Prodr. p. 442. The Birman plant is *B. glomerata*, the Timor one quite different.

65. *B. spinellosa*, Prodr. p. 443, is a silky straggling form of *B. hieraciifolia*.

75. *B. elongata*, Prodr. p. 445, consists of *B. Clarkei*, and the large form of *lacera*?

81. *B. longifolia*, Prodr. p. 446, may be *B. myriocephala*.

P. 482. PRIMULA. All the species here for the first time described will be found together with figures of them in a paper by Dr. Watt, shortly to be published in the *Journal of the Linnean Society*, vol. xx. p. 1 (ined.), together with the following, which should follow 35. *P. uniflora*, p. 493.

P. WATTII, *King in Herb. Calcutt.*; glabrous, leaves oblong-lanceolate narrowed into the petiole obtuse lobulate or crenate softly hairy, scape slender 6-8-fld., bracts narrow or rounded, flowers capitate, calyx large lax cupular membranous irregularly incised, corolla violet, limbs broadly infundibular, lobes crenate.

SIKKIM HIMALAYA; Chola, Natong, *Dr. King*.

Rootstock small. *Leaves* 2-4 in., membranous. *Heads* 1-2 in. diam. *Calyx* $\frac{1}{2}$ in., veined. *Corolla-tube* $\frac{1}{2}$ in., glabrous; limb twice as long and broad. *Stamens* at the mouth of the tube. *Ovary* globose, top rounded; style very short, stigma truncate.—A very beautiful plant.

P. 495. ANDROSACE. This genus also has been illustrated by Dr. Watt for the *Journal of the Linnean Society*, l. c. p. 16 (ined.), where the following additional species is described: it should follow 3. *A. geraniifolia*, p. 497.

A. CROFTII, *Watt in Journ. Linn. Soc. ined*; small, perennial, stoloniferous, densely rufous tomentose, leaves petioled reniform-rounded crenate or lobulate lobules 1-3-crenulate, scape stout few-fld. equalling the leaves, flowers umbellate, bracts lanceolate obtuse, pedicels short, calyx-lobes obtuse, corolla small lobes obovate retuse.

SIKKIM HIMALAYA; Singalelah, alt. 12-13,000 ft., *Watt*.

Whole plant clothed with (when dry) rufous hairs. *Rootstock* short, creeping. *Leaves* 1-1 $\frac{1}{2}$ in. long with the petiole; blade $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., hairy on both surfaces. *Flowers* $\frac{1}{2}$ in. diam., apparently purple.

P. 542, line 6, after *acuminata* add *Lindl.*; and for 260 read 268.

P. 546, for *B. Mottleyana*, *De Vriese*, read *B. Motleyana*, *Clarke*; and add at end of specific character, *Isonandra Motleyana*, *De Vriese in Mig. Journ.* 1861, 257.

INDEX OF GENERA, SPECIES AND SYNONYMS.

MADE AND PRINTED IN GREAT BRITAIN BY
WILLIAM CLOWES AND SONS, LIMITED, LONDON AND BECCLES

FLORA OF BRITISH INDIA.

ORDER XCV. **ASCLEPIADEÆ.** (By J. D. Hooker.)

Herbs or shrubs, usually twining. *Leaves* opposite or obsolete, very rarely alternate, quite entire, exstipulate. *Inflorescence* various, usually an axillary umbelliform cyme; flowers regular, hermaphrodite, 5-merous. *Calyx* inferior, lobes or segments imbricate. *Corolla lobes* or *segments* valvate or overlapping to the right, very rarely to the left; tube or throat often with a ring of hairs, scales, or processes (the outer or *corolline corona*). *Stamens* at the base of the corolla, filaments free in *Periploceæ* with or without interposed glands; in other tribes, connate into a generally very short fleshy column, which usually bears a simple or compound ring or series of scales or processes (inner or *staminal corona*) that are attached to the filaments or to the back of the anthers, or to both; anthers crowning the column, connate or free, adnate by the connective to the stigma, 2-celled; tip often produced into an inflexed membrane; pollen forming one or two granular or waxy masses in each cell, the masses united in pairs or fours to a gland (*corpuscle*) which lies on the stigma. *Ovary* of two distinct superior carpels, enclosed within the staminal column; styles 2, short, uniting in the stigma, which is 5-angled short and included between the anthers, or is produced beyond them into a long or short simple or 2-fid column; ovules many, rarely few, 2-seriate in each carpel. *Fruit* of 2 follicles. *Seeds* compressed, usually flat ovoid winged and surmounted with a dense long brush of hairs (*coma*) (absent in *Sarcolobus*); albumen copious, dense; embryo large; cotyledons flat, radicle short, inferior.—**DISTRIB.** Species about 1,000, chiefly tropical.

* The analysis of the plants of this order is most difficult, and in dried specimens never satisfactory, from the fleshiness and complexity of the coronal processes and anthers. I have spent many months over the Indian ones, and have kept pretty close to the generic limits adopted in the "Genera Plantarum." I have, however, been obliged to abandon the tribe *Stapelieæ*, to suppress *Vincetoxicum*, and to propose several new genera.

SUBORDER I. Periploceæ. Filaments usually free; anthers acuminate or with a terminal appendage; pollen-masses granular, in pairs in each cell.

TRIBE I. Periploceæ. Characters of the Suborder.

* Coronal scales or processes 0.

Anthers with bearded appendages 1. **PENTANURA.**

** Coronal scales corolline, free, short, thick.

Corolla very small, rotate, lobes valvate 2. **HEMIDESMUS.**

VOL. IV.

D. H. HILL LIBRARY
North Carolina State College

Corolla small, rotate, lobes overlapping 3. *CRYPTOLEPIS*.
 Corolla large, funnel-shaped, lobes overlapping *3. *CRYPTOSTEGIA*.

*** Coronal scales 5, free, close to or adnate to the filaments.

† *Coronal scales short, broad; filaments without interposed glands.*

A pubescent twining shrub; leaves opposite 4. *BRACHYLEPIS*.
 An erect tree; leaves alternate 5. *UTLERIA*.

†† *Coronal scales filiform or subulate.*

a. *Filaments free without interposed glands.*

Cymes stopt, pubescent. Corolla-lobes short, broad . . . 6. *FINLAYSONIA*.
 Cymes slender, glabrous. Corolla-lobes slender, straight . 7. *ATHEROSTEMON*.

β. *Filaments free, with interposed teeth or glands.*

Cymes slender, glabrous. Corolla-lobes short, triangular . 8. *ATHEROLEPIS*.
 Cymes slender, glabrous. Corolla-lobes long, slender. . . 9. *ATHERANDRA*.
 Cymes short, sessile. Corolla-lobes short, ovate . . . 10. *STREPTOCAULON*.
 Cymes loosely paniced. Corolla-lobes lanceolate . . . 11. *MYRIOPTERON*.

††† *Coronal scales short, broad; filaments connate, with interposed glands.*

Cymes peduncled. Corolla-lobes ovate, valvate 12. *DECALEPIS*.

**** Coronal scales connate into a lobed ring; filaments without interposed glands.

Corolla rotate, lobes overlapping 13. *PERIPLOCA*.

SUBORDER II. **Euasclepiadeæ**. Filaments connate; pollen-masses waxy.

TRIBE II. **Secamoneæ**. Anthers with a membranous inflexed tip; pollen-masses in pairs in each cell (20 in all), sessile in fours (2 pairs) on the corpuscle.

Corolla rotate, lobes overlapping to the right 14. *SECAMONE*.
 Corolla rotate, lobes overlapping to the left 15. *TOXOCARPUS*.
 Corolla rotate, lobes valvate 16. *GENIANTHUS*.

TRIBE III. **Cynancheæ**. Anthers with a membranous inflexed tip; pollen-masses solitary in each cell (10 in all), sessile or pedicelled in pairs on the corpuscle, pendulous.

* Corona single, corolline, 5-cleft 17. *GLOSSONEMA*.

** Corona double, corolline and staminal 18. *OXYSTEMMA*.

*** Corona staminal, of 5 processes adnate to the anthers; or 0.

† *Stem erect.*

Corolla valvate. Coronal processes laterally compressed . 19. *CALOTROPIS*.
 Corolla valvate. Coronal processes spatulate *19. *ASCLEPIAS*.
 Corolla-lobes overlapping. Coronal processes short, fleshy . 20. *PENTABOTHRAS*.

†† *Stem twining. Corolla-lobes overlapping.*

Corolla campanulate. Coronal processes ligulate 21. *RAPHISTEMMA*.
 Corolla rotate. Coronal processes laterally compressed . 22. *PENTATROPIS*.
 Corolla funnel-shaped. Coronal processes laterally compressed 23. *DÆMIA*.
 Corolla campanulate. Coronal processes 0 24. *ADELOSTEMMA*.

**** Corona single, staminal, cupular or annular. Corolla rotate.

- Corona of a 10-lobed ring, and 5 horny processes behind the
anthers 25. HOLOSTEMMA.
Corona annular. Leafy erect or twining herbs or shrubs 26. CYNANCHUM.
Corona annular. Leafless straggling shrubs 27. SARCOSTEMMA.

TRIBE IV. **Marsdeniææ**. Anthers with a membranous inflexed tip (absent in *Physostelma* and rarely in *Hoya*); pollen-masses solitary in each cell (10 in all), sessile, or pedicelled in pairs on the corpuscle, erect (rarely horizontal or pendulous in *Tylophora*).

* Corolla-lobes overlapping. Corona 0, or corolline.

- Stem twining. Corolla-lobes short. Corona 0 28. SARCOLOBUS.
Stem pendulous. Corolla-lobes long. Stigma included 29. PENTASACME.
Stem twining. Corolla lobes short. Corona on the corolla-
tube 30. GYMNEMA.

** Corolla-lobes overlapping. Coronal processes on the staminal column, rarely 0.

† *Corolla urceolate companulate or salver-shaped.*

- Corolla urceolate. Coronal processes minute or 0. Stigma
included 31. GONGRONEMA.
Corolla urceolate or salver-shaped. Coronal scales on the
back of the anthers, simple 32. MARSDENIA.
Corolla rotate or salver-shaped. Coronal scales on the back
of the anthers, notched 33. PERGULARIA.
Corolla salver-shaped, coriaceous. Coronal scales 0 (in
Indian species) 34. STEPHANOTIS.
Corolla-lobes long, doubled down inwards in bud 35. LYGISMA.

†† *Corolla rotate.*

- Cymes various. Column minute. Coronal processes fleshy 36. TYLOPHORA.
Cymes umbelliform. Column large; coronal processes simple 37. TREUTLERA.
Cymes racemiform. Column minute, fleshy; coronal pro-
cesses 2-fid 38. COSMOSTIGMA.
Cymes umbelliform, pendulous. Coronal scales spreading,
cuspidate 39. DREGEA.

*** Corolla valvate. Coronal processes adnate to the staminal column.

- Corolla small, rotate. Column short, corona stellate. Fol-
licles slender 40. HETEROSTEMMA.
Corolla large, rotate. Column short, corona stellate. Fol-
licles stout 41. DITTOCERAS.
Corolla urceolate or disciform. Corona cupular, fleshy 42. OIANTHUS.
Corolla minute, urceolate. Coronal scales membranous, erect 43. DISCHIDIA.
Corolla rotate. Corona very large, stellate 44. HOYA.
Corolla cupular. Corona large, stellate 45. PHYSOSTELMA.
Corolla-tube short, lobes long subulate. Ovary sunk in the
calyx-tube 46. PYCNORHACHIS.

TRIBE V. **Ceropegieæ**. Anthers incumbent on the stigma, without a membranous tip; pollen-masses one in each cell (10 in all) sessile in pairs on the corpuscle, erect or horizontal. Corolla-lobes valvate in all.

* Corona double; corolline lining the corolla-tube and forming minute processes in the sinus of its lobes, staminal annular.

Calyx turbinate, 5-lobed. Corolla rotate 47. LEPTADENIA.

Calyx 5-partite. Corolla salver-shaped 48. ORTHANTHERA.

** Corona staminal, simple or compound, annular, 5-10 lobed, with 5 processes from its inner face which overlap the anthers.

† *Leafy herbs with terete stems and branches.*

Corolla rotate, lobes very narrow. Stem very slender, erect

or twining 49. BRACHYSTELMA.

Corolla-tube long. Stem stout or slender, erect or twining . 50. CEROPEGIA.

Corolla rotate. Stem erect and branches short, stout, fleshy . 51. FREREA.

†† *Leafless herbs, with fleshy 4-angled stems and branches.*

Corolla rotate, lobes very narrow. Flowers lateral, subsolitary 52. CARALLUMA.

Corolla rotate, lobes very broad. Flowers terminal, umbelled 53. BOUCEROSIA.

GENUS KNOWN BY NAME ONLY.

ODONTANTHERA, *Wight in Lindl. Veg. Kingd.*, 626.

TRIBE 1. PERIPLOCÆ.

1. PENTANURA, Blume.

Twining glabrous shrubs. *Leaves* opposite, elliptic, strongly nerved. *Flowers* small, fascicled on a short axillary peduncle, purplish. *Calyx* small, 5-glandular within. *Corolla* subcampanulate, fleshy; lobes concave, overlapping to the right. *Coronal scales* 0. *Filaments* free, arched, bases distant; anthers oblong, adherent below to the stigma, tipped with bearded appendages; pollen-masses granular; appendages of the corpuscles stipitate, flabellate. *Stigma* capitate, 5-angled. *Follicles* divaricate, cylindric. *Seeds* comose.—Species 2; a Sumatran and the following.

P. khasiana, *Kurz in Herb. Calcutt.*; glabrous, leaves elliptic-lanceolate acuminate at both ends, petiole slender. *Pentanura* sp., in *regione Yunan* and *Periploca khasiana*, *Benth. in Gen. Pl.* ii. 740 and 746.

KHASIA MTS., alt. 3-4000 ft., J. D. H. & T. T., *Kurz*.—DISTRIB. Yunan.

Branches smooth. *Leaves* 4-5 by $1\frac{1}{4}$ - $1\frac{1}{2}$ in., reddish when dry beneath and finely reticulated, midrib stout; nerves 8-10 pairs, arched; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Peduncle* stout, $\frac{1}{4}$ in. in the Khasian specimen, $\frac{1}{2}$ -1 in. in the Yunan ones. *Corolla* about $\frac{1}{4}$ in. diam.; lobes pubescent within, pink. *Filaments* and back of anther pubescent as in *Phyllanthera* (which is perhaps not generically distinct) in the Yunan specimens, glabrous in the Khasian. *Style* elongate; stigma 2-lobed at the top. *Follicles* (young) in Khasian specimen $\frac{1}{2}$ - $\frac{3}{4}$ in. long, ovoid, incurved, obtuse.—I have not seen the Sumatran species which is the type of the genus.

2. HEMIDESMUS, Br.

Twining shrubs. *Leaves* opposite, hoary or pubescent beneath. *Flowers* small, in opposite crowded subsessile cymes, greenish-purple. *Sepals* glandular within, acuminate. *Corolla* rotate; lobes thick, valvate. *Coronal scales* 5, on the corolla-throat, alternate with its lobes, short, thick. *Filaments* distinct; anther-tips connate, inflexed, membranous; pollen-masses cohering in pairs in

each cell, granular; appendages of the corpuscles dilated or hooded. *Stigma* 5-angled, crown flat. *Follicles* long, slender, divaricate, terete, smooth. *Seeds* comose.

H. indicus, *Br. in Mem. Wern. Soc.* i. 57; leaves from broadly obovate to oblong elliptic linear or linear-lanceolate obtuse or apiculate. *Wall. Cat.* 8243; *Wight Contrib.* 63; *Wight Ic.* t. 594; *Deless. Ic. Sel.* v. t. 55; *Dalz. & Gibs. Bomb. Fl.* 147; *Grah. Cat. Bomb. Pl.* 122; *Dcne. in DC. Prodr.* viii. 494; *Benth. & Trim. Med. Pl.* t. 174. *H. Wallichii*, *Miquel Pl. Hohenack.* No. 359. *Periploca indica*, *Willd. Sp. Pl.* i. 2251. *Asclepias pseudo-sarsa*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 39, excl. *syn.*—*Burm. Thes. Zeyl.* t. 83, f. 1; *Rheede Hort. Mal.* x. t. 34.

NORTHERN INDIA; from Banda to Oudh and Sikkim, and southwards to Travancore and CEYLON.

Leaves most variable in form, length, and breadth, the shorter and broader 1-1½ by 1-1½ in., the longer 4 by ½ in., the broadest sometimes retuse at the tip, the narrowest finely acuminate, those on the young shoots often white along the midrib; petiole ½ in. *Pedicels* clothed with ovate acute imbricating bracts. *Corolla* ½ in. diam., green without, purple within. *Follicles* 4-5 in. *Seeds* ½ in., ovate-oblong, flattened, black; coma 1 in.

VAR. pubescens; stem and leaves beneath and sometimes above pubescent. *H. pubescens*, *Wight & Arn. Contrib.* 63; *Wight Ic.* t. 1320; *Wall. Cat.* 8244; *Dcne. in DC. Prodr.* viii. 495.—Behar on the Soane river, *J. D. H.*; Deccan Peninsula, *Wight, &c.*

3. **CRYPTOLEPIS**, *Br.*

Twining glabrous shrubs. *Leaves* opposite. *Flowers* in very lax slender dichotomous few-flowered peduncled terminal or axillary cymes. *Calyx* with 5 scales within. *Corolla-tube* short, cylindric or bell-shaped; lobes linear, overlapping and twisted to the right. *Coronal scales* 5, about or above the middle of the tube, linear or clavate, conniving. *Filaments* subconnate by their broad bases; anthers short, adhering by their base to the stigma, tips conniving, acuminate; pollen-masses cohering in pairs in each cell, granular, appendages oblong. *Stigma* broadly conic. *Follicles* divaricate, terete, smooth. *Seeds* comose.—*DISTRIB.* Species 14; Tropical Asiatic and African.

1. **C. Buchanani**, *Roem. & Sch. Syst.* iv. 409; glabrous, leaves oblong or elliptic, glaucous beneath, nerves very many slender nearly horizontal, cymes axillary many-flowered. *Wight Ic.* t. 494, and *Ill.* t. 182, f. 8; *Falc. in Trans. Linn. Soc.* xix. 53, t. 5; *Brandis. For. Fl.* 330; *Dalz. & Gibs. Bomb. Fl.* 148. *C. reticulata*, *Wall. Cat.* 1640; *Royle Ill.* 270. *Nerium reticulatum*, *Roxb. Hort. Beng.* 19, and *Fl. Ind.* ii. 8. *Echites reticulata*, *Roth Nov. Sp.* 134. *E. cuspidata*, *Heyne in Herb. Rottl.*—*Rheede Hort. Mal.* ix. t. 11.

Throughout INDIA, from WESTERN KASHMIR to ASSAM and BURMA, ascending the Himalaya to 4000 ft.; and southwards to TRAVANCORE and CEYLON.

Leaves 3-6 by 1-2½ in., coriaceous, shining above, sometimes obovate, apiculate or acuminate, base acute; petiole ½ in. *Cymes* very shortly peduncled, paniculate; branches short, divaricate. *Sepals* short, acute. *Corolla* yellow, ¾ in. diam.; tube very short, lobes lanceolate. *Coronal scales* clavate. *Follicles* 2-4 in., straight, rigid, gradually narrowed from about the middle where they are ½-¾ in. diam. *Seeds* ¼ in. long, oblong-ovate, contracted below the tip, compressed; coma 1 in.

2. **C. grandiflora**, *Wight Ic.* t. 831, and *Ill.* ii. 169, t. 155 b, f. E; glabrous, leaves obovate oblong or elliptic obtuse or mucronate, pale beneath,

nerves 5-6 pairs arched, cymes axillary and terminal few- or many-flowered. *C. Wightiana*, *Wall. Cat.* 4457. *Echites coriacea*, *Heyne in Herb. Rottler*.

DECCAN PENINSULA; the Mount, Madras, *Heyne*, &c.; Balaghaut Mts., *Wight*.

Leaves 2-4 by 1-2 in., very variable in form, coriaceous, hardly glaucous beneath, base acute; petiole $\frac{1}{2}$ in. *Cymes* sparingly branched, usually long-peduncled; branches stout, prominently distantly scarred by the fallen bracts. *Sepals* large, ovate, acute. *Corolla* 1 in. diam; tube ventricose, lobes falcate lanceolate. *Coronal scales* clavate. *Follicles* 2-4 in., curved and conniving or straight and divaricate. *Seeds* very large, $\frac{3}{4}$ in. long, linear-oblong; coma a little longer.

3. *C. elegans*, *Wall. Cat.* 1639; glabrous, leaves oblong or linear-oblong or lanceolate apiculate, rounded at both ends or acuminate, glaucous beneath, nerves numerous very faint and spreading, cymes axillary and terminal few-flowered. *G. Don Gen. Syst.* iv. 82. *C. pauciflora*, *Wight Ic.* t. 493. *C. laxiflora*, *Blume Mus. Bot.* i. 147. *Aganosma Edithæ*, *Hance in Ann. Sc. Nat. Ser.* 5. v. 227. *Echites pauciflora*, *Herb. Rottl.* *Nerium pauciflorum*, *Roxb. Ic. ined.*

SIKKIM; Terai, *J. D. H. Orissa*, *Heyne*. ASSAM, BENGAL, KHASIA MTS., CHITTAGONG, TENASSERIM AND ANDAMAN ISLDS.—DISTRIB. Java, S. China.

A slender climber. *Leaves* $1\frac{1}{2}$ - $2\frac{1}{2}$ by $\frac{3}{4}$ in., rarely ovate or linear-lanceolate, tip sometimes retuse, base rarely cordate; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in., very slender. *Cymes* 2-4 in., peduncles long, branches few and pedicels slender. *Sepals* ovate, obtuse. *Corolla* yellow, $1-1\frac{1}{2}$ in. diam., tube short, lobes lanceolate, tips twisted. *Coronal scales* clavate. *Follicles* 5-8 in., slender, nearly straight. *Seeds* much as in *C. Buchanani*.—The mss. name of *Apocynum orizense*, in Rottler's Herbarium, indicates the Orissa habitat of this plant. *Flower* fragrant.

3*. **CRYPTOSTEGIA**, *Br.*

Lofty climbers. *Leaves* opposite. *Flowers* large, in terminal 3-chotomous cymes. *Sepals* lanceolate. *Corolla* funnel-shaped, tube short, throat campanulate; lobes broad, overlapping and twisted to the right. *Coronal scales* at the base of the throat, subulate, entire or 2-cleft. *Filaments* short; anthers adnate to the stigma, acute; pollen-masses in pairs in each cell, granular, appendages subspathulate. *Stigma* convex. *Follicles* thick, divaricate, hard, 3-winged, furrowed between the wings. *Seeds* comose.—DISTRIB. Madagascar.

C. grandiflora, *Br. in Bot. Reg.* t. 435; glabrous, leaves elliptic obtuse, coronal scales cleft into two filiform segments. *Wall. Cat.* 1635; *Wight & Arn. Contrib.* 36; *Wight Ic.* t. 832, and *Ill.* ii. t. 182, f. 9; *Grah. Cat. Bomb. Pl.* 122; *Dalz. & Gibs. Bomb. Pl. Suppl.* 54; *Dene. in DC. Prodr.* viii. 492; *Miquel Pl. Rar. Jard. Buitenz.* t. 8; *Reichb. Ic. Exot.* t. 132. *Nerium grandiflorum*, *Roxb. Hort. Beng.* 19, and *Fl. Ind.* ii. 100.

Cultivated in various parts of INDIA.

Branches stout. *Leaves* 3-4 by $1\frac{1}{2}$ -2 in., coriaceous, glossy above; nerves many, spreading, arched, faint, base acute; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* short, spreading, peduncle and branches stout, hoary or glabrous; bracts caducous. *Sepals* $\frac{1}{2}$ - $\frac{3}{4}$ in. *Corolla* pale pinkish purple, tube and throat $1\frac{1}{2}$ in. long, limb often 2 in. diam., lobes acute. *Follicles* 4-5 by $1-1\frac{1}{2}$ in., broadest near the base, straight, woody. *Seeds* $\frac{1}{4}$ in. long, oblong-ovate, compressed, narrowed upwards; coma $1\frac{1}{2}$ in., very fine.—Supposed to be a native of Africa or Madagascar, from which latter country another species is described with leaves pubescent beneath and entire coronal scales, but this is only known from Mauritian garden specimens. Schweinfurth found *C. grandiflora* cultivated at Khartum on the Nile.

4. **BRACHYLEPIS**, Wight & Arn.

A pubescent or tomentose twining shrub. *Leaves* opposite. *Flowers* small, villous, in terminal or axillary dichotomous cymes. *Sepals* ovate, glandular within. *Corolla* rotate, 5-cleft; lobes short, overlapping and twisted to the right. *Coronal scales* 5, broad, membranous, close to the stamens. *Anthers* sessile, cohering in a fleshy ring, tips acute conniving; pollen-masses in pairs in each cell, granular; appendages of the corpuscles orbicular. *Stigma* 5-angled, top flat. *Follicles* divaricate, acuminate, thick, smooth.

B. nervosa, Wight & Arn. *Contrib.* 64; *Wight Ic.* t. 1284; *Dcne. in DC. Prodr.* viii. 495; *Deless. Ic. Sel.* v. t. 56.—*Tylophora* sp., *Miquel in Pl. Hohen.* n. 1389.

NILGHERY MTS., alt. 5-7500 ft., common, Wight, &c.

Leaves 3-4 by 1-2 in., elliptic or ovate, acuminate, base acute or rounded, coriaceous, glabrous and glossy above; nerves 8-10 pairs, spreading and arched; petiole stout, $\frac{1}{2}$ in. *Cymes* villous, peduncles and pedicels short, stout; bracts persistent; bracteoles numerous, imbricate. *Corolla* $\frac{1}{2}$ in. diam., green outside, purple within, lobes ovate. *Follicles* not seen.

5. **UTLERIA**, Beddome.

A glabrous tree. *Leaves* scattered, narrow, subcrenulate. *Flowers* minute, towards the ends of the long branches of terminal peduncled dichotomous cymes. *Sepals* rounded, glandular within. *Corolla* subrotate, 5-cleft, lobes overlapping and twisted to the right. *Coronal scales* 5, small, opposite and close to the stamens. *Filaments* short; anthers ovate, conniving over and adnate to the stigma; pollen-masses in pairs in each cell, granular; appendages of the corpuscles dilated. *Stigma* convex. *Fruit* unknown.

U. salicifolia, Beddome mss.

DECCAN PENINSULA; Anamallay Mts., alt. 3-4000 ft., Beddome.

Branches stout. *Leaves* crowded at the ends of the branches, 7-9 by $\frac{1}{2}$ -1 in., narrowly lanceolate, acuminate, coriaceous, margin thickened waved or crenulate, base very acute; nerves many, very slender, nearly horizontal, reticulations fine; petiole 1-2 in. *Cymes* 4-6 in., sparingly branched; bracts on the terminal branches numerous, imbricate, obtuse; pedicels short. *Corolla* $\frac{1}{10}$ in. diam., lobes ovate, acute.

6 **FINLAYSONIA**, Wall.

A lofty glabrous climber. *Leaves* opposite. *Flowers* in 2-3-chotomous axillary cymes, yellowish and purple. *Sepals* rounded, short. *Corolla* rotate, 5-cleft; lobes ovate, overlapping to the right. *Coronal scales* 5, close to the stamens, filiform. *Stamens* on the throat of the corolla, filaments slender; anthers adnate by the middle to the stigma, beardless, tip membranous inflexed acute. *Pollen-masses* in pairs in each cell, granular; tips of the corpuscles slightly dilated. *Stigma* 5-angled, top flat. *Follicles* divaricate, turgid, narrowed at both ends, 1-3 winged, tip with a revolute beak. *Seeds* margined with soft retrorse hairs.

F. obovata, Wall. *Pl. As. Rar.* ii. 48, t. 162, and *Cat.* 4466; *Wight & Arn. Contrib.* 65; *Wight Ill.* t. 182, f. 5; *Griff. Notul.* iv. 70, and *Ic. Pl. Asiat.* t. 407; *Dcne. in DC. Prodr.* viii. 494. *Gurua obovata*, Ham. in *Voigt Hort. Sub. Calc.* 544.

From the SUNDERBUNDS to TENASSERIM and MALACCA; Wallich, &c.

Branches stout. *Leaves* 3-4 by $1\frac{1}{2}$ - $2\frac{1}{2}$ in., obovate-oblong or oblanceolate, obtuse or apiculate, thickly coriaceous, reticulate beneath, base acute; nerves very numerous, horizontal, very slender; petiole $\frac{1}{2}$ -1 in. *Cymes* 2-3 in. long; peduncle and branches very thick; bracts short, persistent; pedicels short, thick. *Corolla* $\frac{1}{2}$ in. diam., lobes bearded within. *Follicles* 3 by 2 in., distantly ribbed between the wings, pericarp thin. *Seeds* $\frac{3}{4}$ in. long, flat, obovate-oblong, hairs brown.—*Flowers* fœtid (Voigt).

7. **ATHEROSTEMON**, Blume.

A very slender glabrous twining shrub. *Leaves* opposite. *Flowers* in axillary and terminal slender peduncled dichotomous cymes. *Calyx* minute, tube turbinate, eglandular within. *Corolla* rotate; lobes long, slender, overlapping to the right, straight and forming an oblong-cylindric bud. *Coronal* processes 5, filiform, at back of the bases of the filaments. *Stamens* at the base of the corolla; filaments very short, distinct, without interposed glands or teeth; anthers conniving over and adnate to the stigma, tips membranous, acute; pollen-masses in pairs in each cell, granular; appendages of the corpuscles dilated. *Stigma* rounded. *Fruit* unknown.

A. javensis, Blume Mus. Bot. i. 126, t. 23.

TENASSERIM; banks of the Gyna, Moulmein, Lobb.—DISTRIB. Java.

Leaves 2-3 $\frac{1}{2}$ by $\frac{3}{4}$ - $1\frac{1}{2}$ in., oblong-elliptic or linear-oblong, apiculate, glaucous beneath, base obtuse or rounded; nerves 6-10 pairs, very slender, arched; petiole slender, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* much longer than the leaves; peduncle long and slender, branches filiform; bracts minute; flowers very few, distant; pedicels capillary, tip turbinate. *Calyx*-lobes small, rounded, membranous, with sometimes a very obscure scale in the sinits. *Corolla*-lobes long, linear, obtuse, $\frac{3}{4}$ in. long, erect and recurved. *Stamens* very minute.

8. **ATHEROLEPIS**, Hook. f. Nov. Gen.

A pubescent slender climber. *Leaves* opposite, very narrow, membranous. *Flowers* very small, in very short few-flowered axillary pubescent cymes. *Calyx* $\frac{1}{2}$ -superior, tube turbinate; lobes short, eglandular within. *Corolla* rotate; lobes triangular, overlapping to the right. *Coronal* scales 5, subulate, at the back of the stamens. *Stamens* at the base of the corolla; filaments very short, distinct, with interposed rounded glands; anthers oblong, conniving over and adherent to the stigma, tips obtuse, connate; pollen-masses in pairs in each cell, granular; appendages of the corpuscles dilated. *Ovary* half sunk in the calyx-tube and adherent to it; stigma small, tip obtuse. *Fruit* unknown.

A. Wallichii, Hook. f. *Atherandra Wallichii*, Benth. in Gen. Plant. ii. 744. Hemidesmus Wallichii; Wight & Arn. Contrib. 63; Wall. Cat. 8245; Dene. in DC. Prodr. viii. 495.

PEGU, at Promé, Wallich; Rangoon, McClelland.

Branches glabrous below. *Leaves* 3-7 by $\frac{1}{2}$ - $1\frac{1}{2}$ in., narrow, oblong or linear-lanceolate, acute or acuminate, puberulous above, softly pubescent beneath; base acute; nerves rather distant, spreading, slightly arched, very slender; petiole $\frac{1}{2}$ in. *Cymes* shorter than the petioles; bracts minute; pedicels very short, top turbinate. *Corolla* $\frac{1}{10}$ in. diam., shortly conic in bud, lobes glabrous within. *Filaments* alternating with obscure low glands.—The habit, foliage, inflorescence, eglandular calyx, obtuse anthers and short stigma well distinguish this from *Atherandra*.

9. **ATHERANDRA**, *Dcne.*

Slender glabrous twining shrubs. *Leaves* opposite. *Flowers* in axillary and terminal slender peduncled dichotomous cymes. *Calyx-tube* turbinate, lobes with quadrate crenulate glands within. *Corolla* rotate; lobes long, slender, overlapping and sharply twisted to the right, forming a long-beaked bud. *Coronal* processes 5, filiform, at the back of the bases of the filaments. *Stamens* at the base of the corolla; filaments distinct, alternating with large erect glands; anthers sagittate, conniving over and adnate to the stigma, tips elongate, filiform; pollen-masses in pairs in each cell, granular; appendages of the corpuscles dilated. *Ovary* partly sunk in the broad calyx-tube; stigma elongate-conical, 2-fid. *Fruit* unknown.

A. acutifolia, *Dcne. in DC. Prodr.* viii. 497. *A. pubescens*, *Blume Mus. Bot.* i. 147, t. 2. *A. cuspidata*, *Blume l. c.* *Cryptolepis filiformis*, *Wall. Cat.* 4458.

PENANG, *Wallich*.—DISTRIB. *Java*.

Branches and *leaves* beneath glabrous or sparingly pubescent. *Leaves* 1-2 by 1-1½ in., oblong or obovate-oblong, finely abruptly acuminate; nerves 6-8 pairs, strong beneath, arched; petiole ½-¾ in. *Cymes* numerous, quite glabrous, spreading, longer than the leaves; bracts small, deciduous; pedicels thickened towards the turbinate tip. *Calyx-lobes* ovate, acute, erect or reflexed. *Corolla* ½-¾ in. diam., long and slenderly beaked in bud.

10. **STREPTOCAULON**, *Wight & Arn.*

Twining tomentose herbs or shrubs. *Leaves* opposite. *Flowers* small or minute, in lax sessile or peduncled trichotomous paniced cymes. *Calyx* minute, glandular within. *Corolla* rotate; lobes ovate, overlapping to the right; buds shortly conical. *Coronal-scales* 5, filiform, adnate to the back of the filaments. *Stamens* at the base of the corolla; filaments very short, alternating with minute teeth; anthers conniving over and adnate to the stigma, tip with an obtuse triangular process; pollen-masses in pairs in each cell, granular; appendages of the minute corpuscles dilated. *Stigma* convex, 2-lobed. *Follicles* divaricate, terete, smooth, not winged.—DISTRIB. *Species* 6; *Indian* and *Malayan*.

1. **S. Kleinii**, *Wight & Arn. Contrib.* 65; shrubby, climbing, leaves cuneate-obovate base cordate with softly appressed white tomentum beneath, nerves 7-10 pairs, cymes pubescent shorter than the leaves. *Dcne. in DC. Prodr.* viii. 496.

DECCAN PENINSULA; *Klein*.

Leaves 2-3 by 1-1½ in., coriaceous, above puberulous closely reticulated with sunk nerves, beneath pale buff when dry; nerves and reticulation faintly seen through the tomentum; petiole ¼-½ in. *Cymes* with a stout peduncle ½-1½ in., sparingly shortly di-tri-chotomously branched, branchlets very short 1-2-fid; bracts tomentose, persistent. *Sepals* hirsute, ovate, subacute, 1-2-glandular. *Corolla* ½ in. diam.; lobes ovate, subacute, sparingly hirsute externally, glabrous within.

2. **S. Wallichii**, *Wight & Arn. Contrib.* 65; shrubby, climbing, leaves broadly or narrowly elliptic acute at both ends finely acuminate softly brown-tomentose beneath, nerves 6-8 pairs, cymes much branched many-fid. hispidly pubescent, flowers quite glabrous. *Wall. Cat.* 8249; *Dcne. in DC. Prodr.* viii. 496.

PENANG, *Phillips, Maingay* (Kew Distrib. 1100), &c. SINGAPORE, *Wallich*.

Branches stout, young densely shortly pubescent; bark brown, lenticellate. *Leaves* 2-3 by 1-2 in., very variable in breadth, coriaceous, opaque and puberulous above, reticulations minute; nerves faint beneath; petiole $\frac{1}{4}$ - $\frac{1}{3}$ in. *Cymes* spreading, 1-2 in. long and broad; 2-3-chotomously branched; branches divaricate, slender, ultimate with persistent sometimes imbricate minute bracts; pedicels slender, tips turbinate. *Sepals* glabrous, minute, obtuse. *Corolla* $\frac{1}{10}$ in. diam., red, lobes broad acute. *Follicles* 3 by $\frac{1}{2}$ in. divaricate, straight, acuminate, pubescent. *Seeds* $\frac{1}{4}$ in., oblong, narrowed below the tip; coma $1\frac{1}{4}$ in.

3. **S. tomentosum**, *Wight & Arn. Contrib.* 64; shrubby, climbing, leaves cuneate elliptic or oblanceolate acuminate base rounded or truncate, softly fulvous-tomentose beneath, nerves 16-20 pairs, cymes many-flowered densely pubescent, corolla quite glabrous. *Wight Ill.* t. 182 f. 2.; *Wall. Cat.* 8248; *Dcne. in DC. Prodr.* viii. 496.

AYA, at Taongdong and MOULMEIN, *Wallich*. PEGU, *McClelland*. **DISTRIB.** YUNAN. Cochinchina.

Branches smooth, ultimate finely densely pubescent. *Leaves* very variable in breadth, 3-5 by $1\frac{1}{2}$ - $3\frac{1}{2}$ in., usually broadest beyond the middle and truncate at the base, puberulous above; nerves straight, prominent or concealed in the tomentum beneath; petiole $\frac{1}{3}$ - $\frac{2}{3}$ in. *Cymes* short, 1 in. long and broad or less, branches divaricate; bracts persistent. *Sepals* pubescent. *Corolla* $\frac{1}{10}$ in.; lobes broad ovate, acute. *Fruit* unknown.

4. **S. Griffithii**, *Hook. f.*; shrubby, climbing, leaves obovate-oblong or oblanceolate acuminate base cordate, scaberulous above, densely rusty-tomentose beneath, nerves 14-18 pairs, cymes hispidly tomentose, corolla glabrous. *Streptocaulon, Griff. Notul.* iv. 71, & *Ic. Pl. As.* t. 406.

TENASSERIM, *Helper* (Kew Distrib. 3754, under *tomentosum*); Mergui, *Griffith*.

Branches stout, lenticellate, ultimate hispidly tomentose. *Leaves* 3-6 by $1\frac{1}{2}$ -2 in., variable in form, often broadest above the middle, hard and coriaceous, finely impressedly reticulate above; nerves and reticulations, usually prominent beneath. *Cymes* 1-2 in. long and broad, densely hispid, branches rather stout divaricate; bracts persistent; pedicels short. *Calyx* strigose. *Corolla* $\frac{1}{6}$ in. diam.; lobes broad, acute. *Follicles* 3-4 by $\frac{1}{2}$ in., straight, acute, finely pubescent. *Seeds* nearly $\frac{1}{2}$ in., narrowly oblong, coma 1 in.

5. **S. sylvestre**, *Wight Contrib.* 65; herbaceous, prostrate, leaves sessile orbicular or broadly ovate pubescent or tomentose beneath, base rounded or cordate, nerves 6-7 pairs, cymes small few-fld., corolla nearly glabrous. *Wall. Cat.* 8251; *Dcne. in DC. Prodr.* viii. 496.

BENGAL, *Hamilton*; foot of the SIKKIM HIMALAYA, *Clarke*.

Root woody, giving off many slender pubescent flexuous branches, 12-18 in. long with distichous leaves that lie flat on the ground. *Leaves* 1- $1\frac{1}{2}$ in. long and nearly as broad, apiculate, glabrous or puberulous above; nerves arched, prominent beneath. *Cymes* $\frac{1}{2}$ in., pubescent; peduncle slender; branches and pedicels short, not spreading; bracts minute; *Calyx* small, strigose. *Corolla* $\frac{1}{2}$ in. diam., purple, very slightly pubescent, lobes lanceolate acute. *Fruit* unknown.

11. MYRIOPTERON, *Griff.*

A glabrous or pubescent slender twining shrub. *Leaves* opposite, long-petioled. *Flowers* small, in lax paniculate cymes from opposite axils. *Sepals* minutely glandular within. *Corolla* rotate; lobes narrow, overlapping to the right, twisted to the left, broadly conic in bud. *Coronal scales* 5, at the back of the filaments, filiform from a broad base. *Stamens* at the base of the corolla,

filaments connate below into a ring with alternating teeth; anthers conniving over and adherent to the stigma, tips membranous; pollen-masses in pairs in each cell, appendages of the corpuscles 2-fid. *Stigma* convex, 2-fid. *Follicles* short, turgid, straight; with many longitudinal membranous wings. *Seeds* comose.

M. paniculatum, *Griff. in Calc. Journ. Nat. Hist.* iv. 385; & *Notul.* iv. 71. & *Ic. Pl. Asiat.* 408. *Streptocaulon extensum*, *Wight Contrib.* 65, & *Ill.* t. 182. f. 3.; *Dene. in DC. Prodr.* viii. 496. *S. Horsfieldii*, *Miq. Fl. Ind. Bat.* ii. 470. *Vicarya cristata*, and *Jenkinsia cristata*, *Wall. mss. in Voigt Hort. Sub. Calc.* 544.

ASSAM, CHITTAGONG, PEGU, and TENASSERIM. *DISTRIB.* Java.

Branches smooth, herbaceous. *Leaves* $3\frac{1}{2}$ –5 by $2\frac{1}{2}$ in., very variable in length and breadth, rounded oblong or elliptic, acuminate or subcaudate, base rounded or acute, membranous, finely pubescent or glabrate beneath; nerves 5–7 pairs, slender, arched; petiole very slender, $\frac{1}{2}$ – $1\frac{1}{2}$ in. *Cymes* 3–7 in., peduncle and brachiate branches very slender, quite glabrous; bracts few, chiefly at the forks; pedicels capillary, top turbinate. *Sepals* minute, rounded, ovate. *Corolla* $\frac{1}{2}$ in. diam.; lobes lanceolate. *Follicles* 3 by $\frac{3}{4}$ in., straight, narrowed to the obtuse tip, base rounded, pericarp thin. *Seeds* $\frac{1}{2}$ in. long, ovoid, narrowed to the tip, coma 1 in.—*M. Horsfieldii*, agrees with the perfectly glabrous leaved states of the plant from Tenasserim.

12. DECALEPIS, *Wight & Arn.*

A glabrous twining shrub. *Leaves* opposite. *Flowers* small, in axillary peduncled cymes. *Calyx* eglandular within. *Corolla* rotate; lobes valvate, bearded within, ovoid in bud. *Coronal scales* 5, ovate, adnate to the back of the base of the filaments. *Stamens* at the base of the corolla, filaments connate at the base with alternating minute glands; anthers ovate, conniving over and adnate to the stigma, tip acute inflexed; pollen-masses in pairs in each cell, granular; appendages of the corpuscles dilated. *Stigma* convex, 5-grooved. *Fruit* unknown.

D. Hamiltonii, *Wight & Arn. Contrib.* 64; *Wight Ill.* t. 182. f. 6.; & *Ic.* t. 1285; *Dene. in A. DC. Prodr.* viii. 495. *Streptocaulon Hamiltonii*, *Wight mss.* *Apocynum reticulatum*, *Herb. Madr.*; *Wall. Cat.* 8247.

DECCAN PENINSULA; Balaghaut Mts. near Madras; Anamallay hills, *Wight*.

Branches stout, smooth. *Leaves* coriaceous, orbicular or elliptic-obovate, tip rounded, base acute or rounded, finely reticulated; nerves 6–8 pairs, strongly arched; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Cymes* in single axils, glabrous or puberulous; peduncle $\frac{1}{2}$ in.; branches few, short, spreading; bracts persistent, scattered or subimbricate. *Sepals* oblong, obtuse. *Corolla* $\frac{1}{4}$ in. diam., coriaceous; lobes ovate-oblong, subacute, beard dense white.

13. PERIPLOCA, *Linn.*

Erect or twining glabrous sometimes leafless shrubs. *Leaves* opposite. *Flowers* in lax terminal or axillary cymes, greenish externally, purplish within. *Calyx* 5-glandular within. *Corolla* rotate; lobes obtuse, usually bearded within, overlapping to the right. *Coronal scales* connate into a 10-lobed ring often produced behind the stamens into 5 subulate or branched processes. *Stamens* within the corona, filaments broad short flat; anthers bearded on the back, conniving over and adhering to the stigma, tips cohering, with incurved appendages; pollen-masses in pairs in each cell, granular; appendages of the corpuscles dilated. *Stigma* convex. *Follicles* conniving spreading or divaricate, cylindric, smooth. *Seeds* comose. *DISTRIB.* S. Europe, West Asia and Africa, Species 12.

1. ***P. aphylla***, *Dene. in Jacq. Voy. Bot.* 109. t. 116; and in *DC. Prodr.* viii. 499; erect, leafless or nearly so, flowers purple, coronal lobes very long filiform glabrous. *Boiss. Fl. Orient.* iv. 50. *Campelepis viminea*, *Falc. in Trans. Linn. Soc.* xix. 109, in note.

WESTERN PANJAB, in the plains, *Falconer, &c.* SCIND Stocks. DISTRIB. Afghanistan, Persia, Arabia, Nubia.

A shrub; branches as thick as a goose-quill or less, smooth or tips pubescent. *Leaves*, if present, $\frac{1}{4}$ in., oblong, acute, very thick, nerveless. *Cymes* often opposite, $\frac{1}{2}$ –1 in. long and broad, branched from the base or on short thick peduncles, glabrous; branches short, thick; bracts caducous. *Sepals* broad, rounded-ovate. *Corolla* $\frac{1}{2}$ – $\frac{2}{3}$ in. diam., dark purple, glabrous externally, lobes ovate-oblong, densely bearded above the middle within. *Follicles* $\frac{3}{4}$ by $\frac{1}{4}$ in., rigid, woody, terete. *Seeds* $\frac{1}{4}$ in., narrowly oblong; coma 1 in.—“Used for cordage; flowers fragrant, eaten by natives, taste like raisins” (*Stocks*).

2. ***P. hydaspidis***, *Falc. in Ann. & Mag. of Nat. Hist.* viii. 449; twining, leafless or nearly so, flowers yellow, coronal lobes subulate hairy. *Dene. in DC. Prodr.* viii. 498.

WESTERN HIMALAYA; Southern Kashmir and Kishtwar, ascending to 4000 ft., and the adjacent PANJAB, *Falconer, Thomson, &c.* DISTRIB. Afghanistan.

Quite glabrous. *Branches* tortuous, wiry, sometimes fascicled, as thick as a crow-quill, smooth. *Leaves* (if present) $\frac{1}{2}$ – $\frac{1}{4}$ in., linear, subacute, thick, nerveless. *Cymes* $\frac{1}{2}$ –1 in. long and broad, often opposite, very numerous; peduncle stout, erect, branches divaricate; bracts caducous. *Sepals* rounded, quite glabrous. *Corolla* $\frac{1}{2}$ in. diam.; lobes oblong, obtuse, pubescent or villous within, glabrous externally. *Follicles* (old only seen) broader and less woody than in *P. aphylla*.

3. ***P. calophylla***, *Falc. in Ann. & Mag. Sc. Nat.* viii. 449; twining, quite glabrous, leaves narrowly lanceolate caudate-acuminate, nerves very many horizontal, flowers yellow or pinkish, coronal lobes hairy. *Brandis For. Fl.* 330. *Dene. in DC. Prodr.* viii. 498. *Streptocaulon calophyllum*, *Wight Contrib.* 65, and *Ill.* t. 182, f. 1; *Wall. Cat.* 8252.

TEMPERATE and SUBTROPICAL HIMALAYA, alt. 3–5000 ft. from Kumaon to Sikkim, KHASIA Mts. alt. 4000 ft.

A small shrub, branches slender. *Leaves* $1\frac{1}{2}$ –3 by $\frac{1}{4}$ – $\frac{3}{4}$ in., coriaceous, shining on both surfaces, margin undulate; petiole $\frac{1}{4}$ in. *Cymes* numerous, often in opposite axils, sessile, $\frac{1}{2}$ –1 in. long and broad; branches and pedicels slender; bracts caducous. *Sepals* broadly ovate, obtuse. *Corolla* $\frac{1}{2}$ in. diam., lobes ovate-oblong acute. *Follicles* 4–8 by $\frac{1}{4}$ in., quite straight or curved, parallel or divergent, never divaricate, smooth, terete; pericarp thin but firm. *Seeds* $\frac{1}{2}$ – $\frac{3}{4}$ in. long, linear; coma 1–1 $\frac{1}{2}$ in.

TRIBE 2. SECAMONEÆ.

14. SECAMONE, *Br.*

Climbing or straggling shrubs or undershrubs. *Leaves* opposite. *Flowers* small or minute, in sessile or shortly peduncled lax axillary 2–3-chotomous cymes. *Corolla* rotate, 5-cleft; lobes (in Indian species) overlapping to the right. *Coronal scales* 5, adnate to the staminal tube, laterally compressed, tips free. *Filaments* short, connate; anther-tips small, membranous, inflexed; pollen-masses in pairs in each cell, small, globose, waxy, corpuscles minute. *Stigma* beaked, 2-fid, or low and conical. *Follicles* stout or slender, acuminate, smooth, terete or angled. DISTRIB. Species about 24, tropical Asia, Australia, and Mascarene Islands.

S. emetica, Br. in Mem. Wern. Soc. i. 56; slender, glabrous, except the puberulous cymes, climbing, leaves lanceolate, or linear- or elliptic-lanceolate subacute narrowed into the short petiole, cymes much shorter than the leaves, corolla glabrous, coronal-scales broadly subulate incurved much shorter than the column, stigma 2-lobed, follicles slender straight terete narrowed from the base to the tip. *Dene. in DC. Prodr.* viii. 501; *Wight Contrib.* 60; *Ic.* t. 1283, and *Ill.* t. 155. b. *fig. D.*; *Wall. Cat.* 8236. *Periploca emetica*, Retz. Obs. ii. 14.

Mountains of the SOUTH DECCAN PENINSULA and CEYLON.

Leaves $1\frac{1}{2}$ -3 by $\frac{1}{2}$ - $\frac{1}{2}$ in., rather glaucous beneath, nerves very faint. Cymes few- or many-fl.; peduncle $\frac{1}{2}$ - $\frac{1}{2}$ in. Sepals ciliolate. Corolla $\frac{1}{2}$ in. diam., segments oblong, obtuse, bases saccate. Follicles 2-2 $\frac{1}{2}$ in.—*S. Finlaysoni*, Wight; *Wall. Cat.*, a native of Siam, has much broader leaves and longer cymes.

15. TOXOCARPUS, Wight & Arn.

Twining shrubs. Leaves opposite. Flowers small, in axillary dichotomous cymes. Calyx minute; lobes oblong, obtuse. Corolla-tube short; lobes narrow, spreading and recurved, glabrous, overlapping to the left. Coronal scales minute, obtuse or acute, adnate to the column. Filaments connate; anthers small, retuse, often inappendiculate; pollen-masses 2 in each cell, very minute, pendulous, waxy. Stigma produced far beyond the column. Follicles smooth. Seeds comose. **DISTRIB.** Species about 14, tropical Asiatic and African.

I am unable to determine accurately from herbarium specimens the characters of the very minute staminal column and its scales in this genus.

* Cymes rusty-pubescent. Corolla-segments without an adnate scale.

† Corolla-segments villous or hairy at the base only.

1. **T. villosus**, *Dene. in DC. Prodr.* viii. 506; leaves elliptic-oblong subacute or cuspidate rusty-pubescent beneath, cymes lax, coronal scales with subulate tips overtopping the anther-cells, stigma slender quite entire. *Miq. Fl. Ind. Bot.* ii. 475. *Secamone villosa*, *Blume Bijl.* 1050.

TENASSERIM; Mergui, *Griffith*.—**DISTRIB.** JAVA.

Leaves 2-3 $\frac{1}{2}$ by 1-1 $\frac{1}{2}$ in., base acute, glabrous in age; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. Cyme-branches stout and sepals densely villous. Corolla $\frac{1}{2}$ in. diam., segments slightly hairy at the base.

2. **T. Griffithii**, *Dene. in DC. Prodr.* viii. 505; leaves elliptic-oblong or lanceolate cuspidate, young glabrous beneath, cymes short, coronal scales not overtopping the anther-cells, stigma short enlarged upwards, tip notched. *Toxocarpus* sp. *Griff. Notul.* iv. 69, and *Ic. Pl. Asiat.* t. 404 (*Asclepiadæ*).—*Connaracea*, *Wall. Cat.* 8550.

TENASSERIM, *Griffith*, &c. MALACCA, *Maingay* (Kew distrib. 1105). SINGAPORE, *Lobb.* PENANG, *Porter*.

Leaves 2-4 by 1-2 in., base acute or rounded; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. Cymes few-fl. Corolla-segments slightly hairy at the base, the hairs disposed in a triangle like the adnate scale of *T. acuminatus*. Follicles 12 in., very slender, flexuous, cylindric. Seeds 1 in., very slender, not beaked.

3. **T. himalensis**, *Falc. mss.*; leaves elliptic-oblong or lanceolate or orbicular obtusely cuspidate, young pubescent beneath, coronal scales overtopping the anther-cells, stigma slender unequally 2-fl.

WESTERN HIMALAYA; Chaumussoore, *Falconer*. ASSAM and KHASIA MTS., *Jenkins, Griffith, H. f. & T. &c.*

Leaves 3–5 by $1\frac{1}{2}$ –3 in., quite glabrous when old, base acute or rounded, petiole $\frac{1}{2}$ – $\frac{2}{3}$ in. *Corolla* $\frac{1}{2}$ in. diam.; lobes membranous, slender, villous at the base within. *Follicles* 4–6 by $\frac{1}{2}$ – $\frac{2}{3}$ in., young rusty-pubescent. *Seeds* ovate, beaked, $\frac{2}{3}$ in. long.—The only Himalayan specimen is *Falconer's*, and probably from Garwhal.

†† *Corolla-segments glabrous throughout.*

4. **T. Roxburghii**, *W. & A. Contrib.* 61; stem cymes and calyx sparsely hirsute, leaves broadly elliptic cuspidate membranous glabrous base subacute, cymes spreading much shorter than the leaves, flowers few sessile, coronal scales acute hardly overtopping the anther-cells, stigma fusiform. *Wight Ic. t.* 475; *Wall. Cat.* 8239; *Dcne. in DC. Prodr.* viii. 505; *Asclepias longistigma*, *Roxb. Fl. Ind.* ii. 46.

THE CIRCARS, *Heyne; Roxburgh.*

Leaves $2\frac{1}{2}$ –3 by $1\frac{1}{2}$ –2 in., midrib sparsely puberulous beneath; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. and nerves very slender. *Cymes* shortly peduncled; flowers solitary or clustered, $\frac{1}{4}$ in. diam.; bracts very minute.—I am in doubt about this plant, for which *Wight* cites n. 1561 as his catalogue number, for the solitary specimen in his "Herbarium" has no number, locality, or collector's name attached. Good specimens are however in *Rottler's* "Herbarium," sent by *Heyne* as *Echites dichotoma*, *Herb. Heyne* (not the plant published under that name), and in *Wallich's* also from *Heyne*. *Roxburgh* gives no locality for it in his "Flora," but *Wight* gives the Circars on *Roxburgh's* authority. The flowers in his (*Roxburgh's*) drawing are twice as large as in the specimens. *Wight* and *Arnott* and *Decaisne* describe the corolla-throat as hirsute, which is perfectly glabrous in *Roxburgh's* drawing and in the specimens; and the cymes as longer than the leaves, whereas they are much shorter. As a species it is very near *T. Kleinii*, but is a much more slender less villous plant, with very short coronal scales.

5. **T. Kleinii**, *Wight & Arn. Contrib.* 61; leaves from elliptic-ovate or obovate or lanceolate to orbicular acuminate or cuspidate glabrous or pubescent beneath base acute, cymes spreading and calyx densely tomentose, flowers few sessile and pedicelled, coronal scales overtopping the anther-cells, stigma long fusiform tip slender notched. *Wight Ic. t.* 886; *Dcne. in DC. Prodr.* viii. 505.

HILLS of the DECCAN PENINSULA, from the Concan southwards. CEYLON; Matu-ratte district alt. 3000 ft. *Thwaites; Galle, Champion.*

Very near *T. Roxburghii*, but stouter, with more coriaceous leaves, longer more densely tomentose cymes, larger usually pedicelled flowers $\frac{1}{3}$ in. diam., less membranous calyx and corolla, and longer coronal scales. *Follicles* quite glabrous, more or less curved, some 3 by $\frac{1}{3}$ in. and flattened, others 7 by $\frac{1}{3}$ in. and nearly cylindric. *Seeds* $\frac{1}{3}$ in. ovate, hardly beaked.—In some specimens, both Peninsular and Ceylonese, the leaves are narrow, 2 by $\frac{1}{3}$ in., quite glabrous and shining on both surfaces, in others they are $2\frac{1}{2}$ in. long and broad, rusty-pubescent beneath. I do not find the tube of the corolla to be pubescent within as figured by *Wight*.

6. **T. concanensis**, *Hook. f.*; leaves obovate or elliptic cuspidate mottled and glabrous or pubescent beneath, cymes densely tomentose much branched many-fl., coronal scales hardly overtopping the anther-cells, stigma long slender.

CANARA; on the Bababoodan hills, *Law.*

This again closely resembles *T. Kleinii*, but the leaves are much larger, 3–5 by $2\frac{1}{2}$ –3 in., more obovate, with petioles $\frac{1}{2}$ – $\frac{2}{3}$ in. long, and the cymes are more divided, very many-flowered, densely tomentose. The leaves are dark green, minutely mottled between the nerves beneath in a branching reticulated manner, a character I do not

find in its allies, though there are traces of it in *T. Kleinii*. Fragment of a follicle cylindric, glabrous.

7. **T. Kurzii**, *Hook. f.*; leaves large broadly elliptic-ovate broadly cuspidate coriaceous shining, cymes small, flowers few sessile, calyx nearly glabrous, coronal scales obtuse hardly overtopping the anther-cells, stigma long slender.

MIDDLE ANDAMAN ISLAND, *Kurz*.

I have seen but one specimen, which is nearest to *T. Kleinii*, differing in the large (4-5 by $2\frac{1}{2}$ -3 in.) coriaceous leaves, long ($\frac{2}{3}$ in.) petioles and nearly glabrous calyx.

** Corolla lobes with a triangular erose scale adnate to their bases.

8. **T. acuminatus**, *Benth. in Gen. Pl. ii. 747*; leaves elliptic-lanceolate acuminate quite glabrous shining base acute, cymes branching from the base branches and branchlets very long slender few-fl., flowers pedicelled. *Gonio-stemma acuminatum*, *Wight Contrib. 62*; *Wall. Cat. 8242*; *Dcne. in DC. Prodr. viii. 504*.

SILHET, *Wallich*.

Stem glabrous, pustular. *Leaves* 4-5 by $1\frac{1}{4}$ - $1\frac{1}{2}$ in., shining on both surfaces. nerves many, faint, spreading; petiole $\frac{1}{3}$ - $\frac{1}{2}$ in. *Cymes* almost glabrous, nearly equalling the leaves; pedicels very slender; bracts very minute. *Sepals* very small, rounded. *Corolla* $\frac{1}{4}$ in. diam., quite glabrous, lobes lanceolate twice as long as the tube. *Coronal scales* triangular, shorter than the column. *Stigma* long, fusiform.

DOUBTFUL AND IMPERFECTLY KNOWN SPECIES.

T. FRIOCARPUS, *Hook. f.*; leaves elliptic-oblong or oblong-lanceolate acute at both ends quite glabrous, petiole slender, nerves slender very oblique, follicles long curved terete finely pubescent, seeds linear-oblong tip not contracted.

TRAVANCORE; at Courtallan, *Wight*.

Branches glabrous, woody. *Leaves* $2\frac{1}{2}$ -3 by $1-1\frac{1}{2}$ in. firm, pale when dry. petiole $\frac{1}{3}$ - $\frac{1}{2}$ in. *Flowers* not seen. *Follicles* 5-7 by $\frac{1}{3}$ in. woody. *Seeds* $\frac{3}{4}$ in. long.

T. ROXBURGHII, *Griff. Notul. iv. 68*; *Id. Pl. Asiat. t. 386a f. 4, 5, not of W. & A.* from Mergui. This, though referred by Griffith to Roxburgh's *Asclepias longistigma* (*T. Roxburghii*, W. & A.), is certainly not that plant, and is, I suspect, *T. Griffithii*.

? *T. WIGHTIANUS*, *Hook. & Arn. Bot. Beech. Voy. 200*; *Dcne. in DC. Prodr. viii. 506*; stem very slender, young densely rusty-tomentose, leaves small $1-1\frac{1}{2}$ in. elliptic oblong cuspidate glabrous above rusty-pubescent beneath, base rounded, nerves 2-4 pairs, slender oblique, petiole $\frac{1}{2}$ in.—Specimens in leaf only collected by Dr. Thomson and myself at the Bor-panee river, Khasia Mts. alt. 2000 ft., quite resemble the Chinese *T. Wightianus*, which may be known by its very small cymes of flowers, like those of *T. himalensis*, and its short tomentose pods.

16. **GENIANTHUS**, *Hook. f., Gen. Nov.*

Twining shrubs. *Leaves* opposite. *Flowers* small, in axillary subsimple or dichotomously branched cymes. *Calyx* minute, lobes oblong obtuse. *Corolla-tube* short; lobes narrow, spreading and recurved, villous to the tip on the inner face, valvate. *Corona* of 5 scales adnate to the column. *Staminal-column* minute; pollen-masses 2 in each cell, minute, waxy. *Stigma* sessile and capitate, or long and slender.—DISTRIB. Species 3 or 4 tropical Asiatic and Malayan.

This genus is distinguished from *Toxocarpus* by the bearded corolla-lobes and valvate aestivation.

• *Stigma sessile, capitate. Cymes very compound.*

1. **G. laurifolius**, *Hook. f.*; leaves glabrous broadly elliptic obtusely acuminate, base acute, petiole slender, cymes rusty-tomentose much branched many-fld., coronal scales obtuse hardly overtopping the anther-cells. *Toxocarpus laurifolius*, *Wight Contrib.* 61, and *Ic. t.* 598; *Wall. Cat.* 8241; *Dene. in DC. Prodr.* viii. 506. *T. crassifolius*, *Dalz. & Gibs. Bomb. Fl.* 148. *Asclepias laurifolia*, *Roxb. Fl. Ind.* ii. 49.

SIKKIM HIMALAYA, in hot valleys, *J. D. H. & T. T. CHITTAGONG* to *PEGU*, *Roxburgh, Kurz, &c.* *CONCAN* and *CANARA. Stocks, &c.*

Stem glabrous, pustular. *Leaves* 3-4 by 2-3 in. or larger; nerves slender, spreading; petiole $\frac{1}{2}$ - $1\frac{1}{2}$ in. *Cymes* very variable, 1-4 in. long and broad; flowers $\frac{1}{10}$ - $\frac{1}{8}$ in. diam., sessile and pedicelled, of two forms on the same cyme, one small with narrow densely bearded segments, the other much larger with broader oblong nearly glabrous segments. *Follicles* in *Roxburgh's* figure 5 by $\frac{1}{8}$ in., very slender, terete, straight.—*Wight & Arnott* give *Cawnpore*, *Genl. Hardwicke*, as a locality for this, but I suspect some mistake.

** *Stigma* elongate, columnar. *Cymes* subsimple, branches long stout with distant clusters of sessile flowers.

2. **G. crassifolius**, *Hook. f.*; branches cymes and midrib beneath rusty-tomentose, leaves thickly coriaceous broadly elliptic acute or acuminate, coronal scales overtopping the anther-cells. *Toxocarpus crassifolius*, *Wight Contrib.* 61; *Wall. Cat.* 8240; *Dene. in DC. Prodr.* viii. 506.

SILHET, *Wallich*.

Leaves 3-5 by 2-2½ in., base rounded or subacute, margins narrowly recurved, nerves very spreading; petiole stout, $\frac{1}{2}$ - $\frac{2}{3}$ in. *Cymes* simple, or twice or thrice branched, stout, flexuous, as long as the leaves; flowers $\frac{1}{2}$ in. diam. *Stigma* very stout, subclavate.

3. **G. Maingayi**, *Hook. f.*; branches and cymes rusty-pubescent, leaves glabrous oblanceolate obtusely acuminate, coronal scales overtopping the anther-cells.

SINGAPORE, *Maingay* (*Kew Distrib.* n. 1106).

Leaves 2½-3½ by 1½-1½ in., coriaceous, narrowed into the petiole, midrib beneath glabrous or pubescent. nerves ascending; petiole $\frac{1}{4}$ -½ in. *Cymes, flowers, staminal column* and *stigma* as in *G. crassifolius*.

TRIBE 3. CYNANCHÆ.

17. GLOSSONEMA, *Dene.*

Diffuse, hoary undershrubs or herbs, branched from the base. *Leaves* opposite. *Cymes* small 2-6-flowered, sessile or shortly peduncled; flowers small. *Sepals* glandular within. *Corolla* subcampanulate, tube short, lobes overlapping to the right. *Corona* near the base of the tube, 5-cleft; lobes large, broad, hyaline, obtuse acuminate or ligulate. *Staminal column* short; anthers tipped by an inflexed membrane; pollen-masses solitary in each cell, oblong, not compressed, pendulous, waxy. *Stigma* exserted, fleshy, conical clavate or peltate. *Follicles* thick, acuminate, mucicate or spinous. *Seeds* comose.—*DISTRIB.* Species 6; tropical African, Arabian and Scind.

G. varians, *Benth. in Gen. Pl.* ii. 748; leaves fleshy ovate or rounded obtuse or acute, margin crisped or entire, upper narrower, cymes subsessile, pedicels very short, corolla-lobes rounded. *Mastostigma varians*, *Stocks in Hook. Ic. Pl.* t. 843; *Boiss. Fl. Orient.* iv. 51.

SCIND, *Vicary, Frere, Stocks*.—DISTRIB. Beluchistan, Persia.

Annual? *Branches* 4-6 in., stout, erect or decumbent. *Leaves* 1-2 in., often as broad, base acute, nerves obscure; petiole $\frac{1}{2}$ -1 in. *Flowers* yellowish, $\frac{1}{2}$ in. diam. *Follicles* 2-3 in., ovoid, turgid, beaked, fleshy; spines very stout, soft, scattered. *Seeds* $\frac{1}{2}$ in., broadly ovate, flattened, pale yellow-red, margins thin.

18. OXYSTELMA, Br.

Twining glabrous herbs or undershrubs. *Leaves* narrow, opposite. *Flowers* large, in loose racemose or umbelliform cymes or solitary, pedicels filiform. *Calyx* small, 5- ∞ glandular within. *Corolla* broadly urceolate, or campanulate or rotate; lobes ciliate and subvalvate below, tips overlapping to the right. *Corona* double, corolline annular, at the base of the corolla, papillose within, margin membranous, truncate; staminal of 5 scales adnate to the bases of the stamens with cordate or dilated bases, 2-keeled within. *Filaments* short, connate; anther-tips membranous, inflexed; pollen-masses one in each cell, oblong, compressed, pendulous, waxy. *Stigma* depressed, or subconvex. *Follicles* thick, oblique or curved, smooth or narrowly 2-winged. *Seeds* comose.—DISTRIB. Species 4; tropical Asia and Africa.

O. esculentum, Br.; leaves lanceolate linear-lanceolate or linear finely acuminate, base acute rounded or cordate, corolla 1 in. diam. ciliate, follicles oblong lanceolate or ovoid. *Wight Contrib.* 54; *Grah. Cat. Bomb. Pl.* 121; *Dalz. & Gibs. Bomb. Fl.* 150; *Hook. Comp. Bot. Mag.* t. 22; *Griff. Notul.* iv. 61, and *l.c. Pl. Asiat.* t. 399, 400; *Wall. Cat.* 8219; *Miq. Fl. Ind. Bat.* iii. 483; *Dene. in DC. Prodr.* viii. 542. *O. Wallichii*, *Wight Contrib. l.c.*; *Dene. l.c.*; *Wall. Cat.* 8220. *Periploca esculenta*, *Linn. f. Suppl.* 168; *Roxb. Cor. Pl.* i. 13, t. 11. *Asclepias rosea*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 40, and *As. Research.* iv. 268 (*Dooghdhika*).

Throughout the plains and lower hills of INDIA; from the Punjab to Ceylon, Assam, Pegu and Tenasserim.—DISTRIB. Ava, Java.

A deciduous-leaved very slender climbing perennial. *Leaves* 4-6 by $\frac{1}{2}$ -1 in., membranous, nerves many, uniting far within the margin; petiole $\frac{1}{2}$ in., very slender. *Cymes* few-fl., peduncles and pedicels capillary. *Flowers* white and rose-coloured with purple veins. *Follicles* 2-3 in., rather membranous. *Seeds* very numerous, $\frac{1}{2}$ in., broadly ovate, flat.—*O. Wallichii* of Wight differs only in the more oblong follicles rounded at the end.

19. CALOTROPIS, Br.

Erect, glabrous or hoary shrubs or small trees. *Leaves* opposite, broad, sessile. *Flowers* medium-sized in umbelliform or subracemose cymes. *Sepals* glandular within. *Corolla* broadly campanulate; lobes broad, naked, valvate. *Coronal-scales* 5, fleshy, laterally compressed, radiating from the large staminal column, dorsally spurred. *Anther-tips* membranous, inflexed; pollen-masses one in each cell, pendulous flattened, waxy. *Stigma* depressed, 5-angled or -lobed. *Follicles* short, thick. *Seeds* comose.—DISTRIB. Species 3; tropical Asia and Africa.

1. **C. gigantea**, Br. in *Hort. Kew. Ed.* 2, ii. 78; sub-arboreous, leaves sessile beneath and umbels cottony, corolla-lobes spreading, coronal-scales truncate hairy. *Hamilt. in Trans. Linn. Soc.* xiv. 245; *Wight Contrib.* 53, and *l.c.* t. 155, 156 A.; *Dalz. & Gibs. Bomb. Fl.* 149; *Grah. Cat. Bomb. Pl.* 120; *Brand. For. Fl.* 331; *Griff. Notul.* iv. 68, and *l.c. Pl. Asiat.* t. 397, 398; *Dene. in DC. Prodr.* viii. 535; *Bot. Reg.* t. 58. *Asclepias gigantea*, *Willd.*; *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 30.

Throughout INDIA, ascending to 3000 ft. in the Himalaya from the Punjab to Assam, Ceylon and Singapore.—DISTRIB. Malay Islands, S. China.

Trunk stout, bark pale, shoots woolly. *Leaves* 4–8 by 1–3 in., cuneate-obovate, base cordate, axils bearded, smooth above, cottony beneath, *Umbels* peduncled, simple or compound; bracts oblong. *Corolla* $\frac{1}{2}$ –2 in. diam., pale purple; segments ovate-lanceolate, revolute and twisted in age. *Follicles* recurved, 3–4 in. *Seeds* $\frac{1}{4}$ in., broadly ovate.

2. **C. procera**, Br. in Ait. Hort. Kew. Ed. 2, ii. 78; shrubby, leaves sessile young and umbels cottony old glabrous, corolla-lobes erect, coronal-scales acute glabrous or pubescent. *Hamilt. in Trans. Linn. Soc.* xiv. 246; *Wight Contrib.* 53, and *Ic. t.* 1278; *Dalz. & Gibs. Bomb. Fl.* 149; *Brand. For. Fl.* 331; *Boiss. Fl. Orient.* iv. 57; *Bentl. & Trim. Med. Pl. t.* 176; *Dene. in DC. Prodr.* viii. 585. *C. Hamiltoni*, Wall. Cat. 8215; *Wight l.c.* *C. Wallichii*, *Wight l.c.* 53; *Wall. Cat.* 8216. *C. heterophylla*, Wall. Cat. 8217; *Wight l.c.* 54. *Asclepias procera*, Bot. Reg. t. 1792.

WESTERN and CENTRAL INDIA, ascending to 3500 ft. from Scind and the Punjab to Behar and Bombay.—DISTRIB. Ava, Persia, trop. Africa.

A shrub 6–15 ft. *Leaves* as in *A. gigantea*, but more oblong and acute, sometimes 8–9 by 4 in. *Umbels* long-peduncled, cottony. *Follicles* 4–5 in., recurved. *Seeds* $\frac{1}{4}$ in., ovoid.

3. **C. Acia**, *Hamilt. in Trans. Linn. Soc.* xiv. 247; herbaceous, leaves petioled obovate oblanceolate or oblong glabrous, corolla-lobes erect, coronal-scales 2-lobed. *C. herbacea*, *Wight Contrib.* 54, and *Ic. t.* 492; *Wall. Cat.* 8218; *Dene. in DC. Prodr.* viii. 536. *Asclepias herbacea*, Roxb. Hort. Beng. 21, and *Fl. Ind.* ii. 50.

N. BENGAL and SIKKIM TERAI; from Tirhoot to Mymensing, ascending the Himalaya to 3000 ft.

Stem erect. *Leaves* 6–8 by 3–4 in., very thick, narrowed into the petiole; nerves few, stout; petiole $\frac{1}{4}$ –1 in.—Flowers as in *C. procera*.

19.* **ASCLEPIAS**, Linn.

Perennial erect herbs. *Leaves* opposite, alternate or whorled. *Cymes* umbelliform; flowers medium-sized or small. *Sepals* glandular within. *Corolla* rotate, lobes often reflexed, naked, valvate. *Coronal-scales* 5, erect, adnate to the column, spoon-shaped. *Anther-tips* membranous, inflexed; pollen-masses one in each cell, pendulous, flattened, waxy. *Stigma* depressed, 5-angled. *Follicles* turgid, beaked, smooth. *Seeds* comose.—DISTRIB. Species 60; all American, except 2 African and the following cosmopolitan one.

A. curassavica, Linn.; *Dene. in DC. Prodr.* viii. 566; perennial, leaves opposite lanceolate or oblong-lanceolate acute narrowed into a short petiole glabrous, umbels many-fld. shortly peduncled, corolla orange-red, lobes reflexed, column stipitate. *Roxb. Hort. Beng.* 20; *Dalz. & Gibs. Bomb. Fl. Suppl.* 54; *Gibs. Cat. Bomb. Pl.* 120; *Bot. Reg. t.* 81.

Bengal and various parts of India, a weed introduced from the West Indies throughout the tropics.

20. **PENTABOTHR**A, Hook. f. Gen. Nov.

A dwarf erect glabrous herb. *Leaves* opposite, linear. *Flowers* in axillary umbelliform short-peduncled cymes. *Sepals* oblong, minutely glandular within. *Corolla* campanulate, deeply 5-lobed; lobes oblong-ovate, overlapping to the

right. *Corona* of 5 pouch-like folds at the base of the column alternating with the anthers, and 5 fleshy laterally compressed processes with free obtuse tips adnate longitudinally to the backs of the anthers. *Anthers* large, horny, membranous tips large oblong; pollen-masses one in each cell, elongate, compressed, falcate, with long pedicels, pendulous, waxy. *Stigma*, a depressed 5-angled cone, included.

P. nana, Hook. f. *Ic. Pl.* 1426. *Cynanchum nanum*, Ham. in *Wight Contrib.* 59; *Wall. Cat.* 8230.

NORTHERN CAMRUP (Lower Assam), at Sanyashikata, in grassy hills, *Hamilton*.

Stem 5-6 in., rigid, divided below. *Leaves* 4 by $\frac{1}{4}$ - $\frac{1}{2}$ in., spreading, exactly linear, acute, base cordate, midrib stout, nerves faint; petiole $\frac{1}{10}$ in. *Umbels* clustered, many-fl'd.; pedicels $\frac{1}{4}$ in.; bracts lanceolate. *Sepals* puberulous. *Corolla* $\frac{1}{5}$ - $\frac{1}{4}$ in. diam., purple within, glabrous.—A very remarkable plant, of which the specimen in Wallich's Herbarium (from which fragments were sent to Wight) is the only one known. It is evidently near *Holostemma* and *Asclepias* itself.

21. RAPHISTEMMA, Wall.

Twining glabrous shrubs. *Leaves* opposite, membranous. *Cymes* axillary, umbelliform, long-peduncled; flowers large, white, long-pedicelled. *Calyx* 5-glandular within. *Corolla* campanulate, 5-fid; lobes spreading, twisted in bud and overlapping to the right. *Coronal-scales* 5, membranous, adnate to the column, produced into long slender linear ligules. *Column* large, anthers with an inflexed membranous tip; pollen-masses one in each cell, not compressed, pendulous, waxy. *Stigma* depressed, flat, 2-lobed in the middle. *Follicles* thick, acute, smooth. *Seeds* comose. **DISTRIB.** Species 2; Asiatic.

1. **R. pulchellum**, Wall. *Pl. As. Rar.* ii. 50, t. 163, and *Cat.* 8221 A.; leaves cordate acuminate, flowers 1-1 $\frac{1}{2}$ in. long. *Wight Contrib.* 55. *Dene. in DC. Prodr.* viii. 516. *Pavt. Fl. Gard.* iii. t. 101; *Pavt. Mag.* xiv. 27 with fig.; *Fl. des Serres*, t. 223. *Asclepias pulchella*, Roxb. *Fl. Ind.* ii. 54.

SIKKIM HIMALAYA, alt. 2000 ft., J.D.H. ASSAM, SILHET and CACHAR, *Hamilton*, &c. *PEGU*, Wallich. *MOULMEIN*, *Parish*.

Branches slender, smooth, herbaceous. *Leaves* 3-7 in., sinus at base wide, midrib glandular at the base above; petiole 2-5 in. *Cymes* 4-6 fl'd.; peduncle 4-5 in.; pedicels very slender, 1 $\frac{1}{2}$ -2 in. *Sepals* broad, very variable in size. *Corolla* thick, pure white. *Follicles* (from a drawing) solitary? 6 by 1 $\frac{1}{2}$ in. diam., sharply deflexed from the very base, fusiform, turgid, terete, green, slightly upcurved.—Wallich's 8221 B. from Finlayson seems to be *R. Hooperianum*, a native of Java and Siam.

22. PENTATROPIS, Br.

Twining slender herbs or undershrubs. *Leaves* opposite, small. *Cymes* umbelliform, axillary; pedicels slender. *Flowers* small, purplish. *Calyx* 5-partite. *Corolla* rotate, 5-fid; lobes elongate, overlapping to the right, twisted to the left. *Corona* of 5 laterally compressed scales adnate vertically to the backs of the anthers with free tips and spurred bases. *Column* short; anther-tips inflexed; pollen-masses one in each cell, not compressed, pendulous, waxy. *Stigma* hardly umbonate. *Follicles* smooth. *Seeds* comose. **DISTRIB.** Species 8; tropical Asiatic, African, and Australian.

1. **P. spiralis**, *Dene. in Ann. Sc. Nat.* 1838, 327, t. 11 E. and in *DC. Prodr.* viii. 536; glabrous, leaves ovate lanceolate or oblong base rounded or cordate, corolla-lobes ovate-lanceolate elongate caudate. *Edgew. in Journ. Linn. Soc.* vi. 204, t. 1, f. 9; *Boiss. Fl. Orient.* iv. 58. *P. microphylla*, *Wall. Cat.*

8213 D. *Oxystelma*? *caudatum*, *Herb. Ham.* *Asclepias spiralis*, *Forsk. Fl. Eg. Arab.* 49.

The PANJAB, SCIND, and Eastwards to the Jumna river. *DISTRIB.* Affghanistan and Westwards to the Red Sea and Nubia.

Leaves 1-1½ in., very variable in breadth, obtuse or acute, usually apiculate, coriaceous, nerves obscure; petiole ½-¾ in. *Peduncles* very short or 0; pedicels capillary, top obconic. *Calyx* minute. *Corolla* green, ½ in. diam.; segments narrowed from a triangular base. *Follicles* 2½-3 in., fusiform, narrowed to the base and to the long straight rather slender point. *Seeds* ¼ in. long, ovate, flat, broader end crenate.

2. **P. microphylla**, *Wight & Arn. Contrib.* 52; glabrous, leaves oblong ovate or rounded, base rounded or cordate, corolla-segments triangular-lanceolate obtuse. *Wight Ic.* t. 352; *Wall. Cat.* 8213, excl. D.; *Dalz. & Gibs. Bomb. Fl.* 149; *Grah. Cat. Bomb. Pl.* 120; *Dcne. in DC. Prodr.* viii. 536. *Asclepias microphylla*, *Roxb. Fl. Ind.* ii. 35; *Roth Nov. sp.* 177? *Cynanchum acuminatum*, *Thunb. Obs. in Cynanch.* 5; *Dcne. l.c.* 548. *Eutropis*, gen. nov. *Falconer in Proc. Linn. Soc.* i. 15.

BENGAL, in the Sunderbunds; PEGU; DECCAN PENINSULA, from Bombay southwards. CEYLON, not uncommon.

Habit and general characters of *P. spiralis*, but the flowers are much smaller, and the corolla-lobes have not the long tails.

23. **DÆMIA**, Br.

Twining pubescent or tomentose undershrubs. *Leaves* opposite, cordate. *Cymes* axillary, racemiform or corymbiform, pedicels filiform. *Sepals* glandular within. *Corolla* greenish-white, tube short infundibular; lobes large, broadly ovate, spreading, overlapping to the right. *Corona* of an outer annular 5-10-crenate or -lobed membrane, and 5 laterally compressed scales vertically adnate to the anthers and spurred behind, with free long subulate tips. *Column* large, anther-tips inflexed; pollen-masses one in each cell, subcompressed, pendulous, waxy. *Follicles* echinate. *Seeds* comose.—*DISTRIB.* Species 6; Asiatic and African.

D. extensa, Br. in *Mem. Wern. Soc.* i. 50; subhispidly hairy or glabrate, leaves membranous broadly ovate acuminate deeply cordate pubescent beneath, lobes rounded incurved, peduncles long racemose, corolla ciliate, follicles clothed with long soft spines. *Wight Contrib.* 59, and *Ic.* t. 596; *Wall. Cat.* 8231, excl. F.; *Dalz. & Gibs. Bomb. Fl.* 150; *Grah. Cat. Bomb. Pl.* 122; *Dcne. in DC. Prodr.* viii. 544. *Cynanchum extensum*, *Ait.*; *Jacq. Ic. Rar.* t. 54. *C. cordifolium*, *Retz. Obs.* ii. 15. *C. echinatum*, *Thunb. Obs. in Cynanch.* 8; *Dcne. l.c.* 549. *Asclepias echinata*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 44. *Raphistemma ciliatum*, *Hook. f. in Bot. Mag.* t. 5704.

Throughout India; from the Salt-range and the N.W. HIMALAYA (ascending to 3000 ft.) to LOWER BENGAL and CEYLON (not seen from the Malay Peninsula, Birma, or Pegu).—*DISTRIB.* Affghanistan.

A fetid climber, hairs on stem spreading. *Leaves* 2-4 in. long and broad; petiole 2-4 in. *Peduncles* 2-6 in.; pedicels capillary, ½-2 in. *Sepals* small, ovate, pubescent. *Corolla* ¾ in. diam., pale yellowish green and red. *Column* large, tips of inner coronal processes often twisted together. *Follicles* 1½-2 in., lanceolate, beaked. *Seeds* ¼ in. long, broadly ovate, pubescent, margin quite entire.

24. **ADELOSTEMMA**, Hook f. *Gen. Nov.*

A slender glabrous twiner. *Leaves* opposite, long-petioled, cordate. *Flowers* small, in axillary peduncled corymbiform cymes. *Sepals* lanceolate. *Corolla*

campanulate, glabrous, shortly 5-lobed; lobes erecto-patent, overlapping to the right. *Corona* 0. *Column* very shortly stipitate, conical, 5-angled; anthers with very long oblong membranous tips; pollen-masses one in each cell, ovoid, pedicelled, waxy, corpuscles large. *Stigma* clavate, tip exserted, obtuse.

1. **A. gracillimum**, *Hook. f. Ic. Pl. t. 1427.* *Cynanchum gracillimum*, *Wall. in Wight Contrib.* 57.

BURMA; at Segaeen, *Wallich.*

Leaves in distant pairs, $1\frac{1}{2}$ – $2\frac{1}{2}$ by 1 – $1\frac{1}{2}$ in., very membranous, acuminate; basal lobes rounded, incurved with a broad sinus; nerves very slender; petiole 1 – $1\frac{1}{2}$ in. filiform. *Cymes* puberulous; peduncles shorter than the petioles, pedicels $\frac{1}{10}$ – $\frac{1}{4}$ in. *Sepals* half as long as the corolla, which is $\frac{1}{2}$ in. long, pale and quite glabrous inside and out.—I find no traces of the 5-fid tubular corona at the base of the stipes of the column described by Wight.

25. **HOLOSTEMMA**, *Br.*

Twining glabrous shrubs. *Leaves* opposite, membranous, cordate. *Cymes* axillary, few-fl'd.; flowers large, purple. *Sepals* eglandular. *Corolla* subrotate; lobes thick, ovate, overlapping to the right. *Corona* low, annular, 10-lobed, fleshy. *Anthers* very large, oblong, horny, shining, cohering in a 10-winged column, tip small inflexed membranous; pollen-masses one in each cell, elongate, falcate, compressed, pendulous, waxy, pedicels long black. *Stigma* included, 5-winged. *Follicles* short, thick, smooth, acute. *Seeds* comose.—DISTRIB. Two Indian species.

H. Rheedel, *Wall. Pl. As. rar. ii. 51*, and *Cat. 4469*; leaves acuminate basal lobes rounded, flowers subglobose red-purple and white. *Wight Contrib.* 55, and *Ic. t. 597*; *Dene. in DC. Prodr. viii. 532.* *H. fragrans*, *Wall. l. c.*; *Dene. l. c.*; *Dalz. & Gibs. Bomb. Fl. 148*; *Grah. Cat. Bomb. Pl. 121.* *H. Brunonianum*, *Royle Ill. 276. t. 66*; *Dene. l. c. 533.* *H. Adakodien*, *Roem. & Sch. Syst. vi. 95.* *Asclepias annularis*, *Roxb. Fl. Ind. ii. 37.* *Sarcostemma annulare*, *Roth Nov. sp. 178.* *Gomphocarpus volubilis*, *Herb. Ham. (in Wight l. c.)*—*Rheede Hort. Mal. ix. t. 7.*

TROPICAL HIMALAYA, from Sirmore to Sikkim, alt. 3–5000 ft. DECCAN PENINSULA, from the Circars and Canara southwards. PEGU and BURMA.

Quite glabrous, or the leaves faintly puberulous. *Leaves* 3–6 in., basal lobes spreading or incurved and meeting; petiole 1–3 in., glandular at the base of the midrib above. *Cymes* umbelliform or in irregular racemes; peduncles 1–2 in.; pedicels as long. *Corolla* 1 – $1\frac{1}{2}$ in. diam.; lobes subacute, incurved, white on the back and margin. *Follicles*, according to Rheede's figure, like those of *Raphistemma*.—Sprengel is given as the authority for the name *H. Rheedei*, on the supposition that it is his *H. Rheedianum*, which being described as erect with oblong cuspidate strongly nerved leaves must be a very different plant. As Sprengel's other species, *H. Candolleana*, is a *Fischeria*, his genus must be abandoned.

26. **CYNANCHUM**, *Linn.*

Erect or twining herbs or shrubs. *Leaves* opposite, rarely whorled. *Cymes* axillary, umbelliform racemose or subpaniculate; flowers small, greenish or purplish. *Calyx* 5-partite. *Corolla* rotate, 5-partite, lobes overlapping to the right or valvate. *Corona* adnate to the base of the column, 5-partite or cupular or campanulate, variously toothed or lobed, with or without scales or tubercles on the inner face opposite the lobes. *Anthers* sessile or stipitate, tip membranous inflexed; pollen-masses one in each cell, not compressed, pendulous, waxy. *Stigma* flat, umbonate or apiculate. *Follicles* terete or shortly 2-winged, elon-

gate, moderately ventricose, smooth (in *C. corymbosum* densely clothed with soft spines). *Seeds* comose.—**DISTRIB.** Species about 100; tropical and temperate.

I cannot retain *Vincetoxicum* as distinct from *Cynanchum*; the presence or absence of processes or scales within the corona affords no character (see *C. acutum*). The corona itself affords very inconstant characters even for many of the species.

* Stem erect. Corona simple, 5-lobed or -partite, lobes without internal processes.

1. ***C. Vincetoxicum***, *Pers.*; pubescent or glabrate, leaves broadly cordate or ovate acute, cymes sessile or peduncled, flowers corymbose or paniculate, corolla yellow, segments glabrous or nearly so, coronal-lobes triangular oblong or rounded. *C. Kenouriense*, *Wight Contrib.* 58. *Vincetoxicum officinale*, *Moench*; *Boiss. Fl. Orient.* iv. 54; *Dcne. in DC. Prodr.* viii. 524. *V. Kenouriense*, *Dcne. l.c.* 525. *Asclepias Vincetoxicum*, *Linn.*

TEMPERATE HIMALAYA; from Kashmir to Sikkim, alt. 7–11,000 ft.—**DISTRIB.** Westwards to Norway and Spain.

Stem 6–10 in., and leaves beneath usually pubescent, sometimes glabrous; leaves broader, greener, shorter petioled and less coriaceous than in the two following species. The coronal-lobes are very variable indeed.

2. ***C. glaucum***, *Wall. in Wight Contrib.* 58; erect, hoary or puberulous pale or glaucous, leaves ovate oblong lanceolate or cordate, cymes usually sessile, flowers umbelled, corolla yellow segments hirsute or bearded within, coronal-lobes 5 rounded broader than long fleshy. *Wall. Cat.* 8229. *Vincetoxicum canescens*, *Dcne. in DC. Prodr.* viii. 523; *Boiss. Fl. Orient.* iv. 52.

TEMPERATE HIMALAYA, from Nepal Westwards, alt. 5–9000 ft. WESTERN TIBET, alt. 10–12,000 ft.—**DISTRIB.** Afghanistan and westward to the Greek Archipelago.

Stem 6–18 in., erect, flexuous; rootstock with dense fascicles of roots as in *C. Vincetoxicum*. *Leaves* 1–3 by $1\frac{1}{2}$ – $2\frac{1}{2}$ in., extremely variable in length and breadth, coriaceous, acute acuminate or apiculate, nerves very oblique; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Cymes* pubescent, few or many-fld.; pedicels short. *Corolla* $\frac{1}{2}$ in. diam., very variable in size, segments subacute. *Coronal-lobes* variable. *Follicles* 2–4 in., slender. *Seeds* $\frac{1}{4}$ – $\frac{1}{2}$ in. long, broadly ovoid, concavo-convex.—Boissier says that *C. glaucum* differs from *canescens* in the narrower leaves, few-fld. cymes, and smaller corolla with ovate segments, but none of these characters hold good. In some Tibetan specimens the coronal-lobes are narrow, and the filaments form a rather long column.

3. ***C. Arnottianum***, *Wight Contrib.* 58; erect, puberulous or hoary, leaves ovate oblong or lanceolate, cymes sessile, corolla dark purple, segments hirsute or bearded within, coronal-lobes 5 fleshy oblong or rounded. *Vincetoxicum Arnottianum*, *Wight Ic.* t. 1614; *Dcne. in DC. Prodr.* viii. 523; *Boiss. Fl. Orient.* iv. 52. *V. montanum*, *Dcne. l.c.* 525. *V. luridum*, *Stocks mss.*

WESTERN HIMALAYA; Kashmir, alt. 6–8000 ft., *Royle, &c.*—**DISTRIB.** Beluchistan.

Habit and foliage of *C. glaucum*, with the leaves sometimes whorled, and smaller dark purple flowers. I suspect that it is only a variety of that plant, and both of *C. Vincetoxicum*.

** Stem twining. Corolla glabrous. Corona without internal processes.

† *Peduncle of cyme* short.

4. ***C. ovalifolium***, *Wight Contrib.* 57; twining, glabrous, leaves elliptic or oblong acuminate base rounded or subacute, peduncles short, flowers racemose or panicled, corona short irregularly toothed, teeth often curved.

Wall. Cat. 8226. *Cynoctonum ovalifolium* and *C. Blumei*, Dcne. in DC. Prodr. viii. 529, 528. *Holostemma læve*, Blume Bijl. 1055.

PENANG, Wallich; MALACCA, Maingay.—DISTRIB. JAVA.

Leaves 3-4 by $1\frac{1}{2}$ in., coriaceous, pale beneath, nerves spreading; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. Sepals ovate. Corolla $\frac{1}{4}$ in. diam.; segments broadly ovate, quite glabrous. Column sessile. Follicles 5 in. long, thickly coriaceous, terete, tapering to a narrow but stout point, tip recurved. Seeds $\frac{1}{2}$ in., very broad and flat.—“Produces an excellent caoutchouc” (Wallich). Making allowance for the variability of the corona in this genus, I am disposed to unite with this the *C. formosanum*, Maxim. (Diagn. Pl. Nov. Asiat. 801), and Cuming’s No. 774 from the Philippines.

5. **C. alatum**, Wight & Arn. Contrib. 56; twining, puberulous or glabrate, leaves linear ovate or oblong acute base contracted cordate pale beneath, umbels shortly peduncled pubescent, corona short cupular plaited irregularly crenate, follicles narrowly 2-winged. *Cynoctonum alatum*, Dcne. in DC. Prodr. viii. 529; Wight Ic. t. 1280.

NILGHERY MTS., Gardner, &c. TRAVANCORE, at Coimbatore, Wight.

Stem slender, sometimes softly pubescent. Leaves $1\frac{1}{2}$ - $2\frac{1}{2}$ in., rarely more, very variable in breadth, glabrous or puberulous above; basal lobes rounded, sinus open or almost closed; petiole $\frac{1}{2}$ - $\frac{2}{3}$ in. Umbels 1 in. diam., peduncle and pedicels pubescent. Calyx lobes ovate. Corolla $\frac{1}{4}$ in. diam., glabrous, segments oblong-ovate. Follicles 2- $2\frac{1}{2}$ in., dorsally compressed.—Wight’s figure represents the whole plant as far too hairy; he gives Coimbatore as the only habitat, but his specimens are marked from the Nilgherries, as are all the others I have seen (Gardner, Hohenacker, Schmidt, G. Thomson). In the “Contributions” he gives Coromandel as the only native country, which is unlikely. The plaited corona has obscure thickenings on some of the folds of the inner face which are rudimentary inner processes.

6. **C. pauciflorum**, Br. in Mem. Wern. Soc. i. 45; twining, nearly glabrous, leaves ovate or ovate-lanceolate acuminate, base broadly cordate, lobes rounded, umbels shortly peduncled and flowers glabrous, corona much longer than the sessile column 5-lobed with 5 intermediate teeth, follicles terete. Wight Contrib. 56; Ic. t. 354; Wall. Cat. 8223; Dalz. & Gibs. Bomb. Fl. 148? *C. inconspicuum*, Griff. Notul. iv. 66, and Ic. Pl. Asiat. t. 401. *Cynoctonum pauciflorum*, Dcne. in DC. Prodr. viii. 528. *Periploca tunicata*, Retz. Obs. ii. 15; Willd. Phytogr. i. 7, t. 5, f. 3. *Asclepias tunicata*, Roxb. Hort. Beng. 20, and Fl. Ind. ii. 35.

DECCAN PENINSULA; from the Concan southwards to Travancore. CEYLON, very common in the Central Province.

Stem slender. Leaves 2- $2\frac{1}{2}$ by $1-1\frac{1}{2}$ in., broadest at the base, rather coriaceous; petiole $\frac{1}{2}$ -1 in., glabrous or puberulous; stipular leaves rounded, $\frac{1}{4}$ in. diam. or less. Peduncle shorter than the petiole. Flowers $\frac{1}{4}$ in. diam. Sepals lanceolate. Corona nearly equalling the corolla, campanulate, plicate, large lobes sometimes 2-fid at the tip. Follicles $2\frac{1}{2}$ in. long, thinly coriaceous, beak slender. Seeds orbicular, flat, $\frac{1}{4}$ in. diam.—This at first sight resembles *C. alatum*, but the leaves broad at the base at once distinguish it. The name *pauciflorum* is not very distinctive.

7. **C. Wallichii**, Wight Contrib. 56; twining, glabrous, leaves ovate or oblong-lanceolate finely acuminate membranous base deeply cordate with rounded decurved or incurved lobes, umbels shortly peduncled and flowers glabrous, corona campanulate plicate shortly 5-6-lobed lobes toothed. Wall. Cat. 8224. *Cynoctonum Wallichii*, Dcne. in DC. Prodr. viii. 528.

KHASIA AND JYNTEA MTS.; at the foot of the hills, Wallich, &c.

Stems slender. Leaves 3-5 by 1-2 in., pale beneath, nerves very oblique, basal sinus rounded, open or almost closed by the incurved lobes; petiole $1-1\frac{1}{2}$ in. Peduncles much shorter than the petioles, pedicels slender. Sepals ovate. Corolla

greenish; segments oblong-lanceolate, longer than the corona, which is membranous and pale. *Filaments* forming a column longer than the anthers.

8. **C. Callialata**, *Ham. in Wight Contrib.* 56; twining, glabrous or very sparsely hairy, leaves coriaceous from rounded or oblong or ovate to linear acuminate glaucous beneath, base contracted cordate, nerves spreading obscure, umbels shortly peduncled nearly glabrous flowers glabrous, corona short cupular irregularly 5-toothed and crenate, follicles 2-winged. *Wall. Cat.* 8225; *Wight Ic.* t. 1279. *C. auriculatum*, *Herb. Ham.* *C. angustifolium*, *Wight & A. l. c.* 57. *Cynoctonum Callialata* and *angustifolium*, *Dcne. in DC. Prodr.* viii. 528, 529. *Periploca tunicata*, *Herb. Madr.*

BEHAR; summit of Parusnath, *J. D. H.*, &c. DECCAN PENINSULA, from the Concan to Travancore. BURMA at Hengadah, *Wallich*.

Stem robust, glabrous or sparingly hairy. *Leaves* .3-5 in., very variable in breadth, basal lobes small rounded, sinus narrow, midrib broad, nerves very slender spreading; petiole $\frac{1}{2}$ -1 in. *Peduncles* shorter than the petioles. *Flowers* $\frac{1}{2}$ in. diam., quite glabrous. *Corona* follicles and seeds as in *C. alatum*.—Very closely allied to *C. alatum*, but quite distinct in the much larger size and glabrous habit.

†† *Peduncles of cyme long, slender.*

9. **C. corymbosum**, *Wight Contrib.* 56; quite glabrous, leaves ovate-or orbicular-cordate cuspidate or acuminate membranous glaucous beneath, basal lobes rounded decurved or incurved, peduncles long equalling the long petioles, corona campanulate plicate with longitudinal thickenings within, mouth irregularly crenate, anthers sessile, follicles large clothed densely with long fleshy spines. *Wall. Cat.* 8222, 8231, *F.* *Cynoctonum corymbosum*, *Dcne. in DC. Prodr.* viii. 528.

SEKKIM HIMALAYA, alt. 2-4000 ft. *Clarke*. KHASIA MTS., SILHET and CACHAR, alt. 1-3000 ft. *Wallich*, &c. PENANG, *Wallich*. NICOBAR ISLDS. *Kur.*

Stem rather stout. *Leaves* 2-6 by 1-3 in., membranous, white beneath; petiole $1\frac{1}{2}$ -3 in. *Peduncle* slender; flowers racemose or corymbose, $\frac{1}{2}$ - $\frac{1}{2}$ in. diam. quite glabrous. *Sepals* ovate, obtuse. *Corolla-segments* obtuse. *Corona* large, much longer than the short column, with internal thickenings as in *C. alatum*. *Seeds* $\frac{1}{2}$ in. long, orbicular-ovoid, with a wrinkled nucleus surrounded by a very broad wing deeply crenate at the lower end.—The large lanceolate almost fleshy follicles, 4-5 by $1-1\frac{1}{2}$ in. diam., densely clothed with soft reversed hooked spines $\frac{1}{2}$ - $\frac{1}{2}$ in. long, are quite peculiar, and recall those of *Damia*. It is remarkable that this species, though collected both in the Nicobar Islands and Penang, should never have been found in Burma or the Malay Peninsula.

10. **C. deltoideum**, *Hook. f.*; twining, glabrous or nearly so, leaves deltoid-cordate acuminate membranous, peduncles slender, flowers small umbelled glabrous, corona 10-lobed to the middle, 5 lobes large ovate obtuse, 5 intermediate very small rounded.

KHASIA MTS.; Kalapanee and Moflong, alt. 5-6000 ft., *J. D. H. & T. T.*

Stem slender. *Leaves* 2-3 in. long and nearly as broad, pale beneath, basal lobes large rounded, sinus broad; petiole $1-1\frac{1}{2}$ in. *Umbels* many-flid.; peduncle longer than the petiole, and pedicels hairy. *Sepals* ovate, glabrous. *Corona* concealing the sessile column, the large lobes elliptic and thickened, smaller membranous.

*** *Stem* twining or suberect. *Corolla* glabrous or pubescent. *Corona* with processes on its inner face (sometimes absent in *C. acutum*).

† *Corolla glabrous within.*

11. **C. acutum**, *Linn.*; *Boiss. Fl. Orient.* iv. 60; twining, glabrous or nearly so, leaves narrowed from a broad 3-lobed or hastately cordate base

linear or lanceolate acuminate, peduncle long or short, flowers umbelled or corymbose, corolla glabrous, corona variable, follicles long flattened, seeds narrowly oblong. *Dcne. in DC. Prodr.* viii. 547. *C. longifolium*, *Martens*; *Dcne. l. c.*

WESTERN TIBET, alt. 11–13000 ft., *Thomson &c.*—DISTRIB. Afghanistan, Central and Western Asia, Mediterranean region to Spain.

Leaves 1–5 in. long, very variable in width and in the size and spread of the basal lobes which are rounded at the tip and sometimes $1\frac{1}{2}$ in. long; petiole $\frac{1}{2}$ – $1\frac{1}{2}$ in. *Peduncle* equalling or exceeding the petiole, pedicels pubescent. *Sepals* ovate, usually pubescent. *Corolla* $\frac{1}{4}$ – $\frac{3}{4}$ in. diam.; segments ovate-oblong. *Corona* sometimes quite simple and cleft deeply into triangular lanceolate erect or spreading simple lobes, sometimes cupular and 5-lobed or with 2–5 subulate lobes, and furnished within with a tongue-shaped process. *Anthers* sessile, or stalked by the column of filaments. *Follicles* quite unlike those of its congeners, 4–6 in. long, $\frac{1}{3}$ – $\frac{1}{2}$ in. diam., thinly coriaceous, straight or slightly curved, somewhat compressed, hardly turgid, narrowed to a slender point. *Seeds* $\frac{1}{4}$ in. long flat.

12. **C. Heydel**, *Hook. f.*; twining, nearly glabrous, leaves lanceolate acuminate deeply cordate the lobes incurved often overlapping, sinus long narrow, peduncle slender, flowers corymbose, corolla glabrous, corona campanulate, mouth with 5 long subulate exerted processes each with a short process at its inner base.

WESTERN TIBET; Ladak, between Saspo and Kala-tse, *Heyde*.

I have seen only Heyde's specimens, which differ entirely from *C. acutum* in the long incurved basal lobes of the leaf and the long teeth of the corona projecting beyond the corolla.

13. **C. Dalhousiæ**, *Wight Contrib.* 55; twining, nearly glabrous, leaves elongate linear-lanceolate acuminate base cordate, lobes rounded, peduncles short, flowers umbelled quite glabrous, corona campanulate 5–10-lobed with a low conical process opposite to each lobe near the base within. *Dcne. in DC. Prodr.* viii. 548.

WESTERN TEMPERATE HIMALAYA, from Sirmore to Kumaon, alt. 5–7000 ft.

Stem slender, with sometimes a line of hairs. *Leaves* 3–7 by $\frac{1}{2}$ –1 in., membranous, basal lobes short rounded pointing backwards, sinus open, nerves very oblique; petiole $\frac{1}{3}$ – $\frac{3}{4}$ in. *Peduncles* shorter than the petioles; pedicels slender, glabrous or puberulous. *Flowers* $\frac{1}{3}$ in. diam., pale green. *Sepals* ovate. *Corona* equalling the corolla.

†† *Corolla pubescent within.*

14. **C. auriculatum**, *Herb. Royle*; *Wight Contrib.* 58; twining, puberulous, leaves broadly ovate to ovate-lanceolate acuminate deeply cordate membranous, basal lobes incurved rounded, peduncles long, flowers corymbose, corolla pubescent within, corona short cupular deeply 5-lobed, lobes oblong obtuse with adnate fleshy processes on their inner faces. *Endotropis auriculata*, *Dcne. in DC. Prodr.* viii. 546.

TEMPERATE HIMALAYA; from Kashmir to Sikkim, alt. 6–12000 ft.

Leaves usually large, 4–6 by $2\frac{1}{2}$ – $3\frac{1}{2}$ in., very membranous, basal lobes sometimes meeting or overlapping; petiole 1–2 in. *Peduncles* 2–4 in., often stout; pedicels slender; flowers numerous, yellow, $\frac{1}{3}$ – $\frac{3}{4}$ in. diam. *Sepals* lanceolate. *Corolla-segments* linear-oblong or lanceolate. *Follicles* 4 by $\frac{1}{4}$ in., straight. *Seeds* $\frac{1}{4}$ in. long, flat, flask-shaped with a crenulate broader end.—Nearly allied to *C. Wilfordi*, Maxim. (*E. caudata*, *Miquel*; *Symphyoglossum hastatum*, *Turczan. in Bull. Soc. Imp. Nat. Mosc.* 1848, i. 255), of China and Japan, which has smaller flowers.

15. **C. Roylei**, *Wight Contrib.* 58; suberect, softly pubescent, leaves

small deltoid-ovate or -lanceolate from a broadly cordate base, finely acuminate, sinus open, peduncles very long, flowers corymbose, corolla pubescent, corona short 5-lobed lobes rounded with a tubercle on their inner faces. *Endotropis* Roylei, *Dcne. in DC. Prodr.* viii. 547.

WESTERN HIMALAYA; Kunawur, *Royle, Jacquemont, &c.*

A span to a foot high, branches flexuous. *Leaves* 1-1½ in., pubescent on both surfaces; petiole ¼-½ in. *Peduncles* sometimes twice as long as the leaves, pedicels slender; flowers numerous, ⅓-½ in. diam. *Sepals* lanceolate. *Corolla* pubescent within and without. *Follicles* 2 in. long, fusiform, turgid, puberulous. *Seeds* ¼ in. long, orbicular-obovate, flat.

16. **C. Jacquemontianum**, *Dcne. in Jacquem. Voy. Bot.* 106, t. 112; nearly glabrous, suberect, much branched, leaves small lanceolate from a broadly cordate base finely acuminate, sinus open, peduncles very long, flowers corymbose, corolla pubescent within only, corona equalling the corolla 5-cleft, lobes subulate-lanceolate entire or cleft with a small flat process below them. *C. humile*, *Herb. Falconer*. *Endotropis Jacquemontii*, *Dcne. in DC. Prodr.* viii. 547.

WESTERN HIMALAYA; Kashmir, *Falconer, Jacquemont*.

A span to 2 ft. high. *Branches* slender, spreading, or erect from a woody stock. *Leaves* 1-1½ by ½-⅔ in., sometimes faintly puberulous; petiole ¼-½ in. *Peduncles* sometimes twice as long as the leaves; pedicels slender; flowers numerous, ¼-½ in. diam. *Sepals* ovate.

DOUBTFUL SPECIES.

C. HEYNEANA, *Roem. & Sch. Syst.* vi. 101; *Dcne. in DC. Prodr.* viii. 549. *Periploca reticulata*, *Roth. mss.*—May be *C. Callialata*.

C. PEDUNCULATUM, *Thunb. Obs. in Cynanch.* 5; *Dcne. in DC. Prodr.* viii. 548, from Ceylon is undeterminable.

C. TOMENTOSUM, *Lamk.*, is probably *Tylophora asthmatica*, according to Wight (*Contrib.* 51, in note).

27. **SARCOSTEMMA**, Br.

Trailing leafless jointed shrubs with pendulous branches. *Cymes* terminal or at the nodes, umbelliform; peduncle clavate. *Flowers* small. *Calyx* 5-fid. *Corolla* rotate, 5-fid; lobes broad, overlapping to the right. *Corona* cup-shaped, membranous, adnate to the base of the column, 10-crenate or -lobed, the lobes opposite the stamens bearing large fleshy processes which are adnate to the backs of the anthers. *Column* short; anther-tip inflexed; pollen-masses one in each cell, pendulous, slender, waxy. *Stigma* conical or shortly fusiform. *Follicles* smooth. *Seeds* comose.—*DISTRIB.* Species 5 or 6; Asiatic, African, and Australian.

I am unable to determine the described species of this genus from dried specimens. There are probably differences in the fruit and seeds between the four supposed Indian ones, but I have no sufficient materials to verify this, and those may be reduced to two.

1. **S. brevistigma**, *Wight & Arn. Contrib.* 59; umbels terminal, flowers whitish, column very short, inner processes of the corona almost concealing the anthers, stigma very shortly conical, follicles slightly diverging thinly coriaceous narrowed to the base. *Wight Ic.* t. 595; ? *Wall. Cat.* 8233; *Dalz. & Gibs. Bomb. Fl.* 149; *Dcne. in DC. Prodr.* viii. 538, and in *Jacquem. Voy. Bot.* 107, t. 113. *Asclepias acida*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 31. *A. aphylla*, *Roxb. mss.*

DECCAN PENINSULA; not uncommon in dry rocky places. BURMA, Wallich.

Stem as thick as a goose-quill, green; joints 4-6 in. long. Umbels sessile, 1-1½ in. diam., many-fld.; pedicels ½ in., puberulous. Sepals small, ovate. Corolla ½ in. diam., pale greenish-white; lobes ovate or oblong, obtuse. Corona and column together rounded, very obtuse. Follicles 4-5 by ½ in., thinly coriaceous, tip fine straight. Seeds flattened, ⅓-¼ in. long, ovate.

2. **S. Brunonianum**, Wight & Arn. *Contrib.* 59; umbels chiefly lateral, flowers yellow, column very short, inner processes of corona almost concealing the anthers, stigma very shortly conical, follicles as in *S. brevistigma*. Wight *Ic. t.* 1282; Dcne. in *DC. Prodr.* viii. 538; *Bot. Mag.* t. 6002.

DECCAN PENINSULA, ascending to 4000 ft. in the Nilgherries. CEYLON.

Apparently more slender than *S. brevistigma*, with smaller, chiefly lateral, umbels of bright yellow flowers.

3. **S. intermedium**, Dcne. in *DC. Prodr.* viii. 538; umbels terminal and axillary, flowers white, column ovoid, inner processes of corona oblong subacute, stigma fusiform simple or 2-fid, follicles broad at the base narrowed to the tip thinly coriaceous. *S. viminalis*, Wight & Arn. *Contrib.* 59; Wight *Ic. t.* 1281; ? Wall. *Cat.* 8232, not of Brown.

DECCAN PENINSULA, in arid jungles.

The elongate column, narrower dorsal processes of the anthers and longer stigma are the characters of this. The follicles when in pairs spread but do not divaricate as in the following.

4. **S. Stocksii**, Hook. *f.*; umbels terminal, column very short, inner processes of corona almost concealing the anthers, stigma very shortly conical, follicles short spreading horizontally poinard-shaped nearly cylindric subacute hard thickly coriaceous. *S. brachystigma* (by error for *brevistigma*), Hook. *Ic. Pl.* t. 861.

SCIND, Stocks.

Apparently a much more robust plant than any of the preceding, with the flowers of *S. brevistigma*, but widely different follicles, which are 2½-3½ in. long, rigid, almost woody, cylindric but tapering very gradually from the base to the straight stout point; peduncle very short and thick; the seeds are nearly ½ in. long, linear-oblong, thicker than in its congeners.

TRIBE 4. MARSDENIÆ.

28. SARCOLOBUS, Br.

Twining glabrous shrubs. Leaves opposite. Flowers small, crowded in axillary corymbiform cymes. Calyx 5-partite. Corolla sub-campanulate; lobes 5, ovate, overlapping to the right. Corona 0. Column very short; anthers broad, tip inflexed; pollen-masses one in each cell, erect, waxy, elongate, with long twisted pedicels. Stigma flat. Follicles thick, fleshy, globose and smooth, or oblong and 2-keeled. Seeds large, coma 0.—DISTRIB. Species 2-3; Malayan and E. Asiatic.

1. **S. globosus**, Wall. in *Asiat. Research.* xii. 568, t. 4, and *Cat.* 4468; leaves 3-4 in. oblong or ovate acuminate or obtuse and apiculate, corolla-lobes pubescent within, fruit large globose. Wight *Contrib.* 47, and *Ic. t.* 1273; Dcne. in *DC. Prodr.* viii. 625. *S. carinatus*, Griff. *Notul.* iv. 53, and in *Ic. Pl. Asiat.* t. 410 (not of Wall.).

SUNDERBUNDS and eastwards to MERGUI, MALACCA and the NICOBAR ISLANDS.

Branches stout. *Leaves* brown when dry, thinly coriaceous, nerves arched, base usually rounded; petiole $\frac{1}{2}$ –1 in., slender. *Peduncles* and *pedicels* very short. *Sepals* oblong, obtuse. *Corolla* $\frac{1}{2}$ – $\frac{1}{2}$ in. diam., pale purple within, lobes obtuse. *Anthers* very broad, shortly stipitate. *Fruit* globose, 4 in. diam.; pericarp very thick, brown. *Seeds* $\frac{2}{3}$ in. long, broadly ovate, flat with a thick raised border, dark brown.

2. ***S. carinatus***, Wall. in *Asiat. Research*. xii. 570, t. 5, and *Cat.* 4467; leaves 1–2 in. elliptic obovate lanceolate or linear-oblong obtuse or acute, corolla nearly glabrous within, fruit small ellipsoid. *Wight Contrib.* 47; *Dcne. in DC. Prodr.* viii. 625. *Sarcolobus* sp., *Griff. Notul.* iv. 55, and *Ic. Pl. Asiat.* t. 405.

SUNDERBUNDS and eastwards to MERGUI and the ANDAMAN ISLANDS.

A much smaller plant than *S. globosus*, more slender, with smaller narrower leaves very rarely 3 in. long, thicker in texture, the nerves very obscure, petiole $\frac{1}{8}$ – $\frac{1}{4}$ in., corolla smaller, yellow, with lines of brown dots; anthers sessile. *Fruit* 3 in., curved, turgid, beaked, with several narrow undulate keels, pale yellow, fleshy. *Seeds* $\frac{1}{2}$ in., like those of *S. globosus*.

29. **PENTASACME**, Wall.

Pendulous tufted glabrous herbs, with simple stems. *Leaves* opposite, subsessile, membranous, narrow. *Flowers* long, yellowish, in sessile axillary umbelliform cymes; pedicels filiform. *Calyx* 5-partite. *Corolla-tube* short, campanulate; lobes long, caudate, twisted, overlapping to the right. *Coronal-scales* 5, on the corolla-tube, entire or toothed. *Column* very short; anther-tips membranous; pollen-masses one in each cell, pedicelled, erect, ovoid, waxy, tips pellucid. *Stigma* included, conical or beaked. *Follicles* very slender, terete, straight, smooth. *Seeds* comose.—**DISTRIB.** Species 3–4; Indian and Chinese.

1. ***P. caudatum***, Wall. *Cat.* 8234; very slender, leaves linear-lanceolate caudate-acuminate, corolla-lobes triangular at the base suddenly ending in long almost filiform tails. *Wight Contrib.* 60; *Dcne. in DC. Prodr.* viii. 627.

KHASIA Mts., alt. 0–3000 ft., common. Patkoi Mts. in UPPER ASSAM, *Griffith*, *Pegu*, *McClelland*, *Kurz*.

Densely tufted, flaccid, stems 12–18 in., rarely forked, leafy throughout their length. *Leaves* 2–3 by $\frac{1}{4}$ – $\frac{2}{3}$ in., thin, bright green, nerves obscure. *Flowers* $\frac{1}{2}$ in. long, longer than the capillary pedicels. *Sepals* subulate. *Corolla-lobes* with obtuse tips; coronal-scales 4-fid. *Anther-tips* obtuse. *Stigma* obtuse. *Follicles* 2 $\frac{1}{2}$ –3 in., with long slender points. *Seeds* $\frac{1}{10}$ in. long, ovate, flat, red-brown.

2. ***P. Wallichii***, *Wight Contrib.* 60; leaves elliptic-lanceolate acuminate base acute, corolla-lobes gradually narrowed to the long obtuse tip. Wall. *Cat.* 8235; *Dcne. in DC. Prodr.* viii. 627; *Deless. Ic. Sel.* v. t. 87.

WESTERN HIMALAYA; Kumaon, alt. 3500 ft., *Madden*, &c. SILHET, *Wallich*. MISHMEE Mts., *Griffith*.

Habit of *P. caudatum*, but stems stouter; leaves 2–3 by $\frac{3}{4}$ –1 $\frac{1}{4}$ in., nerves beneath distinct, setulose; flowers much longer, with broader corolla-lobes; coronal-scales minute; anthers acuminate; stigma shortly beaked; follicles rather stouter; seeds much the same.

30. **GYMNEMA**, Br.

Twining shrubs or undershrubs. *Leaves* opposite. *Flowers* small, in crowded umbelliform cymes. *Calyx* 5-partite. *Corolla* subrotate, campanulate or urceolate; lobes thick, twisted, subvalvate or narrowly overlapping to the right. *Corona* 0, or of 5 fleshy processes adnate to the corolla-throat or tube.

Column short; anther-tips small, membranous; pollen-masses one in each cell; ovoid-oblong, waxy, pedicelled, erect. *Stigma* large, conical, clavate or capitate, exserted. *Follicles* slender or turgid, terete, smooth, acuminate. *Seeds* comose. —DISTRIB. Species 25; Asiatic, African, and Australian.

* Corolla-tube short, with fleshy coronal processes on the throat, the free points of which (except in *rotundatum*) protrude above the sinus, and are produced downwards on the tube as double villous ridges. Bracts obsolete.

1. **G. sylvestre**, Br. in Mem. Wern. Soc. i. 33; branches slender and petioles cymes and sepals finely closely pubescent, leaves 1-2½ in. elliptic or obovate acute rarely cordate glabrous or puberulous beneath, cymes small 2-nate peduncled nearly flat, corolla $\frac{1}{10}$ in. diam. lobes glabrous, follicles slender glabrous, seeds narrow. *Wight Contrib.* 44, and *Ic.* t. 349; *Wall. Cat.* 8184 A; *Dalz. & Gibs. Bomb. Fl.* 151; *Grah. Cat. Bomb. Pl.* 120; *Dcne. in DC. Prodr.* viii. 621. *G. melicida*, *Edgew. Banda Fl.* 50. *Periploca sylvestris*, *Willd. Sp. Pl.* i. 1252. *Asclepias geminata*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 45.

BANDA, *Edgeworth*. DECCAN PENINSULA; from the Concan to Travancore.—DISTRIB. Trop. Africa.

A stout large woody climber. *Leaves* rarely pubescent above, thinly coriaceous; petiole slender or stout, $\frac{1}{4}$ - $\frac{1}{2}$ in. *Cymes* $\frac{1}{2}$ in. diam., subglobose, pedicels slender. *Corolla-lobes* short. *Follicles* 2-3 by $\frac{1}{2}$ in., terete, rigid. *Seeds* $\frac{1}{2}$ in. long, narrowly ovoid-oblong, flat with a broad thin wing, pale brown.—The leaves in Wight's figure are unusually large.

VAR. *ceylanica*; leaves ovate base cordate softly pubescent on both surfaces. *G. sylvestre*, var. *Decaisneana*, *Thw. Enum.* 197, excl. *syn.*—Ceylon, ascending to 3000 ft.

2. **G. hirsutum**, *Wight & Arn. Contrib.* 44; branches petioles leaves on both surfaces and cymes densely softly pubescent, leaves 1½-2½ in. broadly ovate or cordate acute or acuminate, cymes 2-nate subsessile few- or many-flid., corolla $\frac{1}{4}$ in. diam., lobes thick ciliolate, follicles slender glabrous. *Wight Ic.* t. 1272; *Wall. Cat.* 8185; *Dcne. in DC. Prodr.* viii. 622. *G. Decaisneanum*, *Wight Ic.* t. 1271.

BEHAR; at Rotas, *J. D. H.*; Nilgherry Mts., *Wight, &c.*

Much stouter than *G. sylvestre*, with broader more ovate and cordate leaves softly pubescent on both surfaces with shorter thicker petioles, and much larger flowers, in more sessile cymes with shorter thicker pedicels.—The Behar specimen is in fruit only and may belong to *G. sylvestre*, though the leaves are pubescent on both surfaces. I have seen no ripe seeds of the Nilgherry plants. In Wight's figure of *G. Decaisneana*, the leaves are glabrous above, which is opposed to his description and specimens. The distinctions he indicates between this and *hirsutum* do not exist.

3. **G. molle**, *Wall. in Wight Contrib.* 45, and *Cat.* 8186; branches petioles leaves beneath and cymes finely pubescent, leaves ovate oblong or cordate acute or acuminate, cymes subsessile dense-flid., corolla $\frac{1}{2}$ in. diam. lobes ciliate, follicles woody broad turgid below the middle pubescent, seeds ovate. *Dcne. in DC. Prodr.* viii. 622.

UPPER BURMA; Irawaddi, near the Petroleum wells, and at Taong-dong, *Wallich.*

A stout climber. *Leaves* very variable, some 2-2½ by 1-1½ in., others 3 in. and as broad, deeply cordate, above glabrous or puberulous; petiole slender, $\frac{1}{4}$ - $\frac{1}{2}$ in. *Cymes* small, irregular. *Sepals* hirsute. *Corolla-lobes* thickened, glabrous. *Follicles* 2½-3 in., $\frac{1}{4}$ -1 in. broad at the thickest part. *Seeds* $\frac{1}{2}$ in. long, very different from those of the preceding species.—This is very near the Chinese *G. affine*, *Dcne.* (*G. parviflorum*, *Wall. Tent. Fl. Nep.* 50), which has broad seeds and similar follicles, but the flowers are larger. Though Upper Burma is beyond British India, the species is so likely to be found in the latter that I (as in like instances) introduce it.

4. **G. acuminatum**, *Wall. Tent. Fl. Nep.* 50; *Cat.* 8187; branches stout, petioles leaves beneath cymes and sepals densely tomentose, leaves 3-6 in. coriaceous ovate acuminate, cymes peduncled globose, corolla $\frac{1}{2}$ in. diam. lobes glabrous not ciliate, follicles turgid ovoid beaked woody, seeds large elliptic broadly winged. *Wight Contrib.* 45; *Dene. in DC. Prodr.* viii. 622. *Cynanchum acuminatum*, *Herb. Ham.* *Asclepias acuminata*, *Roxb. Hort. Beng.* 21, and *Fl. Ind.* ii. 55.

EAST BENGAL, *Griffith.* SILHET and TENASSERIM, *Wallich.* CHITTAGONG, *Roxburgh.* MALACCA, *Griffith,* *Maingay.*

A large climbing shrub, bark of old wood spongy and split (*Roxburgh*). *Leaves* coriaceous, rather shining above; petiole $\frac{1}{2}$ -1 in. *Calyx* villous. *Follicles* 3 in. long, base cordate, thickly woody, narrowed into a stout beak, glabrous. *Seeds* $\frac{2}{3}$ in. long, flat, wing broad membranous.

5. **G. latifolium**, *Wall. in Wight. Contrib.* 45, and *Cat.* 8188; branches stout petioles leaf-nerves beneath cymes and sepals finely pubescent, leaves large orbicular acute or cuspidate, cymes 2-nate peduncled very many-fld., globose, pedicels slender, corolla-lobes ciliolate thickened and puberulous, follicles slender punctate, seeds narrow. *Dene. in DC. Prodr.* viii. 623.

SILHET; BURMA, at Troglā and the Saluen river, *Wallich.*

Leaves 4-5 in. long and nearly as broad, base rounded or subacute, glabrous above except the puberulous midrib, pale beneath; nerves spreading; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* $\frac{1}{2}$ -1 in. diam.; peduncle $\frac{1}{10}$ - $\frac{1}{2}$ in.; pedicels very slender. *Sepals* broadly ovate, obtuse. *Corolla* $\frac{1}{10}$ in. diam. *Follicles* 3 in. long, thinly coriaceous. *Seeds* as in *G. sylvestre*.

6. **G. glabrum**, *Wight Contrib.* 45; branches stout and petioles leaf-nerves beneath and cymes and sepals finely pubescent, leaves large broadly ovate or oblong acuminate, cymes 2-nate peduncled globose many-fld., pedicels slender, corolla very minute, lobes glabrous not ciliate thickened, follicles fusiform. *Wall. Cat.* 8189; *Dene. in DC. Prodr.* viii. 623.

BURMA; at Taong-dong, *Wallich.*

Very similar in foliage to *G. latifolium*, but the leaves are hardly so rounded and the petioles 1-1 $\frac{1}{2}$ in. long; the flowers $\frac{1}{10}$ - $\frac{1}{12}$ in. diam., and the follicles are lanceolate in outline, 4 by 1 in., thinly woody, glabrous, smooth; the seeds broadly ovate $\frac{1}{2}$ in. long, flat.

7. **G. rotundatum**, *Thwaites Enum.* 197; branches petioles leaves beneath cymes and sepals tomentose, leaves long-petioled rounded-ovate obtusely acuminate subpilose above, petiole glandular, cymes 2-nate peduncled densely many-fld., sepals rounded, corolla-lobes not ciliate quite glabrous, coronal processes wholly below the sinus.

CEYLON; central province, alt. 3000 ft., *Thwaites.*

I have seen but one specimen; it differs from *G. latifolium* chiefly in the longer petioles, 1-1 $\frac{1}{2}$ in. and peduncles. The fruit is wanting to tell its affinity. It differs from all others of this section in the coronal processes having no free points between the sinus.

8. **G. lactiferum**, *Br. in Mem. Wern. Soc.* i. 33; branches petioles and nerves beneath glabrous or puberulous, leaves ovate oblong or lanceolate acuminate point often long, cymes peduncled and broadly oblong or rounded, sepals glabrous or sparsely hairy, corolla $\frac{1}{6}$ in. diam. lobes short ciliolate glabrous. *Wight Contrib.* 44; *Dene. in DC. Prodr.* viii. 622.

KHASIA MTS., MALAY PENINSULA, and CEYLON.—DISTRIB. Sumatra, Borneo.

A stout climber. *Leaves* 2-4 by $\frac{3}{4}$ -1 $\frac{3}{4}$ in., coriaceous, brown when dry; nerves

3-4 pairs, very oblique; petiole slender, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* few or many-fl., peduncle shorter than the petiole, flowers subglobose, $\frac{1}{8}$ in. diam. *Follicles* not seen.

VAR. 1. *lactiferum proper*; branches pubescent, leaves glabrous on both surfaces, sepals nearly glabrous. *G. lactiferum*, Br. l.c. *G. zeylanicum*, Dene. in DC. Prodr. viii. 622. *Asclepias lactifera*, Linn.—Ceylon.

VAR. 2. *nitens*; branches glabrous, leaves glabrous or the midrib and nerves beneath pubescent, sepals glabrous or sparsely hairy. *G. nitens*, Blume Mus. Bot. i. 149, t. 29; *Miquel Fl. Ind. Bat.* ii. 498. *G. malayanum*, Griff. Notul. iv. 56, and *l.c. Pl. Asiat.* t. 394.—Malay Peninsula from Mergui to Malacca, Sumatra, Borneo.

VAR. 3. *hasiana*; branches and nerves of leaf beneath pubescent, leaves often lanceolate.—Khasia Mts. at Churra, J. D. H. & T. T.

VAR. 4. *Thwaitesii*; leaves softly pubescent beneath, sepals membranous pubescent.—Ceylon, *Thwaites* (N. 2549). This resembles *G. sylvestre* and *acuminatum*, but the flowers are larger and the calyx is very different.

VAR. 4? *Walkeri*; branches and leaves quite glabrous, cymes sessile puberulous, sepals puberulous membranous.—Ceylon, *Walker*.

9. **G. Maingayi**, Hook. f.; branches slender petioles leaves beneath cymes and sepals softly finely pubescent, leaves small ovate or ovate-cordate acuminate few-nerved, cymes sub-sessile, flowers few minute, corolla-lobes not ciliate.

MALACCA, *Maingay* (Kew. Distrib. 1111).

Leaves 1-2 in. and branches bright yellow-brown when dry, nerves 2-3 pairs; petiole $\frac{1}{8}$ - $\frac{1}{4}$ in. *Pedicels* slender, $\frac{1}{10}$ - $\frac{1}{8}$ in., bracts most minute. *Sepals* oblong. *Corolla* glabrous, $\frac{1}{8}$ in. diam., lobes rather narrow.—This resembles a good deal *G. affine* of China and *G. sylvestre*, but the cymes are sessile and leaves much smaller.

** Corolla-tube with double villous (rarely glabrous) ridges below the sinuses, not produced into fleshy points (see also *G. rotundatum*). BIDARIA, Dene.

† Corolla-tube short, broad, hardly exceeding the linear-oblong sepals; coronal-processes large.

10. **G. tingens**, Wight & Arn. Contrib. 45; glabrous or nearly so, leaves membranous broadly ovate usually cordate acute acuminate or caudate, petiole 1-1 $\frac{1}{2}$ in., cymes 4-6 in. corymbose at length racemose, peduncle shorter than the petioles, sepals glabrate, corolla-lobes glabrous broadly ovate or oblong. Wall. Cat. 8190. *G. tingens* var. *cordifolia*, Wight *l.c.* t. 593. *Bidaria tingens*, Dene. in DC. Prodr. viii. 623, partly. *Asclepias tingens*, Roxb. Hort. Beng. 21, and *Fl. Ind.* ii. 53.

TROPICAL HIMALAYA, from Kumaon to Sikkim; ASSAM; SILHET; LOWER BENGAL at Monghyr; PEGU and TRAVANCORE; Annamallay hills, alt. 4000 ft. *Beddome*.

An extensive climber; branches soft, not woody. Leaves 4-6 by 2-3 in., bright green; nerves 4-6 pairs. *Cymes* many-fl., elongating into a spiral raceme; bracts oblong; pedicels rather exceeding the peduncles; flowers $\frac{1}{2}$ in. diam., pale yellow. "*Follicles* 4 by 1 in. ovate-lanceolate, spreading, smooth fleshy" (Roxb.).—The western localities for this plant are doubtful, a specimen from Royle's Herb. is labelled by Falconer "Kharia Pass," another from Vicary "Gomulepore." The Annamallay specimen is indistinguishable and suggests the probability of this and *G. montanum* being forms of one species.

11. **G. montanum**, Hook. f.; glabrous or nearly so. Leaves 4-5 in. large coriaceous oblong or ovate-oblong or oblong-lanceolate obtuse acute or acuminate, petiole $\frac{1}{4}$ - $\frac{1}{2}$ in., cymes corymbose at length racemose, peduncle shorter than the petiole, sepals ciliate glabrate, corolla-lobes oblong.—*G. tingens* var. *ovalifolia*, Wight *l.c.* t. 592. *Bidaria tingens*, Dene. in DC. Prodr.

viii. 623, partly. *B. elegans*, Dalz. & Gibs. *Bomb. Fl.* 151. ? *Asclepias montana*, Roxb. *Fl. Ind.* ii. 45.

DECCAN PENINSULA, from the Concan Southwards, on the Ghats.

This may, as Wight suggests, be a variety of *G. tingens*, but I find no intermediate forms; it differs in the shape and coriaceous nature of the leaves, their short petioles, and in the shorter peduncles. I have seen no fruit. There appear to be three forms of it.

VAR. 1. Leaves usually ovate, petiole short, cymes many-fld., corolla glabrous.—The Concan.

VAR. 2. *Beddomei*; leaves more oblong or oblong-lanceolate, petiole $\frac{1}{2}$ – $\frac{3}{4}$ in., cymes few-fld., flowers larger, corolla glabrous.—Annamallay hills, alt. 5000 ft. *Beddome*.

VAR. 3. *pubiflora*; leaves of var 2., cymes few-fld., corolla pubescent externally.—Nilgherry hills at Nedawullum, alt. 7000 ft., *Wight, Clarke*. Clarke's specimens have longer peduncles and petioles and densely pubescent cymes.

12. *G. elegans*, *Wight & Arn. Contrib.* 46; glabrous or shoots and cymes puberulous, leaves 2–4 in. membranous ovate-cordate acute or acuminate, cymes few-fld., peduncles slender shorter than the petioles, sepals ciliate, glabrate, corolla-lobes obovate-oblong. *Wight Ic.* t. 830; *Wall. Cat.* 8191. *Bidaria elegans*, *Dene. in DC. Prodr.* viii. 623.

DECCAN PENINSULA; hills of the South Carnatic from the Nilgherries to Travancore, *Wight, &c.*

Much smaller and more delicate than *G. tingens*, with smaller leaves, more slender petioles and pedicels. *Follicles* $2\frac{1}{2}$ –3 by $\frac{1}{2}$ in., narrowly lanceolate, glabrous, straight. *Seeds* $\frac{1}{2}$ in. long, ovate, with a broad border.—As Wight well remarks, it is difficult to distinguish this from *G. tingens* except by habit, size, and the few-fld. cymes.

†† *Corolla-tube much exceeding the sepals; coronal-processes elongate, nearer to the base than to the lobes, often faint and glabrous.*

13. *G. pergularioides*, *Wight & Gardner mss.*; branches very slender and petioles and cymes puberulous, leaves membranous elliptic- or oblong-lanceolate caudate-acuminate base rounded or acute, peduncles equalling the petioles, pedicels very short, corolla-lobes ovate-lanceolate. *Bidaria pergularioides*, *Thwaites Enum.* 198? *Cynanchum cuspidatum*, *Thunb. Obs. in Cynanch.* 5; *Dene. in DC. Prodr.* viii. 548.

CEYLON, *Walker, Gardner, &c.*

Leaves very variable, 1–6 by $\frac{1}{2}$ –2 in., nerves arching or very oblique; petiole $\frac{1}{4}$ – $\frac{3}{4}$ in., slender. *Cymes* dense-fld.; flowers almost capitate. *Sepals* broadly oblong, not half as long as the corolla-tube, which is $\frac{1}{4}$ in. and as long as the lobes. *Corolla-tube* yellow, tinged with red, $\frac{1}{2}$ in. long. “*Follicles* 5–6 in. long, $\frac{1}{4}$ in. broad, linear-lanceolate, much attenuate, puberulous, at length glabrate,” *Thwaites*.

VAR. *Gardneri*, *Thwaites l.c.*; leaves smaller 1–1 $\frac{1}{2}$ in. elliptic-lanceolate more coriaceous, follicles shorter.

14. *G. stenoloba*, *Hook. f.*; glabrous or nearly so, leaves membranous lanceolate acuminate, cymes few-fld., peduncles equalling the petioles, pedicels short, corolla-lobes linear, stigma bifid.

CEYLON, *Walker*.

Closely allied to *G. pergularioides*, but the cymes are few-fld., the flowers much larger, the corolla-tube $\frac{1}{4}$ in. long, the lobes narrowly linear, the column much longer and more slender and the stigma 2-fld. The follicles answer to the description of those of *G. pergularioides*, but are quite glabrous.

15. *G. ? Thomsoni*, *Hook. f.*; quite glabrous, leaves linear-lanceolate coriaceous, cymes simple or branched long-peduncled, pedicels long, corolla-

lobes linear with reflexed margins, anthers with membranous margins and a membranous ligule behind and below the inflexed tip, stigma broadly turbinate.

SIKKIM HIMALAYA, alt. 5-6000 ft., Thomson.

Stems slender. *Leaves* 3-6 by $\frac{3}{4}$ -3 $\frac{1}{2}$ in., base acute or narrowly rounded; nerves oblique, very faint; petiole stout, $\frac{1}{4}$ - $\frac{3}{4}$ in. *Peduncle* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., rather slender; flowers umbelled, pedicels twice or thrice as long as the corolla-tube. *Sepals* very small, broadly oblong. *Corolla-tube* $\frac{1}{2}$ in.; lobes as long, spreading, thick.—A very remarkable plant, resembling *G. stenoloba*, but differing totally in the texture of the leaves, the reflexed margins of the corolla-lobes and especially in the winged anthers with a membranous ligule behind the tip and parallel to it. It is probably a new genus, but, without the fruit, I do not venture to propose it as such.

DOUBTFUL SPECIES.

BIDARIA INODORA, Dcne. in DC. Prodr. viii. 624. "From sandy places near Pondicherry (*Cynanchum inodorum* v. *Ganosma inodora*, Lour. Fl. Coch. 166). A climber with fistular glabrous stems, leaves rounded-ovate or lanceolate quite glabrous base rounded or cordate, petiole slender, peduncles short, pedicels longer, flowers puberulous, tube hairy within, stigma conical emarginate exceeding the anthers" (Dcne. l.c.). I have no idea what this is; it is probably a very common plant.

31. GONGRONEMA, Dcne.

Glabrous twining shrubs or undershrubs. *Leaves* opposite. *Cymes* various, axillary; flowers small. *Calyx* 5-partite. *Corolla* urceolate subrotate or broadly campanulate, lobes narrowly overlapping to the right. *Column* short; coronal scales adnate to the bases of the anthers or 0. *Anther-tips* inflexed, concealing the stigma; pollen-masses solitary in each cell, ovoid, waxy, erect; stigma convex clavate or conical. *Follicles* acuminate. *Seeds* comose. **DISTRIB.** Species about 10; Asiatic, African, and Australian.

* Corolla nearly rotate, tube short.

1. **G. nepalense**, Dcne. in DC. Prodr. viii. 624; glabrous or cymes puberulous, leaves large oblong or ovate acuminate base rounded or cordate, cymes very long-peduncled bracteate, corolla-tube short open, lobes ovate, coronal process small recurved or obsolete. *Gymnema nepalense*, Wall. Tent. Fl. Nep. 50, t. 38, the left-hand leaf only, and Cat. 8192; Wight Contrib. 46.

SUBTROPICAL HIMALAYA; from Kumaon to Sikkim, alt. 2-4000 ft. KHASIA MTS., alt. 3-5000 ft.

An extensive twiner, shoots and cymes puberulous. *Leaves* 3-6 by 1 $\frac{1}{2}$ -3 $\frac{1}{2}$ in., membranous, nerves arching; petiole 1-2 in. *Peduncle* 2-6 in., generally branching into 3 long divaricate arms, each bearing three many-fld. umbels, pedicels short. *Sepals* ovate. *Corolla* $\frac{1}{2}$ in. diam., yellow. *Follicles* slender, 2 $\frac{1}{2}$ -3 by $\frac{1}{4}$ in.

VAR. sagittatum; leaves linear-oblong base rounded or cordate. *G. sagittatum*, Dcne. l.c. *Gymnema sagittatum*, Wall. Cat. 8194; Wight Contrib. 46. *G. nepalense*, Wall. Tent. Fl. Nep. t. 38 (except the left-hand cordate leaf). *G. columnare*, Wall. Cat. 8193; Wight & Arn. l.c. *Gongronema columnare*, Dcne. l.c.—Silhet, Assam, and Chittagong. Except the narrower leaves and usually shorter peduncles I can find no difference between *G. sagittatum* and *nepalense*. The processes at the base of the column vary very much.

** Corolla-tube inflated, equalling or exceeding the lobes in length.

2. **G. Wallichii**, Dcne. in DC. Prodr. viii. 624; quite glabrous, leaves elliptic-oblong or -lanceolate acute or acuminate, cymes subsessile few-fld., corolla-tube hairy within lobes short ovate. *Gymnema Wallichii*, Wight Contrib. 46; Wall. Cat. 8195 A.

MALACCA (? Finlayson), *Griffith, Maingay* (Kew Distrib. 1113).

Leaves 3-6 by 1-2 in., firmly membranous; nerves 5-6 pairs, arched; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cymes* small; pedicels very unequal. *Sepals* small, oblong. *Corolla* $\frac{1}{4}$ in. diam., lobes spreading. *Coronal-scales* broad, recurved, apparently confluent with the anther-base. *Anther-tips* large, exserted. *Follicles* 6 by $\frac{1}{2}$ in., gently curved from base to tip, smooth. *Seeds* $\frac{1}{2}$ in. oblong, wing broad recurved.—Finlayson's specimens in Herb. Wallich have no locality given.

3. *G. ventricosum*, *Hook. f.*; quite glabrous, leaves coriaceous ovate or ovate-lanceolate obtusely caudate-acuminate, cymes subsessile few-fl'd., corolla-tube glabrous within, lobes as long linear with recurved margins.

KHASIA MTS. (Herb. Calcutta).

Leaves 3 by 1-1 $\frac{1}{4}$ in.; nerves 2-3 pairs, very prominent beneath, strongly inarching far within the margin; petiole stout, $\frac{1}{4}$ - $\frac{1}{2}$ in. *Flowers* very shortly pedicelled. *Sepals* very small. *Corolla* $\frac{1}{2}$ in. long. *Coronal-scales* broad, recurved. *Pollen-masses* smaller than the corpuscle.—In form of corolla this a good deal resembles *Gymnema Thomsoni*. I have seen only a solitary indifferent specimen of this plant.

G. ? FINLAYSONII, *Dcne. in DC. Prodr.* viii. 625 (*Gymnema Finlaysonii*, *Wight Contrib.* 46; *Wall. Cat.*), is probably, like most of Finlayson's plants, from Siam. It is glabrous with ovate-cordate leaves, and has peduncled cymes of large flowers $\frac{1}{2}$ - $\frac{1}{2}$ in. diam. The pollen-masses have long spiral pedicels.

32. MARS DENIA, Br.

Twining, rarely erect, shrubs or undershrubs. *Leaves* opposite. *Cymes* umbelliform, simple or branched, terminal or axillary; flowers medium-sized or small. *Calyx* 5-partite. *Corolla* campanulate or urceolate or salver-shaped, lobes narrow or broad, overlapping to the right. *Coronal scales* 5, usually subulate flattened (or 0), adnate to the anthers dorsally, erect. *Column* short; anthers with an inflexed tip; pollen-masses pedicelled, oblong or ovoid, waxy, erect. *Stigma* flat convex or beaked, sometimes very long. *Follicles* lanceolate or poniard-shaped. *Seeds* comose.—DISTRIB. Species about 50; chiefly tropical or subtropical, with one S. European.

A heterogeneous assemblage, amongst which perhaps *M. tinctoria*, *eriocarpa*, and *thyrsoidea* should form one natural genus, and the remainder a second. *M. thyrsoidea* is very remarkable in wanting the coronal scales.

SECT. I. *Eumarsdenia*. *Flowers* small. *Corolla* cylindric, shortly 5-cleft, mouth closed with a brush of short hairs. *Column* minute; anther-tips and coronal scales very short. *Stigma* truncate;

1. *M. tinctoria*, *Br. in Mem. Wern. Soc.* i. 30; nearly glabrous, leaves ovate or cordate acuminate or caudate, flowers in dense thyrsoid or rounded panicles, coronal scales subulate longer and narrower than the anther-tip, follicles finely pubescent. *Wight Contrib.* 40, and *Ic. t.* 589; *Wall. Cat.* 8173; *Griff. Notul.* iv. 52, and *Ic. Pl. Asiat.* t. 389; *Grah. Cat. Bomb. Pl.* 119; *Brand. For. Fl.* 332; *Kurz For. Fl.* ii. 201; *Dcne. in DC. Prodr.* viii. 615 excl. syn. of *Rheede*. *M. monostachya*, *Wall. mss.* *Asclepias tinctoria*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 43. *Pergularia tinctoria*, *Spreng. Syst.* i. 844. *P. parviflora*, *Blume Bijd.* 1056. *Cynanchum tingens*, *Herb. Ham.*

SIKKIM HIMALAYA, alt. 2-3000 ft. ASSAM, SILHET, KHASIA MTS., and BURMA at Prome, *Wallich* (cultivated in the Deccan and elsewhere in India).—DISTRIB. Sumatra, Java, China.

A tall climber; stem stout, smooth, glabrous or finely pubescent, as are the petioles, sometimes the leaves below, and cymes. *Leaves* 3-9 by 1-3 in., nerves spreading, glandular above at the petiole; petiole 1-2 in. *Cymes* short- or long-peduncled, rounded and $\frac{1}{2}$ -1 in. diam. or elongate 3-6 in. long, thyrsoid, formed of interrupted clusters; pedicels short. *Sepals* ovate, pubescent. *Corolla* $\frac{1}{3}$ in. long, yellow, fleshy, glabrous externally; tube with deflexed hairs within. *Follicles* 3 in. long, $\frac{1}{2}$ in. diam., narrowed at the base. *Seeds* narrowly ovoid, $\frac{1}{2}$ - $\frac{3}{4}$ in. long.—In the absence of any description or figure of the follicles, or of authentic specimens in fruit of the Sumatran plant on which the genus was founded, I am in doubt whether this or the following is the true *M. tinctoria*. The flowers are often deformed, very large, and the column is often replaced by rudimentary leaves. Decaisne erroneously quotes Rheedé's Kada Kodi (Hort. Mal. ix. 72, t. 8) for this plant.

2. *M. eriocarpa*, Hook. f.; foliage of *M. tinctoria*, follicles shorter broader turgid at the base softly villous with long spreading hairs, seeds broadly ovate.

SILHET, Herb. Wallich (*Asclep.* 145 A). ASSAM, Masters.

Wallich on the ticket of his specimen (which has no Catalogue number) says of this "Marsdenia, tinctoriæ affinis, sed differt; E. Sylhet, introd. in H.B. Calc. Feb. 1840." Brandis describes the pod of *M. tinctoria* as "covered with long soft hairs," whence he probably has assumed that this is referable to *M. tinctoria*, and, if so, the plant I have described under that name must be named afresh. A reference to Marsden's Sumatran plant can alone solve the difficulty.

SECT. II. MACROCENTRUM. *Flowers* larger. *Corolla* subcampanulate; tube short, globose or subcylindric; lobes large, fleshy, spreading, and throat glabrous or villous. *Staminal column* large, filling the tube; coronal scales usually large, often exceeding the anther-tip.

* *Stigma* not extended beyond the anthers.

3. *M. Roylei*, Wight Contrib. 40; branches petioles leaves beneath and cymes finely pubescent or tomentose, leaves ovate-cordate acuminate, cymes corymbose, corolla-lobes pubescent without villous within, coronal scales slender subulate far exceeding the short anther-tips. *Brand. For. Fl.* 333; *Dene. in DC. Prodr.* viii. 615.

EASTERN and WESTERN HIMALAYA; from Simla to Kumaon, ascending to 5000 ft. SIKKIM, alt. 4000 ft., Clarke.

Leaves 3-6 by 2-4 in., often velvety beneath; petiole $1\frac{1}{2}$ -2 in. *Cymes* 1- $1\frac{1}{2}$ in. diam. *Corolla* $\frac{1}{4}$ - $\frac{1}{2}$ in. diam. *Stigma* dome-shaped. *Follicles* turgid, 3 in. long $1\frac{1}{2}$ in. diam., straight, beaked, pericarp thick transversely rugose puberulous. *Seeds* $\frac{1}{2}$ in. long.

4. *M. tenacissima*, Wight & Arn. Contrib. 41; branches petioles leaves beneath and cymes velvety or tomentose, leaves broadly ovate base cordately 2-lobed acuminate, corolla-lobes pubescent without glabrous within, coronal scales coriaceous subulate hardly exceeding the ovate anther-tip. *Wight Ic. t.* 590; *Wall. Cat.* 8176; *Brand. For. Fl.* 333; *Kurz For. Fl.* ii. 201; *Dene. in DC. Prodr.* viii. 616. *Asclepias tenacissima*, Roxb. Cor. Pl. iii. 35, t. 240, and *Fl. Ind.* ii. 31. *A. tomentosa* and *A. echinata*, Herb. Madr. *Gymnema tenacissima*, Spreng. Syst. i. 844.

WESTERN HIMALAYA; Kumaon, ascending to 4500 ft. NORTHERN OUDH, Thomson. BENGAL; Rajmahal hills, Roxburgh. CHITTAGONG, Wallich. AYA, Kurz. CEYLON, hotter parts of the Island, not common, Thwaites.—DISTRIB. TIMOR (Miquel).

Stem very stout. *Leaves* 4-7 by 3-5 in., often velvety above; petiole 2-3 in. *Cymes* much corymbosely branched. *Corolla* $\frac{1}{2}$ in. diam.; lobes oblong, ciliate *Stigma* between conical and dome-shaped. *Follicles* 5-6 in. long by $1\frac{1}{2}$ -2 in. diam.,

lanceolate; pericarp very thick, longitudinally wrinkled, finely pubescent. *Seeds* ovate-oblong, $\frac{1}{2}$ in. long.—*Pergularia crocea*, Zipp. (*Miquel Fl. Ind. Bat.* ii. 497), of Java is very closely allied, but the coronal scales are much laterally compressed, project radially, and are 2-keeled towards the base.

5. **M. Hamiltonii**, *Wight Contrib.* 41; branches petioles nerves beneath and cymes furfuraceously puberulous, leaves oblong or oblong-ovate obtuse or acute base cordate, cymes corymbosely branched, corolla-lobes glabrous without and within, throat densely villous, coronal scales membranous subulate exceeding the anther-tips. *Wall. Cat.* 8174; *Dcne. in DC. Prodr.* viii. 614. *Cynanchum reticulatum*, *Herb. Ham.*

NORTHERN OUDH, *Hamilton*. WESTERN HIMALAYA; Subsewaliks, *Edgeworth*.

Leaves coriaceous, 2-3 by $1\frac{1}{2}$ -2 in., pale; petiole $\frac{1}{2}$ -1 in. *Cymes* corymbosely branched. *Corolla* $\frac{1}{10}$ to $\frac{1}{5}$ in. diam. *Stigma* quite flat with a central cone. *Follicles* not seen.

6. **M. Brunoniana**, *Wight & Arn. Contrib.* 40; glabrous or cymes and petioles puberulous, leaves orbicular-cordate acuminate membranous, cymes short few-fl. corymbiform, corolla-lobes glabrous within and without, anthers with a double flattened obtuse spur (or fold) at the base, coronal scales ovate acute a little longer than the short anther-tip. *Dcne. in DC. Prodr.* viii. 614; *Wight Ic.* t. 356.

COROMANDEL; near Cotermala, *Wight*.

Branches and petioles sometimes puberulous. *Leaves* 4-5 by 3-4 in., base shortly cordate, nerves slender; petiole 1-2 in., slender. *Cymes* $\frac{1}{2}$ -1 in. diam.; peduncle shorter than the petiole. *Corolla* $\frac{1}{2}$ in. diam., lobes broadly oblong. *Stigma* broadly conical, 2-toothed.

7. **M. Jenkinsii**, *Hook. f.*; glabrous or puberulous, very stout, leaves broadly elliptic or orbicular cuspidate thickly coriaceous, corolla-tube globose, lobes glabrous without villous within, coronal scales subulate much exceeding the very short anther-tip.

ASSAM, *Jenkins* (*Herb. Calcutta*).

Branches as thick as the little finger. *Leaves* 7-10 by 5-7 in., pale beneath; nerves 6-8 pairs, diverging, straight or a little arched; petiole 2-4 in. *Cymes* small; peduncle short, very thick; flowers subumbellate, bracteate; pedicels stout, 1 in. *Sepals* $\frac{1}{2}$ in., lanceolate, pubescent. *Corolla* $\frac{3}{4}$ in. diam., lobes rounded fleshy. *Stigma* dome-shaped.

** *Stigma protruded far beyond the anthers.*

8. **M. lucida**, *Edgew. mss.*; branches petioles cymes and leaves beneath finely pubescent, leaves elliptic or ovate acute or obtusely acuminate, cymes corymbiform very shortly peduncled, corolla-lobes ciliate glabrous without sparsely hairy within, coronal scales subulate equalling the anther-tips, style many times longer than the column tip bifid. *Brand. For. Fl.* 333.

WESTERN HIMALAYA; Kumaon, *Strach. & Winterb.*; Nynetal, alt. 5-7000 ft., *Madden*.

Leaves 4-5 by 2-3 in., rather coriaceous, pale beneath; nerves arched; petiole 1-2 in. *Corymbs* many-fl.; peduncle stout, $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ - $\frac{1}{3}$ in. diam. *Follicles* 5 in. long by 1 in. diam., straight, lanceolate; pericarp thickly coriaceous, glabrous. *Seeds* $\frac{3}{8}$ in. long, ovate-lanceolate.

9. **M. Griffithii**, *Hook. f.*; glabrous except the puberulous cymes, leaves elliptic obtusely acuminate coriaceous base rounded or cordate, cymes corymbiform shortly peduncled, corolla-lobes glabrous without sparsely hairy within,

coronal scales small obtuse shorter than the orbicular anther-tips, style as long as the column, tip 2-toothed. *M. lucida*, *Herb. Ind. Or. II. f. & T.*

KHASIA MTS., alt. 4-6000 ft.; at Mungbrea and Myrung, *Griffith, H. f. & T.*

Stem stout. *Leaves* 3-7 by $1\frac{1}{2}$ - $3\frac{1}{2}$ in., pale beneath; nerves slightly arched; petiole $1-1\frac{1}{2}$ in. *Umbels* and *flowers* greenish yellow, very like *M. lucida*. *Follicles* not seen.

SECT. III. **Microcentrum.** *Clarke mss.* *Flowers* small. *Corolla* urceolate or tubular, shortly 5-cleft, glabrous within. *Anthers* spurred at the base behind. *Stigma* exserted, obtuse.

10. **M. Calesiana**, *Wight Contrib.* 41; branches petioles and leaves beneath and cymes densely pubescent, leaves broadly ovate-cordate acuminate membranous, cymes much corymbosely branched, corolla sparsely hairy without lobes narrow, coronal scales subulate shorter than the long anther-tips. *Wall. Cat.* 8175; *Dcne. in DC. Prodr.* viii. 616. *Pergularia Calesiana*, *Herb. Ham.*

CENTRAL AND EASTERN HIMALAYA; Nepal Morung, *Hamilton*. SIKKIM, alt. 2000 ft., *Clarke.*

Stem stout. *Leaves* 4-6 in. long and nearly as broad, pubescent or glabrate above; petiole $1\frac{1}{2}$ -3 in., slender. *Cymes* shortly peduncled, 3 in. diam. *Corolla-tube* cylindric, $\frac{1}{2}$ in. long; lobes spreading and recurved, thick. *Column* nearly filling the tube.

11. **M. thyrsiflora**, *Hook. f.*; nearly glabrous except the puberulous cymes, leaves broadly ovate or oblong- or deltoid-ovate deeply cordate acuminate, cymes elongate of clusters of shortly peduncled flowers on a long rachis, corolla urceolate glabrous without and within, lobes lanceolate, coronal scales short rounded wholly adnate to the long subulate anther-tips. *M. tinctoria*, in part, *Herb. H. f. & T.*

BENGAL; in the Jheels, *Griffith, J. D. H. & T. T.* ASSAM, *Masters.*

Leaves 4-8 by 2-6 in., membranous; petiole 1-3 in. *Cymes* 4-6 in. long; rachis flexuous; pedicels very short. *Sepals* nearly glabrous, obtuse. *Corolla* $\frac{1}{12}$ - $\frac{1}{10}$ in. long; lobes coriaceous. *Anther-tips* longer than the column, basal spurs very small. *Stigma* fusiform. *Follicles* 2 in. long, dagger-shaped, turgid below; pericarp thinly coriaceous, glabrous. *Seeds* ovate, $\frac{1}{2}$ - $\frac{1}{4}$ in. long.—So similar to some forms of *M. tinctoria* in foliage and inflorescence as to be easily mistaken for that plant. The coronal scales may be said to be absent.

DOUBTFUL SPECIES.

M. ROTUNDIFOLIA, *Dcne. in DC. Prodr.* viii. 615; "branches thick glabrous; leaves rounded, obsoletely cordate, glabrous, shortly acuminate; petiole rather long, slender, puberulous; cymes subcontracted, many-fl.; peduncle equalling the petiole; corolla-lobes ovate-oblong, densely bearded within; coronal scales ovate-deltoid, equalling the column."—Communicated from the Calcutta Garden to Paris Herb. by *Griffith*.

33. **PERGULARIA**, *Linn.*

Twining subglabrous undershrubs. *Leaves* opposite, ovate-cordate, membranous. *Cymes* subumbelliform. *Flowers* greenish or yellow, rather large. *Calyx* 5-partite. *Corolla* salver-shaped, tube swollen at the base; lobes oblong or linear, overlapping to the right. *Column* rather large; coronal scales large, membranous, adnate to the back of the anthers, erect, flattened dorsally or laterally, acute, simple or transversely bifid (2-lamellate above the middle), pollen-masses one in each cell, subcylindric clavate or globosely obovoid, waxy, erect. *Stigma* umbonate or capitate, rather longer than the anther-cells.

Follicles lanceolate, terete, rather turgid. *Seeds* ovate, concave.—DISTRIB. Species about 10; Asiatic and African.

The excessively sweet-scented *P. odoratissima*, Smith (Icones Pictæ, t. 15), is stated to be Indian, but the plant so called by Roxburgh, Wight, &c., is *P. minor*. Smith's figure exactly resembles *P. pallida*, which is nearly scentless.

* *Pollen-masses* elongate-clavate or subcylindric.

1. ***P. pallida***, Wight & Arn. *Contrib.* 42; leaves ovate-cordate acuminate, flowers scarcely fragrant, corolla yellowish white, lobes linear much larger than the tube which is glabrous within, coronal scales with broad points not spurred behind. *Wall. Cat.* 8181; *Wight Ic.* t. 585; *Brand. For. Fl.* 334; *Kurz For. Fl.* ii. 203; *Dene. in DC. Prodr.* viii. 619. *P. coromandeliana* and *P. montana*, *Dene. l. c.* *Asclepias pallida*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 48.

TROPICAL HIMALAYA; from Murree ascending to 5000 ft. eastward to SIKKIM and southward on the plains to BOMBAY and CENTRAL INDIA, BEHAR and BIRMA.

Except by the absence of the sweet scent and pale flowers I do not know how this can be distinguished from Smith's figure and description of *P. odoratissima*. *Follicles* in Roxburgh's figure 6 in. long and 1 broad ($1\frac{1}{2}$ as drawn partially open), lanceolate. *Seeds* $\frac{1}{2}$ in. long, broadly ovate.

** *Pollen-masses* globosely obovoid or obscurely broadly obconic.

2. ***P. minor***, Andr. *Bot. Rep.* t. 184; leaves orbicular or ovate cordately 2-lobed acuminate, flowers very fragrant yellow or green, corolla-lobes oblong about equalling the tube or shorter, tube pubescent above within, coronal scales double inner with a long subulate point. *Bot. Mag.* t. 755. *P. odoratissima*, *Wight Contrib.* 43, and *Ic.* t. 414. *Kurz For. Fl.* ii. 203. *Asclepias odoratissima*, *Roxb. Hort. Beng.* 20; and *Fl. Ind.* ii. 46; *Wall. Cat.* 8182; *Grah. Cat. Boml. Pl.* 120.

Cultivated or native throughout India, and the Eastern Islands, China and Japan; native of the Himalaya (*Brandis*). Tsegai hills in AYA, *Griffith*.

Though confounded with *P. odoratissima*, this appears to be perfectly distinct in the smaller flowers and short broad corolla-lobes. *Follicles* lanceolate, 3 in. long by $\frac{3}{4}$ in. diam.; pericarp thick, glabrous. *Seeds* $\frac{1}{2}$ in. long, broadly ovate.—The coronal scales vary excessively in length acuteness and in the comparative length of the outer and inner divisions.

3. ***P. puberula***, *Miquel Fl. Ind. Bat.* ii. 495; leaves ovate or oblong-ovate acuminate, base rounded or cordate, sepals broadly ovate, corolla pubescent without and within, lobes linear longer than the tube, coronal scales laterally compressed 2-winged dorsally below produced into an inflexed subulate point exceeding the anthers.

PENANG, *Phillips*.—DISTRIB. JAVA.

Habit of *P. pallida*, from which the short sepals, pubescent corolla, and laterally much-flattened scales which project far outwards from the column, and the form of the pollen-masses, at once distinguish it.

34. **STEPHANOTIS**, *Thouars*.

Twining glabrous shrubs. *Leaves* opposite, coriaceous. *Cymes* umbelliform, axillary; flowers large, white. *Calyx* 5-partite, segments large. *Corolla* coriaceous, tubular or salver-shaped, tube cylindric, base swollen; lobes twisted, overlapping to the right. *Coronal scales* 0 in the Indian species (in others adnate to the anthers, erect, dorsally flattened). *Column* very short; anthers with an inflexed tip; pollen-masses one in each cell, erect, waxy, shortly

pedicelled. *Stigma* conical or shortly beaked, hardly or not exerted. *Follicles* very thick, obtuse or acuminate. *Seeds* comose.—**DISTRIB.** Species 14, Madagascar, Malay Islds. and China.

S. Maingayi, *Hook. f.*; quite glabrous, leaves broadly ovate-cordate acuminate, cymes on long stout peduncles, sepals large lanceolate acuminate, corolla-tube 1 in., lobes lanceolate acuminate, anther-tips long, coronal scales 0.

MALACCA; *Maingay* (Kew distrib. 1112).

Branches stout. *Leaves* 4–6 by 2–3 in., basal sinus acute, nerves about 8 pairs; petiole $\frac{1}{2}$ –1 in. *Peduncle* 2–3 in., few-fl'd.; pedicels 1–1 $\frac{1}{2}$ in.; bracts subulate. *Sepals* $\frac{3}{4}$ in., acuminate, coriaceous. *Corolla-tube* with 5 hairy ridges at the base within, lobes about equalling the tube. *Column* $\frac{1}{2}$ the length of the tube. *Anther-tips* as long as the rest of the column, obtuse. *Stigma* capitate.

35. **LYGISMA**, *Hook. f. Gen. Nov.*

A puberulous slender much diffusely branched twining shrub. *Leaves* small, opposite, lanceolate. *Flowers* small, in numerous axillary umbelliform cymes. *Sepals* ovate, eglandular. *Corolla* salver-shaped, tube very short, lobes long, linear, waved, obtuse, the lobes overlapping to the right below the middle, the upper half sharply doubled down inwards (buds hence truncate). *Corona* of minute obtuse appressed teeth at the back of the anthers. *Column* minute, fleshy, low, cylindric; anthers very short, with small rounded membranous tips; pollen-masses cylindric, clavate, waxy, erect, subsessile on the long corpuscle. *Stigma* included.

L. angustifolia, *Hook. f. Ic. Plant. t. 1423.* *Marsdenia angustifolia*, *Night. Contrib. 40*; *Wall. Cat. 8172*; *Dcne. in DC. Prodr. viii. 614.*

BIRMA; hills near Prome, *Wallich.*

Leaves 1–2 by $\frac{1}{4}$ – $\frac{1}{3}$ in., acute, glabrous when mature, base rounded, triple nerved at the base; petiole very short. *Cymes* in all the upper axils, many-fl'd.; peduncle $\frac{1}{3}$ – $\frac{1}{2}$ in., very slender, pedicels $\frac{1}{2}$ in. *Sepals* obtuse, pubescent. *Corolla* glabrous, $\frac{1}{4}$ in. diam.—A very curious plant, the only Indian Asclepiad one known to me with the corolla-lobes doubled down inwards in aestivation, rendering the bud truncate.

36. **TYLOPHORA**, *Br.*

Twining, rarely erect, herbs or undershrubs. *Cymes* umbelliform or racemose; flowers small or minute. *Sepals* ovate or lanceolate. *Corolla* rotate; lobes broad, slightly overlapping to the right. *Coronal processes* fleshy, adnate to the very short column. *Anthers* very small with an inflexed tip; pollen-masses one in each cell, minute, globose or ovoid, waxy, erect or ascending rarely transverse or pendulous from the ascending pedicel. *Stigma* disciform, 5-gonal, included. *Follicles* acuminate, smooth. *Seeds* ovoid, flat, winged, comose.—**DISTRIB.** Species about 40; Asiatic, African, Australian and Oceanic.

The minute anthers (larger in *T. Iphisia*), forming a small ring round the disciform stigma, which is more or less overlapped by the short anther-tips, and the adnate usually gibbous or globose coronal processes are the best characters for this genus. The position of the pollen-masses, ascending, horizontal, or pendulous, cannot be depended upon, and is most difficult to ascertain in dried specimens; as is the exact form of the fleshy coronal processes.

* Stem short, erect or suberect, 1–2 ft. (perhaps longer and twining in *T. Iphisia*), sometimes twining at the tips.

1. **T. Govanii**, *Dcne. in DC. Prodr.* viii. 610; stem simple pubescent, leaves subsessile oblong elliptic or obovate, umbels simple peduncled, sepals linear, corolla-lobes lanceolate, coronal processes gibbous. *Iphia* Govanii, *Wight Contrib.* 52; *Wall. Cat.* 8212. *Vincetoxicum montanum*, *Dcne. l.c.* 525.

WESTERN HIMALAYA; KUNAWUR to Kumaon, alt. 7–8000 ft., *Govan*, &c.

Rootstock slender, creeping. *Stems* 8–16 in., naked below. *Leaves* 1–1½ by ½–1¼ in., rarely linear or almost orbicular, obtuse or apiculate. *Umbels* rarely sessile; pedicels capillary; flowers dark purple, ½ in. diam. *Anthers* large for the size of the column; pollen-masses pendulous. *Stigma* umbonate.

2. **T. Helferi**, *Hook. f.*; softly pubescent, stem simple, leaves sessile ovate or lanceolate acuminate, umbels simple long-peduncled, sepals linear, corolla-lobes elongate-lanceolate, coronal processes gibbous.

TENASSERIM; *Helfer*.

Stem 8–12 in. *Leaves* 1½–2 by ½–1 in., pubescent on both surfaces, base rounded. *Peduncle* strict, equalling the leaves, pedicels capillary. *Corolla* ½ in. diam., purple?, lobes caudate. *Follicles* 1½ in., poniard-shaped, pubescent.—The position of the pollen-masses I could not ascertain, owing to the imperfection of the specimens.

3. **T. fasciculata**, *Ham. in Wight Contrib.* 50; *l.c.* t. 848; stem simple or branched glabrous below finely puberulous above, leaves petioled ovate or lanceolate acute glabrous, cymes peduncled umbelliform simple or compound, sepals lanceolate, corolla-lobes broadly ovate, coronal processes globose, follicles short turgid. *Wall. Cat.* 8204; *Dcne. in DC. Prodr.* viii. 608; *Dalz. & Gibs. Bomb. Fl.* 151.

SOUTH NEPAL; at Sukanagur, *Hamilton*. SOUTH CONCAN; Bababoodan hills, &c.; *Law, Dalzell*, &c.

Stems several from the root, 12–18 in., flexuous or climbing amongst grass. *Leaves* 1–2 by ¾–1½ in., coriaceous; petiole ½–1 in. *Peduncles* slender; pedicels capillary. *Corolla* ½ in. diam., fleshy in the Nepal specimens. *Pollen-masses* horizontal according to *Wight*, but I think erect. *Follicles* 1½–2 by ½–¾ in., ovoid-lanceolate; pericarp very thick, glabrous. *Seeds* ½ in. long, broadly ovoid, quite flat.—*Wight* correctly observes that the corpuscles in this and the following are almost 2-partite.

4. **T. macrantha**, *Hook. f.*; stem simple or branched finely pubescent, leaves petioled ovate acute glabrous, cymes peduncled simple or subcompound, sepals lanceolate, corolla-lobes ovate-lanceolate, coronal processes globose. *T. fasciculata* var. *macrantha*, *Wight Contrib.* 50; *Dcne. in DC. Prodr.* viii. 608.

NILGHERRY MTS., *Wight*, &c. PEGU, *Col. Eyre (in Herb. Calcutt.)*

This has the habit and foliage of *T. fasciculata*, but the flowers are twice as large, and the corolla-lobes ovate-lanceolate. The Pegu specimens seem identical with the Nilgherry ones. *Fruit* unknown.

5. **T. Iphia**, *Dcne. in DC. Prodr.* viii. 610; quite glabrous, stem branched flexuous, leaves petioled ovate or lanceolate acuminate, cymes branched, sepals ovate, corolla subglobose, lobes ovate, coronal processes ovoid wholly adnate to the base of large anthers. *Deless. Ic. Sel.* v. t. 82; *Wight Ill.* t. 155 bis f. e. & *l.c.* t. 1276. *Iphia multiflora*, *Wight & Arn. Contrib.* 52. *T. fasciculata*, *Thwaites Enum.* 197. *T. pauciflora*, *Hohenack. Pl. Ind. Or.* n. 1386.

NILGHERRY MTS., *Wight*, &c. CEYLON; Central province, alt. 4–7000 ft., *Walker*, &c.

Stem rather stout, 2-3 feet long. *Leaves* $1\frac{1}{2}$ -2 $\frac{1}{2}$ by $\frac{1}{2}$ -1 $\frac{1}{2}$ in., dark green, rather coriaceous; petiole $\frac{1}{2}$ - $\frac{1}{2}$ in. *Peduncles* longer than the petiole; pedicels short. *Sepals* quite glabrous. *Corolla* $\frac{1}{2}$ in. diam., yellow or dark purple. *Anthers* large for the size of the column, horny, with broad inflexed tips; pollen-masses horizontal. *Follicles* 3-3 $\frac{1}{2}$ in. long, poniard-shaped, glabrous. *Seeds* $\frac{1}{2}$ in. long, narrowly ovate.—The anthers of this are much larger than in any of its congeners. Hohenacker's is the only Peninsular specimen that I have seen; it is identical with the Ceylon ones. The corpuscles are long, linear with a central groove, quite different from those of *T. fasciculata*.

•• Stems and branches long, twining, and cymes perfectly glabrous; sepals always glabrous (see also *T. Iphisia*); coronal processes without free points (except *T. himalaica*).

6. **T. capparidifolia**, *Wight & Arn. Contrib.* 51; quite glabrous, leaves elliptic or elliptic-oblong obtuse acute or apiculate pale veined coriaceous, cymes shortly peduncled or sessile, pedicels capillary, flowers minute, sepals ovate, corolla subglobose, lobes short ovate, coronal processes globose. *Dene. in DC. Prodr.* viii. 610; *Wall. Cat.* 8208. *Asclepias tenuis*, *Herb. Heyne*.

TRAVANCORE; Courtallam, *Heyne, Wight*.

Branches rigidly flexuous. *Leaves* 2-4 by $\frac{1}{2}$ -1 $\frac{1}{2}$ in., rigid; petiole $\frac{1}{2}$ - $\frac{1}{2}$ in. *Cymes* much shorter than the leaves, pedicels $\frac{1}{2}$ - $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ in. diam. *Follicles* 3 in. long, poniard-shaped.—*Wight* describes the coronal processes as toothed on the inner margin below the tip, a character I fail to verify.

7. **T. globifera**, *Hook. f.*; quite glabrous, leaves short-petioled oblong or ovate acuminate or apiculate, cymes long-peduncled compound few-fl'd. pedicels capillary, sepals ovate-lanceolate, corolla-lobes short ovate, coronal processes very large globose as high as the anthers.

MALACCA, *Griffith*. SOUTH ANDAMAN ISLAND, *Kurz*.

Leaves 1-3 by $\frac{1}{2}$ -1 $\frac{1}{2}$ in., dark brown when dry, base rounded or cordate, nerves few; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Peduncles* 1-1 $\frac{1}{2}$ in., very stout; pedicels $\frac{1}{2}$ -1 in. *Corolla* $\frac{1}{2}$ in. diam. *Staminal column* very short, depressed.

8. **T. pauciflora**, *Wight & Arn. Contrib.* 44; quite glabrous, leaves long-petioled ovate-lanceolate or cordate acuminate, cymes long-peduncled few-fl'd. compound, sepals ovate acute, corolla-lobes short ovate, coronal processes very large globose as high as the anthers. *Wight Ic. t.* 1274; *Dene. in DC. Prodr.* viii. 607. *T. asthmatica* β *glabra*, *Thwaites Enum.* 19. "*Cynanchum flavens* and *bracteatum*, *Thunb.*; *Dene. in DC. l.c.* 549" (*Thwaites*).

DECCAN PENINSULA; from S. Canara to Malabar and Travancore, *Wight, &c.* CEYLON, not uncommon, *Thwaites*.

Branches rather stout. *Leaves* 2-4 by 1-2 in., rather thin, nerves slender; petiole $\frac{1}{2}$ -1 in. *Peduncles* longer than the petioles; pedicels very variable. *Corolla* $\frac{1}{2}$ in. diam. *Column* and *coronal processes* much as in *T. globifera*, from which this differs in the leaves and long petioles.—The North Bengal locality attributed to this in *DC. Prodr.* is doubtless an error. *Thwaites'* specimen of *T. asthmatica* β *glabra* is very imperfect, but I think referable to this.

9. **T. purpurea**, *Wall. in Wight Contrib.* 51, and *Cat.* 8208; quite glabrous, leaves oblong-lanceolate apiculate base cordate, cymes long-peduncled few-fl'd., sepals ovate, corolla-lobes short ovate, coronal processes gibbous. *Dene. in DC. Prodr.* viii. 611.

BIRMA; banks of the Irawaddy, *Wallich*.

Resembles *T. pauciflora*, but the leaves are narrower, more cordate at the base, and the coronal processes less developed. The specimens are very insufficient. *Wight*

describes the processes of the column as toothed on the inner margin below the tip, and the pollen-masses as transverse.

10. **T. longifolia**, *Wight Contrib.* 50; quite glabrous, leaves lanceolate from a broad cordate base acuminate, cymes elongate bearing small distant umbels on the very long slender rachis, sepals ovate, corolla-lobes short ovate obtuse, coronal processes gibbous. *Wall. Cat.* 8205; *Dcne. in DC. Prodr.* viii. 608.

SIKKIM HIMALAYA, alt. 2000 ft., *Clarke*. KHASIA Mts., alt. 4-6000 ft., *Wallich*, &c.

Stem and *branches* slender. *Leaves* 3-6 by $\frac{3}{4}$ -1 $\frac{1}{2}$ in., membranous, nerves distant; petiole $\frac{1}{2}$ - $\frac{1}{2}$ in. *Cymes* very slender and few-fld. *Corolla* $\frac{1}{2}$ in. diam., yellow. *Follicles* not seen.

11. **T. himalaica**, *Hook. f.*; quite glabrous, leaves petioled ovate-lanceolate acuminate base acute or rounded, cymes bearing short distant umbels on the very long slender rachis, sepals lanceolate, corolla-lobes oblong-ovate obtuse, coronal processes gibbous.

WESTERN HIMALAYA (Suhunsudhara), *Falconer*. SIKKIM HIMALAYA, alt. 3000 ft., *Thomson, Clarke*. KHASIA Mts., alt. 0-4000 ft., *Griffith*, &c.

Very closely allied to *T. longifolia*, but the leaves are very different; always contracted, generally acute, and never cordate at the base; and the flowers are twice as large, with narrow longer sepals, more membranous longer corolla-lobes, and a much larger column. *Follicles* 4-5 in., narrowly poniard-shaped. *Seeds* $\frac{1}{4}$ in. long, broadly ovate.—I have observed a very few hairs on the sepals.

12. **T. zeylanica**, *Dcne. in DC. Prodr.* viii. 608; quite glabrous, leaves large fleshy ovate elliptic or almost rounded acuminate acute or apiculate, cymes elongate bearing few- or many-fld. umbels or racemes on the divaricate branches, sepals ovate obtuse, corolla lobes oblong-ovate obtuse, coronal processes gibbous. *T. micrantha*, *Thwaites Enum.* 197. *Cynanchum micranthum*, *Thunb. Diss.* 6; *DC. l.c.* 548.

TRAVANCORE, alt. 2000 ft., *Beddome*. CEYLON; Central province, alt. 2-4000 ft.

A tall climber. *Leaves* 4-6 by 2-4 in.; midrib thick with a gland above at the insertion of the petiole; nerves spreading; petiole 1-1 $\frac{1}{2}$ in. *Flowers* $\frac{1}{2}$ in. diam.; pedicels slender. *Follicles* 4-6 in., slender. *Seeds* $\frac{1}{2}$ in. long, linear-oblong.—In one of *Beddome's* specimens the flower-bearing tips of the branches are thickened and covered with spirally placed scars, each subtended by a minute bract at the insertion of the pedicels.

13. **T. tenuis**, *Blume Bijl.* 1062; very slender, quite glabrous, leaves small fleshy ovate elliptic or oblong obtuse acute or apiculate, base acute or rounded, peduncle capillary simple or branched bearing few-fld. sessile umbels, pedicels capillary, sepals ovate acute, corolla-lobes short ovate obtuse, coronal processes gibbous or globose. *Dcne. in DC. Prodr.* viii. 608. *T. carnosa*, *Wall. in Wight Contrib.* 49; *Wall. Cat.* 8200; *Wight. Ic. t.* 351; *Dcne. l.c.* 607; *T. tenuissima*, *Wight & Arn. Contrib.* 47; *Wight Ic. t.* 588; *Dalz. & Gibs. Bomb. Fl.* 150. *Dcne. l.c.* 607. *Asclepias tenuissima*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 41. *A. dichotoma*, *Rottl. in Wall. Cat.* 8200 B.C. *Ceropegia Decaisneana*, *Miquel Pl. Hohenack.* n. 634.

BENGAL, *Roxburgh*; Salt Lakes near Calcutta and Sunderbunds, *Clarke*. DECCAN PENINSULA, from Canara southwards. BIRMA, *Wallich*. MALACCA, *Griffith*, *Maingay*. CEYLON, hotter parts of the Island, *Walker*, &c.—DISTRIB. Java, Borneo.

Very slender, prostrate or twining. *Leaves* rarely 1 $\frac{1}{2}$ in. long, very variable in form and breadth, base sometimes cordate, nerves few indistinct; petiole $\frac{1}{2}$ - $\frac{1}{2}$ in. *Flowers* rarely $\frac{1}{2}$ in. diam., dark purple; pedicels $\frac{1}{2}$ - $\frac{1}{2}$ in. *Pollen-masses* suberect. *Follicles* 3 in. long, poniard-shaped, pericarp membranous. *Seeds* $\frac{1}{4}$ in., ovate.

•• Stem and branches long, twining, and leaves glabrous or pubescent; sepals always hirsute or pubescent.

† Coronal processes wholly adnate to the column without free points above.

14. **T. Belostemma**, Benth. Gen. Pl. ii. 771; softly hirsute throughout, leaves ovate-cordate acuminate, cymes simple subsessile, flowers few umbelled, coronal processes linear radiating from the base of the column.—*Belostemma hirsutum*, Wall. in *Wight Contrib.* 52, and *Cat.* 8211.

NEPAL, Wallich. KHASIA Mts.; Churra and below it, alt. 2–4000 ft., J. D. H. & T. T.

Hairs reflexed on stem and branches. Leaves $1\frac{1}{2}$ –2 in., pale green when dry, hirsute on both surfaces; petiole $\frac{1}{2}$ – $\frac{2}{3}$ in. Peduncles shorter than the petioles. Sepals lanceolate, hirsute. Corolla $\frac{1}{4}$ in. diam., dull purple; lobes ovate, pubescent within. Staminal column contracted below the anthers. Follicles not seen.

15. **T. hirsuta**, Wight Contrib. 49; stem densely softly tomentose, leaves ovate or ovate-lanceolate acute or acuminate pubescent or tomentose on both surfaces, base rounded obtuse or cordate, peduncles long flexuous bearing distant few-fl. umbels at the flexures, corolla puberulous within lobes short, coronal processes subglobose. Wall. Cat. 8201; Dcne. in DC. Prodr. viii. 607. *T. Jacquemontii*, Dcne. l. c. *Gymnema hirsutum*, Wall. Tent. Fl. Nep. 50.

TROPICAL HIMALAYA, ascending to 5000 ft. in Kumaon, from the Punjab eastwards (Pathankola, Clarke). ASSAM, Jenkins. KHASIA Mts., alt. 2000 ft., J. D. H. & T. T. CACHAR, Keenan.

Stem rather stout; hairs reflexed. Leaves 3–7 by $1\frac{1}{2}$ –4 in., sometimes only faintly hairy; petiole $\frac{3}{4}$ – $1\frac{1}{2}$ in., stout. Peduncle very variable in length, villous or hirsute; pedicels capillary, short or long. Sepals lanceolate, hirsute. Corolla $\frac{1}{2}$ – $\frac{1}{4}$ in. diam. Follicles 2–2 $\frac{1}{2}$ in., poniard-shaped, glabrous. Seeds $\frac{1}{4}$ in. long, narrowly ovate.

VAR. ? *penangensis*; leaves minutely pustular on the upper surface at the bases of the hairs.—Penang, Phillips.—This, of which the specimens are very imperfect, may be *T. villosa*, Blume of Java, which strongly resembles *T. hirsuta*, and also *T. mollissima*, Wall. (Cat. 8202) of China.

16. **T. mollissima**, Wight Contrib. 49; Ic. t. 1275 (not of Wallich), stem densely softly tomentose, leaves oblong or linear-oblong acute or acuminate base rounded tomentose or villous on both surfaces, peduncles flexuous bearing distant few-fl. umbels, sepals lanceolate, corolla glabrous within lobes oblong, coronal processes subglobose hispid. Dcne. in DC. Prodr. viii. 607.

NILGHERY and PULNEY Mts., Wight.

Very similar to *T. hirsuta*, differing in the form of the leaves. Fruit unknown.

17. **T. rotundifolia**, Hamilt. in Wight Contrib. 50; stem pubescent, leaves very shortly petioled orbicular or very broadly ovate obtuse or acute beneath and margins pubescent, base rounded or cordate, cymes many-fl. umbellate sessile or peduncled, pedicels long, sepals lanceolate hispid, corolla lobes ovate, coronal processes globose. Wall. Cat. 8203; Dcne. in DC. Prodr. viii. 608.

ASSAM; Dongtala and Habora Ghat, Hamilton. NORTHERN OUDE, Vicary. THE CONCAN, Law, Stocks. TRAVANCORE; Annamallay hills, Beddome.

Leaves 2–3 $\frac{1}{2}$ in. long and often as broad, coriaceous, glabrous above; petiole $\frac{1}{2}$ – $\frac{1}{4}$ in. Pedicels $\frac{1}{2}$ –1 in. long, nearly glabrous or pubescent. Corolla $\frac{1}{4}$ to nearly $\frac{1}{2}$ in. diam. Follicles not seen.

18. **T. Dalzellii**, Hook. f.; stem and cymes sparsely pubescent, leaves coriaceous or fleshy ovate oblong or cordate acute or acuminate glabrous or

nearly so, cymes sessile or peduncle short, rachis flexuous with umbels or racemes at the flexures, pedicels long capillary, sepals ovate hispid, corolla-lobes short, coronal processes gibbous.—*T. carnosa*, Dalz. & Gibs. *Bomb. Fl.* 150. *Tylophora* n. 23 and *T. pauciflora*? *Herb. Ind. Or. H. f. & T.*

CONCAN and MALABAR, *Stocks, Law, &c.*

Leaves very variable, 2-4 in., quite glabrous or puberulous on the petiole margins and nerves beneath; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Peduncles* nearly half as long as the leaves; rachis often zigzag, sometimes clavate, hispid at the insertion of the pedicels; flowers always numerous, sometimes in a globose mass $1\frac{1}{2}$ in. diam., usually laxer; pedicels $\frac{1}{4}$ –1 in. *Corolla* $\frac{1}{8}$ – $\frac{1}{4}$ in. diam. *Follicles* 3-4 in. poniard-shaped, glabrous. *Seeds* $\frac{1}{3}$ in., broadly ovate.—This is the *T. carnosa* of Dalzell and Gibson, but not of Wight, from whose plant it differs in the pubescence, larger leaves, shorter peduncles, and many-flowered umbels. It differs from *T. rotundifolia* in the much smaller flowers and longer petioles; it also closely resembles *T. asthmatica*, but has shorter sepals and wholly adnate processes.

19. ***T. exilis***, *Coleb. in Trans. Linn. Soc.* xii. 358, t. 16; stem slender and cymes finely sparsely villous, leaves ovate-oblong or -lanceolate acuminate nearly glabrous, peduncles long slender flexuous simple or branched bearing few-fl. sessile umbels, pedicels very short, sepals ovate hispid, corolla-lobes short, coronal processes gibbous. *Wight Contrib.* 50; *Wall. Cat.* 8206; *Dcne. in DC. Prodr.* viii. 608. *Pergularia exilis*, *Spreng. Syst.* i. 844.

ASSAM, *Masters*. SILHET, *Wallich*. CHITTAGONG, *Colebrooke*. MALACCA, *Griffith*.

Very similar to *T. tenuis*, but with larger leaves, hairy branchlets cymes petioles and midrib of the leaf above, and very short pedicels rarely $\frac{1}{4}$ in. long. *Follicles* $3\frac{1}{2}$ in. long, very membranous. *Seeds* $\frac{1}{4}$ in. long, ovate.

†† *Coronal processes adnate below to the column; tips free, reaching as high as the stigma.*

20. ***T. cordifolia***, *Thwaites Enum.* 196; nearly glabrous, leaves small coriaceous ovate-cordate apiculate, peduncles very short 1-2-fl., sepals ovate glabrous, corolla-lobes short, coronal processes strongly laterally compressed, dilated upwards.

CEYLON; common in the central provinces, *Walker, Thwaites*.

Stem slender and petioles puberulous. *Leaves* $\frac{1}{2}$ –1 in., thin, firm, shining; petiole $\frac{1}{10}$ – $\frac{1}{8}$ in. *Peduncle* $\frac{3}{8}$ – $\frac{1}{2}$ in., capillary. *Corolla* $\frac{1}{8}$ in. diam., dark purple, lobes obtuse. "*Follicles* usually solitary, 2 in. long, slender, glabrous" (*Thwaites*).—The column with its processes is obconic (as in some non-Indian species) from the upward dilatation of the processes which radiate from it.

21. ***T. tenerrima***, *Wight Contrib.* 50; nearly glabrous, leaves ligulate or linear-lanceolate obtuse apiculate or acuminate, cymes peduncled 2-4-fl., sepals ovate-lanceolate hispid, corolla-lobes linear-oblong puberulous within, coronal processes gibbous or globose with free incurved cuspidate tips. *Wall. Cat.* 8207; *Dcne. in DC. Prodr.* viii. 610. *Homostyles tenerrima*, *Wall. mss.*

SUBTROPICAL HIMALAYA; alt. 3-6000 ft., from Kumaon, *Royle*, to Sikkim, *J. D. H.*

Stem very slender and much branched. *Leaves* 1-2 by $\frac{1}{10}$ – $\frac{1}{8}$ in., nerveless; petiole very short. *Peduncles* capillary, usually shorter than the leaves; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in. *Corolla* $\frac{1}{8}$ in. diam. *Follicles* not seen.

22. ***T. asthmatica***, *Wight & Arn. Contrib.* 51; glabrous pubescent or tomentose, leaves ovate rounded or oblong apiculate acute or acuminate, base usually cordate, peduncles shorter than the leaves bearing 2-3 sessile few- or many-fl. umbels, pedicels long capillary, sepals long lanceolate hispid, corolla large lobes short acute, coronal processes gibbous or globose with free cuspidate

tips. *Wall. Cat.* 8210; *Wight Ic.* t. 1277; *Dalz. & Gibs. Bomb. Fl.* 150; *Thwaites Enum.* 197, excl. var. β ; *Bentl. & Trim. Med. Pl.* t. 177; *Dene. in DC. Prodr.* viii. 611. *T. pubescens*, *Wall. mss.* *Asclepias asthmatica*, *Willd.*; *Roze. Hort. Beng.* 20, and *Fl. Ind.* ii. 33. *A. tunicata*, *Hort. Calc.* *A. vomitoria*, *Koen. mss.* *Cynanchum vomitorium*, *Lamk. Dict.* ii. 235. *C. viridiflorum*, *Sims. Bot. Mag.* t. 1929. "*C. flavum* and *bracteatum*, *Thunb.*;" *Thwaites*; *Dene. in DC. l. c.* 549. *C. Ipecacuanha*, *Willd.* *C. indicum*, *Herb. Burm.* *Hoya planiflora*, *Wall. mss.*

N. & E. BENGAL, ASSAM, CACHAR, CHITTAGONG and BURMA to MALACCA; DECCAN PENINSULA, abundant. CEYLON, common in the hotter districts.—DISTRIB. Siam, Malay Islds., Borneo.

Stem slender. *Leaves* 2–4 in., rather thickly coriaceous, very variable in width, rarely pubescent or tomentose on both surfaces; nerves few, spreading; petiole $\frac{1}{4}$ – $\frac{2}{3}$ in. *Cymes* always more or less pubescent, hispid at the bases of the umbels. *Corolla* $\frac{1}{3}$ in. diam., dull yellow and purple within. *Follicles* very variable, poniard-shaped, divaricate, 3–4 in. and slender in Deccan specimens with a thin pericarp; turgid in the lower half, and only 2 in. long, with a thick pericarp, in some Ceylon specimens. *Seeds* $\frac{1}{2}$ in. long, broadly ovate.

23. **T. Wallichii**, *Hook. f.*; stem stout, cymes and petioles sparsely pubescent or puberulous, leaves fleshy oblong or ovate-oblong acuminate base cordate, peduncles long stout branched bearing few-fl. irregular umbels or clusters, sepals ovate pubescent, corolla subglobose fleshy shortly 5-lobed, coronal processes gibbous with free cuspidate tips (or 0), follicles very large ellipsoid ventricose. *Gymnema Wallichii*, in part, *Wight Contrib.* 46. *G. sagittatum*, *Wall. Cat.* 8194 B.

SINGAPORE, *Wallich.* PENANG, *Maingay.* MALACCA, *Griffith, Maingay* (*Kew Distrib.* 1142).—DISTRIB. Borneo.

Leaves thickly coriaceous, 4–6 by $\frac{1}{2}$ –2 in., narrowed at the cordate base, nerves spreading; petiole $\frac{1}{2}$ – $\frac{2}{3}$ in. *Cymes* often exceeding the leaves, branches divaricate. *Flowers* $\frac{1}{3}$ in. diam.; often fleshy and deformed with the column imperfectly developed cylindric and without coronal processes. *Follicles* very different from those of any congener, 4–5 by 1–1 $\frac{1}{2}$ in., elliptic-lanceolate, narrowed equally to the base and tip, pericarp coriaceous. *Seeds* $\frac{1}{2}$ in. long, broadly ovate.—This very closely resembles in habit when dry *Gongronema Wallichii*.

37. **TREUTLERA**, *Hook. f. Gen. Nov.*

A stout glabrous twiner. *Leaves* opposite, thickly coriaceous. *Flowers* large, in axillary simple stoutly peduncled umbels. *Sepals* very small, ovate, glandular within. *Corolla* rotate, shortly 5-lobed; lobes broadly ovate, ciliate, overlapping to the right. *Coronal* processes adnate to the backs of the anthers and equalling them, ovate, obtuse, fleshy. *Column* prominent; anther-tips inflexed, rounded; pollen-masses one in each cell, subcylindric, pedicelled, waxy, erect. *Stigma* hemispheric, 2-cuspidate, included.

T. insignis, *Hook. f. in Hook. Ic. Pl.* t. 1425.

SIKKIM HIMALAYA, alt. 8–10,000 ft., *J. D. H., Anderson, Treutler.*

Branches terete, smooth. *Leaves* in distant pairs, 3–5 by 1 $\frac{1}{2}$ –3 in., ovate elliptic oblanceolate or elliptic-oblong, apiculate or acuminate, midrib thick; nerves 4–5 pairs, spreading, secondary indistinct; petiole stout, $\frac{1}{2}$ –1 $\frac{1}{2}$ in. *Peduncle* 1–2 in.; *pedicels* 1–1 $\frac{1}{2}$ in., stout; bracts small, lanceolate. *Sepals* ciliate. *Corolla* 1–1 $\frac{1}{2}$ in. diam., coriaceous, glabrous, dark purple. *Fruit* not seen.—This genus is very near *Marsdenia*, from which it differs conspicuously in the large rotate corolla with short rounded lobes. It is named after Dr. Treutler, a native of the province of Sikkim, who presented to Kew in 1875 a very large and valuable collection of its plants, inclusive of the present which is one of the most handsome of the Sikkim Asclepiads.

38. **COSMOSTIGMA**, Br.

A twining glabrous shrub. *Leaves* opposite, ovate or cordate. *Cymes* axillary, racemiform; flowers small, greenish. *Sepals* small. *Corolla* rotate, lobes overlapping to the right. *Coronal scales* adnate to the base of the anthers, and shorter than they are, erect, broad, membranous, truncate or 2-fid. *Column* very short, filaments fleshy; anther-tip broad, rounded, inflexed; pollen-masses obovoid-oblong, waxy, erect, pedicels long flexuous. *Stigma* broad, flat, 5-angled. *Follicles* large, linear-oblong, obtuse, smooth. *Seeds* comose.

C. racemosum, *Wight Contrib.* 42, and *Ic. t.* 591; *Dalz. & Gibs. Bomb. Fl.* 151; *Grah. Cat. Bomb. Pl.* 119; *Dene. in DC. Prodr.* viii. 613. *C. acuminatum*, *Wight Ic. t.* 1270. *Asclepias racemosa*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 32. *Nerium piscidium*, *Hort. Calc.—Rheede Hort. Mal.* vii. t. 32.

SILHET, CHITTAGONG, and the WESTERN GHATS, from the Concan southwards. CEYLON, common.—DISTRIB. Java.

A tall stout climber. *Leaves* deciduous, 3-5 by $1\frac{1}{2}$ - $2\frac{1}{2}$ in., rather coriaceous, rounded or ovate, finely acuminate or tip obtuse, base sometimes cordately 2-lobed, lobes conniving; petiole 1-2 in. *Peduncles* equalling the petioles, stout, straight; pedicels $\frac{1}{2}$ in., stout, spreading, spirally arranged round the rachis; bracts 0. *Corolla* $\frac{1}{2}$ in. diam., fleshy, speckled with brown. *Follicles* 7 in. long by $1\frac{1}{2}$ in. diam., lanceolate or linear-oblong, obtuse, smooth. *Seeds* $\frac{3}{4}$ in. long, broadly ovate.

39. **DREGA**, E. Meyer.

Twining shrubs, glabrous or hoary. *Leaves* opposite, ovate or cordate, acuminate. *Cymes* axillary, umbelliform; flowers green. *Sepals* small. *Corolla* rotate, lobes broad, overlapping to the right. *Coronal scales* 5, hemispheric, fleshy, adnate to the column, spreading, inner angle cuspidate, the tooth incumbent on the anthers. *Column* very short, fleshy; anther-tips short inflexed; pollen-masses one in each cell, cylindric-oblong, shortly pedicelled, waxy, erect. *Stigma* conical or dome-shaped. *Follicles* thick, hard, winged or ribbed. *Seeds* comose.—DISTRIB. Species 6 or 7; Indian, Malayan, and tropical and S. African.

D. volubilis, *Benth. Gen. Pl.* 775; glabrous hoary or mealy, leaves ovate suborbicular or cordate acuminate, peduncles equalling or exceeding the pedicels many-fld., pedicels slender, flowers green, sepals triangular-ovate. *Hoya viridiflora*, Br. in *Mem. Wern. Soc.* i. 27; *Wight Contrib.* 39, and in *Hook. Bot. Misc.* ii. 98, t. 1, and *Ic. t.* 586; *Wall. Cat.* 8168; *Dalz. & Gibs. Bomb. Fl.* 153; *Grah. Cat. Bomb. Pl.* 119; *Griff. Ic. Pl. Asiat.* t. 387, 388. *Asclepias volubilis*, *Linn. f.*; *Roxb. Fl. Ind.* ii. 36. *Apocynum tiliæfolium*, *Lamk. Encycl.* i. 214. *Wattakaka viridiflora*, *Hassk. in Flora*, 1857, 79.—*Rheede Hort. Mal.* ix. t. 15.

BENGAL, ASSAM and the DECCAN PENINSULA, from the Concan, southwards. CEYLON, in the hotter parts of the island.—DISTRIB. Java.

A stout tall climber, branches often pustular. *Leaves* 3-6 by 2-4 in., rather coriaceous, base rounded or cordate; nerves 4-5 pairs; petiole 1-3 in. *Peduncles* 1-3 in., rather slender; umbels drooping, very many-fld., subglobose; pedicels $\frac{1}{2}$ in., slender. *Corolla* $\frac{1}{2}$ in. diam., cupular, lobes triangular. *Stigma* dome-shaped. *Follicles* $\frac{3}{4}$ in. long by $1-1\frac{1}{4}$ in. diam., broadly lanceolate, turgid, glabrous. *Seeds* 2 in. long, broadly ovate, pale, smooth and shining, border thick.

VAR. *Lacuna*, all parts hoary or mealy. *Hoya Lacuna*, *Ham. in Wall. Cat.* 8169; *Wight Contrib.* 39; *Dene. in Jacq. Voy. Bot.* 108, t. 114, and in *DC. Prodr.* viii. 639. —North-West India from Kumaon to Oude and the Bombay Ghats. Bengal. Birma.

VAR. *angustifolia*, suberect, densely mealy or velvety, leaves ovate-lanceolate small.—Malabar and Bombay (a starved form).

40. **HETEROSTEMMA**, W. & A.

Twining nearly glabrous shrubs or undershrubs. *Leaves* opposite, often cordate, base 3-5-nerved. *Flowers* rather small, in shortly peduncled umbelled or racemose-cymes. *Calyx* small, 5-fid or -partite. *Corolla* rotate, lobes broad triangular valvate. *Corona* of 5 large lobes spreading horizontally from the column and lying flat on the corolla. *Column* very small, depressed; anthers very minute, tip very short; pollen-masses one in each cell, minute, broad, compressed, sessile, waxy, erect. *Stigma* included, truncate, 5-angled. *Follicles* slender, straight, terete, pointed, pericarp thin. *Seeds* comose.—DISTRIB. Species about 10; Indian and Malayan.

* *Coronal processes orbicular, sessile.*

1. **H. Wallichii**, *Wight Contrib.* 42; branches hairy chiefly along two lines, leaves ovate broadly oblong or elliptic acuminate, coronal processes sessile orbicular with or without a small conical boss near the base. *Wall. Cat.* 8179; *Dene. in DC. Prodr.* viii. 630. *Heterostemma*, sp. 4, *Herb. H. f. & T.*

NEPAL, *Wallich*. ASSAM, *Jenkins*. KHASIA MTS. at Nowgong, *J. D. H. & T. T.*

Leaves 3-7 by 2-4 in., base rounded or subcordate, bright green, thinly coriaceous; petiole $\frac{1}{2}$ -2 in. *Cymes* small, peduncle stouter than the petiole; flowers $\frac{1}{3}$ - $\frac{1}{2}$ in. diam., greenish. *Fruit* not seen.

2. **H. alatum**, *Wight Contrib.* 42; branches with two lines of hairs, leaves elliptic-ovate oblong or -lanceolate acuminate, nerves beneath winged, coronal processes ovate-lanceolate acuminate with a large ovate acute concave appendage on the surfaces. *Wall. Cat.* 8180; *Dene. in DC. Prodr.* viii. 630.

CENTRAL and EASTERN HIMALAYA; Kumaon, *Royle*; Nepal, *Wallich*; SIKKIM, alt. 2-6000 ft., *J. D. H.* KHASIA MTS., alt. 4-6000 ft., *Lobb, J. D. H. & T. T.*

Leaves 3-6 by $1\frac{1}{2}$ - $3\frac{1}{2}$ in., rather coriaceous, light green, base acute or rounded, rarely cordate, nerves 3-4 pairs; petiole 1-2 in. *Peduncles* very short, stout; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in., flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., yellow. *Follicles* (immature) very slender, straight.

3. **H. stellatum**, *Hook. f.*; branches with very obscurely pubescent lines, leaves lanceolate or oblong-lanceolate acuminate, nerves beneath winged, corona stellately 5-lobed to below the middle, lobes triangular acute without appendages. *Heterostemma*, n. 3, *Herb. H. f. & T.*

KHASIA MTS.; at Myrung, alt. 6000 ft., *J. D. H.*

This resembles *H. alatum*, but the leaves are narrower with a more regular intermarginal nerve, and the corona is very different.

4. **H. tanjorensis**, *Wight & Arn. Contrib.* 42; branches quite glabrous, leaves broadly or narrowly ovate oblong or oblong-lanceolate obtuse or apiculate, base rounded or subcordate, coronal processes orbicular-obovate with a large erect fleshy appendage on the surface. *Wight Ic.* t. 348; *Wall. Cat.* 1178; *Dene. in DC. Prodr.* viii. 630. *Stapelia involucrata*, *Herb. Madr. Glossostelma*, nov. gen., *Wight mss.*

WESTERN PENINSULA; the Carnatic, in sandy places, *Wight*.

Leaves very variable, 3-5 by $1\frac{1}{2}$ -3 in., tip usually rounded and apiculate. *Cymes* usually sessile, flowers $\frac{1}{3}$ in. diam.; coronal processes with an erect acute appendage. *Follicles* very slender, 4 in. long by $\frac{1}{4}$ - $\frac{1}{3}$ in. diam., glabrous. *Seeds* $\frac{1}{2}$ in. long narrowly ovate.

VAR. zeylanicum; leaves acute or acuminate, flowers dark purple, appendages of the coronal processes larger obtuse or acute. *H. tanjorensis*, *Thwaites Enum.* 198.—Ceylon, central province, ascending to 4000 ft.

5. **H. Dalzellii**, *Hook. f.*; branches glabrous or nearly so, leaves broadly or narrowly elliptic or ovate- or oblong-lanceolate acuminate, coronal processes spathulate without an appendage. *H. Wallichii*, *Dalz. & Gibbs. Bomb. Fl.* 152 (not of *Wight*). *Heterostemma*, sp. 2, *Herb. Ind. Or. H. f. & T.*

The CONCAN; at Vingorla, and Malvan, *Dalzell, Stocks*.

Leaves as in *H. tanjorensis*, of which this may be a variety, differing greatly in the corona, the lobes of which have no appendage proper, though there are traces of swellings at the bases in some specimens and at their backs in others, as if in the latter case the process was reduced and its appendage enlarged. In some specimens the apex is obscurely 3-lobed, in others the tip is subquadrate with a simple or bifid tip, and the sides acutely angled. The follicles appear shorter than in *H. tanjorensis*, but they are not quite ripe in either species.

41. **DITTOCERAS**, *Hook. f. Gen. Nov.*

A stout pubescent twining shrub. *Leaves* opposite, long petioled, elliptic-ovate, acute. *Flowers* large, in sessile umbelliform few-fl. cymes. *Sepals* minute, ovate, obtuse, glandular within. *Corolla* rotate; lobes short, triangular, subacute, valvate in bud. *Corona* large, deeply 5-lobed, lying flat on the corolla, lobes orbicular-spathulate, with a minute boss at the base of each. *Column* depressed. *Anthems* minute, tips very short, incurved; pollen-masses very minute, subglobose, sessile on the minute corpuscle, waxy, erect. *Stigma* pentagonal, included. *Follicles* sub-cylindric, obtuse, recurved, pericarp very thick fleshy, endocarp hard shining. *Seeds* very large, narrowly ovoid-oblong, compressed, winged at the rounded base; coma short.

1. **D. Andersoni**, *Hook. f. in Hook. Ic. Pl.* t. 1422. *Heterostemma*, sp. 6, *Herb. Hook. f. & T.*

SIKKIM HIMALAYA, alt. 2-4000 ft.; *J. D. H., T. Anderson, Clarke*.

Branches leaves beneath, petioles and pedicels rusty-pubescent. *Leaves* 4-5 by 2-3 in., sometimes cordate, dark green, sparsely hairy above, nerves 4-5 pairs; petiole $1\frac{1}{2}$ -2 in. *Corolla* $1\frac{1}{2}$ in. diam., sparsely hairy without, dark purple. *Follicles* 4-5 in. long, by $\frac{2}{3}$ in. diam., green when ripe. *Seeds* $1\frac{1}{4}$ in. long, black, coma as long as the rest of the seed, hairs spreading and reflexed.—Closely allied to *Heterostemma*, but widely differing in the large flowers, follicles, and seeds.

42. **OIANTHUS**, *Benth.*

Twining glabrous undershrubs, branches with two lines of pubescence. *Leaves* opposite. *Cymes* small, subsessile, few-fl. *Sepals* small, obtuse or acute. *Corolla* ovoid-urceolate or disciform, mouth contracted; lobes 5, very short, broad, valvate. *Corona* cupular, adnate to the column, spreading, fleshy, lobulate or toothed. *Column* minute, short, depressed; anther-tips short, inflexed; pollen-masses very minute, one in each cell, semi-ovate, compressed, inner margin pellucid, sessile, waxy, ascending. *Stigma* broadly conic, not exceeding the anthers.

I think it possible that the following species are abnormal forms of *Heterostemma*.

1. **O. urceolatus**, *Benth. in Hook. Ic. Pl.* t. 1191; leaves ovate or ovate-lanceolate acuminate base rounded or subcordate, cymes sessile or shortly peduncled, corolla ovoid-urceolate, corona 5-lobed, lobes incurved 3-toothed. *Heterostemma urceolatum*, *Dalz. in Hook. Kew Journ.* iv. 295; *Dalz. & Gibs. Bomb. Fl.* 153.

The CONCAN; Belgaum and hills to the north of it, *Dalzell*.

Stem purple. *Leaves* 2-4 by 1-2 in.; green, nerves 2-3 pair with strong connecting nervules. *Corolla* coriaceous, $\frac{3}{4}$ in. long, red-purple without, dark purple within, sparingly villous at the base within; lobes minute, triangular.

2. **O. disciflorus**, *Hook. f.*; nearly glabrous, leaves elliptic or ovate-oblong subacute or obtuse, petiole 1-1 $\frac{1}{2}$ in., corolla disciform vertically depressed, corona 5-lobed lobes entire margin very thick somewhat incurved.

WESTERN PENINSULA, the Concan? *Herb. Law. and Stocks*.

This in foliage entirely resembles *Heterostemma Dalzellii*, of which it may be a singular form, but the flowers are quite perfect (about $\frac{1}{2}$ in. diam.)

3. **O. Beddomei**, *Hook. f.*; branches and petioles very pubescent, leaves ovate-cordate acuminate reticulately nerved, petiole 2-3 in., sepals lanceolate acuminate, corolla discoid.

MYSORE in the Beigoor forests, Wynaad, *Beddome*.

Described from an excellent drawing, Col. Beddome having lost his specimen.

43. DISCHIDIA, Br.

Herbs or undershrubs, usually rooting and climbing on trees or pendulous. *Leaves* various, fleshy, sometimes forming into pitchers (ascidia). *Flowers* very small or minute, white or red, in axillary fascicles umbels or racemes. *Sepals* 5, ovate, membranous. *Corolla* urceolate, mouth contracted; lobes 5, very short, valvate. *Coronal-scales* 5, membranous, adnate to the back of the column, erect, tips entire notched or 2-fid or with recurved arms. *Column* very short; anther-tip membranous; pollen-masses one in each cell, compressed, waxy. *Stigma* flat or conical. *Follicles* small, slender or thick, smooth, acuminate. *Seeds* minute, coma long.—DISTRIB. Species about 24; tropical Indian, Malayan, and Australian.

The species of *Dischidia* all want a careful study. They cannot be described satisfactorily from dried specimens. The leaves change in form, and it is not ascertained in respect of many species whether they may or may not be converted into pitchers (ascidia).

1. **D. Nummularia**, *Br. Prodr.* 461; glabrous, leaves subsessile $\frac{1}{4}$ - $\frac{3}{4}$ in. orbicular acute obtuse or apiculate, corolla scarlet, throat with a ring of hairs, follicles 1-1 $\frac{1}{2}$ in. curved obliquely ellipsoid below the middle, above it contracted into a long slender beak. *Wall. Cat.* 4204; *Wight Contrib.* 43; *Dene. in DC. Prodr.* viii. 632; *Blume Bijl.* 1059. *D. orbicularis*, *Dene. l.c.* *Collyris minor*, *Vahl. in Act. Soc. Hafn.* vi. 111; ex *Wight Contrib.* 67.—*Rumph. Herb. Amboin.* v. t. 176, f. 1.

CACHAR, Keenan, and MALAY PENINSULA, from Chittagong. *Clarke*, Tenasserim and the Andaman Islands, to Singapore and Malacca, *Wallich*, &c. DISTRIB. Malay Islds., Australia.

A very slender herb, rooting on tree trunks. *Leaves* whitish when dry, with

often recurved margins, nerves 2-3 pairs horizontal reticulating. *Seeds* $\frac{1}{18}$ in. long, slender.

2. **D. hirsuta**, *Dcne. in DC. Prodr.* viii. 632; papillose and more or less pubescent, leaves $\frac{3}{4}$ -1 in. sessile broadly ovate acute lacunose above between the horizontal nerves, corolla red, throat with 2 rows of hairs. *D. fasciculata*, *Dcne. l. c.* *D. Brunoniana*, *Griff. Notul.* iv. 44, and *l. c. Pl. Asiat.* t. 410, A. f. 1. *Leptostemma hirsutum* and *fasciculatum*, *Blume Bijl.* 1058.

TENASSERIM, *Helfer*; at Mergui, *Griffith*. SINGAPORE, *Hb. Wight*. MALACCA, *Maingay* (Kew Distrib. 1120). DISTRIB. Java.

Stem very slender and leaves on both surfaces papillose and sometimes sparsely hairy. *Leaves* pale when dry, the 2 or 3 pairs of nerves very prominent above. *Corolla* $\frac{1}{2}$ in. long "blood red, with a row of ascending shining hairs in the middle of the tube, and a similar row on the throat inserted below a row of 5 adnate fleshy convex scales. *Pollen-masses* linear, connate at the base." *Maingay*.

3. **D. albida**, *Griff. Notul.* iv. 46; glabrous, leaves petioled ovate or rounded-ovate or ovate-cordate acute or acuminate nerveless.

MALACCA; at Toondook. *Griffith*.

Stems very slender, creeping and rooting. *Leaves* fleshy; petiole $\frac{1}{8}$ - $\frac{1}{6}$ in. "*Peduncles* subaxillary equalling the petiole, perennial. *Flowers* umbelled, few, small, white. *Corolla*-throat closed with white hairs. *Pollen-masses* oblong, scarcely compressed, as long as their caudicles. *Follicles* very long-beaked, deeply channelled on the inner face." *Griffith*.

4. **D. khasiana**, *Hook. f.*; glabrous or very sparsely hairy, leaves $\frac{1}{2}$ - $\frac{3}{4}$ in. petioled orbicular tip rounded, nerves very slender, follicles $2\frac{1}{2}$ in. slender throughout straight or curved. *Dischidia*, n. 9, *Herb. H. f. & T*.

KHASIA Mts. at Churra and Nunklow, alt. 3-4000 ft. *J. D. H. & T. T*.

Stem very slender, creeping, papillose. *Leaves* quite orbicular, tip rounded or apiculate, nerves 2-3 pairs horizontal; petiole $\frac{1}{8}$ - $\frac{1}{4}$ in. *Follicles* about $\frac{1}{2}$ in. diam. below the middle, gradually tapering to the obtuse tip and to the base. pale.—This resembles *D. formosana*, Maxim., but the leaves are much larger; the habit and foliage are precisely those of *Hoya Nummularia*.

5. **D. benghalensis**, *Coleb. in Trans. Linn. Soc.* xii. 357, t. 15; glabrous, branches flagelliform pendulous, leaves linear elliptic obovate oblong or lanceolate midrib and nerves obscure or 0, flowers fascicled subsessile. *Wight Contrib.* 43; *Wall. Cat.* 4205; *Dcne. in DC. Prodr.* viii. 631; *Bot. Mag.* t. 2916. *D. cuneifolia*, *Wall. Cat.* 4206; *Dcne. l. c.* *D. spathulata*, *Blume Bijl.* 1069; *Miquel Fl. Ind. Bat.* ii. 513.

EASTERN NEPAL and SIKKIM, *J. D. H.* ASSAM and southwards to MALACCA.—DISTRIB. Java, Borneo.

Stems often matted, pale green, as thick as a goose-quill. *Leaves* in distant pairs, subsessile, 1-2 by $\frac{1}{4}$ - $\frac{3}{4}$ in. obtuse acute or apiculate, very fleshy. *Flowers* minute. *Corolla* $\frac{1}{2}$ in. long, yellowish, tube globose, throat glabrous. *Follicles* $1\frac{1}{2}$ - $2\frac{1}{2}$ in. slender, straight, acuminate, pericarp thin.

6. **D. Rafflesiana**, *Wall. Plant. As. Rar.* ii. 35, t. 142, and *Cat.* 4208; glabrous, climbing and pendulous, leaves orbicular 1 in. diam. subsessile changing into oblong pitchers 2-5 in. long, flowers umbellate on a long or short stout peduncle, sepals pubescent, corolla ovoid, teeth minute pubescent within, throat glabrous. *Griff. Notul.* iv. 47, t. 386, f. 6, and in *Trans. Linn. Soc.* xx. 387 and 396, t. 17, 18; *Dcne. in DC. Prodr.* viii. 632. *Collyris major*, *Vahl.*; *Wight Contrib.* 66.

CACHAR, *J. D. H. & T. T.*; and from TENASSERIM, *Griffith*, to MALACCA.—DISTRIB. Borneo, Australia.

Stem and branches stout. *Leaves* very similar to those of *D. hirsuta* when dry, but not papillose; ascidia irregularly compressed, obtuse, fleshy, base gibbous, the cavity filled with rootlets from the adjoining node. *Flowers* $\frac{1}{2}$ in long. *Sepals* obtuse. *Corolla* fleshy, teeth 3-gonous and throat thickened. *Follicles* 2-3 in. long, curved, $\frac{1}{2}$ in. broad below the middle, tapering thence to both ends, pericarp thin. *Seeds* $\frac{1}{10}$ in. linear oblong.—Griffith's Mergui plant may be different from the Malacca one, which has longer peduncles and more numerous flowers. I find no difference in the corollas.

7. *D. acutifolia*, Maingay mss.; glabrous, stems slender twining, leaves shortly petioled 3-4 in. long ovate-lanceolate acute coriaceous penninerved, peduncles elongate, flowers subsessile, corolla throat hairy.

MALACCA; Maingay (Kew Distrib. 1122).

Leaves shining, nerves 5-7 pair, prominent on both surfaces; petiole $\frac{1}{4}$ in. or less. *Peduncle* $\frac{1}{2}$ -1 in. "*Corolla* very minute, urceolate, pale yellow with the short limb pink, throat closed with a row of fine horizontal or slightly ascending hairs. *Coronal-processes* very minute, closely appressed to the anthers," Maingay. *Follicles* $2\frac{1}{2}$ in. long, very slender, terete, slightly curved, narrowed from the base upwards.

8. *D. Griffithii*, Hook. f.; glabrous, twining, leaves 1-1 $\frac{1}{2}$ in. petioled obovate acute very fleshy nerveless, peduncles very short few-fld. *D. obovata*, Griff. Notul. iv. 51, and Ic. Pl. Asiat. t. 388, A. f. 7.

TENASSERIM; at Mergui, on trees, Griffith.

Branches as thick as a crow-quill. *Leaves* $\frac{3}{4}$ -1 in. diam., base cuneate; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Peduncles* perennial, ovoid, obtuse, as thick as the branch. "Flowers few, small, inconspicuous, white. *Sepals* minute, rounded. *Corolla* urceolate, 5-toothed, throat closed with hairs. *Coronal-processes* white, fleshy, angular, base 2-fld. *Pollen-masses* tumid, obovoid." Griffith.

9. *D. Collyris*, Wall. Cat. 4207; glabrous, leaves sessile orbicular 1-1 $\frac{1}{2}$ in. diam. fleshy convex papillose with the nerves distinct beneath, corolla glabrous within white. Conchophyllum imbricatum, Blume Bijd. 1062; Dcne. in DC. Prodr. viii. 630. *Collyris* major, Vahl.; Wight Contrib. 66; Miq. Fl. Ind. Bat. ii. 513. ? *D. albiflora*, Griff. Notul. iv. 47, and Ic. Pl. Asiat. t. 410, A. f. 8.

MALACCA, Maingay (Kew Distrib. 1114). SINGAPORE, Walker.—DISTRIB. JAVA, BORNEO.

Stems creeping and rooting, the roots protected by the leaves. *Leaves* sometimes pruinose beneath, nerves 2-3 pairs, horizontal. *Flowers* subsessile on the short peduncles. *Corolla* $\frac{1}{16}$ in. long, globose with erect teeth, "white glabrous within, lobes tipped with lilac," Maingay.

10. *D. coccinea*, Griff. Notul. iv. 45, and Ic. Pl. Asiat. t. 409; glabrous, leaves sessile orbicular $\frac{1}{2}$ - $\frac{3}{4}$ in. diam. convex papillose with the nerves distinct beneath, corolla glabrous within scarlet.

MALACCA, Griffith, Maingay (Kew Distrib. 3780).

More slender and smaller than *D. Collyris*, of which Maingay considers it a variety. *Flowers* fascicled on a very short peduncle $\frac{1}{2}$ in. long. *Follicles* 1 in. long, lanceolate, curved, broadest near the base.

11. *D. complex*, Griff. Notul. iv. 50; glabrous, ascidia subreniform compressed lamina inflexed at the orifice, peduncle long, corolla white, throat closed with hairs.

MALACCA, Griffith.

Twining. *Ascidia* large; orifice small, near the petiole, its outer margin inflexed formed into a second pitcher much smaller than the outer one, opening on each side by an oblique aperture, deeply lobed or furrowed on the upper carinate on the lower side; outer cavity crammed with radicles, inner surfaces of both lurid purple.

Peduncles 3 in.; flowers subumbellate (in bud), white. *Corolla* subglobose. *Coronal scales* with very long narrow arms dilated at the tips; pollen-masses subobovate, caudicles much dilated—Description from Griffith.

DOUBTFUL SPECIES.

D. WALLICHII, *Wight Contrib.* 43; *Wall. Cat.* 8183; *Dene. in DC. Prodr.* viii. 633; flowers and fruit unknown; is probably not a *Dischidia*.

D. CLAVATA, *Wall. Cat.* 4209, from Attran, is unknown to me; I have not found it in Wallich's Herbarium at the Linnean Society.

44. HOYA, Br.

Twining pendulous or rambling and rooting, rarely erect shrubs. *Leaves* opposite, thickly fleshy or very coriaceous. *Flowers* in axillary or terminal umbels. *Calyx* small, 5-partite. *Corolla* rotate, fleshy or waxy; lobes 5, often convex and spreading or reflexed; valvate in bud. *Coronal-scales* 5, large, membranous fleshy or horny, adnate to the column, stellately spreading or ascending, turgid or compressed laterally or vertically, often concave on the upper surface, margins usually recurved so as to enclose a hollow space, the inner angle often produced into a tooth or spur which is erect or incumbent on the anther. *Column* short; anthers conniving over the stigma, membranous, tips inflexed or erect, rarely 0; pollen-masses various, solitary in each cell, waxy, pedicelled, erect. *Stigma* included, flat or the centre apiculate. *Follicles* various, usually slender, acuminate, with a thin pericarp; rarely turgid with very thick walls. *Seeds* very small, ovate or linear-oblong; coma long. *DISTRIB.* Species about 60; tropical Asiatic, Malayan, and Australian.

A most difficult genus to describe from dried specimens. I am quite unable to adopt the sections established by Blume on the development of the coronal-processes. The description of the nervation of the leaves applies to herbarium specimens solely. The secondary nerves, and in most the primary, in perhaps all except *H. coriacea*, are invisible in the living plants, and there is no exact line to be drawn between those with 3-5 principal basal nerves, and those with alternate arched or straight, and more or less horizontal nerves. The peduncle is in very many species persistent and perennial, giving off a succession of flowers from tubercles towards its tip; the result is a cylindric thick end to the peduncle: it is not known whether this feature is common to all the species, nor even whether it is constant in any. The incurved or recurved form of the corolla probably affords a good character, but is lost in dried specimens. The coronal-processes are greatly distorted in drying, and the characters I have drawn from them must be accepted with reserve. The pollen-masses present great variations in size, form, and length of pedicels, and probably afford excellent characters. The follicles present wonderful variations, from the most slender and terete with thin pericarp of *H. globulosa*, to the thick cylindric with rounded lobed ends and excessively thick pericarp of *H. coronaria*. The seeds of all are very small for the Order.

SECT. I. **Cryptoceras.** *Corolla* reflexed, lobes longer than broad. *Column* stipitate; coronal-processes very long, erect, with a long spur diverging from the base of each.

1. **H. multiflora**, *Blume Cat. Hort. Buit.* 49, and *Bijd.* 1064. II. coriacea, *Lindl. Bot. Reg.* 1839, t. 18, not of Blume. *Cryptoceras reflexum*, *Benn. Fl. Jav.* 90, t. 21. C. floribundum, *Maund Botanist*, iv. t. 178. *Centrostemma multiflorum*, *Dene. in Ann. Sc. Nat. Ser. ii.* ix. 272, and in *DC. Prodr.* viii. 634; *Blume Mus. Bot. Lugd. Bat.* i. 45; *Bot. Mag.* t. 5173. C. *Lindleyanum*, *Dene. in DC. l. c.*

MALACCA; on Mt. Ophir, *Maingay*. PENANG (*drawing in Herb. Kew*).—*DISTRIB.* Java, Borneo, Philippine Islds.

Quite glabrous. *Stem* stout, climbing. *Leaves* 3-8 by $1\frac{1}{2}$ to 2 in., linear-oblong, acuminate, base acute; petiole $\frac{1}{2}$ in. *Umbels* terminal and axillary, very many-fld., peduncle 1-2 in.; pedicels slender, as long. *Sepals* small, oblong. *Corolla-lobes* $\frac{1}{4}$ - $\frac{1}{2}$ in. long, tube bearded at the base. *Column* $\frac{1}{2}$ in. long. *Fruit* not seen.

SECT. II. **Pterostelma.** *Corolla* reflexed, lobes longer than broad. *Column* sessile, obconic; coronal-processes laterally compressed, semi-cordate, 2-winged, with an erect subulate point in the inner angle. **PLOCOSTEMMA**, *Bl.*

2. **H. acuminata**, *Benth. in Gen. Pl. ii. 777.* *H. Griffithiana*, *Dcne. mss.* *Pterostelma acuminatum*, *Wight Contrib. 39*; *Wall. Cat. 8170*; *Dcne. in DC. Prodr. viii. 633.*

KHASIA MTS.; alt. 2,000 ft., *Wallich, &c.*

Quite glabrous. *Stem* stout, 1-2 ft., subscent and pendulous. *Leaves* 3-4 by $1\frac{1}{2}$ in., elliptic-lanceolate, nerves obscure; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Umbels* terminal and axillary, few-fld.; peduncle $\frac{1}{2}$ in., pedicels 1 in. *Sepals* linear-oblong, obtuse, ciliolate. *Corolla-lobes* 1 in., glabrous, tube puberulous within. *Corona* shining. *Fruit* not seen.

SECT. III. **Ancistrostemma.** *Corolla* reflexed, lobes longer than broad. *Column* sessile; coronal-processes gibbous and 2-lamellate below, produced upwards into long erect points each with a 2-fid incurved hooked tip.

3. **H. Edeni**, *King in Herb. Hort. Calc.* *Centrostemma* sp., *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA, alt. 3-6000 ft., *Herb. Griffith, J. D. H., &c.*

Stem rather slender, climbing and rooting. *Leaves* 3-4 by $1\frac{1}{2}$ in., elliptic- or obovate-lanceolate, obtusely caudate-acuminate, base acute, thinly coriaceous, puberulous or glabrate beneath; petiole $\frac{1}{10}$ in. pubescent. *Umbels* terminal; peduncles $\frac{1}{4}$ - $\frac{1}{2}$ in., pedicels 1 in. *Sepals* small, ovate, obtuse. *Corolla* pubescent within; lobes $\frac{1}{2}$ in. long, subacute. *Coronal-processes* horny, deeply grooved down the back, much exceeding the anthers. *Follicles* 4 in. long, slender, straight. *Seeds* $\frac{1}{2}$ in. long.

SECT. IV. **Euhoya.** *Corolla-lobes* broader than long, spreading or recurved. *Column* sessile or subsessile; coronal-processes stellately spreading, inner angle acute or produced into an erect or recurved simple spine.

* Inflorescence terminal, or terminal and axillary.

† *Leaves terete.*

4. **H. linearis**, *Wall. in Wight Contrib. 37*, and *Cat. 8155*; ends of branches and umbels hirsute, leaves 1-2 in. cylindric terete acute, umbels terminal sessile many-fld., corolla glabrous or papillose within, coronal-processes horizontal. *Don Prodr. 130*; *Dcne. in DC. Prodr. viii. 637.*

SUBTROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 3-6000 ft., *J. D. H., Treutler.*

Stem pendulous, 1 ft. and more, flaccid. *Leaves* 1-2 by $\frac{1}{4}$ in. diam., straight, midrib glabrous or hirsute; petiole very short. *Pedicels* 1 in., and linear-oblong calyx hirsute. *Corolla* $\frac{1}{2}$ - $\frac{1}{2}$ in. diam., and corona white. *Follicles* $2\frac{1}{2}$ in., slender, straight, pericarp thin glabrous. *Seeds* $\frac{1}{2}$ in. long.—The following varieties are so identical in habit and inflorescence, that I cannot doubt their being conspecific. *Wight's* character is drawn from specimens sent him by *Wallich* consisting of leaves of one plant (*linearis*) and a detached flower of another, of which specimens (also detached) are fastened on *Wallich's* sheet of *linearis*, and which have glabrous pedicels and minute glabrous sepals; these may belong to another species.

VAR. nepalensis; corolla papilloso puberulous within, coronal-lobes ovate flattened above concave beneath.—Nepal.

VAR. sikkimensis; corolla glabrous within, coronal-lobes longer narrower subcylindric. *Bot. Mag. t. 6682.*—Sikkim.

5. *H. teretifolia*, *Griff. mss.*; quite glabrous, stem very slender creeping and rooting, leaves 5-7 in. very slender cylindric quite terete.

UPPER ASSAM; Patkoy hills, alt. 4000 ft., *Griffith*.

A very singular plant, mentioned under the above name by Griffith in his Journal (p. 69). The leaves, which are rather distant, are curved and (as dried) about $\frac{1}{2}$ in. diam. I have seen no flowers.

†† *Leaves flat*.

6. *H. lanceolata*, *Wall. in Wight Contrib.* 33, and *Cat.* 8164 and 8156 b (*H. parviflora*); nearly glabrous, leaves 1-2 in. subsessile lanceolate or ovate-lanceolate fleshy, umbels terminal, peduncles and pedicels stout puberulous, corolla puberulous within. *Don Prodr.* 130; *Dcne. in DC. Prodr.* viii. 637.

TROPICAL HIMALAYA; from Kumaon to Bhotan and KHASIA Mts., alt. 3-4000 ft.

Stem stout, climbing; branches long, pendulous. *Leaves* close set, somewhat elongate-trapezoid, base acute, midrib very obscure. *Umbels* 6-10-fld. *Sepals* oblong-lanceolate, pubescent. *Corolla* $\frac{1}{2}$ in. diam., lobes acute. *Coronal-lobes* ascending, short, thick, obtuse, terete, with a short flat area above, inner angle erect as long as the anther-tip. *Follicles* 5-6 in., very slender.

7. *H. Lobbii*, *Hook. f.*; quite glabrous, branches very stout, leaves 2-3 in. subsessile elliptic or ovate acute or acuminate very fleshy, nerves 6-8 pairs arched spreading, umbels terminal and axillary subsessile, corolla puberulous within, corona very large.

KHASIA Mts.; Nowgong, alt. 1500 ft., *Thos. Lobb*.

Branches as thick as a goose-quill, woody. *Leaves* 1-2 in. diam., base narrowly cordate; midrib rather slender. *Pedicels* 1 in. *Sepals* ovate-lanceolate, glabrous. *Corolla* purple, $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., lobes subacute. *Coronal-processes* ascending, thick, terete, obtuse or subacute, inner angle raised acute as long as the anther tip.

8. *H. polyneura*, *Hook. f.*; quite glabrous, branches stout, leaves 3-4 in. subsessile rhombic-ovate or -lanceolate acuminate very fleshy, nerves very many oblique straight parallel, umbels axillary very shortly peduncled, corolla-lobes papillose within. *Hoya*, No. 29. *Herb. Ind. Or., H. f. & T.*

SIKKIM HIMALAYA; *Herb. Griffith*, alt. 3-5000 ft., *J. D. H., Clarke*.

Branches long, flexuous. *Leaves* very variable in breadth, broadest 1-2 $\frac{1}{2}$ in the middle, base narrow but rounded; midrib slender, nerves very close. *Peduncle* at length thickened and scarred; pedicels slender. *Sepals* oblong, obtuse, glabrous. *Corolla* $\frac{1}{2}$ in. diam., white, disc glabrous. *Coronal-lobes* red-purple, very short, orbicular, flat above, inner angle produced upwards in some specimens into a stout, erect beak which equals the long subulate anther-tip, and downwards into 2 auricles; other specimens have a very short inner angle and short anther-tips. *Follicles* 4 in., slender, falcate, smooth. *Seeds* $\frac{1}{10}$ in. long, ovate-lanceolate.

** Flowers in axillary (rarely also terminal) umbels. (Solitary in *H. retusa*.)

† Corolla small, less than $\frac{1}{2}$ in. diam., revolute, villous within. Staminal column conical.

9. *H. parviflora*, *Wight Contrib.* 37; quite glabrous, leaves lanceolate-acuminate very thick and fleshy, peduncles long slender, corolla revolute villous within, column conical. *Wall. Cat.* 8156 A; *Dcne. in DC. Prodr.* viii. 637.

TENASSERIM; Moulmein, *Wallich*.

Stem climbing, slender. *Leaves* 2 $\frac{1}{2}$ -4 by $\frac{1}{2}$ - $\frac{3}{4}$ in.; petiole short, thick. *Peduncles* almost as long as the leaves; pedicels $\frac{1}{2}$ in., very slender. *Sepals* ovate, glabrous. *Corolla* $\frac{1}{2}$ - $\frac{1}{4}$ in. diam. *Coronal-processes* membranous, united into a conical vertically 5-lobed column, each lobe again longitudinally folded and bifid at the spreading tip.

Follicles 4 in. long, very slender.—This approaches an unnamed Javanese species, but the leaves are more fleshy and the column different.

10. **H. revoluta**, *Wight mss.*; quite glabrous, leaves ovate or ovate-lanceolate acuminate very thick and fleshy, margins strongly recurved, peduncles long slender, corolla revolute villous within, column conical. *H. ovalifolia*, *Wall. Cat.* 8160 b.

MALACCA, *Griffith, Maingay* (Kew Distrib. 1127). SINGAPORE, *Wallich*.

Stem climbing. *Leaves* $1\frac{1}{2}$ –3 in., midrib and nerves not visible, base acute; petiole $\frac{1}{8}$ – $\frac{1}{2}$ in., very thick. *Peduncle* equalling the leaves; pedicels very slender. *Sepals* ovate. *Corolla* $\frac{1}{2}$ in. diam., pink. *Coronal-processes* membranous, united into a conical vertically 5-lobed column, each lobed again, longitudinally folded and produced upwards into an acute point.

11. **H. micrantha**, *Hook. f.*; quite glabrous, leaves ovate or elliptic-lanceolate acute very thick and fleshy, margins flat, peduncle long or short, corolla revolute pubescent within, column conical.

TENASSERIM; Mergui, *Griffith*.

Stem rather stout. *Leaves* $2\frac{1}{2}$ –4 by $1\frac{1}{4}$ – $1\frac{1}{2}$ in., midrib and nerves not visible; petiole very short. *Peduncle* shorter than the leaves; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in., filiform. *Sepals* ovate, obtuse. *Corolla* $\frac{1}{8}$ – $\frac{1}{4}$ in. diam. *Coronal-lobes* lanceolate, suberect, outer angle 2-fid, back with a boss; anther-tip much longer than the process.

12. **H. lacunosa**, *Blume Bijl.* 1063; quite glabrous, leaves ovate or rounded-ovate acute base rounded margins thickened, nerves horizontal, peduncle stout, pedicels very short. *Miquel Fl. Ind. Bat.* ii. 525; *Dcne. in DC. Prodr.* viii. 638; *Bot. Mag.* t. 4826, 5272. *Otostemma lacunosum*, *Blume Mus. Bot.* i. 59, t. 11.

MALACCA; between Jarsing and Aya Bomboo, *Maingay*.—DISTRIB. Sumatra, Java, Borneo.

Stem slender, twining. *Leaves* 1– $1\frac{1}{2}$ in., very thick, but nerves distinct beneath, 3–5 pairs, base rounded; petiole very short. *Peduncle* longer than the leaves; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in. *Sepals* very small, ovate, obtuse. *Corolla* $\frac{1}{2}$ in. diam., pubescent within. *Coronal-lobes* ovate, inner angle produced into an ovate obtuse lobe almost as large as the body, incumbent on the anther (which has no tip?).—This differs from the Javanese *H. lacunosa*, in the much larger inner produced angle of the coronal-processes.

†† *Corolla* $\frac{1}{2}$ in. diam. and upwards, rarely less; lobes usually spreading or incurved. Leaves flat in all.

a. *Leaves* very small, rarely more than 1 in. long.

13. **H. Nummularia**, *Dcne. mss.*; stem slender minutely rough, leaves very small orbicular shining, flowers many in very long-peduncled umbels.

KHASIA Mts.; at Moosmai, *Griffith*.

Stem creeping and rooting, angular (when dry). *Leaves* $\frac{3}{4}$ in. diam., shining and reticulate on both surfaces; petiole $\frac{1}{4}$ in., rather slender. *Peduncle* 2 in.; pedicels $\frac{1}{2}$ – $\frac{2}{3}$ in. *Sepals* ovate-oblong. *Corolla* $\frac{1}{2}$ in. diam., "white, pubescent," *Griffith*. *Coronal-processes* too young for description.—Resembles *Dischidia khasiana*.

14. **H. serpens**, *Hook. f.*; stem very slender minutely rough, leaves very small suborbicular opaque papillose on both surfaces, flowers many on long peduncled umbels, corolla tomentose within, coronal-lobes ellipsoid.

SIKKIM HIMALAYA (*Herb. Griffith*).

Stem creeping and rooting. *Leaves* $\frac{1}{4}$ – $\frac{3}{4}$ in. diam., ovate or very broadly elliptic, base rounded or subcordate, nerves obscure; petiole very short, $\frac{1}{10}$ – $\frac{1}{10}$ in. *Peduncle*

1½ in., stouter than the branch; pedicels 1 in. *Sepals* ovate. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., white, lobes obtuse.—Very similar to *H. Nummularia*, but the leaves are covered with minute papillæ (when dry).

15. *H. obcordata*, Hook. f.; stem very slender minutely rough and here and there hairy, leaves obcordate or obreniform.

SIKKIM HIMALAYA; Chakoong, alt. 4–6000 ft., J. D. H., Yoksun, Clarke.

Stem creeping and rooting. *Leaves* $\frac{1}{2}$ in. long, sometimes broader than long, lobes rounded, sinus acute, base rounded or subacute, rather thin, opaque, nerves obscurely reticulate; petiole $\frac{1}{18}$ – $\frac{1}{10}$ in. *Flowers* in a drawing in Herb. Kew (by Jerdon) in a loose peduncled umbel; pedicels slender. *Corolla* $\frac{1}{2}$ in. diam., white, lobes triangular with villous margins.—Possibly a form of *H. Nummularia* or *serpens*, but if so a very remarkable one.

16. *H. vaccinioides*, Hook. f.; quite glabrous, branches very long slender pendulous, leaves $\frac{1}{2}$ in. elliptic subacute fleshy nerves obsolete.

UPPER ASSAM; Mishmi Mts., by the Thumat river, Griffith,

Follicles 3 in. long, slender, straight, pericarp thin.

17. *H. bella*, Hook. Bot. Mag. t. 4402; stem petioles and peduncles pubescent, leaves 1 in. sub-bifarious ovate acute, peduncles very short, pedicels longer, sepals oblong ciliate. *Part. Magaz.* xv. t. 243; *Fl. des Serres*, iv. t. 399 (copied from Bot. Mag.).

TENASSERIM; Taungkota mountain, Moulmein, T. Lobb.

Leaves deep green, recurved, nerveless when fresh, midrib strong beneath; petiole $\frac{10}{16}$ in. *Peduncle* $\frac{1}{2}$ in.; pedicels $\frac{3}{4}$ in. *Sepals* small. *Corolla* $\frac{3}{4}$ in. diam., pure white, glabrous within; lobes very short, subacute. *Coronal-processes* violet, boat-shaped, concave above, inner angle acute.—I have seen no specimens.

b. Leaves very narrow, lanceolate oblanceolate or linear, rarely 1 in. broad; nerves invisible or very obscure.

18. *H. retusa*, Dalz. in Hook. Kew Journ. Bot. iv. 294; quite glabrous, leaves very narrow gradually dilating from the base to the obcordate broad tip fleshy, flowers subsolitary, corolla puberulous within. *Dalz. & Gibs. Bomb. Fl.* 153.

The CONCAN; on the Ghats, Dalzell, &c.

Stem very slender. *Leaves* 1½–2 in. by $\frac{1}{4}$ – $\frac{1}{3}$ at the broad tip, midrib very strong; petiole $\frac{1}{10}$ – $\frac{1}{6}$ in. *Flowers* 1–3-nate; pedicels slender. *Sepals* minute, ovate. *Corolla* $\frac{3}{4}$ in. diam., white with a pink corona; lobes very broad, acute. *Coronal-lobes* horizontal, ovate, shorter than the corolla-tube, broad end outwards, inner angle acute.

19. *H. pauciflora*, Wight Ic. t. 1269 (*parviflora* in text); quite glabrous, leaves 1–2 in. linear-lanceolate obtuse very thick, peduncles very short few-fl., pedicels long slender, corolla glabrous within. *H. Wightiana*, *Thwaites Enum.* 199.

MALABAR and TRAVANCORE; Cochin and Courtallam, Wight. CEYLON; central province, alt. 3–5000 ft., Walker, &c.

A very slender climber. *Leaves* rarely more than $\frac{1}{4}$ in. broad, margins often recurved; petiole $\frac{1}{10}$ – $\frac{1}{6}$ in. *Peduncle* scarcely exceeding the petiole. *Sepals* small, narrow. *Corolla* $\frac{3}{4}$ in. diam., white. *Coronal-processes* pink, short, ovoid, obtuse, concave above, inner angle produced into a recurved spur.—I see no difference between the Ceylon and Deccan plants.

20. *H. longifolia*, Wall. in Wight. Contrib. 36; Cat. 8154; glabrous, leaves 4–8 in. narrowly oblanceolate acuminate very fleshy, peduncle long or short smooth and pedicels glabrous, corolla glabrous margins pubescent,

coronal-processes horizontal. *Dene. in DC. Prodr.* viii. 627; ? *H. Shepherdii*, *Hook. Bot. Mag.* t. 5269.

TROPICAL HIMALAYA; from Kumaon to Sikkim, alt. 1-3000 ft. KHASIA Mts., alt. 3-4000 ft., *Griffith*, &c.

Stem stout, climbing; branches long, pendulous. *Leaves* very variable in breadth, $\frac{1}{2}$ -1 $\frac{1}{4}$ in., midrib obscure, base narrow acute or rounded; nerves hardly visible, very oblique almost parallel to the midrib; petiole very stout, $\frac{1}{4}$ -1 in. *Peduncle* sometimes 2 in.; pedicels 1-1 $\frac{1}{2}$ in. *Sepals* ovate, acute, glabrous. *Corolla* $\frac{1}{4}$ -1 $\frac{1}{4}$ in. diam., lobes subacute. *Coronal-processes* broadly ovate, flat above with a central boss, convex beneath; inner angle acute, shorter than the broad anther-tips. *Follicles* 4-6 in., slender, straight. *Seeds* $\frac{1}{4}$ in., lanceolate.

21. **H. oblanceolata**, *Hook. f.*; glabrous, leaves 4-6 in. narrowly oblanceolate acuminate very fleshy, peduncles very short and thick and pedicels glabrous, corolla puberulous within, coronal-processes sub-erect.

KHASIA Mts., alt. 3-4000 ft., *J. D. H. & T. T.*

Stem, stout, climbing. *Leaves* as in *H. longifolia*, but smaller. *Peduncles* $\frac{1}{4}$ -1 in., clavate or cylindric, when old $\frac{1}{2}$ - $\frac{1}{4}$ in. diam. and densely scarred; pedicels slender. *Sepals* ovate, acute. *Corolla* $\frac{1}{2}$ in. diam., pale flesh-coloured. *Coronal-lobes* broadly oblong or subspathulate, inner angle produced into a short obtuse lamella which is much shorter than the subulate anther tip.

c. Leaves broad, ovate oblong elliptic or lanceolate, strongly 3-5-nerved from the base to the middle or higher.

22. **H. latifolia**, *G. Don. Gen. Syst.* iv. 127; glabrous, leaves 5-10 in. ovate or oblong-ovate acute or acuminate very thick shining 5-nerved margins recurved, peduncles solitary or fascicled very thick, pedicels very short puberulous, flowers small, coronal-processes shorter than the corolla-tube. *Dene. in DC. Prodr.* viii. 638. *H. macrophylla*, *Wight Contrib.* 38, not of *Blume*. *H. polystachya*, *Blume Mus. Bot.* i. 45, t. 9.

PENANG, *Wallich*. SINGAPORE, *Maingay*.—DISTRIB. JAVA.

Stem very stout. *Leaves* variable in breadth, 3-5 in., base rounded or cordate, petiole very short and thick. *Peduncles* 1-2 in., at length cylindric and covered with raised pitted tubercles. *Sepals* minute, ovate. *Corolla* $\frac{1}{2}$ in. diam., pubescent within. *Coronal-processes* suberect, ovoid, apiculate, upper surface flattened, inner angle acute, under surface deeply grooved.

23. **H. parasitica**, *Wall. in Wight Contrib.* 37, and *Cat.* 8159; glabrous, leaves 3-5 in. ovate elliptic or lanceolate acute or acuminate 3-5-nerved, peduncles solitary or in pairs short or long slender or stout, pedicels slender long glabrous, coronal-processes longer than the corolla-tube. *Wight Ic.* t. 587; *Dene. in DC. Prodr.* viii. 637. *H. Hookeriana*, *Wight Contrib.* 37; *Wall. Cat.* 8153; *Dene. l.c.* 636. *Hoya* sp. *Wall. Cat.* 8153. *H. pallida*, *Lindl. in Bot. Reg.* t. 951; *Paxt. Fl. Gard.* t. 26, copied in *Lemaire Jard. Fleur.* t. 64. *Asclepias parasitica*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 42.

ASSAM; *Conulla, Clarke*. KHASIA Mts. ascending to 2000 ft. SUNDERBUNDS, and from CHITTAGONG to SINGAPORE, MALACCA and the ANDAMAN ISLS.

A tall climber, stem stout or slender. *Leaves* extremely variable in length and breadth, much the largest in Khasian specimens, nerves obscure; petiole $\frac{1}{4}$ - $\frac{3}{4}$ in., very thick. *Peduncles* 1-3 in., slender or stout and becoming much thickened and scarred; pedicels $\frac{1}{4}$ -1 in. *Sepals* small, ovate. *Corolla* $\frac{1}{2}$ in. diam., pearly white; lobes glabrous within, always inflexed in dried specimens with the coronal-processes projecting between them; these are ascending, ovate, acute, concave with a mesial ridge above, with the narrow end outwards, and the inner angle very short, white, pink at the junctures.—I have seen no fruit. Except in the large leaves, sometimes 9 in. long, I can find no character for *H. Hookeriana*. *H. cinnamomifolia*, *Hook. Bot.*

Mag. t. 4347, has very similar flowers and leaves. Lindley figures the flower of *H. pallida* as nearly white, Paxton both figures and describes them as yellow.

d. Leaves elliptic, oblong, or linear-oblong, penni-nerved, nerves very horizontal (sometimes oblique in H. Griffithii).

24. *H. fusca*, Wall. Pl. As. Rar. i. 68, t. 75, and Cat. 8157; glabrous, leaves 6-9 in. linear-oblong acuminate fleshy midrib very thick, peduncles short and pedicels very stout, corolla pubescent within. *Wight Contrib.* 37; *Dcne. in DC. Prodr.* viii. 639.

NEPAL, *Wallich*; SIKKIM, alt. 1-4000 ft. KHASIA Mts. and PEGU.

A stout climber. *Leaves* $1\frac{1}{2}$ - $2\frac{1}{2}$ in. diam., sides nearly parallel; nerves numerous, quite horizontal; petiole thick, $\frac{1}{2}$ -1 in. *Peduncles* sometimes terminal, $\frac{1}{2}$ -1 in., pedicels as long. *Sepals* broadly ovate, obtuse. *Corolla* $\frac{1}{2}$ in. diam., yellow-brown, lobes spreading. *Coronal-processes* short, very thick, obtuse, concave above, inner angle ending in an erect or recurved spur as long as the anther-tip. *Follicles* 4-5 in. long by $\frac{1}{2}$ in. diam., rather thick-walled, straight. *Seeds* $\frac{1}{2}$ in. long.

25. *H. obtusifolia*, *Wight Contrib.* 38; more or less puberulous, stem very stout, leaves 4-6 in. oblong rounded at both ends or tip acute or apiculate very thick, margins flat, midrib stout, peduncle stout, pedicels and calyx pubescent, corolla coriaceous pubescent without glabrous within. *Wall. Cat.* 8167; *Dcne. in DC. Prodr.* viii. 638; *Bot. Mag.* t. 4969 (excl. syn. *H. velutina*). *H. Teysmanniana*, *Miquel Fl. Ind. Bat.* 522.

TENASSERIM OR ANDAMAN ISLDS., *Helper*. PENANG? *Wallich*.—DISTRIB. Sumatra, Java.

Branches as thick as the little finger or less. *Leaves* $1\frac{1}{2}$ - $2\frac{1}{2}$ in., broad, shining, nerves visible only when dried; petiole very thick, $\frac{3}{4}$ -1 in. *Peduncle* 1-3 in., at length terminating in a cylindric mass of scarred close set tubercles; pedicels $\frac{1}{2}$ -1 in. *Sepals* large for the genus, oblong, obtuse, coriaceous. *Corolla* dull yellow, $1\frac{1}{2}$ in. diam.; lobes erect, acute. *Coronal-processes* short, obtuse, suberect, concave in fruit, inner angle ending in an erect or recurved spine longer than the anther-tip. *Follicles* not seen.

26. *H. coronaria*, *Blume Bijl.* 1063, and *Rumph.* iv. 31, t. 182, f. 2 and t. 104; leaves 3-4 in. elliptic or elliptic-ovate abruptly acuminate very thick pubescent beneath, base rounded, margins recurved, peduncle stout and pedicels large, sepals pubescent, corolla coriaceous pubescent without glabrous within, follicles very thick. *Miquel Fl. Ind. Bat.* ii. 516. *H. velutina*, *Wight Contrib.* 35; *Wall. Cat.* 8150. *Dcne. in DC. Prodr.* viii. 635.

MALACCA, *Griffith*, *Maingay* (Kew Distrib. 1125), PENANG, ? *Wallich*.—DISTRIB. Sumatra, Borneo.

Stem stout, twining; young shoots, petioles, leaves beneath and inflorescence finely tomentose. *Leaves* 1-3 in. diam., nerves very obscure; petiole thick, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Peduncles* $\frac{1}{2}$ -1 in., pedicels as long. *Sepals* rounded, thick. *Corolla* 1- $1\frac{1}{2}$ in. diam., thick, "cream white or yellowish speckled with purple," *Maingay*; lobes erect or incurved. *Coronal-processes* small, waxy, white, nearly hemispherical, very concave above and convex beneath, the inner angle shortly horizontally produced, obtuse. *Follicles* 6-8 in. long by $1\frac{1}{2}$ -2 in. diam., subcylindric, obtuse, base gibbous, walls very thick, endocarp hard. *Seeds* $\frac{1}{2}$ in. long.—The smaller shorter leaves with revolute margins distinguish this at once from *H. obtusifolia*; *Wallich's* habitat of Silhet is probably an error for Penang, from which island there is a drawing of this species in Herb. Kew. Perhaps two species mixed here, a purple- and white-flowered.

27. *H. elliptica*, *Hook. f.*; glabrous, leaves $1\frac{1}{2}$ - $2\frac{1}{2}$ in. elliptic obtuse at both ends thin in texture nerves very prominent, peduncle very short, pedicels long slender, sepals very small, corolla glabrous without puberulous within.

MALACCA, *Maingay* (Kew Distrib. 1137).

Stem rather slender, twining. *Leaves* 1-1½ in. diam., intramarginal nerve very distinct; petiole ½-¾ in. *Peduncles* ½ in., pedicels 1-1½ in. *Sepals* ovate, obtuse, puberulous. "*Corolla* white," *Maingay*; lobes obcordate, apiculate, inflexed (when dry). *Coronal-processes* longer than the corolla-tube, suberect, laterally subcompressed, ovate-oblong, obtuse, upper (inner) surface grooved, inner angle produced into a short subulate erect point.

28. *H. Griffithii*, *Hook. f.*; glabrous, leaves 6-9 in. narrowly oblanceolate or linear-oblong acute or acuminate very thick, nerves nearly horizontal, peduncle long stout, sepals large coriaceous, corolla 1½ in. diam. glabrous within.

KHASIA MTS., *Griffith*; Nowgong, alt. 2-4000 ft. *J. D. H. & T. T.*

A stout climber. *Leaves* distant, 1-2 in. diam., midrib stout, nerves quite obscure in some, in others distinct and forming large areoles; petiole ¾-1 in., very thick. *Peduncle* 2-4 in., as thick as the branch; pedicels 1-1½ in., very stout. *Sepals* ¾-1 in., oblong, obtuse, coriaceous. *Corolla* purple? glabrous within, lobes acute. *Coronal-processes* produced upwards from a suborbicular base into an erect stiff obtuse spur as long as the anther-tip, the orbicular base is 2-lamellate below.—In the large calyx this approaches *H. coronaria*. It has been flowered at Fallowfield (Manchester) by Mr. Swan.

29. *H. imperialis*, *Lindl. in Bot. Reg.* 1846, t. 68 in note, and in *Journ. Hort. Soc.* v. 80, with woodcut; leaves 6-9 in. elliptic or linear-oblong obtuse apiculate very thick puberulous or glabrate beneath, peduncles and pedicels long stout, sepals rounded-ovate, corolla 2½-3 in. diam., follicles stout woody. *Hook. Bot. Mag.* t. 3397, copied in *Fl. des Serres*, iv. t. 393, 394; *Ann. de Gand.* 1848, t. 228. ? *H. speciosa*, *Decne. in DC. Prodr.* viii. 635. ? *Asclepias Susuella*, *Roxb. Fl. Ind.* ii. 31, excl. *syn.*

MALACCA, *Maingay*.—DISTRIB. Borneo, ? Amboyna.

A lofty stout climber. *Leaves* 1½-2½ in. diam., rarely acute, shining, base often narrowed and cordate, midrib very stout, nerves quite horizontal; petiole ¼-½ in. *Peduncles* 3-10 in.; pedicels 2-3, and sepals pubescent. *Corolla* leathery, dull purple, puberulous near the corona, lobes triangular acute. *Coronal-processes* white, laterally compressed, erect, turgid, obtuse, inner angle shortly produced into a subulate point. *Follicles* 9 in. long. by 1½ in. diam., straight, lanceolate, finely acuminate, pubescent; pericarp thickly coriaceous, endocarp hard. *Seeds* ¼ in. long.

30. *H. Wightii*, *Hook. f.*; quite glabrous, leaves 3-4 in. long-petioled elliptic or elliptic-lanceolate rarely orbicular acute at both ends thick, margins recurved, nerves distinct horizontal or nearly so, peduncles much shorter than the pedicels, sepals linear-oblong, follicles slender. *H. pendula*, *Wight & Arn. Contrib.* 36 (excl. *syn.*); *Decne. in DC. Prodr.* viii. 635; *Grah. Cat. Bomb. Fl.* 119. *H. pallida*, *Dalz. & Gibs. Bomb. Fl.* 152.—*Hoya*, n. 27, *Herb. Ind. Or. H. f. & T.*

DECCAN PENINSULA; from the Bombay Ghats to the Nilgherry Mts.

A stout climber. *Leaves* 1½-2 in. broad, margins often revolute, tip obtuse often produced, nerves loosely netted; petiole ½-1 in. *Peduncles* ¾-1 in.; pedicels stout, 1 in. *Sepals* glabrous. *Corolla* ½-¾ in. diam., cream-coloured, glabrous within, margins puberulous. *Coronal-processes* ascending, short, inflated, obtuse, concave above, inner angle produced into a short erect spur. *Follicles* 4 in. long, slender, straight, pericarp thin.—For the distinctions between this and *H. ovalifolia* see the latter plant. The vars. *Rheedei* and *nilgherrensis*, *Wight*, are not distinguishable.

e. Leaves orbicular ovate-oblong or broadly elliptic, rarely lanceolate, penninerved, nerves arching (not prominently 3-5-nerved from the base). See also *H. polyneura* and *H. Lobbii*.

31. ***H. caudata***, *Hook. f.*; glabrous, leaves ovate acuminate very shortly petioled very thick margins corrugate, pedicels short filiform, corolla pubescent within lobes tailed.

MALACCA, *Maingay* (Kew Distrib. 1128).

Stem rather slender but woody. *Leaves* 2-3 in. diam., sparsely papillose on both surfaces, midrib and arching nerves faint; petiole $\frac{1}{2}$ in., so thick as to appear globose. *Peduncle* (one only seen) nearly 2 in., with a thickened scarred tip; pedicels $\frac{1}{2}$ in. *Sepals* linear-lanceolate, glabrous. *Corolla* $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., "white, suffused with pink," *Maingay*; lobes triangular, ending in slender tails of their own length. *Coronal-processes* horizontal, elliptic-ovate, broadest end outwards, concave above, inner angle produced into a long subulate spur, which is much shorter than the very long filiform anther-tips.

32. ***H. Arnottiana***, *Wight Contrib.* 36; quite glabrous, leaves 3-8 in. elliptic or lanceolate thick acute or acuminate, nerves distinct, peduncles long or short stout, pedicels long, corolla glabrous within, coronal-processes large exceeding the tube. *Wall. Cat.* 8161; *Dcne. in DC. Prodr.* viii. 638.—*Hoya* n. 38, *Herb. Ind. Or. H. f. & T.*

TROPICAL HIMALAYA; Nepal, *Wallich*. SIKKIM; alt. 1-3000 ft., *J. D. H.* UPPER ASSAM; Suddya, *Griffith*.

A lofty climber. *Leaves* very variable, 2-4 in. diam.; petiole $\frac{1}{2}$ -1 in. *Peduncle* 1-3 in.; pedicels 1 in. *Sepals* broadly ovate, obtuse. *Corolla* $\frac{3}{4}$ in. diam., scarcely papillose within, cream-coloured, lobes spreading, subacute. *Coronal-processes* white, ovate, subacute with the narrower end outwards, concave above, inner angle acute, shorter than the anther-tip.

33. ***H. ovalifolia***, *Wight & Arn. Contrib.* 37; quite glabrous, leaves 2-4 in. elliptic or elliptic-ovate or -oblong or -lanceolate obtuse or acute very thick, nerves distinct, peduncles and pedicels stout, corolla glabrous within, coronal-processes exceeding the tube. *Wight Ic. t.* 847 (not good); *Wall. Cat.* 8160 a; *Dcne. in DC. Prodr.* viii. 638; *Thwaites Enum.* 198; *Paxt. Fl. Gard. t.* 23, copied in *Lemaire Jard. Fleur. t.* 64, f. 2.

NILGHERY MTS. and MANGALORE, *Wight*. CEYLON, in the Ambagamowa district, *Walker, &c.*

Stem slender. *Leaves* often subfascicled, 1-1 $\frac{1}{2}$ in. broad, very variable, acute at both ends; petiole $\frac{1}{2}$ - $\frac{1}{4}$ in. *Peduncle* short; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in. *Sepals* ovate, obtuse, glabrous. *Corolla* $\frac{1}{2}$ - $\frac{1}{3}$ in. diam., pale straw-coloured; lobes broad acute. *Coronal-processes* ovate, obtuse, broader end inwards, concave above, inner angle cuspidate. *Follicles* 5-6 in., very slender, curved, pericarp thin.—The arching nerves, flat leaf-margins and large corona distinguish this from *H. Wightii*.

34. ***H. globulosa***, *Hook. f. in Gard. Chron.* 1882, ii. 732, f. 115; more or less hairy, leaves 5-7 in. long-petioled elliptic or oblong cuspidate or acuminate base rounded midrib very stout, nerves distinct, peduncle long, pedicels villous, corolla nearly glabrous within. *Floral Magazine*, 1860, t. 406.—*Hoya* n. 30 and 33; *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; alt. 1-3000 ft., *J. D. H., Clarke*. ASSAM; Muku hills, *Simmonds*. CACHAR, *Keenan*. CHITTAGONG; at Seetakoond. *J. D. H. & T. T.*

A stout climber, more or less hairy, the hairs long but very deciduous. *Leaves* 2-3 $\frac{1}{2}$ in. diam., much like those of *H. fusca*, but with arching nerves; petiole $\frac{1}{2}$ -1 in. *Peduncle* 3-4 in.; pedicels 1 in. *Sepals* rounded. *Corolla* $\frac{1}{2}$ in. diam., cream-coloured; lobes short, incurved. *Coronal-processes* short, broadly elliptic, pink, concave above, inner angle produced into an erect spur which is shorter than the large broad anther-tips. *Follicles* 12-16 in. long, very slender, cylindric, pericarp thin. *Seeds* $\frac{1}{2}$ in. long, slender.

35. **H. Thomsoni**, *Hook. f.*; petioles and leaves beneath sparsely pilose, leaves 2-3 in. oblong or obovate-oblong acuminate very thick, umbels axillary, peduncle short puberulous tip at length thickened and scarred, corolla-lobes with fringed margins glabrous or pubescent within.—*Hoya*, n. 12, *H. f. & T.*

KHASIA Mts.; Churra, alt. 3-4000 ft., *J. D. H. & T. T.*

Stem slender, rooting. *Leaves* not very fleshy, $\frac{2}{3}$ -1½ in. broad, midrib obscure, base obtuse or rounded, nerves very faint, arched; petiole $\frac{1}{4}$ -½ in. *Peduncle* $\frac{1}{2}$ -1 in., pubescent; pedicels glabrous or sparsely puberulous. *Sepals* glabrous, ovate, acute. *Corolla* $\frac{1}{2}$ in. diam., lobes acute. *Coronal-processes* obovate with the broad end outwards, concave above with a boss, inner angle produced into a short erect spur as long as the anther-tip.—The pubescence of the leaves is very obscure in dried specimens.

36. **H. diversifolia**, *Blume Bijl.* 1064; quite glabrous, leaves 2-3 in. broadly obovate or elliptic obtuse or apiculate very thick margins recurved, nerves indistinct, peduncles and short pedicels stout, corolla puberulous within, follicles very thick. *Miquel Fl. Ind. Bat.* ii. 518; *Dcne. in DC. Prodr.* viii. 637. *H. orbiculata*, *Wall. in Wight Contrib.* 36; *Wall. Cat.* 8151; *Dcne. l. c.*—*Sussuela esculenta*, *Rumph. Herb. Amb.* v. 467, t. 175, f. 2.

BURMA; at Prome, *Wallich.* MALACCA, *Maingay* (Kew Distrib. 1130).—DISTRIB. Java, Amboyna.

A stout climber. *Leaves* 1½-2½ in. diam., base acute or rounded, nerves arched; petiole $\frac{1}{4}$ -½ in. *Peduncle* $\frac{1}{4}$ -½ in., very thick; pedicels about $\frac{1}{2}$ in. *Sepals* small, elliptic, obtuse, glabrous (ciliate, *Maingay*). *Corolla* $\frac{1}{2}$ in. diam., cream-coloured; lobes broad. *Coronal-processes* pale pink, short, thick, ovate, with the broad end outwards concave above, with a boss near the centre, inner angle produced into a short, erect spur shorter than the anther-tip. *Follicles* 6 in. long., $\frac{3}{4}$ in. diam., falcate, sublinear; pericarp thick, apparently $\frac{1}{4}$ in. or more. *Seeds* about $\frac{1}{4}$ in. long.

37. **H. coriacea**, *Blume Bijl.* 1063; *Rumphia*, iv. t. 187; nearly glabrous, leaves 3-5 in. long-petioled elliptic or oblong or obovate-oblong acute or acuminate thinly coriaceous reticulated, base rounded, midrib and slender nerves very distinct, peduncles and pedicels long, sepals linear pubescent, corolla villous within. *Miquel Fl. Ind. Bat.* ii. 521; *Dcne. in DC. Prodr.* viii. 638; *Bot. Mag.* t. 4518, copied in *Fl. des Serres*, t. 578; *Paxt. Fl. Gard.* i. f. 55; *Lemaire Jard. Fleur.* t. 37. *H. Brunoniana*, *Wight Contrib.* 37; *Wall. Cat.* 8163; *Dcne. l. c.* 636.

PENANG, *Wallich.* MALACCA, *Griffith*, *Maingay* (Kew Distrib. 1131, 1134).—DISTRIB. Java, Borneo.

A stout climber. *Leaves* variable, 1½-2½ in. broad, shining above, far more thin than in any Indian congener; petiole $\frac{1}{2}$ -¾ in. *Peduncle* 2-5 in.; pedicels $\frac{3}{4}$ -1 in. *Sepals* as long as the corolla-tube. *Corolla* $\frac{3}{4}$ in. diam., dirty straw-coloured or reddish; lobes incurved when dry. *Coronal-processes* white, ovoid, inflated, subacute, the narrow end outwards, inner angle cuspidate shorter than the anther-tip. "pollen-masses very slender, with trigonous pedicels and minute corpuscles," *Maingay*.—The comparatively membranous leaves with conspicuous reticulate nervation, unlike that of *Hoya*, at once distinguish this species.

38. **H. pendula**, *Wight Ic.* t. 474 (*not of Contrib.*); branchlets and umbels sparsely hairy, leaves 1½-3 in. elliptic-ovate or -lanceolate acute thick nerves distinct, margins recurved, peduncles short, pedicels longer, sepals lanceolate, corolla-lobes silkily villous. *Dalz. & Gibs. Bomb. Fl.* 152. *Asclepias pendula*, *Roxb. Fl. Ind.* ii. 36.

DECCAN PENINSULA; the Circars, *Roxburgh*; Western Ghats, and the Concan, *Nimmo*; Nilgherry hills, *Wight*.

Stem rather slender, hairiness very inconspicuous. *Leaves* 1½-2½ in. diam., like those of *H. ovalifolia*, but margins recurved when dry, base narrow or rounded;

petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. Peduncles $\frac{1}{2}$ – $\frac{3}{4}$ in.; pedicels 1–1 $\frac{1}{2}$ in. Sepals shorter than the corolla-tube. Corolla $\frac{2}{3}$ in. diam., white. Coronal-processes (mutilated) as long as the corolla-tube, apparently ovate, with the inner angle shortly spurred.—The only specimen I have seen is an unnamed one in Wight's Herbarium; the plate in his *Icones* is a copy of Roxburgh's drawing, which represents a much larger leaved plant than the specimen.

39. **H. Maingayi**, *Hook. f.*; quite glabrous, leaves 7–8 in. elliptic-lanceolate or oblanceolate finely acuminate very thick nerves reticulate distinct very oblique, peduncle very short thick, pedicels longer, sepals small obtuse, coronal-processes longer than the villous corolla-tube.

MALACCA, *Maingay* (Kew Distrib. 1136).

Stem stout. *Leaves* 2 $\frac{1}{2}$ –3 $\frac{1}{2}$ in. diam. at or above the middle, reticulate on both surfaces, base narrow; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in., very thick. *Peduncle* $\frac{1}{2}$ –1 in., thickened and scarred; pedicels 1 in. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., pale pink, lobes short, obtuse. *Coronal-processes* ovate, acute, narrow end outwards, above concave with a mesial ridge, inner angle apiculate shorter than the anther-tip.

DOUBTFUL AND EXCLUDED SPECIES.

H. CRASSIFOLIA, *Haw. Succ. Pl. Suppl.* 8; *Dcne. in DC. Prodr.* viii. 640. *Scholera crassifolia*, *Jacq. Eclog.* t. 2; *Traill. in Trans. Hort. Soc.* vii. 22; from India; with leaves described as excessively thick, obsoletely spotted, petals truncate or obtuse, is unknown. Wight (*Contrib.* 38) refers it to the Chinese *H. carnosa*, Br., which name it would supersede.

H. FINLAYSONII, *Wight Contrib.* 38; *Wall. Cat.* 8166; *Dcne l.c.*; stem stout, leaves 5–7 by 2 in. ovate-lanceolate obtusely acuminate densely thick penni-nerved, nerves prominent on both surfaces arched, intramarginal very distinct, petiole short stout.—Singapore, *Wallich*; Siam,? *Herb. Finlayson*.

H. GYMNANTHERA, *Wight. Contrib.* 37; *Wallich's* sheet of this consists of a leafless twig of a *Hoya* with buds, and a good specimen of *Parsonsia spiralis*.

H. NICOBARICA, Br. in *Wight Contrib.* 36 (note under *H. pendula*, W. & A.); *Dcne. l.c.*—Nothing is known of this.

H. OPOSITA, *Don Gard. Dict.* iv. 128 (*Sperlingia opposita*, *Vahl*; *Wight Contrib.* 67), is *H. Rumphii*, *Blume*, a Moluccan plant.

H. WALLICHIANA, *Dcne. l.c.* 635; said to be mixed with *Wallich's* n. 8165 (*H. latifolia*), appears from *Decaisne's* description to be *H. coronaria*, Bl.

H. VERTICILLATA, *G. Don Gard. Dict.* iv. (*Sperlingia verticillata*, *Vahl. Skrivt. Naturhist. Selsk. Kiobenh.* vi. 113), said to be a native of India, is unknown to me.

H. sp.? Amongst the drawings in *Herb. Kew* is one of a *Hoya* from Penang, with ovate-lanceolate acuminate 3-ple nerved leaves 6 in. long suffused with purple, red and white flowers $\frac{1}{2}$ in. diam. having long flexuous hairs on the corolla, the corolla-lobes are obtuse and the coronal-processes red.

45. **PHYSOSTELMA**, *Wight*.

A twining glabrous shrub. *Leaves* opposite, coriaceous, shining. *Flowers* large, umbelled. *Sepals* small, narrow. *Corolla* cup-shaped, lobes very short. *Coronal-processes* 5, very large, ovoid-oblong, obtuse, adnate to the anthers, spreading and ascending; margins reflexed. *Column* very small; anthers conniving over the stigma, tips inappendiculate; pollen-masses one in each cell, ovoid-oblong, erect. *Stigma* flat. *Follicles* long, cylindric, smooth. *Seeds* comose.

P. Wallichii, *Wight Contrib.* 40; *Wall. Cat.* 8171; *Dcne. in DC. Prodr.* viii. 633. *P. campanulatum*, *Dcne. l.c.* *Hoya campanulata*, *Blume Bijl.* 1064; *Bot. Reg.* 1847, t. 54; *Bot. Mag.* t. 4545. *Cystidianthus campanulatus*, *Hassk. Cat. Hort. Boj.* 126; *Blume Mus. Bot.* i. 57.

SINGAPORE; *Wallich*.—DISTRIB. Java?

Leaves 3-5 by $1\frac{1}{4}$ - $2\frac{1}{2}$ in., elliptic-oblong, acuminate, coriaceous, nerves reticulate; petiole $\frac{1}{4}$ in. *Cymes* globose, 3-4 in. diam.; peduncle 1-2 in., stout; podicels as long, slender. *Corolla* $1\frac{1}{2}$ in. diam., pale yellow, lobes apiculate. *Column* $\frac{1}{4}$ in. diam., the radiating coronal-processes narrowly oblong, horny and yellow when dry.

46. **PYCNORHACHIS**, *Benth.*

A hairy twining undershrub. *Leaves* opposite, very shortly petioled, membranous, villous. *Flowers* black-purple, in reflexed pairs spirally disposed round the long fleshy branches of an axillary racemiform cyme. *Sepals* subulate. *Corolla-tube* short, thick, throat annulate; lobes elongate, subulate-lanceolate from a broad base, hairy within, valvate in bud. *Coronal-scales* 5, spreading at the base of the column opposite the anthers. *Column* short, adnate to the middle of the corolla-tube; anther-tip long, subulate, hyaline; pollen-masses one in each cell, long, slender, shortly pedicelled, cylindric, waxy, erect. *Ovary* sunk in the calyx-tube; stigma obtusely conical, 5-angled, much shorter than the anther-tips; ovules many. *Follicles* curved, cylindric, obtuse, glabrous. *Seeds* comose.

P. Maingayi, *Hook. f.*

MALACCA; very rare, *Maingay*.

Branches hispidly hairy. *Leaves* 4-6 by $1\frac{1}{2}$ -2 in., oblong-obovate, acuminate, villous on both surfaces, base narrowly cordate or 2-lobed at the insertion of the petiole; nerves 10-12 pair, spreading; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in., villous. *Cymes* 3-6 in. long, branches few, $\frac{1}{4}$ in. diam. *Corolla* $\frac{1}{4}$ in. long, dark purple; annules of throat fringed with hairs. *Corpuscle* slender. *Follicles* 5 in. long by $\frac{2}{3}$ in. diam., sickle-shaped.—Description chiefly from that and the drawings of the discoverer of this very curious genus, which resembles no other.

TRIBE V. **CEROPEGIÆ.**

47. **LEPTADENIA**, *Br.*

Erect, rigid, almost leafless, or twining, hoary or glabrous, leafy shrubs. *Leaves* elliptic or ovate-cordate. *Flowers* small, in crowded axillary umbelliform cymes. *Calyx* turbinate, shortly 5-lobed. *Corolla* rotate; lobes pubescent or bearded, margins recurved, valvate in bud. *Corona* double, corolline of 5 scales between the corolla-lobes; staminal of a raised undulate wing at the base of the anthers. *Column* short; anthers inflexed, obtuse, tips appendiculate; pollen-masses one in each cell, globose, sessile, erect, tips pellucid. *Stigma* included, flat, 5-gonal, 2-cuspidate. *Follicles* rigid, acuminate, smooth. *Seeds* comose, flat, winged.—DISTRIB. Species 12; tropical Asia and Africa.

1. **L. reticulata**, *Wight & Arn. Contrib.* 47; twining, leafy, leaves ovate-cordate or elliptic acute glabrous or hoary beneath, cymes peduncled hoary. *Wight Ic. t.* 350; *Wall. Cat.* 8197; *Dcne. in DC. Prodr.* viii. 628. *L. appendiculata*, *Dcne. l.c.* *L. imberbe*, *Wight Contrib.* 48; *Wall. Cat.* 8198. *L. brevipes*, *Wight Cat.* 1536; *Dcne. l.c.* *Cynanchum reticulatum*, *Retz. Obs.* ii. 15. *C. asthmaticum*, *Herb. Ham.* ? *C. ovatum*, *Thunb.*; *Dcne. l.c.* 548. *Secamone canescens*, *Sm. in Rees Cycl. Asclepias tuberosa*, *Rarb. Fl. Ind.* ii. 38. *A. volubilis*, *Herb. Madr.* *Gymnema aurantiaca*, *Wall. mss.*

EASTERN PUNJAB, at Amballah, *Edgeworth*; and from BANDA southwards through the DECCAN PENINSULA. BURMA, *Wallich*. SINGAPORE, *Lobb*. CEYLON, at Amoor-adhapoora, *Gardner*.—DISTRIB. AYA.

Bark corky; young branches, &c., hoary. *Leaves* 1-2 in., coriaceous, pale, both

surfaces alike, nerves very faint; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. Cymes solitary or in pairs, $\frac{1}{2}$ –1 in. diam.; many-fld.; peduncles shorter or longer than the petioles. *Calyx-lobes* obtuse. *Corolla* $\frac{1}{4}$ in. diam., thick, pubescent on both surfaces; tip of lobes keeled and thickened on the face, most so at the tips; tube glabrous, shining from the adnate corona which is continued halfway down the middle of the lobes. *Follicles* $2\frac{1}{2}$ –3 in. long, $\frac{1}{4}$ – $\frac{3}{4}$ in. diam., turgid, straight, smooth, almost woody; beak thick, curved. *Seeds* $\frac{1}{2}$ in., long, narrowly ovoid.—I think this hardly differs from an East African species.

2. **L. Spartium**, *Wight Contrib.* 48; erect, leaves narrowly linear or 0, cymes subsessile few-fld. hoary. *Wall. Cat.* 8199; *Dene. in DC. Prodr.* viii. 629; *Boiss. Fl. Orient.* iv. 63. *L. pyrotechnica*, *Dene. in Ann. Sc. Nat.* 1838. 269, and in *DC. Prodr. l. c.* *L. Jacquemontiana* and *gracilis*, *Dene. ll. cc.* *Cynanchum pyrotechnicum*, *Forsk.*; *Del. Fl. Egypt*, t. 20. *Sarcostemma pyrotechnica*, *Br. Prodr.* 453. *Microlooma pyrotechnica*, *Spreng. Syst.* i. 855. *M. angustifolia*, *Herb. Ham.*

The PUNJAB and SCINDE, eastwards to the Jumna.—DISTRIB. Beluchistan, Arabia, Egypt, Senegambia.

A glabrous shrub 3–4 ft. high, with long erect twiggy branches. *Leaves* when present 3–4 by $\frac{1}{4}$ in., acuminate, shortly petioled, leathery. *Flowers* as in *L. reticulata*, but smaller, $\frac{1}{8}$ in. diam. *Follicles* 5 in. long, $\frac{1}{2}$ in. diam., terete, straight, produced into a very long slender straight beak.

48. **ORTHANTHERA**, *Wight*.

An erect twiggy leafless shrub. *Flowers* small, in dense-fld. peduncled woolly cymes. *Sepals* lanceolate, eglandular. *Corolla* salver-shaped, tube ovoid, equalling the lanceolate valvate lobes. *Corona* double; corolline of minute scales between the corolla-lobes; staminal a raised undulate ring below the anthers. *Column* ovoid, anther-tips inappendiculate; pollen-masses globose, sessile, erect. *Stigma* included, flat, 5-gonal. *Follicles* elongate, cylindric, opening out flat after dehiscence. *Seeds* comose.

O. viminea, *Wight & Arn. Contrib.* 48; *Royle Ill.* t. 66; *Dene. in DC. Prodr.* viii. 626, and in *Jacquem. Voy. Bot.* 109, t. 105. *Apocynaea viminea*, *Wall. Cat.* 7478.

NORTH-WEST INDIA; along the base of the Himalaya, alt. 1–3000 ft. from Peshawur and the Punjab to Oudh.

Branches stout, erect, as thick as a crowquill. *Peduncles* $\frac{1}{4}$ –1 in.; flowers shortly pedicelled, very woolly. *Sepals* equalling the corolla-tube. *Corolla* villous outside, glabrous within; lobes keeled down the centre of the face. *Follicles* erect, 5 in. long.—The long sepals and salver-shaped corolla are such strong generic characters that I do not follow the “*Genera Plantarum*” in uniting this genus with *Leptadenia*.

49. **BRACHYSTELMA**, *Br.*

Erect or twining pubescent or glabrous herbs with tuberous roots. *Leaves* opposite, sometimes very narrow or minute. *Flowers* few, in axillary sessile umbels or solitary, pedicels very slender. *Corolla* (in the Indian species) rotate; lobes 5, elongate, valvate. *Corona* short, adnate to the column, annular, variously 5–10-lobed or -toothed, lobes or teeth erect or incumbent on the anthers. *Column* very short; anthers ovoid, tips inappendiculate, retuse; pollen-masses one in each cell, sessile, globose, erect, one margin pellucid. *Stigma* nearly flat. *Follicles* slender, smooth. *Seeds* comose.—DISTRIB. About 14 African species, and the following.

There are probably in India many species of this singular genus, which owing to their slender habit and inconspicuous flowers may be overlooked. I cannot find any character whereby to distinguish *Eriopetalum*, Wight, from *Brachystelma*. The following descriptions are all very imperfect.

* *Stem erect.*

1. ***B. lævigatum***, *Hook. f.*; leaves minute subulate, umbels sessile, corolla glabrous or puberulous, segments thrice as long as the tube, corona with a broad 2-toothed lobe between the anthers, and as many narrow oblong ones opposite them. *Eriopetalum lævigatum*, *Wight Contrib.* 35; *Wall. Cat.* 8149; *Dcne. in DC. Prodr.* viii. 646. *Gomphocarpus lævigatus*, *Ham.*

NORTHERN OUDE; at Gorkhpore, *Hamilton*.

Root the size of a small potato. *Stem* 12–18 in., pubescent upwards. *Umbels* minutely hispid, as are the subulate sepals. *Flowers* pendulous, $\frac{1}{2}$ in. diam., pale dirty purple, with pale green segments. *Follicles* 3 in. long, erect.—Described partly from a drawing in *Herb. Kew*.

2. ***B. parviflorum***, *Hook. f.*; leaves long slender almost filiform glabrous, flowers solitary very long-pedicelled, corolla villous segments twice as long as the tube, corona shortly irregularly toothed. *Eriopetalum parviflorum*, *Wight Contrib.* 35; *Dcne. in DC. Prodr.* viii. 646.

NORTH-WESTERN INDIA; Doongie, *Royle (Wight)*.

Leaves 4 in. by $\frac{1}{10}$ in., acuminate. *Pedicels* 1–2 in. long, bracteate at the base. *Flowers* $\frac{3}{4}$ in. diam., white with a few spots on the tube and purple hairs on the margins and segments. *Sepals* subulate.—Described from a flower and drawing in *Herb. Wight*.

3. ***B. attenuatum***, *Hook. f.*; segments of corolla filiform 4–5 times as long as the tube villous, corona shortly irregularly toothed. *Eriopetalum attenuatum*, *Wight Contrib.* 35; *Dcne. in DC. Prodr.* viii. 646.

NORTH-WESTERN INDIA; Doongie, *Royle (Wight)*.

Flower $\frac{3}{4}$ in. diameter.—I have seen only a single flower in *Herb. Wight*.

4. ***B. maculatum***, *Hook. f.*; glabrous, leaves long slender almost filiform, umbels sessile, corolla-lobes 2–3 times as long as the spotted tube keeled above down the middle glabrous except a few scattered long cilia, corona with 5 subulate teeth opposite to and much higher than the anthers.

CANARA OR MYSORE, *Law*.

Stem 10–12 in. *Leaves* 3–4 by $\frac{1}{10}$ in. *Flowers* 2–3 together, $\frac{3}{4}$ in. diam. *Sepals* quite glabrous, subulate.

5. ***B. glabrum***, *Hook. f.*; quite glabrous, leaves narrowly linear-lanceolate or strap-shaped acute, umbels sessile, corolla puberulous lobes linear obtuse three-times as long as the tube, corona very short, minutely toothed.

DECCAN PENINSULA, *Beddome*.

Stem 6 in. *Leaves* 1–3 by $\frac{1}{8}$ – $\frac{1}{4}$ in. *Flowers* $\frac{3}{4}$ in. diam.

** *Stem twining.*

6. ***B. volubile***, *Hook. f.*; quite glabrous, leaves long linear slender, umbels peduncled, corolla-lobes many times longer than the tube with very long scattered hairs, margins incurved, column very depressed discoid, corona forming a low broad obtusely 5-angled cup round its base.

THE CARNATIC; on the Cuddapa hills, alt. 2000 ft., *Beddome*.

Stem several feet long. *Leaves* 3–5 by $\frac{1}{10}$ – $\frac{1}{8}$ in., acuminate. *Umbels* 2–3-*Ad.*

Corolla 1 in. diam., purplish, lobes crenulate. *Column* inserted by a very small base.

7. **B. Beddomei**, Hook. f.; glabrous, leaves very slender elongate acuminate, umbels peduncled 3 fld., corolla-lobes many times longer than the tube glabrous cohering by their tips corona with 5 very broad rounded lobes. *Ceropegia brevitybulata*, *Beddome Ic. Pl. Ind. Or. t. 174*.

MYSORE; Vellore hills, alt. 1000 ft., *Beddome*.

Glabrous, except the puberulous cyme. *Leaves* in distant pairs, 3-4 by $\frac{1}{8}$ - $\frac{1}{4}$ in., narrowed to the sessile base. *Peduncle* $\frac{1}{2}$ in.; bracts setaceous; pedicels $\frac{1}{4}$ in. *Sepals* setaceous. *Corolla* quite glabrous, pale without, purple within; segments 1 in. long, very narrow, flat. *Corona* with the processes opposite the anthers so entirely confluent with them as to appear to be absent.—This singular species has the corolla of *Brachystelma* with the segments cohering by their tips as in *Ceropegia*; it unites the characters of these genera.

50. CEROPEGIA, Linn.

Twining, rarely erect herbs, often with a tuberous rootstock. *Leaves* opposite, sometimes minute or 0. *Flowers* in axillary peduncled umbelliform cymes, rarely solitary, often large, white or greenish and purple. *Sepals* narrow. *Corolla-tube* elongate, straight or curved, often swollen at the base, throat dilated or not; lobes very various, broad or narrow, erect or incurved with cohering tips, often at length recurved or reflexed. *Corona* adnate to the column, annular or cupular, 5-10-lobed and with 5 long or short ligulate processes within that are free or adnate to the anthers. *Column* short; anther short, obtuse; pollen-masses one in each cell, short, erect, sessile, with one pellucid margin. *Stigma* depressed or shortly 2-lobed, included. *Follicles* usually slender, terete, smooth. *Seeds* comose.—DISTRIB. Species about 50; tropical Asian, African and South African, with a few Malayan and Australian.

Herbarium materials do not suffice to enable me to discriminate satisfactorily the species of this most difficult genus, and still less to describe them accurately. The classification I here propose is quite artificial.

* Stem erect, rarely flexuous or twining.

1. **C. pusilla**, Wight *Ic. t. 1261*; dwarf, puberulous, leaves linear, corolla straight, lobes linear erect much shorter than the tube, tips puberulous. *Wall. Cat. 8140*; *Dcne. in DC. Prodr. viii. 643*.

DECCAN PENINSULA; Nilgherry and Anamallay Mts., alt. 7-8000 ft., *Wight, &c.*

Tuber $\frac{1}{2}$ -1 in. diam. *Stem* 3-6 in. *Leaves* rather crowded, 1-3 by $\frac{1}{10}$ - $\frac{1}{2}$ in., narrowed at the base. *Flowers* solitary or 2-3-nate, erect. *Sepals* $\frac{1}{8}$ - $\frac{1}{4}$ in. *Corolla* 1 in., tube narrow, base ovoid. *Coronal lobes* 5, triangular, acute, 2-fld, ciliate; processes narrowly linear, three times as long. *Follicles* 2 in., narrowly fusiform.

2. **C. spiralis**, Wight *Ic. t. 1267*; quite glabrous, leaves very narrowly linear, corolla straight, lobes narrowly linear contorted as long as the tube fimbriate at the base.

DECCAN PENINSULA; Balaghat hills, Madras, *Wight*; Cuddapa hills, *Beddome*.

Stem slender, 4-6 in. *Leaves* 4-8 by $\frac{1}{10}$ - $\frac{1}{2}$ in., margins recurved. *Flowers* solitary, shortly peduncled. *Sepals* filiform, $\frac{1}{8}$ - $\frac{1}{2}$ in. *Corolla* 2 in. long, base slightly inflated, mouth hardly dilated. *Coronal lobes* 5, triangular, acute, glabrous; processes slender, three times as long.

3. **C. fimbriifera**, *Beddome in Madras Lit. Soc. Journ. 1861, 53*, and *Ic. Pl. Ind. Or. t. 172*; finely pubescent, leaves narrowly linear, corolla straight,

lobes as long as the tube narrowly linear erect or twisted together, fimbriate at the base with gland-tipped hairs. ? *C. Munroi*, *Wight Ic.* t. 1264.

TRAVANCORE; rocky place on the Anamallay hills, alt. 3-4000 ft., *Beddome*.

Stem 4-9 in., slender, glabrous below. *Leaves* 4-6 by $\frac{1}{4}$ - $\frac{1}{2}$ in., narrowed at the base and gradually from the middle to the tip. *Peduncles* $\frac{1}{2}$ -1 in., 1-4-fld. *Sepals* filiform, $\frac{1}{4}$ in. *Corolla-tube* subcylindric, green outside, purple within; lobes narrowed downwards from above the middle, basal margins reflexed, fimbriate with long slender hairs. *Coronal lobes* 10, triangular, ciliate; processes linear-spathulate, four times as long.—*C. Munroi* is only known from the very insufficient drawing engraved in *Wight's Icones*. *Beddome* has suggested to me its being a twining or flexuous form of this species, which becomes scandent in cultivation.

4. *C. attenuata*, *Hook. Ic. Pl.* t. 867; pubescent, leaves linear or linear-lanceolate, corolla straight lobes linear erect as long as the tube naked. *Dalz. & Gibs. Bomb. Fl.* 154; *C. angustifolia*, *Dalz. in Hook. Kew Journ.* ii. 259; *Dalz. & Gibs. l.c.* *C. spiralis*, *Herb. Ind. Or. H. f. & T.*

THE CONCAN; near Vingorla, and rocky pastures near the sea in Malwan, *Dalzell, Stocks, &c.*

Stem 6-12 in., slender or rather stout. *Leaves* 2-6 by $\frac{1}{8}$ - $\frac{1}{2}$ in., narrowed at the base. *Peduncles* short, axillary, usually 1-fld. *Sepals* filiform, $\frac{1}{4}$ - $\frac{1}{2}$ in. *Corolla* 2-2 $\frac{1}{2}$ in. long, base swollen, mouth dilated, lobes very narrow from a triangular base, the margins of which are not reflected. *Coronal lobes* 5, triangular, entire or 2-fld, ciliate, processes narrow, 4 times as long. *Follicles* 3 in. long, very slender, terete, torulose. *Seeds* $\frac{1}{10}$ in., oblong, compressed, margins very thick, coma $\frac{1}{2}$ in.

5. *C. Lawii*, *H. f.*; pubescent, stout, leaves long-petioled ovate, peduncles many-fld., corolla slightly curved lobes small elliptic naked incurved very much shorter than the very narrow tube. *Ceropegia* n. 25, *Herb. Ind. Or. H. f. & T.*

SOUTH CONCAN, *Law, Stocks*.

Tubers 2-5 in. diam. *Stem* often as thick as a goose-quill, 1-2 ft. high. *Leaves* 2-4 by $1\frac{1}{2}$ -2 in., acute, sometimes rounded; petiole $\frac{1}{2}$ -1 in. *Peduncle* 1-1 $\frac{1}{2}$ in. strict; bracts minute; pedicels short. *Sepals* minute, recurved. *Corolla* 1-1 $\frac{1}{2}$ in. long, base scarcely swollen; lobes $\frac{1}{4}$ - $\frac{1}{2}$ in., incurved, forming a small subglobose head. *Coronal lobes* 10, obtuse, short, ciliate; processes slender, four times as long.

6. *C. Wallichii*, *Wight in Bot. Mag.*, note under t. 3267, and *Contrib.* 32; puberulous, stem very stout, leaves ovate or rounded subsessile, flowers fascicled, corolla straight lobes oblong obtuse densely fimbriate within erect much shorter than the tube. *Wall. Cat.* 8143; *Royle Ill.* t. 66, f. 3; *Dcne. in DC. Prodr.* viii. 644.

CENTRAL and WESTERN HIMALAYA; Nepal, *Wallich*; Kumaon at Nainital, alt. 6500 ft., *Strachey and Winterb.*

Stem 8-12 ft. in., as thick as a goose-quill. *Leaves* 2-2 $\frac{1}{2}$, puberulous or glabrate above, tip obtuse acute or rounded. *Peduncle* very short; pedicels crowded, $\frac{1}{4}$ - $\frac{1}{2}$ in.; bracts setaceous. *Sepals* filiform, $\frac{1}{4}$ in. *Corolla* 1 $\frac{1}{2}$ in., tube narrow, base inflated, mouth funnel-shaped acutely 5-angled; lobes forming a narrow oblong obtuse crown $\frac{1}{2}$ - $\frac{1}{2}$ in. long, ciliate with short fusiform stout hairs. *Coronal-lobes* 10, triangular, ciliate, processes four times as long. *Follicles* 1 foot long.

** Stem twining. *Leaves* fleshy. *Calyx* minute. *Corolla* small, straight (rarely 1 in. long) narrow; mouth slightly dilated; lobes short, narrow, erect, fleshy.

7. *C. bulbosa*, *Roxb. Cor. Pl.* i. 11, t. 7, and *Fl. Ind.* ii. 28; leaves various, corolla-tube slender, lobes linear from a triangular base villous within, corona glabrous lobes minute or obsolete, processes filiform straight.

From WESTERN INDIA; the Punjab and Upper Gangetic plain as far east as Allahabad, southwards to Travancore.

Root tuberous. *Stem* very slender. *Leaves* excessively variable (see the varieties). *Peduncles* $\frac{1}{2}$ –1 in., 3–5-fld.; pedicels short. *Sepals* $\frac{1}{10}$ in. long. *Corolla* rarely 1 in. long, greenish, base moderately inflated mouth obtusely 5-angled; lobes $\frac{1}{2}$ – $\frac{3}{4}$ the length of the tube, purple within. *Follicles* 4 in. long, slender, terete, pericarp thin. *Seeds* $\frac{1}{2}$ in. long, linear-oblong, wing membranous.

VAR. 1. bulbosa proper; leaves petioled 1–2 in. rarely more orbicular oblong elliptic obovate or obovate acute or apiculate, rarely elliptic lanceolate, base acute rounded or cordate. *C. bulbosa*, *Roxb. l.c.*, *Wight Contrib.* 32, and *l.c. t.* 845, and in *Hook Bot. Misc.* ii. 99 and *Suppl. t.* 2; *Wall. Cat.* 8141; *Dalz. & Gibs. Bomb. Fl.* 153; *Grah. Cat. Bomb. Pl.* 117; *Dcne. in DC. Prodr.* viii. 643.

VAR. 2. Lushii; leaves subsessile very narrowly linear 4–8 by $\frac{1}{4}$ – $\frac{1}{2}$ in. *C. Lushii*, *Grah. in Bot. Mag. t.* 3300; *Dalz. & Gibs. Bomb. Fl.* 154; *Grah. Cat. Bomb. Pl.* 117; *Dcne. l.c.* 644. Bombay, in the Kasersaya jungles, *Dr. Lush.*

VAR. 3. esculenta, leaves 4–5 by 1 in. shortly petioled linear-lanceolate. *C. esculenta*, *Edgew. in Journ. Linn. Soc.* v. 204; *Aitchison Cat. Punjab. Pl.* 90. Punjab and Mooltan.

8. *C. Wightii*, *Graham in Bot. Mag. t.* 3267; leaves subsessile or shortly petioled elliptic-lanceolate apiculate or acute, corolla-tube slender, lobes linear from a triangular base, corona glabrous, lobes 5 minute obtuse, processes short broad curved. *Wight Contrib.* 30; *Dcne. in DC. Prodr.* viii. 641.

EAST INDIES, formerly cult. in the Edinburgh Bot. Gardens.

Probably a form of *C. bulbosa*, from Bombay.

*** Stem twining, stout. Leaves very small or 0.

9. *C. juncea*, *Roxb. Cor. Pl.* i. 12, t. 10; quite glabrous, fleshy, leaves if present elliptic-lanceolate acute, calyx small, corolla funnel-shaped above the middle, lobes erect nearly as long as the tube. *Wight Contrib.* 30; *Wall. Cat.* 8134; *Dalz. & Gibs. Bomb. Fl.* 153; *Grah. Cat. Bomb. Pl.* 117; *Dcne. in DC. Prodr.* viii. 641.

DECCAN PENINSULA, from Bombay and the Circars to Tanjore and Mysore.

Root tuberous. *Stem* simple, as thick as a goose-quill. *Leaves* very remote, often suppressed, rarely 1 in. long, subsessile. *Peduncle* stout, $\frac{1}{2}$ –1 in., 3–5-fld.; pedicels short, stout. *Sepals* $\frac{1}{4}$ in., subulate. *Corolla* greenish, speckled and veined with purple, base inflated, lobes linear from a triangular base, tips fimbriate within. *Coronal lobes* 10, short, ovate, obtuse, ciliate; processes filiform with hooked tips. *Follicles* 7 in. long.

**** Stem twining, leafy. Leaves membranous. Flower 1 in. long and upwards, rarely less.

† Corolla-lobes much shorter than the tube, very broad, forming a hemispherical or broadly conical crown over the much-dilated broadly funnel-shaped throat of the tube. Corolla curved, base much inflated in all.

10. *C. elegans*, *Wall. in Bot. Mag. t.* 3015, and *Cat.* 8135; quite glabrous, leaves ovate or ovate-lanceolate, corolla-lobes broadly ovate acute ciliate with very long hairs, coronal lobes 10 subulate or linear glabrous almost as long as the straight linear processes. *Wight Contrib.* 31, and *l.c. t.* 1265; *Dcne. in DC. Prodr.* viii. 642. ? *C. spheananantha*, *Wight & Arn. Contrib.* 31; *Wall. Cat.* 8138; *C. sphenanthera*, *Dcne. l.c.* 643.

MALABAR and TRAVANCORE, on the mountains from the Nilgherries southwards. CEYLON, alt. 3000 ft., *Walker, &c.*

Leaves 2–4 by 1–1 $\frac{1}{2}$ in., acute or acuminate; petiole $\frac{1}{4}$ –1 in., very slender. *Peduncles* $\frac{1}{2}$ –2 in.; flowers subumbellate; pedicels short; bracts subulate. *Sepals* filiform,

glabrous. *Corolla* $1\frac{1}{2}$ – $1\frac{3}{4}$ in., spotted with dark purple, base globose or oblong and gibbous, crown $\frac{1}{2}$ –1 in. diam. *Follicles* 7–9 in., very slender, terete, membranous. *Seeds* nearly $\frac{1}{2}$ in. long, linear, convex on one face, deeply grooved on the opposite one.—I can detect no character, except perhaps the shorter and more obtuse coronal lobes, whereby to distinguish *C. sphenanantha*.

The coronal lobes are described by Wight as hirsute, but they are perfectly glabrous in ten flowers I have examined, and they are so represented in a drawing made in the Calcutta Garden, and in another made from specimens grown at Kew. Wight's specimen is accompanied with a loose sketch of a hairy corona, placed in a cover with a loose flower, in which latter the corona is glabrous.

11. *C. mysorensis*, Wight *Ic. t.* 846; glabrous or petioles and leaf-nerves beneath minutely hairy, leaves ovate acuminate, corolla-lobes ovate naked, coronal lobes long subulate glabrous, processes filiform.

MYSOORE and TRAVANCORE; on the Pulney Mts., Wight.

This very closely resembles *C. elegans* in habit, and the form and size of the flowers, but the latter are of a very pale straw colour or greenish, and the lobes are entirely naked. *Leaves* $1\frac{1}{2}$ –2 in. long. *Sepals* $\frac{1}{2}$ in. subulate. *Corolla* 1– $1\frac{1}{2}$ in.

12. *C. Walkeriæ*, Wight *Ic. t.* 1266; quite glabrous, leaves ovate or ovate-lanceolate acuminate, corolla-lobes ovate naked, coronal lobes 10 linear, glabrous nearly as long as the linear processes.

CEYLON; Walker, Wight.

Very similar to and probably a variety of *C. mysorensis*, but the leaves are 3–4 in. long, the sepals are longer, $\frac{1}{2}$ – $\frac{1}{2}$ in., the corolla much larger, 2– $2\frac{1}{2}$ in. long, blotched with purple, the tube narrower above the globose base, and the coronal lobes different.

13. *C. Gardneri*, Hook. *Bot. Mag. t.* 5306; quite glabrous; leaves lanceolate or ovate-lanceolate acuminate, corolla-lobes ovate-cordate ciliate, coronal lobes 10 linear ciliate, processes rather longer linear. *Thwaites Enum.* 199.

CEYLON; Ramboddy, alt. 4–5000 ft., Gardner, &c.

Except by the ciliate coronal lobes I do not see how dried specimens of this can be distinguished from *C. elegans*. According both to the figure in the Botanical Magazine, and to a sketch made in Ceylon, the leaves are purplish beneath. Thwaites, who joins both *C. mysorensis* and *Walkeriæ* with *C. elegans*, regards *Gardneri* as distinct, but does not say on what grounds. According to drawings sent by him to Sir W. Hooker, the Cingalese plant called by him *C. elegans* has very broad leaves, a greenish corolla spotted pale-purple with a hemispheric crown of green cordate lobes tipped with dark purple and fimbriate at the tips only, whereas *C. Gardneri* has a deep purple black corolla with a depressed crown of much broader lobes ciliated at the base only. The follicles and seeds of Thwaites' specimen of *Gardneri* precisely accord with those of *C. elegans*.

14. *C. longifolia*, Wall. *Pl. As. Rar. i.* 56, t. 73, and *Cat.* 8136; sparsely puberulous, leaves shortly petioled elongate- or linear-lanceolate acuminate, corolla-lobes ovate ciliate, coronal lobes 10 lanceolate ciliate, processes linear twice as long. *Wight Contrib.* 31; *Dcne. in DC. Prodr. viii.* 642. *C. lanceolata*, Wight *l. c.*; *Wall. Cat.* 8139; *Dcne. l. c.* 643.

CENTRAL HIMALAYA, Nepal, Wallich; Kumaon, alt. 4–5000 ft., Edgeworth.

Stem with a line of pubescence. *Leaves* 5–8 by $\frac{1}{2}$ – $1\frac{1}{2}$ in., base acute or rounded; petiole $\frac{1}{2}$ – $\frac{1}{2}$ in. *Peduncle* 1– $1\frac{1}{2}$ in., hairy; pedicels fascicled, $\frac{1}{2}$ – $\frac{1}{2}$ in.; bracts subulate. *Sepals* $\frac{1}{2}$ in., very slender. *Corolla* $1\frac{1}{2}$ in., green spotted dark purple, tube curved; lobes very broadly ovate. *Follicles* 6 in. long, very slender. *Seeds* $\frac{1}{2}$ in., linear-oblong, concavo-convex.—Approaches *C. lucida*, differing in the much broader shorter head of the corolla and longer sepals. Wight describes *C. lanceolata* as glabrous and as having the coronal lobes shorter than the column, thus placing it in a different

section from *C. longifolia*, but there is no difference whatever between the authentically named specimens of these species in either Wight's or Wallich's Herbaria. The foliage closely resembles that of *C. angustifolia*.

†† Corolla-lobes shorter than the tube (nearly as long in *C. pubescens*), oblong obovate linear or elliptic, forming a conical ellipsoid ovoid or beaked crown over the not greatly dilated throat.

a. *Leaves and peduncles perfectly glabrous.*

15. **C. tuberosa**, *Roxb. Cor. Pl.* i. 12, t. 9; quite glabrous, leaves fleshy from orbicular apiculate to lanceolate acuminate, corolla straight, lobes $\frac{1}{2}$ shorter than the tube suddenly contracted from a triangular base into linear cohering appendages that are at first connate throughout their length and villous within. *Wight Contrib.* 33, and *Ic.* t. 353; *Wall. Cat.* 8145, excl. A; *Dalz. & Gibs. Bomb. Fl.* 154; *Grah. Cat. Bomb. Pl.* 117; *Dcne. in DC. Prodr.* viii. 644. *C. acuminata*, *Dalz. & Gibs. l. c. not of Roxb.* *C. mucronata*, *Roth Nov. Sp.* 179. *C. Candelabrum*, *Roxb. Hort. Beng.* 20, and *Fl. Ind.* ii. 27, not of *Linnaeus*.

DECCAN PENINSULA; from the Concan southwards, common.

Root tuberous. *Stem* slender. *Leaves* 1-4 in. (fleshy, *Dalzell*), base acute or rounded; petiole $\frac{1}{4}$ - $\frac{2}{3}$ in. *Peduncles* 1-3 together, $\frac{1}{2}$ -3 in.; pedicels fascicled or subpaniculate; bracts minute. *Sepals* subulate, $\frac{1}{2}$ in., recurved. *Corolla* 1-2 in., base somewhat inflated, mouth slightly dilated. *Coronal lobes* ciliate, very short. *Follicles* 4-5 in. long, slender. *Seeds* $\frac{1}{2}$ in. long, linear.

16. **C. Candelabrum**, *Linn. Sp. Pl.* 211; glabrous, leaves oblong acute or apiculate base cordate, peduncles pendulous, flowers whorled erect, corolla-base globose, lobes very short ovate acute united by the tips only. *Dcne. in DC. Prodr.* viii. 643.—*Rheede Hort. Mal.* ix. t. 16.

MALABAR, *Rheede*; at Mangalor, *Perrottet (Dcne.)*.

Stem slender. *Leaves* 2-3 by 1-1 $\frac{1}{2}$ in.; petiole 1 in. *Peduncles* 3 in.; pedicels $\frac{1}{2}$ in.; flowers 10-12 in a whorl. *Sepals* small. *Corolla* 1 $\frac{1}{2}$ in.—I have seen no specimen of this striking species.

17. **C. Elliottii**, *Hook. f.*; quite glabrous, leaves elliptic acute, peduncle pendulous, flowers erect, corolla straight green base somewhat inflated, lobes very short ovate acute united at the tips only, coronal lobes obsolete, processes glabrous linear.

DECCAN PENINSULA; Sinhachalam hills, near Vizagapatam, *Sir W. Elliot*.

Root tuberous. *Stem* rather stout. *Leaves* 4 by 1 $\frac{1}{2}$ -2 in., base subacute; petiole 1 in. *Peduncles* 2 $\frac{1}{2}$ -3 in.; pedicels upcurved, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Corolla* 1 $\frac{1}{4}$ in., rather narrow above the swollen base, striped purple within, lobes pubescent at the tips within. *Follicles* 4 in. long, beaked.—Described from an excellent drawing given by *Sir W. Elliot* to General *Beddome*. It comes far nearer to *C. Candelabrum* than does any other species.

18. **C. acuminata**, *Roxb. Cor. Pl.* i. xii. t. 8, and *Fl. Ind.* li. 29; quite glabrous, leaves short-petioled succulent elongate-lanceolate finely acuminate, peduncles short, corolla small straight, lobes short linear connate by their tips only, coronal lobes 5 minute, processes long filiform. *Wight Contrib.* 32; *Dcne. in DC. Prodr.* viii. 643.

THE CIRCARS; at Samulcottah, *Roxburgh*.

Root tuberous. *Stem* slender. *Leaves* 3-4 by $\frac{1}{2}$ in., base acute, not 3-nerved; petiole $\frac{1}{2}$ in. *Peduncle* $\frac{1}{2}$ in., 4-6-fld.; pedicels $\frac{1}{4}$ in. *Sepals* small. *Corolla* $\frac{3}{4}$ in., white with purple streaks and lobes, base swollen, mouth dilated; lobes $\frac{1}{2}$ in., cohering by the tips only.—Described from *Roxburgh*. *Wight* suggests its being only a variety

of *C. bulbosa*, but the short corolla-lobes are very different. Roxburgh's locality, Samulcottah, has never been explored by a subsequent botanist.

19. *C. intermedia*, *Wight Ic.* t. 1263; quite glabrous, leaves long-petioled ovate or elliptic-lanceolate finely acuminate base 3-nerved, corolla straight, lobes subspathulate villous within connate by their tips only, coronal lobes 5 very short or 0 ciliate or glabrous processes long dilated upwards. *C. tuberosa*, *Wall. Cat.* 8145 A. *C. Candelabrum*, *Thwaites Enum.* 199.

TRAVANCORE; Courtallam and Dindygul, *Wight*; Anamallay hills, alt. 2500 ft., *Beddome*. CEYLON, in the hotter part of the island, *Walker*, *Thwaites*.

Root fibrous (*Beddome*). Stem slender. Leaves 2-3 by $\frac{3}{4}$ -1 $\frac{1}{2}$ in., pale yellow-brown when dry; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. Peduncles 1-2 in., 3-6-fld., pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. Sepals subulate. Corolla 1-1 $\frac{1}{4}$ in., pale purplish, base inflated, lobes much shorter than in *C. tuberosa*.—Wight figures the coronal lobes as obsolete and the processes as hairy at the base; I find 5 minute glabrous lobes. He further figures the lobes of the corolla as linear, but describes them as subspathulate. An excellent drawing from Thwaites of what appears to be this species (his *C. Candelabrum*, C.P. 774) has purple branches. Wallich's 8145 A, from Heyne, appears to be the same.

? VAR. *Wightii*; leaves lanceolate acuminate, corolla-lobes broader glabrous, coronal lobes ciliate.—Courtallam, *Wight*.—Wight calls this *C. acuminata*, but it differs from Roxburgh's drawing in the leaves with slender petioles and strongly 3-nerved at the base.

20. *C. Thwaitesii*, *Hook. Bot. Mag.* t. 4758; quite glabrous, leaves elliptic ovate or ovate-lanceolate acuminate, peduncles 2-3-fld., corolla 2-2 $\frac{1}{2}$ in. base ovoid, throat funnel-shaped, lobes oblong, tip not contracted obtuse erect half the length of the tube, coronal lobes subulate ciliate half as long as the linear straight processes.

TRAVANCORE; at Courtallam, *Wight*; Peermade Ghat, *Beddome*. CEYLON; central province, *Gardner*, &c.

Stem rather stout. Leaves 3-4 by 1 $\frac{1}{2}$ -2 in., petiole $\frac{3}{4}$ -1 $\frac{1}{2}$ in. Peduncles stout, 1-2 in., pedicels $\frac{1}{2}$ -1 in. Corolla curved, green with purple blotches above the middle of the tube, and a purple band across the lobes above the middle. Follicles (in Peninsular specimens) 10 in. long, very slender. Seeds $\frac{1}{2}$ in. long.—The leaves are figured and described in *Bot. Mag.* as ciliolate, but I do not detect this in the only Ceylon example I have seen (a most incomplete one).

β. Leaves and peduncles pubescent or hispid.

21. *C. hirsuta*, *Wight & Arn. Contrib.* 33; hirsute or pubescent, leaves from linear or lanceolate to ovate-cordate acuminate, peduncles hispid, sepals long slender, corolla 1 $\frac{1}{2}$ -2 in. long, base ventricose, lobes suberect oblong obtuse ciliate $\frac{1}{3}$ of the length of the tube, coronal processes hooked.

DECCAN PENINSULA; from the Concan to Travancore.

A coarse climber, more or less clothed with subhispid spreading hairs. Leaves 2-4 in.; petiole $\frac{1}{2}$ -1 in. Peduncles $\frac{1}{2}$ -2 in., very hispid; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in. Sepals $\frac{1}{2}$ in., very slender. Corolla greenish, blotched with purple. Corona very variable, but the processes always broad and curved or hooked at the tip. Follicles 4 in. long, slender. Seeds $\frac{1}{2}$ in., narrowly oblong.—After a very tedious examination of the corona in specimens collected at various places between Bombay and Travancore I conclude that the following are referable to one variable plant, an opinion in which I am confirmed by Colonel Beddome; vars. 1-4 are all mixed in Stock's and Dalzell's Herbaria, and none being authentically named I cannot positively say which answers to the species described in the Bombay Flora.

VAR. 1. *hirsuta proper*; all over hirsute except the corolla, coronal lobes 5 short triangular 2-fld ciliate much shorter than the processes. *C. hirsuta*, *Wight l.c.*; *Dona. in DC. Prodr.* viii. 641.

VAR. 2. *vincifolia*; branches glabrous, leaves less and more softly pubescent ovate-cordate, peduncles hispid, coronal lobes 5 short rounded emarginate ciliate. *C. vincifolia*, *Hook. Bot. Mag.* t. 3740; *Dalz. & Gibs. Bomb. Fl.* 153; *Dene. in DC. Prodr.* viii. 642.—I have seen no authentic specimen of this.

VAR. 3. *ophiocephala*, hirsute all over except the corolla, leaves hispid on both surfaces, lobes of corolla oblong obtuse narrowed and purple at the base yellow in the middle, tips green, coronal lobes 10 obtuse 2-fid connate nearly to the tips yellow bordered with purple. *C. ophiocephala*, *Dalz. in Hook. Kew Journ.* ii. 259; *Dalzell & Gibs. Bomb. Fl.* i. 54.

VAR. 4. *Jacquemontiana*; hirsute all over except the corolla, leaves softly tomentose, "lobes of the corolla broader upwards entirely green," *Dalzell*, coronal lobes united to the middle ciliate. ? *C. Jacquemontiana*, *Dene. in DC. Prodr.* viii. 641; ? *Dalz. & Gibs. Bomb. Fl.* 153.—*Carli, Jacquemont*. I am doubtful if *Dalzell's* plant is *Jacquemont's*. *Decaisne* describes the latter as having the lobes of the corolla nearly as long as the tube, which is not the case with any of the forms I have referred to *hirsuta*.

VAR. 5. *stenophylla*; leaves narrowly linear, margins flat or recurved.—*Pulney Mts.*, *Herb. Wight*; *Anamallays*, alt. 3500-5000 ft., *Beddome*. One of *Wight's* specimens has no coronal lobes, the other and *Beddome's* have 5 rather large 2-toothed ciliate ones. *Beddome* describes the roots as fibrous.

22. *C. oculata*, *Hook. Bot. Mag.* t. 4093; branches glabrous, leaves ovate or ovate-cordate acuminate ciliolate, peduncles hispid, corolla 2-2½ in. long base large much inflated, lobes erect lanceolate half the length of the tube, tips contracted pubescent, coronal lobes short ciliate 2-toothed, processes slender straight erect. *Dalz. & Gibs. Bomb. Fl.* 151.

The *CONCAN*; *Bombay*, *Miss Jones*, *Dalzell*.

Leaves 4-6 by 1½-2½ in., membranous; *petiole* ½-1 in. *Peduncle* 1½-2 in., 4-8-fld. *Sepals* ¼-½ in., slender, nearly glabrous. *Corolla* very pale, spotted with purple below the lobes; lobes green above the middle, pale, each with a large purple blotch below it.—Described chiefly from the *Bot. Mag.*, where the leaves are said to have glands above at the insertion of the petiole, which is not the case with the plants in *Dalzell's* Herbarium which I refer to this species. It no doubt varies greatly from the above characters. But for the erect straight inner coronal processes I should be disposed to refer this to *C. hirsuta* (see also 30, *C. Stocksii*).

23. *C. ciliata*, *Wight Ic.* t. 1262; branches hairy above, leaves linear-to ovate-lanceolate acute or acuminate pubescent above and beneath, peduncles very long hispid very many-fld., corolla ¾ in. gently curved, base slightly swollen, lobes very narrow linear erect one-third the length of the tube, coronal lobes 5 very short 2-toothed ciliate, processes slender hooked.

NIGHERRY and *PULNEY Mts.*, *Wight*, *Beddome*.

Hispidly pubescent nearly all over. *Root* tuberous. *Leaves* 2-3 by ¼-2 in., base acute rounded or cordate, *petiole* ¼-½ in. *Peduncles* 1-5 in., very stout, sometimes shortly branched and 20-fld.; *pedicels* ¼-½ in. *Sepals* slender, hispid, ¼-½ in. *Corolla* greenish, lobes lead-coloured, tips forming an oblong head. *Follicles* 3 in. long.

24. *C. angustifolia*, *Wight Contrib.* 31; branches and peduncles pubescent on one side, leaves narrowly elongate-lanceolate pubescent above ciliolate, peduncles few-fld., corolla 1¼-2 in. nearly straight base slightly inflated, lobes short suberect broadly obovate glabrous one third the length of the tube, coronal lobes 10 lanceolate ciliate, processes straight linear rather longer. *C. longifolia*, *Herb. Ind. Or. H. f. & T.*

KHASIA Mts. alt. 4-6500 ft., *Wallich*, &c.

An extensive slender climber. *Leaves* 2-9 by ½-¾ in., rather coriaceous, minutely pubescent above, finely acuminate, margin often recurved; *petiole* ¼-½ in. *Peduncles*

1-1½ in. 3-6-fld.; pedicels ¼-½ in. *Sepals* glabrous, subulate, ¼ in. *Corolla* pale purple, lobes quite glabrous forming an ovoid crown.—Except in the small sepals, much narrower corolla mouth and form of the lobes and crown, this is almost identical with the Nepalese *C. longifolia*.

25. **C. pubescens**, Wall. *Pl. As. Rar.* ii. 81, 187, and *Cat.* 8144 B.; sparsely pubescent or glabrate, leaves long-petioled ovate acuminate, peduncles glabrous 3-∞-fld., sepals small, corolla 2-2½ in. straight base hardly swollen lobes linear erect from an ovate base cohering from the middle glabrous nearly as long as the tube, coronal lobes minute or obsolete ciliate, processes linear erect. *Dene. in DC. Prodr.* viii. 644.

TEMPERATE HIMALAYA; Nepal, Wallich; Sikkim, alt. 3-8000 ft., J. D. H., Treutler. KHASIA MTS., alt. 4-5000 ft., J. D. H.

Branches slender, nearly glabrous. *Leaves* 3-7 by 1½-3 in., very membranous, base sometimes cordate, sparsely pubescent on both surfaces or glabrous, ciliate; petiole 1-2 in. *Peduncle* ½-2½ in. *Sepals* ½-¾ in., recurved. *Corolla-tube* pale dirty purple, sub-cylindric, mouth hardly dilated; lobes yellow with purplish tips forming a long-beaked crown.—This approaches closely *C. tuberosa*, but is always more or less pubescent and it has much longer corolla-lobes. Amongst Cathcart's drawings (in Herb. Kew.) is one apparently of this species having a green corolla with yellow bases to the lobes. Wallich's 8144 A. (*Herb. Heyne*) is probably *C. tuberosa*, but the specimens are undeterminable.

26. **C. Hookeri**, Clarke *ms.*; minutely pubescent, leaves short-petioled ovate acuminate, peduncles 1-2-fld., sepals minute, corolla 1 in. long straight base swollen, lobes short linear-lanceolate one third the length of the tube, coronal lobes minute or obsolete ciliate, processes slender erect. *Ceropegia*, n. 23, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Lachen, alt. 8-10,000 ft., J. D. H.

Stem very slender and as well as the petioles leaves on both surfaces and peduncles sparsely minutely hairy. *Leaves* 1-2 by ¾-1 in., very membranous; petiole ¼-½ in. *Peduncles* shorter or rather longer than the petioles. *Corolla* short, dark purple, narrow from above the base to the mouth, which is rather contracted, lobes gently curved forming a short ellipsoid crown.

††† Corolla-lobes as long or nearly as long as the tube (or shorter in *C. odorata*).—See also 25, *C. pubescens*.

a. *Corolla-tube* broadly funnel-shaped upwards from above or below the middle.

27. **C. lucida**, Wall. *Pl. As. Rar.* ii. 33, t. 139 and *Cat.* 8133; quite glabrous, leaves ovate or lanceolate, peduncles many-fld., sepals small, corolla 1½-2 in. curved, lobes linear from a lanceolate base tips dilated ciliate, coronal lobes 10 short triangular ciliate, processes linear-spathulate. *Dene. in DC. Prodr.* viii. 641.

SILHET, at Terrya Ghat, Wallich, J. D. H. & T. T. CACHAR, Keenan. BURMA at Prome, Wallich.

An extensive climber; root irregularly tuberous. *Leaves* 4-7 by 1½-3 in., membranous; petiole ½-1½ in. *Peduncles* short, ¼-1 in.; pedicels as long. *Sepals* ¼-½ in. *Corolla* scarcely dilated at the base, green spotted with purple, lobes inflexed from above the base, tips brown connate by all the dilated part.

28. **C. Decaisneana**, Wight *lc.* t. 1259; quite glabrous, leaves short-petioled elongate- or linear-lanceolate acuminate, peduncles 1-3-fld., sepals long filiform, corolla 2½-3 in. curved base very largely inflated, lobes linear from a

lanceolate base, coronal lobes 5 linear forked at the tip villous half as long as the slender linear straight processes.

NILGHERRY Mts.; at Sispara Ghat, *Wight, &c.*

Root tuberous. Stem rather stout. Leaves 4-7 by $\frac{1}{2}$ -1 $\frac{1}{2}$ in., membranous, base acute, margins obscurely ciliate; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. Peduncle slender, 1-5 in.; pedicels 1-3 in. Sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., sometimes puberulous. Corolla large, pale, spotted with pale purple, inflated base sometimes $\frac{3}{4}$ in. diam., lobes sometimes longer than the tube, tips slightly dilated. Coronal lobes rigid, yellow with purple tips.

29. **C. brevicollis**, *Hook. f.*; leaves ovate or lanceolate acuminate puberulous on both surfaces, peduncle sparsely hairy 3-6-fld., sepals filiform, corolla 2 in. long curved, base very broadly inflated, tube with a very short neck and broad funnel-shaped limb, lobes erect linear from an ovate-lanceolate base, tips incurved, coronal lobes obsolete, processes linear erect.

TRAVANCORE; Anamallay hills, alt. 2500 ft., *Beddome*.

Stem slender, glabrous. Leaves very variable, 2 $\frac{1}{2}$ -6 by 1 $\frac{1}{2}$ -2 in., membranous, sometimes linear-oblong; petiole $\frac{3}{4}$ -1 $\frac{1}{2}$ in. Peduncles slender, 1-2 in., glabrous or sparsely hairy; pedicels slender, $\frac{3}{4}$ -1 $\frac{1}{2}$ in. Sepals $\frac{1}{2}$. Corolla-base obliquely inflated, dilating again shortly above the inflation into a broad funnel; lobes longer than the tube, linear for half their length.

30. **C. Stocksii**, *Hook. f.*; leaves ovate or ovate-cordate acuminate puberulous on both surfaces, peduncles 3- ∞ -fld. hispid, sepals filiform; corolla 2 $\frac{1}{2}$ -3 in. straight base slightly inflated, lobes erect linear from a small base, tips incurved, coronal lobes 5 short broad ciliate, processes linear straight.

The CONCAN, *Stocks*.

An extensive climber. Leaves 2-5 by $\frac{1}{2}$ -2 in., membranous; petiole $\frac{1}{2}$ -1 in. Peduncle stout, 1-1 $\frac{1}{2}$ in.; pedicels very short, hispid. Sepals $\frac{1}{4}$ - $\frac{1}{2}$ in. Corolla large. —This closely resembles *C. oculata*, differing in the long linear corolla-lobes. It may be a form of that plant; if so, the corolla affords a most treacherous character.

β . Corolla-tube narrow, subcylindric above.

31. **C. macrantha**, *Wight Contrib. 31*; nearly glabrous, leaves short-petioled elliptic-lanceolate acuminate, peduncles short pubescent many-fld., sepals filiform, corolla curved tube narrow base swollen, lobes slender erect linear glabrous cohering from above the middle, coronal lobes ovate-lanceolate villous, processes straight linear. *Dcne. in DC. Prodr. viii. 642.*

TROPICAL HIMALAYA; Kumaon, alt. 4500 ft., *Royle, &c.*; Sikkim, alt. 2-5000 ft., *J. D. H., Treutler*.

An extensive rather stout climber; branches glabrous. Leaves 4-7 by 1 $\frac{1}{2}$ -3 $\frac{1}{2}$ in., very membranous, glabrous or sparsely puberulous on both surfaces, base acute; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. Peduncles longer and stouter than the petioles; pedicels $\frac{1}{4}$ - $\frac{3}{4}$ in.; bracts many, subulate. Sepals $\frac{1}{2}$ in. Corolla pale, base sometimes globose, lobes with a broad ovate base, above it forming a long straight beak. Follicles 4-5 in. long.

32. **C. Arnottiana**, *Wight Contrib. 32*; nearly glabrous, leaves short-petioled narrowly lanceolate or oblong-lanceolate acuminate, peduncles short few-fld., sepals small, corolla 2 in. narrow straight base hardly inflated, lobes very slender erect longer than the tube, coronal lobes 5 short obtuse notched subciliate, processes linear straight. *Dcne. in DC. Prodr. viii. 644.*

KHASIA Mts., *Lobb*. BURMA at Prome, *Wallich*. TENASSERIM; Moulmein, *Lobb*.

Stem very slender, glabrous. Leaves 3-5 by $\frac{1}{4}$ -1 in., rather firm, glabrous or minutely puberulous above, ciliate; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. Peduncle $\frac{1}{4}$ -1 in. slender;

pedicels very short; bracts setaceous. *Sepals* $\frac{1}{4}$ in. *Corolla* sub-cylindric; lobes lanceolate at the base, tips slightly dilated. *Follicles* 4 in. long, slender. *Seeds* $\frac{1}{16}$ in. long, linear-oblong.

33. **C. odorata**, *Nimmo in Grah. Cat. Bomb. Pl.* 118; nearly glabrous, leaves short-petioled lanceolate acuminate, peduncles short hispid many and dense-fl., corolla 1 in. slender straight base not swollen, lobes very narrow erect, coronal lobes minute glabrous.

The CONCAN; Salsette, *Nimmo, Law.*

Stem slender, glabrous. *Leaves* 3-4 by $\frac{1}{2}$ - $\frac{3}{4}$ in., rather firm, glabrous or minutely puberulous above; petiole $\frac{1}{8}$ - $\frac{1}{2}$ in. *Peduncles* $\frac{1}{4}$ - $\frac{3}{4}$ in., pedicels very short; bracts squarrose. *Sepals* $\frac{1}{4}$ in., recurved. *Corolla* one of the narrowest of the genus, yellow, sweet-scented, lobes variable in length, at first united by the tips, soon free.

34. **C. ensifolia**, *Beddome Ic. Pl. Ind. Or.* 173; stem glabrous, leaves subsessile or short-petioled elongate linear acute or apiculate nerveless finely reticulate, peduncles hispid often very long, sepals small, corolla 1 in. slender straight base inflated, lobes linear erect, coronal lobes 5 short obtuse ciliate, processes long linear erect.

TRAVANCORE; Anamallay hills, alt. 3-3500 ft., *Beddome.*

Root tuberous. *Stem* very slender. *Leaves* 4-7 by $\frac{1}{2}$ - $\frac{1}{2}$ in., firm, glabrous or minutely puberulous above, finely reticulate beneath; petiole 0- $\frac{1}{2}$ in. *Peduncles* 1-5 in., often bearing a succession of fascicles of flowers; pedicels very short. *Sepals* $\frac{1}{2}$ in. *Corolla* greenish-white, lobes as long or longer than the tube. *Follicles* 6-7 in.

35. **C. albiflora**, *Hook. f.*; pubescent, leaves short-petioled ovate- or linear-lanceolate nerves distinct oblique, peduncles hispid often very long, sepals subulate, corolla 1-2 in. slender straight base not inflated, lobes linear erect, coronal lobes 5 very short ciliate processes long linear erect.

TRAVANCORE; near Peermede, alt. 3500-4500 ft., *Beddome.*

Very similar to *C. ensifolia*, in habit, inflorescence, bracts, &c., but, as I am assured by Colonel Beddome, quite distinct, more hispidly pubescent, with much broader distinctly nerved leaves and white flowers. The peduncle is sometimes 8 in. long, and bears 4 or 5 remote sessile fascicles of flowers.

36. **C. Beddomei**, *Hook. f.*; sparsely pubescent, leaves subsessile elongate linear-lanceolate acuminate, nerves very slender, peduncle stout hispid few-fl., sepals filiform, corolla 3 in. long slightly curved, tube slender swollen below funnel-shaped above, lobes slender elongate erect villous within, coronal lobes very short notched ciliate processes broad hooked.

TRAVANCORE; Peermede, alt. 2500 ft., *Beddome.* COCHIN, *Johnston.*

Stem hispid above. *Leaves* 5-6 by $\frac{1}{2}$ - $\frac{1}{2}$ in., rather firm, finely acuminate, narrowed to the base, sparsely puberulous on both surfaces, midrib strong, nerves few and extremely fine. *Peduncle* 1-3 in. stout, pedicels short. *Sepals* $\frac{1}{4}$ - $\frac{1}{2}$ in. *Corolla* dark purple, $\frac{1}{2}$ in. diam. at the mouth, lobes gradually narrowed from the base to the tips. —I have seen but one good specimen of this, Colonel Beddome's; that from Cochin is imperfect, and appears to have straight coronal processes.

DOUBTFUL AND UNDESCRIBED SPECIES.

C. MICANS, *Nimmo*, and **C. ARCTA**, *Nimmo*, from the Concan, and mentioned by name only in *Graham Cat. Bomb. Pl.* 118, are unknown to me.

C. BIFLORA, *Linn. Fl. Zeyl.* 46, and *Sp. Pl.* 211; from Ceylon. The only character given for this, "peduncles 2-flowered," may apply to any Ceylon species. Wight refers it doubtfully to *C. tuberosa*, which is not a Ceylon plant.

51. **FREREA**, Dalz.

A low fleshy quite glabrous erect shrub, branches terete. *Leaves* opposite, oblong. *Flowers* large, solitary or in pairs, axillary. *Sepals* triangular-ovate, acute. *Corolla* rotate, lobes broad, acute, valvate. *Corona* a low broad, 5-angled ring round the column, with 5 broad short truncate or retuse spreading lobes alternating with 5 long narrow processes opposite the anthers and inflexed over them. *Column* very short; anthers retuse, inappendiculate; pollen-masses one in each cell, short, erect, one margin pellucid. *Stigma* flat, included. *Follicles* terete, smooth. *Seeds* comose.

F. indica, Dalz. in Journ. Linn. Soc. viii. 10, t. 3.

The CONCAN; hill foot near Hewra, alt. 3000 ft., Dalzell.

Branches very short, $\frac{1}{2}$ in. diam., nodose. *Leaves* sessile, 1 in., sometimes spatulately obovoid, obtuse or retuse. *Flowers* very shortly dicelled. *Corolla* purple. *Corona* as in *Boucrosia*, from which the genus differs in habit.—Described from Dalzell's figure and characters.

52. **CARALLUMA**, Br.

Fleshy, erect, nearly leafless herbs, with very thick subterete or angular stems and branches. *Leaves* minute and caducous, or 0. *Flowers* solitary, or in pairs at the upper nodes. *Sepals* acute. *Corolla* broadly campanulate; lobes 5, narrow, valvate. *Corona* annular, adnate to the column, 5-lobed, lobes 2-cuspidate, with a ligulate process at the sinus on the inner face which overlaps the anther. *Column* very short; anthers short, retuse, incumbent on or confluent with the stigma, tips inappendiculate; pollen-masses one in each cell, short, erect, one margin pellucid. *Stigma* flat. *Follicles* slender, smooth, terete. *Seeds* comose.—DISTRIB. Species 4; Western India and Arabia.

The corona is that of *Boucrosia*, but the habit and inflorescence are very different, the stem and branches gradually narrowing upwards and becoming very slender. I have had to describe the species for the most part according to drawings in Herb. Kew.

* *Corolla glabrous within.*

1. **C. edulis**, Benth. Gen. Pl. 782; stem and branches subterete 4-grooved, corolla glabrous, tube inflated, lobes ovate-lanceolate. *Boucrosia edulis*, Edgew. in Journ. Linn. Soc. vi. 205, t. 1. *B. ascendens*, Wall. Cat. 8146, in part. *B. Stocksiana*, Boiss. Fl. Orient. iv. 64.

The PUNJAB; at Rawul Pindee, Aitchison; Mooltan, Edgeworth. SCINDE, Stocks. Erect, 6–18 in. high, simple or sparingly branched. *Leaves* $\frac{1}{2}$ in. long, ovoid-lanceolate, acute, fleshy, caducous. *Flowers* $\frac{1}{2}$ in. diam., purple within.

2. **C. adscendens**, Br. in Mem. Wern. Soc. i. 25; stem 4-angled slender terete above, branches glabrous, tube short funnel-shaped, lobes lanceolate acute. *Wight Contrib.* 33; Wall. Cat. 8146, in part; *Dene*. in DC. Prodr. viii. 647. *Stapelia adscendens*, Roxb. Cor. Pl. i. 28, t. 30.

DECCAN PENINSULA; in arid places, Wight.

Stem ascending, 1–2 ft. high; branches slender above. *Flowers* $\frac{1}{2}$ in. diam., dark purple within.

** *Corolla fringed or hairy within.*

3. **C. attendata**, Wight Ic. t. 1268, and Ill. t. 155 b, fig. B.; stem

4-angled, branches slender and terete above, corolla-tube short funnel-shaped, lobes fringed with long hairs.

SOUTH DECCAN Mts.; Nilgherries, Pulneys, &c., *Wight*, &c. COCHIN, *Johnstone*. CEYLON; between Kandy and Badulla.

Habit of *C. ascendens*, but differing according to *Wight's* plate in the larger flowers with deeply fringed petals. The Ceylon plant, according to a drawing from *Thwaites*, is smaller with much smaller flowers borne on the 4-angled stems, not on slender terete branches as in the Peninsular one; it is possibly *C. fimbriata*.

1. *C. fimbriata*, *Wall. Pl. As. Rar.* i. 7, t. 8; stems much diffusely branched 4-angled to the ends of the branches, corolla rotate, segments copiously fimbriate. *Wight Contrib.* 34; *Dalz. & Gibs. Bomb. Fl.* 155.

DECCAN PENINSULA; from the Concan southwards, in arid rocky places.—DISTRIB. Ava.

Wight refers the Peninsular to the Ava plant, remarking that the flowers of the former are much larger (they are 1 in. diam. in *Wallich's* drawing), but finds no other difference. In both the arms of the coronal lobes are long subulate and hooked. —Amongst *Wight's* drawings is one of a plant with the habit of *fimbriata*, that is, bearing the flowers on the curved 4-angled ends of the branches, but with short ovate ciliate corolla-lobes, green, banded with purple, ending in fimbriate linear tips. If this is *Wight's fimbriata*, it differs much from *Wallich's*.

53. *BOUCEROSIA*, *Wight & Arn.*

Fleshy leafless herbs, with thick 4-angled stems, angles toothed. *Flowers* terminal, rather large, solitary or umbelled, more or less purple. *Sepals* narrow. *Corolla* campanulate or rotate; lobes 5, short, broad, valvate. *Corona* annular, adnate to the column, 5-lobed; lobes 2-fid, subulate, erect or spreading with a linear fleshy process on the inner face at the sinus inflexed over the anther. *Column* minute, short; anther-tips inappendiculate; pollen-masses one in each cell, sessile, erect, suborbicular, compressed. *Stigma* low, conical, 5-angled, tip truncate depressed. *Follicles* slender, straight, terete, smooth. *Seeds* flat, winged, comose.—DISTRIB. Species 12; Spain, North Africa, Arabia, Western India.

For the definition of the species of this genus (as of *Caralluma*) I have had to depend mainly upon published and unpublished drawings and definitions.

1. *B. umbellata*, *Wight & Arn. Contrib.* 34; stem very stout, flowers in dense umbels, corolla glabrous. *Wight Ic.* t. 495; *Wall. Cat.* 8147; *Dene. in DC. Prodr.* viii. 648. *Stapelia umbellata*, *Roxb. Cor. Pl.* iii. t. 241. *S. Callamula*, *Ham.*

DECCAN PENINSULA; common in arid localities. CEYLON; rocks near Kornegalle, *Thwaites*.

Stem erect or ascending, simple or sparingly branched, 1-2 ft. high, 1-2 in. across the obtuse thick crenate angles. *Umbels* 2-4 in. diam., globose, dense-fld. *Corolla* 1-1½ in. diam., streaked closely concentrically with purple. *Follicles* 4-7 in. long by ½ in. diam. *Seeds* ½ in. long, oblong.

? VAR. *campanulata*; angles of stem thin, corolla smaller without the purple streaks more tubular. *B. campanulata*, *Wight Ic.* t. 1287.—*Wight* distinguishes this as above, but *Thwaites* unites it with *umbellata*, and in the Herbarium they are indistinguishable, except by the smaller flower and narrower lobes of the corona; its native locality is unknown.

2. *B. crenulata*, *Wight & Arn. Contrib.* 34; stems very stout, flowers in dense umbels, corolla with long scattered hairs over the whole inner surface.

Dcne. in DC. Prodr. viii. 648. *B. lasiantha*, *Wight Ic.* t. 1286. *Caralluma crenulata*, *Wall. Pl. As. Rar.* i. 6, t. 7.

DECCAN PENINSULA; Nuggur hills, near Madras, *Wight*.—DISTRIB. Ava.

Apparently similar in habit to *B. umbellata*, differing chiefly in the hairy inner surface of the corolla.

3. ***B. diffusa***, *Wight Ic.* t. 1599; diffuse, branches very stout, flowers in dense umbels, corolla-lobes fimbriate on the margin only.

TRAVANCORE; arid rocks, alt. 2000 ft., *Wight*.

"The very diffuse habit, a single plant covering many square feet of surface, the minute cauline teeth, small sepals, and distinctly tubular corolla of this plant, combine to mark the species as very distinct from any of its Indian congeners," *Wight l.c.*

4. ***B. Hitchinia***, *Dcne. in DC. Prodr.* viii. 649; stem slender diffusely branched, flowers few in an umbel, corolla hairy within. *Hitchinia indica*, *Wight & Arn. Contrib.* 35; *Wight Ic.* t. 355; *Wall. Cat.* 8148.

The CARNATIC and CIRCARS, *Wight, &c.*

Branches $\frac{1}{2}$ in. diam. Flowers shortly pedicelled. Corolla $\frac{3}{4}$ in. diam. Coronal lobes shorter than in *B. umbellata*, inner process larger in proportion and decurrent.

5. ***B. pauciflora***, *Wight mss.*; *Dcne. in DC. Prodr.* viii. 648; stems slender diffusely branched, teeth or angles recurved, flowers solitary, corolla hairy within.

SOUTH CARNATIC; at Palamcottah, *Wight*.

I have an unpublished lithograph of this plant made for Dr. Wight, and there are specimens in his Herbarium, but not sufficient for full analysis; the stems are as slender as in *B. Hitchinia*, the corolla campanulate, $1\frac{1}{2}$ in. diam. with broad short acute lobes banded closely with purple, and the inflexed process from the corona is short and very broad.

6. ***B. Aucheriana***, *Dcne. in DC. Prodr.* viii. 649; stem short branched, flowers capitate, corolla-lobes lanceolate glabrous pustular above. *Boiss. Fl. Orient.* iv. 63.

Dry hills in the WESTERN PUNJAB; the Saltrange, &c.—DISTRIB. Afghanistan, Beloochistan, Persia, Arabia.

Plant 2-6 in. high; branches $\frac{1}{2}$ - $\frac{1}{2}$ in. diam. Sepals ovate-lanceolate. Corolla $\frac{1}{2}$ in. diam., dark purple, more deeply divided into narrower lobes than in any of the southern species. Follicles 3-4 in., tips capitate.

ORDER XCVI. LOGANIACEÆ. (By C. B. Clarke.)

Trees, shrubs or herbs. *Leaves* opposite (rarely ternate), undivided; stipules various or 0. *Inflorescence* cymose, terminal or axillary, simple or compound; cymes sometimes subcapitate, sometimes reduced to solitary flowers. *Flowers* regular. *Calyx* inferior, small, 4-5-toothed or -lobed. *Corolla* 4-5-lobed or -partite. *Stamens* 4-5, inserted on the corolla-tube, alternate with the lobes; anthers 2-celled. *Ovary* free, 2-celled; style simple, stigma capitate bifid or 2-partite; ovules one or more in each cell, placentæ on the dissepiment or basal in the inner angle. *Fruit* capsular septicidal, or baccate indehiscent, 1-∞-seeded. *Seeds* various, albumen copious; embryo straight, long or short.—Species 350, tropical and subtropical.

TRIBE I. **Euloganieæ.** *Ovary* with many ovules in each cell.

* *Herbs; corolla valvate; capsule compressed, didymous.*

Cymes 2-3-chotomous. *Corolla* 5-lobed 1. MITREOLA.
Pedicels solitary or clustered. *Corolla* 4-lobed 2. MITHASACME.

** *Shrubs or trees.*

Corolla imbricate. *Capsule* 2-valved. 3. BUDDLEIA.
Corolla valvate. *Capsule* 2-valved 5. NORRISIA.
Corolla contorted. *Fruit* indehiscent. 4. FAGRÆA.
Corolla valvate. *Fruit* indehiscent 6. STRYCHNOS.

TRIBE II. **Gaertneriæ.** *Ovary* with 1 ovule in each cell.

Corolla tubular. *Anthers* nearly included in the tube 7. GAERTNERIA.
Corolla subrotate. *Anthers* large, exserted 8. GARDNERIA.

1. MITREOLA, Linn.

Herbs. *Leaves* opposite, membranous; stipules membranous or small. *Cymes* 2-3-chotomous, terminal or peduncled, axillary. *Flowers* small, white, often unilateral on the ultimate cyme-branches. *Sepals* lanceolate. *Corolla* urn-shaped; lobes 5, small, valvate. *Stamens* 5, included. *Ovary* 2-celled; styles 2, short, connate under one small hairy stigma, ultimately divergent; ovules many in each cell, placentas peltate. *Capsule* obovoid, laterally compressed, truncate or 2-horned; carpels dehiscing by separating from each side of the septum from above. *Seeds* very many, minute, globose or elongate, albumen fleshy; embryo linear.—Species 4; 2 American and the following.

1. **M. oldenlandioides**, Wall. Cat. 4350; leaves oblong nearly glabrous, cymes terminal and axillary 2-chotomous, capsule 2-horned, seeds elongate trigonous, A. DC. Prodr. ix. 9; Dalz. & Gibs. Bomb. Fl. 155; Hook. Ic. Pl. t. 827; Benth. in Journ. Linn. Soc. i. 91. M. paniculata, Wall. Cat. 4349; Wight Ic. t. 600 (*flowers of principal figure inaccurate*); A. DC. l. c. (*as to the Asiatic plant*). M. inconspicua, Zoll. et Mor. Verz. (1845-6) 55.

CENTRAL PROVINCES, alt. 0-3000 ft.; extending to Bombay and to Chota Nagpore, frequent. PEGU; J. Anderson. DISTRIB. Burma, Malaya, N. Australia.

Annual, 6-18 in., erect. *Leaves* 2 by $\frac{3}{8}$ in., narrowed at both ends; petiole $\frac{1}{4}$ in. *Cymes* 2-6 in., often numerous; bracts $\frac{1}{16}$ in., lanceolate. *Flowers* subsessile, scarcely $\frac{1}{16}$ in. *Capsules* $\frac{3}{8}$ in., unilateral on the branches. *Seeds* twice as long as broad. The American *M. petiolata* united with this by A. DC. is exceedingly like it, but has globose seeds.

2. **M. pedicellata**, Benth. in Journ. Linn. Soc. i. 91; leaves oblong hairy beneath, cymes on long axillary peduncles 3-chotomous, capsule truncate, seeds globose tuberculate. Parophiorrhiza khasiana, Clarke; Hook. f. Fl. Brit. Ind. iii. 85.

KHASIA MTS., alt. 4200 ft.; Cherra, Limestone Hill, Griffith, J. D. H., Clarke.

Perennial, 2-8 in., decumbent, branching. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{4}$ in., narrowed at both ends; petiole $\frac{1}{3}$ in. *Cymes* 6-12-flowered, lax, irregular, peduncle 1-3 in. *Flowers* nearly as of *M. oldenlandioides*, obscurely unilateral, fruiting pedicels sometimes $\frac{1}{4}$ - $\frac{1}{2}$ in., but not longer than sometimes in *M. oldenlandioides*. *Capsules* $\frac{1}{12}$ in., succulent, little compressed.—The specimens on which the genus *Parophiorrhiza* were founded, were mislaid when the Rubiaceæ were described for this work.

2. MITRASACME, Labill.

Small herbs. *Leaves* opposite, stipules forming a minute sheath. *Flowers* small, white, terminal or axillary, solitary clustered or in irregular umbels.

Calyx campanulate, 4-fid. *Corolla* urn-shaped; lobes 4, valvate. *Stamens* 4, included; anthers ovate. *Ovary* 2-celled; styles 2, connate, separating from the base upwards, usually finally divergent, stigma capitate or 2-lobed; ovules many in each cell, placentæ peltate. *Capsule* subglobose, laterally sub-compressed, truncate or sub-2-horned; carpels dehiscent by separating from each side of the septum from above. *Seeds* very many, minute, subglobose, testa smooth, reticulated.—Species 28; from Bengal to Japan and New Zealand, common in Australia.

1. **M. nudicaulis**, Reinw. in *Blume Bijl.* 849; leaves subradical elliptic minutely hairy, scapes terminated by a lax simple or compound umbel. *A. DC. Prodr.* ix. 12; *Benth. in Journ. Linn. Soc.* i. 92. *M. chinensis*, Griseb. in *Pl. Meyen.* 51; *A. DC. l. c.* 560.

KHASIA and JAITEA MTS., alt. 4000 ft., frequent.—DISTRIB. China, Malaya.

Annual. *Scape* 3–5 in., very slender. *Leaves* $\frac{1}{2}$ in., subsessile, obtuse or acute, minutely hispid-flocculose. *Pedicels* $\frac{1}{2}$ – $1\frac{1}{2}$ in., glabrous; bracts $\frac{1}{10}$ in., lanceolate. *Calyx* $\frac{1}{18}$ in., divided halfway down into acute lobes, glabrous. *Corolla* $\frac{1}{2}$ in., throat hairy. *Capsule* $\frac{1}{2}$ in. diam.

2. **M. alsinoides**, Br. *Prodr.* 453; leaves oblong acute glabrous, pedicels axillary solitary or 2–3 clustered in the upper axils. *A. DC. Prodr.* ix. 11. *M. indica*, Wight *Ic. t.* 1601; *Benth. in Journ. Linn. Soc.* i. 92. *M. pusilla*, Dalz. in Hook. *Kew Journ.* ii. 136; Dalz. & Gibs. *Bomb. Fl.* 155. *M. crystallina*, Griff. *Notul.* iv. 87, and *Ic. Pl. Asiat. t.* 383, fig. 2.

INDIA, alt. 0–2000 ft., widely scattered; ASSAM and BENGAL; CHOTA NAGPORE; DECCAN PENINSULA; PEGU and TENASSERIM. CEYLON.—DISTRIB. Borneo, Philippines, Australia.

Annual; stem 6 in., weak, branched, nearly glabrous. *Leaves* $\frac{1}{4}$ – $\frac{1}{2}$ in., sessile, scaberulous. *Pedicels* $\frac{1}{4}$ – $\frac{3}{4}$ in., scaberulous. *Calyx* $\frac{1}{12}$ in., acutely lobed half-way down. *Corolla* $\frac{1}{5}$ in., throat hairy. *Capsule* $\frac{1}{10}$ in. diam.—The Bengal examples are lax straggling, exactly agreeing with the Malay and Australian; the Madras and Ceylon ones are shorter (2–3 in. high), suberect.

3. **M. polymorpha**, Br. *Prodr.* 452; stems patently glandular hairy below, leaves oblong, umbels terminal or from the upper axils, pedicels long unequal glabrous. *A. DC. Prodr.* ix. 10; *Benth. Fl. Austral.* iv. 353 with syn. *M. capillaris*, Wall. in Roxb. *Fl. Ind. ed. Carey & Wall.* i. 420 and *Cat.* 4348; *Don Prodr.* 129; *A. DC. l. c.* 11; *Benth. in Journ. Linn. Soc.* i. 92. *M. trinervis*, Spanoghe in *Linnaea.* xv. 335; *A. DC. l. c.* 560. *M. malaccensis*, Wight *Ic. t.* 1601. *Limnophila campanuloides*, *Benth. in Wall. Cat.* 3908.

NEPAL; in the valleys, Wallich. PEGU to MALACCA, frequent. DECCAN PENINSULA; Mangalore, Hohenacker, n. 590. DISTRIB. China, Japan, Malaya, Australia.

Annual; stem 2–15 in., erect. *Leaves* $\frac{1}{2}$ by $\frac{1}{2}$ in., sessile, glabrous or pubescent. *Umbels* 1–8 in., compound or simple, capillary; pedicels $\frac{1}{4}$ – $1\frac{1}{2}$ in. *Calyx* $\frac{1}{8}$ – $\frac{1}{4}$ in., lobed acutely halfway down, ciliate pubescent or glabrous. *Corolla* $\frac{1}{4}$ in., throat hairy. *Capsule* nearly $\frac{1}{8}$ in.—The Pegu examples of *M. capillaris* are 14 in., and agree altogether with Australian ones named *M. polymorpha* by Benth. The tropical Australian plant has larger capsules and is said to be perennial. The Nepal and Mangalore specimens are 3–4 in. high only, resembling the Japanese.

VAR. *Parishii*; umbels small dense long-peduncled, flowers large.—Tavoy; Parish. DISTRIB. Cochinchina. *Peduncles* 1–3 in., with a terminal umbel, and sometimes a sessile umbel in the middle; pedicels numerous, 0– $\frac{1}{2}$ in.—This is not much like any one of the numerous forms of the Australian *M. polymorpha*, but some of the Malay examples of *M. polymorpha* show a tendency to the Var. *Parishii*.

3. **BUDDLEIA**, Linn.

Trees, shrubs, or herbs. *Leaves* opposite, entire or crenate, united by a stipulary line. *Cymes* dense, globose or corymbiform, axillary or in a thyrsoid terminal panicle. *Calyx* campanulate, 4-merous. *Corolla* urn-shaped; lobes 4, imbricate in the bud. *Stamens* 4, on the corolla-tube; anthers subsessile, ovate or oblong. *Ovary* 2-celled; style linear, clavate; ovules very many in each cell. *Capsule* septicidally 2-valved. *Seeds* very many, oblong or fusiform, testa usually loose or expanded into a wing or tail, albumen fleshy; embryo straight.—Species 70, tropical and subtropical Asia, America, and Africa.

1. **B. Colvillei**, Hook. f. *Ill. Himal. Pl.* t. 18; sub-arboreous, leaves oblong acuminate crenate-dentate, cymes lax in large terminal panicles, flowers 1 in. crimson. *Gamble List Darjeeling Pl.* 56.

SIKKIM; frequent on Tonglo, alt. 9–12,000 ft., *J. D. H.*, &c.

A small tree 15–20 ft., or a large shrub. *Leaves* 6 by $1\frac{1}{2}$ in., attenuate at the base, densely rusty-woolly when young, obscurely pubescent when mature; petiole $0-\frac{1}{4}$ in.; stipules small. *Panicles* 4–8 in., rusty-villous; pedicels $0-\frac{1}{4}$ in. *Calyx* $\frac{1}{4}$ in., shortly toothed, rusty-villous. *Corolla* tubular-campanulate, glabrous without; lobes short, round. *Ovary* hairy. *Capsule* $\frac{2}{3}$ by $\frac{1}{3}$ in. *Seeds* rhomboid-ellipsoid, testa lax little longer than the seed.

2. **B. macrostachya**, Benth. in *Wall. Cat.* 6407, and *Scroph. Ind.* 42, and in *DC. Prodr.* x. 447; shrubby, leaves oblong acuminate crenulate-dentate stipulate, spikes terminal elongate subpanicked, corolla narrow tubular fulvous-woolly without, seeds tailed. *B. Martii*, *T. A. Schmidt in Trimen Journ. Bot.* 1868, 245.

SIKKIM HIMALAYA, alt. 6000–7000 ft., Choongtam and Lachen, *J. D. H.* KHASIA Mts. alt. 3000–5000 ft. frequent.

Shrub 3–8 ft.; branches quadrangular upwards, woolly. *Leaves* 8 by 2 in., attenuate at the base, rusty-woolly beneath or ultimately brown-pubescent, petiole $0-\frac{1}{2}$ in., stipulary line much developed often eared $\frac{1}{2}$ in. broad. *Spikes* 4–10 in., dense-fld., rusty-villous, usually continuous. *Calyx* $\frac{1}{2}$ in., campanulate; teeth lanceolate, acute. *Corolla* $\frac{1}{2}$ by $\frac{1}{2}$ in., white tinged with pink and yellow, throat orange. *Capsule* $\frac{1}{2}-\frac{1}{3}$ in., oblong, acute, villous. *Seeds* elongate, testa lax 3–6 times as long as the nucleus, tailed at both ends.—The Sikkim plant does not essentially differ, but has a grey pubescence, the calyx is smaller, and almost a silvery white. "Flower very sweet, corolla-tube yellowish, limb patent blue, throat deep orange," *J. H. B. Martii* is described as having glabrous branches, which is never the case in our specimens.

VAR. Griffithii; corolla $\frac{1}{4}$ by $\frac{1}{8}$ in., capsule $\frac{1}{2}$ in.—Bhotan; *Griffith* (Kew Distrib. n. 3743). *Mishmee*; *Griffith* (Kew Distrib. nn. 3746, 3747). "Flowers lead-blue, throat orange," *Griffith*.

3. **B. paniculata**, Wall. *Cat.* 6403, and in *Roeb. Fl. Ind. ed. Carey & Wall.* i. 412; shrubby, leaves ovate or oblong sinuate-dentate crenate or subentire, flower-heads in interrupted panicles, corolla narrow-tubular woolly, seeds ellipsoid not tailed. *Don Prodr.* 92; *Benth. Scroph. Ind.* 43, and in *DC. Prodr.* x. 444; *Brand. For. Fl.* 318; *Kurz For. Fl.* ii, 251. *B. crispa*, Benth. in *Wall. Cat.* 6404, and *Scroph. Ind.* 43; *Bot. Mag.* t. 4793; *T. A. Schmidt in Trimen Journ. Bot.* 1868, 245; *Boiss. Fl. Orient.* iv. 1193. *B. nepalensis*, *Colla*; *Benth in DC. l. c.* 447?

HIMALAYA, alt. 4–7000 ft., common westwards, becoming rare in Sikkim and Bhotan.—DISTRIB. Ava, Cabul Beloochistan. [The locality *Silhet* given by Mr. Bentham is believed to be erroneous.]

A shrub or small tree. *Leaves* 5 by 2 in., hastate, sinuate-dentate (on the flowering

branches usually much smaller, lanceolate, narrowed at the base, crenate or subentire), woolly beneath; petiole $0\frac{1}{4}$ in.; stipules usually very narrow or obsolete. *Flower-heads* woolly. *Calyx* $\frac{1}{2}$ – $\frac{3}{4}$ in., urn-shaped, woolly, teeth short. *Corolla-tube* pink, lobes short lavender-blue, throat orange. *Style* short or long. *Capsule* $\frac{1}{4}$ in., ellipsoid, woolly. *Seeds* ellipsoid, testa lax scarcely longer than the nucleus.—*B. paniculata* was founded on the ends of the flowering branches with paniced heads and subentire oblong leaves; *B. crispa* on lower portions of the same branches with large hastate deeply sinuate-dentate leaves and flower-heads subsolitary on short axillary branches.

4. ***B. asiatica***, Lour. *Fl. Cochinch.* 72; shrubby, leaves lanceolate acuminate entire crenate or toothed, spikes terminal and axillary often paniced, corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. tubular white, seeds not tailed. *Benth. in DC. Prodr.* x. 446; *Bot. Mag.* t. 6323; *Dalz. & Gibs. Bomb. Fl.* 180; *Bedd. For. Man.* 163, and *Anal. Gen. t.* 21; *Brand. For. Fl.* 318; *Kurz For. Fl.* ii. 250. *B. Neemda*, *Ham. in Wall. Cat.* 6401; *Roxb. Fl. Ind. ed. Carey & Wall.* i. 411; *Reich Ic. Bot. Exot.* t. 21; *Benth. Scroph. Ind.* 43, and in *DC. l. c.* *B. discolor*, *Roth Nov. Sp.* 83; *Benth. Scroph. Ind.* 42; *Wight Ill.* t. 165, b. v. and *Ic.* t. 894. *B. salicina*, *Lamk. Ill.* i. 291. *B. acuminatissima*, *Blume Bijl.* 743. *B. serrulata*, *Roth l. c.* 82. *B. subserrata*, *Don Prodr.* 92. *B. virgata*, *Blanco Fl. Filip.* 57.

Throughout INDIA, ascending to 6800 ft., very common; not known from Ceylon.—DISTRIB. Malaya, Cochinchina, and China.

A shrub, 3–6 ft., rarely subarborescent 15 ft. *Leaves* 5 by $1\frac{1}{4}$ in., usually narrowed at the base, grey white or fulvous-tomentose or pubescent beneath; petiole $0\frac{1}{4}$ in.; stipules narrow. *Spikes* 2–8 in., dense, usually continuous, fulvous or grey tomentose or pubescent. *Calyx* $\frac{1}{2}$ – $\frac{3}{4}$ in., campanulate, lobes triangular-oblong. *Corolla-tube* hairy without or glabrescent, lobes short. *Capsule* $\frac{1}{4}$ in., ellipsoid. *Seeds* ellipsoid, testa lax little longer than the nucleus.

4. **FAGRÆA**, Thunb.

Trees or shrubs, often epiphytic, sometimes scandent. *Leaves* opposite, entire (crenulate in *F. crenulata*); petioles dilated at base or united by a stipular sheath. *Cymes* collected in corymbs racemes or elongate panicles, terminal or axillary; bracts small. *Flowers* large or small, white, yellowish or rarely pink. *Calyx* deeply 5-fid; lobes thick, broad, much imbricate. *Corolla-tube* long, narrow or funnel-shaped; lobes 5, broad, twisted to the left in the bud. *Stamens* 5, filaments filiform; anthers oblong. *Ovary* 2-celled, or 1-celled above; style filiform, stigma capitate; ovules very many in each cell. *Berry* 1–2-celled. *Seeds* very many, immersed in pulp, testa crustaceous, albumen horny; embryo small, straight.—Species 30; India, China, Japan, Malaya, and Australia, Pacific Islds.

* *Cymes* few-fl. (except *F. crenulata*), corymbose near the ends of the branches, flowers large.

† *Corolla-tube* more than 3 in., linear, dilated only near the top.

1. ***F. carnosa***, Jack in *Mal. Misc.* ii. n. 7, 81; leaves obovate obtuse petioled, flowers solitary subsessile terminal, corolla-tube $5\frac{1}{2}$ in. *DC. Prodr.* ix. 30; *Benth. in Journ. Linn. Soc.* ix. 97; *Kurz For. Fl.* ii. 204.

TENASSERIM; Lobb, *Kurz*.—DISTRIB. Sumatra.

An epiphytic shrub. *Leaves* 3 by 2 in., truncate-obtuse, mucronate, base cuneate; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Calyx* $\frac{2}{3}$ in.; lobes $\frac{1}{3}$ in., ovate, much imbricate. *Corolla-tube* $\frac{1}{2}$ in., mouth wide; lobes $1\frac{1}{4}$ in., obovate, obtuse, mucronate. *Berry* "size of a hen's egg, ovate, rather pointed" (*Kurz*).

2. **F. zeylanica**, *Thunb. Nov. Gen.* ii. 35; leaves obovate-oblong, cymes terminal few-flowered, corolla-tube $3\frac{1}{2}$ in. *Lamk. Ill.* t. 167, fig. 2; *Blume Rumph.* ii. t. 78, fig. 2; *DC. Prodr.* ix. 29; *Bot. Mag.* t. 6080. *Solandra oppositifolia*, *Moon. Cat.* 15.

CEYLON; central province, not common, *Rottler, Gardner, Thwaites*.

A small tree. *Leaves* 7 by 3 in., subobtusely, base much attenuate; petiole $\frac{1}{2}$ in., or obscure. *Cymes* subsessile, 1-6-flowered; bracts $\frac{1}{2}$ in., ovate; pedicels $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ - $\frac{2}{3}$ in.; lobes $\frac{1}{4}$ - $\frac{1}{3}$ in., ovate, obtuse. *Corolla-tube* $\frac{2}{3}$ in., mouth wide; lobes $1\frac{1}{4}$ in., elliptic, obtuse. *Berry* $1\frac{1}{2}$ by 1 in., ovoid, subacute.

VAR. *brevituba*; corolla-tube $1\frac{1}{4}$ in. *Wall. Cat.* 1594.—Deccan Peninsula, *Heyne*.—Differs only in the corolla-tube rather less dilated upwards.

†† *Corolla-tube less than 3 in. funnel-shaped at least in the upper half* (see also *F. zeylanica*, var. *brevituba*).

3. **F. auriculata**, *Jack in Mal. Misc.* ii. n. 7, 82; leaves obovate-oblong, cymes terminal few-fl., corolla-tube $2\frac{1}{2}$ in., lobes $2\frac{1}{2}$ in. *Wall. Cat.* 1596, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 34, and *Pl. As. Rar.* iii. 15, t. 229; *Blume Bijl.* 1020, and *Rumph.* ii. t. 72; *DC. Prodr.* ix. 29. *F. auricularia*, *Benth. in Journ. Linn. Soc.* i. 98; *Kurz For. Fl.* ii. 204. *F. imperialis*, *Miq. in Ann. Mus. Lugd. Bat.* ii. 226, t. 5. *Willughbeia auriculata*, *Spreng. Syst. curæ* post 71.

TENASSERIM, MALACCA, and SINGAPORE; *Griffith, Helfer, &c.*—DISTRIB. Malaya.

A large shrub. *Leaves* 9 by 4 in., subobtusely, base cuneate or attenuate; petiole $\frac{1}{2}$ - $\frac{1}{2}$ in., base auricled. *Cymes* 1-5-flowered, subsessile. *Calyx-lobes* 1 by $\frac{2}{3}$ in. *Corolla-mouth* 2 in. wide; lobes 2 in. broad, obovate-oblong. *Berry* $2\frac{3}{4}$ by $1\frac{1}{4}$ in., oblong.—Griffith's examples have smaller flowers; Lobb's have the flowers nearly as large as in Miquel's picture.

4. **F. crenulata**, *Maingay ms.*; leaves large broadly obovate crenulate, cymes trichotomous rigid many-flowered, corolla-tube 1 in. funnel-shaped.

MALACCA; *Maingay*.

A tree 40 ft. high; trunk slender, unbranched (*Maingay*). *Leaves* $11\frac{1}{2}$ by $8\frac{1}{2}$ in., obtuse, base narrowed; petiole $\frac{1}{2}$ in., very thick. *Cyme* $6\frac{1}{2}$ in. broad, depressed; peduncle 2 in.; bracts $\frac{1}{2}$ in., ovate; pedicels $\frac{1}{6}$ - $\frac{1}{5}$ in. *Calyx-tube* $\frac{1}{2}$ in.; lobes $\frac{1}{2}$ in., obtuse. *Corolla-mouth* $\frac{1}{2}$ - $\frac{2}{3}$ in. broad, wide campanulate for fully half its length; lobes $\frac{1}{2}$ in., ovate-oblong. *Capsule* $\frac{3}{4}$ by $\frac{1}{2}$ in., ellipsoid. *Seeds* very many.

5. **F. obovata**, *Wall. Cat.* 1595, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 33; leaves obovate-oblong or elliptic abruptly acuminate, stipules interpetiolar, cymes few- ∞ -flowered rigid, corolla-tube 1 in. upper half campanulate. *Blume Bijl.* 1021, and *Rumph.* ii. t. 75; *DC. Prodr.* ix. 29; *Bot. Mag.* t. 4205; *Griff. Notul.* iv. 35, and *Ic. Pl. Ind. Or.* t. 382; *Miq. Fl. Ind. Bat.* ii. 369; *Thwaites Enum.* 200; *Bedd. For. Man.* 164; *Kurz For. Fl.* ii. 205. *F. crassifolia*, *Blume Rumph.* ii. t. 78, fig. 1, and *Mus. Bot.* i. 166; *Thwaites Enum.* 200; *DC. l. c.* 30; *Miq. l. c.* 373; ? *F. crassifolia*, *Wall. Cat.* 1602. *F. malabarica* and *obovato-javana*, *Blume Rumph.* ii. 29, and *Mus. Bot.* i. 164; *Wight. Ic.* t. 1317. *F. Blumei*, *Steud.*; *DC. l. c.* 30. *F. coromandeliana*, *Wight Ic.* t. 1316; *Bedd. Fl. Sylb.* ii. t. 224. *F. celebica*, *Blume Mus. Bot.* i. 167. *F. globosa*, *Wall. Cat.* 1598; *DC. l. c.* 29. *Willughbeia obovata*, *Spreng. Syst. curæ* post 71.—*Rheede Hort. Mal.* iv. t. 58.

DECCAN PENINSULA and CEYLON, alt. 0-6000 ft., common. KHASIA MTS., alt. 0-4000 ft., *Wallich, Griffith, H. f. & T.* BHOTAN; *Gamble*. MALAY PENINSULA; from Pegu to Singapore, frequent.—DISTRIB. Malaya.

Trunk stunted in the Deccan, erect 30 ft. in the Malay Peninsula. *Leaves* $6\frac{1}{2}$ by 3 in., base narrowed; petiole $\frac{1}{2}$ - $\frac{1}{2}$ in.; stipules often partly free within the petiole,

embracing the branch. *Cymes* 1-5- (sometimes 12-15-) fld., subsessile; pedicels short. *Calyx* $\frac{2}{3}$ in.; lobes $\frac{1}{2}$ in., ovate, obtuse. *Corolla-throat* $\frac{3}{4}$ -1 $\frac{1}{4}$ in. wide; lobes 1-1 $\frac{1}{2}$ in., broadly elliptic, obtuse. *Berry* 1 $\frac{1}{2}$ by 1 in.—Primary nerves of the leaves distinct in *F. obovata*, Wall., obscure in *F. crassifolia*, Blume. The corolla in Wallich's Silhet example is considerably larger than in his Singapore one. *Fagraea crassifolia*, Wall. Cat. 1602, is not in the Linnean Herbarium.

VAR. *Gardneri*; scandent. *F. Gardneri*, *Thwaites Enum.* 200; *Bedd. For. Man.* 164.—Ceylon; central province, alt. 3-6000 ft., *Thwaites*. *Thwaites* says that this hardly differs from *F. obovata*, except in habit.

6. ***F. khasiana***, *Benth. in Journ. Linn. Soc.* i. 96; leaves oblong-elliptic acuminate, cymes laxly trichotomous few-fld., corolla-tube $\frac{3}{4}$ in. funnel-shaped nearly from the base.

KHASIA MTS., alt. 0-5000 ft., *Griffith, H. f. & T. ASSAM, Griffith, Simons*.

A tree, 30 ft. Leaves as of *F. obovata*. *Cymes* 3-12-fld., branches lax, often nodding; bracts $\frac{1}{2}$ in., elliptic; pedicels 0- $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in.; lobes $\frac{1}{2}$ in., ovate, obtuse. *Corolla-throat* $\frac{2}{3}$ in. wide; lobes $\frac{1}{2}$ in., broad-elliptic, obtuse. *Berry* $\frac{3}{4}$ by $\frac{3}{4}$ in.—Closely allied to *F. obovata*, having smaller flowers and fruits, and a much laxer inflorescence.

** *Cymes* short, few-flowered, in a more or less elongate raceme.

7. ***F. Maingayi***, *Clarke*; leaves large oblong, calyx $\frac{1}{2}$ in. campanulate, corolla-tube $\frac{3}{4}$ in. widely funnel-shaped from the base.

MALAYA; Tamoosoo Kufoo, *Maingay*.

Leaves 11 by 4 $\frac{1}{2}$ in., parallel-sided, shortly acute at both ends; petiole $\frac{2}{3}$ in., very thick. *Peduncle* $\frac{3}{4}$ in.; raceme 2 in., few-fld.; cymes subsessile on the rachis of the raceme; pedicels $\frac{1}{2}$ in., thick, terete. *Calyx* nearly 6-partite; segments round. *Corolla-throat* $\frac{3}{4}$ in. wide; lobes $\frac{1}{2}$ in., subquadrate. *Berry* not seen.—This by its large calyx differs from all the species of this section except *F. crassipes*, *Benth.*, which has a tubular corolla only slightly funnel-shaped upwards.

8. ***F. racemosa***, *Jack*; *Wall. Cat.* 1601, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 35; tree, leaves large oblong or elliptic base cuneate, racemes terminal condensed, calyx $\frac{1}{4}$ in., corolla-tube $\frac{2}{3}$ in. lower half cylindric, upper half campanulate. *DC. Prodr.* ix. 29; *Benth. in Journ. Linn. Soc.* i. 99; *Kurz For. Fl.* ii. p. 205. *F. coarctata*, *Blume Rumph. ii.* 33, and *Mus. Bot.* i. 170. *Willughbeia racemosa*, *Spreng. Syst. curæ post.* 71.

PENANG and MALACCA, *Wallich, Griffith, Maingay*.

Attains 50 ft. Leaves 10 $\frac{1}{2}$ by 3 $\frac{1}{2}$ in., nerves distinct; petiole $\frac{1}{2}$ in. *Peduncle* 1 $\frac{1}{2}$ in.; raceme 1 $\frac{1}{2}$ in.; pedicels $\frac{1}{2}$ in., subfascicled on the rachis. *Calyx* divided more than halfway down; lobes round. *Corolla-throat* $\frac{1}{2}$ in. wide; lobes scarcely $\frac{1}{2}$ in., round. *Berry* " $\frac{1}{2}$ in., ovoid," *Kurz*.

9. ***F. morindæfolia***, *Blume Rumph. ii.* 79, and *Mus. Bot.* i. 169; a rambling shrub, leaves large oblong or elliptic base rounded, racemes terminal elongate, calyx $\frac{1}{4}$ in., corolla-tube $\frac{2}{3}$ in. upper half campanulate or funnel-shaped. *DC. Prodr.* ix. 29. *F. appendiculata*, *cuspidata* and *robusta*, *Blume Mus. Bot.* i. 169, 170. *F. Thwaitesii*, *F. Muell. Fragm. Phyt. Austral.* ii. 137. *Kuhlia morindæfolia*, *Reinw. in Blume Bijdr.* 777. *Kentia morindæfolia*, *Steud. Nomencl. Bot.* 2nd ed. i. 845. *Utania morindæfolia*, *G. Don Gen. Syst.* iv. 663.

ANDAMAN ISLDS., *Kurz*.—**DISTRIB.** Malaya, to the Philippines and Australia.

Panicle usually 8-14 in. long; lateral branches rarely simple.—Very near *F. racemosa*, *Jack*, and reduced to it by *Benth. (Fl. Austral.* iv. 367). As to *F. volubilis*, *Jack (Wall. Cat.* 1610, and in *Roxb. Fl. Ind.* ii. 36), it is a climber; the racemes weak, curved, axillary, sometimes 2 from the same axil, and seems nearer *F. racemosa* than the present species. The whole may be (as *Bentham* considers) one; but the *F.*

racemosa of the Malay Peninsula is well represented in the herbarium and uniformly differs from all the Malay *F. morindæfolia*.

10. **F. ligustrina**, *Blume Rumph. ii. 33*, and *Mus. Bot. i. 171*; leaves elliptic not very large, racemes terminal slender erect short, calyx $\frac{1}{2}$ in., corolla-tube $\frac{1}{4}$ in. narrowly funnel-shaped upwards. *Benth. in Journ. Linn. Soc. i. 100*.

SINGAPORE, *Lobb.*—DISTRIB. Malaya, Philippines.

Arborescent (*Blume*); branches round, slender. Leaves $4\frac{1}{2}$ by 2 in., suddenly acute, base broadly cuneate; petiole $\frac{1}{4}$ in. Peduncle 1 in.; raceme 1 in.; pedicels $\frac{1}{10}$ in., subfascicled on the nodes of the rhachis. Calyx divided halfway down; lobes round. Corolla much slenderer than in the preceding 3 species, $\frac{1}{12}$ in. wide below; throat scarce $\frac{1}{4}$ in. wide; lobes $\frac{1}{4}$ in., round.

*** Flowers small, in compound corymbs.

11. **F. fragrans**, *Roxb. Fl. Ind. ed. Carey & Wall. ii. 32*; leaves elliptic acute, corymbs many-flowered, calyx $\frac{1}{2}$ in., corolla-tube $\frac{1}{4}$ in. upper half narrowly funnel-shaped. *Wall. Cat. 1597*; *Kurz For. Fl. ii. 205*. *F. peregrina*, *Blume Rumph. ii. t. 80*; *Field. & Gardn. Sert. t. 6*. *Cyrtophyllum fragrans*, *DC. Prodr. ix. 31*. *C. peregrinum*, *Reinw.*; *Blume Bijl. 1022*; *DC. l. c.*

From MARTABAN and ANDAMAN ISLDS. to SINGAPORE; frequent.—DISTRIB. Malaya.

A small tree, 25–30 ft. Leaves 4 by $1\frac{1}{4}$ in., shortly acute at both ends; petiole $\frac{1}{4}$ – $\frac{3}{4}$ in.; stipules often connate. Corymbs axillary towards the ends of the branches, often 50–100-flowered, sometimes 6–8-flowered; pedicels $\frac{1}{2}$ in. Calyx deeply divided, lobes round. Corolla subcylindric below; throat $\frac{1}{4}$ in. wide; lobes $\frac{1}{4}$ in., obtuse. Stamens much exserted. Berry " $\frac{1}{4}$ in., subglobose, reddish," *Kurz*.

12. **F. Wallichiana**, *Benth. in Journ. Linn. Soc. i. 98*; leaves lanceolate, corymbs few-fld., calyx $\frac{1}{4}$ in., corolla-tube $\frac{3}{4}$ in. slender widened only towards the apex. *F. lanceolata*, *Wall. Cat. 1599*, not of *Blume*. *Cyrtophyllum lanceolatum*, *DC. Prodr. ix. 31*.

PENANG, *Wallich, Maingay*.

Leaves 4 by $1\frac{1}{2}$ in., acute at both ends; petiole $\frac{1}{2}$ in. Corymbs terminal and axillary, 3-fld. mostly where attached (but the detached flowers are very numerous sent by *Maingay*); pedicels $\frac{3}{4}$ in. Corolla-tube narrowly funnel-shaped from the middle upwards; throat $\frac{1}{4}$ in. wide; lobes $\frac{1}{2}$ in., elliptic, obtuse. Berries $\frac{1}{4}$ in., ellipsoid, subacute.—This seems very near *F. fragrans*, but has a larger calyx, corolla, and berry, while the corymb is more slender.

5. NORRISIA, *Gardn.*

A shrub; young parts pubescent. Leaves opposite; petioles dilated at the base, subconnate. Cymes dense, trichotomous, in terminal corymbs. Flowers small, white? Calyx small, 5-lobed. Corolla-tube narrow, cylindric; lobes 5, small, ovate, valvate. Stamens 5, on the corolla-throat, filaments filiform; anthers ovate. Ovary 2-celled; style filiform, stigma capitate; ovules in each cell very many. Capsule oblong, septicidally 2-valved; carpophore finally free. Seeds very many, testa lax 4–6 times as long as the linear caudate nucleus, albumen fleshy; embryo straight or curved.

1. **N. malaccensis**, *Gardn. in Hook. Kew Journ. i. 327*. *Antonia Griffithii*, *Wight. Ill. ii. 172*, t. 156 b.

MALACCA, *Griffith, Maingay*.—DISTRIB. Borneo.

Branchlets round, fulvous-villous. Leaves 3 by $1\frac{1}{2}$ in., shortly acute at both ends, fulvous-villous beneath or finally glabrescent except the midrib; nerves 7 pairs,

oblique, strong, secondary distinctly reticulate; petiole $\frac{1}{2}$ in. *Cymes* in dense heads $\frac{1}{2}$ – $1\frac{1}{2}$ in. diam., villous or tomentose. *Calyx* $\frac{1}{30}$ in. *Corolla-tube* $\frac{1}{2}$ in., grey or fulvous hairy without; lobes $\frac{1}{12}$ in. *Capsule* $\frac{1}{2}$ by $\frac{1}{12}$ in., fulvous-tomentose, the 2 elliptic valves finally splitting again from their tops. *Seeds* minute.

6. **STRYCHNOS**, Linn.

Scandent shrubs with short tendrils, or trees. *Leaves* opposite, 3–5-nerved (except sometimes *S. potatorum*); scandent species bear short clavate tendrils in some of the axils, the adjacent leaf then often suppressed; in the sub-terminal axils both tendrils often developed, both the leaves and the point of the branch then generally suppressed, in which case the species has been said to produce terminal bifurcate tendrils. *Cymes* terminal or lateral; bracts small; flowers white or yellowish. *Calyx* small, 5–4-lobed. *Corolla* 5–4-fid; tube short or long or hardly any; lobes valvate. *Stamens* 5, on the corolla-tube, filaments short. *Ovary* 2-celled (or 1-celled above); style long or short or hardly any, stigma capitate or small or sub-2-lobed; ovules many in each cell. *Berry* globose or oblong, many- (or 2–1-) seeded. *Seeds* globose, discoid or oblong, albumen horny; embryo small.—Species 60; in the tropics of both hemispheres.

Strychnos grandis, Wall. Cat. 4454, is *Anisophyllea grandifolia*, G. Henslow (vol. ii. p. 442).

Strychnos sp. Wall. Cat. 7500, with subalternate leaves, is not of this Order.

* *Corolla-tube* shorter than the *calyx* or hardly any.

1. ***S. hypogyna***, Clarke; leaves elliptic-lanceolate 3-nerved glabrous, cymes axillary sessile compound pubescent, petals 5 hardly connate, ovary hairy.

TENASSERIM; Mergui, Griffith (Kew Distrib. n. 3830).—DISTRIB. Borneo.

Tendrils 0 on the examples; branchlets glabrous. *Leaves* $4\frac{1}{2}$ by $1\frac{1}{2}$ in., base broadly rhomboid; petiole $\frac{1}{4}$ in. *Cymes* 1–2 in.; pedicels hardly any. *Calyx* pubescent. *Petals* $\frac{1}{20}$ in., villous within. *Stamens* obscurely attached to the petals, sometimes persistent after the petals have gone, filaments sometimes vilvous; anther-cells oblong, glabrous or nearly so. *Ovary* hairy; style hardly any. *Fruit* not seen.

2. ***S. acuminata***, Wall. Cat. 1593 in part; leaves ovate acute 5-nerved glabrous, cymes axillary weak minutely pubescent; petals 5 shortly connate, ovary hairy. Kurz For. Fl. ii. 166, not of A. DC.

TENASSERIM; Wallich. PEGU and SOUTH ANDAMAN ISLANDS., Kurz, Helfer (Kew Distrib. 3728).

A large climber, with tendrils, Kurz. *Leaves* $4\frac{1}{2}$ by $2\frac{1}{2}$ in., base cuneate obtuse rounded or subcordate, marginal nerves distinct; petiole $\frac{1}{8}$ in. *Cymes* 1–2 in., subsessile, lax; pedicels $0\text{--}\frac{1}{12}$ in. *Calyx* minutely pubescent. *Corolla* $\frac{1}{16}$ in.; petals free, glabrous fide Kurz (shortly connate and villous within in Helfer's). *Berry* $\frac{1}{2}$ in. diam., crustaceous, 1–2-seeded. *Seeds* $\frac{1}{2}$ in. diam., discoid.—Kurz's examples are in ripe fruit; Wallich's are leaves only; on his A sheet are two plants, one (*b*) with 5-nerved leaves is that taken up by Kurz.

3. ***S. micrantha***, Thwaites Enum. 425; leaves elliptic acuminate sub-5-nerved glabrous, cymes axillary short dense minutely hairy, corolla-lobes 5 oblong 3–4 times longer than the tube, ovary glabrous.

Ceylon; not uncommon, Thwaites (C. P. 3720, 1866).

Tendrils often in pairs. *Leaves* $2\frac{3}{4}$ by $1\frac{1}{2}$ in., widest often above the middle, base cuneate or obtuse, nerves not impressed above; petiole $\frac{1}{8}$ in. *Cymes* 1–2 in.; pedicels $0\text{--}\frac{1}{12}$ in. *Calyx* minutely pubescent. *Corolla* $\frac{1}{10}$ in.; tube exceedingly short; lobes

villous within. *Anther-cells* oblong, sparingly villous or glabrous. *Style* as long as the ovary. *Berry* $\frac{1}{2}$ in. diam., crustaceous, 1-2-seeded. *Seeds* $\frac{1}{2}$ in. diam., discoid.—Thwaites says the ovary is villous, but it is absolutely glabrous in C. P. n. 3720. This is the only constant character to distinguish it from *S. colubrina*.

4. ***S. colubrina***, Linn. *Sp. Pl.* 271 (not of Wall., Wight or A. DC.); leaves elliptic acute 3-nerved glabrous, cymes axillary small compound puberulous, corolla-lobes 5 oblong 2-3 times as long as the tube, ovary hairy upwards. *Benth. in Journ. Linn. Soc.* i. 101; *Thwaites Enum.* 201; *Dalz. & Gibs. Bomb. Fl.* 155. *S. bicirrhosa*, Lesch.; *Wall. Cat.* 1589, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 267; *A. DC. Prodr.* ix. 16. *S. minor*, *Blume Rumph.* i. 70; *A. DC. l. c.* 14.—*Rheede Hort. Mal.* vii. t. 5.

W. DECCAN PENINSULA, from the Concan to Cochin, frequent.

Tendrils often in pairs. *Leaves* 4 by $1\frac{3}{4}$ in., base cuneate or obtuse; nerves not impressed above, marginal pair obscure; petiole $\frac{1}{4}$ in. *Cymes* 1-2 in.; pedicels $0-\frac{1}{2}$ in. *Calyx* puberulous. *Corolla* $\frac{1}{10}$ in., tube hardly longer than the calyx, lobes villous within. *Anther-cells* oblong, glabrous, or nearly so. *Ovary* glabrous below, fulvous-hairy upward; style as long as the ovary. *Berry* $\frac{3}{4}$ in. diam., crustaceous, 1-2-seeded. *Seeds* $\frac{1}{2}$ in. diam., discoid.—All authors previous to Bentham took *Rheede Hort. Mal.* viii. t. 24 as the type of Linnæus' *S. colubrina*, whereas Linnæus founds his *S. colubrina* on t. 5, which has totally different fruit, and on which Blume founded his *S. minor*. Hence the confusion of synonyms.

VAR. *zeylanica*; leaves rhomboid cuneate at both ends coriaceous 5-nerved, ovary glabrous.—Ceylon; *Thwaites C. P.* 2516, &c. This is taken by Thwaites as *S. colubrina*, Linn.

5. ***S. Dalzellii***, Clarke; leaves ovate acute 3-nerved glabrous, cymes very short dense axillary and terminal puberulous, corolla-lobes 5 oblong 2-3 times as long as the tube, ovary glabrous. *S. axillaris*, *Dalz. & Gibs. Bomb. Fl.* 155, not of Colebr.

W. DECCAN PENINSULA; Concan, Malabar and Bababoodan Hills; *Law, Dalzell, Ritchie*.

Scandent, *Ritchie*, no tendrils on the specimens. *Leaves* 4 by $1\frac{3}{4}$ in., widest near the cuneate or rounded base, coriaceous, nerves often impressed above; petiole $\frac{1}{4}$ in. *Cymes* $\frac{1}{2}-\frac{3}{4}$ in., subcapitate. *Calyx* puberulous. *Corolla* $\frac{1}{10}$ in., tube hardly longer than the calyx-lobes, villous within. *Anther-cells* ovate, hairy. *Style* as long as the ovary. *Berry* $1-1\frac{1}{2}$ in. diam., crustaceous, many-seeded. *Seeds* $\frac{1}{2}$ in. diam., discoid.

6. ***S. Benthami***, Clarke; leaves short-petioled elliptic acute 3-5-nerved glabrous, cymes very short subcapitate axillary pubescent, corolla-lobes 4 ovate longer than the tube, ovary glabrous. *S. minor*, *Benth. in Journ. Linn. Soc.* i. 101; *Thwaites Enum.* 201, not of Blume.

CEYLON, frequent; *Thwaites*, &c.

Tendrils often present. *Leaves* 2 by 1 in., base obtuse or rounded, secondary nerves distinct; petiole scarcely $\frac{1}{2}$ in. *Cymes* $\frac{1}{2}$ in. diam.; pedicels hardly any. *Calyx* glabrous, margin puberulous. *Corolla* $\frac{1}{10}$ in., villous within. *Anther-cells* ovate, hairy. *Style* as long as the ovary. *Berry* $\frac{1}{2}$ in. diam., crustaceous, 1-2-seeded. *Seeds* $\frac{1}{2}$ in. diam., discoid.—The 5-merous species referred to by Bentham is *S. micrantha*, Thwaites. *S. minor*, Blume, is founded on *Rheede Hort. Mal.* viii. t. 24, which has totally different fruit.

VAR. *parvifolia*, Benth. in *Journ. Linn. Soc.* i. 101; leaves $\frac{3}{4}$ by $\frac{1}{2}$ in. coriaceous with recurved margins.—Ceylon, *Gardner*, &c.

7. ***S. Rheedei***, Clarke; leaves short-petioled elliptic acute 3-nerved, cymes small peduncled few-flid. lax, corolla short-tubed 5-merous, berry very

large, many-seeded. *S. colubrina*, *Blume Rumph. i.* 70; *A. DC. Prodr. ix.* 14, not of *Linn. nor Wall.*—*Rheede Hort. Mal. viii.* t. 24.

MALABAR; *Rheede*.

Tendrils present; branches stout. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{4}$ in., base obtuse or rounded; petiole $\frac{1}{2}$ – $\frac{3}{8}$ in. *Peduncles* $\frac{1}{2}$ in., axillary, 3–4-flowered; pedicels $\frac{1}{2}$ – $\frac{1}{3}$ in. *Berry* $2\frac{1}{2}$ in. diam., globose. *Seeds* $\frac{3}{4}$ in. diam., circular, discoid.—Only known from *Rheede's* figure, which may be incorrect as to the flowers. It appears from *Roxb. Fl. Ind. ed.* Carey & Wall. ii. 264, and from *Beddome*, that there probably exists a stout scandent species in Malabar with fruit like *S. Nux-vomica*. (See 16, *S. cinnamomifolia*.)

8. ***S. Maingayi***, *Clarke*; leaves elliptic acute 3-nerved glabrous, cymes large dense very many-fld., corolla-lobes 5 linear-oblong 5 times as long as the tube, ovary hairy upwards.

MALACCA, *Maingay* (*Kew Distrib. nn.* 1041, 1042).

Branches glabrous; tendrils 0 (in the examples). *Leaves* $4\frac{1}{4}$ by 2 in., base obtuse; petiole $\frac{1}{2}$ in. *Cymes* 4 in., divided from the base, nearly glabrous 100–300-flowered. *Calyx* glabrous, margin obscurely pubescent. *Corolla* $\frac{1}{2}$ in., throat villous, tube hardly any. *Filaments* linear; anther-cells ovate, hairy. *Style* twice as long as the ovary. *Berry* not seen.

VAR. ? *fructuosa*; bearing tendrils, berry $2\frac{1}{4}$ in. diam. globose, rind thick, seeds many $\frac{2}{3}$ by $\frac{1}{2}$ in. oblong-ellipsoid, testa silky, albumen horny, embryo small.—*Penang*; *Maingay* (*Kew Distrib. n.* 1038). This may be the fruiting state of *S. Maingayi*, or of some totally different species. The seeds closely resemble those of *S. Ignatii*. *Bergius (Benth. & Trim. Medic. Pl. t.* 179).

** *Corolla-tube longer than the calyx, not much longer than its lobes.*

9. ***S. laurina***, *Wall. Cat.* 1591; leaves lanceolate or ovate-lanceolate 3-nerved glabrous, cymes large compound fulvous-pubescent, ovary hairy upwards, berry 1 in. diam. globose 1–2-seeded. *A. DC. Prodr. ix.* 13; *Benth. in Journ. Linn. Soc. i.* 102; *Kurz For. Fl. ii.* 166. *S. ovatifolia*, *Wall. Cat.* 1592; *A. DC. l. c.*; *Benth. l. c.* 103.

CACHAR; *Keenan*. PEGU and TENASSERIM to SINGAPORE, common; *Wallich, Griffith, &c.*—DISTRIB. Burma, Malaya.

Tendrils often in pairs; branchlets glabrous. *Leaves* 5 by 2 in., lanceolate, or in *S. ovatifolia*, *Wall.* 5 by $2\frac{1}{2}$ in. and ovate-lanceolate, 3- or sub-5-nerved; petiole $\frac{1}{4}$ in. *Cymes* 2–5 in., axillary and terminal, sessile (or in *S. ovatifolia* peduncled); pedicels $0-\frac{1}{16}$ in. *Calyx* glabrous, or margin obscurely pubescent. *Corolla* $\frac{1}{2}$ in., villous within; tube rather longer than the lobes. *Anther-cells* oblong, slightly hairy. *Style* much longer than the ovary, hairy downwards.—There are no tendrils on *Wallich's* example of *S. ovatifolia*, which Mr. *Bentham* considers, though imperfect, to indicate a distinct species.

10. ***S. septemnervis***, *Clarke*; leaves elliptic acute 5–7-nerved glabrous, cymes stout large fulvous-pubescent, ovary hairy, berry 1 in. diam. globose 1-seeded.

MALACCA; *Maingay* (*Kew Distrib. n.* 1036).

Scandent, *Maingay*. *Leaves* 4 by $2\frac{1}{4}$ in.; petiole $\frac{1}{5}$ in. *Cymes* 2–5 in., sessile, very many-fld. *Calyx* puberulous. *Corolla* $\frac{1}{2}$ in., villous within; tube about as long as the lobes. *Anther-cells* oblong, hairy. *Style* longer than the ovary, hairy downwards.—Perhaps only a large-flowered variety of *S. laurina*, but the nervation of the leaves differs considerably.

11. ***S. Beddomei***, *Clarke*; leaves elliptic acute 3-nerved glabrous, cymes small fulvous-pubescent, ovary hairy, berry $\frac{1}{2}$ in. diam. globose 1–2-seeded. *S. laurina*, *Thwaites Enum.* 201. *S. colubrina*, *Wall. Cat.* 4455, second sheet only.

TRAVANCORE; *Beddome*. CEYLON; *Thwaites*.

Tendrils often in pairs; branchlets glabrous. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{2}$ in., base obtuse, rarely obscurely 5-nerved; petiole $\frac{1}{2}$ in. *Cymes* $\frac{1}{2}$ – $1\frac{1}{2}$ in., sessile; pedicels $\frac{1}{10}$ – $\frac{1}{8}$ in. *Calyx* puberulous. *Corolla* $\frac{1}{8}$ in., villous within; tube rather longer than the lobes. *Anther-cells* oblong, glabrous or nearly so. *Style* longer than the ovary, hairy downwards.—This differs from *S. laurina* in the small cymes, pedicelled flowers, and much smaller berry. It seems more closely allied to *S. colubrina*, Linn., from which it only differs by the longer corolla-tube.

VAR. *coriacea*; leaves coriaceous, petiole $\frac{1}{10}$ in. *S. coriacea*, Thwaites Enum. 425. —Ceylon; *Thwaites*.

12. **S. malaccensis**, *Benth. in Journ. Linn. Soc.* i. 101; leaves ovate acute 5-nerved glabrous, cymes small subcapitate shortly peduncled fulvous-pubescent, ovary glabrous. *S. Gautheriana*, *Pierre ms. in Herb. Kew*.

TENASSERIM OR ANDAMANS; *Helfer*. MALACCA; *Griffith*.—DISTRIB. Cambodia.

Tendrils present; branchlets puberulous. *Leaves* $3\frac{1}{2}$ by $1\frac{3}{4}$ in., base obtuse; petiole $\frac{1}{2}$ in. *Peduncles* $\frac{1}{4}$ – $\frac{3}{4}$ in.; cymes $\frac{1}{4}$ – $\frac{3}{4}$ in. diam.; pedicels hardly any. *Calyx* puberulous. *Corolla* $\frac{1}{8}$ in., villous within, tube shorter than the lobes. *Anther-cells* ovate, densely hairy. *Berry* not seen.—Easily distinguished by the perfectly glabrous ovary and style, and densely hairy anthers.

13. **S. axillaris**, *Colebr. in Trans. Linn. Soc.* xii. 356, t. 15; leaves elliptic acuminate 3-nerved glabrous, cymes small subcapitate sessile pubescent, ovary glabrous. *Wall. Cat.* 1587; *A. DC. Prodr.* ix. 13; *Benth. in Journ. Linn. Soc.* i. 101.

KHASIA MTS., alt. 3–4000 ft; *Wallich, Griffith, H. f. & T.*

Tendrils present; branchlets puberulous. *Leaves* $2\frac{1}{2}$ by 1 in., base obtuse; petiole $\frac{1}{2}$ in. *Cymes* $\frac{1}{4}$ – $\frac{3}{4}$ in.; pedicels hardly any. *Corolla* $\frac{1}{8}$ in., villous within, tube shorter than the lobes. *Anther-cells* oblong, somewhat hairy. *Berry* not seen.—Very near *S. malaccensis*; the leaves are smaller more acuminate, the cymes sessile or very nearly so, the anther-cells not acute upwards.

14. **S. pubescens**, *Clarke*; leaves ovate acute 3–5-nerved hairy beneath, cymes small axillary dense, ovary glabrous, berry $\frac{1}{2}$ in. diam. globose 1-seeded.

MALACCA; *Maingay* (*Kew Distrib.* n. 1040).

Tendrils present; branches hairy. *Leaves* 2 by 1 in., base obtuse; petiole $\frac{1}{2}$ in. *Cymes* $\frac{1}{4}$ – $\frac{3}{4}$ in. diam., sessile or nearly so, puberulous, pedicels hardly any. *Corolla* $\frac{1}{8}$ in., 5-merous, tube longer than the lobes, throat with a dense ring of hairs. *Anther-cells* subsessile below the ring of hairs, ovate, acute, apiculate, base only hairy. *Ovary* small, style hardly any. *Pericarp* crustaceous. *Seeds* $\frac{1}{4}$ in. diam., peltate, hemispheric.

15. **S. rufa**, *Clarke*; leaves elliptic acute 3–5-nerved rufous-hairy beneath, cymes dense axillary, berry $1\frac{1}{4}$ diam. globose many-seeded.

MALACCA; *Maingay* (*Kew Distrib.* n. 1034).

Branches patently rufous hairy, without tendrils (in the specimen). *Leaves* 4 by 2 in., base obtuse or subcordate, glabrescent above, harsh, scabrous; petiole $\frac{1}{2}$ in., rufous-hairy. *Cymes* $\frac{3}{4}$ in. diam., axillary, sessile, pubescent. *Flowers* not seen. *Seeds* compressed.

VAR. *Candollei*; leaves nearly glabrous beneath 3-nerved. *S. acuminata*, *Wall. Cat.* 1593 partly; *A. DC. Prodr.* ix. 14.—Amherst, *Wallich*.

*** *Corolla-tube linear, 5–10 times longer than the calyx.*

16. **S. cinnamomifolia**, *Thwaites Enum.* 201; leaves elliptic acute 3–5-nerved glabrous, cymes terminal short-peduncled many-fld., berry $1\frac{1}{2}$ in. diam.

globose many-seeded. *S. colubrina*, Wall. Cat. 1589, and in Roxb. *Fl. Ind. ed. Carey & Wall.* ii. 264; *Wight Ic.* t. 434, not of Linn.

CEYLON; Hantani district, alt. 3000 ft., *Thwaites*.

Tendrils present; branchlets glabrous or nearly so. Leaves 4 by 2 in., base obtuse; petiole $\frac{1}{2}$ in. Peduncles $\frac{1}{2}$ –2 in.; cymes 1–2 in. diam., puberulous; pedicels hardly any. Corolla-tube $\frac{1}{2}$ in., lobes less than $\frac{1}{2}$ in. glabrous, a few hairs lower down the tube. Anther-cells oblong, glabrous. Ovary glabrous; style very long, glabrous; stigma large, capitate.—Altogether resembles *S. Nux-vomica*, but is scandent with tendrils. Though Rheede (*Hort. Mal.* viii. t. 24) represents the peduncles lateral and the buds subglobose, it may be suspected that Wallich and Wight were right in identifying that picture with their *S. colubrina*. If so *S. Rheedei* (n. 7 above) becomes a synonym of the present species.

17. *S. Wallichiana*, Benth. in *Journ. Linn. Soc.* i. 102; leaves oblong suddenly caudate 3-nerved shining, cymes terminal short-peduncled many-flowered. *S. lucida*, Wall. Cat. 1590 partly.

SILHET; Pundua, Wallich. ASSAM; Kufcoo Forest, Griffith (Kew Distrib. n. 3726); Mikir Hills, Simons.

Tendrils often in pairs. Leaves $5\frac{1}{2}$ by $1\frac{3}{4}$ in., parallel-sided, base broadly cuneate, 3 nerves very strong, 2 additional sometimes close to the margin very slender; secondary nerves very prominent, numerous, subparallel, nearly at right angles to the primary; petiole $\frac{1}{2}$ in. Cymes and flowers as in *S. Nux-vomica* or *S. cinnamomifolia*. Corolla very villous in the throat. Anther-cells broadly oblong, obtuse. Style exsert stigma small. Berry unknown.—Wallich's n. 1590 includes this and *S. Nux-vomica*, whence Steudel's name *S. Wallichiana* applies to both; A. DC.'s *S. Wallichiana* (Prodr. ix. 13), from the ovate leaves and naked corolla-throat, seems described from one of Wallich's examples of *S. lucida* which have been since referred by Benthams to *S. Nux-vomica*. The broader shorter leaved specimens of this species, mentioned by Benthams, are those collected by H. f. & T. at the base of the Khasia Hills, without flower or fruit, and in which the lower leaves are ovate; they look like first year's shoots.

18. *S. Nux-vomica*, Linn.; Roxb. Cor. Pl. i. 8, t. 4, and *Fl. Ind. ed. Carey & Wall.* ii. 261; leaves ovate 5-nerved glabrous, cymes terminal short-peduncled many-fl., berry $1\frac{1}{2}$ in. diam. globose many-seeded. Gaertn. Fruct. ii. t. 179, fig. 7; Wall. Cat. 1586; A. DC. Prodr. ix. 15; Benth. in *Journ. Linn. Soc.* i. 103; Griff. Ic. Pl. Ind. Or. t. 411; Dalz. & Gibs. Bomb. Fl. 155; Bedd. Fl. Sylv. t. 243; Brand. For. Fl. 317; Benth. & Trim. Med. Pl. t. 178 (syn. *S. colubrina*, Wall. & Wight, to be excluded from all authors); Kurz For. Fl. ii. 166. *S. lucida*, Wall. Cat. 1590, partly.—Rheede Hort. Mal. i. t. 37.

Throughout tropical INDIA, alt. 0–4000 ft.; rare in Bengal, common in Tenasserim and Madras.

A tree, attaining 40 ft. Leaves $3\frac{1}{2}$ by 2 in., base obtuse; petiole $\frac{1}{2}$ in. Peduncles $\frac{1}{2}$ –2 in.; cymes 1–2 in. diam., puberulous; pedicels hardly any. Corolla-tube $\frac{1}{4}$ – $\frac{1}{2}$ in.; lobes less than $\frac{1}{2}$ in. glabrous, a few hairs lower down the tube. Anther-cells oblong, glabrous. Style long, glabrous, stigma small capitate. Seeds $\frac{1}{2}$ in. diam., discoid.—Benthams also reduces to the present species *S. ligustrina* (Blume Rumph. i. 68, t. 25), which does not differ by any tangible character, but has smaller, somewhat different-looking leaves.

19. *S. potatorum*, Linn. f. Suppl. 148; leaves elliptic subsessile glabrous or nearly so, cymes axillary nearly sessile, berry $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. 1–2-seeded. Roxb. Cor. Pl. i. 9, t. 5, and *Fl. Ind. ed. Carey & Wall.* ii. 263; Wall. Cat. 1585; A. DC. Prodr. ix. 15; Wight Ill. ii. t. 156; Benth. in *Journ. Linn. Soc.* i. 103; Dalz. & Gibs. Bomb. Fl. 156; Bedd. For. Man. 163; Brand. For. Fl. 317; Kurz For. Fl. ii. 167. S. Tettankotta, Retz. Obs. ii. 12; Gaertn. Fruct. i. 477, t. 179.

DECCAN PENINSULA, extending north-west to the Sone river. PROMB; Kurz. CEYLON frequent.

A tree, attaining 40 ft. Leaves $2\frac{1}{2}$ by 1 in., acute at both ends, hardly acuminate, 3-nerved from the base or more often the lateral nerves springing much higher, or (as depicted by Roxburgh) sub-penninerved; petiole $\frac{1}{10}$ in. Peduncles $0-\frac{1}{2}$ in.; cymes 1 in. diam., nearly glabrous; pedicels hardly any. Corolla-tube $\frac{1}{2}-\frac{1}{3}$ in., hardly twice as long as broad, hairy within, nearly glabrous in the throat; lobes $\frac{1}{12}-\frac{1}{10}$ in. Anther-cells oblong, glabrous. Style long, glabrous; stigma small, capitate. Seeds $\frac{1}{4}-\frac{1}{3}$ in. diam., hemispheric, subpelate, hardly discoid—*The clearing-nut*.

7. GAERTNERA, Lamk.

Trees or shrubs. Leaves opposite, rarely ternate, entire, coriaceous, feather-nerved; stipules connate into a cylindric sheath. Cymes terminal (axillary in *G. obesa*) many- (or 3-1-) flowered. Calyx small, funnel-shaped or campanulate. Corolla-tube longer than the calyx or elongate; lobes 5-4, valvate in bud. Stamens upon the corolla-tube; filaments short. Ovary 2-celled; style short or long, stigmas 2 linear or clavate; ovule 1 in each cell, erect. Berry didymous, subglobose, crustaceous. Seeds often compressed, albumen horny or fleshy; embryo small.—SPECIES 25; tropical Asia and Africa.

So closely resembling *Psychotria* (except for the inferior ovary) that it has been confounded therewith, and it has been proposed to append the genus to *Psychotria* as an aberrant section. *Psychotria*, Wall. Cat. 8341, without habitat, is a *Gaertnera*, but probably non-Indian.

1. *G. Koenigii*, Wight Ic. t. 1318; leaves elliptic or obovate-oblong shortly acuminate glabrous, panicles terminal trichotomous, calyx wide-funnel-shaped sub-truncate, corolla 5-merous tube about twice as long as the calyx, stigmas thick. Benth. in Journ. Linn. Soc. i. 112; Thwaites Enum. 202; Bedd. For. Man. 164, and Anal. Gen. t. 21, fig. 3. *G. thyrsoiflora*, Blume Mus. Bot. i. 174; Benth. l. c. 112. *G. acuminata*, Benth. l. c. *G. Junghuhnii*, Miq. Fl. Ind. Bat. ii. 383. *Sykesia Koenigii* and *thyrsoiflora*, Arn. Pug. Pl. Ind. Or. 35; DC. Prodr. ix. 35. *Psychotria vaginans*, DC. Prodr. iv. 520; W. & A. Prodr. 434. —*Psychotria* sp., Wall. Cat. 8342, 8388.

SINGAPORE; Wallich. CEYLON; alt. 0-3000 ft., very abundant, Thwaites, &c.—DISTRIB. Malaya.

A large shrub. Leaves 6 by $2\frac{1}{2}$ in., base narrowed; petiole $\frac{1}{4}-\frac{1}{2}$ in. Panicles 2-6 in., pubescent or nearly glabrous, sometimes with leafy bracts below; pedicels $0-\frac{1}{2}$ in. Calyx $\frac{1}{10}$ in. long and broad. Corolla-tube $\frac{1}{2}$ in., throat very villous. Anther-cells $\frac{1}{10}-\frac{1}{8}$ in., slightly exserted. Berry $\frac{1}{4}-\frac{1}{2}$ in., obovoid or subglobose.—The flowers are, as stated by Beddome, somewhat dimorphic.

VAR. *oxyphylla*; leaves smaller lanceolate acuminate, style short, stigmas small linear. *Psychotria oxyphylla*, Wall. Cat. 8374; Benth. in Journ. Linn. Soc. i. 112. —Singapore, Wallich. United with *G. Koenigii* by Thwaites; the differences in the stigma are probably sexual.

VAR. *divaricata*; panicle lax, pedicels divaricate, flowers rather smaller. *G. divaricata* and *Psittidia divaricata*, Thwaites Enum. 149 and 420.—Ceylon; Thwaites. United with *G. Koenigii* by Beddome, and it does not seem separable from some of the Ceylon *G. thyrsoiflora* which has flowers smaller than usual in lax panicles.

2. *G. viminea*, Hook. f. ms.; leaves lanceolate caudate-acuminate glabrous, panicles terminal trichotomous, calyx very small substellate, corolla 4-merous tube 2-3 times as long as the calyx, stigmas linear. *Psychotria viminea*, Wall. Cat. 8354.

SINGAPORE; Wallich.

Branchlets terete, smooth. Leaves $3\frac{1}{2}$ by $\frac{3}{4}$ in., base cuneate; petiole $\frac{1}{2}-\frac{1}{4}$ in.

Panicles 1-4 in., nearly glabrous; lowest bracts sometimes $\frac{1}{2}$ in., linear; pedicels hardly any. *Calyx* scarcely $\frac{1}{16}$ in. long and broad. *Corolla-tube* $\frac{1}{2}$ in., throat villous. *Berry* $\frac{1}{2}$ in., obovoid-globose.

3. *G. rosea*, *Benth. in. Journ. Linn. Soc. i.* 111; glabrous, leaves elliptic acuminate, flowers 1-3-nate, terminal subsessile, corolla 5-merous tube 3-4 times as long as the calyx glabrous in the throat. *Thwaites Enum.* 201.

CEYLON; *Walker*; ascending to 2000 ft.; *Thwaites*.

A shrub, 8-10 ft. *Leaves* $2\frac{1}{2}$ by 1 in.; base cuneate; petiole $\frac{1}{2}$ in.; stipular sheath crowned by two linear teeth. *Calyx* $\frac{1}{2}$ in., campanulate, subtruncate. *Corolla* rose-purple, tube $\frac{1}{2}$ in., hairy in the middle; lobes $\frac{1}{2}$ in., oblong. *Stamens* on the middle of the tube; anther-cells oblong, obtuse, included. *Berry* $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., subspherical, "pale blue," *Thwaites*.

4. *G. Walkeri*, *Wight Ill. ii.* 172, t. 156, b.; glabrous, leaves elliptic acuminate, panicles terminal trichotomous few-fld., calyx widely funnel-shaped, corolla 5-merous tube 2-3 times as long as the calyx glabrous in the throat, style very long, *Benth. in. Journ. Linn. Soc. i.* 111, partly; *Thwaites Enum.* 202; *Bedd. For. Man.* 164. *Sykesia Walkeri*, *Arn. Pug. Pl. Ind. Or.* 36; *A. DC. Prodr.* ix. 35.

CEYLON, alt. 3-6000 ft.; *Walker, &c.*

A shrub, 8-10 ft. *Leaves* $2\frac{1}{2}$ by 1 in., base cuneate; petiole $\frac{1}{4}$ in. *Cymes* 3-12-fld.; bracts $\frac{1}{2}$ in. lanceolate; pedicels $0-\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in. long and broad; teeth small, triangular. *Corolla-tube* $\frac{1}{2}$ in., funnel-shaped upwards. *Stamens* inserted about the middle of the corolla-tube amidst hair. *Berry* spherical, "blue," *Thwaites*.—Resembles the smaller-leaved forms of *G. Koenigii forma thyrsiflora*, and does not much differ but by the stamens (with the ring of hairs) being situated lower down the corolla-tube, a point not properly shown in Wight's figure.

VAR. Gardneri; leaves $1\frac{3}{4}$ by $\frac{1}{2}$ in. linear-lanceolate, cymes 3-1-flowered obscurely pubescent, flowers rather smaller. *G. Gardneri*, *Thwaites Enum.* 202.—Ceylon.

5. *G. ternifolia*, *Thwaites Enum.* 212; leaves small linear often ternate, flowers solitary terminal, calyx-teeth lanceolate, berry $\frac{1}{2}$ in. wide didymous subglobose. *G. Walkeri*, var. *angustifolia*, *Benth. in. Journ. Linn. Soc. i.* 111, partly.

CEYLON; near Adam's Peak, alt. 4-5000 ft.; *Thwaites*.

Branchlets minutely pubescent. *Leaves* $\frac{3}{4}$ by $\frac{1}{10}$ in. *Flowers* as *G. Walkeri* var. *Gardneri*.—*Thwaites* calls this a very beautiful and distinct species, but sends a specimen stated to be "an undoubted hybrid between *G. Gardneri* and *G. ternifolia*;" some of the leaves on his specimens of *G. Gardneri* (C. P. n. 363) are ternately whorled: Mr. Benthham considers all to be merely high-level forms of *G. Walkeri*.

6. *G. obesa*, *Hook. f. ms.*; leaves very large obovate-lanceolate glabrous, panicles dense axillary, calyx widely funnel-shaped, corolla-tube exceeding the calyx, lobes 5.—*Psychotria obesa*, *Wall. Cat.* 8328.

SINGAPORE; *Wallich, Walker, Maingay*.

Leaves 17 by $5\frac{1}{2}$ in., base tapering; petiole $1\frac{1}{2}$ in.; stipules $1\frac{1}{2}$ by $\frac{3}{4}$ in., ovate, acute, connate for half their length. *Panicles* 2-3 in., dense, obscurely pubescent, from the upper axils forming a quasi-thyrse. *Calyx* $\frac{1}{2}$ - $\frac{3}{4}$ in. long and broad. *Corolla-tube* $\frac{1}{2}$ - $\frac{3}{4}$ in., lobes $\frac{1}{2}$ in. *Stamens* near the base of the tube; anther-cells lanceolate-linear below the ring of hairs on the corolla-tube. *Style* short, linear, glabrous; stigmas linear, *Berry* not seen.

7. *G. grisea*, *Hook. f. ms.*; leaves large oblong acute hairy beneath, panicles terminal dense, corolla-tube grey-pubescent longer than the subtruncate calyx. *Psychotria*, *Wall. Cat.* 8389.

SINGAPORE; Wallich.

Branches softly hairy. Leaves $9\frac{1}{2}$ by $2\frac{1}{4}$ in., base cuneate or rounded; petiole $\frac{1}{2}$ in.; stipular sheath silky, $\frac{3}{8}$ in. long, crowned by 2-4 teeth. Panicles 1-3 in. diam. trichotomous, grey-pubescent; lower bracts sometimes leaflike; flowers clustered. Calyx $\frac{1}{2}$ in. long and broad, campanulate, grey-pubescent. Corolla-tube $\frac{1}{2}$ in., lobes $\frac{1}{2}$ - $\frac{3}{4}$ in. Anther-cells narrow oblong, immersed in the dense hair in the upper part of the corolla-tube which hardly extends to the throat.—This and the preceding species are allied to *G. longifolia*, Bojer, and other large Mascarene species.

8. GARDNERIA, Wall.

Large, scandent, glabrous shrubs. Leaves opposite, entire; petioles connected by a stipular line. Peduncles axillary, 1- ∞ -fld. Calyx small, deeply 4-5-lobed. Corolla subrotate; lobes 4-5, thick, valvate in bud. Stamens 4-5, on the corolla-tube; anthers subsessile, cells ovate, connivent or subconnate, erect, exerted. Ovary 2-celled; style cylindric, stigma shortly 2-lobed; ovules 1 in each cell, on the dissepiment. Berry globose, 2-celled. Seed compressed parallel to the septum, albumen fleshy; embryo small.—Species 2-3, Indian and Japanese.

1. *G. ovata*, Wall. Cat. 816, and As. Pl. Rar. iii. 17, t. 231, and in Roxb. Fl. Ind. ed. Carey & Wall. i. 400; leaves elliptic acute, cymes trichotomous, corolla-lobes obtuse, anthers connate. DC. Prodr. ix. 20; Benth. in Journ. Linn. Soc. i. 109. *G. Wallichii*, Wight; Wall. Pl. As. Rar. iii. 49, t. 281; Wight Ic. t. 1313.

KHASIA MTS., Wallich, H. f. & T. NILGHERRY MTS., Wight, &c.

Leaves 3 by $1\frac{1}{2}$ in., base obtuse; petiole $\frac{1}{4}$ in. Cymes usually 1-2 in., 5-1-fld.; in the Nilgherry examples sometimes peduncled, and 12-fld.; in a Silhet one compound, paniced, $5-6\frac{1}{2}$ in., and 90-flowered. Calyx $\frac{1}{2}$ in., lobes rounded. Corolla-tube hardly longer than the calyx; lobes $\frac{1}{2}$ - $\frac{3}{4}$ in., patent, tomentose villous or subglabrate within. Anthers in a cylinder $\frac{1}{2}$ in. long. Berry $\frac{1}{2}$ in. diam., scarlet.—A single specimen in Herb. Hook. is marked "Ceylon, Mrs. Walker," but I suspect some error.

2. *G. angustifolia*, Wall. Cat. 817, and in Roxb. Fl. Ind. ed. Carey & Wall. ii. 318; leaves lanceolate acuminate, peduncles 1 (rarely 2)-fld., corolla-lobes acute, anthers free. DC. Prodr. ix. 20; Benth. in Journ. Linn. Soc. i. 109.

TEMPERATE HIMALAYA, alt. 5-7000 ft.; from Kumaon to Bhotan; Wallich, &c.

Leaves $4\frac{1}{2}$ by 1 in., base acute or rounded; petiole $\frac{1}{4}$ in. Peduncles nodding in flower. Corolla-lobes densely villous or nearly glabrous within. Berry $\frac{1}{2}$ in. diam., scarlet.—Closely allied to *G. ovata*, which Bentham reduces to the present species, with *G. nutans*, Sieb. & Zucc. from Japan, which has elliptic acute leaves and rather larger flowers; and may be a geographic form of *G. angustifolia*.

ORDER XCVII. GENTIANACEÆ. (By C. B. Clarke)

Herbs, rarely minutely hairy. Leaves opposite, rarely alternate, entire, or alternate and 3-foliate in *Menyanthes*. Flowers cymose capitate or umbelled, rarely solitary, rarely bracteate, regular; irregular in *Canscora* and *Hoppea*. Calyx inferior, lobes 5-4 imbricate in bud. Corolla funnel-shaped or rotate, lobes twisted to the right, in *Menyanthes* induplicate-valvate. Stamens on the corolla-tube, as many as its lobes and alternate with them, or unequal or suppressed in *Canscora* and *Hoppea*; filaments linear, sometimes dilated

below; anthers oblong. *Disc* of 5 glands at the base of the ovary or 0. *Ovary* superior, 1-celled, or rarely only the placentæ intruded and meeting; style short or linear, simple, stigmas 2 small; ovules numerous. *Capsule* membranous, rarely fleshy and berried. *Seeds* numerous, small, sometimes winged; albumen copious.—Species 520, throughout the globe, more abundant in mountainous regions.

TRIBE I. **Exacææ**. *Leaves* opposite. *Corolla-lobes* twisted to the right. *Ovary* completely 2-celled. *Style* filiform.

Leafless parasites, anthers dehiscing by terminal pores 1. COTYLANTHERA.
Corolla blue, purplish or white 2. EXACUM.
Corolla yellow, anthers dehiscing by longitudinal slits 3. SEBÆA.

TRIBE II. **Chironiææ**. *Leaves* opposite. *Corolla-lobes* twisted to the right. *Ovary* 1-celled. *Style* filiform.

Flowers regular in axillary clusters 5. ENICOSTEMA.
Flowers regular panicle or terminal subcapitate 6. ERYTHRÆA.
Flower irregular, stigma scarcely divided, minute herbs 4. HOPPEA.
Flower irregular, stigmas 2 7. CANSORA.

TRIBE III. **Swertiææ**. *Leaves* opposite, rarely alternate. *Corolla-lobes* twisted or imbricate. *Ovary* 1-celled. *Style* short, rarely elongate.

* *Corolla without pits or depressions near the base of its lobes* (viscid spots or hairy glands sometimes present).

Twiners, corolla tubular-campanulate 8. CRAWFURDIA.
Corolla tubular-campanulate, stamens attached on the tube 9. GENTIANA.
Corolla tubular-campanulate, stamens attached between its lobes 10. JAESCHKEA.
Corolla rotate, stamens attached at its base 11. PLEUROGYNE.

** *Corolla with 1 or 2 depressions pits or spurs near the base of each of its lobes*.

Depressions or pits of the corolla shallow 12. SWERTIA.
Pits of the corolla prolonged into spurs 13. HALENIA.

TRIBE IV. **Menyanthææ**. Aquatic herbs, leaves radical or alternate. *Corolla-lobes* induplicate-valvate in the bud.

Leaves 3-foliolate 14. MENYANTHES.
Leaves simple, cauline deeply cordate 15. LIMNANTHEMUM.

1. COTYLANTHERA, Blume.

Parasitic, small, glabrous herbs. *Leaves* scale-like, opposite. *Flowers* solitary or few, terminal. *Calyx* deeply 4-lobed. *Corolla* rotate; lobes 4, oblong. *Stamens* 4, on the corolla-tube, filaments linear; anther-cells oblong, slightly curved, dehiscing by 1-2 terminal pores. *Ovary* completely 2-celled; placentæ large; style filiform, stigma small capitate. *Capsule* globose, septically 2-valved. *Seeds* numerous.—Species 3, in the Himalaya, Java, and Ladrone Islands.

1. **C. paucisquama**, Clarke in *Herb. Calcutta*; pairs of scales on the stem 1-2 only.

Sikkim; alt. 6000 ft., King.

Stem 2-4 in., white, fleshy. *Leaves* $\frac{1}{2}$ in., elliptic, white. *Calyx-lobes* $\frac{1}{2}$ in., oblong, white. *Corolla-lobes* $\frac{1}{2}$ in., linear-lanceolate, dark blue. *Filaments* $\frac{1}{2}$ - $\frac{3}{4}$ in. *Anthers*

with two pores, *King. Style* $\frac{1}{4}$ in. *Fruit* not seen.—*Cotylanthera tenuis*, *Blume Bijl.* 708, and *Eophylon Lobbii*, *A. Gray in Journ. Linn. Soc.* xi. 23, differ chiefly by having numerous pairs of leaves on the stem; but all may be one species.

2. *EXACUM*, *Linn.*

Herbs, usually branched. *Leaves* ovate or lanceolate, usually 3-5-nerved. *Cymes* terminal and axillary. *Calyx* deeply 4-5-lobed; lobes keeled, winged, or flat. *Corolla* rotate; tube short, globose; lobes 4-5, ovate or oblong, blue purple-blue or white. *Stamens* 5-4, on the corolla-throat, filaments short; anthers large, oblong, apical pores at length extending usually to the base. *Ovary* more or less completely 2-celled; style long, stigma small subcapitate; placentæ large. *Capsule* globose, septicidally 2-valved. *Seeds* very many, minute, subcuboid, testa granular.—Species 20, mostly Indian; a few Malayan, Chinese, and African.

* Stem 4-angular (except *E. teres*); corolla large, lobes 4, blue.

1. *E. teres*, *Wall. Cat.* 4354, and in *Roxb. Fl. Ind. ed. Carey & Wall.* i. 414; stem terete, leaves lanceolate 3-nerved, calyx subquadrangular hardly winged. *Griseb. Gentian.* 108, and in *DC. Prodr.* ix. 44; *Clarke in Journ. Linn. Soc.* xiv. 424.—*Exacum* sp., *Griff. Itin. Notes*, 71 n. 1098.

TROPICAL HIMALAYA, alt. 0-5000 ft.; from Nepal to Bhotan, frequent. ASSAM and KHASIA Mts., alt. 0-4000 ft., frequent.

Stem 1-4 ft., hardly branched, sometimes with 2-4 obscure lines. *Leaves* $3\frac{1}{2}$ by $\frac{1}{2}$ in., sessile or the lower petioled, acute. *Cymes* from the upper axils forming a lax long panicle. *Calyx-lobes* $\frac{1}{4}$ in. ovate, acute, with thickened green keels. *Corolla-lobes* $\frac{1}{2}$ in., obovate-oblong, acute. *Anthers* $\frac{1}{2}$ in. *Style* $\frac{1}{2}$ in. *Capsule* $\frac{1}{2}$ in., ovoid. —Reduced states occur at the higher levels.

2. *E. tetragonum*, *Roxb. Hort. Beng.* 10, and in *Fl. Ind. ed. Carey & Wall.* i. 413; stem quadrangular, leaves sessile broad-lanceolate 5-nerved, calyx-lobes ovate acuminate keeled scarcely winged, anthers $\frac{1}{4}$ in. straight. *Wall. Cat.* 4356, and *Pl. As. Rar.* iii. 47, t. 276; *Don Prodr.* 128, and in *Trans. Linn. Soc.* xvii. 531; *Arn. in Ann. Sc. Nat.* 2, xi. 175; *Griseb. Gentian.* 107, and in *DC. Prodr.* ix. 44; *Benth. Fl. Hongk.* 233; *Clarke in Journ. Linn. Soc.* xiv. 424. *E. Hamiltonii*, *G. Don Gen. Syst.* iv. 213. *E. bellum*, *Hance in Hook. Lond. Journ. Bot.* vii. 472.

N. INDIA, ascending to 5000 ft., common from Kumaon to Central India, Bhotan, and the Khasia Mts.—DISTRIB. China.

Stem 1-4 ft., little branched below. *Leaves* 5 by $1\frac{1}{2}$ in., acute, or $1\frac{1}{2}$ by $\frac{3}{4}$ in., subobtus. *Panicle* large and compound, or depauperated few-fl. *Buds* nearly straight, and corolla subsymmetric. *Calyx-lobes* $\frac{1}{2}$ - $\frac{3}{4}$ in., sometimes sub-3-winged. *Corolla-lobes* $\frac{3}{4}$ in., broadly elliptic, acute, full azure blue (not violet-purple as depicted by Wallich, nor golden yellow as stated by Don). *Style* $\frac{1}{2}$ in. *Capsule* $\frac{1}{2}$ in., subglobose.

VAR. *stylosa*; leaves narrower, corolla smaller, anthers rather longer more attenuate. *E. stylosa*, *Wall. Cat.* 4355; *Griseb. in DC. Prodr.* ix. 46. *E. chironioides*, *Griseb. Gentian.* 109, and in *DC. Prodr.* ix. 45. *E. Horsfieldianum*, *Miq. Fl. Ind. Bat.* ii. 556. *E. sulcatum*, *Clarke in Journ. Linn. Soc.* xiv. 425, not of *Roxb.*—BURMA; *Prome, Wallich.* TENASSERIM; *Mergui, Griffith* (*Kew Distrib.* n. 6809); *Pegu, McClelland*; *Malacca, Lobb.*—DISTRIB. Malaya to Borneo and the Philippines.—A few flowers on the Pegu example are 5-merous.

3. *E. Perrottetii*, *Griseb. in DC. Prodr.* ix. 45; stem quadrangular, leaves sessile 5-7-nerved, calyx-lobes ovate-lanceolate keeled, anthers $\frac{1}{2}$ - $\frac{1}{2}$ in. straight. *Wight Ic.* t. 1322.

W. DECCAN PENINSULA; from the Concan southwards.

Stem 2-5 ft., subsimple below. *Leaves* 2-5 in., from oblong to subcordate-ovate. *Cymes* dense, forming a narrow interrupted panicle. *Calyx-lobes* $\frac{3}{4}$ -1 in., narrowly (or not) winged. *Corolla-lobes* $1\frac{1}{2}$ in., ovate, acute. *Anthers* $\frac{1}{10}$ - $\frac{1}{8}$ in. wide at the base. *Capsule* $\frac{1}{2}$ in., ovoid.—The finest species of the genus: in its straight buds and subsymmetric flowers it resembles *E. tetragonum* on a large scale.

4. ***E. bicolor***, *Roxb. Catal. Pl.* (1813), and *Fl. Ind. ed. Carey & Wall.* i. 413; stem quadrangular, leaves sessile ovate-lanceolate 5-nerved, calyx-lobes ovate suddenly caudate, keel winged; anthers $\frac{1}{2}$ - $\frac{1}{2}$ in. curved. *Wight Ic. t.* 1321; *Griseb. in DC. Prodr.* ix. 45; *Dalz. & Gibs. Bomb. Fl.* 156 (syn. excl.); *Clarke in Journ. Linn. Soc.* xiv. 425. *E. grandiflorum*, *Wall. Cat.* 4358; *Griseb. in DC. Prodr.* ix. 47. *E. Metzianum*, *Herb. Hohenacker*, n. 857. *E. sulcatum*, *Herb. Wight*, not of *Roxb.* *E. tetragonum*, β . *tricolor*, *Bot. Mag. t.* 4340.

DECCAN PENINSULA, frequent from the Concan and Orissa to Courtallum.

Considered by Mr. Bentham only a form of *E. tetragonum*, but differs from that (and the larger *E. Perrottetii*) in the unsymmetric flowers, the buds distinctly curved at the tips, and the anther-cells curved and tapering upwards. The calyx-lobes do not taper gradually as in *E. Perrottetii*. The flowers are larger than those of *E. tetragonum*, smaller than those of *E. Perrottetii*. The corolla-segments are (very generally) white in the lower half, full azure-blue in the upper.

5. ***E. axillare***, *Thwaites Enum.* 203; stem quadrangular, leaves ovate-lanceolate 3-nerved thin succulent, flowers mostly solitary on axillary peduncles, calyx-lobes with a dorsal cordate-lanceolate reticulated wing, anthers $\frac{1}{2}$ in. straight shortly suddenly beaked.

CEYLON; in the Pasdoon Corle, *Walker, Thwaites*.

Stem 6-18 in., procumbent and branched or erect and simple. *Leaves* $2\frac{1}{2}$ by 1 in, base tapering, lower mostly long-petioled, very thin, dried reticulately nerved. *Peduncles* $\frac{1}{4}$ - $\frac{3}{4}$ in., numerous, often from the lower axils; upper imperfectly corymbose. *Calyx-lobes* $\frac{1}{2}$ in.; wing (in young fruit) $\frac{1}{2}$ in. broad. *Corolla-lobe* $\frac{1}{2}$ in., lanceolate, acute, cyaneous (*Thwaites*). *Capsule* $\frac{1}{3}$ by $\frac{1}{2}$ in.

VAR. pentamera; corolla-lobes 5 broader shorter obtuser than in *E. axillare* type. —Ceylon, *Thwaites*.—A dubious plant, perhaps more nearly allied to *E. Walkeri*, but in the thin succulent leaves and cordate calyx-wings altogether resembling *E. axillare*.

** Corolla large or medium-sized, lobes 5 (all from the Deccan Peninsula or Ceylon).

6. ***E. Walkeri***, *Arn. in Ann. Sc. Nat.* 2, xi. 176; leaves ovate or lanceolate acute 3-nerved, peduncles axillary solitary and terminal subcorymbose, calyx-lobes with an ovate-lanceolate dorsal wing, corolla-lobes $\frac{1}{2}$ in. broadly elliptic, anthers $\frac{1}{5}$ - $\frac{1}{6}$ in. subtruncate. *Griseb. Gentian.* 110, and in *DC. Prodr.* ix. 45; *Wight Ill. t.* 157, b. fig. 1. *E. ovale*, *Griseb. Gentian.* 111, and in *DC. Prodr.* ix. 46; *Clarke in Journ. Linn. Soc.* xi. 426. *E. foliosum*, *Griseb. in DC. Prodr.* ix. 45. *E. zeylanicum*, var. β only, *Thwaites Enum.* 203.

CEYLON; *Walker, &c.*; central province, alt. 5000 ft., *Thwaites* (C.P. n. 38).

Stems 1-3 ft., suberect, often with long branches from near the base, quadrangular or obscurely 4-lineolate. *Leaves* (in the original *E. ovale*) 1 by $\frac{2}{3}$ in. ovate, acute, base rounded, subsessile (in *Thwaites E. zeylanicum*, var. β), $2\frac{1}{2}$ by $\frac{2}{3}$ in., lanceolate, acuminate at both ends. *Calyx-lobes* $\frac{1}{2}$ in., base of wing narrowed or rounded, rarely cordate. *Corolla-lobes* acute, white or pale blue. *Capsule* $\frac{1}{4}$ - $\frac{1}{2}$ by $\frac{1}{2}$ in.—*E. ovale* of *Griseb.* has been reduced by *Thwaites* to *E. macranthum*, but the corolla-lobes are described by *Grisebach* as 8 mill. long, and it was doubtless = *E. Walkeri*, as is *E. ovale* of *Wight's* and *Gardner's Herbarium*. In this species 1-flowered peduncles from the lower axils are frequent.

7. ***E. atropurpureum***, *Bedd. Ic. Pl. Ind. Or.* t. 119; leaves subsessile round-ovate shortly acute 5-nerved, flowers 5-1 terminal, calyx winged, corolla-lobes $\frac{3}{4}$ in., anthers $\frac{1}{4}$ in. *E. Beddomei*, *Clarke in Journ. Linn. Soc.* xiv. 427.

DECCAN PENINSULA; Quilon, *Gen. Cullen*; Pulney Mts., *Beddome*.

Stems erect, terete. Leaves $1\frac{1}{2}$ by 1 in., coriaceous. Peduncles $\frac{1}{2}$ in., solitary from the penultimate axils. Calyx-lobes $\frac{1}{2}$ in. Corolla-lobes obovate-oblong, acute, deep blue. Capsule oblong (*Beddome*).

VAR. *anamallayanum*, *Bedd. Ic. Pl. Ind. Or.* t. 154; leaves larger ovate or oblong acute or obtuse margined, flowers corymbose.—Anaimallays and Pulneys, alt. 6-7000 ft., *Beddome*.

8. ***E. courtallense***, *Arn. in Ann. Sc. Nat.* 2, xi. 176; stem quadrangular much branched, leaves lanceolate 3-1 nerved succulent sessile, corymbs terminal few-fl., corolla-lobes $\frac{1}{2}$ - $\frac{1}{2}$ in., anthers $\frac{1}{5}$ in. shortly attenuate. *Griseb. in DC. Prodr.* ix. 47; *Wight Ic.* t. 1323.

S. DECCAN PENINSULA; Courtallum, *Wight*.

Stem often almost woody below, 3-8 in., densely ramous, or 14 in. with fewer longer branches. Leaves $1\frac{3}{4}$ by $\frac{1}{2}$ in., narrowed below, nerves often obscure. Peduncles 0- $\frac{3}{4}$ in., often 1-flowered in the ramous form, corymbose in the less divided. Calyx-lobes $\frac{1}{2}$ in., wing oblong or lanceolate. Corolla-lobes obovate-oblong acute, blue. Capsule $\frac{1}{2}$ by $\frac{1}{2}$ in., ovoid.

VAR. *travancorica*; peduncles $\frac{1}{2}$ - $1\frac{1}{2}$ in. solitary, flowers and capsule rather larger. *E. travancorica*, *Bedd. Ic. Pl. Ind. Or.* t. 118.—Travancore, alt. 5000 ft., *Beddome*.—The examples are only 2-7-fl. and look like alpine forms of *E. courtallense*, but *Beddome* says that *E. travancoricum* is sometimes 50-fl.

9. ***E. Wightianum***, *Arn. in Ann. Sc. Nat.* 2, xi. 176; leaves elliptic-lanceolate 3-5-nerved, calyx winged, corolla-lobes $\frac{3}{4}$ in., anthers $\frac{1}{5}$ - $\frac{1}{4}$ in. scarcely attenuated upwards. *Griseb. in DC. Prodr.* ix. 45; *Wight Ic.* t. 840. *E. zeylanicum*, *Wall. Cat.* 4357, letter a. *E. foliosum*, *Griseb. l. c.* 45.

NILGHERY MTS., alt. 4-7000 ft., frequent. TRAVANCORE, *Beddome*.

Only differs from *E. zeylanicum* in the much shorter anthers, which have a minute papilla at the summit of the connective behind.

10. ***E. zeylanicum***, *Roxb. Catal. Pl.* (1813), and *Fl. Ind. ed. Carey & Wall.* i. 414; leaves elliptic-lanceolate 3-5-nerved, calyx winged, corolla-lobes $\frac{3}{4}$ in., anthers $\frac{1}{2}$ - $\frac{1}{2}$ in. attenuated upwards. *Wall. Cat.* 4357, letter b; *Arn. in Ann. Sc. Nat.* 2, xi. 176; *Griseb. Gentian.* 110, and in *DC. Prodr.* ix. 45; *Thwaites Enum.* 203 (excl. var. β); *Bot. Mag.* t. 4423. *Chironia trinervis*, *Linn. Sp. Pl.* 272; *Moon. Cat.* 16. *Lisianthus zeylanicus*, *Spreng. Syst.* i. 586. —*Burm. Thes. Zeyl.* t. 67.

CEYLON; common up to 5000 ft., *Thwaites*, &c.

Stem 1-3 ft., quadrangular, erect, little-branched below. Leaves 4 by 1 in., narrowed at the base, subsessile. Corymbs terminal, many-fl., 1-fl. peduncles from the lower axils sometimes added. Calyx-lobes $\frac{2}{3}$ in.; wing lanceolate, in fruit ovate or cordate. Corolla-lobes blue, obovate-oblong, obtuse or subacute. Capsule $\frac{1}{2}$ by $\frac{1}{2}$ in.

VAR. *macrantha*; stem terete, corolla purplish-blue, anthers $\frac{1}{2}$ in. broad. *E. macrantha*, *Arn. in Ann. Sc. Nat.* 2, xi. 176; *Griseb. Gentian.* 111, and in *DC. Prodr.* ix. 46; *Bot. Mag.* t. 4771; *Thwaites Enum.* 203.—Ceylon, frequent. The lobes of the corolla are not always acuter than in many examples of *E. zeylanicum* type.

*** Smaller slenderer plants with small 4-merous flowers.

11. ***E. pedunculatum***, *Linn.*; *Griseb. Gentian.* 112, and in *DC. Prodr.* ix. 46; stem erect much-branched, leaves subsessile elliptic or lanceolate 3-nerved, cymes terminal many-fl., pedicels suberect rigid, corolla blue. *Vahl*

Symb. iii. 15; *Wall. Cat.* 4359; *Thwaites Enum.* 203; *Clarke in Journ. Linn. Soc.* xiv. 427. *E. pedunculare*, *Arn. in Ann. Sc. Nat.* 2, xi. 176; *Wight Ic.* t. 336. *E. sulcatum*, *Roxb. Fl. Ind. ed. Carey & Wall.* i. 415; *Griseb. in DC. Prodr.* ix. 46, *syn. excl.* *E. rivulare*, *Edgew. Catal. Pl. Banda*, 51.

Throughout INDIA, ascending to 3000 ft., from Oudh and Bengal to CEYLON, *Thwaites* (C.P. 1876 in *Herb. Kew*), &c.

Stem 3–12 in., quadrangular. *Leaves* $1\frac{3}{4}$ by $\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ – $\frac{1}{2}$ in. *Calyx-lobes* $\frac{1}{2}$ – $\frac{1}{2}$ in., ovate, acuminate; wing distinct, lanceolate. *Corolla-lobes* $\frac{1}{4}$ – $\frac{1}{2}$ in., elliptic. *Anthers* $\frac{1}{2}$ in., scarcely attenuate upwards, dehiscent finally halfway to the base. *Capsule* $\frac{1}{2}$ in., subglobose.—*Linnaeus'* species is founded on *Pluk. Alm. Mant.* t. 343, fig. 3, and *Grisebach* throws doubt on the identification by saying that *Plukenet's* figure is bad; but it seems unusually good and characteristic.

12. ***E. pumilum***, *Griseb. in DC. Prodr.* ix. 46; stem erect branched upwards, leaves sessile lanceolate 3-nerved, cymes lax, pedicels slender, corolla purple-blue. *Wight Ic.* t. 1324; *Dalz. & Gibs. Bomb. Fl.* 157; *Clarke in Journ. Linn. Soc.* xiv. 427.

The CONCAN; Belgaum, *Graham*, *Dalzell*, &c.

Closely allied to *E. pedunculatum*, but slenderer. *Leaves* usually narrower; lower often 1-nerved. *Flowers* less numerous; pedicels (many of them) $\frac{1}{2}$ –1 in. *Calyx-wings* narrower, lanceolate, sometimes obsolete. *Anthers* dehiscent finally often to the base.

13. ***E. sessile***, *Linn.*; *Griseb. Gentian.* 113, and in *DC. Prodr.* ix. 47; leaves small sessile ovate, pedicels lateral and terminal very short cernuous, calyx-lobes ovate acute not winged, corolla white. *Vahl Symb.* iii. 16; *Wight Ic.* t. 1324. *E. macrantherum*, *Miq. Pl. Hohenack.* n. 582.

DECCAN PENINSULA; Mangalore, *Hohenacker*. CEYLON; common up to 2000 ft., *Macrae*, &c.

Stem 4–8 in., erect, quadrangular, simple or corymbose upwards. *Leaves* $\frac{1}{2}$ by $\frac{1}{4}$ in., obscurely nerved, acute or subobtus. *Peduncles* 0– $\frac{1}{2}$ in., axillary, 1-flowered; terminal peduncle appearing sometimes 1 in., but then bearing a pair of small leaves near the flower. *Calyx-lobes* $\frac{1}{10}$ in., herbaceous. *Corolla-lobes* $\frac{1}{2}$ – $\frac{1}{2}$ in., elliptic. *Anthers* $\frac{1}{16}$ in. *Capsule* $\frac{1}{2}$ in., subglobose.—The examples marked *E. macrantherum*, *Miq.*, are certainly *E. sessile*, *Linn.*, but are mixed with *E. pumilum*, and the locality Mangalore is therefore not certain.

14. ***E. Lawii***, *Clarke*; leaves small sessile ovate, cyme few-fl. lax, pedicels mostly elongate, calyx-lobes ovate strongly nerved not winged, corolla purple-blue. *E. sessile*, *Clarke in Journ. Linn. Soc.* xiv. 427, as to the *Bombay examples*.

The CONCAN and MALABAR; Bababoodan hills, *Law*; Belgaum hills, *Ritchie*.

Stem 3–6 in., erect, slender, quadrangular, simple or slightly branched upwards. *Leaves* $\frac{1}{2}$ in. long and broad. *Peduncles* terminal or subterminal, many of them $\frac{1}{2}$ –2 in. without leaves or bracts. *Calyx-lobes* $\frac{1}{2}$ – $\frac{1}{2}$ in., patent, much-nerved at flower-time. *Corolla-lobes* $\frac{1}{2}$ – $\frac{1}{2}$ in., elliptic or round. *Anthers* $\frac{1}{10}$ in. *Capsule* $\frac{1}{2}$ – $\frac{1}{2}$ in., ovoid.—Named *E. sessile* by all collectors, but the flowers are larger, and the inflorescence altogether different.

15. ***E. petiolare***, *Griseb. in DC. Prodr.* ix. 46; leaves petioled elliptic or ovate mostly 5-nerved, peduncles erect, calyx-wings broad, corolla white or pale blue. *Wight Ic.* t. 1324; *Dalz. & Gibs. Bomb. Fl.* 157; *Clarke in Journ. Linn. Soc.* xiv. 427. *E. carinatum*, *Roxb. Fl. Ind. ed. Carey & Wall.* i. 415? *Sebæa carinata*, *Spreng. Syst.* i. 426?

The CONCAN, *Stocks*, &c. CHOTA NAGPORE, alt. 1–3000 ft., abundant, *Clarke*.

Stem 2–12 in., erect, quadrangular, branched upwards. *Leaves* 3 by $1\frac{1}{2}$ in.,

5-nerved, in small specimens lanceolate and subsessile; petiole $\frac{1}{2}$ in. *Cymes* terminal, erect; pedicels mostly $\frac{1}{4}$ – $\frac{1}{2}$ in.; the 1-flowered peduncle at the bifurcation of the cyme often 1–2 $\frac{1}{2}$ in. *Calyx-lobes* $\frac{1}{2}$ in.; wing in fruit ovate or cordate, nerved. *Corolla-lobes* $\frac{1}{2}$ in. or more (or in small examples $\frac{1}{3}$ in.). *Anthers* $\frac{1}{2}$ in., finally dehiscing nearly to the base. *Capsule* $\frac{1}{2}$ in., subglobose.—Roxburgh's Ic. Ined. of his *E. carinatum* resembles in all respects *E. pedunculatum*, Linn., except that the corolla-lobes are orange-yellow. As a yellow corolla is unknown in *Exacum*, Sprengel placed the species under *Sebea*. Arnott and Grisebach, assuming that Roxburgh had not seen the plant alive, reduce it to *E. pedunculatum*. But as Roxburgh had the plant in cultivation and both figured and described *E. pedunculatum* (under *E. sulcatum*), it is not likely that his *E. carinatum* is the same thing. Roxburgh's description seems almost certainly to refer to *E. petiolare*, Griseb., which has white corolla-lobes with yellow anthers and the marked calyx-wing, &c., described by Roxburgh. It doubtless extends to Ceylon, for Thwaites' *E. petiolare* (Clarke in Journ. Linn. Soc. xiv. 427) were almost surely rightly named, though the number (C.P. 1876) attached to the specimens is wrong.

**** Small plant with small 5-merous flowers.

16. **E. pteranthum**, Wall. Cat. 4360; leaves elliptic acuminate 3-nerved often petioled, calyx-lobes winged. Griseb. in DC. Prodr. ix. 47.

PEGU and TENASSEERIM, Wallich, Lobb, alt. 3–4000 ft., Kurz.

Stem 4–8 in., erect, quadrangular, simple or slightly branched upwards. *Leaves* 1 $\frac{1}{2}$ by $\frac{2}{3}$ in., base narrowed; petiole sometimes $\frac{1}{2}$ in. *Cymes* terminal, few-fl., axillary 1-fl. peduncles sometimes added; pedicels 0– $\frac{1}{4}$ in. *Calyx-lobes* $\frac{1}{2}$ in., ovate, acute; wings broad-lanceolate or ovate. *Corolla-lobes* $\frac{1}{4}$ in., ovate-lanceolate. *Anthers* $\frac{1}{12}$ in., dehiscent finally nearly to the base. *Capsule* $\frac{1}{8}$ in., subglobose.

DOUBTFUL SPECIES.

E. PUNCTATUM, Linn. f. Suppl. 124; leaves very shortly petioled 3-nerved glandulose-punctate, corolla blue, stamens exserted yellow. Griseb. in DC. Prodr. ix. 47.—INDIA, Koenig.

3. **SEBEA**, R. Br.

Erect, annual herbs. *Leaves* small, sessile. *Flowers* small, yellow, in terminal cymes. *Calyx-lobes* 4–5, keeled. *Corolla-tube* cylindric; lobes 4–5 patent. *Stamens* 4–5, on the upper part of the corolla-tube, filaments short linear; anther-cells oblong, opening introrsely by longitudinal slits. *Ovary* completely 2-celled, placentæ large; style short, linear, stigma globose or subspatulate. *Capsule* globose or ellipsoid, septicidally 2-valved. *Seeds* very many, minute, polyhedral, testa coarsely loosely reticulated.—Species 18; in Africa, Madagascar, Australia, and N. Zealand.

S. khasiana, Clarke in Journ. Linn. Soc. xiv. 428; cauline leaves $\frac{1}{2}$ – $\frac{1}{3}$ in. lanceolate-linear, cyme 1–7-flowered, calyx 5-partite. Cicendia microphylla, Edgew. in Trans. Linn. Soc. xx. 83. Erythræa microphylla, Benth. in Gen. Pl. ii. 811.

N. W. HIMALAYA; Gurwhal, alt. 5–6000 feet, Edgeworth; NEPAL; Wallich. KHASIA Mts., Kollong Rock, alt. 5500 ft., Clarke.—DISTRIB. Angola.

Stem 6 in., simple, slender, angular, glabrous. Radical *leaves* 0 at flowering time. *Pedicels* $\frac{1}{12}$ – $\frac{1}{3}$ in., rigid, angular. *Sepals* $\frac{1}{2}$ in., lanceolate, keeled, scarious-margined. *Corolla-tube* $\frac{1}{2}$ in.; lobes $\frac{1}{2}$ in.; elliptic. *Anthers* oblong, scarcely apiculate, without glands at the base, finally straight; stigma a flattened ellipsoid, papillose on the edge.—*S. aurea*, R. Br. (Griseb. in DC. Prodr. ix. 52), has the upper leaves broader, but the plant collected by Welwitsch in Angola is identical with the Indian, except that its anthers are minutely apiculate.

4. **HOPPEA**, Willd.

Small, much branched, glabrous herbs. *Leaves* small, sessile, ovate or elliptic. *Cymes* 2-3-chotomous, flowers sessile or short-pedicelled. *Calyx* campanulate; lobes 4, ovate, acuminate. *Corolla-tube* subglobose or elongate; lobes 4, short or long, more or less unequal. *Stamens* 1 perfect, 3 barren, attached in the corolla-throat, filaments linear short; anthers ovate, dehiscing introrsely by two longitudinal slits; barren anthers similar but much smaller, sometimes 0. *Ovary* 1-celled, placentæ not far intruded; style short, stigma subentire. *Capsule* globose or ellipsoid, carpels separating. *Seeds* very many, minute, nearly black, obscurely reticulated.—Species 2, Indian.

1. **H. dichotoma**, Willd. in *Ges. Nat. Fr. Berl. Neue Schrift*. iii. 435; divaricately densely branched often from near the base, corolla ventricose shorter than the calyx both in flower and fruit, lobes short triangular, capsule subglobose. *Hayne Termin. Bot.* t. 30, fig. 3. *Hoppea dichotoma*, *Vahl Enum.* i. 3. *Pladera pusilla*, *Roxb. Fl. Ind. ed. Carey & Wall.* i. 419; *Griseb. in DC. Prodr.* ix. 63; *Clarke in Journ. Linn. Soc.* xiv. 429. *Canscora pusilla*, *Roem. & Sch. Syst.* iii.; *Mant.* 230 (excl. syn. *Exacum* sessile); *Wall. Cat.* 4366; *D. Don in Trans. Linn. Soc.* xvii. 530. *Cicendia Roxburghii*, *Griseb. Gentian.* 160; *Thoms. & Bacon in Hook. Lond. Journ.* iv. 637, t. 22.

Throughout INDIA, alt. 0-3000 ft.; very common; from the Punjab and Assam to Belgaum and Central India, the Circars, and Chittagong.

Stem 1-5 in., quadrangular. *Leaves* $\frac{1}{4}$ in., ovate. *Cymes* dense or lax. *Calyx* $\frac{1}{12}$ in.; lobes scarious, marginal nerve green. *Corolla* white, tube $\frac{1}{20}$ in., ventricose; in fruit wider upwards with the lobes incurved, overtopped by the acute calyx-teeth. *Stigma* clavate, obscurely 2-fid.

2. **H. fastigiata**, *Clarke*; corymbose upwards with ascending branches, corolla tubular lobes oblong overtopping the calyx both in flower and fruit, capsule ellipsoid. *Cicendia fastigiata*, *Griseb. Gentian.* 158, and in *DC. Prodr.* ix. 62. *Pladera fastigiata*, *Arnott in Herb. Wight*; *Clarke in Journ. Linn. Soc.* xiv. 429. *P. pusilla*, *Thwaites Enum.* 204, not of *Roxb.* *Exacum*? *concinnum*, *Miq. in Pl. Hohenack.* n. 581.

S. DECCAN PENINSULA, Mysore and Courtallum, *Wight*; Mangalore, *Hohenacker*. MOULMEIN; *Lobb.* CEYLON, frequent.

Stem 2-6 in., winged. *Leaves* $\frac{1}{2}$ in., ovate. *Flowers* fastigiate. *Calyx* $\frac{1}{2}$ in.; lobes scarious with a marginal nerve. *Corolla-tube* $\frac{1}{10}$ in. long, oblong, in fruit narrowed in the throat with the lobes erect, much overtopping the calyx-teeth. *Stigma* slightly clavate, subentire. *Seeds* very small, but twice as large as those of *H. dichotoma*.—The type of *Cicendia fastigiata*, *Griseb.* is *Macrae's* Ceylon plant, which *Grisebach (Gentian.* 159) says has 4 perfect stamens, but it has 1 only. The corolla in the present species is totally unlike that of *Hoppea dichotoma*, and the species so far agrees with *Cicendia*.

5. **ENICOSTEMA**, Blume.

A glabrous herb, erect, or decumbent branched. *Leaves* sessile, ovate-lanceolate or linear. *Flowers* small, in sessile axillary clusters. *Calyx* deeply 5-fid; segments not keeled. *Corolla* tubular funnel-shaped; lobes 5, spreading, white or bluish. *Stamens* 5, on the upper part of the corolla-tube, filaments shortly linear with minute scales at their base; anthers oblong, acute, included. *Ovary* 1-celled, placentæ not far intruded; style short, linear, stigma capitate. *Capsule* ellipsoid, carpels separating. *Seeds* many, subglobose, reticulated.

E. littorale, Blume Bijdr. 848; Griseb. *Gentian.* 135 and in DC. *Prodr.* ix. 66. *Gentiana verticillata*, Linn.; Wall. *Cat.* 4396; Roxb. *Fl. Ind.* ii. 71. *G. verticillaris*, Retz Obs. ii. 15. *Exacum hyssopifolium*, Willd. *Sp. Pl.* i. 640; Roxb. *Hort. Beng.* 10. *E. verticillatum*, Willd. *Sp. Pl.* i. 640. *Ericoila verticillata*, Borkh. in Roem. Arch. i. 27. *Hippion hyssopifolium* and *verticillatum*, Spreng. *Syst.* i. 589; Griseb. *Gentian.* 134. *H. orientale*, Daltz. & Gibs. *Bomb. Fl.* 157. *Cicendia hyssopifolia*, W. & A. in Hook. *Comp. Bot. Mag.* ii. 249, t. 28. *Slevogtia verticillata*, D. Don in Trans. Linn. Soc. xvii. 532. *S. orientalis* and *occidentalis*, Griseb. in DC. *Prodr.* ix. 65. *S. maritima*, Daltz. in Hook. *Kew Journ.* ii. 137. *Adenema hyssopifolium*, G. Don *Syst.* iv. 201; *Wight Ic.* t. 600.

Throughout INDIA, alt. 0–1500 ft.; from the Punjab and Gangetic Plain to CEYLON; more frequent near the sea, not known in Bengal.—DISTRIB. Malaya, Tropical Africa, W. Indies.

Stem 4–20 in., terete or quadrangular, internodes short. *Leaves* 2 by $\frac{1}{2}$ in., or small or sublinear. *Calyx* $\frac{1}{10}$ in.; lobes narrowly oblong, obtuse. *Corolla-tube* $\frac{1}{2}$ in.; lobes $\frac{1}{10}$ in., elliptic. *Capsule* $\frac{1}{2}$ – $\frac{1}{3}$ in. *Seeds* small, but much larger than in the preceding genera.

6. ERYTHRÆA, L. C. Rich.

Herbs, annual or perennial, erect, branched. *Leaves* opposite, sessile. *Cymes* dichotomous, dense or corymbose, rarely elongate; flowers rose, white or (in non-Indian species) yellow. *Calyx* tubular; teeth 5, lanceolate or linear, keeled. *Corolla-tube* long or short; lobes 5, spreading. *Stamens* 5, near the summit of the corolla-tube, filaments short linear; anthers narrowly oblong. *Ovary* 1-celled, placenta far intruded; style linear, stigmas semicircular or oblong. *Capsule* oblong, about as long as the calyx, nearly 2-celled, 2-valved, capsules separating. *Seeds* very small, reticulated.—Species 20, throughout the N. Hemisphere, extending to Chili and Australia.

The Indian species have all an elongate corolla-tube, as long or longer than the calyx, and the corolla-lobes elliptic or oblong, small, much shorter than the tube, and would be by some authors all referred as varieties to *E. ramosissima*, Pers.

1. **E. ramosissima**, Pers. *Syn.* i. 283; radical leaves not rosulate cauline oblong or elliptic acute, flowers rose-coloured clustered sessile prominently bracteate, calyx-teeth long linear about equalling the corolla-tube. Griseb. *Gentian.* 137, and in DC. *Prodr.* ix. 57; Boiss. *Fl. Orient.* iv. 67. *E. pulchella*, Hornem. in *Fl. Dan.* t. 1637. *Erythræa* sp. 2, Clarke in *Journ. Linn. Soc.* xiv. 428. *Gentiana Centaurium*, var. β , Linn. *Sp. Pl.* 333.

PUNJAB, alt. 1–2000 ft.; Loodiana, Hooshiapore, Thomson, Edgeworth, &c.—DISTRIB. Cabul and Beloochistan, W. Asia and Egypt.

Stem 3–15 in., very leafy. *Leaves* $1\frac{1}{2}$ by $\frac{2}{3}$ in. *Calyx* $\frac{1}{2}$ in.; teeth prominent, overtopping the buds almost till the moment of opening.—This Punjab plant is not exactly the type of *E. ramosissima*, being often tall, leafy, the flowers in clusters enveloped with bracts, the calyx-teeth substellate; the same form extends through Asia to Egypt.

VAR. caspica; upper leaves oblong-linear, cyme repeatedly dichotomous. *E. caspica*, Griseb. *Gentian.* 145, and in DC. *Prodr.* ix. 59.—Punjab (?), Falconer.—Cabul and the Caspian region.

VAR. pulchella, Griseb. *Gentian.* 137; stem slender, cauline leaves $\frac{1}{2}$ – $\frac{1}{3}$ in. oblong or ovate obtuse, cymes depauperated, calyx-teeth not prominent.—Skardo, alt. 7–8000 ft., Thomson.—Distrib. Central and W. Asia. This is not exactly the same as Fries' *E. pulchella*, but it is included under *E. ramosissima* by Boissier, l. c. *Hk. f. & T.* in Herb. marked it *E. tenuiflora*, Link (*Fl. Port.* i. t. 67), which again is only a var. of *E. latifolia*, Griseb., but the true *E. latifolia*, Smith, differs considerably, having larger flowers and being allied to *E. Centaurium*.

2. **E. Roxburghii**, *G. Don Gen. Syst.* iv. 206; radical leaves numerous persistent obovate or elliptic cauline smaller narrower, cymes repeatedly dichotomous with a long-pedicelled flower in each fork, corolla-tube much longer than the calyx, lobes rose-coloured. *Griseb. Gentian.* 145, and in *DC. Prodr.* ix. 59; *Dalz. & Gibs. Bomb. Fl.* 157. *E. ramosissima*, Var. *a* and *β*, *Clarke in Journ. Linn. Soc.* xiv. 428, *not of Pers.* *Chironia centaurioides*, *Roxb. Fl. Ind.* i. 584; *Wall. Cat.* 4397.

Throughout INDIA ascending to 2000 ft., from the Punjab and Bengal to Travancore; common in Bengal Plain.

Stem 2–8 in. *Radical leaves* 1 by $\frac{1}{2}$ in., usually obtuse. *Cyme* fastigiate or widely dichotomous; pedicels in the forks usually $\frac{1}{4}$ – $\frac{1}{2}$ in.; bracts not prominent. *Calyx* $\frac{1}{2}$ in. *Corolla-tube* exceeding $\frac{1}{2}$ in., lobes very small.

VAR. *saxatilis*; stem taller paniced, leaves narrowly lanceolate basal leaves disappearing, flowers in small terminal clusters.—S. Deccan Peninsula.

3. **E. Meyeri**, *Bunge; Ledeb. Fl. Alt.* i. 220, and *Ic. t.* 159; radical leaves not rosulate cauline oblong, cyme laxly sparingly dichotomous with a long-pedicelled flower in each fork, corolla-tube scarcely longer than the calyx lobes white. *E. ramosissima* and *altaica*, *Griseb. in DC. Prodr.* ix. 57. *E. ramosissima*, var. *albiflora*, *Boiss. Fl. Orient.* iv. 67.

KASHMIR and BALTISTHAN; alt. 5–8000 ft., frequent.—DISTRIB. Cabul, Central Asia to the Altai.

Stem 4–10 in., undivided below; radical leaves 2 or 0 at flowering time. *Leaves* $\frac{1}{2}$ by $\frac{1}{2}$ in., subobtuse. *Pedicels* of the flowers on the forks $\frac{1}{4}$ – $\frac{1}{2}$ in.—It is not clear why *Grisebach* and *Boissier*, while maintaining several *Erythræas* as distinct species, reduce this to *E. ramosissima*, from which it is remote in its undivided stem and long-pedicelled flowers, which are invariably white. It is in fact much nearer *E. Roxburghii*.

4. **E. babylonica**, *Griseb. in DC. Prodr.* ix. 60; stem quadrangular, radical leaves not rosulate, cauline oblong remote, cyme laxly dichotomous, branches erect all the flowers subsessile rose-coloured. *E. spicata*, var. *Boiss. Fl. Orient.* iv. 69; *Clarke in Journ. Linn. Soc.* xiv. 428. *E. ramosissima* and *linarifolia*, *Clarke l. c.*, *not of Persoon*.

PUNJAB; *Falconer*; Lahore, *Brandis*.—DISTRIB. Cabul, Persia.

Stem 6–15 in., simple below, acutely quadrangular. *Radical leaves* 2–0 at flowering time. *Leaves* $\frac{1}{2}$ by $\frac{1}{2}$ in., scarcely acute. *Cyme* symmetrically dichotomous; pedicels of the flowers in the forks scarcely $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in., nearly equalling the corolla-tube.—Considered by *Bentham* and *Boissier* a var. of *E. spicata*, *Pers.*, which differs only by its unilateral cyme-branches. *E. babylonica* has been misunderstood, because *Grisebach* described the flowers as 4-merous, whereas in *Ancher-Eloy's* n. 2432 (*Grisebach's* type) they are 5-merous. The Cabul examples identical with this are called by *Boissier E. caspica*, and it is very difficult to say how they differ except in the strict cymes forming an elongate panicle.

7. **CANSCORA**, *Lamk.*

Annual herbs, dichotomously branched. *Leaves* opposite, sessile, petioled or perfoliate. *Flowers* in terminal or central cymes, or axillary solitary, or densely spiked on scapes. *Calyx* tubular, 4-toothed, terete striate keeled or winged. *Corolla-tube* cylindric, about as long as the calyx; lobes 4, more or less unsymmetric, imbricate in the bud. *Stamens* 4, near the summit of the corolla-tube; 1 or 2 larger with longer filaments and fertile ovate or oblong anthers; 3 or 2 with shorter (often lower-attached) filaments, smaller, barren or sometimes subobsolete. *Ovary* 1-celled, placentæ not far intruded; style

linear, stigmas 2 short hemispheric. *Capsule* 2-valved, separating into its 2 carpels, or often very thin breaking up irregularly. *Seeds* very small, polyhedral, dark brown, reticulated.—Species 14, chiefly Indian; Malaya, Australia, Trop. Africa and its islands.

SURGENUS I. Eucanscora. *Flowers* in terminal dichotomous cymes, or pedicelled in axillary small cymes. *Calyx* keeled or winged. *Corolla* subbilabiate. *Stamens* 4, one larger perfect, three shorter smaller barren or subobsolete.

* Cymes terminal; bracts at its bifurcations not perfoliate.

† *Calyx* striate or keeled, not winged, pedicels not 4-winged.

1. **C. diffusa**, Br. *Prodr.* 451 in *Obs.*; stem quadrangular, lower leaves lanceolate or elliptic, cyme diffuse, bracts (at least of its lower divisions) large ovate acute sessile membranous, pedicels slender flexuose, corolla rose. *Griseb. Gentian.* 162, and in *DC. Prodr.* ix. 64; *Wall. Cat.* 4261; *Dalz. & Gibs. Bomb. Fl.* 158; *Clarke in Journ. Linn. Soc.* xiv. 429; *Benth. Fl. Austral.* iv. 372. *C. foliosa*, G. Don *Gen. Syst.* iv. 199? *C. Lauri*, *Wight Ic.* t. 1327, not of *Clarke*. *Gentiana diffusa*, *Vahl Symb.* iii. 47. *Exacum diffusum*, *Willd. Sp. Pl.* i. 637. *E. erectum*, *Roth Nov. Sp.* 83. *Orthostemon erectum*, Br. *Prodr.* 461; *Griseb. Gentian.* 151, and in *DC. Prodr.* ix. 63. *O. Hugelii*, *Griseb. in DC. Prodr.* ix. 63. *Pladera virgata*, *Roxb. Fl. Ind. ed. Carey & Wall.* i. 417; *Hook. Bot. Misc.* iii. 88, t. 25. *Cobamba dichotoma*, *Blanco Fl. Filip.* (ed. 2) 355.

Throughout INDIA ascending to 4000 ft., common; from Kumaon and Bhotan to Ceylon and Tenasserim.—**DISTRIB.** Malaya, Australia, and E. Tropical Africa.

Annual, erect, 4–20 in., densely branched upwards. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in., 3-nerved, often petioled; upper passing into the bracts. *Cyme* diffuse, leafy; bracts $\frac{1}{2}$ in. leaflike, a few of the uppermost linear. *Calyx* $\frac{1}{2}$ in.; teeth lanceolate-linear. *Corolla-tube* $\frac{1}{2}$ in., lobes $\frac{1}{2}$ in. *Stamens* one on the corolla-throat, perfect; 3 rather lower down with slightly shorter filaments and smaller anthers, polliniferous or not. *Capsule* oblong, as long as the calyx.

VAR. tenella; bracts ovate herbaceous, many of the upper linear. *C. tenella*, *Wight Ic.* t. 1327; *Wall. Cat.* 4362.—Malabar and Mysore, *Wight*.—This has the bracts nearly as in the next species, but the cyme is diffuse, the pedicels long slender.

2. **C. decurrens**, *Dalz. in Hook. Kew Journ.* ii. 136; stem 4-winged, lower leaves lanceolate or elliptic, cyme erect with ascending branches, bracts in its upper part small or linear, pedicels erect, corolla rose or white. *Dalz. & Gibs. Bomb. Fl.* 157; *Clarke in Journ. Linn. Soc.* xiv. 430. *C. divaricata*, *Miq. in Pl. Hohenack.* n. 670.

W. DECCAN PENINSULA from the Concan southwards, frequent.

Very doubtfully distinct from *C. diffusa*, var. *tenella*. *Leaves* hardly decurrent. *Cyme* subtrichotomous (in *C. diffusa* usually dichotomous).

3. **C. pauciflora**, *Dalz. in Hook. Kew Journ.* ii. 136; stem 4-winged, lower leaves ovate or obovate, cyme laxly dichotomous few-flowered, branches long curved ascending somewhat 4-angled, pedicels often thickened under the calyx. *Dalz. & Gibs. Bomb. Fl.* 157. *C. lancifolia*, *Miq. in Pl. Hohenack.* a. 305. *C. Lauri*, *Clarke in Journ. Linn. Soc.* xiv. 430, not of *Wight*.

W. DECCAN PENINSULA, from Malwan to Quilon; *Dalzell, Wight, &c.*

Lower leaves scarcely $\frac{1}{2}$ in., smaller than the middle cauline. *Bracts* (of the lower part of the cyme) rarely so much as $\frac{1}{4}$ in., oblong or linear.—This seems very near, but separable from, *C. diffusa*; *Wight*, however, in his *Herb.*, referred it to his *C. tenella* (treated above as a var. of *C. diffusa*).

†† *Calyx keeled not winged, cyme-branches distinctly winged.*

4. **C. sessiliflora**, Roem. & Sch. Syst. iii. Mant. 230; leaves ovate, flowers in the forks of the cyme sessile. Wall. Cat. 4367; Griseb. *Gentian.* 153, and in *DC. Prodr.* xiv. 64; Clarke in *Journ. Linn. Soc.* xiv. 430. *Gentiana heteroclita*, Linn. Mant. 560. *Exacum heteroclitum*, Willd. Sp. Pl. i. 639. *Pladera sessiliflora*, Roxb. Fl. Ind. ed. Carey & Wall. i. 416. *Centaurium malabaricum*, Borkh. in Roem. Arch. i. 27.

S. DECCAN PENINSULA; Rottler, Wight, &c. CEYLON, Batticaloa district, not common, Thwaites.

Stem 4–9 in., broadly 4-winged upwards. *Leaves* $\frac{1}{2}$ in., sessile, obtuse or subacute. *Cyme* with ascending branches; bracts $\frac{1}{8}$ – $\frac{1}{4}$ in., narrow; lateral flowers usually bracteate, sometimes pedicelled. *Calyx* $\frac{1}{4}$ in. *Corolla-tube* $\frac{1}{4}$; lobes $\frac{1}{4}$ in., broadly obovate, rose-coloured. *Flowers* and *capsules* nearly as of *C. diffusa*, but slightly larger.

††† *Calyx distinctly winged.*

5. **C. decussata**, Roem. & Sch. iii. Mant. 229; leaves oblong-lanceolate, cyme rigidly erect, branches 4-winged, calyx-wings narrowly lanceolate, flowers white. Wall. Cat. 4364; Griseb. *Gentian.* 153, and in *DC. Prodr.* ix. 430. *Pladera decussata*, Roxb. Fl. Ind. ed. Carey & Wall. i. 418; Bot. Mag. t. 3066.

Throughout INDIA, ascending to 4000 ft.; from the Himalaya to Burma; abundant in Bengal Plain. CEYLON, not uncommon.—DISTRIB. Madagascar, Bourbon, Trop. Africa.

Stem 4–20 in., 4-winged. *Leaves* $1\frac{1}{2}$ by $\frac{3}{8}$ in., sessile, 3-nerved. *Cyme* lax; flowers in the forks pedicelled. *Calyx* $\frac{1}{2}$ – $\frac{1}{3}$ in. *Corolla-tube* as long as the calyx; lobes $\frac{1}{4}$ in., obovate, obtuse. *Stamens* 1 perfect; 3 barren, variously reduced, subsessile or with filaments. *Capsule* and *seeds* considerably larger than in *C. diffusa*.—*Exacum alatum*, Roth, is reduced here by Grisebach, and there are specimens of Rottler and Heyne which do belong; but Roth's description "calyx with broad scarious wings, corolla rose" refers entirely to *Canscora perfoliata*, Lamk.

6. **C. concanensis**, Clarke; leaves ovate, cymes slender branches not winged, calyx-wings elliptic nerved scarious in fruit.

The CONCAN, Law.

A slender annual, 3–5 in.; stem decumbent then erect, obscurely quadrangular. *Leaves* $\frac{3}{4}$ by $\frac{1}{2}$ in., subacute, sessile, 3-nerved. *Cymes* weak, at first dichotomous, branches upwards subunilateral, flowers all pedicelled; pedicels $\frac{1}{8}$ – $\frac{1}{4}$ in., slender; bracts $\frac{1}{8}$ – $\frac{1}{2}$ in., linear. *Calyx* $\frac{1}{2}$ in.; wings $\frac{1}{2}$ in., broad in fruit. *Corolla-tube* as long as the calyx; lobes $\frac{1}{6}$ in., obovate, obtuse, seem to have been rose.—Nearest to *C. macrocalyx*, Miq. Fl. Ind. Bat. ii. 553, which is a rigid erect plant with winged stem and cyme-branches.

** Cymes terminal; bracts at its bifurcations (or some of them) perfoliate.

7. **C. perfoliata**, Lamk. Dict. i. 601, not of Griseb.; leaves elliptic acute, calyx large wings elliptic nervose. *C. alata*, Wall. Cat. 4363 A; Griseb. *Gentian.* 154, and in *DC. Prodr.* ix. 65; Daltz. & Gibbs. *Bomb. Fl.* 158; Clarke in *Journ. Linn. Soc.* xiv. 431. *C. grandiflora*, Wight Ic. t. 1326. *C. macrocalyx*, Miq. in Pl. Hohenacker, n. 810 (not Fl. Ind. Bat. ii. 553). *Pladera perfoliata*, Roxb. Fl. Ind. ed. Carey & Wall. i. 418. *Exacum alatum*, Roth Nov. Sp. 85.—Rheede Hort. Mal. x. 103, t. 52.

The DECCAN PENINSULA; from Bombay to Travancore; Rottler, &c.

Stem 6–18 in., 4-winged. *Leaves* 1 by $\frac{1}{2}$ – $\frac{3}{8}$ in., sessile, 3-nerved. Upper bracts $\frac{1}{2}$ in. diam., suborbicular, 2-mucronate; pedicels very short. *Calyx* $\frac{1}{2}$ – $\frac{3}{8}$ by $\frac{1}{4}$ – $\frac{1}{2}$ in.

Corolla-tube as long as the calyx; lobes $\frac{1}{4}$ – $\frac{1}{2}$ in., obovate, obtuse, rose. *Capsule* $\frac{1}{2}$ in. —Lamarck founded *Canscora* and the species *C. perfoliata* on Rheede l. c.; Grisebach says the calyx is exalate, in direct opposition to Rheede's figure and description; moreover the size of the calyx and corolla and whole habit of the plant in Rheede shows that his figure means the *Pladera perfoliata* of the old collectors.

8. **C. Walltohl**, Clarke; leaves oblong acute, calyx cylindric not winged. *C. perfoliata*, Wall. Cat. 4365; Griseb. *Gentian.* 155, and in *DC. Prodr.* ix. 65 (*syn. excl.*); Wight *Ic. t.* 1327, *middle figure*; Thwaites *Enum.* 204; Clarke in *Journ. Linn. Soc.* xiv. 431, *not of Lamk.*—*Canscora* sp., Wall. Cat. 4363 B *partim*.

THE CARNATIC, MYSORE, and MALABAR, Heyne, &c. CEYLON; north end of the Isld., Gardner, &c.

Stem 8–16 in., 4-winged. *Leaves* and *cyme* very nearly as of *C. perfoliata*; pedicels $\frac{3}{4}$ – $\frac{1}{2}$ in., filiform. *Calyx* $\frac{1}{4}$ – $\frac{1}{2}$ by $\frac{1}{2}$ in., in fruit scarious with 12 green nerves. *Corolla-tube* as long as the calyx; lobes hardly $\frac{1}{2}$ in., obovate, obtuse, rose.

*** Cymes axillary, weak, few-fl'd.

9. **C. andrographioides**, Griff. mss.; Clarke in *Journ. Linn. Soc.* xiv. 431; leaves elliptic-lanceolate 3-nerved, pedicels filiform, bracts minute, calyx cylindric striate not winged. *Canscora diffusa?*, Wall. Cat. 4361 K. *Pladera?* *virgata*, Griff. *Notul.* iv. 92.

KHASIA MTS.; alt. 1–4000 ft., frequent, Wallich, &c. MOULMEIN; Griffith, Lobb.

Stem paniculately branched from the base; branches 8–20 in., quadrangular, not winged. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ – $\frac{1}{2}$ in., 3–5-nerved; petiole $\frac{1}{12}$ in. *Cymes* 1–2 in., 1–5-flowered. *Calyx* $\frac{1}{2}$ by $\frac{1}{10}$ in. *Corolla-tube* as long as the calyx; lobes $\frac{1}{4}$ in., obovate-oblong, white-purple- or rose-veined. *Stamens*, 1 with a filament and ovate perfect anther, 3 subsessile with oblong small but often polliniferous anthers. *Capsule* and seeds nearly of *C. diffusa*.

SUBGENUS II. **Heterocanscora**. *Flowers* in dense spikes, opposite, each bracteate and with 2 large bracteoles. *Calyx* very thin, not winged. *Corolla*, *stamens*, and *style* of *Eucanscora*.

10. **C. Schultesii**, Wall. Cat. 4368; scapose, radical leaves small elliptic petioled. Griseb. *Gentian.* 155, and in *DC. Prodr.* ix. 65. *Heterocanscora* Schultesii, Clarke in *Journ. Linn. Soc.* xiv. 431.

BURMA; Prome Hills, Wallich; Pegu Yomah, Kurz.

Scapes 3–10, several from one annual root, somewhat 4-winged upwards. *Radical leaves* $\frac{1}{2}$ by $\frac{1}{4}$ in.; cauline few, bractlike, $\frac{1}{4}$ in., linear, acute. *Flower-spikes* 1–3 in., terminal, simple, scarcely interrupted. *Bracts* $\frac{1}{2}$ in., boat-shaped, widely elliptic, shortly caudate; bracteoles similar, rather smaller, unilateral. *Calyx* $\frac{1}{4}$ in. *Corolla-tube* $\frac{1}{2}$ in., lobes $\frac{1}{2}$ in. *Stamens* 1 with a filament, perfect; 3 much smaller, on very short filaments. *Capsule* $\frac{1}{2}$ in., and seeds of *Canscora*.—In general habit, inflorescence, and bracts simulating *Andrographis paniculata*.

SUBGENUS III. **Phyllocyclus**. *Stem* and *branches* terete. *Leaves* all perfoliate orbicular. *Flowers* axillary, solitary. *Calyx* ventricose-tubular. *Stamens* 2 larger, on longer filaments, 2 smaller.

11. **C. Parishii**, Hook. f. in *Bot. Mag.* t. 5429; calyx $\frac{1}{2}$ – $\frac{1}{2}$ in., corolla-tube as long as the calyx, lobes $\frac{1}{2}$ in. ovate white with two yellow spots at the base. *Phyllocyclus* Parishii, Kurz in *Journ. As. Soc.* 1873, pt. ii. 236; Clarke in *Journ. Linn. Soc.* xiv. 432.

MOULMEIN, Griffith, Parish, Lobb.

Stem 8–24 in., divaricately dichotomous. *Leaves* $1\frac{1}{2}$ in. diam., radiately nerved;

uppermost herbaceous. *Pedicles* $0-\frac{1}{8}$ in. *Calyx* $\frac{1}{4}-\frac{1}{2}$ in. broad at the base, slightly narrowed upwards, lobes short triangular. *Capsule* $\frac{1}{4}$ by $\frac{1}{2}$ in., ellipsoid. *Seeds* as of *Eucanscora*.

12. **C. Helferiana**, Wall. mss.; calyx $\frac{1}{4}-\frac{1}{2}$ in., corolla-lobes $\frac{1}{4}$ in. *Phyllocyclus* Helfer, Kurz in Journ. As. Soc. 1873, pt. ii. 236; Clarke in Journ. Linn. Soc. xiv. 432.

MOULMEIN, Griffith; Three-Pagoda Pass into Siam, Helfer (Kew Distrib. n. 5816).

Closely resembling *C. Parishii*, but the calyx, corolla, and capsule rather smaller, and the uppermost (floral) leaves very scarious. It is probably only a var. of *C. Parishii*.

8. **CRAWFURDIA**, Wall.

Twining. *Leaves* opposite, petioled, 3-nerved. *Flowers* showy, axillary, solitary or in small cymes, purple white or greenish-yellow. *Calyx* tubular, lobes 5 (or 4 in a non-Indian species). *Corolla* elongate tubular-campanulate, plicate or subterete; lobes 5, short. *Stamens* 5, on the middle of the corolla-tube, filaments flattened; anthers oblong. *Ovary* stalked, 1-celled; disc small, 5-toothed; style linear, stigmas 2 short linear. *Fruit* globose or oblong, compressed or terete, 2-valved, or indehiscent. *Seeds* many, discoid, broadly winged, or wedge-shaped subtriquetrous narrowly 3-winged.—Species 9–10; in India, Malaya, China, and Japan.

SUBGENUS I. **Dipterospermum**. *Flowers* (or many of them) long-pedicelled. *Calyx* not keeled. *Capsule* dry. *Seeds* compressed, discoid; wing marginal, broad, simple, scarious.

1. **C. speciosa**, Wall. Cat. 4371, and Tent. Fl. Nep. 64, t. 48; leaves elliptic acuminate minutely denticulate glabrous, calyx-limb truncate teeth 5 small lanceolate excurrent below the margin, corolla-limb subtruncate teeth distant small triangular acute. *D. Don* in Trans. Linn. Soc. xvii. 517; Griseb. Gentian. 305, and in DC. Prodr. ix. 120; Clarke in Journ. Linn. Soc. xiv. 442, partly.

CENTRAL and EASTERN HIMALAYA; Nepal and Sikkim, alt. 6–10,000 ft., frequent, Wallich, J. D. H., &c.

Leaves 3 by 1 in., base cuneate or rounded. *Cymes* 1–3 in., 1–5-flowered; pedicels 0–7 in.; bracts $\frac{1}{2}$ in., lanceolate, one pair near the base or summit of the pedicel, often 0. *Calyx* $\frac{1}{2}$ by $\frac{1}{2}$ in., cylindric, base campanulate; teeth $\frac{1}{8}-\frac{1}{5}$ in. *Corolla* $1\frac{1}{2}$ by $\frac{3}{4}$ in., purple, plicate; teeth scarcely $\frac{1}{2}$ in. *Filaments* dilated in the middle, attached in the middle of the corolla, sometimes free at the base. *Stigma* more than $\frac{1}{2}$ in., linear. *Capsule* 1 by $\frac{1}{4}-\frac{1}{2}$ in., subincluded in the corolla, stalk $\frac{1}{2}-\frac{2}{3}$ in.

2. **C. campanulacea**, Wall. & Griff. mss.; leaves elliptic acuminate entire glabrous coriaceous, calyx-lobes ovate-lanceolate terminating the tube, corolla-lobes approximate ovate-lanceolate. *C. speciosa*, Clarke in Journ. Linn. Soc. xiv. 442, partly.

KHASIA Mts., alt. 4–6000 ft., frequent, Wallich, H. f. & T., &c.

Leaves as of *C. speciosa* but more coriaceous, the 3 main nerves broad beneath, others obscure. *Peduncles* 0–4 in., all 1-flowered; bracts $\frac{1}{2}$ in., present or absent, varying in position. *Calyx-tube* $\frac{1}{2}$ by $\frac{1}{2}$ in., cylindric; lobes $\frac{1}{3}-\frac{1}{5}$ in., not keeled. *Corolla* $1\frac{1}{2}$ by $\frac{3}{4}$ in., purple, very obscurely plicate; teeth $\frac{1}{4}-\frac{1}{2}$ in., hardly keeled. *Stamens* as of *C. speciosa*. *Stigmas* $\frac{1}{2}$ in., linear. *Capsule* $\frac{3}{4}$ by $\frac{1}{4}$ in., included in the corolla; stalk $\frac{2}{3}$ in.

3. **C. angustata**, Clarke; leaves elliptic acuminate entire glabrous coriaceous, calyx-tube elongate teeth small approximate lanceolate, corolla-tube elongate narrow lobes lanceolate.

UPPER ASSAM; Mishmee Mts., Griffith (Kew Distrib. n. 5838, 5639).

Calyx-tube $\frac{3}{4}$ by $\frac{1}{2}$ in., narrowed at the mouth; teeth $\frac{1}{10}$ in., terminal. *Corolla* 2 by $\frac{1}{2}$ in.; segments $\frac{1}{2}$ – $\frac{3}{4}$ in., acuminate. *Capsule* not ripe, seems likely to be narrow. —This may be a variety of *C. campanulacea*.

4. **C. puberula**, Clarke in Journ. Linn. Soc. xiv. 442; leaves elliptic acuminate minutely denticulate glandulose-puberulous on the nerves beneath, calyx subtruncate teeth small linear distant, corolla-limb subtruncate teeth small triangular acute.

SIKKIM HIMALAYA; Yakla, alt. 9–10,000 ft., Clarke.

Petioles glandular-pubescent. *Cymes* 1–4 in., 1–5-fl., slender. *Calyx* $\frac{1}{2}$ by $\frac{1}{2}$ in.; teeth $\frac{1}{2}$ in., subterminal. *Corolla* $1\frac{1}{4}$ by $\frac{1}{2}$ in., purple, plicate; lobes $\frac{1}{2}$ in. *Style* long, early exsert. *Capsule* $\frac{3}{4}$ by $\frac{1}{2}$ in., half-exsert from the corolla, stalk $\frac{1}{2}$ –1 in. —Perhaps an alpine var. of *C. speciosa* which grows fully as high up, but the flowers are much smaller.

SUBGENUS II. **Tripterosperrum**. *Flowers* (in the Indian species) fascicled. *Calyx* keeled. *Capsule* 2-valved or succulent, subindehiscent. *Seeds* wedge-shaped, triquetrous, almost winged on the angles, one face much narrower than either of the others.

5. **C. fasciculata**, Wall. Tent. Fl. Nep. 63. t. 47; leaves elliptic acuminate, calyx-teeth distant linear not half so long as the tube, corolla large purple, capsule 2-valved dry oblong short-stalked included in the corolla. *D. Don* in Trans. Linn. Soc. xvii. 518; Griseb. Gentian. 306, and in DC. Prodr. ix. 120; Bot. Mag. t. 4838; Clarke in Journ. Linn. Soc. ix. 442. *C. affinis*, Wall. Cat. 4370, partly.

KHASIA MTS., alt. 3–6000 ft., frequent, Wallich, &c.—DISTRIB. S. China.

Leaves 3 by 1 in. *Flowers* 3–1; sometimes pedicelled, with 2 foliaceous bracts under the flower. *Calyx-tube* $\frac{1}{2}$ by $\frac{1}{4}$ in., 5-keeled to the base, scarious between the keels; teeth $\frac{1}{4}$, linear, subterminal. *Corolla* $1\frac{1}{2}$ by $\frac{2}{8}$ in., plicate; lobes $\frac{1}{2}$ in., ovate, acute. *Capsule* 1 by $\frac{1}{2}$ in., stalk scarcely $\frac{1}{4}$ in. —The typical form here described is well-marked; but the starved forms with small flowers hardly differ from the next species by the shorter calyx-teeth and purple flowers.

6. **C. affinis**, Wall. Cat. 4370, partly; leaves cordate-lanceolate acuminate, calyx-teeth linear as long as the tube, corolla small white or greenish yellow, capsule 2-valved dry oblong short-stalked included in the corolla. *C. fasciculata*, Wall. Cat. 4369 A.

SIKKIM HIMALAYA, alt. 5–6000 ft.; frequent. KHASIA MTS., Wallich.

Closely resembling *C. fasciculata*; leaves rounded at the base. *Calyx-tube* $\frac{1}{2}$ in.; teeth more than $\frac{1}{4}$ in., subterminal. *Corolla* less than 1 by $\frac{1}{4}$ in. (in Wallich's example). *Capsule* $\frac{1}{2}$ by $\frac{1}{2}$ in.; stalk $\frac{1}{2}$ in. —The capsule is certainly dry, 2-valved; nevertheless it is to be feared that the species is merely a form of the next. The Javan *C. Blumei* (*Tripterosperrum trinerve*, Blume; DC. Prodr. ix. 121) differs apparently only in having solitary long-pedicelled flowers.

7. **C. japonica**, Sieb. & Zucc. Fl. Jap. Fam. Nat. ii. 36; leaves cordate-lanceolate, calyx-teeth linear as long as the tube, corolla greenish or yellowish, berry ellipsoid red succulent included or exsert from the corolla. Golowninia japonica, Maxim. in Bull. Acad. St. Petersb. iv. 251, t. 4.

SIKKIM HIMALAYA, alt. 7000 ft., J. D. H., Clarke.—DISTRIB. Japan, China, Formosa.

Leaves 3 by 1 in. *Calyx* $\frac{1}{4}$ – $\frac{1}{2}$ in.; teeth distant, excurrent below the margin, or subterminal. *Corolla* 1 – $1\frac{1}{4}$ by $\frac{1}{4}$ in., subtubular, plicate; lobes $\frac{1}{2}$ in., ovate, acute. *Stamens*, *style*, and *disc*, very nearly as of *C. speciosa*, but rather smaller. *Berry* $\frac{3}{4}$ by

$\frac{1}{2}$ in., ellipsoid, or $\frac{1}{2}$ by $\frac{3}{4}$ in., subglobose; completely exserted from the corolla, or half included (on the same branches); stalk often $1-1\frac{1}{2}$ in.

VAR. *luteo-viridis*; berry 1 by $\frac{3}{4}-1$ in., quite included or $\frac{1}{2}$ exsert oblong red, stalk $\frac{1}{2}-1$ in. *C. luteo-viridis*, *Clarke in Journ. Linn. Soc.* xiv. 443. *C. fasciculata*, *Griff. Itin. Notes*, p. 27, n. 420, and p. 127, n. 470. *Gentiana volubilis*, *Don Prodr.* 126.—Himalaya, alt. 5–8000 ft.; from Kumaon to Bhotan, common. Khasia Mts.; alt. 3–5000 ft., frequent.—This is the common *C. fasciculata* of the Himalaya of collectors; but the stalk of the berry is frequently more elongated, and the berry itself so short, that it appears inseparable from *C. japonica*; when much less succulent it runs into *C. affinis*. Wallich appears not to have distinguished it from *C. fasciculata*, as he gives the Himalaya for the habitat of *C. fasciculata*, which species is confined to Khasia.

VAR. *Championi*; leaves hardly acute long-petioled, corolla smaller narrower, berry $\frac{1}{4}$ in. diam. subglobose red exserted. *C. fasciculata*, *Thwaites Enum.* 204. *Tripterospermum Championi*, *Gardn. ms.*—Ceylon; *Gardner*, *Thwaites*.

9. GENTIANA, Linn.

Herbs, annual or perennial, or (*G. crassa*, Kurz) shrubby. Leaves opposite, bases often connate. Flowers axillary or terminal. Calyx tubular, terete or rarely keeled (spathaceous in *G. decumbens*); lobes 5–4. Corolla tubular, bell- or funnel-shaped; lobes 5–4, often with folds between the lobes. Stamens 5–4, attached in the middle or lower half of the tube, included, filaments linear somewhat flattened downwards; anthers oblong or ovate. Ovary 1-celled, placentæ but little intruded; style short or 0, except in *G. stylophora*, stigmas divergent. Capsule stalked or sessile, ellipsoid or oblong, compressed, separating into its 2 carpels, usually to the base. Seeds very many, small, globose or oblong, often trigonous, testa close or lax sometimes prominently reticulated.—Species 180, chiefly in the mountains of the Old World, with a few in the Andes, New Zealand, and Australia.

SECT. I. *Amarella*. Corolla not more than 1 in. at the time of expansion, without folds. Capsule included, sessile or shortly stalked. Seeds small, yellow-brown, numerous, subglobose; testa close, not reticulated.

* Corolla not fimbriate in the throat.

1. *G. Moorcroftiana*, Wall. Cat. 4390; leaves oblong or elliptic, corolla nearly 1 in. 4–5-merous tubular-funnel-shaped. *Griseb. Gentian.* 243, and in *DC. Prodr.* ix. 96, syn. excl.; *Clarke in Journ. Linn. Soc.* xiv. 433.

WESTERN HIMALAYA; Kashmir, Baltistan and Lahoul, alt. 8–12,000 ft., *Moorcroft*, *Falconer*, &c.

Stem 8–16 in., erect, 4-lineolate, branches ascending. Leaves 1 by $\frac{1}{2}$ in., narrowed below. Cymes in subterminal racemes; pedicels $\frac{1}{2}-1\frac{1}{2}$ in. Calyx-tube $\frac{1}{10}$ in.; lobes $\frac{1}{2}$ in., linear. Corolla (at time of expansion) $\frac{1}{2}-1$ in., up to the moment of expansion often short, blue in fruit enlarged often $1\frac{1}{2}$ in., funnel-shaped not campanulate, mouth $\frac{1}{2}$ in. diam. Capsule $\frac{2}{3}$ in., lanceolate; stalk $\frac{1}{2}$ in.—Measurements here taken from *Moorcroft's* example, the calyx-teeth are often even longer, $\frac{1}{2}$ by $\frac{1}{18}$ in.

VAR. *Falconeri*; flowers often 4-merous, calyx-teeth shorter broader often unequal opposite larger $\frac{1}{4}$ by $\frac{1}{6}$ in. *G. Falconeri*, *Clarke in Journ. Linn. Soc.* xiv. 433.—Kashmir, *Falconer*. The seeds do not differ from those of *G. Moorcroftiana*.

VAR. *Maddeni*; leaves narrowly lanceolate acute, expanded corolla often less than $\frac{1}{2}$ in.—Kumaon, alt. 10–12,000 ft., *Madden*, *Davidson*. Tibet, alt. 15,000 ft. (Piti?), *Strachey* & *Winterbottom*.

2. *G. aurea*, Linn.; Boiss. Fl. Orient. iv. 71; leaves oblong or elliptic, corolla $\frac{1}{4}-\frac{1}{2}$ in. 5-merous, tubular. *Griseb. Gentian.* 254, and in *DC. Prodr.* ix.

100. *G. involucrata*, *Fries in Act. Hafn.* x. 434, t. 1, fig. 2. *G. quinquefolia*, *Fl. Dan.* t. 344. *G. umbellata*, *Bieb. Fl. Taur. Cauc.* iii. 188. *G. azurea*, *Bunge in Nouv. Mém. Soc. Imp. Mosc.* i. 230, t. 10, fig. 3, not of *Griseb.* *G. Stoliczkaei*, *Clarke in Journ. Linn. Soc.* xiv. 433.

WESTERN TIBET; Baltisthan, alt. 10–14,000 ft.; *Thomson, &c.*—DISTRIB. Central Asia, and the whole Subarctic Zone.

Stem 4–18 in., erect, 4-lineolate or 4-angular, branches ascending. *Leaves* 1 by $\frac{1}{2}$ in., narrowed below. *Peduncle* $\frac{1}{2}$ –2 in., 1-flowered, in axillary and terminal fascicles. *Calyx-tube* $\frac{1}{2}$ in., lobes $\frac{1}{2}$ in., linear-spathulate, minutely serrulate in the Indian plant. *Corolla* bluish or yellowish, lobes ovate mucronate shorter than the tube; basal glands obsolete. *Capsule* $\frac{1}{2}$ in., oblong; stalk $\frac{1}{2}$ in.—The Indian plant differs from *G. aurea*, Linn. type, in the absence or obscurity of the glands at the base of the corolla-tube, agreeing thus with *G. umbellata*, Bieb. This character considered by *Grisebach* as of sectional value is probably hardly specific.

VAR. *holosteoides*; height $\frac{1}{2}$ –3 in., umbellate character of the inflorescence obscured. *G. holosteoides*, *Schott & Kotschy in Pl. Kotschy*, n. 285.—N. Kashmir, *Falconer*. Skardo; alt. 9100 ft., *Clarke*. DISTRIB. Taurus. The Skardo plant exactly agrees with *Kotschy's*.

3. ***G. Thomsoni***, *Clarke*; minute, leaves obovate-oblong, corolla $\frac{1}{6}$ – $\frac{1}{5}$ in. 4-merous funnel-shaped. *Gentiana* sp. 6, *Herb. Ind. Or. H. f. & T.*

WESTERN TIBET; Karakorum, Nubra alt. 17,000 ft., *Thomson*.

Stem 1 in.; branches numerous, ascending. *Leaves* $\frac{1}{2}$ – $\frac{1}{3}$ in. *Peduncles* $\frac{1}{4}$ –1 in., erect, 1-flowered, subsolitary. *Calyx-tube* $\frac{1}{16}$ in.; lobes $\frac{1}{16}$ in.; oblong or rhomboid. *Corolla-lobes* oblong, about as long as the tube.

** *Corolla fimbriate in the throat.*

4. ***G. borealis***, *Bunge in Nouv. Mém. Soc. Imp. Mosc.* i. 251, t. 10, fig. 2; erect, leaves oblong, pedicels short, corolla tubular 4-lobed terminal flower often 5-lobed.

WESTERN TIBET, alt. 12–14,000 ft.; *Gen. Munro*; LAHOUL, *Jaeschke*; N. KASHMIR to the Karakorum, common.—DISTRIB. N.W. America.

Stem 3–12 in., 4-lineolate, branches ascending. *Leaves* 1 by $\frac{1}{2}$ in., base hardly narrowed. *Pedicels* 0–1 in., mostly cymose on axillary peduncles. *Calyx-tube* $\frac{1}{20}$ in., lobes $\frac{1}{4}$ by $\frac{1}{16}$ in. *Corolla* pink-purple; tube $\frac{1}{2}$ in.; lobes $\frac{1}{8}$ in., ovate, mucronate. *Capsule* $\frac{1}{2}$ in., narrowly oblong; stalk $\frac{1}{12}$ in.—This has the habit of *G. aurea*.

5. ***G. tenella***, *Fries in Act. Hafn.* x. 436, t. 2, fig. 6; erect, leaves oblong or ovate, pedicels (many of them) long, corolla tubular 5-lobed. *Fl. Dan.* t. 318; *Griseb. Gent.* 248, and in *DC. Prodr.* ix. 98; *Clarke in Journ. Linn. Soc.* xiv. 434. *G. Koenigii*, *Gunn. Fl. Norv.* ii. 102. *G. glacialis*, *Thomas in Vill. Delph.* i. 532. *G. dichotoma*, *Pall. Fl. Ross.* ii. 110; *Gmel. Fl. Sibir.* iv. t. 51, fig. B. *G. tetragona*, *Roth Tent. Fl. Germ.* ii. 290. *G. nana*, *Wulf. in Jacq. Misc.* i. 161, t. 18, fig. 3; *Griseb. Gentian.* 249, and in *DC. Prodr.* ix. 98. *G. tristriata* and *pulmonaria*, *Turcz. in Flora 1834 Beibl.* i. 19. *G. pedunculata*, *Royle*; *G. Don Gen. Syst.* iv. 182. *Hippion longepedunculatum*, *Schmidt in Roem. Arch.* i. 21, t. 3, fig. 5. *Eurythalia pedunculata*, *D. Don in Trans. Linn. Soc.* xvii. 516, and *E. nana* and *glacialis*, *G. Don Gen. Syst.* iv. 188, with others.

KASHMIR and W. HIMALAYA, alt. 10–14,000 ft., common.—DISTRIB. Arctic and Alpine Europe and N. and Central Asia.

Stem 2–10 in., erect or straggling, 4-lineolate, branched. *Leaves* $\frac{1}{2}$ by $\frac{1}{4}$ in., lowest spatulate. *Pedicels* often 1–3 $\frac{1}{2}$ in., terminal, solitary. *Calyx-tube* hardly any; lobes $\frac{1}{2}$ by $\frac{1}{10}$ in., elliptic, often unequal. *Corolla-tube* $\frac{1}{2}$ by $\frac{1}{2}$ – $\frac{1}{3}$ in.; lobes $\frac{1}{2}$ in., elliptic. *Capsule* $\frac{3}{4}$ in., oblong-linear, sessile.—Alpine examples, with flowers only

half the size of the fully-developed plant, are frequent. The type specimen (n. 1024 Griff. Journ.) is altogether an average Himalayan example; *G. minutissima*, Boiss. (Fl. Orient. iv. 71) founded on this number is evidently described from some other plant. Koch says that *G. tenella* in Germany is 4-merous; the Himalayan examples are almost uniformly 5-merous. As to the synonyms, if *G. nana* specifically differs from *G. tenella*, it is found in the Himalaya.

VAR. *falcata*, Turcz.; Griseb. *Gentian.* 249; corolla-tube $\frac{1}{2}$ in. long and nearly as broad.—W. Himalaya. DISTRIB. Caucasus.

VAR. *sikkimensis*; stems weak flexuose, leaves scarcely $\frac{1}{2}$ in., peduncles mostly long terminal 1-flowered, expanded corolla scarcely $\frac{1}{2}$ in.—Sikkim; alt. 12,000 ft.; Yeumtung, J. D. H., *Elwes*.

SECT. 2. **Chondrophyllum** (*char. widened*). Corolla not more than 1 in., 5-lobed, tubular, with folds between the lobes. Capsule often exerted. Seeds small, globose oblong or falcate, usually trigonous, testa close, not (or most obscurely) reticulated. (See also *G. ornata*, var. n. 30.)

6. **G. recurvata**, Clarke; stems weak often branched, leaves remote ovate or oblong, pedicels scattered nodding in fruit, corolla twice as long as the calyx, capsule shortly obovoid compressed. *Gentiana* sp. 13, *Herb. Ind. Or. H. f. & T.*; sp. 6, Clarke in *Journ. Linn. Soc.* xiv. 434.

SIKKIM HIMALAYA; alt. 9–12,000 ft., J. D. H., &c.

Stems 2–6 in. Radical leaves $\frac{1}{2}$ by $\frac{1}{2}$ in., spatulate-ovate; cauline $\frac{3}{8}$ – $\frac{1}{2}$ in., sessile, often connate, flaccid. Pedicels $\frac{1}{4}$ in., nodding in bud, erect in flower, recurved in fruit. Calyx $\frac{1}{4}$ in.; lobes $\frac{1}{2}$ in., lanceolate, acute, entire, glabrous, always erect. Corolla $\frac{1}{2}$ – $\frac{3}{4}$ by $\frac{1}{8}$ – $\frac{1}{6}$ in., brilliant blue, folds fimbriate into linear-clavate blue laciniae. Capsule $\frac{1}{5}$ by $\frac{1}{8}$ – $\frac{1}{6}$ in., stalk as long as the corolla (at least in some cases). Seeds twice as long as broad, oblong or subfalcate, trigonous.

7. **G. aquatica**, Linn. *Amœn.* ii. 343; branches radical numerous weak little divided, cauline leaves small ovate or obovate marginate recurved, corolla less than $\frac{1}{2}$ in., capsule short-obovoid compressed. Bunge in *Nouv. Mém. Soc. Imp. Mosc.* i. 236, t. 9, fig. 6; Griseb. *Gentian.* 271, and in *DC. Prodr.* ix. 106; Ledeb. *Fl. Ross.* iii. 62. *G. riparia*, Karel. et Kiril. in *Bull. Soc. Imp. Mosc.* 1841, 706; Griseb. in *DC. Prodr.* ix. 186; Clarke in *Journ. Linn. Soc.* xiv. 434, *syn. excl.* *G. Ledebourii*, Reich. *Fl. Excurs.* 425. *G. prostrata*, Clarke, l.c., not of Haencke. *Hippion aquaticum*, Schmidt in *Roem. Arch.* i. 10. *Ericoila aquatica*, Borkh. in *Roem. Arch.* i. 27. *Ericala* (or *Erycala*) *aquatica*, G. Don *Gen. Syst.* iv. 192.

KASHMIR and WESTERN TIBET, alt. 13–16,000 ft.; Thomson, &c.—DISTRIB. N. Asia.

Branches 1–3 in. Radical leaves $\frac{1}{4}$ – $\frac{1}{2}$ in., ovate; cauline $\frac{1}{2}$ in., remote, usually obtuse, mucronate; margin hyaline, narrow. Pedicels $\frac{3}{8}$ – $\frac{1}{2}$ in., terminal, solitary. Calyx $\frac{1}{4}$ – $\frac{1}{2}$ in.; lobes $\frac{1}{2}$ in., lanceolate, acute, glabrous, entire, always erect. Corolla-tube hardly longer than the calyx, lobes short blue; folds bifid; fimbriae none. Capsule $\frac{1}{5}$ by $\frac{1}{8}$ – $\frac{1}{6}$ in.; stalk long, often $\frac{2}{3}$ in., hence capsule long-exsert. Seeds ellipsoid, trigonous, not much longer than broad.—*S. prostrata*, Haencke (as understood by Ledebour and Boissier, *Fl. Orient.* iv. 72), differs by having the capsule nearly twice as long; it was collected in Cabul (Griff. n. 1049), never in British India.

VAR. *Karelini*; calyx elongate, corolla $\frac{1}{2}$ – $\frac{3}{4}$ in. narrowly tubular. Griseb. in *DC. Prodr.* ix. 106. *G. prostrata*, Karel. & Kiril. in *Bull. Soc. Imp. Mosc.* 1841, 705, not of Haencke (?).—Karakoram, alt. 13–14,000 ft. *G. Karelini*, T. Thomson, &c. DISTRIB. Altai.—Stems 1–2 in. fewer and smaller than those of the type. The Karakoram examples agree closely with Karel. & Kiril's *G. prostrata*; but their description differs in the corolla twice as long as the calyx; whereas, in the Indian plants the calyx is $\frac{1}{2}$ in., as long as the corolla-tube.

8. *G. humilis*, Steven.; Bunge in *Nouv. Mém. Soc. Imp. Mosc.* i. 235; branches radical numerous weak little divided, cauline leaves small oblong or elliptic not recurved nor marginate, corolla less than $\frac{1}{2}$ in., capsule short-obovoid compressed. *Griseb. Gentian.* 272, and in *DC. Prodr.* ix. 106; *Ledeb. Fl. Ross.* iii. 63; *Boiss Fl. Orient.* iv. 72. *G. aquatica*, *Pall. Fl. Ross.* ii. t. 97, fig. 2, not of Linn. *Ericala humilis*; *G. Don Gen. Syst.* iv. 192.

WESTERN TIBET; Kárákorum, alt. 13-16,000 ft.; Thomson, &c.—DISTRIB. CAUCASUS, N. Asia.

Closely resembling *G. aquatica*. Corolla $\frac{1}{2}$ by $\frac{1}{10}$ in., usually white, sometimes blue. Capsule $\frac{3}{8}$ - $\frac{1}{2}$ in.

VAR. *evolutior*; corolla $\frac{1}{2}$ by $\frac{1}{4}$ in. fine blue, capsule $\frac{1}{4}$ in.—Karakorum; Thomson, &c.

9. *G. pygmæa*, Clarke; stem $\frac{1}{4}$ -1 in. simple 1-flowered, leaves minute remote ovate, corolla $\frac{1}{4}$ - $\frac{1}{2}$ in. tubular.

WESTERN TIBET; Karakorum, Nubra, Thomson.

Leaves $\frac{3}{8}$ - $\frac{1}{2}$ in., ovate or obovate, margined. Calyx shorter than the corolla-tube; lobes lanceolate, acute, erect. Corolla blue; folds bifid; fimbriæ 0.—This looks like an excessively reduced form of *G. aquatica*, Linn.

VAR. *acuminata*; leaves imbricate acuminate.—Kashmir; Palgam, alt. 13,500 ft. Clarke.—Some of the examples are only $\frac{1}{2}$ in. high, the expanded corolla $\frac{1}{2}$ in. long.

10. *G. squarrosa*, *Ledeb. Fl. Ross.* iii. 64 and *Ic. Pl. Fl. Ross.* t. 14; branches radical numerous weak little divided, cauline leaves small obovate recurved, corolla less than $\frac{1}{2}$ in., capsule short-obovoid compressed. Bunge in *Nouv. Mém. Soc. Imp. Mosc.* i. 234, t. 9, fig. 3; *Griseb. Gentian.* 273, and in *DC. Prodr.* ix. 107. *Ericala squarrosa*, *G. Don Gen. Syst.* iv. 191.

ALPINE HIMALAYA and WESTERN TIBET, alt. 10-15,000 ft.; Karakorum, Thomson, &c.; Sikkim; J. D. H., &c.—DISTRIB. Dahuria, Siberia.

Closely resembling *G. aquatica*, Linn., and hardly separable except by the calyx-teeth, which are ovate, mucronate, recurved even more strongly than in Ledebour's figure. The leaves are scarcely marginate.

11. *G. infelix*, Clarke; branches radical numerous small woody, leaves very small ovate, calyx-teeth ovate erect, corolla $\frac{1}{2}$ in. tubular, capsule oblong subsessile. *Gentiana*, *Herb. Ind. Or. H. f. & T.* n. 9 and 10. Clarke in *Journ. Linn. Soc.* xiv. 435.

SIKKIM HIMALAYA; Yeumtong and Kankola, alt. 14-15,000 ft.; J. D. H. KUMAON; Barji Kang, alt. 14,700 ft., *Strachy & Winterbottom*.

Perennial; branches 1-1 $\frac{1}{2}$ in., black, leafless, wiry below, leafy upwards, 1-flowered. Leaves $\frac{1}{2}$ - $\frac{1}{2}$ in., herbaceous, approximate, not margined. Flower subsessile. Calyx $\frac{3}{8}$ - $\frac{1}{2}$ in.; lobes $\frac{1}{16}$ - $\frac{1}{12}$ in., obtuse, glabrous. Corolla-lobes shorter than the tube; folds subentire; fimbriæ 0. Capsule $\frac{1}{2}$ by $\frac{1}{2}$ in. Seeds oblong-ellipsoid, trigonous, twice as long as broad; testa close, smooth.

12. *G. quadrifaria*, Blume *Bijd.* 847; radical leaves $\frac{1}{2}$ -1 $\frac{1}{2}$ in. ovate or lanceolate, cauline smaller coriaceous often marginate, calyx-lobes lanceolate acute rigid often subquarrose, corolla $\frac{1}{4}$ - $\frac{1}{2}$ in. *Griseb. Gentian.* 276, and in *DC. Prodr.* ix. 108. *G. pedicellata*, *Wall. Cat.* 4394; *Griseb. Gentian.* 273, and in *DC. Prodr.* ix. 107; *Wight Ic.* t. 1328; Clarke in *Journ. Linn. Soc.* ix. 435. *G. orbiculata*, *Heyne*; *Wall. Cat.* 4395. *G. abscondita*, *Zenk. Pl. Ind.* 11, t. 13. *G. zeylanica*, *Griseb. Gentian.* 274, and in *DC. Prodr.* ix. 108. *G. laxicaulis*, *Zoll.*; *Miq. Fl. Ind. Bat.* ii. 568. *G. pumila*, *Griff. Ic. Pl. As.* t. 384, fig. 2. *Gentiana* sp. n. 749, *Griff. Itin. Notes*, 151. *Ericala pedicellata*, *D. Don in Trans. Linn. Soc.* xvii. 514. *E. quadrifaria*, *procumbens* and *orbiculata*, *G. Don Gen. Syst.* 190, 192, 193.

HIMALAYA, alt. 3–10,000 ft.; from Kashmir to Bhotan, common. KHASIA Mts.; alt. 3–5000 ft., common. Mts. of the DECCAN PENINSULA. CEYLON; common.—DISTRIB. Burma, Java, China.

Biennial or annual; stems usually numerous, 1–4 in., decumbent; sometimes erect, 4–10 in., simple, corymbose upwards. *Radical leaves* often rosulate, persistent; cauline $\frac{1}{4}$ – $\frac{1}{2}$ in., ovate and lanceolate, mucronate, often squarrose. *Cymes* usually 3–5-flowered; pedicels 0– $\frac{1}{2}$ in. *Calyx* shorter than the corolla-tube, glabrous. *Corolla* blue, or yellowish-green; folds small, pale, bifid or emarginate; fimbriæ 0. *Capsule* $\frac{1}{5}$ by $\frac{1}{8}$ – $\frac{1}{6}$ in., ellipsoid or ovoid, usually subexsert, i.e. stalk $\frac{1}{4}$ – $\frac{1}{3}$ in. *Seeds* (in the Southern form) globose or obovoid, trigonous, smooth; in the Himalayan form narrower, ellipsoid.—The Indian and Java forms have very shining cartilaginous leaves; when decumbent they are called *G. abscondita*, Zenk. or *G. zeylanica*, Griseb. or *G. laxicaulis*, Zoll.; when more erect they are *G. quadrifaria*, Blume, or *G. orbiculata*, Wall. The abundant N. Indian plant is more herbaceous with green not shining leaves, and is *G. pedicellata*, Wall. or *Ericala procumbens*, Don. A form (?) with elongate, strict stems, and cauline leaves few, oblong, adpressed, flowers in early spring in Sikkim, and is doubtfully referred to *G. pedicellata* by Sir J. D. Hooker.

VAR. *pilosula*; leaves minutely ciliate-pubescent, calyx pilose.—Sikkim, alt. 6–8000 ft.; J. D. H., &c.

13. *G. decemfida*, Ham.; Don Prodr. 127; radical leaves ovate mucronate cauline silvery marginate, flowers lateral and terminal short-pedicelled, corolla $\frac{1}{3}$ in. little exceeding the calyx, capsule shortly ellipsoid subincluded. Wall. Cat. 4392; Griseb. *Gentian.* 274, and in DC. Prodr. ix. 107. *G. Royleana*, Wall. Cat. 4393. *Ericala decemfida*, D. Don in Trans. Linn. Soc. xvii. 514. *E. Royleana*, G. Don Gen. Syst. iv. 192.

N.W. and CENTRAL HIMALAYA, from the Punjab to Nepal, alt. 1–8000 ft.; Wallich, Madden, &c.

Annual; stems 1–9 in., erect, with ascending branches. *Radical leaves* 1 by $\frac{1}{2}$ in., subsessile; cauline $\frac{1}{4}$ – $\frac{1}{2}$ in., cartilaginous; uppermost lanceolate, minutely ciliate-pubescent on the margin. *Pedicels* 0– $\frac{1}{5}$ in. *Calyx* $\frac{1}{3}$ in.; lobes $\frac{1}{6}$ in., narrow-lanceolate, glistening. *Corolla* (in Wallich's examples) not longer than the calyx, sometimes half as long again; folds bifid; fimbriæ 0. *Capsule* $\frac{1}{5}$ by $\frac{1}{8}$ – $\frac{1}{6}$ in., stalk $\frac{1}{4}$ in. *Seeds* ellipsoid, very small, obscurely trigonous; testa close, smooth, minutely reticulated.

VAR. *aprica*; stems strict, inflorescence subpaniculate, pedicels often $\frac{1}{4}$ in., corolla $\frac{1}{3}$ – $\frac{2}{3}$ in. often twice as long as the calyx. *G. aprica*, Dene. in Jacquem. Voy. Bot. 112, t. 118; Griseb. in DC. Prodr. ix. 107.—Subtropical Punjab—Himalaya, alt. 1–3000 ft.; Siwaliks, Dehra Doon, Hooshiapore; Griffith, Edgeworth, &c. Uppermost leaves usually ciliate-pubescent on the margin; capsule included.

14. *G. argentea*, Royle; Griseb. *Gentian.* 275, and in DC. Prodr. ix. 107; radical leaves lanceolate mucronate cauline silvery marginate, flowers mostly terminal subcapitate, corolla $\frac{1}{3}$ in. equalling or exceeding the calyx, capsule ellipsoid subincluded. *Ericala argentea*, D. Don in Trans. Linn. Soc. xvii. 512.

KASHMIR and N.W. HIMALAYA, alt. 8–12,000 ft.; Royle, Thomson, &c.—DISTRIB. Afghanistan.

Stems 1–4 in., erect, branched. *Radical leaves* 1 by $\frac{1}{2}$ in.; uppermost ovate or oblong, falcate, glabrous, often closely investing the flower-heads. *Capsule* more than $\frac{1}{4}$ by $\frac{1}{8}$ in., stalk $\frac{1}{8}$ in. *Seeds* as of *G. decemfida*, from which this species is hardly distinguishable.

15. *G. micans*, Clarke; stems very numerous short, radical leaves small ovate cauline silvery marginate, corolla $\frac{1}{3}$ in., capsule oblong often exsert. *G. argentea*, var. β , Clarke in Journ. Linn. Soc. xiv. 436. *Gentiana* sp. 19, Herb. Ind. Or. H. f. & T.

SIKKIM HIMALAYA; Phullong, alt. 15,000 ft., J. D. H.

Annual; forming dense tufts 1-2½ in. diam.; branches 10-30 from the root, little divided. Radical leaves ½ in., sessile; cauline leaves ½ in., lanceolate, imbricate, cartilaginous. Flowers terminal, sessile, solitary, blue. Calyx ¼-½ in.; lobes ¼-½ in., narrowly lanceolate, rigid, erect, glabrous. Corolla tubular, folds bifid; fimbriæ 0. Capsule ¼ by ½ in., stalk sometimes ¾ in., sometimes but ¼ in.; seeds as of *G. decemfida*.

16. *G. capitata*, Ham. in *Don Prodr.* 126; stem simple erect naked below, leaves ovate or oblong mucronate marginate, flowers capitate, capsule globose compressed subincluded. *Griseb. Gentian.* 275, and in *DC. Prodr.* ix. 107; *Clarke in Journ. Linn. Soc.* xiv. 436. *G. marginata*, Wall. *Cat.* 4391, not of *Griseb.* *G. cephalodes*, *Edgew. in Trans. Linn. Soc.* xx. 84; *Thoms. & Bacon in Hook. Lond. Journ. Bot.* iv. 637, and *G. Baconi*, t. 20.—*Gentiana* sp., *Griff. Ic. Pl. As.* t. 384, fig. 1.

TEMPERATE HIMALAYA, alt. 4-12,000 ft.; from Kumaon to Bhotan; *Wallich, Griffith, &c.*

Stems 1-4 in., often naked at the time of flowering except the leaves mixed in the flower-head, sometimes leafy in the upper half. Leaves ½ by ¼-½ in., thick, somewhat shining, falcate. Calyx ¼ in.; lobes ½ in., oblong, acute, scarious-margined, glabrous. Corolla ¼-½ in., blue or white, folds emarginate; fimbriæ 0. Capsule ½ in. long and broad; stalk sometimes ½ in. Seeds very small, ellipsoid, nearly twice as long as broad, trigonous, smooth, scarcely reticulated.

VAR. *Andersoni*; stem naked below, upper cauline leaves petioled ovate or elliptic herbaceous not marginate. *G. Andersoni*, *Clarke in Journ. Linn. Soc.* xiv. 436. *Ericala capitata*, *D. Don in Trans. Linn. Soc.* xvii. 512.—From Kumaon to Bhotan, alt. 5-8000 ft.; *J. D. H., T. Anderson, &c. Khasia; Simons, &c.* Probably only the fully developed state of *G. capitata*; having sometimes stout subquadrangular stems, and leaves 1½ by ¾-1 in. *D. Don* seems to have got finer specimens for his description in *Trans. Linn. Soc.* than when he founded the species in *Prodr. Fl. Nepal.*

VAR. *strobiliformis*; stem ¼-1 in., densely clothed with imbricated margined often round leaves, flowers solitary or few. *Gentiana* sp. n. 707, *Griff. Itin. Notes.* 147.—Himalaya, alt. 10-12,000 ft., from Kumaon to Bhotan; *Griffith, &c.*

17. *G. carinata*, *Griseb. Gentian.* 304, and in *DC. Prodr.* ix. 109; stem erect branched, radical leaves persistent oblong-lanceolate acute marginate, calyx-teeth shorter than the tube lanceolate acute erect, corolla ½ by ½ in. fimbriate, seeds small ellipsoid subtrigonous smooth not winged. *G. marginata*, *Clarke in Journ. Linn. Soc.* xiv. 437, not of *Griseb.* nor of *Wall.* *Eurythalia carinata*, *D. Don in Trans. Linn. Soc.* xvii. 516. *Ericala carinata*, *G. Don Gen. Syst.* iv. 189.

KASHMIR and N.W. HIMALAYA, alt. 8-12,000 ft., frequent; *Royle, Falconer, &c.*

Annual; stems 1-6 in. Radical leaves 1¾ by ½ in., sessile, very acute, sub-3-nerved; cauline similar, smaller, not much falcate except those next the flowers. Flowers clustered, lateral and terminal, subsessile. Calyx-tube ¼ in.; lobes ½ in., acuminate. Corolla tubular, narrowly funnel-shaped upwards; folds bifid or subentire. Capsule ½ by ¼ in., ellipsoid, compressed; stalk 0-½ in. Seeds altogether as of *Chondrophyllum*; *Grisebach* puts this in a section with winged seeds, but he does not appear to have seen these.

VAR. *marginata*; leaves more crowded herbaceous falcate less acuminate, calyx-teeth falcate sometimes obovate acute, corolla without fimbriæ. *G. marginata*, *Griseb. Gentian.* 275, and in *DC. Prodr.* ix. 108, not of *Wall.* *Ericala marginata*, *D. Don in Trans. Linn. Soc.* xvii. 513.—Kashmir, alt. 11-14,000 ft.; *Falconer, Thomson, &c.* Distrib. Kashgar.

VAR. *intermedia*; leaves as of *G. carinata* type, corolla without fimbriæ.—Kashmir, *Falconer.* These are finely-developed typical *G. carinata* with very acute straight leaves, and large corollas absolutely without fimbriæ (as often occurs).

18. **G. coronata**, *Royle Ill. t. 68, fig. 1*; stem short with spreading branches, leaves lanceolate acute, cyme terminal subcapitate, calyx-teeth ovate-mucronate erect, corolla $\frac{1}{2}$ by $\frac{1}{4}$ in. fimbriate. *Griseb. Gentian. 304*, and in *DC. Prodr. ix. 109*. *Eurythalia coronata, D. Don in Royle Ill. 278*, and in *Trans. Linn. Soc. xvii. 515*. *Ericala coronata, G. Don Gen. Syst. iv. 193*.

N. W. HIMALAYA; Kedarkanta, *Royle*.

Only known from *Royle's* figure, according to which it differs from *G. carinata* by the wider subcampanulate corolla.

19. **G. Hugelii**, *Griseb. in DC. Prodr. ix. 108?*; stem short-branched leafy many-flowered, leaves elliptic obtuse, calyx-teeth shorter than the tube elliptic obtuse, corolla $\frac{1}{2}$ by $\frac{1}{8}$ in. fimbriate, seeds small ellipsoid subtrigonus smooth not winged.

WESTERN TIBET, *Hugel*; Zanskar, alt. 8-10,000 ft., *Thomson*.

Stem 1-3 in. Leaves $1\frac{1}{4}$ by $\frac{1}{2}$ in., upper cauline smaller obovate obtuse. Otherwise as *G. carinata*.—Identified with *G. Hugelii* from *Grisebach's* description, which agrees very well except as to the testa which he describes as winged, whereas in *Thomson's* plant it is close, as in other species of *chondrophyllum*.

20. **G. nudicaulis**, *Kurz in Journ. As. Soc. 1873, pt. ii. 235*; stem erect leafless downwards when flowering, leaves lanceolate, flowers capitate or closely paniced, corolla $\frac{3}{4}$ in. much exceeding the calyx. *Clarke in Journ. Linn. Soc. xiv. 437*.—*Gentiana* sp. 16, *Herb. Ind. Or. H. f. & T*.

KHASIA MTS., *Griffith* (Kew Distrib. n. 5819), &c. BRITISH BURMA, alt. 4-7000 ft.; Nattoung, *Kurz*; Moolee, *Lobb, Parish*.

Stem 2-10, erect, simple below. Leaves 2 by $\frac{1}{2}$ in., sessile, sub-3-nerved, obscurely margined. Cymes $2\frac{1}{2}$ in. diam. in Khasia examples, dense-fl'd.; much smaller, capitate (in Burmese). Calyx-tube $\frac{1}{2}$ in.; teeth $\frac{1}{4}$ in., lanceolate, acute, erect, scarious-margined. Corolla tubular, often nearly twice as long as the calyx, blue, plicate; fimbriæ 0 in *Kurz's* example at Kew; said to be present by C. B. Clarke *l. c.* Capsule nearly $\frac{1}{2}$ by $\frac{1}{8}$ in., ellipsoid, compressed; stalk $\frac{1}{4}$ - $\frac{1}{2}$ in. Seeds small, ellipsoid, nearly twice as long as broad, trigonous; testa close, smooth.

SECT. III. **Pneumonanthæ**. Corolla 1 in. or more ($\frac{3}{4}$ in. in *G. crassa* and *sikkimensis*), 5-lobed with folds between the lobes; fimbriæ 0. Seeds globose, not winged; testa very lax, reticulated, glistening, white.

* Flowers terminal, capitate; calyx-lobes very unequal.

21. **G. crassa**, *Kurz in Journ. As. Soc. 1873, pt. ii. 235*; shrubby, leafless downwards, leaves broadly lanceolate, corolla $\frac{3}{4}$ by $\frac{1}{5}$ in., tubular. *Clarke in Journ. Linn. Soc. xiv. 440*.

PEGU; Nattoung Summit, *Kurz*. MOULMEIN; *Parish*.

Stem 12-18 in., woody, terete, branched. Leaves 2 by $\frac{1}{3}$ - $\frac{2}{3}$ in., attenuated below, coriaceous, margins drying subcrenulate, connate at base into a short cylindric sheath round the stem. Flowers 4-16, capitate. Calyx-tube $\frac{1}{4}$ in.; lobes $\frac{1}{6}$ - $\frac{1}{5}$ in., linear or ovate, foliaceous, often 3 linear 2 foliaceous. Capsule $\frac{1}{2}$ by $\frac{1}{8}$ in.; stalk $\frac{1}{4}$ - $\frac{1}{2}$ in.

22. **G. sikkimensis**, *Clarke*; stems decumbent, radical leaves orbicular or elliptic obtuse, cauline elliptic or oblong, corolla $\frac{3}{4}$ by $\frac{1}{5}$ in. tubular-funnel-shaped. *Gentiana* sp. n. 32 b., *Herb. Ind. Or. H. f. & T*. *Gentiana* sp. n. 31, *Clarke in Journ. Linn. Soc. xiv. 439, partly*.

SIKKIM, alt. 10-14,000 ft., common; *J. D. H., &c.*

Branches 1-8 in., herbaceous, 1-3 from the same root. Radical leaves $\frac{1}{2}$ in., persistent at flowering time; cauline leaves 1 in., distant, uppermost enclosing the heads. Flowers 2-10, capitate. Calyx-tube $\frac{1}{3}$ in.; lobes $\frac{1}{4}$ in., linear or elliptic, foliaceous.

often 3 linear 2 elliptic. *Corolla* $\frac{3}{4}$ –1 in., not contracted at the mouth. *Capsule* $\frac{1}{2}$ – $\frac{3}{4}$ by $\frac{1}{2}$ in.; stalk $\frac{1}{4}$ – $\frac{3}{4}$ in.—Heads flowers and capsules exceedingly like those of *G. crassa*.

23. **G. Elwesii**, Clarke; stems erect, radical leaves elliptic subacute, cauline elliptic or oblong, corolla $1\frac{1}{2}$ by $\frac{1}{2}$ – $\frac{3}{4}$ in. inflated. *Gentiana* sp. 32, *Herb. Ind. Or. H. f. & T.* *Gentiana* sp. n. 31, Clarke in *Journ. Linn. Soc.* xiv. 439, partly.

SIKKIM HIMALAYA, alt. 13–15,000 ft.; Yeumtong and Lachoong, J. D. H., Elwes.

Possibly a form of *G. sikkimensis*, but among the abundant material of that species, all have stems curved, heads not erect, basal leaves very obtuse, and corolla funnel-shaped. The corolla in *G. Elwesii* is inflated in the middle, somewhat contracted at the mouth, resembling that of the typical *Pneumonanthea*, and considerably larger than in any example of *G. sikkimensis*.

** Branches 1-flowered or stem simple (1–4-fld. in *G. venusta* and *nubigena*).

24. **G. depressa**, Don *Prodr.* 125; stems very short or 0, leaves widely elliptic subacute, calyx-lobes ovate subacute marginate, intervening sinus very narrow, corolla $1\frac{1}{4}$ by $\frac{3}{4}$ in. tubular-campanulate. *Wall. Cat.* 4387; *Griseb. Gentian.* 269, and in *DC. Prodr.* ix. 109; Clarke in *Journ. Linn. Soc.* xiv. 438, *syn. excl.* *Pneumonanthea depressa*, D. Don in *Trans. Linn. Soc.* xvii. 511. *Ericala depressa*, *G. Don Gen. Syst.* iv. 189.

CENTRAL AND EASTERN HIMALAYA; NEPAL, Wallich; SIKKIM, Elwes.

Branches 0–2 in., several or 1 from one root; barren branches short densely imbricated with leaves, fertile branches 0–2 in., with small leaves or naked below and a terminal tuft of leaves. *Leaves* $\frac{3}{4}$ by $\frac{1}{2}$ in., sessile. *Flowers* solitary, sessile, blue. *Calyx-tube* $\frac{1}{2}$ in., campanulate; lobes $\frac{1}{4}$ in. *Corolla-lobes* $\frac{1}{2}$ in., ovate, acute, erect. *Capsule* $\frac{1}{2}$ by $\frac{1}{2}$ in., stalk 0– $\frac{1}{2}$ in.

25. **G. cachemirica**, Dene. in *Jacquem. Voy. Bot.* iii. t. 117; branches often elongate, leaves elliptic or oblong mucronate, calyx-lobes spatulate-oblong acute, intervening sinus wide, corolla 1– $1\frac{1}{4}$ by $\frac{1}{2}$ in. tubular-campanulate. *Griseb. in DC. Prodr.* ix. 109. *G. stipitata*, Edgew. in *Trans. Linn. Soc.* xx. 84.

WESTERN HIMALAYA, from Kashmir to Kumaon, alt. 9–13,000 ft.; Falconer, Royle, &c.

Branches 0–6 in., leafy, often numerous from the root. *Radical leaves* 1 by $\frac{1}{2}$ in., obovate-oblong, acute; cauline $\frac{1}{2}$ – $\frac{3}{4}$ in. *Flowers* solitary, sessile, blue. *Calyx-tube* $\frac{1}{2}$ in., campanulate; lobes $\frac{1}{4}$ in. *Corolla-lobes* $\frac{1}{2}$ in., ovate, acute, erect. *Capsule* $\frac{1}{2}$ by $\frac{1}{2}$ in.; stalk $\frac{1}{2}$ –1 in.—The capsule-stalk in an apparently ripe example of Edgeworth's is only $\frac{1}{8}$ in.; the length is not a safe specific character in this species or its allies. Numerous examples, stemless or nearly so, can hardly be distinguished from *G. depressa*, except by the wide sinus between the calyx-teeth.

26. **G. amœna**, Clarke; branches numerous short densely leafy, leaves obovate marginate obtuse, calyx-lobes broadly obovate marginate obtuse, corolla $\frac{3}{4}$ –1 by $\frac{1}{2}$ – $\frac{3}{4}$ in. campanulate. *Gentiana* sp. n. 30, *Herb. Ind. Or. H. f. & T.* *Gentiana* sp. 25, Clarke in *Journ. Linn. Soc.* xiv. 438.

SIKKIM HIMALAYA, alt. 14–18,000 ft.; Samdong, Momay, and Donkiab, J. D. H.

Tufted; stems 0–2 in., numerous, branched; barren branches succulent with sub-remote smaller leaves. *Leaves* $\frac{3}{4}$ in., densely imbricated (on the fertile branches), margin glistening. *Calyx* $\frac{1}{4}$ in.; lobes $\frac{1}{8}$ in., truncate or submarginate; margin glistening. *Corolla-lobes* $\frac{1}{2}$ in., ovate, subacute, erect. *Capsule* $\frac{1}{2}$ – $\frac{3}{4}$ by $\frac{1}{2}$ in.; stalk $\frac{1}{4}$ in.

27. **G. phyllocalyx**, *Clarke*; stems solitary suberect 1-flowered, leaves obovate obtuse not marginate, calyx-lobes large resembling the leaves, corolla $1\frac{1}{4}$ – $1\frac{3}{4}$ by $\frac{1}{2}$ – $\frac{3}{8}$ in. tubular inflated. *Gentiana* sp. n. 26, *Clarke in Journ. Linn. Soc.* xiv. 439.

SIKKIM HIMALAYA, alt. 13–15,000 ft.; Kankola and Lachen, *J. D. H.*

Stems 1–5 in. Radical leaves $\frac{3}{4}$ by $\frac{1}{2}$ in., obovate, obtuse, herbaceous, sub-1-nerved, persistent at fruiting time; cauline similar, rather smaller, remote. Calyx-lobes $\frac{1}{2}$ – $\frac{1}{2}$ in., elliptic, green, not marginate. Corolla blue, somewhat contracted at the mouth. Capsule $\frac{3}{4}$ by $\frac{1}{4}$ in.; stalk often 1 in.—Has larger flowers, and very much larger calyx-lobes, than *G. venusta*.

28. **G. venusta**, *Wall. Cat.* 4389; stemless or nearly so, leaves elliptic or obovate obtuse, calyx-lobes small oblong acute, corolla 1 by $\frac{1}{4}$ – $\frac{1}{2}$ in. tubular. *Griseb. Gentian.* 276, and in *DC. Prodr.* ix. 109; *Clarke in Journ. Linn. Soc.* xiv. 439. *Ericala venusta*, *G. Don Gen. Syst.* iv. 189.

ALPINE WESTERN HIMALAYA, from Kashmir to Kumaon, alt. 11–14,000 ft.; *Blinkworth, Gen. Munro, &c.*

Stems 0, or 3 in., prostrate: flowers 1–3 subsessile on the short, densely leafy, annual shoots. Leaves $\frac{1}{4}$ – $\frac{1}{2}$ in. Calyx-tube $\frac{1}{4}$ in., lobes $\frac{1}{8}$ – $\frac{1}{4}$ in., linear or oblong, sinus intervening wide. Capsule $\frac{1}{2}$ – $\frac{3}{4}$ in. by $\frac{1}{4}$ – $\frac{1}{2}$ in.

29. **G. tubiflora**, *Wall. Cat.* 4388; stemless or nearly so, leaves imbricate ovate or elliptic acute, calyx-teeth ovate-lanceolate acute, corolla 1 by $\frac{1}{4}$ in. tubular. *Griseb. Gentian.* 277, and in *DC. Prodr.* ix. 110. *Ericala tubiflora*, *G. Don Gen. Syst.* iv. 189.

ALPINE HIMALAYA; Nepal, *Wallich*; WESTERN TIBET, *Munro*; Sikkim, alt. 14–16,000 ft., *J. D. H.*

Stems $\frac{1}{4}$ –1 in. Leaves $\frac{1}{4}$ – $\frac{1}{2}$ in. Calyx-tube $\frac{1}{2}$ in.; lobes $\frac{1}{8}$ in. Corolla-lobes $\frac{1}{8}$ – $\frac{1}{2}$ in., triangular, erect. Capsule $\frac{1}{2}$ by $\frac{1}{2}$ in.; stalk 1– $1\frac{3}{4}$ in.—The fruiting examples are very distinct from *G. venusta* by the long-exsert capsule; the flowering are hardly separable by the more acute leaves and calyx-teeth.

30. **G. ornata**, *Wall. Cat.* 4386; branches many from the root elongate leafy 1-flowered, cauline leaves oblong or sublinear acute, calyx-lobes oblong or linear, corolla 1– $1\frac{3}{4}$ in. tubular funnel-shaped. *Griseb. Gentian.* 277, and in *DC. Prodr.* ix. 110; *Bot. Mag.* t. 6514. *Pneumonanthe ornata*, *G. Don Gen. Syst.* iv. 194.

ALPINE CENTRAL and EASTERN HIMALAYA, alt. 11–15,000 ft.; Nepal, *Wallich*; Sikkim, *J. D. H., &c.*, common.

Branches 1–5 in., curved. Radical leaves 0 or inconspicuous at flowering time; cauline $\frac{1}{4}$ – $\frac{3}{4}$ by $\frac{1}{8}$ – $\frac{1}{6}$ in., acute; bases connate into a short tube. Calyx-tube $\frac{1}{2}$ in.; lobes $\frac{1}{4}$ in.; sinus wide. Corolla $\frac{1}{2}$ in. diam. (in *Wallich's* example); lobes $\frac{1}{2}$ in., triangular, acute, erect. Capsule $\frac{1}{2}$ by $\frac{1}{2}$ in.; stalk $\frac{1}{4}$ – $1\frac{1}{2}$ in.—The abundant material shows the capsule (fully ripe) often included, and nearly as often far exserted.

VAR. *metantha*; barren shoots with minute leaves, corolla $\frac{1}{2}$ – $\frac{1}{2}$ in.—Sikkim; *Jongri*, alt. 13,000 ft., *Clarke*.—Leaves of the barren shoots $\frac{1}{2}$ in., imbricate, recurved (as in *G. humilis* or *squarrosa*), of the flowering shoots nearly as in *G. ornata*. Calyx-tube $\frac{1}{2}$ in., lobes $\frac{1}{2}$ in., not so much reduced as the corolla. Capsule $\frac{1}{4}$ in., subincluded in the corolla-tube. Testa white, lax, altogether as of *G. ornata*. A very dubious plant.

31. **G. nubigena**, *Edgew. in Trans. Linn. Soc.* xx. 85; leaves oblong-linear, calyx-lobes oblong much shorter than the tube with wide sinus intervening, corolla $1\frac{1}{2}$ by $\frac{2}{3}$ in. funnel-shaped.

ALPINE HIMALAYA, alt. 16–18,000 ft.; from Kashmir to Sikkim; *Edgeworth, Thomson, J. D. H., &c.*

Stems 0-6 in., suberect, usually 1-2 flowering, and 1-2 barren from the same root. Lower leaves $2\frac{1}{2}$ by $\frac{1}{2}$ in.; cauline shorter, connate at base into a short tube. Flowers often 1-3 on each branch, shortly pedicellate or subspicate. Calyx-tube $\frac{1}{2}$ in., teeth $\frac{1}{2}$ in.; sinus often plicate. Corolla-lobes $\frac{1}{2}$ in. acute. Capsule 1 by $\frac{1}{4}$ in., with the stalk $\frac{1}{4}$ - $\frac{1}{2}$ in., included.

VAR. *parviflora*, Gentiana 1 by $\frac{1}{4}$ in. subtubular. Gentiana sp. n. 39, *Herb. Ind. Or. H. f. & T.*—Sikkim, alt. 17,000 ft.; Kinchinjhow, J. D. H.—This again is a doubtful plant; it appears to have been collected with *G. nubigena*.

SECT. IV. **Kurroo**. Stoutish herbs. Flowers racemose or spicate. Corolla 1 in. or more, 5-lobed with folds between the lobes; fimbriæ 0. Seeds oblong trigonous or falcate, acute or subcaudate, not winged; testa close, not (or minutely obscurely) reticulated.

32. **G. Kurroo**, Royle *Ill. t.* 68, fig. 2; leaves oblong or linear, flowers solitary or few racemose, calyx-lobes subequal linear, corolla 2 by $\frac{3}{4}$ in. Griseb. *Gentian.* 304, and in *DC. Prodr.* ix. 110; Clarke in *Journ. Linn. Soc.* xiv. 440; *Bot. Mag.* t. 6470. *Pneumonanthe Kurroo*, D. Don in Royle *Ill.* p. 278, and in *Trans. Linn. Soc.* xvii. 509.

KASHMIR and N.W. HIMALAYA, alt. 5-11,000 ft., common; Royle, &c.

Rootstock stout, perennial: flowering stems 2-12 in., simple. Radical leaves 3 by $\frac{1}{2}$ in., tufted; cauline 1 in., linear, connate at the base into a tube. Flowers 1-4 on each stem, sometimes truly racemed, more often an uppermost pair of leaves close to the calyx. Calyx-tube $\frac{1}{2}$ - $\frac{1}{2}$ in., not keeled; lobes $\frac{1}{2}$ - $\frac{1}{2}$ in., linear, rarely suboblong. Corolla-lobes $\frac{1}{2}$ in., ovate, acute, sky-blue. Capsule $\frac{3}{4}$ by $\frac{1}{2}$ in.; stalk $\frac{1}{4}$ - $\frac{1}{2}$ in. Seeds twice as long as broad, acute at one end, subcaudate at the other.

33. **G. decumbens**, Linn. f. *Suppl.* 174; leaves oblong, flowers terminal clustered and axillary, calyx very unequal often spathaceous or some of the teeth ovate suddenly linear-pointed, corolla $\frac{3}{4}$ -1 in. Bunge in *Nowv. Mem. Soc. Imp. Mosc.* i. 212; *Bot. Mag.* tt. 705, 723; Griseb. *Gentian.* 279, and in *DC. Prodr.* ix. 110; Ledeb. *Fl. Ross.* iii. 64; Clarke in *Journ. Linn. Soc.* xiv. 440. *G. adscendens*, Pall. *Fl. Ross.* ii. 106, t. 94. *Pneumonanthe adscendens*, Schmidt in *Roem. Arch.* i. 10. *Dasystephana adscendens*, Borkh. in *Roem. Arch.* i. 26.—Gentiana sp., Gmel. *Fl. Sibir.* iv. 103, t. 51, fig. A.

BALTISTHAN and WESTERN TIBET, alt. 11-15,000 ft., eastwards to Lahul, Thomson, &c., common on the Karakorum.—DISTRIB. Dahuria, Siberia.

Rootstock stout; flowering stems 2-10 in., simple. Radical leaves 2 by $\frac{1}{2}$ - $\frac{1}{2}$ in.; cauline 1-1 $\frac{1}{2}$ in., oblong or elliptic, connate at the base into a tube. Flowers 1-2 subsessile in each upper axil, the upper 3-7 approximate, subcapitate, the axillary clusters subremote or wanting. Calyx-tube $\frac{1}{2}$ in., lobes $\frac{1}{2}$ in.; but the tube is often split down one side nearly to the base, the lobes very unequal, 2-4 linear, 1-2 ovate obtuse or obovate with linear teeth. Corolla funnel-shaped, lobes rounded. Capsule $\frac{1}{2}$ by $\frac{1}{2}$ in.; stalk $\frac{1}{4}$ - $\frac{1}{2}$ in. Seeds oblong, trigonous, falcate, twice as long as broad, subobtusate at both ends, testa close.

34. **G. dahurica**, Fisch. in *Act. Soc. Nat. Scr. Mosq.* iii. 63, with fig.; leaves oblong, flowers terminal clustered with axillary often added, calyx-lobes equal oblong-linear, corolla $\frac{3}{4}$ -1 in. Bunge in *Nowv. Mem. Soc. Imp. Mosc.* i. 213. G. Olivieri, Griseb. *Gentian.* 278, and in *DC. Prodr.* ix. 110; Clarke in *Journ. Linn. Soc.* xiv. 440; Boiss. *Fl. Orient.* iv. 76.

W. HIMALAYA; Thomson, Hay.—DISTRIB. Beloochistan, Cabul, Dahuria, Soot-garia.

Only differs from *G. decumbens* by the equal calyx; and it may be questioned whether the figure, Gmel. *Fl. Sibir.* t. 51, fig. A (on which *G. decumbens* is founded) may not rather represent *G. dahurica*.

SECT. V. **Crossopetalum**. Erect, branched herba. *Flowers* scattered, pedicelled. *Corolla* $\frac{3}{4}$ –2 in., 4-lobed; folds between the lobes obscure or 0; fimbriæ 0. *Seeds* ellipsoid or subglobose; testa reticulated, hardly lax, not glistening-white.

35. **G. detonsa**, *Fries in Act. Hafn.* x. 435, t. 1, fig. 3; leaves oblong-linear, calyx-tube terete funnel-shaped, lobes ovate-lanceolate, corolla $\frac{3}{4}$ –1 $\frac{1}{4}$ in., seeds subglobose. *Griseb. Gentian.* 256, and in *DC. Prodr.* ix. 101; *Ledeb. Fl. Ross.* iii. 59; *Clarke in Journ. Linn. Soc.* xiv. 437. *G. ciliata*, *Pall. Fl. Ross.* ii. 101, t. 92, fig. 2; *Bot. Mag.* t. 639. *G. barbata*, *Froel. Gentian.* 114; *Bunge in Nouv. Mem. Soc. Imp. Mosc.* i. 223, t. 9, fig. 1. *G. brachypetala*, *Bunge l. c.* i. 225, t. 11, fig. 3. *Gentianella detonsa and barbata*, *G. Don Gen. Syst.* iv. 179.

N. KASHMIR and WESTERN TIBET, alt. 9–15,000 ft., common in the Karakorum.—DISTRIB. Europe, N. Asia, and N. America.

Stems 8–24 in., much branched (in the Indian plants). *Leaves* 1 $\frac{1}{2}$ by $\frac{1}{4}$ in., distant, scarcely connate at the base. *Peduncles* 1–8 in., mostly very long. *Calyx-tube* $\frac{1}{2}$ in.; lobes $\frac{1}{3}$ in., unequal, 2 opposite ovate-lanceolate, 2 lanceolate. *Corolla-tube* 1 by $\frac{1}{4}$ in., lobes $\frac{3}{8}$ in., fimbriate or serrate at least at the apex; glands near the base of the tube very obscure. *Capsule* $\frac{3}{4}$ by $\frac{1}{4}$ in., stalk $\frac{1}{2}$ in. *Seeds* hardly longer than broad; testa reticulated and minutely scaly.—The numerous Indian examples are uniform; but according to Grisebach (*DC. Prodr.* ix. 110), the 5-merous *G. serrata* is only a var., and, according to Asa Gray (*Man. Bot.* 387), *G. crinita*, Froel., cannot be separated. There is a wide range in size of corolla, length and fimbriation of its lobes, in the extra-Indian examples.

VAR. *Stracheyi*; leaves broader, calyx-tube strongly 4-keeled, corolla $\frac{3}{4}$ –2 $\frac{1}{4}$ in., seeds much larger ellipsoid. *Gentiana* sp., nn. 7 & 8, *Herb. Ind. Or. H. f. & T.*—N. Kashmir and W. Tibet; alt. 8–13,000 ft.; *Strachey & Winterbottom*, &c. Sikkim; Tungu, alt. 12–13,000 ft., *J. D. H.*—So far as the Indian material is concerned this var. looks a distinct species, except that the corolla is very variable in size; but among the American *G. crinita* there are examples with a keeled calyx.

36. **G. contorta**, *Royle Ill.* 278, t. 69, fig. 3; leaves elliptic, flowers subracemose, calyx-lobes ovate acute, corolla 1 in. with 4 large oblong glands near the base within, seeds minute subglobose. *D. Don in Trans. Linn. Soc.* xvii. 508; *Griseb. Gentian.* 304, and in *DC. Prodr.* ix. 94.

N. W. HIMALAYA, alt. 6000 ft., *Thomson, Edgeworth.*

Stem 4–8 in. *Radical leaves* 0 at flowering time; cauline 1 by $\frac{1}{2}$ – $\frac{1}{3}$ in., narrowed but hardly connate at the base. *Stems* 2–7-flowered; pedicels $\frac{1}{4}$ – $\frac{3}{4}$ in. *Calyx-tube* $\frac{1}{4}$ in., terete, funnel-shaped; lobes $\frac{1}{2}$ in., somewhat unequal. *Corolla-tube* $\frac{3}{8}$ in.; lobes $\frac{1}{2}$ in., oblong, subentire; basal glands much larger than in *G. detonsa*, reminding *D. Don l. c.* of barren stamens. *Capsule* $\frac{1}{2}$ by $\frac{1}{2}$ in., stalk $\frac{1}{2}$ in. *Seeds* much smaller than in *G. dentosa* and very obscurely reticulated, but not well ripe.

SECT. VI. **Stylophora**. *Stem* hollow, $\frac{1}{4}$ – $\frac{1}{2}$ in. thick. *Flowers* and capsules large. *Style* $\frac{1}{2}$ – $\frac{3}{4}$ in.

37. **G. stylophora**, *Clarke*; leaves large elliptic lower petioled, peduncles axillary 1–8 in. 1-flowered with 2 bracts below the flower, capsule 2 by 1 in. *Gentiana* sp. 40, *Herb. Ind. Or. H. f. & T.*

SIKKIM, alt. 11–14,000 ft.; Chola and Kankola, *J. D. H.*; Jongri, *Clarke*.

Flowering stem 3–6 ft., simple. Lower leaves 12 by 4 in., strongly 5-nerved, upper 5 by 2 in., sessile, shortly connate at the base. *Calyx* widely funnel-shaped, tube $\frac{1}{2}$ in.; lobes $\frac{3}{4}$ by $\frac{1}{2}$ in., subobtus. *Corolla* (apparently very succulent, badly preserved) widely funnel-shaped, fimbriate in the throat (?). *Stamens* attached half-way up the corolla-tube, filaments linear; anthers $\frac{1}{4}$ in., oblong. *Stigmas* $\frac{1}{8}$ – $\frac{1}{4}$ in., oblong. *Seeds* $\frac{1}{8}$ by $\frac{1}{12}$ in.; testa lax, reticulated, scrobiculate.—This fine plant is remote from *G. lutea* in the inflorescence and the widely funnel-shaped corolla; it

may constitute a new genus when the corolla is fully known. It has the habit of *Frasera* and the large *Swertias*, from which it differs in the gamosepalous calyx and long style.

10. **JAESCHKEA**, Kurz.

Herbs, erect, or small decumbent. *Leaves* opposite, linear-lanceolate or ovate, bases shortly connate. *Flowers* paniculate or terminal pedunculate, blue. *Sepals* lanceolate or orbicular. *Corolla* tubular; lobes 5, short, triangular-lanceolate, valvate in bud. *Stamens* 5, attached at the sinus of the corolla-tube, filaments short, linear; anthers oblong-sagittate, blue or greenish. *Ovary* 1-celled, placentæ little intruded; style short, linear, stigma 2-lobed; ovules much fewer than in *Gentiana*. *Capsule* elliptic, sessile or shortly stalked, separating to the base into its two carpels, splitting the style into halves. *Seeds* ellipsoid; testa close, smooth not reticulated.—Species 3; Alpine W. Himalayan.

1. **J. gentianoides**, Kurz in *Journ. As. Soc.* 1870, pt. ii. 230, t. 13, and in *Flora*, 1871, 275; erect, panicled, leaves narrowly lanceolate, sepals lanceolate, seeds $\frac{1}{20}$ in. Clarke in *Journ. Linn. Soc.* xiv. 441. *Gentiana oligosperma*, Griseb. in *DC. Prodr.* ix. 94. *G. Jaeschkei* (by misprint *Taeschkei*), Kurz in *Trimen Journ. Bot.* 1867, 241.

KASHMIR and WESTERN HIMALAYA, alt. 8–13,000 ft.; abundant, *Jaeschke*, &c.

Stem 8–30 in., rigid, slender, somewhat lineolate. *Leaves* $1\frac{1}{2}$ by $\frac{1}{4}$ in., sessile. *Flowers* panicled, numerous; pedicels $0\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ by $\frac{1}{20}$ in., acute, sub-3-striate. *Corolla* expanding when only $\frac{1}{8}$ in., but gradually enlarging till in fruit (on the same stem) more than $\frac{1}{2}$ in.; tube subventricose; lobes (in fruit) $\frac{1}{2}$ by $\frac{1}{8}$ in. *Stamens* shorter than the corolla-lobes, blue or green when dry. *Capsule* $\frac{1}{2}$ in., ellipsoid, compressed, very shortly stalked. *Seeds* 10–30, much larger than in *Gentiana*.

2. **J. latisepala**, Clarke in *Journ. Linn. Soc.* xiv. 441; erect, panicled, leaves oblong acuminate, sepals unequal ovate obovate or orbicular, seeds $\frac{1}{20}$ in. *Gentiana canaliculata*, Royle; *D. Don* in *Trans. Linn. Soc.* xvii. 509; *G. Don* *Gen. Syst.* iv. 182. *G. Moorcroftiana*, Griseb. in *DC. Prodr.* ix. 96, partly, not of Wall.

N. KASHMIR and WESTERN TIBET, alt. 9–13,000 ft.; common, *Royle*, &c.

Closely resembling *J. gentianoides*; but rather stouter, with broader leaves. *Sepals* $\frac{1}{2}$ by $\frac{1}{2}$ in., hardly striate; uppermost leaves, when near the flowers and bractiform, ovate. *Capsule* sessile. *Seeds* as of *J. gentianoides*.

3. **J. microsperma**, Clarke; small, diffuse, leaves elliptic, flowers small long-peduncled terminal on the branches, sepals oblong, seeds minute.

ALPINE SIKKIM; Samdong, alt. 11–17,000 ft., *J. D. H.*

Stem $\frac{1}{2}$ – $1\frac{1}{2}$ in. Lower leaves $\frac{1}{3}$ by $\frac{1}{4}$ in., cauline $\frac{1}{8}$ in. *Peduncles* $\frac{1}{4}$ – $\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ by $\frac{1}{10}$ in., subacute. *Corolla-tube* $\frac{1}{8}$ in.; lobes $\frac{1}{10}$ in. *Anthers* blue or greenish. *Capsule* $\frac{1}{4}$ – $\frac{1}{2}$ in., subsessile. *Seeds* $\frac{1}{20}$ in., suborbicular, but, except in size, closely agreeing with those of *Jaeschkea*.—This small plant has doubtless been passed for *Gentiana tenella*, small examples of which it much resembles.

11. **PLEUROGYNE**, Eschsch.

Annual herbs, decumbent branched or erect. *Leaves* opposite. *Flowers* panicled, or long-peduncled. *Sepals* elliptic or linear, often unequal. *Corolla* rotate, without (or with very obscure) basal pits or depressions; tube very short with or without fimbriæ; lobes elliptic, usually acute. *Stamens* 4–5, attached to the corolla-tube, filaments linear somewhat flattened; anthers ob-

long or ovate. Ovary 1-celled, placentæ little intruded; stigma sessile. Capsule oblong or elliptic, sessile or nearly so, carpels separating. Seeds very many, small, subglobose, smooth, testa close not (or obscurely) reticulate.—Species 7; in the Mts. of Europe, Asia, and N. America.

1. **P. carinthiaca**, Griseb. *Gentian.* 310, and in *DC. Prodr.* ix. 122; branching from the base, cauline leaves ovate or elliptic; pedicels elongate, sepals $\frac{1}{4}$ in. elliptic, corolla 5-merous lobes $\frac{1}{2}$ in. fimbriate near the base. *Reich. Ic. Pl.* t. 1045; *Boiss. Fl. Orient.* iv. 77. *P. Stelleriana*, G. Don *Gen. Syst.* iv. 188. *P. carinata*, Edgew. in *Trans. Linn. Soc.* xx. 85, ex descr. *P. himalayensis*, Klotzsch in *Reis. Pr. Walden. Bot.* 91, t. 68. *Swertia carinthiaca*, Wulf. in *Jacq. Misc.* ii. 53, t. 6. *S. rotata*, Pall. *Fl. Ross.* iv. t. 89, fig. 3. *Gentiana carinthiaca*, Froel. *Gentian.* 103. *G. Stelleriana*, Cham. & Schl. in *Linnæa*, i. 188. *G. rotata*, M. Bieb.; Bunge in *Nouv. Mem. Soc. Imp. Mosc.* i. 254. *Lomatogonium carinthiacum*, Braun in *Flora*, 1830, 221.

W. HIMALAYA and WESTERN TIBET; alt. 10–13,000 ft., from Kashmir and Kumaon to the Karakorum, frequent, Thomson, &c.—DISTRIB. Alps, Caucasus, Cabul, Central Asia, Siberia.

Stems 1–6 in., usually very numerous. Radical leaves 1 by $\frac{1}{2}$ in., obovate, persistent or sometimes disappearing; cauline $\frac{1}{2}$ by $\frac{1}{4}$ in., narrowed at the base. Pedicels $\frac{1}{4}$ –2 in., mostly long. Sepals $\frac{1}{4}$ – $\frac{1}{2}$ by $\frac{1}{8}$ in., subacute or obtuse. Corolla-tube very short; lobes $\frac{1}{2}$ by $\frac{1}{4}$ in., blue, with green nerves, fimbriate near the base. Anthers somewhat large, oblong, often as long as the filaments. Capsule $\frac{1}{2}$ in., oblong, acute, sessile. Seeds numerous, small, ellipsoid.

2. **P. Thomsoni**, Clarke; branching from the base, cauline leaves small elliptic, pedicels elongate, sepals $\frac{1}{2}$ in. elliptic, corolla 5-merous lobes $\frac{1}{2}$ in. naked at the base.—Pleurogyne sp. 2, *Herb. Ind. Or. H. f. & T.*

W. TIBET, alt. 15–18,000 ft.; Thomson, Strachey.

Cauline leaves $\frac{1}{2}$ – $\frac{1}{4}$ in. Corolla-lobes at base naked or with obscure depressions. Anthers large, oblong, often as large as the filaments.—Mr. Bentham doubts whether this should not be removed to *Swertia*, but the depressions at the base of the petals are never well marked, and the habit is so exactly that of *P. carinthiaca* that some examples are hard to distinguish from that, while others are less than 1 in., with very small flowers.

3. **P. brachyanthera**, Clarke; branching from the base, cauline leaves small elliptic, pedicels elongate, corolla 4-merous lobes $\frac{1}{4}$ – $\frac{1}{2}$ in., anthers ovate very small much shorter than the filament.

WESTERN TIBET; Karakorum, alt. 13,000 ft., Clarke.

Cauline leaves $\frac{1}{2}$ – $\frac{1}{4}$ in. Sepals $\frac{1}{2}$ in., elliptic. Corolla-lobes at base slightly fimbriate, —The anthers are unlike any examples of *P. carinthiaca* or *P. Thomsoni*. Resembles a starved state of *P. carinthiaca*.

4. **P. spatulata**, A. Kerner *Nov. Sp.* ii. 8; branching from the base, cauline leaves linear-oblong, pedicels elongate, sepals narrowly oblong about half the length of the corolla.

N. KASHMIR; alt. 13,000 ft., Stoliczka, &c. LAHUL (A. Kerner).

Closely allied to *P. carinthiaca*. Radical leaves $1\frac{1}{2}$ in., linear-spatulate; cauline $\frac{3}{4}$ by $\frac{1}{2}$ in. Corolla-lobes often $\frac{3}{4}$ in., more than twice as long as the sepals. Anthers large, oblong. Capsule and seeds as in *P. carinthiaca*, but rather larger.

5. **P. ? minor**, Benth. in *Gen. Pl.* ii. 816; stem erect, cauline leaves ovate or elliptic, flowers 4-merous panicked pedicels $\frac{1}{2}$ –1 in., corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. *Ophelia minor*, Griseb. in *DC. Prodr.* ix. 126; *Wight Ic.* t. 1332; *Datz. & Gibbs. Bomb. Fl.* 156; Clarke in *Journ. Linn. Soc.* xiv. 446.

W. DECCAN PENINSULA ; in the Ghats, from Bombay southwards ; common in the Nilgherries.

Stem 2-9 in., usually undivided at the base, without radical leaves. *Cauline leaves* $\frac{1}{2}$ by $\frac{1}{4}$ in., sessile. *Sepals* $\frac{1}{2}$ by $\frac{1}{3}$ in. elliptic. *Corolla* white or clear blue, nearly 5-partite ; segments oblong, base naked or minutely glandular, scarcely pitted. *Anthers* small, ovate, much shorter than the filament. *Ovary* sessile, oblong ; stigma sessile, shortly bilobed. *Capsule* $\frac{1}{4}$ in., oblong. *Seeds* minute, subglobose.—Genus doubtful ; in the symmetrical erect habit, 4-merous flowers, corolla without green nerves, it approaches *Swertia* Sect. *Ophelia* (see *Swertia Beddomei*).

12. SWERTIA, Linn.

Annual or perennial herbs. *Leaves* opposite except in *S. alternifolia*. *Flowers* blue, lurid, or whiteish, sometimes with yellow glands ; cymes in thyrsoid or corymbose panicles. *Sepals* 4-5, lanceolate, rarely ovate. *Corolla* rotate ; lobes 4-5, twisted to the right ; on each lobe (or on the short corolla-tube below its base) are 1 or 2 pits depressions or glands, naked or partly covered by a basal scale ; margins of pits fimbriate all round, or at its apex only ; scale naked or tips fimbriate. *Stamens* 4-5, attached near the base of the corolla, free, rarely monadelphous, filaments linear complanate, often more or less dilated downwards ; anthers oblong ovate or hastate, versatile. *Ovary* 1-celled, placentæ little intruded ; style 0 or short rarely linear-cylindric, stigmas 2. *Capsule* sessile, ovate or oblong, separating into its 2 carpels. *Seeds* various, many, rarely few, small or minute, testa close or very lax or winged reticulate.—Species 50 ; in Europe, Asia, and Africa, principally in the mountains.

In the species with one pit at the very base of each corolla-lobe, this pit seems homologous with the spur of *Halenia*. There is a passage from the species with a depressed broad viscous spot, fimbriate on the margins only to those which have 2 small lateral linear vertical glands ; among these *S. cærulea*, with very small depressions, should perhaps be removed to *Pleurogyne*. In *S. bimaculata*, where there are 2 green viscous spots, scarcely depressed, in the middle of the corolla-lobes, the morphology is obscure.

SUBGENUS I. Ophelia. *Stems* annual or once-flowering, erect, panicled, solid, virgate. *Radical leaves* 0 at the time of flowering.

* *Flowers* all (or most of them) 5-merous.

† *Sepals* almost free.

1. ***S. purpurascens*, Wall. Cat. 4379 ;** leaves oblong or lanceolate 3-1-nerved, filaments dilated downwards united into a short tube free from the corolla, style long stigmas sublinear. *Ophelia purpurascens*, *D. Don in Trans. Linn. Soc.* xvii. 526 ; *Griseb. Gentian.* 315, and in *DC. Prodr.* ix. 124 ; *Wight Ill. t.* 157, bis 3, fig. d. *O. Dalhousiana*, *Griseb. Gentian.* 313, and in *DC. Prodr.* ix. 123. *O. ciliata*, *G. Don Gen. Syst.* iv. 178.

TEMPERATE N.W. HIMALAYA, alt. 5-12,000 ft. ; from Kashmir to Kumaon ; abundant near Dalhousie and Dhurmsala.

Stems 8-36 in., terete or 4-lineolate. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in., base narrowed, lowest subobtuse, uppermost acute, glabrous, *Panicles* divaricate, many-flowered, leafy ; pedicels often clustered. *Sepals* $\frac{1}{2}$ in., oblong, 1-nerved. *Corolla-lobes* $\frac{1}{2}$ in., ovate, acute, purple or dark red, reflexed in flower ; pits solitary near the base of each lobe, horse-shoe shaped, naked. *Stamen-tube* erect, and filaments puberulous ; anthers elliptic-lanceolate, much acuminate. *Seeds* $\frac{1}{60}$ in. diam., globose, smooth, light-yellow when ripe.—Grisebach's type specimens of *S. purpurascens* and *Dalhousiana* are identical. This species is recognised at once by the red-purple much-reflexed corolla-lobes. There is a strong purple band near the base of the corolla-lobe which is

usually interrupted in the middle, hence from behind the corolla-lobe appears biglandulose near the base; the foveola or pit is below this, in the corolla-tube, and is a watch-pocket slit, never more than one to each corolla-segment. *O. ciliata* is founded on some scraps of Royle's with most minutely ciliate petioles, nowise differing from the type. There is a form (? dimorphic) in which the stamens are not half so long as the corolla-lobes, the anthers linear.

2. ***S. paniculata***, Wall. Cat. 4374, and Pl. As. Rar. iii. 3, t. 205; leaves oblong or lanceolate 3-1-nerved, filaments linear separately attached to the corolla-tube, style long stigmas linear. *Ophelia paniculata*, D. Don in Trans. Linn. Soc. xvii. 525; Griseb. Gentian. 314, and in DC. Prodr. ix. 124; Bot. Mag. 5687, fig. 5, 6. *O. Wallichii*, G. Don Gen. Syst. iv. 178.

TEMPERATE W. HIMALAYA, alt. 5-8000 ft.; from Kashmir to Nepal, Wallich, &c.

Close resemblance to *S. purpurascens*, when dried. *Sepals* $\frac{1}{2}$ in., oblong, acute, sub-1-nerved. *Corolla-lobes* $\frac{1}{4}$ in., ovate, acute, white in the upper half, patent not reflexed in flower; pit very near the base of the corolla, 1 to each lobe, naked; near the base of the corolla-lobe are 2 purple or lurid-green subglandular marks, sometimes confluent into one. *Filaments* hardly dilated downwards, not puberulous; anthers oblong, not hastate. *Capsule* $\frac{1}{4}$ in., elliptic-lanceolate, acuminate. *Seeds* as of *S. purpurascens* but rather smaller.—The var. *brachypetala*, Griseb. Gentian., 314, was founded on Wallich's type of *S. paniculata*; but Grisebach subsequently marked examples of *S. dilatata* (n. 4 below) as var. *brachypetala*.

3. ***S. Griffithii***, Clarke; leaves narrowly lanceolate 3-1-nerved, panicles dense, calyx-lobes lanceolate rigid 3-nerved connate below, filaments linear free, style long stigmas linear. *Gentianeae* n. 1006, *Griff. Itin. Notes*, 189.

BHOTAN; Lamnos, alt. 9000 ft., Griffith (Kew Distrib. 5883).

Possibly an eastern var. of *S. paniculata*. Examples are 4-7 in., very rigid, branched, dense with leaves and fruit. *Leaves* 1 by $\frac{1}{2}$ in. *Pedicels* mostly $\frac{1}{2}$ in. *Capsules* rather smaller than in *S. paniculata*.

4. ***S. dilatata***, Clarke; leaves lanceolate 3-1-nerved, filaments much dilated for more than half their length puberulous not connate into a tube at the base, style cylindric stigmas sublinear.

SIKKIM HIMALAYA, alt. 4-12,000 ft., common; J. D. H., &c. NEPAL; Wallich.

Resembling *S. paniculata*, but with larger flowers and capsules; and the stamens more like those of *S. purpurascens*. *Leaves* glabrous, base minutely ciliate. *Sepals* $\frac{1}{2}$ in., elliptic-lanceolate, acuminate, much broader than in *S. paniculata*. *Corolla* usually shorter than the sepals; lobes greenish yellow, a transverse purple continuous band near the base; a pit horse-shoe-shaped on the corolla-tube, one for each lobe. *Filaments* usually more dilated than in *S. purpurascens*, sometimes nearly to the summit, while at the base they are contracted, separate. *Capsule* $\frac{1}{2}$ in.

VAR. *pilosa*; leaves pilose on both surfaces with ciliate margins and nerves, pedicels and sepals ciliate. Nepal; J. Scully.

5. ***S. tetragona***, Clarke; leaves lanceolate 3-1-nerved, filaments linear free, style 0 stigmas of 2 closely approximated hemispheric plates. *Ophelia tetragona*, Edgew. in. Trans. Linn. Soc. xx. 86.

TEMPERATE HIMALAYA, alt. 5-8000 ft.; from Kashmir to Simla, abundant; Edgeworth, Thomson, &c.

Resembling in general appearance *S. paniculata*. *Sepals* $\frac{1}{2}$ in., narrowly lanceolate. *Corolla-lobes* more than $\frac{1}{4}$ in., whitish; near the base on either side of each lobe is an oblong vertical hairy gland; no pit at the base of the corolla-tube but a shining obscure concavity, of which (as in other species) the two oblong glands are the more prominent upper margins. *Anthers* oblong, hastate to the middle. *Capsule*

$\frac{1}{4}$ – $\frac{1}{2}$ in., oblong, obtuse. *Seeds* small, nearly as of *S. paniculata*.—This very abundant plant has been overlooked as *S. paniculata* and as *S. angustifolia*.

6. ***S. cordata***, Wall. Cat. 4378; leaves sessile ovate acute 5–3-nerved, filaments linear free, style cylindric stigmas subhemispheric. *Ophelia cordata*, Griseb. *Gentian.* 315, and in DC. *Prodr.* ix. 124; Clarke in *Journ. Linn. Soc.* xiv. 445, not of Don. *O. nuda*, Klotzsch in *Reis. Pr. Wald. Bot.* 91, t. 67.

TEMPERATE HIMALAYA and WESTERN TIBET, alt. 4–12,000 ft., from Kashmir and the Karakorum to Bhotan; abundant westward. KHASIA Mts., alt. 3–5000 ft., very common.

Stem 8–36 in., 4-lineolate. *Leaves* $1\frac{1}{4}$ by $\frac{1}{2}$ in., obtuse, base often cordate. *Panicles* large, many-flid., branches ascending or patent; pedicels 0– $1\frac{1}{2}$ in., often fascicled, unequal. *Sepals* $\frac{1}{2}$ by $\frac{1}{2}$ in., ovate-lanceolate, acute. *Corolla-lobes* $\frac{1}{2}$ – $\frac{1}{3}$ in., elliptic or oblong, acute or obtuse, white or with purplish nerves; above the base of the lobe is a large orbicular viscous yellowish spot hardly depressed, not fimbriate, traversed obscurely by the central nerve, not bifid; no pits in the corolla-tube. *Filaments* linear, subhypogonous, obscurely connate at the very base; anthers oblong, scarcely hastate. *Capsule* (in Wallich's example) $\frac{1}{2}$ by $\frac{1}{2}$ in., often hardly $\frac{1}{2}$ in. *Seeds* $\frac{1}{16}$ in. diam., subglobose, ornamented with long raised lines of rows of glands.—Described from Wallich's Kumaon example, which is *Ophelia cordata* β *laxa*, Grisebach l. c.; and has large flowers and capsules; the Khasia form is nearly the same. Some Kashmir examples have very small flowers with obtuse lobes, others have very large flowers; all have the ovate sessile leaves, the corolla-lobes with one large spot each, and the peculiarly marked seeds. *Ophelia cordata*, Don, is said by him to have been founded on Wallich's *Swertia Chirata* and *cordata* thrown together; the description refers mainly (as to the petals and glands) to *S. Chirata*. This species, like *S. purpurascens*, has a form with very short filaments and linear anthers. It also occurs (in N. Kashmir) with double flowers.

7. ***S. bimaculata***, H. f. & T.; Clarke in *Journ. Linn. Soc.* xiv. 449; leaves elliptic-lanceolate petioled 3-nerved, corolla-lobes marked half-way up with 2 green spots, filaments linear free, stigmas sessile hemispheric. *Ophelia bimaculata*, Sieb. & Zucc. *Fam. Nat.* 35. *So Mokou*, iv. t. 55.

EASTERN HIMALAYA; Sikkim and Bhotan, alt. 5–8000 ft.; Griffith, J. D. H., &c., abundant about Darjeeling.

Stem 2–6 ft., stout, 4-angular, corymbose upwards. *Leaves* 3 by $1\frac{1}{4}$ in., or upper cauline sometimes $6\frac{1}{2}$ by $2\frac{3}{4}$ in., glabrous, petioled or at least much narrowed at the base. *Flowers* numerous, 4–5 merous; pedicels $\frac{1}{2}$ – $1\frac{1}{2}$ in., mostly long. *Sepals* $\frac{1}{2}$ in., elliptic, mostly obtuse. *Corolla-lobes* $\frac{1}{2}$ – $\frac{1}{3}$ in., broadly elliptic, white or yellowish-green, with black spots in their upper half; the two green spots in the middle viscid, scarcely depressed, no pits in the corolla-tube. *Filaments* attached on the corolla-tube; anthers oblong, not hastate. *Capsule* $\frac{3}{4}$ by $\frac{1}{2}$ in. *Seeds* $\frac{1}{10}$ in., cuboid-globose, smooth, obscurely reticulated.

8. ***S. macrosperma***, Clarke; leaves subsessile oblong or subovate acute, corolla-lobes with 2 small oblong glands near their base, stigmas subsessile, seeds few large smooth. *Ophelia macrosperma*, Clarke in *Journ. Linn. Soc.* xiv. 448.—*Ophelia* sp. n. 15, *Herb. Ind. Or. H. f. & T.*

KHASIA Mts., alt. 4–6000 ft., very common; Griffith, H. f. & T., &c.

Stem 6–48 in., quadrangular, diffusely branched upwards. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in., or in small plants subovate. *Pedicels* $\frac{1}{2}$ –2 in., mostly long. *Sepals* $\frac{1}{2}$ in., lanceolate. *Corolla-lobes* $\frac{3}{4}$ in., lanceolate, pale lurid blue or nearly white; the two glands vertical, parallel, hardly depressed, naked or hairy. *Filaments* linear, free, on the corolla-tube; anthers hastate. *Capsule* $\frac{1}{2}$ by $\frac{1}{2}$ in. *Seeds* $\frac{1}{16}$ in., ellipsoid.—Of this also double-flowered examples occur wild. The whole habit and seeds of this species show it to be very closely allied to *Halenia*.

†† *Calyx distinctly gamosepalous.*

9. **S. racemosa**, Wall. Cat. 4377; leaves subsessile elliptic-lanceolate 3-nerved, filaments free linear slightly dilated below, style long cylindric, stigmas short oblong. *Ophelia racemosa*, Griseb. *Gentian.* 319, and in *DC. Prodr.* ix. 127; Clarke in *Journ. Linn. Soc.* xiv. 447.

NEPAL; Wallich.

Stems 18 in., 4-lineolate. Leaves $1\frac{3}{4}$ by $\frac{1}{2}$ in. Panicles many-fl., leafy; pedicels $0-\frac{1}{2}$ in., mostly short, fascicled, unequal. *Calyx-tube* $\frac{1}{12}$ in., funnel-shaped; lobes $\frac{1}{2}-\frac{1}{3}$ in., lanceolate, very acute, almost keeled. *Corolla-lobes* $\frac{1}{4}-\frac{1}{2}$ in., oblong, acute; at the very base of each, almost in the corolla-tube, is a pit covered by a scale, teeth of its margin lanceolate-linear black not hairy. Filaments on the corolla-tube; anthers oblong, not hastate. Capsule $\frac{1}{2}$ in. Seeds somewhat large, ellipsoid, smooth.—On Wallich's sheets, some *S. Chirata* is mixed with this, which seems to have troubled D. Don as noticed by Grisebach.

** Flowers all 4-merous.

† Species of North India.

10. **S. Chirata**, Ham.; Wall. Cat. 4372; cauline leaves subsessile elliptic acute 5-nerved, corolla lurid-green-yellow near the base of each lobe 2 glandular depressions each terminated by long hairs. *Gentiana Chirayita*, Roxb.; Fleming in *Asiat. Res.* xi. 167. *G. Chirayta*, Roxb. *Fl. Ind.* ii. 71. *G. Chirata*, Wall. *Pl. As. Rar.* iii. 33, t. 252. ? *G. floribunda*, Don *Prodr.* 127. *Agathotes Chirata*, D. Don in *Trans. Linn. Soc.* xvii. 552. *Ophelia Chirata*, Griseb. *Gentian.* 320, and in *DC. Prodr.* ix. 127; Clarke in *Journ. Linn. Soc.* xiv. 447; Benth. & Trim. *Med. Pl.* iii. t. 183.—*Ophelia* sp., 17, 19, and 20, *Herb. Ind. Or. H. f.*, & T.

TEMPERATE HIMALAYA, alt. 4-10,000 ft. from Kashmir to Bhutan. KHASIA MTS., alt. 4-5000 ft.; frequent.

Stem 2-5 feet, 4-lineolate or subterete. Leaves 2 by $\frac{3}{4}$ in., the lower often much larger sometimes petioled. Panicles large, leafy, many-fl.; pedicels $0-\frac{3}{4}$ in., fascicled, mostly short. *Calyx-lobes* $\frac{1}{2}$ in., lanceolate. *Corolla-lobes* $\frac{1}{4}$ in., ovate, acuminate, more or less purple-nerved; the glandular depressions are green, shallow, often submarginal, rarely close together or subconfluent, with a fringe of long white or pink hairs at the summit. Filaments linear, free; anthers oblong. Style cylindric; stigmas oblong. Capsule $\frac{1}{4}$ in. and upwards, ovate, acute. Seeds $\frac{1}{50}$ in., polyhedral, smooth; testa close, not (or microscopically) reticulated.—D. Don (in *Trans. Linn. Soc.* xvii. 522) has reduced to *S. Chirata* his *Gentiana floribunda*. But there must be some error, for he describes the corolla as 5-fid, tubular, blue, and both it and the leaves as hairy. *Ophelia* sp. 20, H. f. & T., is the Khasia plant which has strongly 3-nerved leaves attenuated at the base, and of which some examples have woody short barren branches with terminal tufts of leaves, others annual erect flowering stems. This species is so exceedingly near the two next, that the quotations of all the older authors are uncertain; Bentley and Trimen's figure is the one to be relied upon. While many of the other *Ophelias* are gregarious and could be collected in great quantity, this occurs scattered (from Khasia to Kashmir); yet all the medicinal *Chiretta* of the Bengal bazaars collected by Dr. Wise proved to be *S. Chirata* true, without any admixture of the closely allied species.

11. **S. lurida**, Royle ms.; cauline leaves subsessile elliptic acute 5-nerved, corolla lurid green-yellow with 2 glandular depressions without hairs near the base of each lobe. *Ophelia lurida*, D. Don in *Trans. Linn. Soc.* xvii. 527; Griseb. in *DC. Prodr.* ix. 124. *O. lucida*, G. Don *Gen. Syst.* iv. 179.

N.W. HIMALAYA, Royle, Falconer; Naini Tal, Col. Davidson.

Corolla-lobes $\frac{1}{10}$ in. Capsule $\frac{1}{2}$ in.—Differs from *S. Chirata* in the smaller flowers and capsules.

12. **S. alata**, *Royle ms.*; cauline subsessile leaves ovate acute 5-nerved, corolla lurid green-yellow near the base of each lobe one round depression. *Agathotes alata*, *D. Don in Trans. Linn. Soc.* xvii. 523. *Ophelia alata*, *Griseb. in DC. Prodr.* ix. 127; *Bot. Mag.* t. 5687, fig. 12.

TEMPERATE W. HIMALAYA, alt. 4-6000 ft.; from Kashmir to Kumaon, common.

Stem 4-angular, often 4-winged. *Calyx-lobes* $\frac{1}{4}$ in. and upwards. *Corolla-lobes* purple-veined, often shorter than the calyx; glandular depression minutely pubescent round the margin or glabrous, covered at the base by a slit-like gland.—Closely resembling *S. Chirata*.

13. **S. nervosa**, *Wall. Cat.* 4383; leaves elliptic-lanceolate 3-nerved narrowed at the base, sepals oblong-linear exceeding the corolla, corolla-lobes greenish-yellow with one orbicular gland near the base of each lobe, stigmas subsessile hemispheric. *Griseb. Gentian.* 317, and in *DC. Prodr.* ix. 125.

TEMPERATE NEPAL and SIKKIM, alt. 6-9000 ft., common; *Wallich, J. D. H., &c.*

Stem 1-3 feet, 4-lineolate or 4-winged. *Leaves* $1\frac{1}{2}$ by $\frac{2}{3}$ in., upper cauline subpetiolate. *Panicles* many-flowered; *pedicels* $\frac{1}{2}$ - $1\frac{1}{2}$ in., very variable. *Sepals* $\frac{2}{3}$ by $\frac{1}{4}$ in., sometimes longer. *Corolla-lobes* $\frac{1}{4}$ - $\frac{1}{2}$ in., ovate, acute, purple-nerved or dotted; gland large, sometimes viscous, little depressed, nearly naked; sometimes a distinct pit covered by a slit-like fold with a hairy margin. *Filaments* linear (in one form short); anthers oblong, scarcely hastate. *Capsule* $\frac{1}{2}$ by $\frac{1}{2}$ in., ovate. *Seeds* $\frac{1}{40}$ in., polyhedral; testa somewhat loose, glistening along the edges.

14. **S. angustifolia**, *Ham. in Don Prodr.* 127; leaves narrowly lanceolate sub-1-nerved narrowed at the base, sepals oblong-linear often longer than the corolla, corolla-lobes white or blueish oblong acute with one large orbicular gland near the base. *Wall. Cat.* 4373, and *Pl. As. Rar.* iii. 2, t. 204. *Ophelia angustifolia*, *D. Don in Trans. Linn. Soc.* xvii. 524; *Griseb. Gentian.* 320, and in *DC. Prodr.* ix. 126; *Bot. Mag.* 5087, fig. 3, 4.

SUBTROPICAL HIMALAYA, alt. 1-6000 ft. from the Chenab to Bhotan, common.

Generally resembling *S. nervosa*, the leaves narrower. *Sepals* equalling the corolla in Wallich's type, often $\frac{1}{2}$ - $\frac{2}{3}$ in. and greatly exceeding it; sometimes considerably shorter than the corolla, when the species must be distinguished from *S. pulchella* by the larger gland. *Corolla-lobes* $\frac{1}{4}$ - $\frac{1}{2}$ in., usually white with blue or black dots, never lurid; the large depression usually minutely pubescent on the margin, and partly closed by a scale. *Stamens*, capsule, and seeds nearly as in *S. nervosa*.

15. **S. pulchella**, *Ham. in Wall. Cat.* 4375; leaves sessile narrowly lanceolate sub-3-nerved, sepals lanceolate much shorter than the corolla, corolla-lobes ovate-lanceolate with one orbicular gland near the base. *Ophelia pulchella*, *D. Don in Trans. Linn. Soc.* xvii. 525; *Griseb. Gentian.* 318, and in *DC. Prodr.* ix. 126. *O. porrigens*, *G. Don Gen. Syst.* iv. 178. *O. pratensis*, *Edgew. in Trans. Linn. Soc.* xx. 85.

SUBTROPICAL HIMALAYA, the Terai, alt. 500-4000 ft., from Kangra to Bhotan, very common. KHASIA MTS., alt. 1-4000 ft., common.

Hardly differing from *S. angustifolia* but by the shorter sepals which are hardly half as long as the corolla in Wallich's type. *Corolla-lobes* pale-blue with deeper-blue nerves and dots, erect and connivent in young fruit; orbicular depression very near the base of the corolla, covered by a small scarcely pubescent scale or naked.

VAR. elegans; sepals exceeding the corolla or much shorter than it (on the same branch), corolla-lobes subpatent in young fruit. *S. elegans*, *Wall. Cat.* 4376, *not of Wight*. *Swertia florida*, *Wall. Cat.* 4382. *Ophelia florida*, *G. Don Gen. Syst.* iv. 178; *Griseb. in DC. Prodr.* ix. 125. Himalaya, Khasia, British Burma, frequent over nearly the whole area of *S. pulchella* type. *Distrib. Ava.*—This variety has

been often referred to *S. angustifolia* which has less acute sepals, larger glands on the corolla-lobes, but it may be doubted whether it is a distinct species.

†† *Species of the Deccan Peninsula and Ceylon*.—(Filaments linear, not or scarcely dilated, free or nearly so; anthers oblong, not or obscurely cordate. Style short cylindric, stigmas oblong. Capsule ovate, acute, about as long as the corolla. Seeds $\frac{1}{16}$ in. polyhedral; testa close, minutely reticulated, so that the seeds appear often glistening).

16. *S. affinis*, Clarke; leaves lanceolate 3-nerved base narrowed, cymes forming an elongate lax panicle, corolla-lobes $\frac{1}{4}$ by $\frac{1}{2}$ in. oblong shortly acute or subobtus. *Ophelia affinis*, Arn. in *Wight Ill.* ii. 175, t. 157, bis fig. 3 b. *O. elegans*, *Wight Ic.* t. 1331.

DECCAN PENINSULA, alt. 2-4000 ft.; from Chota Nagpore to the Pulneys, *Wight*, &c.

Stem 1-3 feet. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in. *Panicle-branches* sharply quadrangular; pedicels 0-1 in., flowers not clustered. *Sepals* $\frac{1}{2}$ in., narrowly lanceolate. *Corolla-lobes* white or with blue nerves; orbicular gland near the base large, completely covered by a large scale with pubescent margin.—This in its long panicle and smaller flowers differs from the other Deccan species, but is very near *S. pulchella*, var. *elegans*, Wall., of which it may be the South Indian form, as *Wight* supposed.

17. *S. corymbosa*, *Wight ms.*; upper cauline leaves sessile ovate or oblong subacute 3-nerved, cymes forming a level-topped corymb, corolla-lobes $\frac{1}{2}$ by $\frac{1}{2}$ in. broadly oblong shortly acute. *Ophelia corymbosa*, *Griseb. Gentian.* 317, and in *DC. Prodr.* ix. 125; *Wight Ic.* t. 1329; *Bot. Mag.* t. 4489.

MTS. OF THE S. DECCAN PENINSULA, alt. 4-7000 ft.; common.

Stem 8-20 in., quadrangular or 4-winged. Lower cauline leaves $\frac{3}{4}$ by $\frac{1}{2}$ in., spatulate-obovate, obtuse, subpetioled; upper cauline $\frac{1}{2}$ by $\frac{1}{2}$ in., ovate, obtuse, mucronate. *Corymb* wide; pedicels 0- $\frac{1}{2}$ in., clustered. *Sepals* $\frac{1}{2}$ in., narrowly lanceolate. *Corolla-lobes* white with blue-nerves or pale-blue, one gland at the base of each covered by a scale with pubescent margin.—Described from *Wight's* type; *Bot. Mag.* t. 4489, is a much drawn-up garden specimen with the upper leaves spatulate, and the flowers much bluer than common. The following varieties are here described from the type specimens, but numerous intermediates occur which *Wight* was unable to refer to any one variety.

VAR. elatior, *Griseb.* in *DC. Prodr.* ix. 125; upper cauline leaves $2\frac{1}{2}$ in. elliptic lanceolate acute, sepals $\frac{1}{2}$ in. acute, corolla-lobes $\frac{1}{2}$ in. very obtuse.—Nilgherries, Bombay; *Dalzell*.

VAR. Grisebachiana; upper cauline leaves $1\frac{1}{4}$ by $\frac{1}{2}$ in. acute. *Ophelia Grisebachiana*, *Wight Ic.* t. 1330.—Pulneys and Nilgherries; *Wight*. *Stem* terete, obscurely lineolate; lower cauline leaves small, somewhat fleshy, narrowly oblong. This variety approximates to *S. zeylanica*.

VAR. Lawii; lower cauline leaves sessile ovate-lanceolate subobtus 5-3-nerved, upper narrow, corymb lax sometimes few-flowered. *Ophelia Lawii*, Arn. in *Wight Ill.* ii. 175, t. 157, bis fig. 3 c. *O. pauciflora*, *Dalzell* in *Hook. Kew Journ.* iii. 211; *Dalzell & Gibs. Bomb. Fl.* 156.—Bombay Ghats; *Dalzell, Ritchie*.

18. *S. trichotoma*, Wall. *Cat.* 4381; upper cauline leaves elliptic-lanceolate, pedicels umbelled or clustered at the ends of the cyme-branches, corolla-lobes $\frac{1}{2}$ - $\frac{1}{2}$ by $\frac{1}{2}$ in. oblong acuminate often caudate. *Ophelia trichotoma*, W. & A. *ms.*; *Wight Ill.* ii. 175, t. 157, fig. 3 g. *O. umbellata*, *Wight l.c.* fig. 3 a; *Bot. Mag.* t. 5397.

NILGHERRIES, alt. 6-8000 ft.; common.

Only differs from *S. corymbosa* in the inflorescence and very acuminate corolla-lobes. *Pedicels* $\frac{1}{2}$ - $1\frac{1}{2}$ in., numerous, sometimes forming perfect umbels; sometimes much shorter, when the examples have been mistaken for *S. decussata*.

19. **S. decussata**, Nimmo in *Grah. Cat. Pl. Bomb.* 249; leaves sessile ovate obtuse 5-3-nerved, corymbs very dense, corolla-lobes $\frac{1}{2}$ by $\frac{1}{2}$ in. broadly oblong shortly acute. *Ophelia densifolia*, Griseb. in *DC. Prodr.* ix. 125. *O. alba*, Arn. in *Wight Ill.* t. 157, bis fig. 3 f. *O. multiflora*, Dalz. in *Hook. Kew Journ.* ii. 135; Dalz. & Gibs. *Bomb. Fl.* 156.

W. DECCAN PENINSULA, alt. 3-6000 ft.; from the Concan to Travancore, common.

Stem 1-3 ft., terete or 4-winged. *Leaves* $1\frac{1}{2}$ by $\frac{3}{4}$ in., numerous, approximate, decussate. *Pedicels* $0-\frac{1}{2}$ in., mostly short. *Sepals* $\frac{1}{4}-\frac{1}{2}$ in., narrowly lanceolate. *Corolla-lobes* white with blue nerves, with one round depression at the base of each, covering scale shortly hairy not very large.

20. **S. zeylanica**, Walker ms.; leaves sessile short lanceolate subobtuse fleshy, cymes terminal umbel-like, corolla-lobes $\frac{1}{2}$ in. broadly elliptic shortly acute. *Ophelia zeylanica*, Griseb. *Gentian.* 316, and in *DC. Prodr.* ix. 124.

CEYLON, alt. 5-7000 ft.; common.

Stem 8-20 in. terete or scarcely 4-lineolate. *Cauline leaves* $\frac{1}{2}$ by $\frac{1}{2}$ in., lower leaves similar but subspathulate. *Cymes* many or few-flowered; *pedicels* $\frac{1}{4}-\frac{1}{2}$ in. mostly short. *Corolla* deep blue.—Much resembling *S. corymbosa*, var. *Grisebachiana*, but having flowers considerably smaller.

21. **S. Beddomei**, Clarke; leaves sessile ovate subobtuse 3-nerved, cymes forming terminal flat-topped dense corymbs, corolla-lobes $\frac{1}{2}-\frac{1}{3}$ in. elliptic subacute.

DECCAN PENINSULA; Canara, Beddome; Mysore; Lobb.

Stem 12 in., quadrangular. *Leaves* $\frac{2}{3}$ by $\frac{1}{2}$ in., distant, lower smaller disappearing. *Pedicels* $0-\frac{1}{2}$ in., mostly short. *Sepals* $\frac{1}{2}-\frac{1}{3}$ in., elliptic or oblong, scarcely acute. *Corolla-lobes* elliptic, acute; one orbicular depression at the base of each, covered by an oblong scale fimbriated at the tip. *Capsule* not seen.—Not very nearly allied to any of the foregoing, but very near *Pleurogyne* *β. minor*, Benth., of which it has been supposed to be merely a luxuriant form.

SUBGENUS II. **Euswertia**. *Rootstock* perennial with tufted long-petioled leaves; annual flowering stems erect, often thick, hollow (see also n. 10 *S. Chirata*).

22. **S. Hookeri**, Clarke; cauline leaves elliptic scarcely connate at the base, cymes axillary dense distant, flowers 4-merous, seeds much compressed narrowly winged.—*Gentiana* sp. n. 41, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA, alt. 12-13,000 ft.; Lachen & Choongtam, J. D. H., King.

Stem $1\frac{1}{2}-4$ ft., hollow, $\frac{1}{4}-\frac{1}{2}$ in. thick. *Radical leaves* 4 by 1 in., spathulate-elliptic; cauline 3 by 1 in., narrowed at both ends, sessile, 5-nerved. *Peduncles* hardly any; *pedicels* $\frac{1}{2}-2$ in., nodding with flowers. *Sepals* $\frac{1}{2}$ by $\frac{1}{2}$ in., ovate, hardly acute. *Corolla-lobes* $\frac{2}{3}$ by $\frac{1}{2}$ in., obtuse, purplish with blue nerves; pit at the base of each deep, naked. *Filaments* linear, little dilated; anthers oblong blue. *Style* $\frac{1}{10}$ in., stigmas very short. *Capsule* $\frac{2}{3}$ by $\frac{1}{2}$ in., shining brown. *Seeds* $\frac{1}{2}$ in. diam., discoid, exceedingly thin, smooth.

23. **S. Rex**, Clarke; cauline leaves elliptic acuminate connate into a tube at the base, cymes forming a narrow panicle, flowers 5-merous, glandular depressions 2 on each corolla-lobe above the base nearly naked, seeds compressed narrowly winged.

SIKKIM HIMALAYA, alt. 11,000 ft.; Singalelah, Clarke.

Stem 3-5 ft., hollow, $\frac{1}{2}$ in. thick. *Cauline leaves* 7 by 3 in., 7-nerved; tube at the base $1\frac{1}{2}$ in., lax. *Cymes* 6 in., erect; *pedicels* 1-4 in. *Sepals* $\frac{1}{2}$ by $\frac{1}{2}$ in., lanceolate, 3-nerved, entire. *Corolla-lobes* $\frac{2}{3}$ by $\frac{1}{2}$ in., ovate, subacute, lurid-blue with green nerves; glandular depressions 2, above the base $\frac{1}{2}$ the way up, lower margin slightly produced minutely hairy so as to form an imperfect scale covering the lower part of

the depression. *Filaments* linear, flattened; anthers ovate, small. *Stigmas* subsessile. *Capsule* $\frac{2}{3}$ - $\frac{3}{4}$ by $\frac{1}{2}$ in. *Seeds* $\frac{1}{8}$ in. diam., smooth.

24. ***S. speciosa***, *Wall. Cat.* 4384; cauline leaves elliptic acuminate bases connate, cymes forming a narrow panicle, flowers 5-merous, glandular depressions 2 on each corolla-lobe close to the base subconfluent prominently fimbriate, seeds compressed narrowly winged. *Griseb. Gentian.* 334, and in *DC. Prodr.* ix. 133.

WESTERN HIMALAYA, Kumaon; *Wallich, Munro*; Gurwhal; Ramni, alt. 10,500 ft., *Strach. & Winterb.*; Kashmir; Sonamurg, alt. 9000 ft., *Levinge*.

Stem $1\frac{1}{2}$ -4 ft., hollow, $\frac{1}{2}$ in. thick. *Radical leaves* long-petioled, cauline 5 by 2 in., narrowed downwards, 7-nerved; tube at the base $\frac{1}{4}$ - $\frac{1}{2}$ in. *Peduncles* short, pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ by $\frac{1}{2}$ in., ovate, acute, serrate, much overlapping at the base. *Corolla-lobes* $\frac{3}{4}$ by $\frac{1}{2}$ in., spatulate-oblong, shortly acute; fimbriæ $\frac{1}{8}$ in. *Stamens, capsule* and seeds nearly as of *S. Rex*.—Described from Wallich's type, but the var. *perfoliata* is mixed in Wallich's collection. The Kashmir example has the corolla smaller.

VAR. *perfoliata*; sepals narrower subentire, corolla-lobes $\frac{3}{4}$ by $\frac{1}{2}$ in. much acuminate. *G. Don Gen. Syst.* iv. 176. *S. speciosa*, *D. Don in Trans. Linn. Soc.* xvii. 518.—Gurwhal and Punjab Himalaya, alt. 11,000 ft.; *Royle, Edgeworth, &c.*

25. ***S. alternifolia***, *Royle Ill.* 278, t. 67, fig. 2; leaves all alternate, cauline elliptic-lanceolate amplexicaul, cymes forming a narrow panicle, flowers 5-merous, glandular depressions 2 on each corolla-lobe close to the base subconfluent prominently fimbriate. *D. Don in Trans. Linn. Soc.* xvii. 520; *Griseb. in DC. Prodr.* ix. 133.

WESTERN HIMALAYA; Kumaon and Gurwhal, alt. 11-12,000 ft.; Choor and Kedarkanta, *Royle*; Jungle (on the Upper Pabur), *Edgeworth*.

Resembling altogether *S. speciosa*, but all the cauline leaves, including those containing cymes, are alternate. All authors describe the flowers as golden or yellow, but it is probable that they have no authority except Royle's artist, and that the flowers are really lurid blue.

26. ***S. petiolata***, *Royle*; *D. Don in Trans. Linn. Soc.* xvii. 519; lower cauline leaves long-petioled oblong connate into a tube upper often sessile, cymes forming a narrow panicle, flowers 5-merous, glandular depressions 2 much fimbriate, seeds polyhedral scrobiculate not winged. *Griseb. in DC. Prodr.* ix. 133. *S. speciosa*, *G. Don Gen. Syst.* iv. 176, not of *Wall.*

WESTERN HIMALAYA; Kashmir, alt. 9-12,000 ft., frequent; Gulmurg, Tragbol, &c., *Royle, Atkinson, Levinge, &c.*—DISTRIB. Cabul.

Stem 1-3 ft., hollow, $\frac{1}{8}$ - $\frac{1}{6}$ in. thick. *Lower cauline leaves* $3\frac{1}{2}$ by 1 in., 5-nerved, petiole 2-3 in.; tube at the base $\frac{1}{4}$ -1 in.; leaves at the base of the cyme $1\frac{1}{2}$ by $\frac{1}{2}$ in., sessile, hardly connate; upper cauline leaves petioled or sessile. *Peduncles* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., mostly 3-5-flowered; pedicels $\frac{1}{4}$ - $\frac{3}{4}$ in. *Sepals* $\frac{1}{2}$ by $\frac{1}{2}$ in., lanceolate, acute (in Royle's example), sometimes $\frac{1}{2}$ by $\frac{1}{2}$ in. *Corolla-lobes* $\frac{1}{2}$ - $\frac{3}{4}$ by $\frac{1}{2}$ - $\frac{1}{2}$ in., acute subentire (in Royle's example) with orbicular glands; in other examples emarginate or suberose at the tip, with glands elliptic or elongate; corolla lurid grey or nearly white with blue-green nerves, the glands yellow, the tip green. *Style* hardly any, stigmas short. *Capsule* $\frac{1}{2}$ by $\frac{1}{4}$ in. *Seeds* corrugate-cristate (*D. Don*) i.e. testa lax in long series of glandular ridges, approaching in structure those of *S. cordata*, but much larger.

VAR. *lahulensis*; sepals $\frac{2}{3}$ by $\frac{1}{2}$ in., corolla-lobes $\frac{3}{4}$ -1 by $\frac{1}{2}$ in. spatulate-oblong greenish erose at the tips, glands elongate considerably above the base of the corolla-lobes. *S. lahulensis*, *A. Kerner Nov. Sp.* ii. 4.—Lahoul; *Jaesckke*. The glands are fimbriate on the upper edge, and also at their base, not on the sides; and, being $\frac{1}{10}$ in. long, there seem to be 2 small hairy glands some way up the corolla-lobes, and a ring of hairs at the very base about the filaments. But there are examples which come between *A. Kerner's* type and the *S. petiolata* of Royle.

27. **S. Thomsoni**, Clarke; lower cauline leaves long-petioled oblong or elliptic scarcely connate upper often sessile, cymes forming a narrow panicle, flowers 5-merous, glands near the base of the corolla-lobes obscure, seeds smooth narrowly or irregularly winged.

WESTERN HIMALAYA; Kashmir; Sonamurg, alt. 9250 ft., Thomson, Clarke.

Resembling in leaves and habit *S. petiolata*, but with more numerous smaller flowers and capsules. Peduncles often 6 in. Sepals $\frac{1}{4}$ by $\frac{1}{10}$ in., acute. Corolla-lobes $\frac{1}{2}$ by $\frac{1}{2}$ in., subobtusely; glands 2 yellow spots very close to the base of the corolla, altogether obscure in T. Thomson's fine examples, usually naked, rarely minutely hairy. Capsule $\frac{1}{4}$ – $\frac{1}{3}$ in. Seeds $\frac{1}{16}$ – $\frac{1}{20}$ in., globose, somewhat angular, wing very partial and irregular; testa close, smooth, microscopically reticulate (hence glistening).

28. **S. cuneata**, Wall. Cat. 4380; cauline leaves spatulate-oblong or petioled, peduncles long mostly 3-1-flowered, corolla 5-merous, glands linear vertical 2 near the edge of each corolla-lobe, seeds $\frac{1}{25}$ in. angular ellipsoid smooth not winged. D. Don in Trans. Linn. Soc. xvii. 520; Griseb. Gentian. 333, and in DC. Prodr. ix. 133. S. Hugelii, Griseb. in DC. Prodr. ix. 133.

ALPINE HIMALAYA, alt. 11-14,000 ft.; from Simla to Sikkim; Wallich, Royle, J. D. H., &c.

Stem 6-24 in., hollow, $\frac{1}{8}$ in. thick. Leaves 3 by $\frac{3}{4}$ in., usually obtuse. Pedicels $\frac{1}{2}$ –2 in., mostly long. Sepals $\frac{1}{4}$ – $\frac{1}{2}$ in., narrowly oblong, obtuse acute or spatulate and apiculate. Corolla-lobes $\frac{1}{2}$ – $\frac{1}{2}$ by $\frac{1}{8}$ – $\frac{1}{6}$ in., obtuse; the 2 glands fimbriate with hairs $\frac{1}{2}$ in. long or nearly naked. Stigmas of 2 sessile hemispheric plates. Capsule $\frac{1}{2}$ in. Seeds black-brown; testa close, reticulated.

29. **S. cœrulea**, Royle Ill. 278, t. 67, fig. 1; cauline leaves oblong sessile or the lower spatulate, pedicels short, corolla 5-merous, glands oblong small, seeds $\frac{1}{50}$ in. polyhedral smooth. D. Don in Trans. Linn. Soc. xvii. 521; Griseb. in DC. Prodr. ix. 132.

WESTERN HIMALAYA; alt. 5-9000 ft., Royle; Chumba, Clarke.

Stem 6-18 in., $\frac{1}{10}$ in. thick. Leaves nearly as of *S. cuneata*. Cymes forming a linear dense panicle, peduncles short, pedicels rarely longer than the flowers. Sepals $\frac{1}{2}$ – $\frac{1}{2}$ in., narrowly lanceolate. Corolla-lobes $\frac{3}{4}$ by $\frac{1}{2}$ in., ovate, acute, blueish with green nerves, glands with small oblong slightly fimbriate scales. Stigmas sessile, hemispheric. Capsule $\frac{3}{4}$ by $\frac{1}{2}$ in., narrowly oblong. Seeds yellow-brown; testa close, reticulated.—Differs from *S. cuneata* in its corolla and seeds, and is excessively near *Pleurogyne rotata*; the difference is that in *Pleurogyne* the two scales near the base of each corolla-lobe are subconfluent, forming a nearly continuous hairy ring near the base of the corolla, without any definite depressions or viscous marks on the corolla-lobe above them; while in *Swertia cœrulea* there are two oblong minute depressions above the base of each corolla-lobe with an oblong scale fimbriated on its upper edge produced above the base of each depression so as partially to cover it.

VAR. *Wattii*; pedicels 1-2 in., sepals $\frac{3}{4}$ by $\frac{1}{2}$ in., corolla-lobes hardly longer than the sepals, scales at their base more developed.—Pangi, alt. 13,000 ft.; Dr. Watt.—This, except in the large calyx, closely resembles some forms of *S. perennis* (see Engl. Bot. t. 1441), which has seeds totally unlike *S. cœrulea*; but Dr. Watt's example being in young flower is not certainly determinable.

SUBGENUS III. **Poephila**. Perennial herbs with numerous short branches from the rootstock.

30. **S. multicaulis**, Don Prodr. 127; leaves narrowly spatulate-oblong, cymes very compound pedicels long, corolla 5-merous, a small pit at the base of each lobe with marginal fimbriæ. Griseb. in DC. Prodr. ix. 134; Clarke in Journ. Linn. Soc. xiv. 449.

ALPINE NEPAL and SIKKIM, alt. 14-17,000 ft., Wallich, J. D. H., &c.

Branches 2-5 in., much divided. *Leaves* $1\frac{3}{4}$ by $\frac{1}{2}$ in., petiole 0- $1\frac{1}{2}$ in. *Pedicels* 1-3 in., ultimately rigid, thickened upwards. *Sepals* $\frac{1}{4}$ - $\frac{1}{3}$ in., narrowly oblong, acute or subobtus. *Corolla-lobes* $\frac{1}{3}$ - $\frac{1}{2}$ by $\frac{1}{8}$ - $\frac{1}{5}$ in., obtuse; pit less than $\frac{1}{3}$ the breadth of the lobe, deep, without a scale but partially closed by the fimbriæ all round the margin. *Stigmas* sessile. *Capsule* $\frac{1}{2}$ by $\frac{1}{4}$ in. *Seeds* $\frac{1}{24}$ in., ellipsoid, black; testa close, smooth, minutely reticulate.

13. **HALENIA.**

Annual or perennial erect herbs. *Leaves* opposite. *Cymes* axillary and forming a lax terminal panicle. *Calyx* sub-4-partite, segments lanceolate. *Corolla* campanulate, 4-fid more than half-way down, pits at the base of the lobes produced into a long spur (in the Indian species). *Stamens* 4, attached near the base of the corolla, filaments linear complanate; anthers ovate or oblong, versatile. *Ovary* 1-celled, placentæ broad; style short, cylindric, stigmas small oblong or linear. *Capsule* sessile, ovate, carpels separating nearly to the base. *Seeds* ellipsoid (fewer and larger than in most *Ophelias*) smooth, testa close yellow.—Species 25 (probably reducible to 15); Mts. of India, Central Asia and America.

1. **H. elliptica**, *D. Don* in *Trans. Linn. Soc.* xvii. 529; leaves elliptic subobtus 5-nerved, spurs linear nearly as long as the petals. *Griseb. Gentian.* 326, and in *DC. Prodr.* ix. 129. *Swertia centrostemma*, *Wall. Cat.* 4385. *S. peloria*, *Griff. Itin. Notes*, 197.

TEMPERATE HIMALAYA, alt. 6-12,000 ft., from Kashmir to Bhotan, frequent.

Stem 1-24 in. *Cauline leaves* 1 by $\frac{1}{2}$ in. (in Don's type) to $2\frac{1}{2}$ by $\frac{3}{4}$ in. and acute; lower in large examples often petioled. *Sepals* $\frac{1}{2}$ in., usually acute. *Corolla* pale-blue; spurs $\frac{1}{6}$ to $\frac{1}{3}$ in., patent, tip often upcurved. *Style* hardly $\frac{1}{12}$ in. *Capsule* $\frac{1}{2}$ - $\frac{1}{3}$ in. *Seeds* $\frac{1}{16}$ in. and upwards, with a concavity at the hilum.—The western small form with elliptic subobtus leaves was *D. Don's* type; but large Sikkim examples with acute leaves appear to pass into *H. Sibirica* (*Swertia corniculata*, *Linn.*; *Pall. Fl. Ross.* ii. 99, t. 90, fig. 1), and, if this be admitted, the range of the species extends through Dahuria, N. China, and Siberia to N. America.

2. **H. Perrottetii**, *Griseb. in DC. Prodr.* ix. 129; leaves ovate or elliptic acute 5-nerved lower spatulate or petioled, spurs linear-oblong hardly half as long as the petals. *Wight Ill. t.* 157, and *Ic. t.* 1334.

NILGHERRIES, alt. 6-8000 ft.; plentiful.

Closely resembling *H. elliptica*. *Style* rather longer, stigmas sublinear. *Seeds* $\frac{1}{24}$ in., *i.e.* considerably smaller.

14. **MENYANTHES**, *Linn.*

Perennial herbs; rootstock creeping or floating. *Leaves* alternate, long-petioled, 3-foliolate in the Indian species. *Peduncles* long, scape-like; flowers white or blueish, subracemose; pedicels 1-bracteate or naked. *Sepals* 5, oblong-lanceolate. *Corolla* shortly funnel-shaped, 5-fid half way down; lobes fimbriate or crested within, induplicate valvate in bud. *Stamens* 5, on the corolla-tube, filaments linear; anthers sagittate, versatile. *Ovary* 1-celled, placentæ shortly intruded; style long, linear, stigmas 2 small. *Capsule* globose, shortly 2-valved from the apex, carpels splitting down the back. *Seeds* many, lenticular, shining, yellow, smooth.—Species 2, in the N. Temperate and Subarctic zones.

1. **M. trifoliata**, *Linn.*; *Griseb. Gentian.* 340, and in *DC. Prodr.* ix. 137; leaves 3-foliolate, leaflets elliptic or oblong obtuse entire or obscurely wavy. *Lamk. Ill. t.* 100, fig. 1; *Engl. Bot. t.* 495; *Boiss. Fl. Orient.* iv. 64; *Benth. & Trim. Med. Pl. t.* 184.

WESTERN HIMALAYA; Kashmir; *Jacquemont, Falconer*.—DISTRIB. Europe, N. Asia, and N. America, the Caucasus, Amurland and Japan.

Stems covered by lax sheathing of petioles, the lower leafless. *Petioles* 3-8 in.; leaflets subsessile, 2 by 1 in. *Peduncle* 3-6 in.; raceme 1-6 in.; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in. *Sepals* $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ - $\frac{1}{2}$ in. *Style* $\frac{1}{4}$ in. *Capsule* $\frac{1}{4}$ - $\frac{1}{2}$ in., sometimes bifid nearly to the base. *Seeds* $\frac{1}{10}$ in.

15. **LIMNANTHEMUM**, *S. P. Gmel.*

Aquatic herbs. *Leaves* deeply cordate, entire or sinuate, alternate or sub-opposite. *Peduncles* clustered at the nodes; flowers white or yellow. *Sepals* 5-4, oblong. *Corolla* rotate, deeply 5-4-fid; tube often with glands opposite the lobes, sometimes hairy in the throat; lobes valvate in bud, ciliate, fimbriate or with an oblong longitudinal fold down their middle. *Stamens* 5-4, on the corolla-tube, filaments linear short; anthers hastate-oblong, versatile. *Ovary* 1-celled, placentæ not intruded; style short, stigma of 2-3 plates. *Capsule* ovoid or oblong, subindehiscent. *Seeds* numerous, orbicular, compressed, either slightly marginate, or nearly flat discoid; testa close, somewhat spongy finely reticulated, sometimes covered with papillose glands.—Species 14, in fresh water, throughout the Tropical and Temperate Zones.

1. **L. nymphæoides**, *Link Fl. Portug.* i. 344; leaves orbicular deeply cordate, umbels axillary, corolla yellow lobes crenulate-ciliate, capsule 1 in., seeds large discoid. *Griseb. Gentian.* 341, and in *DC. Prodr.* ix. 138; *Boiss. Fl. Orient.* iv. 65. *Menyanthes nymphæoides*, *Linn.*; *Engl. Bot.* t. 217; *Gaertn. Fruct.* ii. 157, t. 114. *Villarsia nymphæoides*, *Vent. Choix.* n. 9.

WESTERN HIMALAYA; Kashmir, alt. 6-9000 ft., *Falconer, &c.*—DISTRIB. From W. and Central Europe to China.

Stems long, floating, rooting at the nodes. *Leaves* subopposite, 1-2 in. diam.; petiole 1-2 in. *Pedicels* 1-4 in. *Calyx-lobes* 5, $\frac{1}{2}$ by $\frac{1}{2}$ in. *Corolla-lobes* $\frac{3}{4}$ -1 in., without any longitudinal fold down the middle, sparingly ciliate. *Capsule* ellipsoid, acute, scarcely dehiscent. *Seeds* $\frac{1}{8}$ in. diam., lenticular, ellipsoid, winged.

2. **L. cristatum**, *Griseb. Gentian.* 342, and in *DC. Prodr.* ix. 139; leaves orbicular deeply cordate, pedicels densely fascicled at the nodes, corolla white yellow towards the base within lobes 5-6 entire with a longitudinal fold down the middle, capsule $\frac{1}{5}$ in., seeds numerous scabrous. *Wight Ill.* t. 157, *bis fig.* 4; *Dalz. & Gibs. Bomb. Fl.* 158; *Thwaites Enum.* 205. *Menyanthes cristata*, *Roxb. Cor. Pl.* ii. 3, t. 105, and *Fl. Ind.* ii. 28. *Villarsia cristata*, *Spreng. Syst.* i. 582; *Wall. Cat.* 4353; *Wight in Hook. Journ. Bot.* i. 65, t. 123; *Griff. Notul.* iv. 88, t. 386 A. V. indica, *Wall. Cat.* 4352 A. a.—*Rheede Hort. Mal.* xi. t. 29.

Throughout INDIA; very common.—DISTRIB. S. China.

Stems long, floating, rooting at the nodes. *Leaves* 1-3 in. diam.; petiole often 0-1 $\frac{1}{2}$ in. *Pedicels* 0-2 in., numerous, unequal. *Calyx-lobes* $\frac{1}{2}$ by $\frac{1}{2}$ in. *Corolla-lobes* $\frac{1}{4}$ - $\frac{1}{2}$ in.; tube with a ring of white hairs round the throat. *Stigma* 2-4- (often 3-) ridged; placental lines 2-3. *Capsule* subglobose, 10-20-seeded. *Seeds* $\frac{1}{18}$ in., circular, very thick, lenticular, margins subacute, scabrous.

3. **L. indicum**, *Thwaites Enum.* 205; leaves orbicular deeply cordate, pedicels densely fascicled at the nodes, corolla white yellow towards the base within, lobes fimbriated densely papillose without a longitudinal fold down the middle, capsule $\frac{1}{4}$ - $\frac{1}{2}$ in., seeds numerous smooth or nearly so. *Dalz. & Gibs. Bomb. Fl.* 158; *Benth. Fl. Austral.* iv. 378, with all syn. (except *Bot. Mag.* t. 658); *Boiss. Fl. Orient.* iv. 65; *Griseb. Gentian.* 343, and in *DC. Prodr.* ix. 139?. *L. Kleinianum*, *Griseb. Gentian.* 344, and in *DC. Prodr.* ix. 139; *Seem.*

Fl. Viti, t. 33. *L. Wightianum*, Griseb. *Gentian.* 344, and in *DC. Prodr.* ix. 139. *L. calycinum*, *Miq. Fl. Ind. Bat.* ii. 564. *Menyanthes indica*, *Linn. Sp. Pl.* 207; *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 31. *Villarsia indica*, *Venten.*; *Wall. Cat.* 4352 A. g.; *Wight in Hook. Bot. Misc. Suppl.* t. 30. *V. macrophylla*, *Wight. in Hook. Bot. Misc.* iii. 96. *V. eglandulosa*, *Griff. Ic. Pl. As. t.* 385.—*Rheede Hort. Mal.* xi. t. 28; *Rumph. Herb. Amb.* vi. t. 72, fig. 3.

Throughout INDIA; very common.—DISTRIB. Cabul, Mascarene Islds., S.E. Asia, Malaya, Australia to Fiji Isles.

Stems long, floating, rooting at the nodes. *Leaves* 2-8 in. diam.; petiole 0 or short. *Pedicels* 0-5 in., numerous, unequal. *Calyx-lobes* $\frac{1}{2}$ – $\frac{1}{3}$ in., narrowly lanceolate. *Corolla-lobes* $\frac{1}{2}$ – $\frac{1}{3}$ in. *Ovary* and stigmas nearly as in *L. cristatum*. *Capsule* $\frac{1}{2}$ – $\frac{1}{3}$ in., subquadrate. *Seeds* $\frac{1}{20}$ in., thickly lenticular, smooth or minutely glandular-puberulous, never scabrous as in *L. cristatum*.—The descriptions of *L. cristatum* and *indicum* by Grisebach are so incorrect, that Bentham quotes Thwaites as the primary authority for this common species. *Bot. Mag.* t. 658, adduced here by Bentham, has yellow flowers, and looks more like *L. nymphæoides*.

4. ***L. aurantiacum***, *Dalz. in Hook. Kew Journ.* ii. 136; leaves orbicular deeply cordate, pedicels few from each node, corolla yellow lobes fimbriated on the margin, capsule $\frac{1}{2}$ in., seeds smooth. *Dalz. & Gibs. Bomb. Fl.* 158. *L. biflorum*, *Thwaites Enum.* 205. *Menyanthes biflora*, *Moon. Cat. Pl. Ceyl.* 13.

W. DECCAN PENINSULA; from Bombay southwards. CEYLON, frequent.

Stems elongate, nodes not rooting. *Leaves* $1\frac{1}{2}$ in. diam.; petiole often 1-3 in. *Pedicels* commonly 2 from each node. *Calyx-lobes* 5, $\frac{1}{2}$ by $\frac{1}{10}$ in. *Corolla-lobes* $\frac{1}{2}$ in., sparingly fimbriate, without a longitudinal fold down the middle. *Capsule* subglobose, 10-15-seeded. *Seeds* $\frac{1}{20}$ in. diam.; nearly as of *L. indicum*; testa close, thick, minutely reticulate, not papillose.

5. ***L. Forbesianum***, *Griseb. Gentian.* 345, and in *DC. Prodr.* ix. 139; leaves small orbicular deeply cordate, peduncles numerous equalling or exceeding the leaf, corolla white lobes 5 hairy within fimbriate on the margin, seeds globose obtusely carinate most minutely punctate not muricate.

CEYLON; *Macrae*.

Stems short; pedicels many fasciculate; corolla white (*Macrae*).—This appears to be a small form of *L. aurantiacum*, but *Macrae* has twice noted the corolla to be white. It is *Menyanthes campestris*, *Macrae* and *Wight* (in *Herb.*) partly; but half of *Wight's* sheet is *L. Moonii*, *Thwaites*.

6. ***L. parvifolium***, *Griseb. in DC. Prodr.* ix. 141; leaves small radical spathulate-orbicular cauline deeply cordate, pedicels numerous fascicled, corolla white lobes 5-4 fimbriate, capsule oblong narrowed below, seeds minutely puberulous. *Dalz. & Gibs. Bomb. Fl.* 158. *Villarsia parvifolia*, *Wall. Cat.* 4351.

W. DECCAN PENINSULA, *Wight*, &c. CHITTAGONG, *H. f. & T. Tavoy*, *Wall. Ceylon*.

Stems apparently rooted on mud at the base, long, floating, not rooting at the nodes. *Radical leaves* 1 in. diam., cuneate at the base on the broad petiole; cauline leaves $\frac{1}{2}$ – $\frac{3}{4}$, subsessile. *Pedicels* 3-10, $\frac{1}{2}$ – $\frac{1}{3}$ in., at each node. *Calyx-lobes* $\frac{1}{10}$ in., oblong. *Corolla-lobes* $\frac{1}{2}$ – $\frac{1}{3}$ in. *Capsule* $\frac{1}{2}$ by $\frac{1}{12}$ in.

VAR. *Moonii*; flowers 4-merous, capsule $\frac{1}{2}$ in. long and broad subglobose, seeds smooth, testa thick closely minutely reticulated. *L. Moonii*, *Thwaites Enum.* 205. *Menyanthes campestris*, *Moon. Cat. Pl. Ceyl.* 13.—Ceylon, *Thwaites*, *Kelaart*. *Moulmein*, *Griffith* (*Kew Distrib.* n. 187).

ORDER XCVIII. **POLEMONIACEÆ.** (By C. B. Clarke.)

Herbs, shrubs, or trees. *Leaves* exstipulate. *Flowers* showy, regular, hermaphrodite, 5-merous. *Calyx* inferior. *Corolla* gamopetalous, lobes twisted to the right. *Stamens* 5, on the corolla-tube, alternate with its lobes. *Ovary* superior, 3-celled; style simple, shortly 3-fid; ovules very many. *Capsule* septicidal, 3-valved. *Seeds* many, albuminous; embryo straight.—Species 150; in America, a very few in N. Asia and Europe.

1. **POLEMONIUM**, Linn.

Perennial herbs. *Leaves* alternate, pinnate. *Cymes* terminal, corymbose. *Flowers* blue. *Calyx* campanulate, lobed half-way down, scarcely ribbed. *Corolla* funnel-shaped, lobes patent obovate. *Stamens* attached near the base of the corolla; filaments declinate, hairy, appendaged at the base. *Ovary* and capsule ovoid. *Seeds* not or obscurely winged; testa, when wetted, becoming mucilaginous and breaking up elastically into spiral threads.—Species 8; from Europe, N. and Central Asia, N. America to Mexico and Chili.

P. cœruleum, Linn.; *Benth. in DC. Prodr.* ix. 317; stem erect leafy, leaflets lanceolate or ovate-lanceolate, flowers many corymbose, calyx-lobes ovate or lanceolate-oblong scarcely acute, corolla 2-3-times longer than the calyx. *Gaertn. Fruct.* i. 299, t. 62; *Lamk. Ill.* t. 106; *Wall. Cat.* 1471; *Syme Engl. Bot.* iii. t. 922; *Boiss. Fl. Orient.* iv. 83.

ALPINE WESTERN HIMALAYA, alt. 9-12,000 ft.; from Kashmir to Kumaon, frequent.—DISTRIB. Europe, N. and Central Asia, N. America.

Stems 1-4 ft., viscous hairy or glabrescent. *Leaves* 5 by 3 in., leaflets $1\frac{1}{4}$ by $\frac{1}{2}$ in. *Flowers* often clustered; corolla 1 in. diam. or more, a fine blue. *Capsule* $\frac{1}{2}$ in., ellipsoid, much overtopped by the persistent calyx. *Seeds* $\frac{1}{10}$ in., oblong-ellipsoid, smooth, not winged (in the Indian plant).—The Himalayan, like the European plant, is tall with narrow leaflets.

ORDER XCIX. **HYDROPHYLLACEÆ.** (By C. B. Clarke.)

Differ from *Gentianaceæ* by the alternate leaves and imbricate corolla-lobes.

The single Indian genus, forming by itself the tribe *Hydroleæ*, is easily known from *Gentianaceæ* by its 2 styles distinct from the base with capitate stigmas.—Species 150, mainly American, 3 or 4 only in the Old World.

1. **HYDROLEA**, Linn.

Herbs. *Leaves* alternate, entire. *Flowers* blue, in short terminal racemes or cymes, regular, 5-merous. *Calyx* divided nearly to the base, segments lanceolate. *Corolla* widely campanulate, subrotate, lobes imbricate. *Stamens* 5, attached to the short corolla-tube, alternate with its lobes, filaments filiform often dilated at the base; anthers sagittate, oblong. *Ovary* completely 2-celled; styles 2, distinct, stigmas capitate; ovules very many. *Capsule* globose or ovoid, septicidal or irregularly 4-valved. *Seeds* minute.

H. zeylanica, Vahl *Symb.* ii. 46; annual, unarmed, leaves lanceolate, flowers racemed on short lateral branches, calyx-lobes lanceolate striate exceeding the capsule. *Lamk. Ill.* t. 184; *Wall. Cat.* 4398; *W. & A. in Hook. C. np.*

Bot. Mag. ii. 193, t. 26; *Wight Ill.* t. 167, and *Ic.* t. 601; *Choisy in DC. Prodr.* x. 180; *Dalz. & Gibs. Bomb. Fl.* 170. *H. javanica*, *Blume Bijl.* 725. *Nama zeylanica*, *Linn.*; *Roxb. Fl. Ind.* ii. 73. *Nama*, *Linn. Fl. Zeyl.* 49, t. 2. —*Rheede Hort. Mal.* x. 28.

Throughout INDIA, ascending to 4000 ft., in wet places; abundant in rice swamps. —DISTRIB. S.E. Asia, Malaya, and Australia; Tropical Africa and America.

Stems 3–18 in., procumbent, branched, with the inflorescence patently viscidly hairy, or (in the Ceylon form) nearly glabrous. *Leaves* 2 by $\frac{1}{2}$ in., narrowed at the base. *Racemes* 1–2 in.; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., narrow; pedicels $\frac{1}{8}$ – $\frac{1}{4}$ in. *Sepals* $\frac{1}{4}$ in. *Corolla-segments* $\frac{1}{2}$ in. *Filaments* dilated at the base, or nearly filiform. *Capsule* $\frac{1}{2}$ in.

ORDER C. **BORAGINÆ.** (By C. B. Clarke.)

Herbs, shrubs or trees, often hispid or scabrous. *Leaves* alternate, very rarely opposite, exstipulate, mostly entire. *Flowers* usually in dichotomous scorpioid cymes, rarely solitary and axillary. *Calyx* inferior, 5-, rarely 6–8-toothed or lobed, usually persistent in fruit. *Corolla* gamopetalous, often with scales in the throat, rarely 4–6-lobed, imbricate (rarely twisted) in the bud. *Stamens* as many as the corolla-lobes, alternate with them, upon the corolla-tube. *Ovary* superior; cells 2, 2-ovuled, or 4–1-ovuled; style terminal or from between the ovary-lobes, long or short, stigma capitate or 2-lobed, rarely the style twice bifid; ovules suberect from the inner basal angle of the cell. *Fruit* drupaceous or dividing into 2–4 nutlets. *Seeds* erect or oblique, testa membranous, albumen fleshy copious sparing or 0; embryo straight or curved, radicle superior.—Species 1,200; throughout the world.

TRIBE I. **Cordiææ.** Trees or shrubs. *Style* terminal on the entire ovary, twice bipartite. *Drupe* 4–1-seeded; albumen 0; cotyledons plicate longitudinally.

Calyx-teeth very short, irregular 1. **CORDIA.**

TRIBE II. **Ehretieæ.** *Style* terminal on the entire ovary, simple, bipartite, or styles 2. *Drupe* with 2 2-celled, or 4 1-celled pyrenes; or of 4–1 nuts.

Trees or shrubs. *Style* 2-fid 2. **EHRETIA.**

Frostrate herb. *Styles* 2 3. **COLDENIA.**

Virgate shrub. *Style* 1, stigma capitate 4. **RHABDIA.**

TRIBE III. **Heliotropieæ.** *Style* terminal on the entire ovary, depressed-conic at the apex, or with a horizontal ring below the stigmas. *Fruit* as of *Ehretieæ*.

Shrubs, often scandent. *Style* short, shortly 2-lobed 5. **TOURNEFORTIA.**

Herbs. *Style* dilated at the apex or above the base 6. **HELIOTROPIMUM.**

TRIBE IV. **Boragææ.** Herbs. *Style* simple or bifid, rising from between the ovary lobes (except in *Trichodesma*). *Nutlets* 4, rarely 3–1 by suppression (2 in *Rochelia*); albumen 0.

SUBTRIBE I. **CYNOGLOSSEÆ.** *Nutlets* attached to a convex or conical carpophore, scar continued to the apex of the nutlets which are often depressed, produced, or saccate at the base.

* *Fruiting calyx enlarged enclosing the nutlets.*

Anthers conically connivent, lanceolate, subexsert 7. **TRICHODESMA.**

** *Nutlets depressed, their bases produced downwards.*

Stamens included. Nutlets obovoid, scar punctiform . . .	8. ACTINOCARYA.
Stamens included. Margins of nutlets reflexed over their backs . . .	9. OMPHALODES.
Stamens included. Nutlets obovoid, glochidiolate . . .	10. CYNOGLOSSUM.
Stamens exerted; anthers large, linear-oblong . . .	11. LINDELOFIA.
Stamens exerted; anthers small, shortly oblong . . .	12. SOLENANTHUS.

*** *Nutlets connate, forming a pyramidal fruit, margined, hardly produced downwards.*

Racemes ebracteate. Margin of the nutlets glochidiolate, often reflexed . . .	13. PARACARYUM.
Racemes bracteate. Margin of the nutlets glochidiolate, scarcely reflexed . . .	14. ECHINOSPERMUM.

SUBTRIBE II. ERITRICHIEÆ. *Nutlets attached to a convex or conical carpophore, scar in the middle or lower half of the nutlets which are not depressed at the base, but are produced at the apex above the scar, free round the base of the style.*

* *Scar in the basal half of the nutlet.*

Racemes ebracteate. Nutlets 4 . . .	15. ERITRICHIMUM.
Racemes bracteate. Nutlets 2, 1-seeded . . .	16. ROCHELIA.

** *Scar in the middle of the inner face of the nutlets.*† *Scar small, without a prominent thickened incurved margin.*

Flowers axillary, subsessile. Fruiting calyx enlarged . .	17. ASPERUGO.
Almost stemless. Fruiting calyx not enlarged . . .	18. MICROULA.

†† *Scar depressed, with a thickened incurved margin.*

Flowers axillary, pedicelled . . .	19. BOTHRIOSPERMUM.
Flowers axillary, subsessile . . .	20. GASTROCOTYLE.

SUBTRIBE III. ANCHUSEÆ. *Nutlets on a flat or nearly flat receptacle; scar basal, prominent, hollowed out, with a prominent thickened margin.*

* *Corolla-throat closed by 5 scales.*

Corolla-tube straight . . .	21. ANCHUSA.
Corolla-tube curved . . .	22. LYCOPSIS.

** *Corolla-throat naked or hairy within, but without scales.*

Racemes dense. Calyx large . . .	23. NONNHA.
----------------------------------	-------------

SUBTRIBE IV. LITHOSPERMEÆ. *Nutlets on a flat or nearly flat receptacle scar basal, but little hollowed out, without a prominent margin.*

* *Racemes ebracteate. Corolla-lobes distinct.*

Corolla-tube cylindric. Anthers included . . .	24. MERTENSIA.
Corolla-tube cylindric. Anthers exerted . . .	25. MOLTZIA.
Corolla-tube short. Nutlets tetrahedral . . .	26. TRIGONOTIS.
Corolla-tube short. Nutlets ovoid-oblong . . .	27. MYOSOTIS.

** *Racemes bracteate. Corolla-lobes distinct.*

Corolla-throat naked or with small scales . . .	28. LITHOSPERMUM.
Corolla-throat densely filled with hairs . . .	29. SERICOSTOMA.

Hispid spreading herbs. Corolla yellow, tube elongate . . . 30. ARNEBIA.
 Suberect herbs. Corolla purple, tube elongate . . . 31. MACROTOMIA.

*** *Corolla-lobes reduced to minute teeth.*

Anthers lanceolate, connivent in a cone . . . 32. ONOSMA.

1. CORDIA, Linn.

Trees or shrubs, sometimes subsucculent. *Leaves* alternate, rarely subopposite, petioled. *Flowers* in dichotomous corymbs or clusters, ebracteate, polygamous, hermaphrodite corymbs much fewer-flowered than the male. *Calyx* tubular or campanulate, teeth very short often irregular, in fruit accrescent. *Corolla* funnel-shaped; lobes 4-8, patent or recurved, white or orange. *Stamens* 4-8, filaments often hairy at the base; anthers shortly exserted. *Ovary* 4-celled, glabrous; style terminal, long, bipartite, branches again bipartite linear or subspathulate; cells 1-ovuled. *Drupe* ovoid or ellipsoid, putamen bony, cells 1-4, usually 1 fertile. *Seeds* exalbuminous.—Species 180, all tropical.

SECT. I. **Myxa.** *Corolla* small, white; tube hardly so long as the calyx. *Stamens* usually 4-5.

* *Adult leaves glabrous or subvillous beneath, not tomentose* (except in *C. obliqua*, Willd. var. *Wallichii*).

† *Leaves 3- (or 3-5-) nerved at the base, lateral primary nerves few.*

1. **C. Myxa**, Linn.; *DC. Prodr.* ix. 479; branchlets glabrous, leaves ovate or oblong sub-3-nerved glabrous above, corymbs lax many-fl., calyx glabrous or minutely pubescent without lobes hairy within, berry $\frac{3}{4}$ in. ovoid subacute 1-seeded. *Delile Fl. Æg.* t. 19, fig. 1; *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 332; *Wall. Cat.* 889; *Wight Ill.* t. 169; *Hayne Arzn. Gewach.* ix. t. 33; *Dalz. & Gibs. Bomb. Fl.* 173; *Benth. Fl. Austral.* iv. 386 (with syn.); *Bedd. For. Man.* 165, and *Fl. Sylv.* t. 245, fig. A; *Brand. For. Fl.* 336, partly; *Kurz For. Fl.* ii. 208; *Boiss. Fl. Orient.* iv. 124. *C. Myxa*, var. β *minor* only, *Thwaites Enum.* 214. *C. indica*, *Lamk. Dict.* vii. 49; *DC. Prodr.* ix. 500. *C. officinalis* and *africana*, *Lamk. Ill.* ii. 420, and *Ill.* t. 96, fig. 3. *C. Sebestena*, *Forsk. Fl. Æg. Arab.* lxiii. *C. paniculata*, *Roth Nov. Sp.* 124; *DC. Prodr.* ix. 482. *Sebestena officinalis*, *Gaertn. Fruct.* i. 364, t. 76. *Ehretia glabra*, *Roth Nov. Sp.* 127; *DC. Prodr.* ix. 510, *ex descr.* *Beurreria glabra*, *G. Don Gen. Syst.* iv. 390.—*Rheede Hort. Mal.* iv. t. 37.

Throughout INDIA and CEYLON, alt. 0-3000 ft.; common wild, and often planted. **DISTRIB.**—From Egypt to Cochinchina and Tropical Australia; but often cultivated.

A crooked tree, 40 ft., or a shrub. *Leaves* alternate, 1-5 in. diam., very variable in form and size, subentire, repand-crenate or sublobate, never acuminate; above glabrous or very obscurely scabrous without white discs or hairs, beneath scabrous often hairy or subvillous when young; petiole $\frac{1}{4}$ -1 $\frac{1}{2}$ in. *Flowers* ♂ and ♀, often on the same tree, mostly 5-merous. *Corymbs* 2-8 in., male larger laxer, terminal and on short lateral branches (*C. reflexa* sp., *Wight mss.*), glabrous or (when young) villous or pubescent. *Calyx* $\frac{1}{8}$ - $\frac{1}{2}$ in. at flower-time, soon much accrescent, tubular-campanulate, lobes very short. *Corolla-lobes* $\frac{1}{10}$ - $\frac{1}{8}$ in., tube hairy within. *Stigmas* with long linear lobes. *Berry* yellow or pinkish, glassy, nearly always 1-seeded; fruiting calyx $\frac{3}{4}$ in. diam., wide-funnel-shaped, glabrescent, more or less distinctly striated longitudinally.—*Sebesten*.

VAR. brunnea, *Kurz For. Fl.* 208; leaves large, young shoots fulvous-pubescent, young calyx pubescent or subtomentose, berry 1 in. ovoid subacute 1-seeded. *C. latifolia*, *Wall. Cat.* 893, not of *Roxb.*—Bengal, Assam, Khasia, Burma, alt. 0-2000

ft.; frequent. Distrib. Ava, Malacca.—Leaves mostly broad-elliptic or obovate-oblong, glabrous above, never tomentose beneath; corymbs (at least of ♂) very dense; corolla exactly as of *C. Myxa*.—This is the plant united by modern authors with the typical glabrous form of *C. obliqua*, Willd., which has a considerably larger corolla.

VAR. *domestica*; innovations fulvous-tomentose, leaves small young minutely pubescent above closely grey tomentose beneath, corymbs small grey tomentose. *C. domestica*, Roth Nov. Sp. 123.—Deccan (?); Herb. Wight.—Leaves $\frac{1}{2}$ –1 $\frac{1}{2}$ in., repand-crenate, mature nearly glabrous. Flowers as of *C. Myxa*. Berries (when nearly ripe) rostrate-acuminate, very unlike those of *C. Myxa*. This may be a distinct species, and possibly more nearly allied to *C. fulvosa*, Wight.

2. ***C. obliqua***, Willd. Sp. Pl. i. 1072; innovations fulvous-villous, leaves ovate or orbicular sub-3-nerved young tomentose beneath adult glabrous, corymbs divaricate dichotomous glabrous, calyx glabrous without or scarcely villous on the margin, berry 1 in. ovoid subacute 1-seeded. DC. Prodr. ix. 479. *C. latifolia*, Roxb. Fl. Ind. ed Carey & Wall. ii. 330; Dalz. & Gibs. Bomb. Fl. 173, not of Wall. *C. Myxa*, Thwaites Enum. 213, not of Linn.; Brand. For. Fl. 336, partly.

WESTERN INDIA, from the Punjab and Hindostan to CEYLON, frequent. NICOBARS.

A tree closely resembling *C. Myxa*. Calyx $\frac{1}{5}$ – $\frac{1}{4}$ in. (at flower-time); tube campanulate; lobes distinct, densely villous within. Corolla-lobes $\frac{1}{5}$ – $\frac{1}{4}$ in.

VAR. *Wallichii*; adult leaves densely stellately fulvous- or white-tomentose beneath, calyx glabrescent without below, teeth densely fulvous-villous. *C. Wallichii*, G. Don Gen. Syst. iv. 379; DC. Prodr. ix. 479; Dalz. & Gibs. Bomb. Fl. 174; Bedd. Fl. Sylv. t. 245. *C. tomentosa*, Wall. in Roxb. Fl. Ind. ed Carey & Wall. ii. 329. *C. obliqua*, Wight Ic. t. 1378. *C. grandis*, Wall. Cat. 892 B.—W. India from Lahore to Kurg.—This is *C. obliqua*, var. β of all the old collectors, who have mixed it with *C. obliqua* type. The two are undoubtedly one; they differ in hairs only, and immediately hairy examples occur.

3. ***C. monoica***, Roxb. Cor. Pl. i. 43, t. 58, and Fl. Ind. ed. Carey & Wall. ii. 334; innovations fulvous-tomentose, leaves ovate 3-nerved scabrous with white discs above mature glabrescent or somewhat villous beneath, corymbs small tomentose, berry $\frac{3}{4}$ in. ovoid scarcely acute. DC. Prodr. ix. 479; Bedd. For. Man. 166. *C. polygama*, Roxb. Fl. Ind. ed. Carey & Wall. ii. 237; Wall. Cat. 891; DC. Prodr. ix. 480; Bedd. For. Man. 166; Kurz For. Fl. ii. 207. *C. diversa*, Thwaites Enum. 214; Bedd. For. Man. 166.—*Cordia* sp. n. 16, Herb. Ind. Or. H. f. & T.

DECCAN PENINSULA from Orissa and the Central Provinces southwards to CEYLON; alt. 2–5000 ft., common.

A small tree. Leaves 1–3 in., obtuse or subacute, subentire or sharply crenate. Corymbs 1–2 in. diam., dense, monoicous or polygamous; ♂ usually 4-androus, ♀ 5-androus. Calyx-tube $\frac{1}{2}$ in., tomentose or pubescent; teeth small, villous. Corolla-lobes $\frac{1}{2}$ in., narrow. Drupe yellow; stone 4-celled, drilled at the apex, 3 cells barren, one 1-seeded.—The authentic specimens of *C. polygama* are identical with *C. monoica*; Wight has called the examples with subentire leaves *C. monoica*, and those with strongly crenate leaves *C. polygama*.

4. ***C. grandis***, Roxb. Fl. Ind. ed. Carey & Wall. ii. 335; leaves large ovate 3–5-nerved scabrous above mature glabrous or scarcely villous beneath, corymbs large dense, flowers small pubescent or scarcely tomentose, berry at most $\frac{1}{2}$ in. ellipsoid very obtuse. Wall. Cat. 892; DC. Prodr. ix. 481; Kurz For. Fl. ii. 208. *C. cordifolia*, Wall. Cat. 894.

ASSAM, *Griffith*, &c. CHITTAGONG; *H. f. & T.*, &c. PEGU; *Kurz*.—DISTRIB. Ava.

A large tree. *Leaves* 3-6 in., acute or obtuse, scabrid with very small rough points, base 3-5-nerved; petiole 1-2½ in. *Corymbs* terminal, female many-flowered, male dense. *Calyx* at flower-time scarcely ⅙ in., tubular-campanulate. *Corolla-lobes* 4, ⅓-⅔ in. *Stamens* 4. *Berry* usually ⅓ by ⅓ in., 1-2-seeded; fruiting-calyx scarcely ⅓ in wide.

†† *Leaves* feather-nerved not (or-obscurely) 3-nerved at the base.

5. **C. Rothii**, *Roem. & Sch. Syst.* iv. 798; leaves subopposite oblong base attenuate feather-nerved mature scabrous glabrescent, cymes small pubescent or subtomentose, berry ⅓ in. ellipsoid acute. *Wight Ic.* t. 1879; *DC. Prodr.* ix. 480; *Dalz. & Gibs. Bomb. Fl.* 174; *Bedd. For. Man.* 166; *Brand. For. Fl.* 338. *C. angustifolia*, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 338, not of *Roem. & Sch.* *C. reticulata*, *Roth Nov. Sp.* 124; *Wall. Cat.* 895; not of *Vahl*. *C. subopposita*, *DC. Prodr.* ix. 480.

W. INDIA, from the Punjab, Hurdwar, and Scinde to Malabar, frequent.—DISTRIB. Arabia, Abyssinia.

A tree, attaining 30 feet. *Leaves* 4 by 1¼ in., usually obtuse, entire or undulate; petiole ¾ in. *Corymbs* 1-3 in. *Calyx* at flower time ⅓ in., minutely pubescent. *Corolla-lobes* usually 4, ⅓ in. *Berry* usually 1-seeded.

6. **C. Perrottetii**, *Wight Ic.* t. 1381, not of *A. DC.*; leaves obovate-oblong feather-nerved scabrous pubescent, corymbs small tomentose, berry ½ in. ellipsoid acuminate. *Bedd. For. Man.* 166 partly?

S. DECCAN PENINSULA; Bellary, Coimbatore, &c., *Wight*.

A small tree. *Leaves* 1-2 in., somewhat clustered, scarcely subopposite, obtuse, entire or crenate; petiole ½ in. *Corymbs* 1-2 in. *Calyx* at flower time ⅓ in., tomentose, tubular-campanulate, soon glabrescent. *Corolla-lobes* mostly 4, ⅓-⅔ in.—*Cordia Perrottetii*, *A. DC. Prodr.* ix. 482 (*Perrottet's* Pondicherry example) is *Premna tomentosa*, *Willd.*; *Beddome's* description l.c. appears compounded of this and *Wight's*.

7. **C. oblongifolia**, *Thwaites Enum.* 214; leaves elliptic acute or lanceolate feather-nerved mature glabrous, corymbs terminal soon glabrous, berry 1 by ¾ in. ellipsoid shortly acute. *Bedd. For. Man.* 166. ? *C. Leschenaultii*, *DC. Prodr.* ix. 482.

CEYLON; Central Province up to 2000 ft., *Thwaites*.

Subscandent, *Thwaites*. *Leaves* alternate, 4 by 2 in. elliptic, or 4 by 1 in. lanceolate, base cuneate or rounded, subentire, secondary nerves conspicuous minutely reticulated; petiole 1 in. *Corymbs* 2-4 in., flowers in close clusters. *Calyx* at flower time ⅓ in., narrowly funnel-shaped, nearly glabrous without. *Corolla-lobes* 5-7, ⅓ in.—Of *C. Leschenaultii* no authentic example has been seen; the old specimen in the British Museum so named is *C. oblongifolia*. These plants only differ from *C. Myxa* in the leaves being obscurely 3-nerved at the base with more numerous lateral nerves.

8. **C. Roxburghii**, *Clarke*; minutely scabrous-pilose, leaves oblong-lanceolate copiously feather-nerved, corymb small, calyx widely funnel-shaped teeth triangular distinct.

CEYLON; *Herb. Roxburgh*.

Branches terete, minutely scabrous-pilose. *Leaves* alternate, 3½ by 1 in., acute at both ends, coriaceous, subentire, nerves 10-15 pair; petiole ¼ in. *Corymb* 1½ in. diam., minutely scabrous-pilose; flowers few, sessile in small clusters. *Calyx* at flower-time ⅓ in., minutely scabrous-pilose; teeth 5 or 6, ⅓ in., minutely scabrous-pilose within. *Corolla* glabrous within, lobes ⅓ in., elliptic. *Style* long, divided into

4 spatulate branches. *Stamens* 5, glabrous; anthers large, oblong.—A very distinct species; but possibly not an indigenous plant of Ceylon.

9. **C. Griffithii**, *Clarke*; leaves alternate lanceolate and ovate-lanceolate glabrous feather-nerved, male corymbs large terminal lax nearly glabrous.

MALACCA; *Griffith*.

Branchlets terete, glabrous, curved; innovations fulvous-tomentose. *Leaves* $3\frac{1}{2}$ by $1\frac{3}{4}$ in., or the uppermost narrow-lanceolate, acuminate to an obtuse apex, cuneate at the base, subentire, texture thin, secondary nerves finely reticulate; petiole $\frac{3}{4}$ in. *Calyx* at flower-time $\frac{1}{4}$ in., funnel-shaped, nearly glabrous. *Corolla-lobes* 5, $\frac{1}{2}$ in., elliptic.—Appears closely allied to *C. oblongifolia*. A male plant collected at Malacca by Maingay (Kew Distrib. n. 1162) is perhaps the same, but has the primary nerves of the leaves more numerous.

** *Adult leaves tomentose beneath*.

10. **C. fragrantissima**, *Kurz For. Fl.* ii. 207; leaves alternate large ovate 3-nerved mature scabrous above grey-tomentose beneath, corymbs large terminal soon glabrescent, berry $\frac{1}{2}$ in. ellipsoid obtuse. *C. rotundifolia*, *Heyne in Herb. Rottler*.

KHASIA MTS.; *Griffith* (Kew Distrib. n. 5999). E. BENGAL, at Mymensing; CHITTAGONG, MARTABAN, and TENASSERIM; *Kurz*.

This closely resembles *C. grandis*, Wall. in its area of distribution, inflorescence, 4-merous flowers, and berries: differing only in the adult leaves being densely stellately villous beneath. *Kurz* says "ovary with a sessile stigma," whence, it is presumed, he had only male flowers.

11. **C. vestita**, *H. f. & T. in Journ. Linn. Soc.* ii. 128; innovations fulvous-woolly, leaves ovate or oblong acuminate sub-3-nerved harshly coriaceous tomentum beneath deciduous, flowers cymose-paniculate, berry $\frac{3}{4}$ in. ellipsoid acute. *Brand. For. Fl.* 338. *C. incana*, *Royle Ill.* p. 306, *name only*. *Gynaion vestitum*, *A. DC. Prodr.* ix. 468.

SUBTROPICAL WESTERN HIMALAYA, alt. 1-4000 ft.; frequent from the Jhelum to Oude, *Edgeworth, &c.*

A tree, attaining 30 feet. *Leaves* 4 in., sometimes ovate from a rounded base, sometimes cuneate-oblong from a narrow base, entire crenate or lobed, densely tomentose beneath at least till nearly mature, at length scabrous above often with white dots; petiole 1 in. *Corymbs* dense, tomentose, and woolly. *Calyx* $\frac{1}{2}$ in. tubular-clavate, prominently ribbed upwards, or, in other examples, much smaller scarcely clavate, hardly ribbed. *Corolla-lobes* $\frac{1}{2}$ in., obovate, or smaller elliptic. *Calyx* in fruit $\frac{3}{4}$ -1 in. diam., saucer-shaped; or, in Aitcheson's Punjab examples, $\frac{3}{4}$ by $\frac{3}{4}$ in., elongate campanulate, strongly ribbed.

12. **C. Macleodii**, *H. f. & T. in Journ. Linn. Soc.* ii. 128; very softly densely tomentose, leaves cordate-ovate obtuse 3-5-nerved permanently tomentose beneath, corymbs short tomentose, berry $\frac{3}{4}$ in. ovoid acute. *Brand. For. Fl.* 337, t. 41. *Hemigymnia Macleodii*, *Griff. in Calc. Journ. Nat. Hist.* iii. 363; *Schauer in DC. Prodr.* xi. 697.

CENTRAL INDIA, CONCAN and BELGAUM; *Stocks, Dalzell, &c.*

A tree, attaining 40 feet. *Leaves* alternate, scarcely subopposite; mature 5 in. diam., impressed rugose above, densely tomentose beneath; petiole 1-2 in. *Calyx* $\frac{1}{2}$ in., tubular-clavate, densely tomentose, ribbed upwards; or much smaller, not (or obscurely) ribbed. *Corolla-lobes* $\frac{1}{2}$ in., oblong, or much shorter. *Fruit* acutely conical till nearly ripe, calyx broadly funnel-shaped or subcampanulate.—The specimen on which Griffith founded the species, is leafy and in flower, the calyx then

about $\frac{1}{4}$ in.; most of the examples are leafless when in flower, often with much larger calyx.

13. **C. fulvosa**, *Wight Ic.* t. 1380; leaves ovate obtuse or acute tomentum beneath hard, corymbs closely tomentose calyx soon glabrescent, berry $\frac{3}{4}$ –1 in. ovoid acute. *Bedd. For. Man.* 166. *C. polygama*, *Wall. Cat.* 892, partly.—*Cordia* sp. n. 13, *Herb. Ind. Or. H. f. & T.*

W. DECCAN PENINSULA; Concan and Belgaum, *Lav, Stocks, Ritchie*.

Leaves with hard, not woolly tomentum, becoming scabrous or subglabrate in age, very variable in size, obtuse or more often acute, crenately lobed or entire, obscurely 3-nerved.—Except in its much less tomentose corymb and leaves, this is undistinguishable from *C. Macleodii*; it may be only a more tomentose form of *C. monoica*, as Wallich esteemed it.

VAR. evolutior; less tomentose, leaves 8 by 4 in., corymb large, calyx at flower-time glabrescent.—Bombay; *Dalzell*.—A very doubtful plant; it forms part of *Cordia* n. 13, *Herb. Ind. Or. H. f. & T.* and appears really to belong here, but it is exceedingly unlike *Wight's* picture of *C. fulvosa*.

SECT. II. **Sebesten.** *Corolla* larger, tube exceeding the calyx. *Stamens* 6–8.

14. **C. octandra**, *A. DC. Prodr.* ix. 477; leaves ovate acuminate crenate-suberrate 3-nerved nearly glabrous, calyx cylindric obscurely tomentose without, corolla white tube slightly longer than the calyx, stamens usually 8. *Bedd. For. Man.* 166. *C. serrata*, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 333; *Wall. Cat.* 890; *Wight Ic.* t. 469, not of *Juss.*

TRAVANCORE; *Roxburgh*.

Arboreous. *Leaves* alternate, 6 by 3 in., rounded or rhomboid at the base; petiole 1–2 in. *Corymbs* lateral, peduncled, 2–4 in., minutely rusty; flowers subsessile in small clusters. *Calyx-tube* $\frac{1}{3}$ in.; lobes $\frac{1}{10}$ in., triangular, hairy within. *Corolla-lobes* 7–9, $\frac{1}{2}$ in. *Filaments* hairy; anthers ovate, small.—Described from the Calcutta Botanic Garden examples; no wild specimen known.

15. **C. subcordata**, *Lamk. Ill.* ii. 421; leaves large ovate acute obscurely 3-nerved nearly glabrous without, corolla large orange or reddish tube exceeding the calyx, stamens 6. *Wall. Cat.* 9063; *DC. Prodr.* ix. 477; *Seem. Fl. Viti*, t. 34; *Benth. Fl. Austral.* iv. 385, with syn.; *Kurz For. Fl.* ii. 209. *C. orientalis*, *Br. Prodr.* 498. *C. campanulata*, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 336. *C. Rumphii*, *Blume Bijl.* 843. *C. hexandra*, *Roem. & Sch. Syst.* iv. 799.—*Rumph. Herb. Amb.* ii. t. 75.

ANDAMANS and S. MALAY PENINSULA. In Bengal and various parts of India often planted.—DISTRIB. S.E. Asia to Australia and the Sandwich Isles. Widely cultivated.

A small tree. *Leaves* 3–6 in., base rounded or subcordate; petiole $\frac{3}{4}$ –1 $\frac{1}{2}$ in. *Corymbs* lateral and few-fl., nearly glabrous; flowers usually 6-merous. *Calyx* $\frac{1}{2}$ in.; teeth short, triangular, villous within. *Corolla-tube* $\frac{3}{4}$ in., lobes $\frac{2}{3}$ in. Branches of the stigmas linear-spathulate. *Fruit* 1 in., ellipsoid, acute, usually 1-seeded. Seed grossly muricated, subspinose.

EXCLUDED SPECIES.

CORDIA FINLAYSONIANA, *Wall. Cat.* 7010; without locality attached, was probably collected in Cochin-China.

CORDIA SP., *Wall. Cat.* 9064, is *Mappia oblonga*, Miers, var. *elliptica* (v. i. p. 589).

II. EHRETIA, Linn.

Shrubs or trees, scabrous or glabrous. *Leaves* alternate. *Corymbs* or panicles axillary or terminal, rarely peduncles axillary 1-flowered; flowers small, white. *Calyx* sub-5-partite. *Corolla-tube* short or cylindric; lobes 5, imbricated in the bud, patent or reflexed. *Stamens* 5, on the corolla-tube; anthers ovate or oblong, exsert, rarely included. *Ovary* 2-celled, cells 2-ovulate; style terminal, cylindric bifid or bipartite, stigmas small capitate. *Drupe* small, subglobose, 4- (or by suppression 3-1-) seeded; pyrene one 4-celled, or two 2-celled, or four 1-celled; 3-1 pyrenes or cells not rarely suppressed. *Seeds* straight, testa thin, albumen scanty.—Species 50, all tropical; principally in the Old World.

SECT. 1. **Euehretia.** *Style* single, bifid.

* *Leaves serrate.*

1. **E. acuminata**, Br. *Prodr.* 497; leaves elliptic-oblong acuminate serrate glabrous beneath, panicles terminal dense compound, calyx-lobes $\frac{1}{2}$ in. obtuse. *DC. Prodr.* ix. 503; *Benth. Fl. Austral.* iv. 387. *E. serrata*, Roxb. *Hort. Beng.* 17, and in *Fl. Ind. ed. Carey & Wall.* ii. 340; *Wall. Cat.* 898; *Bot. Reg.* t. 1097; *Wight Ill.* t. 170; *DC. Prodr.* ix. 503; *Griff. Ic. Pl. As. t.* 459; *Brand. For. Fl.* 339; *Kurz. For. Fl.* ii. 210. *E. pyrifolia*, Don *Prodr.* 102. *E. ovalifolia*, Hassk. *Cat. Hort. Bog.* 137, not of *Wight*. *Cordia thyrsoflora*, Sieb. & Zucc. *Fl. Jap. Fam. Nat.* ii. 26.

SUBTROPICAL HIMALAYA and adjacent plains, ascending to 5000 ft., from Ghurwal to Bhotan, common. KHASIA Mts. to PEGU.—DISTRIB. Ava, Australia, Japan.

A tree, attaining 40 feet. *Leaves* 3-4 in., minutely bristly or glabrous above; petiole $\frac{1}{2}$ in. *Panicles* 2-6 in., minutely bristly or glabrescent, crowded with flowers. *Corolla-tube* very short; lobes $\frac{1}{2}$ in., reflexed. *Anthers* exsert. *Style* bifid for less than half its length, branches linear, stigmas minutely capitate. *Drupe* $\frac{1}{2}$ - $\frac{1}{4}$ in. diam., short-ellipsoid, obtuse, not ribbed nor lobed; pyrenes 2, without any hollow between them, each 2-celled, cells 1-seeded.

2. **E. macrophylla**, Wall. *Cat.* 901, and in Roxb. *Fl. Ind. ed. Carey & Wall.* ii. 343; leaves large broadly elliptic acute serrate bristly above softly hairy beneath, panicle terminal compound bristly, calyx-lobes (in young fruit) $\frac{1}{2}$ in. oblong-lanceolate. *DC. Prodr.* ix. 503.

NEPAL; Chundaghiri, Wallich.

A tree. *Leaves* $7\frac{1}{2}$ by 4 in., rhomboid or rounded at the base; petiole 1 in. *Panicle* 2-3 in., sparsely fulvous hirsute. Young *drupe* $\frac{1}{4}$ in. (but Wallich notes the drupe size of a small gooseberry); pyrenes 2, each 2-celled.—Flowers unknown to Wallich. *E. Dicksoni*, Hance in *Ann. Sc. Nat.* 4, xviii. 224, from the interior of S. China, is probably the same species (the leaves in Hance's examples are broadly elliptic subcordate, not oblong as in the description); calyx softly hairy, tube $\frac{1}{8}$ in., lobes $\frac{1}{2}$ in. oblong; corolla-tube $\frac{1}{4}$ in., pubescent without, lobes $\frac{1}{2}$ in. ovate reflexed; anthers long exsert; style single long sparsely hairy, lobes 2 short oblong glabrous; berry as of *C. macrophylla*, $\frac{3}{8}$ in. diam.

** *Leaves quite entire.*

3. **E. lævis**, Roxb. *Cor. Pl.* 42, t. 55, and *Fl. Ind. ed. Carey & Wall.* ii. 341; leaves ovate shortly acuminate undulate base unequally cuneate glabrous, nerves 5-6 pair irregular tufted in the axils, corymbs mostly subaxillary repeatedly dichotomous branches recurved in fruit, calyx-lobes small pubescent, style shortly 2-branched. *Don Prodr.* 102; *Wall. Cat.* 899; *DC. Prodr.* ix.

505; *Wight Ic.* t. 1382; *Dalz. & Gibs. Bomb. Fl.* 170; *Bedd. Fl. Sylv.* t. 246; *Kurz For. Fl.* ii. 210; *Brand. For. Fl.* 340, t. 42. *E. punctata*, *Roth Nov. Sp.* 126. *E. affinis*, *Wall. Cat.* 900. *E. dichotoma*, *Rottl. in Wall. Cat.* 904, probably of *Blume* also. *Beurreria lævis* and *punctata*, *G. Don Gen. Syst.* iv. 390.

Throughout INDIA in tropical and subtropical regions, common.—DISTRIB. From Persia to China, Australia and Polynesia, the allied Tropical African species are perhaps only geographical forms.

A tree 30–40 feet, or a shrub; branchlets glabrous, or rusty-pubescent, or sparsely laxly hirsute. *Leaves* 5 by $2\frac{1}{2}$ in., unsymmetric, rather thin in texture, young glabrous softly hairy or densely tomentose, mature glabrescent; petiole $\frac{3}{8}$ in. *Corymbs* 3 in. lax, glabrous or usually pubescent or rusty, ultimate branches long recurved with sessile fruits. *Calyx-lobes* $\frac{1}{10}$ in., oblong, in fruit ovate. *Corolla-tube* $\frac{1}{10}$ in., lobes $\frac{1}{8}$ in. spreading. *Anthers* exsert. *Drupe* (when perfecting 4 seeds) $\frac{1}{8}$ in. diam., depressed globose, when dry distinctly 4-ribbed, pyrenes 4 each 1-seeded; on one corymb are usually seen drupes perfecting 1, 2, 3, or 4 seeds.—All authors previous to Brandis have kept this species distinct, describing it as absolutely glabrous; it is however nearly always manifestly hairy, and the indumentum is rusty, pubescent, ciliate, hirsute or tomentose at least in the innovations.

VAR. *floribunda*, *Brand. For. Fl.* 340; innovations hairy or glabrous, corymbs large axillary or collected towards the ends of the branches often forming quipanicles 6 in. diam. *E. floribunda*, *Benth. in Royle Ill.* 306; *DC. Prodr.* ix. 507; *Boiss. Fl. Orient.* iv. 124. *E. Cutranga*, *Ham. in Wall. Cat.* 7012.—Punjab to Behar. Distrib. Cabul.

VAR. *pubescens*; branchlets hairy, mature leaves softly hairy beneath or on both surfaces. *E. pubescens*, *Benth. in Royle Ill.* 306; *DC. Prodr.* ix. 597.—Throughout India.

VAR. *timorensis*; glabrous or the innovations and corymbs rusty-pubescent, leaves broadly oblong or somewhat obovate acuminate, corymbs axillary and terminal. *E. timorensis*, *Decne. in Nouv. Ann. Mus. d'Hist. Nat.* iii. 395; *DC. Prodr.* ix. 505. *E. philippensis*, *A. DC. Prodr.* ix. 504. *E. lævis*, type *Benth. Fl. Austral.* iv. 389.—Malay Peninsula. Distrib. Malaya, Australia.—*Leaves* often 6 in., usually larger and more acuminate than in the Indian *E. lævis*, also drying very black and usually symmetric or nearly so. As to the fruit, in *E. lævis* type it is often sub-2-pyrenous, the pyrenes only separating into 4 ultimately or with difficulty.

VAR. *canarensis*; glabrous or nearly so, leaves broadly oblong symmetric narrowed at both ends, mature glabrous above rugose with impressed nerves scabrous beneath. *E. canarensis*, *Miq. in Pl. Hohenack.* n. 285. *E. Championi*, *Wight & Gardn. ms.*—W. Deccan Peninsula and Ceylon.—The common *Ehretia* of the Nilghiris (alt. 3–6000 feet) and other Deccan Mts. It has been regarded as a distinct species, being readily distinguished by the symmetric strong-nerved leaves.

VAR. *aspera*; leaves small obtuse mature hairy beneath. *E. aspera*, *Roxb. Cor. Pl.* i. 41, t. 55, and in *Fl. Ind. ed. Carey & Wall.* ii. 342; *Wall. Cat.* 902; *DC. Prodr.* ix. 507; *Bedd. For. Man.* 166; *Brand. For. Fl.* 340; *Kurz For. Fl.* ii. 209. *E. tomentosa*, *Roth Nov. Sp.* 126, not of *Lamk.* *E. Heynii*, *Roem. & Sch. Syst.* iv. 532. *Beurreria aspera*, *G. Don Gen. Syst.* iv. 390.—Assam.—Described from Roxburgh's example in *Herb. Wallich* (which agrees with his *Ic. Ined.* in *Herb. Kew*), on which the largest leaves are $1\frac{3}{8}$ by $\frac{3}{8}$ in., scabrous above, persistently hairy beneath. None of the *E. aspera* (except from E. Bengal) agrees with this exactly, the *E. aspera* of *Kurz*, *Dalzell*, &c., having larger leaves and resembling *E. lævis*, var. *pubescens*. *Wight's E. aspera* includes an example absolutely glabrous, the young leaves and calyx shining glabrous; no example of *E. lævis* type is so glabrous. A very hairy obtuse-leaved example collected at Arcot by Griffith has the calyx-lobes narrowly oblong and the style deeply bifid.

4. ***E. obtusifolia***. *Hochst.*; *A. DC. Prodr.* ix. 507; leaves obovate-oblong obtuse mature hairy, flowers as of *E. lævis* but rather larger. *Brand.*

For. Fl. 340; *Boiss. Fl. Orient.* iv. 124. *E. obovata*, *R. Br. in Salt Abyss.* *Append.* iv. 64 (name only).

SCINDE, *Stocks*. PUNJAB; in the Salt range, *Fleming*, &c.—DISTRIB. Beloochistan, Abyssinia.

A shrub. *Leaves* 1–1½ in., much cuneate at the base. *Flowers* pedicelled and sessile. —Differs from *E. laevis* var. *aspera* in the narrowed base of the leaves, the more lax corymb, and the slightly larger flowers.

5. ***E. retusa***, *Wall. Cat.* 903; leaves small obovate mature hairy beneath, corymbs small hairy terminal on lateral spurs, calyx-lobes lanceolate acute, flowers and fruit as in *E. laevis* but rather smaller. *DC. Prodr.* ix. 511. *Beurreria retusa*, *G. Don Gen. Syst.* iv. 390.

BURMA; Pagamew, *Wallich*.

Branches scraggy, as of a tough shrub. *Leaves* 1½ by ¾ in., base cuneate, shortly acute or obtuse not retuse, nerves distant not prominent; petiole ½ in.—This may be a stunted example of *E. laevis* var. *aspera*; but the leaves are much narrowed at the base, the calyx-teeth remarkably narrow and acute. In habit it is remote from *E. obtusifolia* and the flowers are hardly half as large.

6. ***E. ovalifolia***, *Wight Ic.* t. 1383; innovations and corymbs pubescent or tomentose, leaves elliptic subobtuse mature glabrous. *Bedd. For. Man.* 167. —Boraginea, *Wall. Cat.* 7529.

S. MADRAS; Jyamallay, *Wight*. CEYLON; Jaffna, *Dykes*.

Otherwise as *E. laevis*, from which it only differs in the obtuse leaves. No fruit seen.

7. ***E. Wightiana***, *Wall. Cat.* 7013; nearly glabrous, leaves lanceolate and obovate-lanceolate scarcely acute, corymbs mostly terminal dense. *G. Don Gen. Syst.* iv. 388; *Wight Ic.* t. 1384; *Bedd. For. Man.* 167. *E. lanceolata*, *Heyne in Herb. Rottl.*

S. MADRAS; Mysore, Courtallum, &c. *Wight, G. Thomson, &c.*

Leaves 1½ by ½ in. in Wight's type example, but larger and broader, approaching *E. laevis* in others. *Corymbs*, when young, pubescent and subtomtose in Wight's example, soon glabrescent. *Flowers* and *drupes* as of *E. laevis*.

8. ***E. parallela***, *Clarke*; nearly glabrous, leaves elliptic or obovate, nerves 8 pair oblique parallel approximate, inflorescence flowers and fruit as in *E. laevis* but rather smaller.

BURMA; banks of the Irrawaddy, *Griffith (Kew Distrib.* n. 6004).

Branches round, glabrous. *Leaves* 1½ by ¾–1 in., retuse and subacute on the same branch, cuneate at the base, glabrous even when young, prominently striate by the straight primary nerves hardly ½ in. apart; petiole ½ in. *Corymbs* minutely pubescent.—Well-marked by the strong, straight, parallel, closely-placed primary nerves, not much like any other species; the leaves are usually obtuse, sometimes retuse.

9. ***E. Wallichiana***, *H. f. & T.*; *Gamble Darjeeling List*, 57; nearly glabrous, leaves elliptic acuminate, corolla-tube much exceeding the calyx. *Cordia acuminata*, *Wall. Cat.* 896, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 339; *DC. Prodr.* ix. 499.

SIKKIM and BHOTAN, alt. 2–7000 ft., frequent; *J. D. H.*, &c. KHASIA MTS. *Wallich, Griffith*.

A tree, attaining 40 ft., flowering before the leaves. *Leaves* 5 by 2 in., base cuneate nerves 7 pair; petiole ½ in. *Corymbs* 1–3 in. diam., mostly sublateral, dense, minutely pubescent. *Calyx-lobes* ¼ in., oblong. *Corolla-tube* ½ in.; lobes ½ in., white, recurved. *Anthers* exsert. *Ovary* 2-celled, cells 2-ovulate; style bifid much less than half-way down, stigmas small capitate. *Drupe* ¼ in. diam., subglobose, when

dry longitudinally ribbed; pyrenes 4, compressed, lunate, corrugated without, occupying the periphery of the drupe, the centre (in the dried drupe) hollow, occupied by the shrivelled fleshy tissue; pyrenes 1-seeded.—Perhaps a small-flowered form of the Hong-Kong *E. longiflora* (Champ. in Hook. Kew Journ. v. 58), which agrees exactly as to the fruit and leaves, but has the corolla-tube $\frac{1}{3}$ in. long.

SECT. II. **Carmona**. *Styles* 2, undivided (1 sometimes suppressed), or 1 sub-2-partite.

10. ***E. buxifolia***, *Roxb. Cor. Pl.* i. 42, t. 57, and in *Fl. Ind. ed. Carey & Wall.* ii. 343; leaves small fascicled obovate entire or lobed, peduncles axillary 1- (or few-) flowered. *Wall. Cat.* 905; *DC. Prodr.* ix. 509; *Bedd. For. Man.* 167. *E. heterophylla*, *Spreng. Syst.* i. 648; *A. DC. l. c.* *E. microphylla*, *Lamk. Ill.* ii. 425. *Cordia retusa*, *Vahl Symb.* ii. 42. *C. coromandeliana*, *Koenig & Retz ms.* *Carmona heterophylla*, *Cav. Ic.* v. 23, t. 438.

DECCAN PENINSULA; in dry jungles, *Wight, Dalzell, &c.*—DISTRIB. Malaya to Formosa and the Philippines.

A shrub. *Leaves* 1 by $\frac{1}{2}$ in., obtuse, very scabrous, often 3-lobed towards the apex, attenuated at the base, subsessile. *Peduncles* 0– $\frac{3}{4}$ in., hairy. *Calyx-lobes* $\frac{1}{2}$ in., lanceolate-linear. *Corolla* $\frac{1}{2}$ in., white, campanulate; lobes short, ovate. *Filaments* very short. *Drupe* $\frac{1}{2}$ in. diam., globose; pyrene 1, 4-seeded; without any cavities in the drupes examined; with 6–8 cavities (A. DC.).

EXCLUDED SPECIES.

E. mollis, *Wall. Cat.* 7011; *DC. Prodr.* ix. 511, is *Mappia ovata*, *Miers*, v. i. p. 509.

3. **GOLDENIA**, *Linn.*

Prostrate, scabrous herbs. *Leaves* alternate, crisped. *Flowers* axillary, sessile (or nearly so), the upper sometimes in a one-sided leafy spike, white. *Sepals* 4–5, narrow. *Corolla*-tube short, lobes 4–5, imbricate in the bud, patent. *Stamens* 4–5, on the corolla-tube; anthers ovate. *Ovary* 2-celled with 2 ovules in each cell, or sub-4-celled with solitary ovules; style terminal, bifid. *Drupe* (nearly dry) of 4, subconnate, 1-seeded, pyrenes. Testa of the seed thin; albumen 0, or scanty; cotyledons flat.—Species 10 American, and the following.

1. ***G. procumbens***, *Linn.*; *DC. Prodr.* ix. 558; procumbent, scabrous-hairy, leaves elliptic-obovate coarsely serrate or subpinnatifid, pyrenes subconnate into an acute 4-ribbed pyramid. *Gaertn. Fruct.* i. 329, t. 68; *Lamk. Ill.* t. 89; *Roxb. Fl. Ind.* i. 448; *Wall. Cat.* 942; *Dalz. & Gibs. Bomb. Fl.* 171. *Lobophyllum tetrandrum*, *F. Muell. in Hook. Kew Journ.* ix. 21. *Waltheria microphylla*, *Miq. in Pl. Hohenack.* n. 87 b. not of Cav.

Throughout tropical INDIA, a weed.—DISTRIB. Asia, Africa, Australia, America.

Annual, usually quite flat. *Leaves* 1–1 $\frac{1}{2}$ in. *Flowers* $\frac{1}{2}$ in. *Pyrenes* $\frac{1}{2}$ in. *Seeds* albuminous.

4. **RHABDIA**, *Mart.*

A shrub; branches twiggy. *Leaves* small, alternate or clustered, linear-oblong, entire or toothed. *Flowers* small; racemes very small, few-fl., sub-terminal on short lateral branches. *Sepals* 5, lanceolate, acuminate. *Corolla* pink-purple; tube short, campanulate; lobes oblong, imbricate in the bud. *Stamens* 5, on the corolla-tube; anthers oblong or ovate. *Ovary* 2-celled, cells 2-ovuled, or sub-4-celled with cells 1-ovuled; style terminal, stigma capitate

or minutely 2-lobed. *Drupe* with 4 crustaceous 1-seeded pyrenes. *Seeds* oblong, albumen thin.

1. **R. lycioides**, Mart. *Nouv. Gen. & Sp.* ii. 137, t. 195; *DC. Prodr.* ix. 512; *Fresen. in Mart. Fl. Bras. Fasc.* xxii. 58, t. 9, fig. 9. *R. viminea*, Dalz. & *Gibs. Bomb. Fl.* 170; *Hook. Ic. Pl.* t. 823; *Brand. For. Fl.* 341; *Kurz For. Fl.* ii. 211. *R. fluvialis*, *Edgew. Pl. Banda*, 51. *R. crebrifolia*, *Miers Contrib.* ii. 222, t. 84. *Rotula aquatica*, *Lour. Fl. Cochinch.* 121; *DC. Prodr.* ix. 531. *Ehretia viminea*, *Wall. Cat.* 906; *DC. l.c.* 509. *E. cuneata*, *Wight Ic. t.* 1385.—*Careyæ* sp. *Miq. in Pl. Hohenack.* n. 688.

INDIA, alt. 0–2500 ft.; from Kumaon and Assam to CEYLON and Tenasserim, frequent; especially on gravelly banks flooded by rapid streams.—DISTRIB. Tropical S.E. Asia, Africa, and Brazil.

Height 2–6 ft. *Leaves* $\frac{3}{4}$ by $\frac{1}{2}$ in. *Flowers* $\frac{1}{4}$ in. *Drupe* $\frac{1}{8}$ in., yellow or brown-red, nearly dry.

5. **TOURNEFORTIA**, Linn.

Trees or shrubs, often rambling or subscandent. *Leaves* alternate, entire. *Cymes* terminal, rarely lateral or extra-axillary, dichotomous, scorpioid; flowers numerous, dense, sessile or very shortly pedicelled, ebracteate, white or greenish-yellow. *Sepals* 5 or 4, lanceolate or ovate. *Corolla-tube* cylindric (short in *T. argentea*), naked in the throat; lobes 5 or 4, small, patent. *Stamens* 5 or 4, included in the tube, filaments short; anthers oblong. *Ovary* 4-celled; style terminal, short, shortly 2-lobed (in the Indian species); ovules 1 in each cell. *Drupe* small, ovoid, scarcely fleshy, not distinctly separating into 2 or 4 pyrenes; pyrenes two 2-celled 2-seeded (in the Indian species). *Seed* straight or curved, albuminous.—DISTRIB. Species 100; in the tropics of both hemispheres.

SECT. 1. **Mallota**. An erect, densely silky shrub. *Leaves* narrowed at the base. *Corolla* subrotate, tube very short.

1. **T. argentea**, Linn. *f. Suppl.* 133; branches and leaves on both surfaces fulvous-sericeous, leaves obovate-lanceolate, cymes very dense. *Rorb. Fl. Ind. ed. Carey & Wall.* ii. 4; *Blume Bijl.* 844; *DC. Prodr.* ix. 514.—*Rumph. Herb. Amboin.* iv. t. 55.

Seashores of CEYLON and the MALAY PENINSULA. NICOBARS; *Kurz*.—DISTRIB. Malaya, Australia, Mauritius.

Branchlets thick. *Leaves* 6 by 2 in., acute or subobtuse; petiole ill-defined. *Peduncles* terminal, or from an upper axil, 1–5 in.; cymes often forming a panicle 6 in. diam.; flowers sessile. *Sepals* $\frac{1}{10}$ in., ovate, densely woolly, ultimately glabrescent. *Corolla-tube* hardly as long as the sepals; lobes $\frac{1}{10}$ in., ovate, crenulate. *Stigma* subsessile, obscurely 2-lobed. *Drupe* $\frac{1}{4}$ in. diam., subglobose.

SECT. 2. **Pittonia**. Rambling or subscandent shrubs. *Leaves* obtuse at the base, distinctly petioled. *Corolla* 5-merous, narrowly tubular.

* *Drupe*s shortly pedicelled (all from the Deccan).

2. **T. Heyneana**, Wall. *Cat.* 910 (*Heyne's specimen*) not of *DC.*; leaves oblong-lanceolate, corolla-tube $\frac{3}{8}$ – $\frac{1}{2}$ in. *T. cymosa*, *Heyne in Herb. Rottler*, not of Linn.

DECCAN PENINSULA, *Heyne*; Nilgherries (near Nadooputtah), *Wight*.

Branchlets sparsely scabrous-hairy. *Leaves* 5 by $1\frac{1}{2}$ in., acuminate, base cuneate or rhomboid, mature sparsely minutely scabrous-hairy on both surfaces; nerves 7 pair, closely hairy when young; petiole $\frac{1}{2}$ in. *Cymes* terminal and extra-axillary, sparsely scabrous-hairy. *Calyx-teeth* $\frac{1}{12}$ in., lanceolate. *Drupe* $\frac{1}{8}$ in., or pedicels $\frac{1}{8}$ in.—Wallich appears to have received a small quantity of this species, and to have named

it *T. Heyneana*; subsequently to have placed with it a large quantity of a Khasian species, *T. Candollii*, Clarke, which he distributed as *T. Heyneana*.

3. ***T. reticosa***, *Wight Ic. t.* 1386; leaves oblong acuminate glabrescent prominently reticulate beneath, corolla-tube $\frac{1}{3}$ – $\frac{1}{2}$ in.

NILGHERRIES & COORG; *Wight*.

Branchlets softly, sparsely hairy. *Leaves* $5\frac{1}{2}$ by $1\frac{3}{4}$ in., base rhomboid or rounded, mature very sparsely hairy above; nerves 8 pair, tertiary densely anastomosing; petiole $\frac{1}{2}$ – $\frac{1}{2}$ in. *Cymes* terminal; flowers sub-1-serial; pedicels (at flower-time) $\frac{1}{16}$ – $\frac{1}{8}$ in. *Calyx-teeth* $\frac{1}{16}$ – $\frac{1}{12}$ in. *Drupe* not seen.

4. ***T. Wightii***, *Clarke*; leaves subcordate ovate-lanceolate mature hairy beneath, corolla-tube $\frac{1}{4}$ – $\frac{1}{3}$ in.

DECCAN PENINSULA; *Wight*.

More hairy than the preceding species. *Leaves* $3\frac{1}{2}$ by $1\frac{3}{4}$ in.; nerves 8 pair, sub-impressed on the upper surface, tertiary obscure; petiole $\frac{1}{2}$ in. *Cyme* extra-axillary; flowers sub-1-serial; pedicels (at flower-time) 0 – $\frac{1}{16}$ in. *Calyx-teeth* $\frac{1}{8}$ in., lanceolate-linear. *Drupe* not seen.—This differs (inter alia) from *T. reticosa* by the primary nerves being much more approximate.

** *Drupe sessile or nearly so (species of Bengal and the E. Peninsula).*

5. ***T. Roxburghii***, *Clarke*; leaves oblong acuminate shortly densely villous beneath, calyx-teeth lanceolate-linear, corolla-tube $\frac{1}{3}$ in.

CHITTAGONG; Seetakoond, Bindravun, Rungamuttea, *J. D. H.*, &c.

Branches hairy. *Leaves* 4 by $1\frac{1}{2}$ in., sometimes subovate, not rugose above, tertiary nerves obscurely reticulated; petiole $\frac{1}{2}$ in. *Cymes* terminal and supra-axillary; flowers sub-2-seriate. *Calyx-teeth* $\frac{1}{8}$ in. *Drupe* $\frac{3}{8}$ – $\frac{1}{6}$ in., sessile, sub-2-seriate; calyx not glistening white within.—Easily separated from all other species of this subsection by its longer corolla. Roxburgh collected his *Lithospermum viridiflorum* in Chittagong (where this is the only species known, and is frequent, on Roxburgh's collecting ground near Sir W. Jones's country-seat), and his description seems (at least partly) drawn therefrom: but his picture, and the Calcutta Botanic Garden authentic examples, refer to the next species.

6. ***T. viridiflora***, *Wall. Cat.* 907, and in *Fl. Ind. ed. Carey & Wall.* ii. 5; leaves oblong acuminate softly hairy beneath, calyx-teeth lanceolate-linear, corolla-tube $\frac{1}{2}$ in. *DC. Prodr.* ix. 516. *Lithospermum viridiflorum*, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 4. *Heliotropium viridiflorum*, *Lehm. Asperifol.* 30.

ASSAM; *Griffith, Masters.* SILHET; *Wallich*.

Branches hairy. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{4}$ in., sometimes subovate, in age wrinkled above, tertiary nerves obscure; petiole $\frac{1}{2}$ in. *Cymes* terminal, rusty-villous; flowers 2-ranked, very dense. *Calyx-teeth* $\frac{1}{10}$ in. *Corolla-tube* little exceeding the calyx-teeth, not exceeding $\frac{1}{4}$ in. in the large cultivated examples from the Calcutta garden. *Drupe* $\frac{1}{8}$ – $\frac{1}{6}$ in., sessile; calyx-lobes in fruit very narrow, not white glistening within.

VAR. Griffithii; mature leaves nearly glabrous beneath distinctly reticulated.—Khasia & Assam; *Griffith*.

7. ***T. Candollii***, *Clarke*; leaves ovate-lanceolate softly hairy beneath, calyx-teeth lanceolate-linear corolla-tube $\frac{1}{4}$ in. *T. Heyneana*, *DC. Prodr.* ix. 516; *Wall. Cat.* 910, as to the Khasia examples.

BHOTAN, ASSAM, KHASIA, and SILHET, frequent; *Wallich, Griffith*, &c.

Branches hairy. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{2}$ in., sometimes oblong, base obtuse or subcordate; primary nerves soon impressed on the upper surface, tertiary very obscurely reticulated; petiole $\frac{1}{2}$ in. *Calyx-teeth* $\frac{1}{10}$ in., in fruit narrowly lanceolate, not glistening white within. *Drupe* $\frac{1}{6}$ – $\frac{1}{8}$ in., sessile.—This species is remote from *T. Heyneana*: it is nearly intermediate between *T. viridiflora* and *T. ovata*, differing little from *T. viridiflora*, var. *Griffithii*, but in the longer corolla.

8. **T. ovata**, Wall. Cat. 908; leaves ovate and elliptic suddenly shortly acuminate hairy or glabrescent beneath, calyx-teeth ovate-lanceolate in fruit glistening white-setose within, corolla-tube $\frac{1}{4}$ – $\frac{1}{3}$ in. *G. Don Gen. Syst.* iv. 369; *DC. Prodr.* 516.

BRITISH BURMA; Rangoon, Wallich, McClelland. S. ANDAMAN; Kurz.

Scandent, branches hairy. Leaves 3–6 in., rhomboid at the base; tertiary nerves obscure. Calyx-teeth $\frac{1}{12}$ in., about $\frac{1}{4}$ the length of the corolla-tube. Drupes $\frac{1}{8}$ – $\frac{1}{4}$ in., sessile.—In Kurz example, the corolla is permanent, the base greatly enlarged so as to include the fruit; this state appears induced by the attack of an insect.

9. **T. khasiana**, Clarke; leaves ovate acuminate glabrescent base obtuse or subcordate, calyx-teeth ovate acute small, corolla-tube exceeding $\frac{1}{4}$ in.

KHASIA MTS.; Nongpriang, alt. 1500 ft., Clarke.

Branchlets minutely hairy. Leaves $3\frac{1}{2}$ by $1\frac{1}{2}$ in., gradually acuminate, tertiary nerves reticulated not very prominent; petiole $\frac{1}{2}$ in. Cymes rusty-pubescent; branches few, long, densely fld. Calyx-teeth scarcely $\frac{1}{16}$ in. Drupe not seen.

10. **T. Hookeri**, Clarke; leaves ovate or elliptic acute glabrescent prominently reticulated beneath, calyx-teeth lanceolate-linear, corolla-tube $\frac{1}{6}$ – $\frac{1}{5}$ in. hardly exceeding the calyx. *T. viridiflora*, Gamble Darjeeling List, 57, not of Wall.

SIKKIM; alt. 2–5000 ft., frequent; *J. D. H.*, &c.

Large, subscent; branches nearly glabrous. Leaves 4–5 by $1\frac{1}{5}$ – $2\frac{1}{2}$ in., obtuse and unequal at the base; tertiary nerves exceedingly prominent; petiole $\frac{1}{2}$ in. Cymes terminal, diffuse, rusty pubescent; branches long; flowers sub-2-seriate. Calyx-teeth $\frac{1}{6}$ in. Drupes $\frac{1}{2}$ in., ovoid, sessile.

VAR. *subtropica*; corolla-tube more than $\frac{1}{4}$ in. pentagonal with 5 hairy lines without, more than twice as long as the calyx-tube.—Sikkim; by the great Rungait, *J. D. H.*

SECT. 3. **Tetrandra**. Rambling or subscent shrubs. Leaves obtuse at the base, distinctly petioled. Corolla 4-merous, narrowly tubular.

11. **T. Wallichii**, DC. Prodr. ix. 527; leaves ovate acute glabrescent base rounded, corolla-tube scarcely $\frac{1}{4}$ in. twice or thrice as long as the calyx. *T. tetrandra*, Wall. Cat. 911, not of Blume. *Tetrandra Wallichii*, *Miq. Fl. Ind. Bat.* ii. 928.

SINGAPORE & PENANG; Wallich, Maingay. NICOBARS; Kurz.

Branches nearly glabrous. Leaves $3\frac{1}{2}$ by $1\frac{3}{4}$ in., tertiary nerves obscure; petiole $\frac{1}{4}$ in. Cymes terminal, lax. Calyx-teeth $\frac{1}{20}$ in., triangular-lanceolate. Drupes $\frac{1}{8}$ in., sessile.—*Tetrandra glabra*, *Miq. Fl. Ind. Bat.* ii. 929, has oblong leaves narrowed at the base; *T. Zollingeri*, *Miq. l.c.* 928, has flowers $\frac{1}{2}$ in. long; these two make up the old *Tournefortia tetrandra*, *Blume Bijl.* 845, *DC. l.c.* More material may reduce the 4 species of this section to 1.

12. **T. Walkerae**, Clarke; leaves oblong acuminate glabrescent reticulated beneath, corolla-tube $\frac{1}{2}$ in. very narrow. *T. Wallichii*, *Thwaites Enum.* 214.

CEYLON; Walker, Thwaites.

Leaves $3\frac{1}{2}$ by 1 – $1\frac{1}{4}$ in., base rounded; upper surface rugose by the impression of the nerves.—This seems nearer both *Tetrandra glabra* and *Zollingeri* than to *Tournefortia Wallichii*.

DOUBTFUL SPECIES.

T. ARBORESCENS, Lamk. Ill. ii. 417; *DC. Prodr.* ix. 529, is described as a tree from India. No tree belonging to the genus is known in British India.

T. TERNATA, Wall. Cat. 912, from Tavoy; there is no specimen of this in Wallich's Herbarium.

6. **HELIOTROPIUM**, Linn.

Annual or perennial herbs, rarely (non-Indian species) shrubby, villous or scabrous. *Leaves* alternate. *Cymes* terminal, dichotomous; branches often long, scorpioid; flowers small, white or nearly so in the Indian species; bracts small, 0, or leafy (inflorescence axillary). *Calyx* 5-partite or -lobed; segments lanceolate or linear (except in Sect. *Piptoclaina*). *Corolla* tubular, throat not hairy; lobes 5, imbricate or induplicate in the bud, spreading in flower. *Stamens* 5, on the corolla-tube, included, filaments very short; anthers ovate or lanceolate. *Ovary* completely or imperfectly 4-celled, 4-ovulate; style terminal, short or long, ending in a depressed conical or flat disc; stigma above the disc 0 or short or elongate-lanceolate, entire, rarely with 2 linear branches (Sect. *Ditrichostigma*). *Fruit* dry, 2-4-lobed, of 4 more or less free nutlets. *Seeds* straight or curved, albumen small or 0 (rarely plentiful).—Species 100, in the tropical and temperate zones of both hemispheres.

SECT. 1. **Messerschmidia**. *Corolla-lobes* patent, caudate-acuminate. *Style* longer than the stigma.

1. **H. zeylanicum**, Lamk. *Ill.* ii. 393, not of Wall; leaves narrowly lanceolate, spikes elongate ebracteate, stigma short-oblong densely hairy included in the corolla-tube. *Burm. Fl. Ind.* t. 16, fig. 2. *Wight Ic.* t. 892; *H. paniculatum*, Heyne in *Herb. Rottler*, not of Br. nor of Roxb. *Tournefortia subulata*, Hochst.; *A. DC. Prodr.* ix. 528; *Dalz. & Gibs. Bomb. Fl.* 171. *T. Royleana & Edgeworthii*, *DC. Prodr.* ix. 527, 529. *T. zeylanica*, *Wight Ill.* t. 170. *Messerschmidia hispida*, Benth. in *Royle Ill.* 306.

W. INDIA, from the Punjab to the W. Deccan Peninsula; *Royle, Edgeworth, Wight*, &c.—DISTRIB. Tropical Africa.

Annual, erect, 1-3 ft., scabrous-hairy. *Leaves* $1\frac{1}{2}$ by $\frac{1}{4}$ in., narrowed at both ends, subentire, sessile; nerves obscure in the upper surface. *Spikes* 2-6 in. in fruit; flowers sessile, 1-2-ranked. *Sepals* $\frac{1}{16}$ in., ovate, acute. *Corolla-tube* $\frac{1}{8}$ in., wider in the upper half, minutely setose without; lobes $\frac{1}{16}$ in. *Style* glabrous, half as long as the corolla-tube; stigma surrounded by the stamens in the swollen upper half. *Fruit* $\frac{1}{12}$ in., of 2 rugose pitted 2-seeded nutlets.

SECT II. **Catimas**. *Corolla-lobes* with an abruptly inflexed mucro. *Stigma* elongate-conic.

2. **H. dasycarpum**, Ledeb.; *Eichw. Itin. Casp.-Caucas.* ii. t. 5; leaves small elliptic, spikes few-flowered, style short, stigma minutely scabrous included in the corolla-tube. *Bunge in Bull. Soc. Imp. Nat. Mosc.* 1869, 323; *Boiss. Fl. Orient.* iv. 140. *H. Schrenkianum*, Ledeb. *Fl. Ross.* iii. 102, *fide Boiss. l. c.* *H. brahuicum*, *Stocks in Hook. Kew Journ.* iv. 173. *H. luteum*, *Aitchison Cat. Punjab.* 94 (? Poir).

PANJAB; Peshawur, *Stewart*.—DISTRIB. Beloochistan, Cabul, Persia, Turkestan, Soongaria.

Woody, rigid, 6-18 in., suberect, scabrous-hairy. *Leaves* $\frac{3}{4}$ by $\frac{1}{4}$ in., mostly cuneate at both ends, subentire, sessile or lower obscurely petioled; nerves obscure in the upper surface. *Spikes* in flower short, in fruit 2-4 in., lower flowers often an inch apart; flowers mostly sessile, but stray lower flowers have pedicels $\frac{1}{4}$ - $\frac{3}{4}$ in. *Sepals* $\frac{1}{10}$ in., oblong-lanceolate. *Corolla-tube* $\frac{1}{8}$ in., cylindric or slightly narrower upwards, hairy without. *Filaments* rather long; anthers ovate-oblong near the top of the tube. *Style* about $\frac{1}{4}$ the length of the stigma, minutely retrorse setose (in *Stocks'* examples as in *Eichwald's* picture, but *Boissier* says style as long as the stigma). *Fruit* small, glabrous in *Stocks'* example, sometimes silky (*Boiss.*).—Very near *H. luteum*, Poir. (*DC. Prodr.* ix. 532) which has larger flowers and fruits, and more rugose leaves.

SECT. III. **Monimantha**, *Franch.* *Stigma* with 2 linear branches exsert from the corolla.

3. **H. ophioglossum**, *Stocks*; *Aitchison Cat. Punjab*. 94; leaves lanceolate, spikes elongate many-flowered, corolla-lobes round crenate. *Boiss. Fl. Orient.* iv. 145. *H. stylosum*, *Franch. Sert. Somal. in Mission Révoil*. 45, t. 4, not *Philippi*.

SCINDE; Kurrachee, *Stocks*.—DISTRIB. Beloochistan, Somali-land.

Woody, 6–15 in., branched from the base, scabrous-hairy. *Leaves* 1 by $\frac{1}{2}$ in., tip cuneate, base attenuated or subpetioled, subentire, nerves obscure on the upper surface. *Spikes* 2–6 in.; flowers sessile, 1–2-ranked. *Sepals* $\frac{1}{2}$ in., lanceolate. *Corolla-tube* scarcely longer than the sepals, cylindric, minutely scabrous without. *Anthers* linear, occupying the upper half of the corolla-tube. *Style* very short; *stigma* conico-linear, nearly as long as the corolla-tube. *Nutlets* 4, $\frac{1}{16}$ in., glabrous.

SECT. IV. **Piptoclaina**. *Calyx-lobes* short, subvalvate. *Fruit* enclosed by the calyx.

4. **H. supinum**, *Linn.*; *DC. Prodr.* ix. 533; leaves petioled elliptic or ovate subobtusate, spikes short woolly, nut solitary (sometimes 2) large rugose margined. *Sibth. Fl. Græc.* t. 157; *Wight Ic.* t. 1387; *Dalz. & Gibs. Bomb. Fl.* 171; *Bunge in Bull. Soc. Imp. Nat. Mosc.* 1869, 289; *Boiss. Fl. Orient.* iv. 127. *Piptoclaina supina*, *G. Don Gen. Syst.* iv. 364. *Lithospermum heliotropoides*, *Forsk. Fl. Æg. Arab.* 39.

PUNJAB and UPPER GANGETIC PLAIN; *Royle, Edgeworth, &c.*—DISTRIB. W. Asia, S. Europe, N. Central Africa.

Annual, prostrate, 1 ft. diam., much branched, shortly softly villous. *Leaves* $\frac{1}{2}$ –1 $\frac{1}{2}$ in., subentire; nerves often impressed on the upper surface. *Calyx* $\frac{1}{2}$ in., ovate, woolly. *Corolla-tube* $\frac{1}{2}$ in., ovate; lobes very small, round. *Anthers* ovate-oblong, near the top of the tube. *Stigma* conical, hairy, nearly as long as the style, included. *Nutlets* $\frac{1}{2}$ by $\frac{1}{2}$ in., margins broad, smooth; often 2 in the Indian examples.

VAR. *malabarica*; nuts usually 4 smaller in horizontal section triangular without margins. *H. malabarica*, *Retz Obs.* iv. 24; *Roxb. Fl. Ind.* i. 454; *Wall. Cat.* 7014. *Piptoclaina malabarica*, *G. Don Gen. Syst.* iv. 364.—W. Deccan Peninsula, from Central India (*Edgeworth*) to Tinnevely (*Wight*), frequent. *Cutch & Scinde, Stocks, Stoliczka*.—*Bunge* (l. c. 287) excludes from the section *Piptoclaina* all the species with 4 nutlets, and objects to regarding *H. malabaricum* as a var. of *H. supinum*; but there is every gradation between the two forms of fruit in the Indian collections; an example, marked as collected at Darjeeling in *Herb. Griffith*, has 2–3 or 3–4 nuts.

SECT. V. **Euheliotropium**. *Sepals* narrow, not enclosing the fruit. *Corolla-lobes* plicate or crenulate, neither patent cuspidate nor with closely-incurved mucro. *Style* short; *stigma* conic, entire or minutely 2-fid or (in *H. rariflorum* and *mysotoides*) capitate, included in the corolla-tube. *Nutlets* not spreading, forming an ovoid 4-pointed mitre-like fruit, with a small hole at the apex.

* *Leaves* obovate or elliptic, silky scarcely scabrous, subentire; flowers sessile.

5. **H. Eichwaldi**, *Steud*; *DC. Prodr.* ix. 535; leaves obovate lower long-petioled softly closely hairy, spikes dense ebracteate, flowers 2-ranked, calyx deciduous with the fruit, nutlets glabrous minutely verrucose. *Bunge in Bull. Soc. Imp. Nat. Mosc.* 1869, 292; *Boiss. Fl. Orient.* iv. 131. *H. ellipticum*, *Ledeb.*; *Eichw. Itin. Casp.-Caucas.* 10, t. 4, not of *Salt*. *H. strictum*, *Ledeb. Fl. Ross.* iii. 100. *H. macrocarpum*, *Guss. Pl. Inarime*, 214, t. 7, fig. 2, and *g*,

h. *H. europæum*, *Aitchison Cat. Punjab*. 94; *Benth. Fl. Austral.* iv. 394; ?*Linn.*; *DC. l.c.* 534.

PUNJAB and SCINDE; in the plains, frequent. KASHMIR; Srinuggur, alt. 5,200 ft.—DISTRIB. W. and Central Asia. Australia.

Stems woody; branches from the base, 6–12 in., softly closely hairy. *Leaves* $\frac{1}{2}$ – $1\frac{1}{2}$ in., obtuse; nerves not prominent on the upper surface; petiole $\frac{1}{2}$ –1 in. *Spikes* 2 in. *Sepals* $\frac{1}{12}$ in., ovate-lanceolate, hairy. *Corolla-tube* $\frac{1}{8}$ in., narrow, cylindric, hairy without; segments small, round, crenulate. *Stigma* microscopically scabrous. *Nutlets* $\frac{1}{12}$ in.—Differs from *H. europæum*, Linn., in the more softly hairy leaves and spikes; as to the minute differences in the stigma (shown by *Gussone l.c.*) they do not apply satisfactorily to the Indian and Australian materials.

VAR. *lasiocarpum*; nuts hispid-silky sparingly rugose. *H. lasiocarpum*, *Fisch & Mey. Ind. Sem.* iv. 38; *Bunge in Bull. Soc. Imp. Nat. Mosc.* 1869, 292; *Boiss. Fl. Orient.* iv. 131.—N.W. India; ex *Boiss. l.c.*, but all the Indian examples seen suit *H. Eichwaldi* so far as the two differ.

6. **H. calcareum**, *Stocks in Hook. Kew Journ.* iv. 174; leaves obovate lower long-petioled softly closely hairy, spikes elongate ebracteate, flowers 1-ranked, calyx persistent after the setulose nutlets have fallen. *Bunge in Bull. Soc. Imp. Nat. Mosc.* 1869, 303; *Boiss. Fl. Orient.* iv. 128. *H. cinerascens*, *Aitchison Cat. Punjab*. 94, not of *Steud.*

SCINDE; *Stocks*.—DISTRIB. Beloochistan.

Stem and leaves nearly as of *H. Eichwaldi*, but indumentum more ash-coloured. *Spikes* often 6 in. *Sepals* $\frac{1}{10}$ in., lanceolate, hairy. *Corolla-tube* $\frac{1}{8}$ in., cylindric, hairy without; lobes small, round, crenate. *Stigma* conic elongate, minutely bifid at the apex. *Nutlets* $\frac{1}{10}$ in.

7. **H. ovalifolium**, *Forsk. Fl. Æg.-Arab.* 38; leaves elliptic or obovate softly closely hairy lower long-petioled, spikes elongate persistently bracteate. *Roth Nov. Sp.* 103; *Wall. Cat.* 2089. *H. coromandelianum*, *Retz. Obs.* ii. 9; *DC. Prodr.* ix. 541; *Wall. Cat.* 7016; *Wight Ic.* t. 1388; *Dalz. & Gibs. Bomb. Fl.* 171. *H. tomentosum* and *polystachyum*, *Poir. Dict. Suppl.* iii. 23; *DC. l.c.* 549. *H. gracile*, *Br. Prodr.* 493. *H. obovatum*, *Don Prodr.* 101; *DC. l.c.* 548. *H. Kunzei*, *Lehm.*; *DC. l.c.* 541; *Boiss. Fl. Orient.* iv. 130. *H. Syenites*, *Spreng. Syst.* i. 539. *H. Brocchianum*, *Vis. Pl. Æg.-Nub.* 8, t. 2, fig. 1. *H. niloticum*, *A. DC. Prodr.* ix. 541.

BENGAL, DECCAN PENINSULA and SCINDE; frequent.—DISTRIB. Tropical Africa and Australia.

Stems woody; branches 1 ft., ascending, softly hairy. *Leaves* $\frac{3}{4}$ by $\frac{1}{2}$ in., or in the western examples hardly half so large, obtuse with or without a mucro; nerves not prominent. *Spikes* 1–4 in., dense; bracts $\frac{1}{10}$ – $\frac{1}{8}$ in., ovate, acute. *Sepals* $\frac{1}{12}$ in., elliptic, acute. *Corolla-tube* $\frac{1}{10}$ in., cylindric; lobes minute, ovate, patent, subacute. *Stigma* minutely hairy. *Nutlets* $\frac{1}{18}$ in., densely setulose.

** *Leaves lanceolate, bristly, margins crisped-crenulate; flowers sessile, ebracteate.*

8. **H. undulatum**, *Vahl Symb.* i. 13; leaves obscurely petioled, spikes rigid branches short, nutlets small hispid. *Wall. Cat.* 916; *DC. Prodr.* ix. 536; *Boiss. Fl. Orient.* iv. 147. *H. persicum*, *Lamk. Dict.* iii. 94; *Burm. Fl. Ind.* 41, t. 19; *DC. l.c.* 537; *Boiss. Fl. Orient.* iv. 147. *H. crispum*, *Desf. Fl. Atlant.* i. 151, t. 41. *H. eriocarpum*, *Delile*; *Lehm. Asperifol.* 55 (*vide Boiss.*). *H. ramosissimum*, *Sieb.*; *DC. l.c.* 536. *H. affghanum*, *Boiss. Fl. Orient.* iv. 143. *Lithospermum hispidum*, *Forsk. Fl. Æg.-Arab.* 38.

PUNJAB, SCINDE, and UPPER GANGETIC PLAIN, alt. 0–1000 ft., frequent.—DISTRIB. W. Asia and N. Africa.

Suberect, 6–24 in., branched, harsh, scabrous. *Leaves* $\frac{1}{2}$ – $1\frac{1}{4}$ in., often rugose.

Sepals $\frac{1}{16}$ in., oblong, scabrous, rigid, persistent after the nutlets have fallen. *Corolla-tube* $\frac{1}{8}$ in., tubular, scabrous without; lobes very small, ovate. *Nutlets* 4, $\frac{1}{12}$ in., verrucose or bristly.—Boissier says that *H. affghanum* has the corolla hairy within, and thus differs from *H. undulatum*, but the type of *H. affghanum* (viz., Griffith, Kew Distrib. n. 5936) altogether agrees with *H. undulatum*.

VAR. suberosa; fruits depressed-globose $\frac{1}{2}$ in. diam. glabrous dividing into 2 two-seeded nutlets with corky cells on the back. *H. nubicum*, *Bunge in Bull. Soc. Imp. Nat. Mosc.* 1869, 330?—Scinde, *Stocks*. The seeds are as in *H. undulatum*. This was collected by Stocks as part of his n. 473, and is probably a variety of *H. undulatum* affected by an insect-punctures; but it is remarkable that Stocks' example has very numerous flowers and fruits, and that every ovary, without exception, appears to form a corky fruit.

*** *Leaves small or very narrow, subentire, scabrous hairy; flowers mostly bracteate, lower often pedicelled or with leaflike bracts.*

† *Stigma elongate conic.*

9. **H. Rottleri**, *Lehm. Asperifol.* 66; woody, leaves small oblong, racemes long with distant flowers, fruit depressed distinctly 4-lobed completely covered by short grey adpressed hairs with a depressed hollow at the apex whence springs the style. *DC. Prodr.* ix. 549; *Wight Ic. t.* 1392; *Dalz. & Gibs. Bomb. Fl.* 171.

DECCAN PENINSULA; Coimbatore, alt. 1000 ft., *Wight, &c.*

Very harsh, with stiff curved branches. *Leaves* $\frac{1}{2}$ by $\frac{1}{8}$ in., sessile, scattered, margins recurved when dry. *Racemes* 2-4 in., stiff, curved; pedicels solitary, each opposite a bract. *Sepals* $\frac{1}{12}$ in., ovate, acute, similar to the bracts. *Stigma* ovate, shortly acute. *Fruit* $\frac{1}{16}$ in. long by $\frac{1}{12}$ broad.

10. **H. paniculatum**, *Br. Prodr.* 494, not of *Roxb.*; erect, subvirgate, leaves linear, racemes filiform elongate, fruit depressed subdivaricately 4-lobed glabrous or with few scattered minute hairs. *DC. Prodr.* ix. 547; *Benth. Fl. Austral.* iv. 399. *H. glabellum*, *Br. l. c.* 494; *DC. l. c.* 548. *H. linifolium*, *Lehm. Asperifol.* 35; *DC. l. c.* 547; *Wight Ic. t.* 1391. *H. tenue*, *Wall. Cat.* 915; *DC. l. c.* 548, not of *Roem. & Sch.* *H. zeylanicum*, *Heyne in Herb. Rottl.*; *DC.* (under *H. glabellum*) *l. c.* 548. *Cynoglossum zeylanicum*, *Wight in Wall. Cat.* 7018, not *Heliotropium zeylanicum*, *Wall.*

S. DECCAN and CEYLON, *Rottler, Wight. PEOU, Wallich.*—DISTRIB. Siam, Australia.

Branches erect, twiggy. *Leaves* 1 by $\frac{1}{10}$ in. *Racemes* 2-6 in.; pedicels subopposite a small linear bract or often extra-axillary. *Sepals* $\frac{1}{4}$ in., ovate, acute. *Stigma* conical-linear. *Fruit* $\frac{1}{20}$ by $\frac{1}{12}$ in.—*Wight* called a rather stouter form, with leaves $\frac{1}{2}$ in. wide and larger flowers, *H. tenue*, the ordinary form *H. linifolium*; but the difference is slight.

11. **H. strigosum**, *Willd. Sp. Pl.* i. 743; ramous, leaves small linear-lanceolate, spikes mostly elongate, upper flowers sessile not conspicuously bracteate, fruit ovoid not or obscurely 4-lobed with minute grey hairs. *DC. Prodr.* ix. 546; *Boiss. Fl. Orient.* iv. 143.

Throughout INDIA; very common.—DISTRIB. W. Asia, Malaya, Australia.

Usually procumbent, intricately branched. *Leaves* $\frac{2}{3}$ by $\frac{1}{10}$ in. Lower flowers of the spike often pedicelled, with larger bracts. *Sepals* $\frac{1}{12}$ in., ovate-lanceolate. *Stigma* ovate, linear. *Fruit* $\frac{1}{16}$ — $\frac{1}{12}$ in. long and broad, depressed conical at the apex.

VAR. brevifolia; leaves $\frac{1}{4}$ by $\frac{1}{10}$ in. narrowly lanceolate. *H. brevifolium*, *Wall. Cat.* 914, and in *Roxb. Fl. Ind. ed Carey & Wall.* ii. 2; *DC. l. c.* 546. *H. compactum*, *Don Prodr.* 101.—Throughout India, even more abundant than *H. strigosum* type.

12. **H. bracteatum**, *DC. Prodr.* 493; suberect, leaves lanceolate, spikes shortened, flowers crowded among prominent bracts, fruit distinctly 4-lobed

glabrous chestnut-brown below scabrous or minutely hairy near the apex. *DC. Prodr.* ix. 547; *Benth. Fl. Austral.* iv. 397. *H. foliatum*, *Br. l.c.* 493; *DC. l.c.* 548. *H. ramosum*, *Roxb.*; *Wall. Cat.* 7015. *H. cyrtostachyum*, *Miq. Fl. Ind. Bat.* ii. 924.

S. DECCAN PENINSULA AND CEYLON.—DISTRIB. Java, Australia.

Stems 4-8 in., strict or with ascending branches. *Leaves* $\frac{3}{4}$ by $\frac{1}{8}$ - $\frac{1}{6}$ in., not very acute. *Sepals* $\frac{1}{2}$ in., lanceolate, smaller than many of the bracts.

VAR. laxiflora; spikes elongate or (in *H. zeylanicum*, *Wall.*) filiform. *H. laxiflorum*, *DC. l.c.* 548; *Dalz. & Gibs. Bomb. Fl.* 171. *H. zeylanicum*, *Wall. Cat.* 2091, not of *Lamk.*—S. Deccan Peninsula and Ceylon, *Heyne, Wight*.

13. *H. marifolium*, *Retz. Obs.* ii. 8; leaves lanceolate acute scabrous cauline often large, spikes 1-2 in. dichotomous rigid dense curved conspicuously bracteate, fruit 4-lobed chestnut-brown below shortly bristly.

DECCAN PENINSULA; from Chota Nagpore and Rajpootana to Cape Comorin.

Stems rigid, divaricately ramous, not intricate. *Cauline leaves* $1\frac{1}{2}$ by $\frac{1}{4}$ in., harsh. *Flowers and fruits* rather larger than those of *H. bracteatum* from which it is perhaps not distinct.

VAR. Wallichii; stems decumbent intricately ramous, leaves smaller less harsh, spikes elongate, flowers and fruits nearly of *H. bracteatum*. *H. marifolium*, *Wall. Cat.* 2092; *DC. Prodr.* ix. 547; *Wight Ic. t.* 1390; *Dalz. & Gibs. Bomb. Fl.* 171. *Cynoglossum marifolium*, *Roxb. Fl. Ind. i.* 457. *Bothriospermum?* *marifolium*, *A. DC. Prodr.* x. 116.—Throughout India. Distinguished from *H. strigosum* by its broader leaves and 4-lobed fruit. Except in its very ramous habit this does not differ from *H. bracteatum*, var. *laxiflora*. Anthers ovate with linear twisted tips (as in allied species) described by Roxburgh as "scales" between the corolla-lobes which error has misled A. DC.

14. *H. scabrum*, *Retz. Obs.* ii. 8; procumbent, densely, leafy, leaves lanceolate acute, flowers subcapitate among leaflike bracts, fruit 4-lobed chestnut glabrous or minutely hairy near the apex. *Wall. Cat.* 7017; *Wight Ic. t.* 1389.

DECCAN PENINSULA AND CEYLON; frequent.

Forming dense tufts with fasciated leaves. Probably not specifically distinct from *H. marifolium*.

†† *Stigma subcapitate*.

15. *H. rariflorum*, *Stocks in Hook. Kew Journ.* iv. 174; erect, branched, leaves linear, spikes elongate bracteate, fruit 4-lobed bristly. *Boiss. Fl. Orient.* iv. 144. *Lithospermum leucophlæum*, *Schweinf. Herb. Afr. Centr.* n. 696.

SCINDE; Kurrachee, *Stocks*. PUNJAB; Jhelum, *Aitchison*.—DISTRIB. Cabul, Beloochistan, Nubia, Socotra.

Branches 6-12 in. *Leaves* 1 by $\frac{1}{8}$ in. *Spikes* 1-3 in.; flowers all sessile; bracts scattered, leaflike. *Stigma* a very depressed cone. Hairs on the fruit adpressed or thickly bristly.

SECT. VI. *Heliophytum*. Fruit mitriform, subacutely 4-pointed.

16. *H. indicum*, *Linn.*; *Roxb. Fl. Ind. i.* 454; herbaceous, leaves petioled ovate subserrate, spikes elongate dense ebracteate, fruit separating into two 2-seeded 2-pointed pyrenes. *Bot. Mag. t.* 1837. *H. anisophyllum*, *Beauv. Fl. Ow. et Ben.* ii. 62, t. 96. *Tiaridium indicum*, *Lehm. Asperifol.* 14; *Wall. Cat.* 913; *Wight Ill. t.* 171; *Chamisso in Linnæa*, 1829, 452, t. 5, fig. 2; *Dalz. & Gibs. Bomb. Fl.* 172. *T. anisophyllum*, *G. Don Gen. Syst.* iv. 364. *Heliophytum indicum*, *DC. Prodr.* ix. 556; *Fresen. in Mart. Fl. Bras. fasc.* 22, 48, t. 10, fig. 4. *H. velutinum*, *DC. l.c.* 557.

Throughout INDIA; very common in the moister parts.—DISTRIB. Malaya, E. Asia, Tropical Africa and America.

Annual, hirsute. *Stems* 6–18 in. *Leaves* alternate or subopposite, 1–4 in., more or less woolly. *Spikes* 1–8 in., mostly leaf-opposed. *Sepals* $\frac{1}{16}$ – $\frac{1}{12}$ in., linear. *Corolla-tube* $\frac{1}{2}$ in., narrow-cylindric; lobes small, round, crenate. *Stigma* conoid-linear. *Fruit* $\frac{1}{2}$ in., ovoid, ribbed, soon separating into 2 mitrelike pyrenes; each pyrene with 2 cavities in addition to the seed-bearing cells.

DOUBTFUL SPECIES.

H. ROXBURGHII, *Spreng. Syst. curæ post.* 54; erect, ramous, hairy, leaves petioled ovate-oblong, spikes terminal paniced secund, tube of the corolla long and gibbous. *DC. Prodr.* ix. 549. H. paniculatum, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 2, not of R. Br.—CHITTAGONG, *Roxburgh*. Known only from Roxburgh's description. Possibly, as Roxburgh did not live to publish his own mss., this was his first description of *Tournefortia Roxburghii* (afterwards described fully under *Lithospermum*), which he may have preserved for reference. This explanation applies certainly to some duplicate species in Roxburgh's posthumous work. It can hardly be *H. æylanicum*, *Lamk.* (as Rottler supposed) because that species is not known in Chittagong.

7. **TRICHODESMA**, Br.

Coarse, hispid herbs. *Leaves* opposite, upper alternate, entire. *Pedicels* axillary, 1-flowered, going off into terminal racemes by the gradual reduction of the floral leaves. *Calyx* deeply 5-merous; lobes triangular-lanceolate, in fruit enlarged. *Corolla-tube* campanulate-cylindric, throat without scales; lobes 5, twisted to the left, a gland or depression near the base of each. *Stamens* 5, filaments short; anthers elongate, lanceolate, connivent in a cone; connectives more or less hairy on the back, tips excurrent at length twisted. *Ovary* 4-celled; style terminal filiform, stigma small. *Fruit* ellipsoid, sub-4-ridged; nutlets ovoid-oblong, smooth, shining on the back, scabrous, slightly or strongly margined on the inner face, closely adnate by their whole inner face to the carpophore below the style, finally separating.—Species 10; in tropical and warm-temperate Africa, Asia, and Australia.

* *Calyx-lobes* in fruit cordate or hastate at the base.

1. **T. indicum**, Br. *Prodr.* 496; bristly with hairs springing from tubercles and also more or less villous, leaves mostly sessile lanceolate or cordate-lanceolate, calyx-lobes (at least in fruit) cordate or hastate at the base, staminal cone densely closely woolly on the back. *Wall. Cat.* 932; *Wight Ill.* t. 172; *DC. Prodr.* x. 172; *Dalz. & Gibs. Bomb. Fl.* 173; *Boiss. Fl. Orient.* iv. 280. *T. perfoliatum*, *Wall. Cat.* 934. *T. hirsutum*, *Edgew. Pl. Banda*, 51. *Borago indica*, *Linn.*; *Roxb. Fl. Ind.* i. 458. ? *B. spinulosa*, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 11; *DC. Prodr.* x. 35.

Throughout INDIA; common; not in Bengal Plain.—DISTRIB. Cabul, Beloochistan, Persia, Mauritius.

Erect or diffuse. *Leaves* 1–4 in., tuberculate on the upper surface. Lower *pedicels* often distinctly axillary, 1-flowered. *Calyx-lobes* $\frac{1}{2}$ – $\frac{1}{2}$ in., more or less grey- or white-villous. *Corolla-tube* $\frac{1}{2}$ in.; lobes $\frac{1}{2}$ in., ovate, suddenly acuminate. *Nutlets* $\frac{1}{2}$ in., sometimes very rough on the inner face, obscurely margined.—Edgeworth notes that *Borago spinulosa* is *Trichodesma indicum*, probably correctly; no one appears to have seen a specimen or to know what else it can be.

VAR. *subsessilis*; leaves subelliptic narrowed downwards many very shortly petioled. *T. subsessilis*, *Wall. Cat.* 933.—British Burma; Prome, *Wallich*; Pegu, *Kurz*.

2. **T. amplexicaule**, *Roth Nov. Sp.* 104; bristly with hairs springing from tubercles, hardly at all villous, leaves sessile cordate-oblong beneath strigose

on the nerves otherwise glabrous, flowers and fruit nearly as of *T. indicum*. *DC. Prodr.* x. 172; *Dalz. & Gibs. Bomb. Fl.* 173. *T. inaequale*, *Edgew. Pl. Banda*, 51.

Throughout W. INDIA; from Scinde, Rajpootana, and Central India to Malabar; frequent.

Probably a mere form of *T. indicum*. *Corolla-lobes* ovate, suddenly acute, twisted to the left in the bud. *Anthers* exsert, tips of the connective finally twisted.

3. ***T. africanum***, *Br. Prodr.* 496; bristly with hairs springing from tubercles, leaves ovate-oblong lower long-petioled, calyx-lobes in fruit cordate at the base, staminal cone laxly hairy on the back. *DC. Prodr.* x. 173; *Boiss. Fl. Orient.* iv. 280. *Borago africana*, *Linn. Sp. Pl.* 197. *B. verrucosa*, *Forsk. Fl. Æg-Arab.* 41.

PUNJAB and SCINDE; *Aitchison, Stocks, &c.*—DISTRIB. Cabul, Persia, Arabia, Tropical Africa to Senegal.

Stem and leaves as of *T. indicum*, but more harshly hispid. *Racemes* mostly lateral, often bipartite and subbracteate. *Calyx-lobes* $\frac{1}{4}$ in., in fruit $\frac{1}{2}$ – $\frac{3}{4}$ in. *Corolla tube* $\frac{1}{2}$ in.; lobes $\frac{1}{4}$ in., ovate, acute. *Nutlets* $\frac{1}{8}$ in.; margin prominent, glochidiate.

** *Calyx-lobes in fruit ovate or rounded at the base.*

4. ***T. zeylanicum***, *Br. Prodr.* 496; leaves oblong obtuse or acute at the base hairy beneath, racemes lateral and terminal, nutlets $\frac{1}{2}$ in. ovoid-oblong obscurely margined. *Wall. Cat.* 935; *DC. Prodr.* x. 172; *Bot. Mag.* t. 4820; *Benth. Fl. Austral.* iv. 404. *Borago zeylanica*, *Linn. Mant.* 202; *Jacq. Ic. Pl. Rar.* ii. t. 314; *Burm. Fl. Ind.* 41, t. 14, fig. 2. *Leiocarya Kotschyana*, *Hochst. in Flora*, 1844, 30.

DECCAN PENINSULA and CEYLON: common.—DISTRIB. Malaya, Australia, Mascarene Islands.

Habit of *T. indicum*. *Leaves* sessile or subpetiolate, bristly with hairs springing from tubercles on the upper surface. *Racemes* usually denser, more softly villous than in *T. indicum*. *Flowers* and fruit about the same size as in *T. indicum*.

5. ***T. khasianum***, *Clarke*; very large, leaves elliptic narrowed at both ends or petioled sparsely hairy beneath, racemes forming large terminal corymbs, nutlets $\frac{1}{4}$ in. widely margined.

KHASIA; *Griffith* (*Kew Distrib.* n. 5989), &c.

Apparently a stout, sparingly setose, shrub. *Leaves* 7 by $2\frac{1}{2}$ in., mostly opposite, petioled, scabrous tuberculate above, rugose subglabrate beneath. *Corymbs* with 50–100 flowers, nearly ebracteate. *Calyx-lobes* in the bud $\frac{2}{3}$ by $\frac{1}{2}$ in., rusty-pubescent, in fruit 1 by $\frac{2}{3}$ in., papery. *Corolla-tube* $\frac{1}{2}$ in.; lobes $\frac{1}{2}$ in., lanceolate-linear. *Anther-cone* nearly $\frac{1}{2}$ in., patently white-hairy.—Remote in habit from the other Indian species; a still larger species has lately been discovered by Dr. Balfour in Socotra.

8. **ACTINOCARYA**, *Benth.*

A slender, diffuse herb, sparsely strigose or nearly glabrous. *Leaves* alternate, obovate-oblong, entire. *Flowers* minute, solitary on axillary pedicels. *Calyx* deeply 5-lobed, hardly enlarged in fruit. *Corolla-tube* short; scales in the throat 5, very small; lobes 5, obtuse, spreading, imbricate in the bud. *Stamens* 5, filaments short; anthers small, ovate, obtuse. *Ovary* deeply 4-lobed; style short, from the base of the lobes, stigma small. *Nutlets* 4, obovoid-oblong, divaricate, with small spines on all sides, attached to the small carpophore only at their minute lower ends.

A. tibetica; *Benth. in Gen. Pl.* ii. 846.

WESTERN TIBET; Nubra, alt. 13,000 ft.; near Karsar village, *Thomson*.

Stems 4-14 in., prostrate, branched. *Leaves* $\frac{3}{4}$ by $\frac{1}{2}$ in., subobtusely. *Pedicels* $\frac{1}{4}$ - $\frac{1}{2}$ in. *Sepals* $\frac{1}{16}$ in., narrowly oblong. *Corolla-tube* scarcely longer than the sepals; lobes $\frac{1}{30}$ in. *Nutlets* $\frac{1}{16}$ in.

9. **OMPHALODES**, *Moench*.

Weak, decumbent herbs, strigose or subglabrous. Radical *leaves* long-petioled, lanceolate or ovate; cauline few, alternate. *Pedicels* in lax racemes, slender, lower subaxillary solitary from leaf-like bracts. *Flowers* white or blue. *Sepals* 5, spreading, little enlarged in fruit. *Corolla* rotate, throat almost closed by obtuse scales; lobes 5, round, spreading, imbricate in the bud. *Stamens* 5, included; anthers small, obtuse. *Ovary* deeply 4-lobed; style filiform, from the base of the lobes, stigma small or subcapitate. *Nutlets* 4, depressed, forming a pyramid, attached to the small carpophore by their inner faces, their margins broad thin, entire or serrate, reflexed over the back of the nuts so as to form on each a small nearly closed cell opening outwards by a small hole; nuts smooth on the back.—Species 10; from the Mediterranean basin to Central Asia and Japan.

O. Thomsoni, *Clarke*; leaves elliptic or oblong subobtusely strigose on both surfaces, racemes lax subterminal, revolute margins of the nutlets nearly entire. *Omphalodes*, sp. 8, *Herb. Ind. Or. H. f. & T*.

WESTERN TIBET: Nubra, alt. 13,000 ft., *Thomson*.

Rootstock perennial; annual branches 6-10 in., very numerous, slender, strigose. Radical *leaves* 1 by $\frac{1}{4}$ in., spatulate; petiole $\frac{1}{4}$ - $1\frac{1}{2}$ in.; cauline $\frac{3}{4}$ by $\frac{1}{2}$ in., sessile. *Pedicels* $\frac{1}{4}$ - $\frac{3}{4}$ in., recurved in fruit. *Sepals* $\frac{1}{10}$ in., oblong, reflexed in fruit. *Fruit* $\frac{1}{5}$ in. long and broad, exactly pyramidal; nutlets somewhat saccate at base, appearing inflated by the reflexed loose membranous margin.

10. **CYNOGLOSSUM**, *Linn.*

Biennial or perennial herbs, erect, hairy. *Leaves* alternate, radical petioled. *Racemes* elongate, ebracteate; flowers ultimately distant, sessile or lower shortly pedicelled, blueish or purple. *Calyx* deeply 5-lobed, in fruit spreading not (or slightly) enlarged. *Corolla-tube* short, with 5 obtuse or emarginate scales in the throat; lobes 5, obtuse, imbricate in the bud. *Stamens* 5, included beneath the scales; anthers small, ovate, their tips hardly above the mouth of the corolla-tube. *Ovary-lobes* 4; style short or longish from the base of the lobes, stigma small. *Nutlets* 4, forming a much depressed pyramid, apices hardly produced above the hilum, bases rounded produced downwards, outer faces convex or flattened, with or without a margin, glochidiate; carpophore (after the nuts have fallen) linear, shortly conic at the base (elongate-conic in *C. Ritchiei* and sometimes in *C. denticulatum*, var. *zeylanica*).—Species 60; in subtropical and temperate, especially mountain regions.

* *Flowers* very small; style neither in flower nor in fruit exceeding $\frac{1}{2}$ in.

1. **C. furcatum**, *Wall. in Roxb. Fl. Ind. ed. Carey & Wall.* ii. 6, and *Cat.* 919; depressed-strigose, upper cauline leaves oblong sessile entire softly hairy, racemes furcate branches long fulvous towards the tips, lower flowers distinctly pedicelled, outer faces of the nutlets ovate distinctly margined by the confluence of the bases of the marginal glochidia. *Don Prodr.* 100; *DC. Prodr.* x. 149; *Maxim. in Bull. Acad. Petersb.* xvii. 554. *C. ovatum*, *Moon Cat.* 12.

Throughout INDIA and CEYLON; in the mountains, alt. 4-9000 ft., very common; no examples from the Malay Peninsula.—DISTRIB. Cabul.

Erect, 1-3 ft., no patent or lax hairs on the stem. Radical leaves larger, long-petioled, persistent at the time of flowering; cauline 4 by 1 in., acute, frequently subdecurent, glabrous or very minutely but scarcely scabrous on the upper surface, nerves beneath often prominent. Lower pedicels often $\frac{1}{10}$ - $\frac{1}{4}$ in. Calyx-lobes ovate, in fruit often $\frac{1}{2}$ in. broadly oblong. Outer face of the nutlets $\frac{1}{2}$ in., with no distinct medial line, with scattered glochidia often not much shorter than the marginal; carpophore linear, hardly conical at the base.—Generally distinguished correctly from the other closely allied species of this subsection by its almost silky indumentum and tawny young racemes. *C. ovatum*, Moon, is a form common in the Nilgherries with shorter, ovate, thicker, more softly hairy leaves.

VAR. *lanceolata*; leaves thinner margin obscurely crenulate upper surface subscabrous with longer hairs rising from a more tuberculate base. *C. lanceolata*, Heyne; Wall. Cat. 921. *C. Heynei*, G. Don Gen. Syst. iv. 354; DC. Prodr. x. 150.—Nilgherries, Anamallays, and Mts. of Ceylon, frequent.—Stem with subpatent hairs; cauline leaves narrowed at the base, sometimes obscurely petioled, margin minutely scabrous, in these respects approaching *C. micranthum*, but the fruit is altogether as of *C. furcatum*.

2. ***C. micranthum***, Desf. Cat. Hort. Par. 1804, 220, *vide* A. DC. Prodr. x. 149; patently hairy, upper cauline leaves lanceolate acute at both ends crenulate, racemes divaricately forked lower flowers subsessile, calyx-lobes minute ovate obtuse, outer faces of the small nutlets shortly ovate not (or most obscurely) margined glochidiate on all sides. Maxim. in Bull. Acad. Petersb. xvii. 555. *C. canescens*, Willd. Enum. Hort. Berol. 180; Benth. in Royle Ill. 306; Wall. Cat. 918, partly. *C. vesiculosum*, Wall. Cat. 920, partly.

NORTHERN INDIA and the HIMALAYA, alt. 1-8000 ft., from Kashmir to Bhotan and Pegu, common.

Stem 1-4 feet, erect, hirsute. Radical leaves none at the time of flowering; upper cauline 3 by $\frac{1}{2}$ in., uppermost often very narrow, margin ciliate sometimes subdentate, upper surface scabrous with hairs from tuberculate bases. Racemes rigid, often imbricate; flowers very small, sessile in the typical form (lower pedicelled in Wallich's examples). Calyx-lobes $\frac{1}{4}$ in. in fruit, obtuse from the first. Corolla very small, white, the scales in the throat blue-black. Nutlets $\frac{1}{10}$ in., ovoid, in the typical form, sometimes rather larger; carpophore cylindric-linear; style often twice as long as the nutlets.

3. ***C. lanceolatum***, Forsk. Fl. Æg. 41, not of Heyne; hispid, leaves broadly lanceolate strongly nerved beneath, racemes often long with all the flowers pedicelled, nutlets $\frac{1}{2}$ in. diam. shortly ovate not (or most obscurely) margined glochidiate on all sides. DC. Prodr. x. 155. *C. racemosum*, Roxb. Hort. Beng. 13, and Fl. Ind. ed. Carey & Wall. ii. 6. *C. hirsutum*, Jacq. Hort. Schoenb. iv. t. 489, not of Thunb. *C. micranthum*, Dalz. & Gibs. Bomb. Fl. 172.

BENGAL PLAIN, to the sea, common; extending throughout the GANGETIC PLAIN to LAHORE. BOMBAY; Law.—DISTRIB. Arabia.

Raceme-branches in fruit often 6-10 in.; pedicels often $\frac{1}{4}$ in.; calyx-lobes in fruit $\frac{1}{2}$ in., obtuse.—Roxburgh's *C. racemosum* has been united by all authorities with *C. micranthum*, Desf.; the nutlets are larger, the habit coarser; whether species or variety, it is identical with *C. lanceolatum*, Forsk.

4. ***C. glochidiatum***, Wall. Cat. 922; stem hispid with hairs springing from tubercles, cauline leaves lanceolate base attenuate or petioled ciliate or denticulate, lower flowers of the elongate racemes shortly pedicelled, calyx-lobes ovate obtuse sometimes oblong in fruit, outer faces of the nutlets ovate margined glochidiate on all sides. DC. Prodr. x. 150, as to description only. *C. stellulatum*, Wall. Cat. 921. *C. micranthum*, Var. *H. f.* & *T. in Herb.*

KHASIA Mts. and adjacent parts of ASSAM, alt. 2-6000 ft., frequent; Wallich, Griffith, H. f. & T. &c.—DISTRIB. Ava.

Erect, 1-2 feet, branches ascending. Leaves 2 by $\frac{1}{2}$ in., thin, sparsely hispid on both surfaces with hairs often rising from tubercles; radical leaves 0 at the time of flowering. Calyx-lobes $\frac{1}{12}$ in. in fruit. Nutlets $\frac{1}{10}$ in., margined by the confluent bases of the glochidia, but not prominently, glochidia on the faces plentiful and not much shorter; carpophore sublinear.—H. f. & T. appear justified in regarding this plant as allied to *C. micranthum*, rather than to *C. denticulatum*. Both Benth. and DC. say that Wallich's *C. glochidiatum* came from Nepal; but Wallich says he got it at Punduah, i.e. Khasia, where all other collectors get it.

5. *C. denticulatum*, A. DC. Prodr. x. 150; stem softly hairy or strigose, leaves ovate- or oblong-lanceolate some cauline petioled ciliate or denticulate, calyx-lobes ovate, outer faces of the nutlets shortly ovate prominently margined glochidiate sparingly on the faces. G. Don. Gen. Syst. iv. 354. *C. glochidiatum*, Benth. in Royle Ill. 306; Lindl. in Bot. Reg. 1841, t. 15. *C. canescens*, Wall. Cat. 918, partly. *C. vesiculosum*, Wall. Cat. 920, partly.

TROPICAL and TEMPERATE HIMALAYA, alt. 1-9000 ft., from Kashmir to Sikkim; very common. CENTRAL INDIA from Chota Nagpore to Bombay; very common.—DISTRIB. Cabul, Malaya.

Resembling *C. glochidiatum*. Leaves usually closely clothed on the upper surface with hairs rising from tubercles. Carpophore sublinear.—The Central Indian examples have rather larger nutlets than the Himalayan *C. denticulatum*, and are intermediate between that and the Var. *zeylanica*.

VAR. *zeylanica*; nutlets larger their faces sometimes $\frac{1}{2}$ in. diam. very strongly margined, base of the carpophore sometimes elongate conic so that the nutlets are attached obliquely. *C. zeylanicum*, Thunb. *C. glochidiatum*, Dalz. & Gibs. Bomb. Fl. 172. *Echinosperrum zeylanicum*, Lehm. Asperifol. 116; Roem. & Sch. Syst. iv. 780; DC. Prodr. x. 142.—W. Deccan Peninsula, from the Concan southwards in the tropical region. Ceylon (fide Lehmann).

6. *C. Wallichii*, G. Don Gen. Syst. iv. 354; stem hirsute erect, cauline leaves lanceolate to ovate base narrowed or petioled ciliate or denticulate, calyx-lobes oblong in fruit sometimes elongate narrow, nutlets shortly ovate strongly margined glochidiate sparingly on the faces. DC. Prodr. x. 150. *C. calycinum*, Wall. Cat. 923, not of Meyer. *C. vesiculosum*, Wall. Cat. 920, partly. *C. microcarpum*, A. Kerner Nov. Pl. Sp. ii. 13.—Cynoglossum sp. n. 6, Herb. Ind. Or. H. f. & T.

W. TEMPERATE HIMALAYA, alt. 4-11,000 ft., from Kashmir to Kumaon, very common.

Differs from *C. denticulatum* in the narrower calyx-lobes more elongate in fruit; these are ovate-oblong in typical *C. calycinum*, linear-oblong in *C. microcarpum*, A. Kerner; and there is every state between.—Very abundant westward about Dalhousie, when *C. denticulatum* becomes rare; but the two species are very difficult to distinguish, and may not be distinct.

VAR. *alpina*; more hirsute, stems prostrate or decumbent, leaves mostly small more scabrous tuberculate hairy. Cynoglossum sp. n. 7, Herb. Ind. Or. H. f. & T. ? *C. membranaceum*, A. DC. Prodr. x. 150.—W. Subalpine Himalaya; Edgeworth, &c. Lower cauline leaves 1 in., long-petioled, but most of the leaves $\frac{1}{2}$ – $\frac{3}{4}$ in., sessile. No authentic example of *C. membranaceum* seen.

7. *C. ? Ritchiei*, Clarke; cauline leaves lanceolate narrowed at the base, calyx-teeth in fruit elongate oblong, outer faces of the nutlets ovate marginate strongly glochidiate, carpophore $\frac{1}{2}$ in. elongate-conic at base so that the nuts are attached obliquely.

BOMBAY; Belgaum, Ritchie.

This closely resembles *C. denticulatum*, var. *zeylanica*, and may be a form of it.

but the carpophore is much dilated at the base; the calyx-segments in fruit $\frac{1}{8}$ by $\frac{1}{20}$ in. This plant is a species of *Paracaryum* according to the "Genera Plantarum," but it cannot well be removed far from *C. denticulatum*, Var. *zeylanica*.

** Flowers larger $\frac{1}{4}$ – $\frac{1}{2}$ in. diam., style $\frac{1}{8}$ – $\frac{1}{4}$ in.

8. **C. microglochis**, *Benth. in Royle Ill.* 305; cauline leaves numerous subsessile ovate or elliptic acute densely softly hairy beneath, calyx-lobes in fruit $\frac{1}{4}$ in., outer faces of the nutlets $\frac{1}{5}$ in. ovate margined coarsely not densely glochidiate. *DC. Prodr.* x. 151.

TEMPERATE W. HIMALAYA, alt. 7–11,000 ft., from Kashmir to Kumaon frequent; *Royle, Strachey, & Winterbottom, &c.*

Erect $1\frac{1}{2}$ –3 feet, hairy. Leaves 4 by 2 in., in Royle's type, often narrower, entire, lower attenuated at the base. Racemes dense, in fruit 1–4 in.; pedicels short, lower in fruit $\frac{1}{4}$ in. Calyx-lobes in flower $\frac{1}{8}$ by $\frac{1}{10}$ in., elliptic, obtuse, villous. Corolla-tube shorter than the calyx-lobes, segments $\frac{1}{8}$ in. Anther-cells oblong, divaricate at the base, tips shortly emergent above the corolla-throat, covered by the depressed cone of scales. Nutlets with very stout glochidia; carpophore conic, style $\frac{1}{4}$ in.

9. **C. nervosum**, *Benth. ms.*; cauline leaves numerous subsessile elliptic or oblong acute sparsely hirsute on both surfaces, calyx-lobes in fruit $\frac{1}{4}$ in., outer faces of the nutlets $\frac{1}{5}$ in. ovate margined densely glochidiate. *Omphalodes nervosa*, *Edgew. ms.*

WESTERN HIMALAYA; Kulu, Jalauri Pass, *Edgeworth*; Pangee, alt. 12,000 ft., *Dr. Watt.*

Generally resembling *C. microglochis*, but with laxer racemes, larger flowers, and different indumentum. Cauline leaves 4 by $1\frac{1}{4}$ in., hairs on the upper surface from tubercles, on the lower lax; nerves not prominent. Racemes 1–6 in., lax; lower pedicels $\frac{1}{4}$ – $\frac{1}{3}$ in. Corolla $\frac{2}{3}$ in. diam., widely campanulate, tube very short. Nutlets not fully ripe, much more closely glochidiate than in *C. microglochis*; carpophore shortly conical at the base, style $\frac{1}{4}$ in.

10. **C. petiolatum**, *A. DC. Prodr.* x. 149; cauline leaves few ovate acute minutely softly hairy beneath, calyx-lobes in fruit $\frac{1}{8}$ in., outer faces of the nutlets $\frac{1}{6}$ in. ovate margined sparsely glochidiate. *Anchusa petiolata*, *Hook. Bot. Mag.* t. 3858.

ALPINE WESTERN HIMALAYA; Zanskar, near Umasi Pass, *T. Thomson.*

Erect, 2–3 feet, hairy. Lower leaves oblong, long-petioled; petiole of the radical leaves 5 in. Racemes straggling, branched, 4–8 in. in fruit; pedicels very short, lower scarcely $\frac{1}{4}$ in. Calyx-lobes in flower $\frac{1}{8}$ in., elliptic, obtuse, hairy. Corolla $\frac{1}{2}$ in. diam., tube hardly longer than the calyx. Nutlets as of *Cynoglossum*, faces but little glochidiate except on the margins.—Flowers intermediate in size between those of the two last species and those of *C. furcatum*, &c. No authentic example of *C. petiolatum* has been seen; and Thomson's examples are referred to that species, only because *Bot. Mag.* t. 3858, closely resembles them; the leaves in Thomson's plant here described are hairy on both surfaces, in the picture they appear glabrous, ciliate on the margin only.

DOUBTFUL SPECIES.

C. **EDGEWORTHII**, *A. DC. Prodr.* x. 150; stem erect hispid below, leaves ovate-oblong narrowed at both ends adpressedly hairy, calyx-lobes ovate obtuse short, nutlets ovate glochidiate on all sides.

HIMALAYA; alt. 4–6000 ft., *Edgeworth.*

Differs from *C. micranthum* by the flowers twice as large, the corolla longer towards (? in proportion to) the calyx, the leaves seldom subdenticulate.

11. LINDELOFIA, Lehm.

An erect, perennial, hairy herb. Radical leaves petiolate; cauline alternate, from ovate to linear-lanceolate. Racemes dense, elongate, ebracteate. Flowers blue, purple, or nearly black. Sepals in fruit somewhat enlarged, spreading. Corolla-tube cylindric, longer than the calyx, crowned with scales in the throat forming a cone; lobes obtuse, round, spreading, horizontally imbricated in bud. Stamens 5; anthers large, linear-oblong, exserted, but scarcely overtopping the scales. Ovary 4-lobed; style from near the base of the lobes, long, stigma small. Nutlets 4, depressed, rounded at the base, apices hardly produced, glochidiate; carpophore short.

L. spectabilis, Lehm. in *Linnæa*, xxiv. 216; hairy, cauline leaves sessile oblong, corolla-tube 1-3 times as long as the calyx, faces of the nutlets glochidiate on the margin chiefly. *Cynoglossum longiflorum*, Benth. in *Royle Ill.* 305; *Bot. Reg.* 26, t. 50. *C. grandiflorum*, Benth. in *Royle Ill.* 305; *DC. Prodr.* x. 156. *Omphalodes longiflora*, A. DC. *Prodr.* x. 158. *Anchusopsis longiflora*, Bisch. in *Linnæa*, xxxvi. 736.

ALPINE WESTERN HIMALAYA; alt. 10-12,000 ft., from Gurwhal to Kashmir, *Royle*, *Madden*, *Falconer*, &c.

Stem 1-2 ft., patently, sometimes densely hairy. Radical leaves long-petioled, 2-4 in., lanceolate; lower cauline petioled, upper subcordate, amplexicaul, 3 in., hirsute more or less on both surfaces. Racemes dense, even in fruit, or elongate lax. Calyx-lobes in flower $\frac{1}{3}$ in., subacute, in the type example, sometimes obtuse, variable in length, sparingly pilose or woolly. Corolla intense blue, tube $\frac{1}{4}$ in., lobes $\frac{1}{2}$ in. in the type example, excessively variable in size. Outer faces of the nutlets $\frac{1}{8}$ - $\frac{1}{5}$ in., ovate, marginal glochidia connate at the base, the obscure medial line sparingly glochidiate, the rest of the surface nearly smooth; in a word, as of *Cynoglossum*; carpophore sublinear.—Hardly any two examples agree in the size and shape of the corolla and calyx or in their relative sizes.

VAR. *Falconeri*; stems strict, leaves linear-lanceolate, calyx-lobes $\frac{1}{2}$ in. narrowly oblong, corolla-tube $\frac{1}{2}$ - $\frac{2}{3}$ in.—Kashmir, *Falconer*.

VAR. *Levingii*; leaves elliptic and ovate acute, calyx-lobes $\frac{3}{4}$ - $\frac{1}{2}$ in. ovate, corolla-tube $\frac{2}{3}$ by $\frac{1}{4}$ in., segments $\frac{1}{2}$ in. diam. orbicular, style $\frac{3}{4}$ in.—Kashmir; Pir Pingul, alt. 11,500 ft., *Levinge*. This has much larger flowers than any other example.

2. **L. Benthami**, Hook f.; hairy, leaves linear-lanceolate acute, racemes panicled, corolla-tube about equalling the calyx narrow, segments elliptic or oblong suberect. *Solenanthes* sp. 3, *Herb. Ind. Or. H. f. & T.*

KASHMIR and WESTERN TIBET; alt. 11-15,000 ft., *Thomson*, *Strachey & Winterbottom*, &c.

Stems 2-3 ft., erect. Radical leaves long-petioled, narrow-lanceolate, cauline sessile 4 by $\frac{1}{4}$ - $\frac{1}{2}$ in. Panicles repeatedly branched, laxly racemose; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. and upwards. Calyx-lobes at flower-time nearly $\frac{1}{3}$ by $\frac{1}{2}$ in., narrowly lanceolate, acute. Corolla-tube $\frac{1}{4}$ - $\frac{1}{3}$ by $\frac{1}{2}$ in., cylindric; lobes $\frac{1}{2}$ by $\frac{1}{8}$ in., erect or only half-patent. Filaments as long as the scales; anthers exserted (not from the corolla). Style $\frac{1}{2}$ - $\frac{3}{4}$ in. Nutlets $\frac{1}{4}$ - $\frac{1}{3}$ in., forming a pyramid, densely shortly glochidiate, especially round the margins; carpophore elongate conic.—This may prove to be *S. angustifolius*, *Fisch. & Mey.*; *DC. Prodr.* x. 165; it was placed in *Lindelofia* by Bentham, (to which genus I would refer the *Solenanthes* with long anthers, as *S. lanatus*, A. DC., *S. brachystemon*, F. & M.—*J. D. Hooker*).

12. SOLENANTHUS, Ledeb.

Perennial, hairy herbs. Leaves alternate, radical petioled. Racemes dense or corymbose, ebracteate. Calyx 5-partite, scarcely enlarged in fruit. Corolla

tubular, throat with 5 scales; lobes 5, small, obtuse, erect or scarcely spreading. *Filaments* long; anthers small, shortly oblong, far exserted. *Ovary* 4-lobed; style from the base of the lobes, filiform, stigma small. *Nutlets* 4, attached somewhat obliquely to the conical carpophore, scarcely produced at the apex, rounded at the base, muricate or shortly glochidiate, usually margined.—Species 10, in S. Europe, Central and W. Asia.

1. ***S. circinnatus***, *Ledeb. Fl. Alt. i.* 194, and *Ic. Fl. Ross. t.* 26; radical leaves long-petioled cordate submembranous cauline subamplexicaul oblong-lanceolate, racemes forming a terminal panicle *DC. Prodr. x.* 164; *Boiss. Fl. Orient. iv.* 270.

ALPINE WESTERN HIMALAYA; Zanskar, *Thomson*; Pangee, *Dr. Watt*.—DISTRIB. Afghanistan, Astrabad, Soongaria, Altai.

Stems 3 ft., erect, laxly hairy. *Radical leaves* 6 by $2\frac{3}{4}$ in.; petiole 8 in.; cauline 3 by $1\frac{1}{4}$ in. *Panicle* in fruit 10 by 8 in., branches elongate; flowers approximate; pedicels $0\frac{1}{4}$ in. *Calyx-lobes* $\frac{1}{2}$ by $\frac{1}{12}$ in., oblong. *Corolla-tube* $\frac{1}{4}$ in., lobes $\frac{1}{10}$ in. *Filaments* $\frac{1}{4}$ in. *Style* $\frac{1}{4}$ – $\frac{1}{3}$ in. *Nutlets* forming a pyramid $\frac{1}{4}$ – $\frac{1}{3}$ in. diam., densely shortly glochidiate, especially round the margins; carpophore elongate-conic.

13. **PARACARYUM**, *Boiss.*

Perennial or biennial, hairy herbs. *Leaves* alternate. *Racemes* elongate, bracts few or 0. *Flowers* small, blue. *Calyx* deeply 5-fid, in fruit not much enlarged. *Corolla* funnel-shaped, or cylindric in *P. heliocarpum*, tube closed by 5 scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, beneath the scales. *Ovary* 4-lobed; style from the base of the lobes, short or long, stigma small. *Nutlets* 4, depressed, often broadly adnate to the carpophore with rigid persistent style, forming a pyramid, their apices hardly produced, their bases rounded, attached obliquely to the elongate conical carpophore, glochidiate (except in *P. ? Lambertianum*), strongly margined; margin sometimes much reflexed as in *Omphalodes*.—Species 20, in S. Europe, W. and Central Asia.

SECT. I. *Stem* solitary, tall, corymbose upwards. *Leaves* large.—(This section differs from *Cynoglossum microglochis*, *petiolatum*, &c., only in the more elongate conic carpophore, the nutlets being obliquely suberect, rather than much depressed and subdivaricate as in *Cynoglossum*.)

1. ***P. cælestinum***, *Benth. in Gen. Pl. ii.* 850; radical leaves ovate-cordate submembranous cauline ovate base cuneate strigose on the nerves beneath, racemes divaricate furcate, pedicels very short. *Cynoglossum cælestinum*, *Lindl. in Bot. Reg.* 1839, t. 36; *DC. Prodr. x.* 151; *Dalz. & Gibs. Bomb. Fl.* 173. *Echinosperrum cælestinum*, *Wight Ic. t.* 1394.

WESTERN DECCAN PENINSULA; from Mahabeshwur to Mysore, common, *Wight, Dalzell, &c.*

Erect, 3–4 ft., sparsely hairy. *Radical leaves* long-petioled, 7 by 5 in.; cauline $3\frac{1}{2}$ by 2 in., acute, subentire, tubercular-scabrous above, nearly glabrous beneath except on the nerves. *Racemes* strigose; branches 2–4 in.; pedicels $\frac{1}{5}$ in., approximate. *Calyx-lobes* $\frac{1}{10}$ in., elliptic; in fruit $\frac{1}{2}$ in., ovate. *Flowers* $\frac{1}{2}$ in. diam., nearly as of *Cynoglossum*. *Style* scarcely $\frac{1}{4}$ in. Outer faces of the *nutlets* $\frac{1}{2}$ in., ovate, margin prominent reflexed strongly glochidiate, disc nearly smooth shining.

2. ***P. malabaricum***, *Clarke*; radical leaves ovate-cordate tuberculate-hispid, cauline ovate cuneate at the base hirsute, racemes numerous erect

forming a large dense corymb, pedicels very short. *Cynoglossum* sp. 13, *Herb. Ind. Or. H. f. & T.*

WESTERN DECCAN PENINSULA; Canara and Mysore, *Law*.

Resembling the preceding species but stouter, more hairy, with larger flowers and fruits. *Calyx-lobes* $\frac{1}{2}$ in., elliptic; in fruit $\frac{1}{4}$ in., ovate. *Nutlets* more than $\frac{1}{4}$ in. diam., subglobose, disc of their faces glochidiate, style $\frac{1}{4}$ in.

3. ? **P. Lambertianum**, *Clarke*; strigose, cauline leaves sessile ovate acute, racemes long forked, pedicels very short, nutlets large margined not glochidiate.

BOMBAY (*Herb. Lambert*).

The upper portions of 2 fruiting stems of this are very like *P. caelestinum*, but the fruits are totally different. *Calyx* as of *P. caelestinum*. *Corolla* not seen. *Nutlets* $\frac{1}{3}$ in. diam., ovate, much depressed flattened, margin $\frac{1}{12}$ in. broad, entire, not reflexed, disc smooth, shining; carpophore elongate conic, style ultimately $\frac{1}{2}$ in.—The genus of this plant is very doubtful; the nutlets approach those of *Rindera*.

4. **P. hellocarpum**, *A. Kerner Nov. Pl. Sp.* ii. 9; radical leaves spathulate-lanceolate, cauline oblong or lanceolate softly hairy on both surfaces, racemes long lax flowers pedicelled, corolla-tube elongate much exceeding the calyx, margin of the nutlets broad membranous white reflexed with lanceolate glochidia disc slightly muricated. *Cynoglossum anchusoides*, *Lindl. in Bot. Reg.* 1842, t. 14; *DC. Prodr.* x. 151. *Cynoglossum Emodi*, *Schottw. Cat. Hort. Copenhagen*. *Lindelia anchusoides*, *Lehm. in Linnæa*, 1851, 216.

TEMPERATE WESTERN HIMALAYA, alt. 7–9000 ft.; Kashmir, Lahul and Piti, *Thomson*, &c.—DISTRIB. Kashgar.

Erect, 3 ft., softly hairy. *Radical leaves* long-petioled, 6 by 1 in.; cauline $2\frac{1}{2}$ by $\frac{1}{2}$ in., closely hairy on both surfaces. *Racemes* 4–10 in., ebracteate; pedicels in fruit $\frac{1}{4}$ – $\frac{1}{2}$ in., distant. *Calyx-lobes* $\frac{1}{2}$ in., narrowly oblong, silky; in fruit $\frac{1}{4}$ in. or more, widened. *Corolla-tube* $\frac{1}{4}$ – $\frac{1}{3}$ in.; lobes $\frac{1}{2}$ in., suberect. *Anthers* linear, included. *Style* $\frac{1}{2}$ in. in fruit. *Nutlets* $\frac{1}{4}$ – $\frac{1}{3}$ in.; glochidia broadly-lanceolate, thin, membranous.—A plant frequently collected in Cabul by Griffith has been named *P. anchusoides*, but it has very stiffly glochidiate, smaller, less margined nuts; and may be *Cynoglossum macrostylum*, Bunge (cf. Boiss. Fl. Orient. iv. 266).

5. **P. glochidiatum**, *Benth. in Gen. Pl.* ii. 850; radical leaves cordate-ovate, cauline ovate acute hairy on the nerves beneath, racemes elongate furcate lax, margins of the nutlets prominent long-glochidiate. *Rindera glochidiata*, *Wall. Cat.* 926. *Cynoglossum uncinatum*, *Benth. in Royle Ill.* 305. *C. Roylei*, *Wall. Cat.* 917; *DC. Prodr.* x. 155. *C. laxum*, *G. Don Gen. Syst.* iv. 356. *Echinoglossum glochidiatum*, *A. DC. Prodr.* x. 136.

ALPINE HIMALAYA, alt. 9–12,000 ft.; from Kashmir to Sikkim, frequent, *Wallich*, *Royle*, *J. D. H.*, &c.

Stem 3 ft., laxly hairy. *Radical leaves* 2–4 in. diam., petioles often 6 in.; cauline leaves mostly distinctly petioled, orbicular to elliptic-lanceolate, base obtuse. *Racemes* 2–6 in., strigose; pedicels in fruit often $\frac{1}{4}$ – $\frac{1}{2}$ in. distant. *Calyx-lobes* $\frac{1}{2}$ in., oblong, acute; in fruit $\frac{1}{4}$ in., ovate. *Corolla* $\frac{1}{2}$ in. diam., tube short, much as of *Cynoglossum*. *Style* $\frac{1}{2}$ in. *Nutlets* forming a pyramid $\frac{1}{3}$ – $\frac{1}{2}$ in. diam., much adnate to the carpophore; glochidia $\frac{1}{8}$ – $\frac{1}{4}$ in., sublinear.

6. **P. Thomsoni**, *Clarke*; radical leaves ovate-oblong, cauline mostly petioled ovate-lanceolate sparsely hairy, racemes divaricate, pedicels very short, nutlets less than $\frac{1}{2}$ in. glochidiate margined.—*Echinosperrum* sp. 2, *Herb. Ind. Or. H. f. & T.*

ALPINE WESTERN TIBET; Nubra, Baltal, *Thomson*.

Stem 3 ft., sparsely hairy. *Radical leaves* 8 by 4 in., blade decurrent on the 4–10 in.

petiole; cauline leaves 3 by $1\frac{1}{4}$ in., cuneate or rhomboid at the base. *Spikes* dense or lax. *Calyx* and *corolla* nearly as of *P. glochidiatum*. *Nutlets* much smaller, margin shorter, white, membranous, less reflexed, more shortly glochidiate.

SECT. 2. Small hispid plants, with several stems. *Leaves* and *flowers* small.—(This section only differs from *Omphalodes* in the more erect nutlets, not saccate at the base.)

7. ***P. himalayense***, *Clarke*; leaves oblong, flowers subsessile, nutlets $\frac{1}{4}$ – $\frac{1}{3}$ in. diam., margin subpatent glochidiate. *Mattia himalayensis*, *Klotzsch in Reis. Pr. Waldem. Bot.* 94, t. 64.—*Omphalodes* sp. n. 4, *Herb. Ind. Or. H. f. & T.*

ALPINE WESTERN HIMALAYA; Nubra, *Thomson*.

Stems decumbent then ascending, 6–14 in., patently hispid. *Radical leaves* $1\frac{1}{2}$ by $\frac{1}{3}$ in., narrowed at both ends, hispid on both surfaces, petiole 1 in.; cauline similar, smaller, subsessile. *Spikes* in fruit 3–8 in.; pedicels hardly any, distant. *Calyx-lobes* hardly $\frac{1}{20}$ in., oblong; in fruit sometimes $\frac{1}{2}$ in. *Corolla* scarcely $\frac{1}{2}$ in. diam., blue, tube short. *Fruit* pyramidal; margin of nutlets membranous, disc muricate, subglochidiate; style hardly $\frac{1}{8}$ in.

8. ***P. tibeticum***, *Clarke*; leaves oblong, flowers subsessile or lower pedicelled, nutlets $\frac{1}{5}$ – $\frac{1}{4}$ in. diam., margin patent subentire.—*Omphalodes* sp. n. 6, *Herb. Ind. Or. H. f. & T.*

WESTERN TIBET; Ladakh, alt. 9000 ft., *Thomson*.

Much resembling *P. himalayense*. *Stems* more diffuse. *Flowers* very small, mostly subsessile; lower pedicels in fruit occasionally $\frac{1}{4}$ in. *Fruit* pyramidal; margin of nutlets membranous, disc minutely glochidiate, style less than $\frac{1}{10}$ in.

9. ***P. microcarpum***, *Boiss. Diagn.* 2. iii. 139, and *Fl. Orient.* iv. 255; leaves oblong, flowers pedicelled, nuts $\frac{1}{16}$ – $\frac{1}{12}$ in., margin inflexed entire.—*Omphalodes* sp. n. 7, *Herb. Ind. Or. H. f. & T.*

SUBALPINE WESTERN HIMALAYA, alt. 8000 ft.; Kashmir and Pangee, *Thomson*.—DISTRIB. Cabul.

Diffuse, hairy. *Racemes* in fruit 3–8 in.; pedicels $\frac{1}{2}$ – $\frac{1}{4}$ in. *Calyx* and *corolla* rather larger than of the two preceding species. *Fruit* pyramidal, somewhat depressed; margin of nutlets membranous, as though inflated; disc minutely glochidiate.

14. **ECHINOSPERMUM**, *Swark*.

Annual or perennial, hispid herbs. *Leaves* alternate, oblong, lanceolate or narrowly obovate. *Flowers* very small, sessile or pedicelled; racemes bracteate, or bracteate above. *Sepals* 5. *Corolla-tube* short, mouth closed by 5 scales; lobes 5, imbricate in the bud, obtuse, spreading. *Stamens* 5, included. *Anthers* ovate, obtuse. *Ovary* 4-lobed; style between the lobes, short, stigma small capitate. *Nutlets* 4, erect, forming a pyramid, confluent or separable, attached above their base; scar produced to their apex; bases not produced; margins with 1 or 2 rows of strong glochidia; carpophore as long as the nutlets.—Species 20, in the north temperate regions of the old World and in N. America; a few in S. Africa and Australia.

The character in Gen. Pl. (ii. 835) assigned of “apices of the nuts erect, free round the style, more or less prominent,” applies only to the glochidiate species of *Eritrichium* placed by Bentham in *Echinosperrum*, but here enumerated under *Eritrichium*.

1. ***E. minimum***, *Lehm. Asperifol.* 126; patently hispid, leaves linear-oblong, calyx-lobes linear, nutlets elongate-pyramidal confluent. *Myosotis*—

echinophora. Pallas *Voy.* (ed. Gauthier), v. 496, t. 16, fig. 2. *Rochelia echinophora*, Roem. et. Sch. *Syst.* iv. 110, 782. *Heterocaryum minimum*, A. DC. *Prodr.* x. 144.

KASHMIR; temperate region Thomson. PUNJAB; Peshawur, Vicary.—DISTRIB. Cabul, Beloochistan to the Ural Mts. and Altai.

A coarser plant with larger flowers and fruits than the other Indian *Echinosperms*. Stem 6–12 in., erect, rigid. Leaves $1\frac{1}{2}$ by $\frac{1}{2}$ in., numerous, sometimes somewhat obovate, lower spatulate petioled. Racemes in fruit 3–4 in.; pedicels $\frac{1}{2}$ in., distant, rigid, suberect, often thickened; bracts $\frac{3}{4}$ – $\frac{1}{2}$ in., leaflike, often continued to the top of the raceme. Calyx-lobes $\frac{1}{2}$ – $\frac{1}{4}$ in. Corolla-tube $\frac{1}{2}$ in., lobes not much over topping the calyx. Nutlets $\frac{1}{2}$ – $\frac{1}{4}$ in.; margins thickened, with a single row of strong glochidia; backs depressed, smooth or scarcely granular; nutlets inseparably confluent, not rarely 1 or 2 abortive.—Boissier (*Fl. Orient.* iv. 243) doubts whether *Heterocaryum pachypodium*, *rigidum*, and *Szovitzianum* (A. DC. *Prodr.* x. 145), are other than forms of this species.

2. ***E. barbatum***, Lehm. *Asperifol.* 128; patently hispid, leaves oblong, calyx-lobes oblong, nutlets separable tubercular-scabrous on all sides with 2 rows of short stout glochidia round the margin. DC. *Prodr.* x. 137; Boiss. *Fl. Orient.* iv. 250. *Myosotis barbata*, Bieb. *Cent. Pl. Rar.* t. 36. *Rochelia barbata*, Roem. & Sch. *Syst.* iv. 110, 782.

SUBALPINE WESTERN HIMALAYA, alt. 7–12,000 ft.; from Gurwhal to Baltisthan, frequent; Thomson, &c.—DISTRIB. from Beloochistan and Cabul to the Ural and Altai.

Erect, 6–18 in. Leaves $\frac{1}{2}$ –2 in., narrowed at the base, lower petioled. Racemes in fruit 2–12 in.; pedicels $\frac{1}{2}$ – $\frac{1}{3}$ in., erect; bracts $\frac{1}{2}$ in., usually 0 in the upper part of the spike. Calyx-lobes $\frac{1}{10}$ in. Nutlets $\frac{1}{10}$ – $\frac{1}{8}$ in., forming a compact pyramid, but separable.

3. ***E. Redowskii***, Lehm. *Asperifol.* 127; patently hispid, leaves oblong, flowers subsessile, calyx-lobes oblong-linear, nutlets separable scabrous on all sides with one row of strong glochidia round the margin. DC. *Prodr.* x. 137. *E. intermedium*, Ledeb. *Fl. Alt.* i. 199, and *Ic. Fl. Ross.* ii. t. 180. *Rochelia Redowskii*, Roem. & Sch. *Syst.* iv. 782.

WESTERN TIBET, alt. 9–10,000 ft.; Leh, Thomson.—DISTRIB. Central Asia to the Ural and Altai.

Generally resembling *E. barbatum*. Pedicels rarely exceeding $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in., oblong, often continued (smaller) to the summit of the spike. Calyx-lobes rather longer than of *E. barbatum*, in fruit $\frac{1}{8}$ – $\frac{1}{2}$ in. in Thomson's example. Nutlets nearly as in *E. barbatum* but the glochidia in one row and much longer.—Perhaps *E. patulum*, Lehm. (DC. *Prodr.* 137; Boiss. *Fl. Orient.* iv. 250) is not specifically distinct.

4. ***E. semiglabrum***, Ledeb. *Fl. Alt.* i. 204, and *Ic. Fl. Ross.* i. t. 28; patently hispid, leaves oblong, flowers subsessile, calyx-lobes linear-oblong, nutlets tubercular-scabrous on all sides with one row of glochidia round the margin as long as the nutlet is broad. DC. *Prodr.* x. 138; Boiss. *Fl. Orient.* iv. 251.

WESTERN TIBET and BALTISTHAN, alt. 8–10,000 ft.; Thomson, &c.—DISTRIB. Cabul; Turkestan to the Altai.

Hardly distinguishable from *E. Redowskii*, but by the longer glochidia of the nuts which often exceed $\frac{1}{2}$ in. Spikes denser, more divided, often somewhat closely paniced.

15. **ERITRICHIMUM**, Schrader.

Annual or perennial herbs, strigose or silky-villous. Leaves alternate, narrow. Racemes simple or branched. Flowers small, blue, rarely white. Sepals 5, not or slightly enlarged in fruit. Corolla-tube short, throat with 5

scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers ovate, obtuse. *Ovary* 4-lobed; style between the lobes, short, stigma small capitate. *Nutlets* 4, erect, much longer than the carpophore, scar small below their middle, nearly basal in *E. basiflorum*, tips free; margins winged by glochidia confluent at the base or rugose or entire.—Species 70; Europe, Temp. Asia, America; in Australia.

* *Glochidia on the margin of the nutlets confluent at their bases.*

1. ***E. strictum***, *Dene. in Jacquem. Voy. Bot.* 125; perennial, silky-white, leaves linear, bracts minute in the upper part of the raceme, sepals in fruit $\frac{1}{16}$ – $\frac{1}{12}$ in. oblong. *A. DC. Prodr.* x. 128. *E. Jacquemontii* and longifolium, *Dene. l. c.* 122, 123, tt. 127, 129; *DC. l. c.* 25. *Echinosperrum canum*, *Benth. in Royle Ill.* 306; *A. DC. l. c.* 141. ? *E. myosotiflorum*, *A. DC. Prodr.* x. 141.

Throughout the WESTERN HIMALAYA, alt. 7–13,000 ft.; common, from Kashmir and Baltistan to the Sutledge.

Rootstock woody; stems 8 in., numerous, strict, undivided. *Leaves* $1\frac{1}{2}$ by $\frac{1}{8}$ in., softly adpressedly silky; lowest similar but larger, attenuate, hardly petioled; radical withered. *Racemes* 1–3 in., branched; pedicels $\frac{1}{8}$ – $\frac{1}{3}$ in., erect in fruit. *Flowers* $\frac{1}{4}$ in. diam., blue. *Nutlets* forming a pyramid $\frac{1}{12}$ – $\frac{1}{10}$ in. high, produced more than half their length above the punctiform scar; margins subreflexed, thin, the weak glochidia produced shortly above their confluence, scabrous, apices of most divided, uncinat; backs scabrous, or muricated with minute prickles.—Decaisne's example here described has narrower leaves than the mass of the material which is half-way between this and var. *Thomsoni*. This is the type of the genus *Echinosperrum* as described in the Gen. Pl., and may be *E. myosotiflorum*, *A. DC. Prodr.* x. 141.

VAR. *Thomsoni*; glistening silky, stems 12–18 in., cauline leaves $\frac{3}{4}$ by $\frac{1}{5}$ in. oblong radical much larger long-petioled, racemes larger with rather larger calyces and fruits, nutlets often pilose.—N. Kashmir, alt. 8000 ft., *Thomson*, &c. A most beautiful plant, perhaps specifically distinct.

VAR. *fruticulosum*; weaker, greener, stems diffuse sometimes with divaricate branches. *E. fruticulosum*, *Klotzsch in Reis. Pr. Wald. Bot.* 96, t. 62. *E. patens*, *Dene. in Jacquem. Voy. Bot.* 125; *DC. Prodr.* x. 128.—W. Himalaya, alt. 8–11,000 ft.; Pangee, Lahoul, Changas; *Thomson*, &c.

2. ***E. spathulatum***, *Clarke*; perennial, villous, leaves oblong, bracts minute in the upper part of the raceme, calyx-lobes in fruit $\frac{1}{8}$ – $\frac{1}{5}$ in. oblong. *Echinosperrum spathulatum*, *Benth. in Royle Ill.* 306; *DC. Prodr.* x. 142.

WESTERN TIBET; Hangarang Pass, *Thomson*; Kijungar Pass, alt. 16,000 ft., Strachey and Winterbottom.

Rootstock woody. *Stems* 2–6 in., numerous, decumbent. *Cauline leaves* $\frac{3}{4}$ by $\frac{1}{4}$ in., sessile; lower numerous, larger, spathulate, petioled. *Nutlets* not ripe, larger than in *E. strictum*, var. *Thomsoni*, hairy on the back.—Perhaps a form of *E. strictum*, but wants the glistening silky indumentum of that species; calyx and nutlets larger.

** *Margins of the nutlets entire or crenulate not glochidiate.*

3. ***E. pustulosum***, *Clarke*; weak, diffuse, strigose, leaves spathulate-oblong, pedicels few subaxillary, nutlets ovoid tubercular and minutely pubescent.—*Eritrichium* sp. n. 14, *Herb. Ind. Or. H. f. & T.*

ALPINE SIKKIM; Lachen, alt. 13–15,000 ft., *J. D. H.*

Rootstock biennial (at least), weak; stems 3–7 in. *Leaves* $\frac{3}{4}$ by $\frac{1}{4}$ in., cauline mostly spathulate, petioled, a few uppermost sessile. *Pedicels* $\frac{1}{4}$ – $\frac{1}{3}$ in. in fruit. *Calyx-lobes* in fruit $\frac{1}{2}$ in., elliptic-oblong. *Flowers* $\frac{1}{2}$ in. diam., pale blue. *Nutlets* $\frac{1}{16}$ – $\frac{1}{12}$ in., not distinctly margined; tubercles appearing as tufts of minute hairs.

4. **E. pygmæum**, *Clarke*; nearly stemless leaves elliptic, pedicels $\frac{1}{4}$ in. appearing umbelled, nutlets ovoid nearly smooth.—*Eritrichium* sp. n. 16, *Herb. Ind. Or. H. f. & T.*

ALPINE SIKKIM; Momay, alt. 16,000 ft., *J. D. H.*

Stems 0– $\frac{3}{4}$ in., annual, erect, densely clothed with spreading leaves, terminated by numerous subfascicled spreading pedicels. *Leaves* $\frac{1}{4}$ in., sessile, subobtusely, patently villous. *Calyx-lobes* $\frac{1}{10}$ in., narrowly oblong. *Corolla* not seen. *Nutlets* $\frac{1}{20}$ in., with free apices, testa minutely reticulate and wrinkled; carpophore very short.

5. **E. Munroi**, *Clarke*; small, suberect, branched, leaves oblong lower spathulate, racemes numerous many-flowered, nutlets ovoid-oblong nearly smooth.—*Eritrichium* sp. n. 13, *Herb. Ind. Or. H. f. & T.*

ALPINE HIMALAYA, alt. 11–13,000 ft.; Kunawur, *Munro*, Kumaon, *Strach. & Winterb.*; Sikkim, Lachen, *J. D. H.*

Stems 1–4 in. *Leaves* $\frac{1}{4}$ – $\frac{1}{2}$ in., patently villous. *Racemes* villous, dense in flower; in fruit pedicels sometimes $\frac{1}{2}$ in., upper ebracteate. *Calyx-lobes* in flower minute, in fruit $\frac{1}{2}$ in. or upwards, oblong-linear. *Flowers* hardly $\frac{1}{8}$ in. diam. *Nutlets* $\frac{1}{12}$ in., minutely reticulate and wrinkled; carpophore very short.—The fruit is imperfect, and there may be more than one species mixed here.

6. **E. tibeticum**, *Clarke*; lax, weak, diffuse, leaves elliptic mostly petioled, racemes elongate ebracteate, nutlets ovoid shining glabrous margins entire.—*Eritrichium* sp. n. 17, *Herb. Ind. Or. H. f. & T.*

WESTERN TIBET; Ladakh, alt. 9–10,000 ft., *Thomson.*

Rootstock slender, annual? *Stems* 6–10 in., numerous, slender. *Leaves* $\frac{3}{4}$ by $\frac{1}{2}$ in., obtuse, spathulate, strigose. *Racemes* in fruit 6 in.; pedicels $\frac{1}{3}$ in., a few lower from leaflike bracts. *Calyx-lobes* $\frac{1}{12}$ in., ovate-oblong. *Flowers* $\frac{1}{5}$ in. diam. *Nutlets* $\frac{1}{16}$ in.; margin somewhat prominent.

VAR. minor; less strigose, stems 2–3 in., leaves $\frac{1}{4}$ – $\frac{1}{2}$ in. *Eritrichium* sp. n. 15, *Herb. Ind. Or. H. f. & T.*—Sikkim; Phulloong, alt. 15,000 ft., *J. D. H.*

*** *Nutlets conic-obovoid, margin strong fringed with divided hairs.*

7. **E. basifixum**, *Clarke*; erect, leaves sessile broadly lanceolate softly villous, racemes dense bracteate, nutlets apparently basally attached, carpophore depressed hardly convex. *Echinosperrum sericeum*, *Benth. in Royle Ill.* 306; *DC. Prodr.* x. 142.

ALPINE WESTERN HIMALAYA; from Kashmir to Gurwhal, alt. 13–15,000 ft.; *Royle, Lance, Jaeschke, &c.*

Stems 3–7 in., solitary or few, erect, divided at the apex. *Leaves* $\frac{2}{3}$ by $\frac{1}{2}$ in., acute, lower densely tufted, upper distant. *Racemes* in fruit 1 $\frac{1}{2}$ in.; pedicels 0– $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in. *Calyx-lobes* in fruit $\frac{1}{2}$ in., narrowly oblong. *Flowers* $\frac{1}{4}$ in. diam. and upwards, blue, purpurecent. *Nutlets* $\frac{1}{12}$ in., membranous, glabrous; circular back within the margin minutely hairy.—Closely allied to *E. villosum*, in which the margins of the nutlets carry broad-based flattened lanceolate ciliate-serrate teeth. In the typical *Eritrichium* the scar of the nutlets is sub-punctiform at the apex of a depressed cone on the inner lower face; in *E. villosum*, *DC. Prodr.* x. 126 (*Myosotis villosa*, *Ledeb. Ic. Fl. Ross.* t. 215), this cone is less depressed; in *E. basifixum* it is elongate still more, so that the nutlets are attached apparently basally, nearly as in *Lithospermea*.

16. **ROCHELIA**, *Reichb.*

Annual or perennial, villous or hispid herbs. *Leaves* alternate. *Racemes* simple or branched, bracteate. *Flowers* small, blue or white. *Sepals* 5 (in non-Indian species 6–7), enlarged in fruit, linear or base auricled and sagittate. *Corolla-tube* cylindric, throat with or without scales; lobes small, spreading.

Stamens 5, included; anthers ovate, obtuse. *Ovary* 2-lobed, 2-celled; style from between the lobes, sublateral, shortly linear, stigma capitate; ovule 1 in each cell. *Nutlets* 2, 1-seeded, erect, ovate-oblong, granular-tubercular (in the Indian species); scar extending from the base to the middle.—Species 8; from India, through W. Asia to N. Africa and S. Europe; 1 in Australia.

1. ***R. stellulata***, *Reichb. Iconogr.* ii. 13; t. 123; villous, subhispid, leaves narrowly oblong subspathulate, sepals in fruit linear incurved with hooked hairs, pedicels not exceeding the sepals. *DC. Prodr.* x. 176; *Boiss. Fl. Orient.* iv. 244. *R. saccharata*, *Reichb. in. Flora*, 1824, 243. *Lithospermum dispersum*, *Linn. Sp. Pl.* 191. *L. retortum*, *Pallas Voy. (ed. Gauthier)* v. 497, t. 16, fig. 3.

WESTERN TIBET; Nubra, *Thomson*.—DISTRIB. From Soongaria and Cabul to Spain and Algeria.

Stems 5–14 in., branched, wiry. *Leaves* 1 by $\frac{1}{2}$ in., lower subpetioled. *Racemes* in fruit 2–12 in.; bracts to nearly all the flowers, leaflike, smaller upwards. *Sepals* in flower scarcely $\frac{1}{10}$ in., in fruit nearly $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ in. long, less than $\frac{1}{10}$ in. diam. *Nutlets* nearly $\frac{1}{6}$ in. long, white-tuberculate; style hardly longer than the nutlets; pedicels in fruit subpatent, not distinctly recurved nor thickened.

2. ***R. stylaris***, *Boiss. Fl. Orient.* iv. 245; adpressedly villous, leaves spathulate-oblong or sublinear, sepals in fruit linear incurved without hooked hairs, pedicels exceeding the sepals. *R. stellulata*, *Aitchison Punjab List*, 67.

KASHMIR, and adjoining PUNJAB PLAINS, frequent; *Thomson, Vicary, &c.*—DISTRIB. Cabul.

Annual, 2–8 in., erect. *Leaves* narrower, *racemes* slenderer than in *R. stellulata*. *Pedicels* in fruit deflexed, scarcely thickened. *Style* considerably exceeding the nutlets.—Closely allied to *R. stellulata*.

3. ***R. rectipes***, *Stocks in Hook. Kew Journ.* iv. 176; villous, subhispid, leaves oblong, sepals in fruit ligulate base keeled with spreading scarcely hooked hairs, pedicels about equalling the sepals.

WESTERN TIBET; Zaskar, *Thomson*.—DISTRIB. Cabul and Beloochistan.

Annual; stems 2–5 in., erect, with ascending branches. *Leaves* $\frac{3}{4}$ by $\frac{1}{2}$ in., lower spathulate or sublinear. *Racemes* in fruit 1–4 in., somewhat dense, bracteate. *Sepals* in fruit $\frac{1}{2}$ by $\frac{1}{24}$ in. wide at the base, hairs soft hardly hooked even when dry. *Corolla* pale-blue, with a white throat (*Stocks*). *Nutlets* scarcely half as long as the sepals; fruiting pedicels suberect, not thickened.—*Boissier (Fl. Orient.* iv. 246) reduces this species to *R. macrocalyx*, Bunge (in *Pl. Lehm.* 419). But Bunge describes the fruiting sepals as bigibbous at the base and very hispid, which does not fit. There is another Cabul plant of Griffith's which (ex descr.) may be *R. macrocalyx*, Bunge, and which may have been sent to Boissier as *R. rectipes*.

4. ***R. cardiosepala***, *Bunge in Pl. Lehm.* 420; strigose, subhispid, leaves oblong, sepals in fruit ovate-lanceolate auriculate-cordate at the base hispid, pedicels in fruit recurved as long as the sepals. *Boiss. Fl. Orient.* iv. 246.

WESTERN TIBET; Nubra, *Thomson*.—DISTRIB. Turkestan.

Annual, erect, 6–8 in., very ramous. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in., lower spathulate or petioled. *Racemes* lax, 2–5 in.; bracts to nearly all the flowers, leaflike, smaller upwards. *Sepals* in flower, $\frac{1}{2}$ in., white silky, in fruit $\frac{1}{2}$ by $\frac{1}{2}$ – $\frac{1}{8}$ in. *Corolla* $\frac{1}{2}$ by $\frac{1}{2}$ in. *Nutlets* $\frac{1}{2}$ in., rather larger than of *R. stellulata*.

17. **ASPERUGO**, *Linn.*

A procumbent, scabrous-hispid annual. *Leaves* alternate and subopposite, spathulate-oblong or petioled, subentire. *Flowers* small, axillary, subsessile,

solitary or paired. *Calyx* campanulate, 5-fid half-way down; in fruit much enlarged, rigid, compressed, lobes toothed nervose. *Corolla-tube* short, mouth closed with 5 scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers ovate-oblong, obtuse. *Ovary* deeply 4-lobed; style short, stigma small capitate. *Nutlets* 4, erect, ellipsoid-oblong, laterally compressed, smooth, stony, attached at a small subpunctiform scar above their middle; carpophore conoid.

A. procumbens, Linn.; DC. *Prodr.* x. 146; Lamk. *Ill.* t. 94; Engl. *Bot.* t. 661; Sibth. *Fl. Gr.* t. 177; Reichb. *Fl. Germ.* t. 1327; Boiss. *Fl. Orient.* iv. 275.

PUNJAB and KASHMIR, alt. 1-7000 ft.; extending to 13,000 ft. in WESTERN TIBET and the KARAKORUM; a weed especially near cultivation, Thomson, &c.—DISTRIB. Europe, N. Africa, W. Central and N. Asia.

Spreading, 1-2 ft., branched. *Leaves* 1-2½ in. *Flowers* ½ in. diam., purplish-blue or white; calyx-lobes in flower, ¼ in., oblong. *Nutlets* ⅓-½ in.; calyx in fruit ½ in. diam., reticulately-nerved; lobes large, triangular.

18. **MICROULA**, Benth.

An almost stemless, scabrous-pubescent herb. *Radical leaves* elliptic-spathulate, rosulate. *Cymes* dense, many-fld., subsessile among the leaves, bracteate. *Flowers* small, sessile. *Calyx* campanulate; lobes 5, ciliate. *Corolla-tube* short, throat with 5 scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers ovate-oblong, obtuse. *Ovary* deeply 4-lobed; style short, stigma small capitate. *Nutlets* 4, or fewer, ovoid-oblong, dorsally compressed, attached by a small scar above their middle.

M. Benthami, Clarke.

WESTERN TIBET, alt. 15-17,000 ft.; Parang Pass, Thomson; Kyoongar Pass, Strachey & Winterbottom.

Root long, vertical, crowned by a tuft of leaves longer than the inflorescence; but one example has a stem of 3 in., with inflorescence as in *Eritrichium*. *Leaves* 3 in. *Flowers* ¼-½ in. diam. *Nutlets* ⅓ in., backs diamond-shaped, scabrous with subsessile glochidia.

19. **BOTHRIOSPERMUM**, Bunge.

Weak herbs, annual or biennial, strigose or hirsute. *Leaves* alternate, ovate or lanceolate. *Flowers* small, blue or white, axillary, pedicelled, the upper going off into a bracteate raceme. *Calyx* 5-partite; lobes narrow, not (or scarcely) enlarged in fruit. *Corolla-tube* short, throat with 5 scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers ovate, obtuse. *Ovary* deeply 4-lobed; style short, stigma capitate. *Nutlets* 4, ellipsoid, without angles, granular-scabrid; scar near the middle of the inner face, large, hollow, smooth, with an inflexed margin; carpophore oblong.—Species 2 or 3; from N. India to Amurland.

B. tenellum, Fisch. & Mey. *Ind. Sem.* 1835, 24; adpressedly hispid, leaves ovate-lanceolate lower petioled, pedicels axillary as long as the calyx, scar of the nutlets elliptic longitudinal. DC. *Prodr.* x. 116. *B. asperugoides*, Sieb. & Zucc. *Fam. Nat. Jap.* ii. 26. *Anchusa tenella*, Hornem.; Roem. & Sch. *Syst.* iv. 100. *A. zeylanica*, Jacq. *f. Ecl.* i. 47, t. 29. *Cynoglossum diffusum*, Roxb. *Fl. Ind. ed. Carey & Wall.* ii. 7; Wall. *Cat.* 925. *C. prostratum*, Don *Prodr.* 100.

Throughout N. INDIA, alt. 0-4000 ft., from the foot of the N.W. Himalaya and Jubbulpore to BHOTAN and KHASIA; not common.—DISTRIB. Amurland, Japan, China, with neighbouring islands, (Mauritius introduced).

Usually prostrate or diffuse, 1-2 ft. with elongate branches and distant axillary flowers; sometimes suberect 3-6 in. with erect, close racemes. *Leaves* 1 by $\frac{1}{4}$ - $\frac{1}{2}$ in., subacute. *Calyx-lobes* in fruit $\frac{1}{8}$ - $\frac{1}{6}$ in., lanceolate or linear. *Corolla* $\frac{1}{8}$ in. diam., white. *Nutlets* $\frac{1}{20}$ - $\frac{1}{16}$ in.; scar more than half their length.

20. *GASTROCOTYLE*, Bunge.

A hispid, diffuse herb. *Leaves* alternate, oblong, lowest spatulate or petioled. *Flowers* small, axillary, solitary and shortly pedicelled, or in dense small, axillary racemes. *Calyx* 5-partite. *Corolla-tube* short, closed with scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers ovate, obtuse. *Ovary* 4-lobed; style short, stigma subcapitate. *Nutlets* 4, or fewer, ovoid, erect, incurved; scar on the inner face, near their middle, oblong, longitudinal, elevated, margined; carpophore half as long as the nutlets; apex with 4 ridges.

G. hispida, Bunge *Rel. Lehm.* 405. *Anchusa hispida*, Forsk. *Fl. Æg.-Arab.* 40; *DC. Prodr.* x. 50; *Boiss. F. Orient.* iv. 158.

PUNJAB, alt. 1000 ft.; Thomson, &c.—DISTRIB. From Egypt to Beloochistan, Cabul, and Soongaria.

Leaves 1-2 in. *Calyx-lobes* $\frac{1}{8}$ - $\frac{1}{6}$ in., coarsely hispid. *Corolla* $\frac{1}{2}$ in. diam. *Nutlets* $\frac{1}{8}$ - $\frac{1}{6}$ in., rugose, minutely papillose between the wrinkles, undistinguishable from those of *Lycopsis*.

21. *ANCHUSA*, Linn.

Hispid or bristly herbs. *Leaves* alternate. *Cymes* dichotomous, or racemes unilateral, terminal ultimately elongate. *Calyx* deeply 5-fid, not (or scarcely) enlarged in fruit. *Corolla-tube* straight, long or short, closed with scales; lobes 5, imbricate in bud; obtuse, spreading. *Stamens* 5, included; anthers oblong, obtuse. *Ovary* deeply 4-lobed; style filiform, stigma small. *Nutlets* 4, ovoid, conoid, sessile on a flat receptacle; scar basal, concave, margined.—Species 30; Europe, Africa, and W. Asia.

A. italica, Retz, is said to grow in Kashmir (*DC. Prodr.* x. 47); but it is almost certainly a cultivated plant, and the specimens, which were in Royle's Herbarium, were very probably from the Saharanpur Garden.

A. sikkimensis, Clarke; erect, tall, bristly, leaves petioled elliptic or oblong, cymes short bracteate forming a terminal panicle, corolla-tube shortly exceeding the sepals.

ALPINE SIKKIM, alt. 11-12,000-ft., Lachen and Latong, J. D. H.

Stem 2-3 ft. *Cauline leaves* $2\frac{1}{4}$ by 1 in., subacute; petiole $\frac{1}{3}$ in. *Calyx-lobes* $\frac{1}{10}$ in., narrow. *Corolla* $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., blue. *Nutlets* not ripe, dorsally compressed; backs diamond-shaped, scabrous; scar very small.—The nutlets are exceedingly like those of *Microula*, and do not agree well with those of *Anchusa*; but the habit is altogether that of *Anchusa sempervirens*, &c. Mr. Bentham has referred the species to *Anchusa*, and it had better remain here till good fruit is obtained; to remove it to *Microula* would require the characters of that genus to be considerably modified.

22. *LYCOPSIS*, Linn.

Annual, hispid herbs. *Leaves* alternate. *Flowers* small, blue purple or white: racemes bracteate, terminal. *Sepals* 5, linear. *Corolla-tube* curved in

the middle, somewhat longer than the calyx; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers ovate, obtuse. *Ovary* 4-lobed; style filiform, stigma capitate. *Nutlets* 4, ovoid, suberect, reticulate-rugose; scar on the inner face, near the middle, oblong, longitudinal, elevated, margined; carpophore conical.—Species 3–4, of the Mediterranean region.

L. arvensis, Linn.; *DC. Prodr.* x. 54; erect, bristly, leaves oblong acute upper amplexicaul lower petioled, corolla-lobes subequal. *Lamk. Ill.* t. 92; *Engl. Bot.* t. 938. *Anchusa arvensis*, *Bieb. Fl. Taur.-Cauc.* i. 123; *Reichb. Ic. Fl. Germ.* t. 1310, fig. 1; *Boiss. Fl. Orient.* iv. 160.

KASHMIR and WESTERN TIBET, alt. 3–8000 ft.; from near Peshawur to Skardo, Royle, Thomson, &c.—**DISTRIB.** Europe, W. & N. Asia.

Stem 1–2 ft. *Leaves* 2 by $\frac{1}{2}$ in. *Racemes* in fruit 3–6 in.; pedicels $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in., lanceolate, or lower leaflike. *Sepals* in flower $\frac{1}{2}$ in., hispid, oblong-linear, in fruit $\frac{1}{4}$ in. *Corolla-tube* $\frac{1}{4}$ in., narrowly cylindric; lobes $\frac{1}{2}$ in., blue, or in the Indian plant usually white. *Stamens* attached near the base of the corolla-tube. *Nutlets* $\frac{3}{8}$ – $\frac{1}{2}$ in., 12 not papillose-scabrid between the wrinkles.

23. NONNEA, Moench.

Annual or perennial herbs, hispid or villous, usually diffuse. *Leaves* alternate. *Cymes* dense, in fruit elongate, bracteate. *Calyx* 5-fid, shortly or half-way down; in fruit much enlarged, tube enclosing the nutlets. *Corolla-tube* straight, about as long as the calyx, throat naked or hairy (not with scales), small scales sometimes present lower down; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included or scarcely exsert; anthers oblong, obtuse. *Ovary* deeply 4-lobed; style filiform, stigma shortly or obscurely 2-lobed. *Nutlets* 4, ovoid, reticulate-rugose, on a depressed-conic receptacle; scar large, basal, oblique, concave, with a central appendage and very hard margin.—Species 20; in Europe, N. Africa, W. and Central Asia.

N. pulla, Lamk. et *DC. Fl. Fr.* iii. 626, in note; erect, hairy, leaves oblong acute upper subamplexicaul lower petioled, calyx-lobes acuminate, corolla blackish-purple, stamens included. *DC. Prodr.* x. 32; *Reichb. Ic. Fl. Germ.* t. 1302, fig. 2; *Boiss. Fl. Orient.* iv. 166. *N. taurica*, Ledeb. *Fl. Ross.* iii. 112. *N. Edgeworthii*, A. *DC. Prodr.* x. 30. *Lycopsis pulla*, Linn.; *Jacq. Fl. Austr.* ii. t. 188; *Gaertn. Fruct.* i. 327, t. 67. *Anchusa pulla*, *Bieb. Fl. Taur.-Cauc.* i. 125.—*Boraginearum* sp., *Edgw. in Hook. Journ. Bot.* ii. 284.

PUNJAB PLAIN, Thomson, Edgeworth, &c.—**DISTRIB.** Central and E. Europe, W. Asia.

Much branched, 12–18 in., hispid and villous. *Leaves* 2 by $\frac{1}{2}$ in. *Racemes* 2–5 in., dense; pedicels $\frac{3}{8}$ – $\frac{1}{2}$ in.; bracts 1 in., leaflike. *Calyx* $\frac{1}{4}$ in.; in fruit $\frac{1}{2}$ in., the campanulate base $\frac{1}{4}$ in. diam.; subglobose. *Corolla-tube* $\frac{1}{4}$ in., narrow; lobes $\frac{1}{2}$ in., half-spreading. *Nutlets* $\frac{1}{2}$ in., obliquely curved inwards, slightly wrinkled, puberulous.

24. MERTENSIA, Roth.

Perennial herbs, strigose or softly hairy. *Leaves* alternate. *Racemes* terminal, scorpioid, usually simple, dense or lax; bracts 0. *Flowers* blue or purplish, pedicelled. *Sepals* narrow, somewhat enlarged in fruit. *Corolla-tube* as long as, or much longer than, the calyx; throat with or without scales; lobes 5, imbricate in bud, short, obtuse, spreading or suberect. *Stamens* 5, included or scarcely exserted, filaments short linear; anthers oblong, obtuse. *Ovary-lobes* 4; style filiform, often very long, stigma small. *Nutlets* 4, erect,

ovoid-oblong, obscurely dorsally compressed, smooth, slightly angular; scar small, triangular, at the very base of the inner angle, not strongly margined.—Species 15; in E. Europe, extratropical Asia, and N. America.

Trigonitis differs by its short corolla-tube and shortly trigonous (not oblong) nutlets. *Myosotis* differs by its short corolla-tube and twisted corolla-lobes. The length of the corolla is variable in the species of this genus.

1. ***M. elongata***, *Benth. in Gen. Pl.* ii. 857; adpressedly hairy, leaves oblong lower long-petioled spathulate, raceme many-flowered at length elongate, corolla-tube a little longer than the calyx, scales in the throat very small. *Lithospermum elongatum*, *Dcne. in Jacquem. Voy. Bot.* 121, t. 126. *Eritrichium elongatum*, *A. DC. Prodr.* x. 124.

KASHMIR, alt. 5–8000 ft.; *Jacquemont, Falconer*.

Rootstock somewhat stout, annual stems 8 in. *Radical leaves* 2 by $\frac{1}{2}$ in.; petiole $1\frac{1}{2}$ in.; cauline 2 by $\frac{1}{2}$ in., sessile, acute, hairs adpressed from tubercular bases. *Raceme* in fruit $3\frac{1}{2}$ in., long-peduncled; pedicels $\frac{1}{2}$ in., rigid, suberect. *Calyx-lobes* $\frac{1}{8}$ in., linear, sparingly strigose; in fruit $\frac{1}{6}$ in. *Corolla* $\frac{1}{2}$ in. diam., tube $\frac{1}{2}$ in. long; scales in the throat very small; lobes spreading. *Anthers* subsessile, above the scales. *Style* $\frac{1}{2}$ in. *Nutlets* $\frac{1}{10}$ in., white or pale, shining.—Described from *Jacquemont's* specimen.

2. ***M. moltkoides***, *Clarke*; patently hairy, leaves oblong or elliptic lower long-petioled spathulate, racemes many-flowered, corolla-tube nearly twice as long as the calyx, scales in the throat small. *Anchusa moltkoides*, *Benth. in Royle Ill.* 305, t. 73, fig. 1; *DC. Prodr.* x. 51. *Lithospermum moltkoides*, *Dcne. in Jacquem. Voy. Bot.* 122.

KASHMIR, alt. 8000 ft., *Falconer*; near Islamabad, *Thomson*. PANGEE; *Dr. Watt*.

Very near *M. elongata*; leaves more softly hairy, hairs on the midrib beneath patent or reflexed. *Racemes* shorter peduncled. *Calyx* larger. *Corolla-tube* $\frac{1}{2}$ by $\frac{1}{18}$ in. *Nutlets* brown-black, not more excavate at the base than are those of *M. elongata*.

VAR. *Thomsoni*; radical leaves large elliptic acute, corolla exceeding $\frac{1}{2}$ in. diam. with tube $\frac{1}{2}$ in. long. *Mertensia* sp. n. 3, *Herb. Ind. Or. H. f. & T.*—Kashmir, alt. 11,000 ft.; near Islamabad, *Thomson*. *Radical leaves* 3 by $1\frac{1}{2}$ in., base subobtuse. *Pedicels* in fruit $\frac{1}{4}$ – $\frac{1}{2}$ in. *Sepals* in fruit $\frac{1}{2}$ in. and upwards, narrowly oblong, patently hairy. *Nutlets* exceeding $\frac{1}{2}$ in. brown-black.

3. ***M. echioides***, *Benth. in Gen. Pl.* ii. 857; softly hairy, leaves oblong lower long-petioled spathulate, raceme dense many-fl., corolla-tube one-third longer than the calyx-lobes erect scales in the throat obsolete, anthers exsert from the tube. *Lithospermum echioides*, *Benth. in Royle Ill.* 305; *DC. Prodr.* x. 83. *L. secundiflorum*, *Dcne. in Jacquem. Voy. Bot.* 120, t. 125. *Eritrichium secundiflorum*, *A. DC. Prodr.* x. 124.

KASHMIR and WESTERN TIBET, alt. 5–12,000 ft.; from the Upper Indus to the southern face of the Himalaya, frequent; *Royle, Falconer, &c.*

Stems 6–15 in. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in., subobtuse. *Peduncles* long; racemes 1–3 in., dense even in fruit; pedicels $\frac{1}{2}$ – $\frac{1}{2}$ in., linear. *Corolla-tube* $\frac{1}{2}$ – $\frac{1}{4}$ in., lobes $\frac{1}{2}$ in. *Filaments* linear, distinct; anthers completely exsert, but not reaching above its lobes. *Style* and *nutlets* as of *M. elongata*.—Easily distinguished from all the other species of *Mertensia* by its erect corolla-lobes.

4. ***M. primuloides***, *Clarke*; strigose, leaves small elliptic lower very shortly petioled, raceme dense not many-flowered, corolla-tube $\frac{1}{4}$ in. twice as long as the calyx, scales in the throat distinct. *Eritrichium primuloides*, *Dcne. in Jacquem. Voy. Bot.* 123, t. 128; *A. DC. Prodr.* x. 125.

ALPINE WESTERN HIMALAYA, *Jacquemont*; Sai and Gilgit, alt. 15,000 ft., *Col. Tanner*.

Stems 3 in., densely leafy below. *Leaves* $\frac{1}{2}$ by $\frac{1}{8}$ in., narrowed at both ends; petiole short or very broad. *Peduncle* 1 in. *Raceme* in flower $\frac{1}{2}$ in.; pedicels $\frac{1}{12}$ in. *Calyx-lobes* $\frac{1}{2}$ in., narrowly oblong. *Corolla* $\frac{1}{4}$ in. diam. *Anthers* subexsert, overtopping the small scales. *Style* $\frac{1}{2}$ in. *Fruit* unknown.

VAR. Tanneri; leaves 2 in. linear-spathulate, calyx-lobes $\frac{1}{5}$ in., corolla violet-purple, tube $\frac{1}{2}$ in. long.—Gilgit and Astor, *Col. Tanner*. This looks like a distinct species, but there is only a fragment (in flower).

5. **M. tibetica**, *Clarke*; hispid, leaves small subradical long-petioled elliptic, peduncles long subscapose, corolla-tube $\frac{3}{4}$ — $\frac{2}{3}$ in. five times as long as the calyx, anthers included, scales in the corolla-throat large.

WESTERN TIBET; Karakorum, alt. 14–16,000 ft., *Clarke*.

Leaves all subradical, $\frac{2}{3}$ by $\frac{1}{4}$ in., petiole 1 in. *Peduncles* 2–4 in.; racemes 1–4 in.; pedicels $\frac{1}{8}$ in. *Sepals* $\frac{1}{2}$ in., narrowly oblong; in fruit $\frac{1}{5}$ in. *Corolla-tube* elongate-funnel-shaped, $\frac{1}{2}$ in. wide in the throat; lobes $\frac{1}{2}$ in. and upwards, subquadrate; scales half as long as the lobes, obtuse, emarginate; anthers entirely below the scales. *Style* $\frac{3}{4}$ in. *Nutlets* as of *M. moltkoides*.

6. **M. racemosa**. *Benth. in Gen. Pl.* ii. 857; minutely hairy, radical leaves long-petioled ovate cauline ovate to lanceolate, racemes lax few-flowered, corolla-tube half as long again as the calyx. *Myosotis racemosa*, *Benth. in Royle III.* 305. *M. longiflora*, *Wall. Cat.* 929; *A. DC. Prodr.* x. 113. *Lithospermum ovalifolium*, *Dene. in Jacquem. Voy. Bot.* 119, t. 124. *Eritrichium nemorosum*, *A. DC. l. c.* 123. *Anchusa racemosa*, *DC. Prodr.* x. 50.

TEMPERATE WESTERN HIMALAYA, alt. 7–10,000 ft.; Gurwhal and Kumaon, frequent near Simla; *Royle, Munro, Madden, &c.*

Stems 3–8 in., weak, nearly glabrous. *Radical leaves* 1–1 $\frac{1}{2}$ in., often suborbicular, obtuse, base sometimes cordate; petiole 1–4 in.; cauline similar, smaller, often nearly all petioled. *Racemes* subsessile, i.e. bracteate at the base; pedicels attaining $\frac{1}{4}$ — $\frac{1}{2}$ in. *Sepals* $\frac{1}{10}$ in., linear; in fruit $\frac{1}{2}$ in., villous. *Corolla* $\frac{1}{2}$ — $\frac{3}{8}$ in. diam.; tube $\frac{1}{2}$ in., scales in the throat prominent; anthers below the scales. *Style* $\frac{1}{4}$ — $\frac{1}{2}$ in. *Nutlets* as of *M. moltkoides*.

25. MOLTZIA, *Lehm.*

Corolla abbreviated with small erect lobes hardly overtopping the calyx. *Anthers* long exsert on filiform filaments. Otherwise as *Mertensia*.

M. parviflora, *Clarke*; minutely hairy, leaves linear-oblong, racemes peduncled dense scorpioid ebracteate. *Craniospermum parviflorum*, *Dene. in Jacquem. Voy. Bot.* 126, t. 130; *A. DC. Prodr.* x. 175.

KASHMIR, alt. 6–8000 ft.; *Thomson, Aitchison*.—DISTRIB. Cabul.

Rootstock woody; annual stems 3–10 in., suberect, with sometimes a long trailing stem added. *Leaves* 2 by $\frac{1}{2}$ in. *Racemes* 1–2 in., dense, sometimes forked; pedicels 0— $\frac{1}{8}$ in. *Calyx-lobes* $\frac{1}{2}$ in., narrowly oblong; in fruit $\frac{1}{5}$ in. rather wider. *Corolla* without scales in the throat. *Filaments* exsert $\frac{1}{2}$ in. *Style* $\frac{1}{4}$ in. *Nutlets* ovoid-oblong, acute, smooth, shining; scar small at the base on the inner side.—All the other species of *Moltzia* have bracteate racemes. *Nutlets* altogether of *Mertensia*, and the plant hardly differs from *M. echinoides* but in the abbreviated corolla and longer filaments. *Craniospermum* has exsert anthers but is remote in habit and in the fruit.

26. TRIGONOTIS, *Steo.*

Perennial herbs, weak or diffuse, more or less hairy. *Leaves* alternate, ovate or lanceolate, mostly petioled. *Racemes* lax, ebracteate, or the lower pedicels bracteate, or many pedicels axillary. *Calyx* 5-fid, or 5-partite, in fruit

not or slightly enlarged. *Corolla* small, blue or white; tube shorter than the calyx, throat with 5 small scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers oblong, obtuse. *Ovary* deeply 4-lobed; style filiform, not elongate, stigma capitate. *Nutlets* 4, tetrahedral with 4 acute or submarginate edges, hardly longer than broad, shining black; scar small, basal, substipitate.—Species 10; Central and E. Asia.

* *Nutlets glabrous* (three very closely allied species).

1. ***T. microcarpa***, *Benth. in Gen. Pl.* ii. 858; leaves petioled ovate acute minutely strigose on both surfaces, racemes terminal, solitary axillary pedicels added, fruiting sepals oblong acuminate. *Myosotis microcarpa*, *Wall. Cat.* 928. *Eritrichium microcarpum*, *DC. Prodr.* x. 123.

ALPINE NEPAL and SIKKIM, alt. 10,000 ft.; *Wallich, J. D. H.*

Stems 6–20 in., procumbent, divided. *Cauline leaves* 1 by $\frac{1}{2}$ in., mucronate, obtuse or rounded at the base, petiole $\frac{1}{4}$ in.; radical leaves rather larger petioled, $1\frac{1}{2}$ in. *Racemes* in fruit 3–6 in., ebracteate, i.e. lower scattered pedicels in the axils of fully-developed leaves; pedicels $\frac{1}{4}$ in. *Calyx-lobes* $\frac{1}{20}$ in., in fruit $\frac{1}{18}$ – $\frac{1}{12}$ in. *Flowers* $\frac{1}{2}$ in. diam. *Nutlets* $\frac{1}{20}$ in. diam.

2. ***T. rotundifolia***, *Benth. in Gen. Pl.* ii. 858; cauline leaves sessile or petioled elliptic narrowed at both ends minutely strigose, racemes terminal, calyx-lobes elliptic acute. *Myosotis rotundifolia*, *Wall. Cat.* 930. *Eritrichium rotundifolium*, *DC. Prodr.* x. 123.

SUBALPINE HIMALAYA, alt. 6–10,000 ft.; *Royle*; Kumaon, *Wallich*; Sikkim (Lachen), *J. D. H.*

Stems weak, 2–4 in. *Cauline leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in.; radical long-petioled, some orbicular but many spatulate.—Does not differ from *T. microcarpa* except in being smaller, with subsessile leaves more attenuate at the base. *Wallich's* example is not in good fruit.

3. ***T. multicaulis***, *Benth. in Gen. Pl.* ii. 858; cauline leaves sessile or petioled elliptic narrowed at both ends minutely strigose, racemes terminal, calyx-lobes in fruit ovate acute. *Myosotis multicaulis*, *Wall. Cat.* 7020. *Eritrichium multicaule*, *DC. Prodr.* x. 123.

CENTRAL and EASTERN HIMALAYA; NEPAL; *Wallich*. SIKKIM, alt. 10–12,000 ft.; Latong, *J. D. H.*

Stems 10 in. *Leaves* $\frac{3}{4}$ by $\frac{1}{4}$ in., upper sessile. *Pedicels* $\frac{1}{4}$ in.—Described from *Wallich's* examples, which resemble his *T. rotundifolia*, but are larger. The Sikkim ones are much smaller, with fruiting pedicels hardly exceeding $\frac{1}{8}$ in. and the nutlets brown yellow.

** *Nutlets minutely patently hairy on all sides.*

4. ***T. ovalifolia***, *Benth. in Gen. Pl.* ii. 858; leaves petioled ovate minutely strigose on both surfaces, racemes terminal with solitary axillary pedicels added, fruiting sepals elliptic acuminate. *Myosotis ovalifolia*, *Wall. in Roxb. Fl. Ind. ed. Carey & Wall.* ii. 9, and *Cat.* 927. *Eritrichium ovalifolium*, *DC. Prodr.* x. 123.

CENTRAL and EASTERN HIMALAYA; Nepal and Sikkim, alt. 8–12,000 ft., frequent; *Wallich, J. D. H.*, &c.

Stems 8–24 in., mostly prostrate. *Cauline leaves* $\frac{1}{2}$ – $1\frac{1}{4}$ in., from elliptic to orbicular, obtuse, base often cordate, petiole $\frac{1}{3}$ – $\frac{1}{2}$ in. *Pedicels* sometimes all axillary $\frac{1}{4}$ – $\frac{3}{4}$ in.; terminal racemes generally added. *Calyx-lobes* in fruit $\frac{1}{4}$ – $\frac{1}{2}$ in. *Flowers* $\frac{1}{4}$ in. diam. and upwards. *Nutlets* $\frac{1}{16}$ – $\frac{1}{12}$ in. diam.—Had there been as few specimens of this as of the three preceding species, the axillary-flowered examples would indubitably have been reckoned distinct from *Wallich's* terminal-racemed ones.

5. **T. Hookeri**, *Benth. in Gen. Pl.* ii. 853; leaves elliptic acute hispid-villous, racemes lateral and terminal elongate ebracteate, calyx-lobes oblong acuminate hispid villous.

KHASIA MTS., alt. 5-6000 ft.; Moflong, *H. f. & T.*

Stems 2 feet at least, stout, branched, patently hispid villous. *Cauline leaves* 2 by $\frac{1}{2}$ – $\frac{3}{4}$ in., base obtuse; petiole $0\frac{1}{2}$ in. *Racemes* 3-6 in., often peduncled, axillary; pedicels $\frac{1}{4}$ – $\frac{1}{3}$ in. *Calyx-lobes* in fruit $\frac{1}{8}$ – $\frac{1}{6}$ in. *Flowers* $\frac{1}{4}$ – $\frac{1}{3}$ in. diam. *Nutlets* $\frac{1}{12}$ in. diam.—This is an ennobled species of *Trigonotis*, much finer than the others, but the nutlets nearly as of *T. ovalifolia*.

27. **MYOSOTIS**, Linn.

Annual or perennial, *hairy* herbs. *Leaves* alternate or densely crowded. *Racemes* elongate, ebracteate, or flowers subsessile and solitary in the penultimate axils. *Calyx* shortly or deeply 5-fid, hardly altered in fruit. *Corolla* blue, changing to red, or white, tube short, mouth closed with scales; lobes 5, twisted to the right in bud, obtuse, spreading. *Stamens* 5, included; anthers ovate, obtuse. *Ovary* deeply 4-lobed; style filiform, stigma small. *Nutlets* 4, ovoid-oblong, longer than broad, shining, smooth, or hairy upwards; scar basal, small; receptacle flat.—Species 30; temperate regions of the N. hemisphere; in Australia and New Zealand.

SECT. I. **Eumyosotis**, A. DC. Weak herbs. *Leaves* distant. *Racemes* elongate, scorpioid. *Nutlets* glabrous.

1. **M. cæspitosa**, *Schultz Fl. Starb.* ii. 11; hairs of stem adpressed, leaves oblong lowest spatulate, pedicels longer than the calyx, calyx-teeth triangular-lanceolate about as long as the tube adpressedly hairy. *DC. Prodr.* x. 105, with syn.; *Syme Engl. Bot.* t. 1103; *Boiss. Fl. Orient.* iv. 235. *M. palustris*, *Benth. in Royle Ill.* 305, not exactly of *With.* *M. lingulata*, *Lehm. Asperif.* 110, name only.

TEMPERATE and SUBALPINE HIMALAYA, from Kunawur to Kashmir and Baltistan; *Royle, Falconer, Thomson*.—DISTRIB. From Cabul to Siberia, Europe and N. Africa, N. America.

Stems 4-20 in. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ in. *Racemes* 2-8 in.; lower fruiting pedicels $\frac{1}{4}$ in. and upwards. *Calyx* in fruit $\frac{1}{2}$ in., sparsely minutely strigose; teeth scarcely acute. *Corolla* $\frac{1}{2}$ in. diam. *Style* shorter than the calyx.—The name *M. lingulata*, *Lehm.* is one year prior to *M. cæspitosa*, *Schultz*; but Boissier and most authors do not consider the notice of the plant by *Lehmann* to be worthy the rank of a "description."

2. **M. sylvatica**, *Hoffm. Deutsch. Fl.* i. 85; hairs of stem spreading, leaves oblong lowest petioled, pedicels longer than the calyx, calyx villous some of the hairs spreading at base, teeth lanceolate longer than the tube, corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. diam. limb flat. *DC. Prodr.* x. 107 with syn.; *Syme Engl. Bot.* t. 1107; *Boiss. Fl. Orient.* iv. 237. *M. montana*, *Besser*; *Fl. Dan.* t. 583. *M. pallens*, *Wall. Cat.* 7019; *DC. l. c.* 112.

ALPINE WESTERN HIMALAYA, alt. 7-12,000 ft., from Kumaon to Kashmir, frequent; *Wallich, &c.*—DISTRIB. Europe; N. West Asia to the Canaries.

Stems 4-16 in., mostly erect, sparingly villous. *Leaves* $1\frac{1}{2}$ by $\frac{1}{4}$ in., lowest broader. *Racemes* 2-8 in., often divided; lower fruiting pedicels usually $\frac{1}{4}$ in. or more, hardly longer than the calyx in *Wallich's M. pallens*. *Calyx* in fruit $\frac{1}{4}$ – $\frac{1}{2}$ in., with many ascending hairs and some patent from the base; teeth in fruit erect hardly connivent.

3. **M. arvensis**, *Hoffm. Deutsch. Fl.* i. 85; hairs of stem spreading, leaves oblong lowest petioled, pedicels longer than the calyx, calyx villous

some of the hairs spreading at base, teeth lanceolate longer than the tube, corolla $\frac{1}{2}$ – $\frac{1}{4}$ in. diam. limb concave. *Engl. Bot.* t. 2558. *M. intermedia*, *Link. Enum.* i. 164; *DC. Prodr.* x. 108; *Boiss. Fl. Orient.* iv. 239.

SUBALPINE KASHMIR; *Aitchison*.—DISTRIB. Cabul and Siberia to N. Africa and Europe.

Hardly distinguishable from *M. sylvatica* but by the smaller corolla. *Pedicels* in fruit longer. *Calyx-teeth* in fruit connivent over the nutlets.—*Aitchison's* example is as near English *M. arvensis* as may be; there are other Kashmir examples supposed to be *M. arvensis* or *M. intermedia*, but they cannot be distinguished in the herbarium from *M. sylvatica*.

4. ***M. stricta***, *Link. Enum.* i. 164; hairs of stem spreading, leaves oblong lower subsessile, lower pedicels in fruit shorter than the calyx, calyx villous some of the hairs spreading at base, teeth lanceolate longer than the tube erect in fruit. *DC. Prodr.* x. 109; *Boiss. Fl. Orient.* iv. 239.

KASHMIR, *Falconer*; alt. 5–6000 ft., *Thomson*; *Pangee, Dr. Watt*.—DISTRIB. Cabul, W. Asia, N. Africa, Europe.

Stems 3–8 in. erect. *Leaves* $\frac{3}{4}$ by $\frac{1}{5}$ in., narrowed at both ends. *Racemes* 3–5 in., often reduced nearly to a spike, with closely approximated flowers.

SECT. 2. Small, densely tufted herbs. *Leaves* crowded. *Flowers* solitary, sub-sessile. *Nutlets* hairy upwards.

5. ***M. Hookeri***, *Clarke*; leaves obovate-spathulate villous.

ALPINE SIKKIM, alt. 15–17,000 ft.; *Kinchinjaw*, *Lama Kangra*, and *Phulloong*, *J. D. H.*

Appearing like a small tufted Alpine *Cerastium*, but with bright blue flowers. *Stems* 1–3 in., repeatedly dichotomous, most densely clothed with leaves in appearance whorled, lower withering or scale-like. *Leaves* $\frac{1}{2}$ – $\frac{1}{3}$ in., very obtuse, with much soft straight long white hair. *Flowers* just emergent from the tufts, nearly as of *Myosotis arvensis* and *sylvatica*. *Nutlets* nearly as of *M. arvensis*, but with some erect hairs in the upper half.

IMPERFECTLY KNOWN SPECIES.

M. ROBUSTA, *Don Prodr.* 101; *DC. Prodr.* x. 112; roots perennial fusiform; stem $1\frac{1}{2}$ feet, ascending, simple, hairy; leaves 3 by $\frac{3}{8}$ in. sessile, elliptic oblong, acute, hairy on both surfaces; racemes paired, short, ebracteate; calyx-segments ovate obtuse, larger than the corolla-tube.—*Nepal*, *Gossainthan*, *Wallich*.—Known only by *Don's* description, which does not accord with any of the described species.

28. **LITHOSPERMUM**, *Linn.*

Herbs or undershrubs, hispid or rough. *Leaves* alternate. *Flowers* white blue or yellow, axillary solitary or in terminal bracteate racemes. *Sepals* 5, linear. *Corolla* tubular-funnel-shaped, throat naked or with 5 small scales; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, included; anthers oblong, obtuse or apiculate. *Ovary* deeply 4-lobed; style filiform or cylindric, stigma usually 2-fid. *Nutlets* 4, erect, ovoid, stony, smooth or rough; scar flat, basal; receptacle nearly flat.—Species 40, in the temperate N. hemispheres, Africa, and S. America.

1. ***L. arvense***, *Linn.*; *DC. Prodr.* x. 74; strigose, leaves lanceolate lower petioled obovate-oblong, corolla white rarely blue tube not longer than the calyx, nutlets ovoid-oblong tuberculate. *Engl. Bot.* t. 123; *Boiss. Fl. Orient.* iv. 216. *Margarospermum arvense*, *Dene. in Jacquem. Voy. Bot.* 122.

KASHMIR; Peshawur, *Vicary*. WESTERN TIBET, *Thomson*.—DISTRIB. From Cabul, Siberia to N. Africa, Europe.

Annual. *Stems* 12–24 in., erect. *Cauline leaves* 1 by $\frac{1}{4}$ in., strigose, hairs often from tuberculate bases. *Racemes* in fruit 4–10 in., pedicels $\frac{1}{10}$ in.; bracts leaflike, smaller upwards. *Corolla* $\frac{1}{4}$ in. long, hairy upwards. *Nutlets* $\frac{1}{8}$ in., gradually narrowed upwards; sepals in fruit $\frac{1}{4}$ – $\frac{1}{3}$ in., hispid.

2. ***L. tenuiflorum***, *Linn. f. Suppl.* 130; strigose, leaves oblong-linear lower spatulate scarcely petioled, corolla blue rarely white tube slightly exceeding the calyx, nutlets ovoid somewhat suddenly acuminate tuberculate. *Jacq. Ic. Rar.* ii. t. 313; *DC. Prodr.* x. 75; *Boiss. Fl. Orient.* iv. 217. *Myosotis tenuiflora*, *Viv. Fl. Lib.* 9, t. 1, fig. 2.

KASHMIR, alt. 5–7000 ft., *Thomson*. PUNJAB, Rawul Pindee, *Aitchison*.—DISTRIB. Cabul, W. Asia to Egypt and Greece.

Very near the preceding species. *Stems* often divided near the base, decumbent, rarely more than 12 in.

3. ***L. officinale***, *Linn.*; *DC. Prodr.* x. 76; hispidly hairy, leaves oblong-lanceolate, corolla white fading yellowish, nutlets ovoid shining white smooth. *Engl. Bot.* t. 134; *Boiss. Fl. Orient.* iv. 218. *Margarospermum officinale*, *Dcne. in Jacquem. Voy. Bot.* 122.

KASHMIR; alt. 5–8000 ft., frequent; *Falconer, Thomson, &c.*

Perennial. *Stems* 2–4 feet, erect, corymbose upwards. *Leaves* 2 by $\frac{1}{2}$ in., rough strigose, nerves subprominent. *Racemes* in fruit 1–4 in.; pedicels $\frac{1}{8}$ in.; bracts leaflike, smaller upwards. *Corolla* $\frac{1}{4}$ in., hairy upwards. *Nutlets* $\frac{1}{8}$ in.; sepals in fruit $\frac{1}{4}$ in.

29. **SERICOSTOMA**, *Stocks*.

Small strigose branched shrubs. *Leaves* alternate. *Flowers* small, axillary, sessile, solitary, or the upper in a bracteate raceme. *Sepals* 5, narrow. *Corolla-tube* short; mouth wide, closed with hair; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5, subincluded; anthers oblong, obtuse. *Ovary* deeply 4-lobed; style short, stigma subcapitate. *Nutlets* 4, ovoid, substipitate; scar basal; receptacle flat.—Species 3 in W. Asia, from India to Arabia.

1. ***S. pauciflorum***, *Stocks in Wight Ic.* t. 1377; roughly strigose, leaves oblong subsessile, corolla white, nuts ovoid acute stony blotched with very flat white tubercles. *Dalz. & Gibs. Bomb. Fl.* 172; *Hook. Ic. Pl.* t. 804.

W. INDIA; Deesa. KATTYWAR (in the sands near the sea). SCINDE; *Stocks, &c.*

Attaining 12–18 in., oftener small, scrubby. *Leaves* $1\frac{1}{4}$ by $\frac{1}{2}$ – $\frac{3}{4}$ in., obtuse with a minute mucro, narrowed at the base, hispid with tubercle-based hairs; in scrubby plants $\frac{1}{4}$ – $\frac{1}{2}$ in. long. *Sepals* $\frac{1}{8}$ in., lanceolate, hispid. *Corolla* $\frac{1}{4}$ in. diam., lobes crisp subserrulate on the margin; tube within and base of the lobes densely hairy. *Nutlets* $\frac{1}{10}$ in., acute.

30. **ARNEBIA**, *Forsk.*

Annual or perennial hispid herbs, diffuse or divided near the base; root often staining red. *Leaves* alternate. *Racemes* terminal, elongate, bracteate; flowers subsessile, yellow or whiteish (in the Indian species). *Sepals* linear, not or slightly enlarged in fruit (in the Indian species). *Corolla-tube* slender, longer than the sepals, throat naked within; lobes 5, imbricate in bud, obtuse, spreading. *Stamens* 5; much below the mouth of the tube with long style, or in the throat semi-exsert with short style; anthers small, oblong obtuse. *Ovary* deeply 4-lobed; style shortly bipartite, stigmas small capitate, nearly the same in the long- and short-styled flowers. *Nutlets* 4, ovoid-oblong or acute, erect;

scar basal, large, triangular, flat, shortly produced up the inner face.—Species 12; in N. Africa, W. and Central Asia.

1. **A. hispidissima**, *DC. Prodr.* x. 94; very hispid, leaves lanceolate, sepals $\frac{1}{2}$ in., corolla-tube $\frac{1}{2}$ in., nutlets $\frac{1}{20}$ – $\frac{1}{16}$ in. ovoid-conic sharply tuberculate on all sides. *Wight Ic.* t. 1393; *Boiss. Fl. Orient.* iv. 213; *Clarke in Journ. Linn. Soc.* xviii. 524. *Dioclea hispidissima*, *Spreng. Syst.* i. 556. *Lithospermum hispidissimum*, *Lehm. Ic.* t. 39. *L. vestitum*, *Wall. Cat.* 941; *Benth. in Royle III.* 305. *Echiochilon hispidissimum*, *Tausch. in Flora*, 1829, 643. *Strobila hispidissima*, *G. Don Gen. Syst.* iv. 327.

WESTERN INDIA, alt. 500–3000 ft.; from the Upper Gangetic plain and Rajpootana westwards, frequent.—DISTRIB. W. Asia to Egypt and Nubia.

Annual and (at least) biennial, diffuse, 3–15 in.; hairs white, harsh, spreading from tubercular bases. *Leaves* 2 by $\frac{1}{2}$ in. *Spikes* 2–4 in., one-sided; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., linear. *Corolla* yellow, mouth $\frac{1}{4}$ in. diam.—Dimorphic; the plants with stamens sub-erect about as numerous as those with anthers below the corolla-throat.

2. **A. Griffithii**, *Boiss. Fl. Orient.* iv. 213; patently hispid, leaves lanceolate, sepals $\frac{1}{3}$ – $\frac{1}{2}$ in., corolla-tube $\frac{3}{4}$ –1 in., nutlets $\frac{1}{10}$ in. ovoid suddenly narrowed upwards obtusely tuberculate on all sides. *Bot. Mag.* t. 5266. *A. echiioides*, *Hook. Bot. Mag.* t. 4409, not of l. c.—*Arnebia* sp. n. 5, *Herb. Ind. Or. H. f. & T.*

PUNJAB; Peshawur, *Vicary*. SCINDE; *Col. Thompson*.—DISTRIB. Beloochistan, Cabul.

Annual, diffuse, 3–6 in.; hairs white, spreading, from tubercular bases, less harsh than in *A. hispidissima*. *Leaves* 2 by $\frac{1}{4}$ in. *Spikes* 1–3 in., one-sided. *Corolla* yellow, lobes on expansion with 5 dark brown spots at the sinus, which disappear as the day advances, mouth $\frac{1}{3}$ – $\frac{1}{2}$ in. diam. *Nuts* much larger than those of *A. hispidissima*, more triangular in horizontal section. Dimorphic.

3. **A. Thomsoni**, *Clarke*; shaggy hispid, leaves narrowly oblong, sepals $\frac{1}{2}$ in., corolla-tube $\frac{1}{2}$ in., nutlets $\frac{1}{10}$ in. ovoid-conic without tubercles.—*Arnebia* sp. n. 6, *Herb. Ind. Or. H. f. & T.*

WESTERN TIBET; Piti Valley, *Thomson*; Leh, *Lance*.

Biennial or perennial, diffuse, 3–10 in.; hairs white, long, dense, softer and more numerous than in *A. hispidissima*. *Leaves* $1\frac{1}{2}$ by $\frac{1}{4}$ – $\frac{1}{3}$ in. *Spikes* 1–2 in., dense; bracts oblong, obtuse, overtopping the sepals. *Corolla* nearly as of *A. hispidissima*. *Nutlets* gradually narrowed upwards, trigonous in horizontal section.—Stems and spikes much more villous than those of *A. hispidissima*, and the nutlets larger, smooth. Dimorphic.

4. **A. tibetana**, *Kurz in Journ. As. Soc.* 1874, pt. ii. 189; hispid, leaves narrowly oblong, sepals $\frac{1}{4}$ – $\frac{1}{3}$ in., corolla-tube $\frac{1}{2}$ – $\frac{1}{2}$ in., nutlets $\frac{1}{10}$ in. ovoid-conic scabrous.—*Arnebia* sp. n. 7, *Herb. Ind. Or. H. f. & T.*

NORTH KASHMIR and WESTERN TIBET, alt. 7–12,000 ft., frequent; *Thomson*, *Jaeschke*, *Aitchison*, &c.—DISTRIB. Kashgar, Yarkand.

Rootstock perennial, staining red.—Closely resembling *A. Thomsoni*; but more hispid, less villous; the spikes often elongate, the sepals somewhat widened in fruit, the nutlets minutely tuberculate. Dimorphic.

31. **MACROTOMIA**, *DC.*

Erect, hispid, perennial herbs. *Leaves* alternate, oblong or linear. *Spikes* dense, or in fruit elongate. *Sepals* 5, linear, long, more or less accrescent in fruit. *Corolla* (in the Indian species); tube narrow, long; throat naked; lobes 5, imbricate in bud, round, spreading. *Stamens* 5; anthers oblong, obtuse, in

the throat of the corolla, with the stigma in the middle of the tube; or anthers in the middle of the corolla-tube with the stigma at the mouth. *Ovary* deeply 4-lobed; style filiform, 2-fid with 2 capitate stigmas, or entire with a 2-lobed stigma. *Nutlets* 4, ovoid, rugose, trigonous; scar basal, large flat.—Species 6; Himalaya, Siberia, the Caucasus.

The character of the stigma, by which Benthams mainly separated *Arnebia* from *Macrotomia* is largely sexual; there is, however, no difficulty in separating the Indian species, the *Arnebias* having yellow flowers, the *Macrotomias* purple.

1. **M. Benthami**, DC. *Prodr.* x. 26; erect, tall, simple, hispid, leaves narrow-lanceolate, spike terminal solitary, sepals 1-1½ in. linear. *Clarke in Journ. Linn. Soc.* xviii. 524. *Echium Benthami*, Wall. *Cat.* 931; *G. Don Gen. Syst.* iv. 333. *Leptanthe macrostachya*, Klotzsch in *Reis. Pr. Waldem. Bot.* 95, t. 63.

WESTERN HIMALAYA, from Kumaon to Kashmir, alt. 10-13,000 ft., frequent; Wallich, Falconer, &c.—DISTRIB. Cabul.

Stem 1-3 ft. *Radical leaves* 11 by ½ in., cauline 3 by ½ in., acute. *Spike* 12 by 2-3 in., usually very dense. *Corolla-tube* ⅔ in.; mouth in diam. ¼-½ in. *Style* shortly bifid, stigmas 2 capitate. *Nutlets* ½ in., ovoid, suddenly acute, nearly as broad as long.

2. **M. perennis**, Boiss. *Fl. Orient.* iv. 212, note; stems solitary or several undivided hirsute, leaves oblong, cymes compound, spikes short many-flowered or subcapitate, sepals ½-¾ in. lanceolate-linear. *Clarke in Journ. Linn. Soc.* xviii. 525. *M. endochroma*, H. f. & T. ms.; *Henderson Yarkand*, 328; *Aitchison in Journ. Linn. Soc.* xviii. 81, name only. *M. onosmoides*, Regel & Smirnow in *Reg. Descr. Pl.* vi. 50. *Stenosolenium perenne*, Schrenk; *Fisch. & Mey. Enum. Fl. Schrenk*, 34. *Lithospermum euchromon*, Royle III. 305; DC. *Prodr.* x. 82. *Arnebia perennis*, A. DC. *Prodr.* x. 95.

ALPINE WESTERN HIMALAYA and WESTERN TIBET, alt. 10-14,000 ft., from the Karakorum and Kashmir to Kumaon, frequent; Royle, Thomson, &c.—DISTRIB. Cabul, Kashgar, Yarkand, Alatau Mts.

Root perennial; stems 8-20 in. *Radical leaves* 5 by ½ in., striated; cauline 1-2 in., sessile. *Cymes* 3-4 in. diam., many-flowered, pedicels 0-½ in. in *M. endochroma*, H. f. & T.; or condensed capitate few-flowered in Royle's examples on which *Lithospermum euchromon*, Royle, was founded. *Sepals* ½-½ in. in flower, patently hirsute, in fruit sometimes nearly 1 in. and sublanceolate. *Corolla-tube* as long as the sepals in flower or exceeding them by ⅓-½ in.; lobes ½ in., varying in breadth. *Flowers* dimorphic, one form having ½ exserted anthers, and short 2-lobed stigmas, the other with included anthers between the capitate stigma. (See *Fisch. & Mey. l.c.*) *Nutlets* nearly as in *M. Benthami*, but larger.—There is difficulty about the specific name of this species; *M. endochroma*, H. f. & T. is a name published without a description, and it is not known whether it was an error for *M. euchroma* or whether it was intended to imply a species closely allied to *Lithospermum euchromum*. *M. cyanochoera*, Benth. (= *Munbya cyanochoera*, Boiss. *Fl. Orient.* iv. 212. *Arnebia tingens*, A. DC. *Prodr.* x. 96), does not differ from *M. perennis*, but by being more coarsely hispid; it is frequent in Cabul and Persia.

32. **ONOSMA**, Linn.

Hispid herbs or undershrubs. *Leaves* alternate. *Racemes* simple or cymose, one-sided, bracteate. *Flowers* yellow or purple, sessile or shortly pedicelled. *Calyx* 5-partite or 5-fid; segments acute, in fruit sometimes enlarged. *Corolla* tubular or ventricose, throat dilated or contracted; lobes 5, very short. *Stamens* 5, filaments attached near the middle of the corolla-tube linear short or long or greatly dilated at the base; anthers lanceolate, acuminate, free, conically

connivent, included or half-exserted. *Ovary* deeply 4-lobed; style filiform, stigma capitate or obscurely 2-lobed. *Nutlets* 4, ovoid, acute, erect or somewhat incurved, smooth or tuberculate; scar basal, large, flat.—Species 70, of the Mediterranean region and Central Asia.

SECT. 1. **Eunosma**. *Calyx lobes* in fruit much longer than the tube. *Corolla* tubular or somewhat widened upwards. *Filaments* not dilated at the base.

1. **O. echioides**, Linn.; DC. *Prodr.* x. 61; patently hispid, leaves oblong, racemes elongate often forked, calyx-lobes $\frac{1}{3}$ in. narrowly oblong, corolla $\frac{3}{4}$ in. cylindric slightly dilated upwards yellow, nutlets shining smooth. *Lamk. Ill.* t. 93; *Sibth. Fl. Græc.* t. 172; *Jacq. Fl. Austr.* t. 295; *Boiss. Fl. Orient.* iv. 181. O. hispida, Wall. *Cat.* 938; DC. *Prodr.* x. 66. O. arenarium, Walldst. & Kit. *Pl. Hung.* iii. t. 279. O. Gmelini, Ledeb. *Fl. Alt.* i. 184, and *Ice. Fl. Ross.* iii. t. 280.

KASHMIR, alt. 5-9000 ft., frequent, Thomson, &c. KUMAON; Royle.—DISTRIB. From Siberia and Cabul to France.

Biennial; stems 8-20 in. *Cauline leaves* $2\frac{1}{2}$ by $\frac{1}{2}$ in. *Racemes* in fruit 1-6 in.; bracts $\frac{1}{2}$ -1 in., leaflike; pedicels $0-\frac{1}{2}$ in. *Calyx-lobes* in fruit attaining sometimes 1 in. *Corolla* $\frac{1}{4}$ in. diam. at top, glabrous without. *Filaments* linear, anthers included or shortly exserted. *Style* overtopping the anthers. *Nuts* $\frac{1}{2}-\frac{1}{4}$ in. long, stony, white, often speckled.

2. **O. Hookeri**, Clarke; hirsute, leaves oblong, racemes subcapitate, calyx-lobes $\frac{1}{3}$ in. linear silky, corolla $\frac{3}{4}$ in. cylindric dilated upwards, nutlets muricated on the sides.—*Onosma*, sp. n. 2, *Herb. Ind. Or. H. f. & T.*

ALPINE SIKKIM, alt. 12-14,000 ft.; Kongra Lama and Tungu, J. D. H.

Rootstock perennial; stems 3-7 in. *Radical leaves* 3 by $\frac{1}{2}$ in.; *cauline* 1-2 by $\frac{1}{4}$ in., somewhat distant. *Flowers* in a single terminal villous head. *Calyx-lobes* in fruit $\frac{3}{4}$ in., very silky. *Corolla* silky without, apparently purple; upper half $\frac{1}{2}$ in. diam., nearly twice as wide as the lower. *Stamens* and *style* nearly as of *O. echioides*. *Nutlets* scarcely $\frac{1}{2}$ in., ovoid, suddenly narrowed, somewhat incurved, shining, and nearly smooth on the back.—Affords the best Lepcha red dye.

3. **O. Thomsoni**, Clarke; hirsute, leaves linear white woolly beneath, racemes small divided calyx-lobes $\frac{1}{3}$ in. linear, corolla $\frac{1}{2}-\frac{1}{3}$ in. cylindric slightly dilated upwards, nutlets shining glabrous.—*Onosma* sp. n. 3, *Herb. Ind. Or. H. f. & T.*

KASHMIR, alt. 6000 ft.; Banahal, Thomson.

Perennial; stems 1-2 ft., patently hairy. *Cauline leaves* $1\frac{1}{2}$ by $\frac{1}{8}-\frac{1}{6}$ in., hispid above with tubercular-based hairs. *Racemes* 1-3 in., capitate or in fruit lax; bracts $\frac{1}{2}$ in., linear; pedicels $0-\frac{1}{4}$ in. *Calyx-lobes* scarcely enlarged in fruit. *Corolla* minutely hairy, mouth $\frac{1}{8}-\frac{1}{6}$ wide. *Anthers* more than half their length exsert; style overtopping the stamens. *Nutlets* $\frac{1}{2}$ in., ovoid, very acute, somewhat incurved, sides obscurely angular.

4. **O. bracteatum**, Wall. in Roxb. *Fl. Ind. ed.* Carey & Wall. ii. 13; and *Cat.* 936; hirsute, leaves lanceolate upper ovate-lanceolate silky white beneath, racemes capitate, calyx-lobes in fruit 1 in. linear silky, corolla-tube $\frac{1}{2}$ in. slightly dilated upwards, nutlets ovoid rough. DC. *Prodr.* x. 66. O. macrocephala, Don *Prodr.* 99.

WESTERN HIMALAYA; Kashmir, Royle. Kumaon, alt. 11,500 ft.; Pindari, Strachey & Winterbottom.

Stems 15 in., erect, stout, patently hispid. *Radical leaves* 6 by 1 in., petioled; *cauline* 2 by $\frac{2}{3}$ in., acuminate, upper surface hispid with tubercular-based hairs. *Flowers* in dense silky heads 2-3 in. diam. *Corolla* $\frac{1}{2}$ in. diam. at the mouth, hairy

without, a ring of hairs at the base within, purple (?). *Anthers* included, filaments linear. *Nutlets* $\frac{1}{8}$ in., acute.

5. **O. bicolor**, *Wall. Cat.* 939; hispid, cauline leaves spathulate-oblong uppermost elliptic sessile, racemes small divided, calyx-lobes $\frac{1}{5}$ in. lanceolate, corolla $\frac{1}{2}$ in. tubular purple, nutlets obscurely minutely rough. *Maharanga bicolor*, *A. DC. Prodr.* x. 71.

CENTRAL and EASTERN HIMALAYA; Nepal, *Wallich*; Sikkim at Lachen, alt. 10,000 ft.; *J. D. H.*

Stems 12–18 in., suberect, patently hispid. *Cauline leaves* $2\frac{1}{2}$ by $\frac{1}{2}$ in., subobtusate, much narrowed at the base, hispid with tubercle-based hairs above, whiter more silky beneath. *Cymes* 1–2 in.; bracts $\frac{1}{4}$ in., linear; pedicels $\frac{1}{2}$ in. *Calyx-tube* $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., hairy without, purple. *Anthers* included; filaments linear not dilated downwards. *Nutlets* $\frac{1}{10}$ in., ovoid, scarcely acute.

SECT. 2. **Maharanga**. *Calyx-tube* distinct, widened in fruit. *Corolla* ventricose, distinctly narrowed at the mouth. *Filaments* very much dilated downwards.

6. **O. Emodi**, *Wall. in Roxb. Fl. Ind. ed. Carey & Wall.* ii. 11, not *Wall. Cat.*; hispid, leaves oblanceolate, calyx-lobes a little shorter than the corolla-tube, in fruit spreading broad-lanceolate. *O. vestitum*, *Wall. Cat.* 937. *Maharanga Emodi*, *A. DC. Prodr.* x. 71.

ALPINE HIMALAYA, alt. 10–13,000 ft.; Gurwhal, *Strachey & Winterbottom*; Nepal, *Wallich*; Sikkim, frequent.

Stems 6–18 in., suberect, patently hairy. *Cauline leaves* attaining 6 by $\frac{3}{4}$ in., subobtusate, hispid on both surfaces; uppermost 2 in., elliptic, sessile. *Flowers* capitate or in fruit cymose; bracts $\frac{1}{3}$ in., narrowly lanceolate; pedicels 0– $\frac{1}{4}$ in. *Calyx* $\frac{1}{2}$ in. diam. in fruit, lobes hardly twice as long as the tube, with long white hairs within. *Corolla* $\frac{1}{2}$ in., minutely hairy, purple. *Anthers* included. *Style* exsert. *Nutlets* $\frac{1}{3}$ in., muricate, tubercular.

7. **O. Wallichianum**, *Benth in Gen. Pl.* ii. 864; hispid, leaves spathulate lanceolate, calyx less than half the length of the corolla, lobes in fruit acutely lanceolate from a triangular base. *O. Emodi*, *Wall. Cat.* 940. *Maharanga Wallichiana*, *A. DC. Prodr.* x. 71.

NEPAL; *Wallich*.

This is perhaps as *Wallich* estimated it, a mere form of *O. Emodi*, which is a very variable plant. *Corolla*, *stamens*, *filaments* and *nutlets* are the same.

ORDER CI. CONVOLVULACEÆ. (By C. B. Clarke.)

Herbs or shrubs, often twining, very rarely trees. *Leaves* alternate, exstipulate, in *Cuscuta* 0. *Cymes* 1- or more-flowered; bracteate. *Flowers* regular, hermaphrodite, often showy, 5- (rarely 4-) merous. *Calyx* deeply 5-lobed, persistent, sometimes much enlarged in fruit. *Corolla* campanulate or funnel-shaped, rarely subrotate; limb shortly or deeply lobed, often 5-plaited in the bud. *Stamens* 5, on the corolla-tube; anthers oblong, dehiscing longitudinally. *Ovary* superior, often surrounded by an annular disc, of 2 carpels, 2-celled or by false dissepiments 4-celled; style 1 rarely 2, stigma capitate 2-lobed, or 2-branched; ovules 2 in each carpel, sessile, erect, anatropous. *Fruit* indehiscent, or 2–4-valved or circumsciss or breaking up irregularly, 4–2 rarely 1-seeded. *Seeds* erect, albumen 0 or scanty; cotyledons generally plaited, rarely flat; radicle next the hilum.—Species 800, more abundant in warm regions.

The following genera are expected to occur in British Burma.

Dichondra repens, *Forst.*, found in Mts. beyond Ava by Wallich, belongs to a small group of *Convolvulaceæ*, with a deeply 2-4-lobed ovary with basilar style, and a fruit of 2-4 utricles; it is a small creeping herb with cordate or reniform leaves, and small solitary axillary flowers. It is a native of warm countries in the old and new worlds.

Blinkworthia lycopodioides, *Choisy* (DC. Prodr. ix. 334), a very imperfectly known genus from near Ava. An erect villous shrub, with linear leaves glabrous above and subsilky beneath, short 1-fl. peduncles, 3 involucriform bracts, 5 sepals, a small urceolate corolla, 2-lobed stigma and 1-seeded berry.

TRIBUS 1. **Convolvulææ.** *Corolla-limb* plaited or induplicate in bud.

* *Fruit indehiscent.*

Stigma large, globose, subsessile	1. ERYCIBE.
Stigma 2, linear-oblong	2. RIVEA.
Ovary 4-celled; style long, stigmas 2	3. ARGYREIA.
Ovary 2-celled; style long, stigmas 2	4. LETTSOMIA.

** *Capsule 2-4-valved, or fragile and breaking up.*

Stigmas 2-globose. Filaments linear or dilated near the base.	5. IPOMÆA.
Stigmas 2-globose. Filaments with an oblong process near the base	6. LEPISTEMON.
Ovary 1-celled. Stigmas short-oblong. Bracts shorter than the calyx	7. HEWITTIA.
Ovary 1-celled. Stigmas short-oblong. Bracts enclosing the calyx	8. CALYSTEGIA.
Ovary 2-celled. Style 1. Stigmas short-oblong	9. CONVULVULUS.
Ovary 2-celled. Styles 2, each with 2 linear stigmas	10. EVOLVULUS.
Sepals in fruit enlarged, scarious. Capsule 1-seeded.	11. PORANA.
Styles 2, or 1 deeply 2-partite; stigmas capitate	12. BREWERIA.
Styles 2. Bract in fruit large, orbicular flat, reticulated	13. NEUROPELTIS.

TRIBUS 2. **Cresseæ.** *Corolla-lobes* imbricate in bud.

Leaves small, sessile. Sepals distinct. Styles 2	14. CRESSA.
--	-------------

TRIBUS 3. **Cuscutææ.** Leafless, yellow, twining parasites.

Corolla small, campanulate or ovoid	15. CUSCUTA.
---	--------------

1. **ERYCIBE**, *Roxb.*

Scandent or diffuse shrubs, or erect trees; shoots rusty-tomentose. *Leaves* from ovate to narrow-oblong, acuminate, entire, coriaceous. *Cymes* short, axillary or in terminal racemes or panicles; bracts usually inconspicuous. *Sepals* subequal, orbicular, coriaceous, adpressed to the base of the fruit. *Corolla* white or yellowish; tube shortly campanulate, densely hairy; limb plaited in bud, glabrous, lobes subbilobed, entire or serrate. *Stamens* on the corolla throat, filaments short; anthers ovate-lanceolate. *Ovary* globose, 1-celled, 4-ovuled; style 0, stigma large subglobose 2-lobed or -partite. *Berry* fleshy, ovoid or ellipsoid, 1-seeded. *Albumen* scanty, irregularly intruded between the plicate fleshy cotyledons; radicle inferior.—Species 20; from India to Australia.

* *Cymes in terminal racemes or panicles, sometimes also axillary.*

1. **E. paniculata**, *Roxb.* *Cor. Pl.* ii. 31, t. 159, and *Fl. Ind.* i. 585, and *ed. Carey & Wall.* ii. 284; branchlets angular, leaves obovate or obovate-oblong abruptly acuminate base attenuate, cymes in narrow terminal panicles, berry $\frac{1}{2}$ in. ellipsoid. *Wall. Cat.* 1330; *Wight Ill.* t. 180; *Chois. in Ann. Sc. Nat.* 2,

i. 222; *DC. Prodr.* ix. 464, *exclud. var.*; *Dalz. & Gibs. Bomb. Fl.* 169; *Brand. For. Fl.* 344; *Miq. Fl. Ind. Bat.* ii. 1032; *Benth. Fl. Austral.* iv. 411; *Kurz For. Fl.* ii. 214. *E. Rheedii*, *Blume Bijl.* 1047. *Erimatalia Rheedii*, *Roem. & Sch. Syst.* v. 331. *Catonia glauca*, *Vahl in Skrift Kiøbenh.* vi. 99.—*Rheede Hort. Mal.* vii. t. 39.

THROUGHOUT INDIA, from Oudh eastward and southward to Ceylon, Tenasserim and the Nicobars; ascending the Himalaya to 4000 ft.—*DISTRIB.* Malaya, Australia.

A diffuse or subscandent shrub, or an erect tree 40 ft. *Leaves* 5 by 2 in., glabrescent; nerves 5-7 pairs, distinct above; petiole $\frac{1}{3}$ in. *Panicles* 7 by $1\frac{1}{2}$ in.; bracts inconspicuous; pedicels $\frac{1}{8}$ – $\frac{1}{6}$ in. *Sepals* $\frac{1}{10}$ in. *Corolla* $\frac{1}{3}$ – $\frac{1}{2}$ in., yellowish.—Roxburgh's plant was a diffuse or subscandent shrub, with rusty shoots; the Central Indian is an erect tree with pendent branchlets and racemes, and grey pubescence.

VAR. Wightiana, leaves elliptic cuneately acuminate at both ends or lanceolate coriaceous, primary nerves obscure above, secondary prominent much reticulated beneath, axillary cymes often 3-5 in. elongate raceme-like or terminal panicle broad, flowers white sweet-scented. *E. Wightiana*, *Grah. Cat. Bomb. Pl.* 137; *Dalz. & Gibs. Bomb. Fl.* 170; *Brand. For. Fl.* 344. *Catonia elliptica*, *Vahl in Skrift Kiøbenh.* vi. 101.—*W. Deccan Peninsula*, from Bombay to Cochin; common.

VAR. peguensis; leaves elliptic cuneately acuminate at both ends, secondary nerves not prominently reticulate beneath, panicles terminal large, branches long or short, flowers white.—Chittagong; *J. D. H. Moulmein*; *Griffith, Falconer, Parish*.

2. ***E. expansa***, *Wall. Cat.* 1331; branchlets angular rusty-tomentose, leaves elliptic acuminate base rounded or subcordate, cymes in terminal racemes or panicles often prominently bracteate. *G. Don Gen. Syst.* iv. 392. *E. ferruginosa*, *Griff. Notul.* iv. 283. *E. paniculata*, var. β *expansa*, *Chois. in Ann. Sc. Nat.* 2, i. 222; *DC. Prodr.* ix. 464.

PEGU and TENASSERIM; *Wallich*.

Panicles mostly large, broad (whence the name *E. expansa*); bracts $\frac{1}{2}$ –1 by $\frac{1}{4}$ in., foliaceous. *Berry* not seen.—Perhaps a form of *E. paniculata*, but the base of the leaf is always rounded or subcordate, which it never is in *E. paniculata*.

3. ***E. subspicata***, *Wall. Cat.* 1332; branchlets angular rusty-tomentose, leaves elliptic or lanceolate acuminate, cymes peduncled subspicate, berry $\frac{1}{2}$ – $\frac{2}{3}$ in. elliptic-oblong. *G. Don Gen. Syst.* iv. 392.

SILHET, *Wallich*. KHASIA MTS., *Griffith, J. D. H.*—*DISTRIB.* Ava.

Leaves 4 by $1\frac{3}{4}$ in., less abruptly acuminate than in *E. paniculata*, not at all obovate, rhomboid or rounded at the base, coriaceous, nerves obscure above.—Perhaps only a variety of *E. paniculata*; but the specimens are very uniform.

4. ***E. glaucescens***, *Wall. Cat.* 1334; nearly glabrous except the corolla, leaves elliptic acuminate base cuneate, cymes axillary often half as long as the leaves and in elongate terminal panicles. *Chois. in Ann. Sc. Nat.* 2, i. 223; *DC. Prodr.* ix. 464; *Kurz For. Fl.* ii. 214. *E. lævigata*, *Wall. Cat.* 1333 b; *Chois. in Ann. Sc. Nat.* 2, i. 223, partly; *DC. l. c.* partly.

SILHET and MOULMEIN, *Wallich*. CACHAR; *Keenan*.

Differs from *E. paniculata*, var. *peguensis*, only by the branchlets and young panicles being very nearly glabrous. *E. glaucescens* of *DC.*, with the racemes sparingly rufous-silky, and *E. glaucescens*, *Kurz*, with the young shoots rusty-pilose, may include, wholly or partially, *E. lævigata*. *Keenan* refers to his plant as "a tall erect tree with white scented flowers."

5. ***E. lævigata***, *Wall. Cat.* 1333, *a only*; branchlets angular slightly pubescent, leaves elliptic or oblong acuminate base cuneate, cymes short axillary towards the end of the branches and terminal scarcely paniced, berry $\frac{2}{3}$ in.

globose, *Chois. in Ann. Sc. Nat.* 2, i. 223, partly; *DC. Prodr.* ix. 464, partly. —*Erycibe*, n. 8, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA, alt. 5-6000 ft., *Herb. Griffith, King, &c.* KHASIA Mts., alt. 4000 ft., *Wallich, Griffith, J. D. H.*

A rambling, stout shrub; branchlets thick. *Leaves* 5 by $1\frac{1}{2}$ in., coriaceous; nerves 8-20 pair; petiole $\frac{1}{2}$ in. or longer. *Cymes* hardly half so long as the leaves, rusty-tomentose, terminal hardly larger than the axillary. *Flowers* yellowish-white, as of *E. paniculata*, but larger.—This is distinguished from the four preceding by its thick branchlets, larger flowers and fruits, the nerves appear very variable in number, but always more numerous than in *E. paniculata*.

** *Cymes axillary short, terminal (if any) scarcely larger than the axillary.*

6. ***E. malaccensis***, *Clarke*; leaves elliptic or obovate-oblong acuminate coriaceous base cuneate or rounded, nerves distinctly reticulated raised beneath, cymes and sepals uniformly closely fulvous tomentose, berry $\frac{2}{3}$ in. subquadrate ellipsoid.—*Erycibe* n. 7, *Herb. Ind. Or. H. f. & T.*

MOULMEIN, *Lobb.* MALACCA, *Griffith, Maingay.*

A large scandent shrub; innovations fulvous-pubescent; branchlets obscurely angular. *Leaves* 3 by $1\frac{1}{4}$ in.; petiole $\frac{1}{2}$ in. *Cymes* $\frac{1}{2}$ -2 in. *Sepals* not glabrescent upwards. *Flowers* nearly as of *E. paniculata*.

7. ***E. Princei***, *Wall. Cat.* 1335; innovations rusty-pubescent, leaves short-petioled obovate-oblong abruptly acuminate base obtuse, cymes subcapitate axillary and terminal subspicate or racemose, berry $\frac{1}{2}$ in. ellipsoid. *Chois. in Ann. Sc. Nat.* 2, i. 224; *DC. Prodr.* ix. 464. *E. camptobotrya*, *Miq. Fl. Ind. Bat. Suppl.* 578.

PENANG, *Wallich.* MALACCA, *Griffith, Maingay.*—DISTRIB. Java, Banca, Borneo.

A powerful scandent, sometimes twining, shrub; branchlets scarcely angular, obscurely rusty-pubescent. *Leaves* 4 by $1\frac{3}{4}$ in., coriaceous, suddenly narrowed at the base, sometimes subcordate; nerves 5-7 pairs, nerves obscure; petiole $\frac{1}{2}$ in. *Cymes* scarcely 1 in. diam., subsessile, rusty-villous; bracts $\frac{1}{10}$ in., oblong. *Flowers* nearly as of *E. paniculata*. *Sepals* villous or glabrate, coriaceous.

8. ***E. Griffithii***, *Clarke*; branchlets round glabrous, leaves large obovate-oblong abruptly acuminate base cuneate, cymes sessile small axillary lax few-fl. rufous-villous, berries 1 in. ellipsoid.

MERGUI, *Griffith* (*Kew Distrib.* n. 5880). MALACCA, *Maingay.*

A large, scandent shrub. *Leaves* $5\frac{1}{2}$ by 2 in., coriaceous, nerves 6 pairs, secondary not prominent; petiole $\frac{1}{4}$ in. *Cymes* $\frac{1}{2}$ - $\frac{3}{4}$ in., densely clothed with dark-red hair. *Berry* coriaceous, rough.

9. ***E. Maingayi***, *Clarke*; innovations minutely hairy, leaves long-petioled elliptic acuminate to an obtuse apex base cuneate, cymes axillary small lax minutely rufous-pubescent.

MALACCA; *Maingay.*

A large, scandent shrub; branches round, glabrous or nearly so. *Leaves* $2\frac{1}{2}$ by $1\frac{1}{4}$ in., nerves 6 pairs, secondary obscure; petiole $\frac{1}{2}$ in. *Cymes* $\frac{1}{2}$ in., deep red, appearing glabrous, but minutely adpressedly pilose under a lens.—This appears allied to *E. Princei*; but, besides the differences in indumentum, the long petioles give it a habit of its own.

10. ***E. coriacea***, *Wall. Cat.* 1337; branchlets round glabrous or nearly so, leaves large elliptic acuminate very coriaceous, nerves obscure on both surfaces, cymes $\frac{1}{2}$ -2 in. minutely rusty-pubescent dense-fl. *Chois. in Ann. Sc. Nat.* 2, i. 224; *DC. Prodr.* ix. 465; *Kurz For. Fl.* ii. 213.

CHITTAGONG, Wallich.

Leaves $6\frac{1}{2}$ by $2\frac{1}{2}$ in., cuneate at the base, verrucose beneath; midrib strong, much raised beneath; petiole $\frac{3}{8}$ in. Berry not seen.—There is no specimen of this in Wallich's Herbarium, nor have I seen any.

VAR. *fragrans*; leaves $5\frac{1}{2}$ by $3\frac{1}{4}$ in. ovate-elliptic acuminate, cymes rather less dense than in *E. coriacea*. G. Don Gen. Syst. iv. 392. *E. fragrans*, Wall. Cat. 1336.—Amherst, Wallich.

11. **E. glomerata**, Wall. Cat. 1338 (? of Blume); innovations villous, leaves large elliptic acuminate nerves impressed above much raised beneath secondary obscure, cymes axillary sessile capitate. Chois. in Ann. Sc. Nat. 2, i. 224; DC. Prodr. ix. 465; Kurz For. Fl. ii. 213. *E. citriniflora*, Griff. Notul. iv. 284.—Ebenacea, Wall. Cat. 9061.

MOULMEIN, Wallich. MERGUI, Griffith.

A powerful scandent shrub; branchlets round, stout, soon glabrescent. Leaves 7 by $2\frac{1}{2}$ in., narrowed downwards, but often shortly suddenly rounded at the very base, coriaceous, often rugose above from the strongly impressed nerves; petiole scarcely $\frac{1}{4}$ in. Cymes $\frac{1}{2}$ in. diam., minutely closely rusty-tomentose. Berry not seen.—There is no specimen of this in Wallich's Herbarium. Miquel (Fl. Ind. Bat. ii. 1033) says that this plant is not *E. glomerata*, Blume Bijd. 1047; but from Blume's description it is either the same or very near it.

2. RIVEA, Chois.

Twining shrubs. Leaves ovate-cordate, silky or hirsute beneath, at least while young; petiole long. Peduncles axillary, 1-3-fld.; bracts 2-3, narrow. Sepals ovate or oblong, subequal. Corolla large, white, tube long, cylindric; limb wide-funnel-shaped, plaited. Stamens attached near the middle of the tube, included; anthers narrowly-oblong, obtuse, not finally twisting. Ovary 4-celled, 4-ovuled; disc annular; style filiform, stigmas linear-oblong. Fruit indehiscent or irregularly breaking up, subglobose, shining, nearly dry. Seeds 1-4, glabrous, in mealy pulp.—Species 2, Indian.

1. **R. ornata**, Chois. Convolv. Or. 27, t. 3, and in DC. Prodr. ix. 326; leaves orbicular-cordate white-tomentose beneath, peduncles short mostly 3-fld., sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. elliptic-oblong acute or subacute, corolla-limb white silky without. Wight in Calc. Journ. Nat. Hist. viii. 179, t. 5, fig. 1, and Ill. t. 168, bis fig. 1, and Ic. t. 1356; Dalz. & Gibs. Bomb. Fl. 168. Lettisia ornata, Roxb. Hort. Beng. 13, and Fl. Ind. i. 496, and ed. Carey & Wall. ii. 85. Convolvulus candidans, Roth Nov. Sp. 106; Roem. & Sch. Syst. iv. 273, 790, not of Sol. C. ornatus, Wall. Cat. 1369. C. Tarita, Ham.; Wall. Cat. 2253. Argyreia ornata, Sweet Hort. Brit. ed. 2, 373; Brand. For. Fl. 343.

DECCAN PENINSULA; common in dry jungles, &c. CEYLON; in the hotter parts of the Island.

Branchlets stout, white-tomentose. Leaves 3-5 in. in diam., often broader than long, glabrous above and, sometimes, at length beneath; petiole 1-2 in. Peduncles $\frac{1}{2}$ in or less; pedicels hardly any; bracts $\frac{1}{2}$ in., narrowly oblong, deciduous. Corolla-tube 2 in., limb 2 in. diam. Stigmas $\frac{1}{10}$ by $\frac{1}{40}$ in. Fruit $\frac{2}{3}$ in. diam., globose, mucronate by the style base, yellow-brown, nearly dry.—Roxburgh says he obtained seeds of this from Cawnpore (possibly from a garden?); no examples have been seen but from the South Deccan.

VAR. *Griffithii*; leaves less silky beneath, peduncles 1-4 $\frac{1}{2}$ in., sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. elliptic-oblong acute, corolla-limb glabrous without even in the bud.—BENGAL, Griffith, Falconer.—Possibly a cultivated form. One of Griffith's examples is from the Calcutta Botanic Garden, the other from Sikkim; Falconer's example is without locality.

2. **R. hypocrateriformis**, *Chois. Convolv. Or.* 26, and in *DC. Prodr.* ix. 326; leaves orbicular-cordate adpressedly silky beneath when young, sepals $\frac{1}{2}$ in. ovate-elliptic obtuse, corolla-limb glabrous or puberulous without. *Dalz. & Gibs. Bomb. Fl.* 168; *Miq. Fl. Ind. Bat.* ii. 584, *only copied*. *R. bona-nox*, *Roxb. Hort. Beng.* 13; *Chois. Convolv. Or.* 27, and in *DC. Prodr.* ix. 326; *Dalz. & Gibs. Bomb. Fl.* 168. *R. fragrans*, *Ninmo in Grah. Cat. Pl. Bomb.* 127. *R. ornata*, *Aitch. Cat. Punjab Pl.* 100, *not of Chois.* *Convolvulus hypocrateriformis*, *Lamk. Enc.* iii. 561. *C. candicans*, *Wall. Cat.* 1368; *Roem. & Sch. Syst.* iv. 302, *not of Roth.* *Lettsomia uniflora*, *Roxb. Cat. Pl.* (1813) and *Fl. Ind.* i. 495, and *ed. Carey & Wall.* ii. 85. *L. bona-nox*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 494. *Argyreia uniflora* and *bona-nox*, *Sweet Hort. Brit. ed.* 2, 373; *Brand. For. Fl.* 343.

WESTERN INDIA; in dry forests, from Lahore and Behar to Mysore, common.—ASSAM, *Griffith*.

Generally resembling *R. ornata*, but the hair on the stems beneath the leaves and on the sepals is less copious, and much less white. The essential distinction lies in the sepals which are smaller and more obtuse.—Roxburgh's *Lettsomia bona-nox*, a native of Midnapore jungles, is referred to here with little doubt, though no specimens of it are known to exist; the only difference his characters afford between his *L. bona-nox* and his *L. uniflora* (*Rivea hypocrateriformis*) are, that the former has deliciously clove-scented flowers and three of them together, the latter solitary flowers; whether scented or no is not stated. Roxburgh's figure is excellent.

3. ARGYREIA, *Lour.*

Scandent, rarely suberect, shrubs. *Leaves* from cordate-ovate to narrow-lanceolate, silky hirsute or pubescent. *Cymes* sessile or peduncled, capitate or corymbose. *Flowers* showy, purple or rose, rarely white. *Sepals* from orbicular to lanceolate, subequal, or the inner smaller, adpressed to the fruit, often somewhat enlarged. *Corolla* funnel-shaped; limb plaited, very shortly lobed. *Stamens* included; anthers oblong, never twisting. *Ovary* completely 4-celled, 4-ovuled; disc annular, often prominent, as long as the ovary; style filiform, stigmas 2 sessile globose. *Fruit* indehiscent, baccate or nearly dry, hard or papery, 4-1-seeded.—Species 30, Indian, Malayan, and S. Chinese, one African.

SECT. I. **Pomifera**. *Sepals* orbicular, ultimately enlarged, completely enveloping the fruit, strongly imbricate, glabrous, mucilaginous.

1. **A. tiliaefolia**, *Wight Ic.* t. 1358; leaves ovate-cordate shortly acuminate or obtuse hoary beneath or glabrescent, peduncles 1-3-fld. shorter than the petioles, corolla-plaits glabrous without or nearly so. *Kurz For. Fl.* ii. 215. *Convolvulus tiliaefolius*, *Lamk. Enc.* iii. 544. *C. gangeticus*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 467, and *ed. Carey & Wall.* ii. 46; *Wall. Cat.* 1340. *C. melanostictus*, *Schldl. in Linnæa*, 1831, 737. *Ipomæa tiliaefolia*, *Roem. & Sch. Syst.* iv. 229. *I. gangetica*, *Sweet Hort. Brit. ed.* 2, 371. *I. melanosticta*, *G. Don Gen. Syst.* iv. 271. *Rivea tiliaefolia*, *Chois. Convolv. Or.* 25, and in *DC. Prodr.* ix. 325; *Hassk. Retzia*, i. 68.

INDIA, alt. 0-1000 ft., except in the western dry portion, very common in Beugal and near the sea.—DISTRIB. Malaya to the Philippines; elsewhere often cultivated.

Scandent or twining, often forming low, dense masses with apple-like fruits. *Leaves* 1-4 in. diam.; petiole long. *Peduncles* $\frac{1}{2}$ -3 in.; bracts inconspicuous, caducous. *Corolla* 2-3 in., widely-funnel-shaped, rose-purple. *Fruit* $\frac{3}{4}$ -1 $\frac{1}{2}$ in. diam., including the sepals; capsule thin. *Seeds* $\frac{1}{2}$ in., minutely rusty-villous, hilum hirsute.—Miquel (*Fl. Ind. Bat.* ii. 587) says *Ipomæa ilacina* (*Blume Bijl.* 716) is this plant, but the description does not agree ("sepals acute," &c.).

SECT. II. **Euaryrea.** *Sepals* from ovate to narrow-oblong, more or less hairy, ultimately dry. *Seeds* glabrous or very closely tomentose.

* *Stems* twining, often extensively scandent.

2. **A. speciosa**, *Sweet Hort. Brit. ed. 2*, 373; leaves large ovate-cordate acute glabrous above persistently white-tomentose beneath, peduncles long, flowers subcapitate, bracts large ovate-lanceolate acute thin softly woolly deciduous, corolla-tube woolly, fruit brown-yellow stout nearly dry. *Chois. Convolv. Or. 29*, and in *DC. Prodr. ix. 328*; *Wight Ic. t. 851*; *Hassk. Retzia*, i. 68; *Dalz. & Gibs. Bomb. Fl. 168*; *Brand. For. Fl. 343*. *Convolvulus speciosus*, *Linn. f. Suppl. 137*; *Smith Ic. Pict. t. 17*; *Wall. Cat. 1363*. *C. nervosus*, *Burm. Fl. Ind. 48*, t. 20, fig. 1. *Lettsomia speciosa*, *Roxb. Hort. Beng. 13*. *L. nervosa*, *Roxb. Hort. Beng. 13*, and *Fl. Ind. i. 488*, and ed. *Carey & Wall. ii. 78* (not of *Hort. Bot. Calc.*). *Ipomæa speciosa*, *Blume Bijl. 717: Bot. Mag. 2446*.

INDIA, alt. 0-1000 ft.; from Assam to Belgaum and Mysore; frequent in Bengal plain.—DISTRIB. Java; also from China, Mauritius, &c., cultivated.

Extensively climbing. *Stems* stout, white-tomentose. *Leaves* 3-12 in. diam., glabrous above even before unfolding; petiole long. *Peduncles* usually 3-6 in., stout, white-tomentose; outer bracts $1\frac{1}{2}$ in. *Corolla* 2-3 in., tubular-funnel-shaped, rosy. *Fruit* $\frac{3}{4}$ in. diam., globose, apiculate; sepals ultimately $\frac{3}{8}$ in. diam., ovate, coriaceous, woolly.

3. **A. argentea**, *Chois. Convolv. Or. 36*, and in *DC. Prodr. ix. 330*; leaves ovate-cordate acute hairy above persistently white-silky beneath, corymbs peduncled dense or subcapitate, bracts narrow mostly inconspicuous, corolla hairy without, berry nearly black, fruiting sepals thin lanceolate subpatent. *Lettsomia argentea*, *Roxb. Hort. Beng. 13*, and *Fl. Ind. i. 489*, and ed. *Carey & Wall. ii. 79*. *Convolvulus argenteus*, *Wall. Cat. 1364*.

BENGAL PLAIN; frequent, extending to Assam and Chittagong. KHASIA MTS., alt. 4000 ft., *H. f. & T.*

A large climber. *Leaves* 3-6 in., closely pilose above ultimately subglabrous, silky subtomentose beneath; petiole long. *Peduncles* 2-5 in.; corymbs small, or large; bracts $\frac{1}{2}$ by $\frac{1}{4}$ in., in the Khasia plant larger subsistent. *Corolla* 2 in., tubular-funnel-shaped, with many spreading simple lax hairs without, rose-purple. *Berry* $\frac{3}{8}$ in. diam., globose; sepals ultimately $\frac{1}{2}$ by $\frac{1}{8}$ in., subpatent, or in one example ovate subobtusely coriaceous.

VAR. *venusta*; indumentum less silvery ultimately thin. *A. venusta*, *Chois. Convolv. Or. 36*, and in *DC. Prodr. ix. 330*. *Convolvulus festivus*, *Wall. Cat. 1414*, not *Argyrea festiva*, *Wall. Pl. As. Rar. Argyrea* sp., n. 27, *Herb. Ind. Or. H. f. & T.* —PEGU, *Wallich, McLelland, &c.* BENGAL; Furidpore, *Clarke*.—DISTRIB. AVA.

4. **A. Roxburghii**, *Chois. Convolv. Or. 37*, and in *DC. Prodr. ix. 330*, most *syns. excl.*; leaves ovate-cordate acute softly patently villous on both surfaces, peduncles equalling the petioles, corymbs dense, bracts narrow, sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. elliptic-lanceolate. *Convolvulus Roxburghii*, *Wall. Cat. 1415*.

NEPAL, *Wallich*; SIKKIM TERAI, *Clarke*. ASSAM, *Jenkins*.

Leaves hardly shining. *Peduncles* 2 in., shorter than in *A. argentea*, which it very closely resembles.

VAR. *ampla*; innovations white silky, leaves large ultimately sparsely hairy, cymes lax irregularly compound, one or more of the outer bracts often leaflike petioled. *Argyrea ampla*, *Chois. Convolv. Or. 38*, and in *DC. Prodr. ix. Convolvulus amplus*, *Wall. Cat. 1420*.—The common form.

5. **A. Hookeri**, *Clarke*; leaves large cordate-ovate acute glabrescent or somewhat hairy beneath, peduncles very long, cymes dichotomous few-flowered,

bracts caducous, sepals ovate- or oblong-lanceolate, berry dusky succulent completely 4-celled. *A. populifolia*, *Chois. in DC. Prodr.* ix. 329; and *C. malabaricus*, *Wall. Cat.* 1414 B; the Goalpara plant only.

ASSAM, *Hamilton*. SIKKIM HIMALAYA, alt. 1-4000 ft., frequent, *J. D. H.*, &c. BHOTAN, alt. 3000 ft., *Clarke*.

A large climber, ultimately glabrescent; innovations villous or sometimes shining, subsericeous. *Leaves* 4-9 in., larger deeply cordate; petiole long. *Peduncles* 3½-2 in.; bracts ½ in., narrow, caducous. *Sepals* ½ in.; in fruit larger, acute. *Corolla* 2-2½ in., tubular-funnel-shaped, sparsely hairy without, rose-coloured. *Berry* ¾ in. diam., globose.—*Convolvulus peduncularis*, *Wall. Cat.* 1417, from Ava, is exceedingly like *A. Hookeri*; but in it the fruiting sepals are ½ in., orbicular and coriaceous.

6. ***A. splendens***, *Sweet Hort. Brit. ed.* 2, 373; leaves elliptic acuminate base rhomboid or rounded glabrous above silky-white beneath, corymbs peduncled, bracts caducous, corolla-plaits hairy without, capsule papery scarlet. *Lettsomia splendens*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 487, and *ed. Carey & Wall.* ii. 75; *Wall. Cat.* 1361. *Ipomæa splendens*, *Bot. Mag.* t. 2628.

KHASIA MTS.; *Griffith*. CHITTAGONG; *Roxburgh*; at Seetakoond, *H. f. & T.*

A large climber. *Leaves* 7 by 4 in., never cordate; petiole 3 in. *Peduncles* 1-4 in., few- or many-flowered. *Sepals* ½ in., ovate, obtuse, closely tomentose. *Corolla* 1½ in., tubular-campanulate, rose-coloured. *Fruit* (with the sepals) as of *A. Wallichii*.—*Convolvulus Finlaysonianus*, *Wall. Cat.* 6607, from Cochin-China, is closely allied, but the leaves are elliptic and ovate subcordate. *A. acuta*, *Lour.* (*Chois. in DC. Prodr.* xix. 333) is exceedingly near, but has the corymbs slenderer, smaller flowers, and sepals elliptic-oblong with adpressed silvery hairs.

7. ***A. oblecta***, *Clarke*; leaves elliptic or oblong acute at both ends pilose above silky-strigose beneath, peduncles short, bracts caducous, sepals short ovate obtuse, corolla hirsute without, capsule papery red. *Convolvulus oblectus*, *Wall. Cat.* 1416. *Rivea? oblecta*, *Chois. Convolv. Or.* 28, and *in DC. Prodr.* ix. 326.

MALAY PENINSULA; Tavoy and Amherst, *Wallich*; Mergui, *Griffith*; Tenasserim, *Helper*.

A large climber. *Leaves* 5 by 2½ in., beneath tawny or whiteish; petiole ¾ in. *Peduncles* ½-1½ in. *Flower* and *fruit* nearly as in *A. splendens*, but sepals and corolla more hirsute. *Ovary* 4-celled, 4-ovuled.—Known from *A. splendens* by the short petioles, from *A. lanceolata* by the peduncled corymbs.

VAR. *obtusifolia*; leaves obtuse almost emarginate. Tavoy; *Griffith*.—An example in *Herb. Wight*, named by him *Convolvulus laurifolius*. This may be *A. obtusifolia*, *Lour.* (*Chois. in DC. Prodr.* ix. 333), of which the fragments at the British Museum consist of branchlets, fruits, and a fragment of one leaf.

8. ***A. lanceolata***, *Chois. Convolv. Or.* 39, and *in DC. Prodr.* ix. 331; leaves lanceolate or linear-lanceolate pilose above shining silky beneath, flowers axillary subsessile 1-3 together, bracts inconspicuous, sepals elongate-oblong, corolla hairy without. *Convolvulus argyrophyllus*, *Wall. Cat.* 1395.

MALAY PENINSULA; Martaban and Tavoy, *Wallich*; Moulmein, *Parish*; Tenasserim or Andamans, *Helper*.

Stems twining, slender. *Leaves* 5 by ¾ in., or shorter and broader, base cuneate or rounded; petiole ¾ in. *Sepals* ¾ by ½ in., oblong or lanceolate. *Corolla* 1½ in., tubular-campanulate. *Capsule* ¼ in., globose, thin, not red (but unripe).—The foliage and corymbs are sometimes like those of *A. oblecta*, from which it is distinguished by the elongate sepals.

9. **A. Wallichii**, *Chois. Convolv. Or.* 39, and in *DC. Prodr.* ix. 331; leaves large ovate-cordate acute glabrous wrinkled above persistently tomentose beneath, peduncles very short, flowers capitate, bracts large persistent outer thinner often nerved. *Convolvulus erythrocarpus*, *Wall. Cat.* 1413. *Lettsomia nervosa*, *Hort. Bot. Calc. and Herb. Wight*, not of *Roxb.*

SIKKIM TERAI; *Clarke*.—DISTRIB. AVA.

A large climber. *Leaves* 4–10 in., upper surface wrinkled by the impressed secondary nerves; *petiole* 2–4 in. *Peduncles* 0–1 in.; *heads* 1–3 in. diam., dense, many-fl.; *outer bracts* 1 in. and upwards, ovate-oblong. *Sepals* 2–3 in., elliptic-oblong. *Corolla* $1\frac{1}{2}$ in., tubular-infundibuliform, hirsute, white tinged rose. *Capsule* $\frac{1}{2}$ in., depressed globose, becoming (together with the interior of the sepals) red, or (in the Sikkim example) a glistening white.

VAR. coriacea; leaves more leathery, sepals more leathery densely hairy not nerved, capsule red.—Sikkim, alt. 2–5000 feet, common; *J. D. H., Treutler, &c.* Upper Assam; *Jenkins*.

10. **A. populifolia**, *Chois. Convolv. Or.* 32, and in *DC. Prodr.* ix. 329; leaves ovate acuminate base shallowly cordate or rounded glabrous or sparingly hairy beneath, peduncles shorter than the leaves, flowers subcapitate, bracts prominent linear-lanceolate persistent, sepals small subequal ovate obtuse. *Ipomœa zeylanica*, *Gaertn. Fruct.* ii. 482, t. 178, fig. 1; *Moon Cat. Pl. Ceyl.* 14, not *Argyreia zeylanica*, *Kurz.* *Convolvulus festivus*, *Wall. Cat.* 1414, the Ceylon material only. *Rivea zeylanica* var. *a* only, *Thwaites Enum.* 209, many syn. excl.

CEYLON; common; *Walker, &c.*

A large twiner, sparingly grey pilose or glabrate. *Leaves* 2–5 in. diam., long-petioled. *Peduncles* 1–7 in., usually exceeding the petioles; *bracts* numerous $\frac{1}{2}$ –1 in., sparingly grey-pilose or glabrate. *Sepals* $\frac{1}{2}$ in., hardly larger in fruit. *Corolla* 2 in., funnel-shaped, rose-purple, hairy on the plaits without, ultimately nearly glabrescent. *Berry* $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., dusky, pulpy.

VAR. Thwaitesii; leaves elliptic acute base rounded sparsely hirsute beneath, bracts elliptic oblong.—Ceylon; Colombo, *Thwaites* (C. P. n. 1943.)

VAR. fastigiata; corymbs many-fl., close not capitate. *Convolvulus fastigiatus*, *Wall. Cat.* 2258, not of *Roxb.* *Ipomœa fastigiata*, *Chois. in DC. Prodr.* ix. 380, the Bengal plant, not of *Sweet*.—Bengal (*Choisy*). The type (in Wallich's Herbarium), is a plant from the Calcutta Botanic Garden, and looks altogether like *A. populifolia* cultivated. A powerful twiner; stems sparsely hairy. *Leaves* 4 in., shallowly cordate, ovate, subacute, glabrous above, sparingly hairy beneath; *petiole* 2 in. *Peduncles* 3–8 in., strigose; corymbs 2–4 in. diam.; *bracts* 1 by $\frac{1}{2}$ in., lanceolate, persistent, a few outer sometimes leaflike and petioled. *Sepals* $\frac{1}{2}$ in. ovate, obtuse, adpressed villous. *Corolla* $2\frac{1}{2}$ in. and upwards, tubular-funnel-shaped, hairy without, rose-purple. *Fruit* not seen.

11. **A. involucrata**, *Clarke*; leaves ovate acuminate sparingly hairy or glabrescent, peduncles shorter than the leaves, flowers subcapitate, bracts large oblong persistent, sepals subequal ovate-lanceolate acuminate.—*Argyreia* n. 23, *Herb. Ind. Or. H. f. & T.*

WESTERN DECCAN PENINSULA; Concan and Bababoodan Hills, *Law*; Bombay, *Dalzell*.

A large twiner. *Leaves* $7\frac{1}{2}$ by $4\frac{1}{2}$ in., usually more elongate than *A. populifolia*, base rounded or shallowly cordate. *Peduncles* 2–6 in.; *bracts* 1 by $\frac{1}{2}$ in., sparingly hairy, flat. *Sepals* $\frac{1}{2}$ in., often caudate, margins scarious. *Corolla* and fruit nearly as of *A. populifolia*.—*Leaves* in one example of *Dalzell's* narrower, 5 by $1\frac{1}{2}$ in., base subrhomboid.

VAR. inæqualis; bracts large some attaining 2 by $\frac{3}{4}$ in., two outer sepals much longer than the inner, corolla exceeding $3\frac{1}{2}$ in.—The Concan, *Stocks*. Distrib.

Tropical Africa (if *A. populifolia*, var. *africana* (Oliver in Trans. Linn. Soc. **xxix**. 114) can be identified with any Indian plant).

12. *A. bracteata*, *Chois. Convolv. Or.* 39, and in *DC. Prodr.* ix. 328; leaves ovate base rounded glabrate above fulvous densely silky beneath, peduncles mostly short, flowers subcapitate, bracts prominent oblong or elliptic silkily villous persistent, sepals $\frac{1}{2}$ in. ovate subacute. *Wight in Hook. Comp. Bot. Mag.* i. 38, t. 3. *Convolvulus pomaceus*, *Wall. Cat.* 1419, type sheet partly. *Ipomœa Kleiniana*, *Roem. & Sch. Syst.* iv. 789.

DECCAN PENINSULA; *Rottler*; Madras, *Shuter*; Coimbatore, *Wight*.

Scandent. *Leaves* 2–3½ in., obtuse or scarcely acuminate, base sometimes slightly cordate; petiole 1 in. *Peduncles* $\frac{1}{2}$ –2 in., bracts $\frac{3}{4}$ in. *Sepals* with scarious margins. *Corolla* 2 in. and upwards, tubular-campanulate, hirsute without. *Berry* $\frac{2}{3}$ in., yellowish-brown, pulpy.—Easily distinguished by its leaves being glabrous above shining silky beneath; hence often confounded with *A. argentea*.

13. *A. pomacea*, *Chois. Convolv. Or.* 31, and in *DC. Prodr.* ix. 329; leaves elliptic-ovate obtuse closely softly hairy on both surfaces, peduncles short, corymbs small lax, bracts narrowly oblong caducous, sepals $\frac{1}{4}$ in. round-ovate. *Wight Ill.* 168 bis fig. 2. *Lettsomia pomacea*, *Roxb. Hort. Beng.* 18, and *Fl. Ind.* i. 493, and ed. *Carey & Wall.* ii. 83. *Rivea pomacea*, *Wight Ic.* t. 888. *Convolvulus pomaceus*, *Wall. Cat.* 1419, part of second sheet.

SOUTH DECCAN; Mysore, *Roxburgh*; Coimbatore, *Wight*; Nilgherries, *G. Thomson*, &c.

Large, scandent. *Leaves* 1–3 in., sometimes emarginate, often undulate, base rhomboid or rounded; petiole $\frac{3}{4}$ in. *Peduncles* 0– $\frac{3}{4}$ in.; bracts $\frac{1}{4}$ – $\frac{3}{4}$ in. *Corolla* 2 in., tubular-campanulate, hirsute without. *Berry* $\frac{2}{3}$ in. diam., yellow-brown, pulpy.

VAR. *triflora*; leaves narrowly elliptic rhomboid at the base glabrate above sparsely strigose beneath, peduncles $\frac{1}{3}$ – $\frac{2}{3}$ in. 1–3-flowered, bracts $\frac{1}{3}$ – $\frac{1}{2}$ in. narrowly oblong obtuse glabrous, sepals glabrous. *A. Leschenaultii*, *Thwaites Enum.* 209, not of *Chois.* *Ipomœa* n. 43, *Herb. Ind. Or. H. f. & T.*—Ceylon; *Thwaites* (C. P. n. 1932).

14. *A. sericea*, *Dalz. & Gibs. Bomb. Fl.* 169; leaves ovate-cordate acute hispid or strigose above densely silky beneath, peduncles as long as the petioles, flowers capitate, bracts prominent persistent oblong or elliptic nerved silky, sepals elliptic-lanceolate often unequal. *Ipomœa bracteata*, *Graham Cat. Bomb. Pl.* 131, not of *G. Don*.

MALABAR GHATS and CONCAN, frequent; *Stocks*, *Law*, &c.; Belgaum, *Ritchie*.

A powerful, silky twiner. *Leaves* 3–5 in., base of lower deeply cordate; petiole 1–3 in. *Peduncles* 1–4 in.; bracts attaining 1½ in. *Sepals* $\frac{1}{2}$ in., two outer often much longer. *Corolla* 2½ in., tubular-funnel-shaped, pink, hirsute, without. *Berry* $\frac{1}{2}$ in. diam., orange-coloured, pulpy.—Perhaps, as *Dalzell* suggests, nearest to *A. argentea*, but is usually referred to *A. bracteata*, *Choisy*, to which it is not very near.

15. *A. Leschenaultii*, *Chois. Convolv. Or.* 31, and in *DC. Prodr.* ix. 329, not of *Thwaites*; innovations white-tomentose, leaves subcordate ovate acuminate softly hairy on both surfaces, peduncles short, bracts linear, sepals $\frac{1}{4}$ – $\frac{1}{2}$ in. ovate obtuse. *Convolvulus Choisyanus*, *Wall. Cat.* 2259, type sheet only (*Choisy*).

NILGHERRIES, alt. 1–6000 ft.; *Wight*, &c.

A powerful climber. *Leaves* 6 by 5 in., suddenly shortly acuminate, closely villous subtomentose beneath becoming less so in age; petiole 2 in. *Peduncles* $\frac{1}{2}$ –2 in., softly villous; bracts $\frac{3}{4}$ by $\frac{1}{2}$ in., subsistent. *Corolla* 2 in., hirsute without.

Berry $\frac{3}{4}$ in. diam., pulpy.—*Convolvulus Choisyanus* (Wall. Cat. 2259) is not now in Wallich's herbarium; Choisy says it is *Argyreia Leschenaultii* but it may have been *A. Choisyana*, Wight.

16. **A. nellygherya**, Chois. *Convolv. Or.* 82, and in *DC. Prodr.* ix. 329; leaves subcordate elliptic subacute softly hairy above densely villous beneath, peduncles shorter than the leaves, cymes few-fl. subcapitate, bracts oblong persistent, sepals $\frac{1}{2}$ in. ovate obtuse. *Convolvulus pomaceus*, Wall. Cat. 1419, partly.

NILGHERRIES, alt. 6000 ft.; Wight, &c.

Differs little from *A. Leschenaultii* except that the leaves are only half as wide (2–2½ in.) and much more shaggy, often rufescent somewhat shining beneath. It is also very near *A. pomacea*, but has larger sepals and peduncles often 2–3 in.

17. **A. malabarica**, Chois. *Convolv. Or.* 38, and in *DC. Prodr.* ix. 331; stem pubescent, leaves ovate-cordate acute sparsely hispid on both surfaces ultimately nearly glabrous, peduncles 2–5 in., bracts elliptic or oblong, sepals in fruit $\frac{1}{2}$ – $\frac{3}{4}$ in. elliptic-lanceolate. *Dalz. & Gibs. Bomb. Fl.* 169. *Convolvulus malabaricus*, Linn.; *Blume Bijd.* 715, not of Roxb. C. Rottleri, Spreng. *Syst. cur. post.* 61? *Ipomœa malabarica*, Roem. & Sch. iv. 235.—*Rheede Hort. Mal.* xi. t. 51.

MALABAR and COROMANDEL (Choisy).—DISTRIB. Java, Cochin China (Choisy.)

Founded on Rheede's plate, no authentic example being seen by any author, with which, however, Wight's Herb. n. 2353 (named *A. Leschenaultii*) very closely agrees. —Wight had a ms. species, *A. courtallensis*, in his Herb., the plant on which Choisy founded his *A. Leschenaultii*. Hence, Wight having the name *A. Leschenaultii* in excess, applied it to his n. 2353; but the three species are so near that they might be made one.

18. **A. hirsuta**, Arn. *Pugill. Pl. Ind. Or.* 38; leaves ovate-cordate acute villous above shaggy beneath, peduncles very long patently hispid, bracts prominent linear or oblong outer often petioled leaflike, sepals $\frac{1}{2}$ in. ovate obtuse. Chois. in *DC. Prodr.* ix. 330; *Bot. Mag.* t. 4946. *Rivea hirsuta*, Wight *Ic.* t. 891.

NILGHERRY MTS., common; Wight, &c.

Probably, as Arnott suggests, a large form of *A. nellygherya*, which the sepals, corolla, and fruit resemble. The peduncles are often 4–8 in., and the outer petioled bract makes the cymes pseudo-sessile. The needle-like hairs on the stems and peduncles also give the plant a different aspect.

VAR. *coacta*; leaves cordate triangular-ovate acute closely shortly silky beneath, peduncles very long, bracts large elliptic-oblong flat sparsely hairy. *Rivea zeylanica*, var. β *hirsuta*, Thwaites *Enum.* 209.—Ceylon, alt. 4000 feet, Thwaites, &c. This in its indumentum and the more triangular leaves does not agree at all closely with *A. hirsuta*, Arn.

19. **A. pilosa**, Arn. *Pugill. Pl. Ind. Or.* 38; leaves ovate subcordate acute hairy on both surfaces, peduncles shorter than the leaves, flowers capitate, bracts linear persistent, sepals elliptic-lanceolate acute often bristly upwards. Chois. in *DC. Prodr.* ix. 330.—*Argyreia*, n. 22 and 24, *Herb. Ind. Or. H.* f. & T.

WESTERN DECCAN PENINSULA, the CONCAN, CANARA, and MYSORE; Law, Ritchie, &c.

A powerful twiner. Leaves 2–6 in., base rounded or slightly cordate, fulvous-strigose beneath or sometimes green less hairy; petiole long. Peduncles $\frac{1}{2}$ –4 in., variable in length, stout; bracts $\frac{3}{4}$ by $\frac{1}{8}$ in., bristly. Sepals $\frac{1}{2}$ – $\frac{1}{2}$ in. Corolla 2 in., tubular-funnel-shaped, hirsute without. *Berry* $\frac{3}{4}$ in. diam.—The specimens of *H. f.*

♂ *T. n.* 22 have the leaves densely hairy, almost shaggy, fulvous beneath; while here those of *n.* 24 are strigose green beneath; both have very acute sepals.

20. **A. Lawii**, *Clarke*; leaves elliptic acute base rhomboid or rounded softly strigose on both surfaces, peduncles elongated, cymes small dense, bracts narrowly oblong, sepals $\frac{1}{4}$ in. ovate obtuse.—*Argyrea n.* 28, *Herb. Ind. Or. H. f. & T.*

THE CONCAN AND MALABAR, Bababoodan Hills, *Law*, &c.

Scandent, subsericeous. *Leaves* 4 by 2 in., whiter beneath; petiole 1-2 in. *Peduncles* 2-5 in., silky, white, slenderer than in the foregoing species; bracts $\frac{2}{3}$ by $\frac{1}{2}$ in. *Cyme* dichotomous 3-9-fl., with one in the fork; flowers subsessile. *Corolla* 2 in. and upwards, tubular-campanulate, hairy without. *Fruit* not seen.—Appears closely allied to *A. Choisyana*, but the sepals differ widely.

21. **A. Choisyana**, *Wight ms.*; leaves subcordate elliptic-oblong hairy on both surfaces, peduncles 1-3-fl. shorter than the leaves, bracts narrowly oblong, sepals $\frac{1}{2}$ - $\frac{1}{2}$ in. elliptic-lanceolate acuminate. *Batatas Choisyana*, *Wight Ic. t.* 491.

MADRAS; Balaghaut Hills, *Wight*.

A twiner, patently hirsute. *Leaves* 2 by 1 in., subobtusely, densely strigose above, silky somewhat shining beneath; petiole $\frac{1}{2}$ - $\frac{2}{3}$ in. *Peduncles* 1-2 in., hirsute, often with 1 or 2 silky shining subfoliaceous bracts remote from the flowers; proper bracts $\frac{3}{4}$ by $\frac{1}{2}$ in. *Corolla* nearly 2 in., tubular-funnel-shaped, hirsute without. *Ovary* 4-celled. *Fruit* not seen.—Neither the leaves, flowers, ovary or bracts of this species resemble those of *Ipomœa atropurpurea* to which Choisy (in *DC. Prodr.* ix. 366) has reduced it.

VAR. ? *Wightii*; leaves rhomboid at the base glabrous above sparsely strigose beneath, sepals strigose margins scarious, corolla $2\frac{1}{2}$ in. and upwards.—Madras; Condauputy and other hills, *Wight*. This may be a new species, but it is only a fragment in flower.

22. **A. Daltoni**, *Clarke*; leaves large elliptic or oblong acute glabrate above fulvous-strigose beneath, peduncles elongate, corymbs lax, bracts narrowly oblong persistent, sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. ovate-oblong.

CHOTA NAGPORE; Bundgao in Singhboom, alt. 2000 ft., *Clarke*.

A large climber. *Leaves* attaining 9 by 4 in., base usually unequal cuneate, sometimes rounded, primary nerves very oblique; petiole 1-3 in. *Peduncles* 2-4 in., rigid, fulvous-silky; bracts $\frac{3}{4}$ in., often narrowly subspathulate. *Corolla* 2 in., shaggy without. *Sepals* fulvous-strigose in fruit, coriaceous, concave, two inner shorter glabrate on the margins. *Berry* $\frac{2}{3}$ in. diam., pulpose.—Named after Gen. Dalton, Commissioner of Chota Nagpore.

23. **A. cymosa**, *Sweet Hort. Brit. ed.* 2, 373; grey pruinose-pubescent, leaves ovate-cordate shortly acuminate, peduncles long, corymbs often branched, flowers densely capitate at the ends of the branches, bracts orbicular persistent, sepals ovate obtuse. *Chois. Convolv. Or.* 46, and in *DC. Prodr.* ix. 333; *Wight Ic. t.* 839. *Lettomia cymosa*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 492, and *ed. Carey & Wall.* ii. 82. *Convolvulus glomeratus*, *Wall. Cat.* 2257.

DECCAN PENINSULA, frequent; *Rottler, Wight, &c.*—DISTRIB. Philippines.

Scandent. *Leaves* 2-4 in. diam.; petiole 1-3 in. *Peduncles* 1-4 in.; corymbs 1-4 in. diam., sometimes reduced to single heads; bracts $\frac{1}{2}$ in. diam. *Sepals* $\frac{1}{2}$ - $\frac{1}{3}$ in., somewhat enlarged in fruit. *Corolla* 2 in., tubular-funnel-shaped, hairy without. *Stamens* not exserted. *Berry* $\frac{3}{4}$ in. diam., pulpose.—This is the *Convolvulus malabaricus* of Heyne in *Herb. Rottler*; and, as it is frequent in the Peninsula, it is probably *Convolvulus malabaricus*, Linn., though Linnæus founds his *C. malabaricus* on a plate of Rheedé's, which is *A. malabarica*, Choisy.

** *Stems suberect.*

24. **A. cuneata**, *Ker in Bot. Reg.* t. 661; leaves short-petioled elliptic or obovate villous beneath, peduncles numerous short few-fl'd., corolla bright-purple. *Chois. Convolv. Or.* 34, and in *DC. Prodr.* ix. 330; *Dalz. & Gibs. Bomb. Fl.* 169; *Brand. For. Fl.* 344. *Lettsomia cuneata*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 491, and *ed. Carey & Wall.* ii. 81. *Convolvulus cuneatus*, *Willd. Sp. Pl.* i. 873; *Wall. Cat.* 1366. *Rivea cuneata*, *Wight in Hook. Journ. Bot.* iii. 199; *Chois. in DC. Prodr.* ix. 327; *Wight Ic.* t. 890. *Ipomœa atrosanguinea*, *Bot. Mag.* t. 2170, not of *Chois.*

DECCAN PENINSULA, common.

Shrubby; 2-5 feet; branches often almost virgate, sometimes somewhat twining. *Leaves* 2-4 in., obtuse mucronate or emarginate, glabrate above; petiole $\frac{1}{4}$ - $\frac{1}{3}$ in. *Peduncles* 0-1 $\frac{1}{2}$ in., often 3-flowered; bracts deciduous. *Sepals* $\frac{1}{2}$ in., ovate, subobtuse, *Corolla* 2 in., tubular-funnel-shaped, hairy without. *Ovary* 4-celled; *Fruit* $\frac{2}{3}$ in., ovoid, shining, yellow-brown, nearly dry.

25. **A. fulgens**, *Chois. Convolv. Or.* 33, and in *DC. Prodr.* ix. 329; leaves long-petioled elliptic acute densely silky shining beneath, peduncles numerous short few-fl'd. *Wight in Calc. Journ. Nat. Hist.* viii. 179, t. 5, fig. 3, and *Ic.* t. 1357. *Convolvulus fulgens*, *Wall. Cat.* 1394.

S. DECCAN PENINSULA; *Heyne*; *Courtallum*, *Wight*.

Branches straight, silky white. *Leaves* 4 by 1 $\frac{3}{4}$ in., acuminate, base rounded or rhomboid, glabrate above; petiole 1-2 in. *Peduncles* 1 in., 3-7-fl'd.; bracts deciduous. *Sepals* $\frac{1}{2}$ in., elliptic, subobtuse. *Corolla* 2 in. and upwards, tubular-campanulate, glabrous without, or when young strigose near the tip, appears to have been very dark in colour. *Ovary* 4-celled. *Fruit* not seen.—In habit closely allied to *A. cuneata*.

4. **LETTSOMIA**, *Roxb.*

Scandent more or less hairy shrubs. *Leaves* alternate, undivided, base often rounded or cordate. *Cymes* axillary, peduncled, densely corymbose or capitate, bracteate. *Sepals* orbicular elliptic or oblong, in fruit often somewhat thickened or enlarged. *Corolla* tubular-funnel-shaped; limb plicate, lobes usually shallow. *Stamens* included or exerted; anthers oblong or linear, never twisting. *Ovary* 2-celled, 4-ovuled; disc annular, usually prominent; style filiform, stigmas 2 subsessile globose. *Fruit* indehiscent. *Seeds* 4-1.—Species 32, East Asiatic and Tropical Africa.

SUBGENUS I. **Eulettsonia**. Fruit 4-1-seeded, 1-seeded capsules occurring as the rule of no one species.

* *Corolla less than 1 in., limb lobed; anthers distinctly exerted.*

1. **L. aggregata**, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 488, and *ed. Carey & Wall.* ii. 76; leaves ovate cordate subacute glabrous above white-woolly beneath, peduncles grooved when dry shorter than the leaves, flowers capitate, bracts orbicular closely woolly subpersistent, sepals nearly as long as the bracts ovate white-tomentose. *Wight in Calc. Journ. Nat. Hist.* viii. 179, t. 5, fig. 4, and *Ic.* t. 1359; *Kurz For. Fl.* ii. 216. *Convolvulus orixensis*, *Rottl.*; *Wall. Cat.* 1362. *C. imbricatus*, *Spreng. Syst.* i. 613. *Ipomœa imbricata*, *Roth Nov. Sp.* 112. *Argyreia aggregata*, *Chois. Convolv. Or.* 45, and in *DC. Prodr.* ix. 333; *Dalz. & Gibs. Bomb. Fl.* 169.

DECCAN PENINSULA, frequent; *Wight*, *Dalzell*, &c.

A scandent shrub; branches closely white-tomentose. *Leaves* 1-4 in., somewhat wrinkled above; petiole 1 in. *Peduncles* 0-2 in.; bracts $\frac{1}{3}$ - $\frac{1}{2}$ in. *Corolla* $\frac{2}{3}$ in.,

tubular-campanulate, rose-coloured, hirsute without. *Capsule* $\frac{1}{2}$ in., red, as are the fruiting sepals within.

VAR. osyrensis; leaves softly hairy above white-tomentose or somewhat fuscous, villous beneath. *Ipomæa osyrensis*, *Roth Nov. Sp.* 117. *Argyreia osyrensis*, *Chois. in DC. Prodr.* ix. 334.—Deccan Peninsula, frequent. Tenasserim, *Helfer*. Ceylon, abundant.—*DISTRIB.* Ava.

2. *L. mysorensis*, *Clarke*; leaves elliptic cordate mucronate glabrous above white-tomentose beneath, peduncles long grooved when dry, corymbs small, bracts shorter than the sepals deciduous, outer sepals ovate inner much smaller narrow.—*Argyreia* n. 29, *Herb. Ind. Or. H. f. & T.*

MYSOORE; *G. Thomson*.

Scandent; branches closely white-tomentose. *Leaves* 5 by 3 in., subobtus with a mucro; petiole 3 in. *Peduncles* 3-5 in.; outer bracts $\frac{1}{4}$ in., obovate, white-tomentose, caducous, inner $\frac{1}{4}$ in., oblong; outer sepals $\frac{1}{2}$ in. white-tomentose, inner $\frac{1}{4}$ in. oblong. *Corolla* as of *L. aggregata*. *Anthers* exserted. *Fruit* not seen.—Closely allied to *L. aggregata*.

3. *L. bella*, *Clarke*; leaves ovate-cordate acute glabrous or softly hairy above white-tomentose beneath, peduncles terete shorter than the leaves, flowers capitate, bracts small spatulate or oblong, outer sepals elliptic densely white hirsute.

CHOTA NAGPORE, alt. 2000 ft., frequent; *Clarke*.

Scandent; branches white-woolly. *Leaves* 4 in.; petiole 3 in. *Peduncles* $\frac{1}{2}$ -3 in., rarely exceeding the petioles; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in. Outer sepals $\frac{1}{2}$ - $\frac{1}{2}$ in., elliptic-lanceolate, in fruit enlarged, subovate, coriaceous; inner sepals gradually smaller; sepals all densely patently white-hirsute. *Corolla* as of *L. aggregata*, more hirsute. *Anthers* exsert. *Capsule* $\frac{1}{4}$ in., red.—*Convolvulus vestitus*, *Wall. Cat.* 1411, from the Nepal Terai, appears to be this plant; but, if so, Wallich's flowers which are $1\frac{1}{2}$ in. long, cannot belong to it.

4. *L. bracteosa*, *Clarke*; leaves elliptic acute glabrescent above sparingly fuscous-villous beneath, peduncles short, flowers capitate, bracts $\frac{3}{4}$ in. orbicular tomentose persistent, sepals $\frac{1}{2}$ in. orbicular in fruit.

PEGU; *McLelland, &c.*

Scandent; branches glabrescent. *Leaves* 3 by $1\frac{1}{4}$ in.; petiole 1 in. *Peduncles* $\frac{1}{2}$ in., woolly; heads dense, softly hirsute. *Flowers* not seen. *Capsule* red.—Resembles *Convolvulus multibracteatus*, *Wall. Cat.* 1408 (= *Argyreia tomentosa*, *Chois. in DC. Prodr.* ix. 333), from Ava, in which the bracts are ovate shortly acute, the sepals linear-lanceolate.

** *Corolla more than 1 in. long, anthers included.*

5. *L. elliptica*, *Wight, note to Ic. t.* 1356; leaves elliptic subacute glabrescent above sparsely strigose beneath, corymbs loose, bracts caducous, sepals $\frac{1}{2}$ in. ovate, corolla $1\frac{1}{4}$ in. nearly glabrous without. *C. ellipticus*, *Spreng. Syst.* i. 613; *Wall. Cat.* 1380. *C. laurifolius*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 470, and *ed. Carey & Wall.* ii. 50, 573. *Ipomæa elliptica*, *Roth Nov. Sp.* 113. *I. laurifolia*, *Sweet Hort. Brit. ed.* 2. 372. *Argyreia elliptica*, *Chois. Convolv. Or.* 35, and in *DC. Prodr.* ix. 330 (*excl. syn. Wall. Cat.* 1381, 1417); *Dalz. & Gibs. Bomb. Fl.* 169.

DECCAN PENINSULA, *Wight, &c.* *CEYLON*; central province, not uncommon.

Scandent; innovations villous, soon glabrous or sparingly grey-pubescent. *Leaves* 4 by 2 in., base rhomboid or rounded; petiole $1\frac{1}{2}$ in. *Peduncles* 2-5 in., or short, or leafy, 0 when the corymbs have an outer bract; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. *Sepals* obtuse, in fruit orbicular, coriaceous, patent. *Corolla* pale purple. *Berry* $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., depressed-globose, orange-brown.

6. **L. Thomsoni**, *Clarke*; leaves ovate-lanceolate cordate sparsely strigose on both surfaces, peduncles scattered mostly as long as the petioles, flowers capitate, bracts $\frac{1}{3}$ – $\frac{1}{2}$ in. spatulate-oblong sparsely villous caducous, sepals $\frac{1}{2}$ – $\frac{3}{4}$ in. ovate acute densely patently hirsute. *Argyreia capitata*, *Brand.* *For. Fl.* 343, not of *Chois.*

SUBTROPICAL HIMALAYA, alt. 0–4000 ft., from Gurwhal to Sikkim, common; *Royle, Thomson, J. D. H., &c.*

Scandent; stems sparsely villous. *Leaves* 5 by $2\frac{1}{4}$ in., acuminate; petiole 2 in. *Peduncles* 2–5 in.; bracts shorter than, and much less hirsute than the sepals, sometimes subsistent. *Sepals* with soft fulvous hairs $\frac{1}{2}$ – $\frac{3}{4}$ in. long, in fruit coriaceous slightly enlarged. *Corolla* nearly 2 in., rose-purple, hirsute without. *Capsule* usually 4–2-seeded.

7. **L. hirsutissima**, *Clarke*; leaves ovate-cordate acute softly dusky villous on both surfaces, peduncles short collected towards the ends of the branches, flowers capitate, bracts $\frac{1}{3}$ in. oblong villous deciduous, sepals $\frac{1}{2}$ – $\frac{3}{4}$ in. elliptic acute densely patently hirsute. *Convolvulus hirsutissimus*, *Wall. Cat.* 1400. *Argyreia capitata* β conferta, *Chois. in DC. Prodr.* ix. 332.

SIKKIM HIMALAYA, alt. 5000 ft.; *Tendong, Clarke.*—DISTRIB. Ava.

Perhaps only a villous mountain form of *L. Thomsoni*. *Leaves* villous or almost silky. *Peduncles* $\frac{1}{2}$ –2 in., rigid, forming as it were a narrow terminal dense panicle.

8. **L. strigosa**, *Roxb. Hort. Beng.* 13, and *Fl. Ind. ed. Carey & Wall.* ii. 80; leaves cordate suborbicular suddenly short acuminate sparsely hispid on both surfaces, peduncles long, flowers capitate, bracts 1 in. elliptic-oblong sparsely hispid persistent, sepals unequal smaller than the bracts densely bristle-hispid. *L. capitata*, *Miq. Fl. Ind. Bat.* ii. 591. *Convolvulus strigosus*, *Wall. Cat.* 1365, type-sheet. *C. capitatus*, *Vahl Symb.* iii. 28. *C. capitiformis*, *Poir. Enc. Suppl.* iii. 469. *Ipomæa capitata*, *Roem. & Sch. Syst.* iv. 238, not of *Chois.* *Argyreia capitata*, *Chois. Convolv. Or.* 41, and in *DC. Prodr.* ix. 332, in part.

BENGAL PLAIN, and ASSAM, common; extending into subtropical valleys of the adjacent mountains.—DISTRIB. Java.

A powerful climber; branches hispid. *Leaves* 5 by $4\frac{1}{4}$ in., usually very obtuse, covered with needle-like fulvous long straight patent hairs, as is nearly the whole plant; petiole 2 in. *Peduncles* 2–4 in.; bracts much less copiously bristly than the sepals. *Sepals* $\frac{1}{2}$ – $\frac{3}{4}$ in.; outermost elliptic, inner almost linear, coriaceous in fruit. *Corolla* 2 in. purple, hispid without. *Capsule* $\frac{1}{4}$ in., papery, usually 4–2-seeded.

9. **L. peguensis**, *Clarke*; leaves ovate-lanceolate cordate densely softly hairy on both surfaces, peduncles long, flowers capitate, bracts 1 in. elliptic-oblong softly densely hairy subsistent, sepals unequal smaller than the bracts densely hispid. *Argyreia capitata*, *Kurz For. Fl.* ii. 216; *Choisy in DC. Prodr.* ix. 332, chiefly. *Convolvulus strigosus*, *Wall. Cat.* 1365, partly.

BRITISH BURMA, common; *Griffith, Parish, &c.* TAVOY; *Wallich.* ANDAMANS, *Helper, &c.*

Perhaps only a marked local variety of *L. strigosa*, as *Choisy* and *Kurz* have esteemed it; is very constant in its characters and general aspect. *Stem* villous or woolly, without the needle-like hairs of *L. strigosa*. *Leaves* gradually narrowed upwards. *Corolla* softly sparsely hairy without.

10. **L. barbiger**, *Clarke*; leaves ovate-lanceolate cordate sparsely hirsute on both surfaces, peduncles long, flowers capitate, bracts $\frac{1}{3}$ – $\frac{1}{2}$ in. ovate obtuse persistent, sepals ovate and elliptic longer than the bracts densely subpatently hirsute. *Convolvulus barbiger*, *Wall. Cat.* 1404. *Pharbitis barbiger*,

G. Don. Gen. Syst. iv. 262. *Argyreia barbigera*, *Chois. Convolv. Or.* 42, and in *DC. Prodr.* ix. 332; *Brand. For. Fl.* 343.

ASSAM; *Jenkins*. BRITISH BURMA; *Promé, Wallich*.

Probably a var. of *L. setosa*; it differs in the capitate inflorescence and spreading almost hispid backs of the sepals.

11. *L. setosa*, *Roxb. Hort. Beng.* 13, and in *Fl. Ind.* i. 490, and *ed. Carey & Wall.* ii. 80; leaves ovate-cordate acute or subobtuse sparsely hirsute on both surfaces, peduncles long, corymbs dense, bracts $\frac{1}{2}$ – $\frac{1}{3}$ in. ovate obtuse adpressedly strigose persistent, sepals ovate or elliptic longer than the bracts densely adpressedly strigose. *Wight Ic.* t. 1360. *Convolvulus setosus*, *Wall. Cat.* 1412. *C. strigosus*, *Spreng. Syst.* i. 600. *Ipomœa strigosa*, *Roth Nov. Sp.* 113. *Argyreia setosa*, *Chois. Convolv. Or.* 43, and in *DC. Prodr.* ix. 332; *Dalz. & Gibs. Bomb. Fl.* 168; *Brand. For. Fl.* 343.

Throughout tropical and subtropical INDIA, from Oudh, Mt. Aboo and Bombay, to Pegu. CEYLON.

A large climber; branches adpressedly strigose. *Leaves* 3–5 in., in age sometimes nearly glabrous; petiole 1–3 in. *Peduncles* 2–8 in., stout, adpressedly strigose; bracts coriaceous, very obtuse, at length deciduous; corymbs 1–4 in. diam., dense, but not capitate, branches thick. *Sepals* ovate, inner elliptic, very coriaceous, somewhat enlarged in fruit. *Corolla* $1\frac{1}{2}$ –2 in., densely setose without, rose-coloured. *Stamens* included. *Berry* much more succulent than in *L. strigosa*, ovoid, subacute, red, usually 4–2-seeded.

VAR. *minor*; leaves 1–2 in., peduncles 1 in., flowers capitate.—*Argyreia* n. 21, *Herb. Ind. Or. H. f. & T.*—Deccan Peninsula, *Wight*; S. Concan and Bababoodan Hills, *Lav.*

VAR. *obovata*; leaves large 6 by 5 in. obovate obtuse or emarginate, fruit of *L. setosa*. *Convolvulus obovatus*, *Wall. Cat.* 1381.—Nepal; *Wallich*.—Reduced to *L. elliptica* by *Choisy (DC. Prodr.* ix. 330, under *Argyreia*), from which it is certain that the true *Convolvulus obovatus*, now in the Wallichian herbarium, was not detected by *Choisy* among *Wallich's* collections, which were placed loose in his hands. Several species not found by *Choisy* appear to have been afterwards identified correctly by *Kippist*, the Librarian of the Linnæan Society, in arranging the herbarium.

12. *L. atropurpurea*, *Clarke*; leaves elliptic-lanceolate cordate sparsely hirsute on both surfaces, heads dense subsessile, bracts large oblong-lanceolate persistent. *Convolvulus atropurpureus*, *Wall. Cat.* 1345, and *Fl. Ind. ed. Carey & Wall.* ii. 54, and *Pl. As. Rar.* i. 38, t. 43. *Ipomœa atropurpurea*, *Chois. Convolv. Or.* 75, and in *DC. Prodr.* ix. 366 (syn. partly excl.). *I. sphærocephala*, *Don. Prodr.* 98, syn. excl.

NEPAL; *Wallich*. SIKKIM TERAI; *J. D. H., &c.*

A large climber. *Leaves* 6 by 2½ in., base deeply cordate; petiole 1½ in. *Peduncles* 0–½ in., fulvous-hirsute; bracts 1½ in., acuminate, softly hirsute. *Sepals* $\frac{3}{4}$ in., oblong-lanceolate, herbaceous, softly hairy, lax in fruit. *Corolla* 1½ in., tubular-campanulate, hirsute without, dark-purple, or in a Sikkim example, white. *Fruit* $\frac{1}{2}$ in. diam., globose, coriaceous, indehiscent, usually 4–2-seeded.

13. *L. sikkimensis*, *Clarke*; leaves large elliptic shortly acuminate at both ends or subobtuse sparsely hairy beneath, peduncles long, corymbs small few-fl'd., bracts linear-oblong, sepals $\frac{1}{4}$ in. round nearly glabrous.—*Argyreia* n. 12, *Herb. Ind. Or. H. f. & T.*

SIKKIM; Pomong, alt. 3000 ft., *Clarke*. KHASIA Mts., SILHET and CACHAR, *H. f. & T., Keenan*.

A large twiner; stems closely strigose. *Leaves* 5½ by 3 in., base usually shortly cuneate, sometimes rounded; petiole 2–5 in. *Peduncles* 3–8 in., somewhat slender; bracts $\frac{1}{2}$ –1 in., inconspicuous, deciduous, or one of the outer sometimes leaflike

petioled. *Calyx* very small for the flower. *Corolla* $2\frac{1}{3}$ –3 in., widely tubular-funnel-shaped, nearly glabrous without, purple. *Stamens* included; anthers not twisted. *Ovary* 2-celled; stigmas 2, sessile, globose.—*Fruit* not seen, hence this may be an *Ipomœa*; but the large long-petioled leaves and large wide-tubed corollas indicate rather *Lettsomia*. This resembles *L. elliptica*, Wight, which has smaller flowers, more numerous in the corymbs.

14. ***L. rubens*, Clarke**; leaves ovate-cordate shortly acuminate sparingly hairy beneath, peduncles long 1–5-fld., bracts caducous, sepals widely elliptic obtuse sparsely softly hairy. *Convolvulus rubens*, Wall. Cat. 1421. *Ipomœa rubens*, Choisy. *Convolv. Or.* 81, and in *DC. Prodr.* ix. 371, var. *a*.

ASSAM; Goalpara, Wallich. BENGAL; Silhet, Wallich, H. f. & T.; Cachar, Keenan.

Scandent; stems sparsely softly hairy. *Leaves* 4 by 3 in., somewhat deeply cordate; petiole 2–3 in. *Peduncles* 2–4½ in.; bracts deciduous before the flowers expand; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in. *Sepals* $\frac{1}{4}$ – $\frac{1}{2}$ in. *Corolla* 1½–2 in., widely tubular-funnel-shaped, softly silky without on the plaits, at least when young, rose-purple. *Ovary* 2-celled; stigmas 2, sessile, globose. *Fruit* not seen.—From the habit and few-flowered peduncles, this has been supposed a *Rivea*; but the ovary is 2-celled. The var. *lanata*, Choisy, is founded on *Convolvulus glandulosus*, Ham. in Wall. Cat. 2252, collected in Lower Assam. This plant is not now in Wallich's herbarium, but from the description it may have been *Argyreia Roxburghii*, Choisy.

15. ***L. barbata*, Clarke**; leaves oblong acuminate or elongate-lanceolate shining fulvous-silky beneath, heads few-fld. subsessile, bracts 1 in. filiform persistent. *Convolvulus barbatus*, Wall. Cat. 1391, and *Pl. As. Rar.* ii. 45, t. 155. *Ipomœa barbata*, Choisy. *Convolv. Or.* 76, and in *DC. Prodr.* ix. 366, not of Roth.

PEGU; Wallich. TENASSERIM; Helfer; Mergui, Griffith.

Scandent, stems with bright long fulvous hairs; innovations densely silky. *Leaves* in Wallich's type oblong or subelliptic acute (in numerous other examples very narrow, $7\frac{1}{2}$ by $1\frac{1}{2}$ in.), sparsely or densely fulvous-hairy beneath, sparingly hairy above; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in. *Peduncle* 0–½ in.; bracts numerous, scarcely $\frac{1}{12}$ in. broad, fulvous-hirsute. *Sepals* $\frac{1}{3}$ in., elliptic-lanceolate, in fruit ovate. *Corolla* $1\frac{1}{4}$ in., widely tubular-campanulate, pale rose-coloured, glabrous without. *Berry* $\frac{1}{3}$ in. diam.; depressed-globose, reddish, usually 4–2-seeded.

SUBGENUS 2. ***Moorcroftia***. *Fruit* 1- rarely 2-seeded.

16. ***L. rubicunda*, Clarke**; leaves large elliptic shortly acute fuscous-villous beneath, peduncles long, bracts deciduous, corymbs compound open, sepals round obtuse fuscous-woolly. *Convolvulus rubicundus*, Wall. Cat. 1409. *Argyreia rubicunda*, Choisy. *Convolv. Or.* 44, and in *DC. Prodr.* ix. 333.—*Argyreia* n. 26, *Herb. Ind. Or. H. f. & T.*

MALACCA; Griffith, Maingay.—DISTRIB. Ava.

A powerful climber; stems fulvous-villous. *Leaves* $6\frac{1}{2}$ by 4 in., base rounded, in age glabrate above, thick; petiole 1–2 in. *Peduncles* 3–7 in., fulvous-lanate; corymbs 2–6 in. diam., many-fld.; bracts caducous before the flowers expand. *Sepals* $\frac{1}{2}$ in., in fruit $\frac{1}{3}$ in., inner somewhat smaller. *Corolla* $\frac{3}{4}$ in., densely fulvous-hirsute without. *Fruit* $\frac{3}{4}$ by $\frac{1}{2}$ – $\frac{1}{3}$ in., ellipsoid, obtuse, smooth, nearly dry, lower half closely embraced by the calyx.

17. ***L. Maingayi*, Clarke**; leaves large elliptic acute glabrescent, heads large subsessile, bracts large ovate-lanceolate persistent, sepals linear-lanceolate.

MALAY PENINSULA, Griffith; Malacca, Maingay.

A large climber; branches stout, sparsely patently hairy. *Leaves* $6\frac{1}{2}$ by $3\frac{1}{2}$ in.,

base rhomboid or rounded, adult glabrous or with scattered fulvous hairs on the nerves beneath, coriaceous; petiole $\frac{1}{2}$ -1 in. *Peduncles* 0- $\frac{1}{2}$ in., fulvous-hirsute; heads 2-3 in. diam., very dense; bracts nearly 2 by 1 in., sparsely hairy. *Sepals* 1 in. and upwards; flower-buds densely hairy without. *Berry* $\frac{3}{4}$ by $\frac{1}{2}$ in., ellipsoid, very succulent, 1-seeded. Expanded flowers not seen.

18. ***L. hancorniaefolia***, *Clarke*; leaves elliptic acuminate glabrous, peduncles short 1-fld., sepals ovate subobtusely ashy pubescent. *Argyreia hancorniaefolia*, *Gardn.*; *Thwaites Enum.* 210.

CEYLON; ascending to 5000 ft., *Walker*, &c.

Scandent; branches ashy-pubescent, afterwards glabrate. *Leaves* 3 by $\frac{1}{2}$ in., base rounded; nerves at right angles to the midrib, very fine and close; petiole $1\frac{1}{2}$ in. *Peduncles* $\frac{1}{4}$ - $\frac{3}{4}$ in., ashy-pubescent; bracts near the middle, $\frac{3}{4}$ in., linear, caducous. *Sepals* $\frac{1}{4}$ in. *Corolla* $1\frac{1}{2}$ in., tubular-funnel-shaped, glabrous without, purple. *Ovary* 2-celled; stigmas 2, globose. *Berry* 1 by $\frac{2}{3}$ in., ellipsoid, very succulent, 1-seeded.

19. ***L. adpressa***, *Miq. Fl. Ind. Bat.* ii. 591; leaves elliptic acute hairy on both surfaces, peduncles very short, cymes small, bracts small lanceolate hairy. *Convolvulus adpressus*, *Wall. Cat.* 1424. *Moorcroftia adpressa*, *Chois.* *Convolv. Or.* 49, and in *DC. Prodr.* ix. 334.

PENANG; *Wallich*, *Maingay*, &c.

Shrubby (? scandent); branches hairy. *Leaves* $4\frac{1}{2}$ by 2 in., base obtuse or cuneate; petiole $1\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ - $1\frac{1}{2}$ in., hirsute; bracts $\frac{1}{4}$ by $\frac{1}{2}$ in., a leaflike bract sometimes added; pedicels 0- $\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ - $\frac{1}{2}$ in., narrowly lanceolate, sparsely hirsute. *Corolla* $1\frac{1}{2}$ in., hirsute without. *Berry* $\frac{1}{2}$ in., ellipsoid.

20. ***L. penangiana***, *Miq. Fl. Ind. Bat.* ii. 592; leaves elliptic-oblong adult glabrous or midrib beneath sparsely hairy, peduncles elongate slender glabrate, cymes lax, bracts inconspicuous. *Convolvulus penangianus*, *Wall. Cat.* 1425. *Moorcroftia penangiana*, *Chois. Convolv. Or.* 50, t. 4, and in *DC. Prodr.* ix. 335.

PENANG; *Wallich*.

Scandent; innovations thinly fulvous-hirsute. *Leaves* 6 by $2\frac{1}{2}$ in., base obtuse or cuneate, coriaceous; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Peduncles* 2-4 in.; pedicels (many of them) $\frac{1}{4}$ - $\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ in., ovate, obtuse, sparsely hirsute. *Corolla* (only seen in *Choisy's* picture) $1\frac{3}{4}$ in., tubular-funnel-shaped, hirsute without. *Berry* $\frac{2}{3}$ by $\frac{1}{2}$ in., ovoid.—Nearly allied to *L. adpressa*, but only one specimen seen.

21. ***L. ? Kurzii***, *Clarke*; leaves ovate subcordate very sparingly hairy beneath, peduncles long, cymes few-flowered, bracts $\frac{1}{2}$ in. linear, sepals $\frac{1}{2}$ in. linear-oblong, capsule berry-like yellow size of a pea usually 1-seeded. *Argyreia zeylanica*, *Kurz For. Fl.* ii. 215, *syn. excl.*

PEGU, not rare in the upper forests (*Kurz*).

An extensive twiner; young shoots sparingly adpressed-hairy. *Leaves* 3-5 in., sometimes a foot long and broad. *Peduncle* 5-8 in. *Corolla* large, funnel-bell-shaped, pink; tube $1\frac{1}{2}$ in., lobes of the limb triangular blunt.—Not seen; the foregoing copied from *Kurz*, who supposed this plant to be *Ipomœa zeylanica*, *Gaertn.*, which does not grow in Burma; nor will *Kurz's* description of the fruit suit, which, if correctly described as a 1-seeded berry no bigger than a pea; it may possibly be a *Porana*.

5. **IPOMÆA**, *Linn.*

Herbs, rarely shrubs, twining or prostrate, less often suberect. *Leaves* alternate, entire, lobed or divided. *Cymes* axillary, 1- many-flid.; bracts various. *Flowers* purple, white or yellow, usually showy. *Sepals* ovate or linear, equal or unequal, in fruit erect or rarely patent. *Corolla* campanulate

or funnel-shaped, tube long or short; limb 5-plaited, margin very shortly lobed. *Stamens* unequal, included or exserted; filaments filiform or dilated at base, often hairy, not with processes subconnivent over the ovary; anthers oblong, ultimately twisted or straight. *Ovary* 2-celled, 4-ovuled, rarely 4-celled and 4-ovuled (subgenus *Quamoclit*), or 3-celled and 6-ovuled (subgenus *Pharbitis*); disc annular; style filiform, stigma entire or 2-globose. *Capsule* globose or ovoid, 4-3- (rarely sub-2-) valved. *Seeds* as many as the ovules, or fewer.—Species 300, in the warmer regions of both hemispheres.

SUBGENUS I. **Calonyction**, *Chois. in DC. Prodr.* ix. 345 (genus). *Corolla-tube* elongate, 2-6 in., many-times longer than the sepals. *Stamens* about as long as the corolla-tube. *Ovary* 2-celled.

1. **I. bona-nox**, *Linn. Sp. Pl.* 228, as to the American plant only, not of *Gaertn.*; stem smooth or muricate, leaves cordate ovate acute glabrous entire or angular or lobed, peduncles long 1-5-flowered, flowering sepals ovate mucronate or shortly acute rarely obtuse, corolla white tube linear, capsule 1 in. ovoid-oblong, seeds glabrous. *Cav. Ic.* iii. 52, t. 300; *Bot. Mag.* t. 752; *Jacq. Hort. Schoenb.* i. 13, t. 36; *Benth. in Hook. Fl. Nigrit.* 465; *Meissn. in Mart. Brasil.* vii. 215. *Calonyction speciosum*, *Chois. Convolv. Or.* 59, t. 1, fig. 4, and in *DC. Prodr.* ix. 345, as to the American plant and synonyms only.

Cultivated throughout INDIA, native of tropical America.

VAR. grandiflora; leaves cordate ovate acute not lobed. *I. grandiflora*, *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 497, and *ed. Carey & Wall.* ii. 87. *I. noctiluca*, *Herb. in Bot. Reg.* note to t. 917. *I. bona-nox*, *Blume Bijl.* 712; *Kurz For. Fl.* ii. 217, not of *Linn. even in part.* *I. aculeata*, *Blume Bijl.* 715, *vide Hassk.* *I. Roxburghii*, *Steud. Nomencl. not of Sweet.* *I. noctiflora*, *Griff. Notul.* iv. 286. *Convolvulus grandiflorus*, *Wall. Cat.* 1370. *Quamoclit longiflora*, *G. Don Gen. Syst.* iv. 259. *Calonyction speciosum*, *Chois. Convolv. Or.* 59, and in *DC. Prodr.* ix. 345, var. *a* and *β* (but most of the Indian synonyms quoted belong to *C. asperum*, *Chois.*); *Wight Ic.* t. 1361; *Dalz. & Gibs. Bomb. Fl.* 164; *Hassk. Pl. Jav. Rar.* 522. *C. Roxburghii*, *G. Don Gen. Syst.* iv. 263, wholly or in part.

TROPICAL INDIA, in most climates common; from Assam and Bengal to Tenasserim, and Malabar.—DISTRIB. E. Asia, Tropical Africa.

Extensively scandent; stems smooth, or not rarely muricate. *Leaves* 3-8 in., glabrate, secondary nervation much less prominent than in *I. glaberrima*; petiole 3-6 in. *Peduncles* 2-6 in.; bracts caducous. *Sepals* $\frac{1}{2}$ in., usually ovate, obtuse, mucronate, in fruit unaltered or slightly enlarged. *Corolla-tube* 3 by $\frac{1}{2}$ in., limb 3-5 in. diam., pure white or with plaits greenish, never with at all purple. *Anthers* shortly exserted or subincluded. *Capsule* narrowed upwards; peduncle at length somewhat thickened.—Moon-flower of the English; the flower expands at night, closes to wither about one hour after sunrise; see Sir W. Jones in *Asiat. Research.* iv. 257. It does not appear that Linnæus ever saw *I. grandiflora*, *Roxb.*, which is perhaps specifically distinguishable from the American *I. bona-nox*; there are many specimens of the typical *I. bona-nox* supplied from Asia; but American seeds of this were grown in India in Roxburgh's day, if not before. It is consequently now very difficult to decide whether *I. bona-nox* and *I. grandiflora* should be regarded as distinct.

2. **I. muricata**, *Jacq. Hort. Schoenb.* iii. 40, t. 323, not of *Cav.*; stem usually muricate, leaves cordate-ovate acute glabrous entire, peduncles 1-5-fld. somewhat shorter than the petioles, flowering sepals elliptic-lanceolate, corolla rose-purple tube linear, capsule $\frac{1}{2}$ - $\frac{3}{4}$ in. globose apiculate, seeds glabrous. *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 499, and *ed. Carey & Wall.* ii. 89; *Benth. in Hook. Fl. Nigrit.* 465; *Miq. Fl. Ind. Bat.* ii. 608. *I. bona-nox*, β purpurascens, *Bot. Reg.* iv. t. 290. *Convolvulus muricatus*, *Linn. Mant.* 44; *Wall. Cat.*

2249. *Calonyction muricatum*, *G. Don Gen. Syst.* iv. 264. *C. bona-nox*, var. *muricata*, *Chois. in DC. Prodr.* ix. 345, partly, not of Baker.

HIMALAYA, alt. 1-5000 ft., frequent from Kangra to Sikkim. DECCAN HILLS, *Rottler, Wight, &c.*, cultivated elsewhere.—DISTRIB. Japan.

A much weaker plant than *I. bona-nox*; leaves 2-4 in.; sepals in flower more lanceolate, in fruit nearly as of *I. bona-nox*; corolla-tube 1-2 by $\frac{1}{2}$ in., hairy within; peduncle usually greatly thickened under the fruit.—Clearly distinct from *I. bona-nox*.

3. *I. grandiflora*, Lamk. Ill. i. 467; stem usually muricate, leaves cordate-ovate acute entire glabrous, peduncles 1-3-flowered short, flowering sepals large elliptic, corolla white tube linear, capsule nearly 1 in. diam. globose, seeds softly shortly villous margins shaggy. *I. longiflora*, *Br. Prodr.* 484; *Benth. Fl. Austral.* iv. 418. *I. macrantha*, *Roem. & Sch. Syst.* iv. 251. *I. glaberrima*, *Bojer*; *Hook. Journ. Bot.* i. 357. *I. Tuba*, *G. Don Gen. Syst.* iv. 270; *Meissn. in Mart. Brasil.* vii. 216. *I. jucunda*, *Thwaites Enum.* 211, 426. *Convolvulus grandiflorus*, *Linn. f. Suppl.* 136, not of Wall. *C. asper*, *Wall. Cat.* 1388. *C. Tuba*, *Schlecht. in Linnæa*, 1831, 735. *Calonyction asperum* and *grandiflorum*, *Chois. Convolv. Or.* 60, and in *DC. Prodr.* ix. 346, some syn. excl. *C. comorensis*, *Bojer Hort. Maurit.* 228. *C. comospermum*, *Bojer Hort. Maurit.* 228; *Chois. in DC. Prodr.* ix. 346. *C. muticum*, *Dcne. in Nouv. Ann. Mus.* iii. 390; *Chois. in DC. Prodr.* ix. 345. *C. pseudomuricatum*, *G. Don Gen. Syst.* iv. 264. *C. longiflorum*, *Hassk. Pl. Jav. Rar.* 523.—*Rheede Hort. Mal.* xi. t. 50.

W. DECCAN PENINSULA; common. CEYLON; Dolosbage district, rare, *Thwaites*. DISTRIB. Timor, New Caledonia, Australia, and Polynesia, Mascarene Islands with E. Tropical Africa. Tropical America, cultivated.

A large twiner; stem often softly muricate. Leaves 3-6 in. diam., often deeply cordate, secondary nerves prominent; petiole 2-5 in. Peduncles usually 1-2 in.; flowers 1-3; bracts caducous. Sepals in flower $\frac{3}{4}$ -1 in., obtuse or very shortly acute; in fruit enlarged, orbicular, often $1\frac{1}{2}$ in. diam., embracing the capsule. Corolla-tube $2\frac{1}{2}$ by $\frac{1}{2}$ in., sometimes much longer, limb 3 in. diam. Capsule obtuse; peduncles in fruit somewhat thickened.—The length of the peduncle is very variable, almost 0, in others, as in the *Convolvulus asper* and in *Thwaites's Calonyction comospermum*, more than 4 in. Brown describes his *I. longiflora* as with obtuse sepals, and *Bentham's I. longiflora* is identical with the Ceylon *I. grandiflora*; but F. Mueller has lately supplied specimens with much-acuminated sepals, which prove either that the sepals in *I. grandiflora* are eminently variable or that there is another species of *Calonyction* in Australia.

4. *I. trichosperma*, Blume Bijl. 710; stem often muricate, leaves ovate-cordate acute glabrous sometimes lobed, peduncles very short 1-fl., flowering sepals large elliptic, corolla very large tube much wider than in *I. grandiflora*, capsule nearly 1 in. diam. subglobose, seeds softly villous margins shaggy. *I. Yomæ*, *Kurz For. Fl.* ii. 218. *Calonyction trichospermum*, *Chois. Convolv. Or.* 60, and in *DC. Prodr.* ix. 346. *C. diversifolium*, *Hassk. Pl. Jav. Rar.* 523, not of *Fl. des Serres*, t. 1328.

SILHET; *H. f. & T.*, &c. PEGU; *Kurz*. MOULMEIN; *Parish*.—DISTRIB. Java.

Very near *I. grandiflora*, but some of the leaves are lobed, and the flower is very large; in *Parish's* example more than 6 in. long, with the tube 1 in. diam.—The Khasian examples are in fruit, and have the leaves very slightly lobed; some Javan specimens have subdigitate leaves.

SUBGENUS II. **Quamoclit**, *Chois. in DC. Prodr.* ix. 335 (genus). Corolla crimson (in cultivated varieties orange yellow or white), middle-sized, tube narrow long, mouth rather small. Anthers exsert. Ovary 4-celled, 4-ovuled. Capsule 4-celled.

5. **I. coccinea**, Linn.; *Bot. Mag.* t. 221; leaves ovate-cordate acute glabrous, sepals elliptic suddenly acuminate, seeds densely furred. *Roxb. Hort. Beng.* 14; *Andr. Bot. Rep.* t. 499; *Meissn. in Mart. Brasil.* viii. 217, with syn. *I. luteola*, Jacq. *Ic. Rar.* i. t. 35; *Blume Bijl.* 711. *I. phœnicea*, *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 502, and ed. *Carey & Wall.* ii. 92. *Convolvulus coccineus* and *luteolus*, *Spreng. Syst.* i. 599. *C. phœniceus*, *Spreng. Syst.* i. 596; *Wall. Cat.* 1372. *Quamoclit coccinea*, *Moench Hort. Marb.* 453; *Chois. in DC. Prodr.* ix. 335, with syn. *Q. phœnicea*, *Chois. Convolv. Or.* 51, t. 1, fig. 1, and in *DC. Prodr.* ix. 336.

Cultivated and quasi-wild throughout INDIA, erroneously supposed by Roxburgh to be a native of Coromandel.—Introduced from tropical America.

Stems subscandent, weak. *Leaves* 2–4 in. diam., entire or lobed; petiole 2–4 in. *Peduncles* 2–6 in., slender; cyme lax, few or many-flowered; bracts inconspicuous. *Sepals* $\frac{1}{4}$ in., unaltered in fruit. *Corolla* crimson, in garden varieties orange or yellow; tube 1 in., mouth $\frac{3}{4}$ in. diam. *Ovary* completely 4-celled. *Capsule* $\frac{1}{4}$ in. or rather more, ovoid, smooth, completely 4-celled; dissepiments thin, membranous, persistent.

6. **I. Quamoclit**, Linn.; *Bot. Mag.* t. 244; leaves pinnate segments numerous linear, sepals elliptic, seeds nearly glabrous. *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 502, and ed. *Carey & Wall.* ii. 93; *Blume Bijl.* 708; *Meissn. in Mart. Brasil.* vii. 217, with syn. *Convolvulus pennatus*, *Lamk. Enc.* iii. 567. *C. Quamoclit*, *Spreng. Syst.* i. 591; *Wall. Cat.* 1375. *Quamoclit vulgaris*, *Chois. Convolv. Or.* 52, and in *DC. Prodr.* ix. 336.—*Rumph. Herb. Amb.* v. t. 155, fig. 2.; *Rheede Hort. Mal.* xi. t. 60.

Common throughout INDIA, in gardens and as a denizen; native of tropical America.

A slender, glabrous twiner. *Leaves* 3–5 by 2–3 in., segments distant. *Peduncles* few-flowered. *Corolla* crimson or white. *Flowers* and capsules nearly as of *I. coccinea*.

SUBGENUS III. **Pharbitis**, *Chois. in DC. Prodr.* ix. 341 (genus). *Corolla*-tube narrow. *Anthers* included. *Ovary* 3-celled, 6-ovuled. *Capsule* 3-celled, 6–4-seeded.

7. **I. hederacea**, Jacq. *Collect.* i. 124, and *Ic. Rar.* i. t. 36; hairy, leaves ovate-cordate 3-lobed lobes ovate acuminate, peduncles 1–5-fld. mostly shorter than the petioles, sepals elliptic elongate-linear patently hirsute near the base, seeds glabrous. *Bot. Reg.* t. 85; *Blume Bijl.* 710; *Meissn. in Mart. Brasil.* vii. 228. *I. cœrulea*, *Koen.*; *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 501; ed. *Carey & Wall.* ii. 91; *Bot. Reg.* t. 276. *I. punctata*, *Pers. Syn.* i. 184. *I. nil* and *barbata*, *Roth Cat. Bot.* i. 36, 37. *I. Dillenii*, *Roem. & Sch. Syst.* iv. 227. *Convolvulus nil*, Linn.; *Bot. Mag.* t. 188. *C. hederaceus*, Linn.; *Wall. Cat.* 1373. *C. Dillenii*, *Lamk. Enc.* iii. 544. *C. cœruleus*, *Spreng. Syst.* i. 593. *Convolvuloides triloba*, *Moench Hort. Marb.* 452. *Pharbitis hederacea* and *nil*, *Chois. Convolv. Or.* 57, 58, and in *DC. Prodr.* ix. 343, 344. *P. diversifolia*, *Lindl. in Bot. Reg.* t. 1988. *P. variifolia*, *Dcne. in Nouv. Ann. Mus.* iii. 390. *P. Purshii*, *punctata* and *barbata*, *G. Don Gen. Syst.* iv. 263, with many other syn.

INDIA; both cultivated and apparently wild, common.—DISTRIB. Tropical and subtropical regions of both hemispheres.

Stem twining, sparsely retrorsely hirsute. *Leaves* 2–5 in. diam.; petiole 1–4 in. *Peduncles* rarely longer than the petioles; pedicels usually $\frac{1}{4}$ in.; bracts 2, $\frac{1}{2}$ in., linear, close to the calyx. *Sepals* $\frac{1}{2}$ –1 in., subequal, narrowly linear upwards, very hirsute, or nearly glabrous near the base. *Corolla* $1\frac{1}{2}$ –2 in., tubular-funnel-shaped, rose-coloured, blue, or somewhat orange below. *Anthers* never twisted. *Capsule*

$\frac{1}{2}$ in., ovoid, subglobose, smooth.—Probably an American plant, naturalised in the Old World. *I. scabra*, Forsk., is adduced as a syn. by Choisy (DC. Prodr. ix. 344), which, if this is correct, is the oldest name; but Forskahl says his plant had 5-lobed leaves, hence the name of Linnæus and Meissner has been here retained.

VAR. *integrifolia*, Choisy.; leaves ovate-cordate acute entire, peduncles about as long as the petioles, sepals elliptic much elongate. *I. cœrulescens*, Roxb. Hort. Beng. 14, and *Fl. Ind.* i. 500, and *ed. Carey & Wall.* ii. 90.—Cultivated and apparently wild. Intermediate states connect this with *I. hederacea*. It is often called *I. hispida*, but it differs from that in the elongate ligulate termination to the sepals.

VAR. *himalaica*; leaves and flowers larger, sepals in fruit attaining $1\frac{1}{2}$ in., seeds densely closely villous.—Himalaya, alt. 4–5000 ft., from Kashmir to Sikkim, in the inner valleys at some distance from the plains.

8. *I. purpurea*, Lamk. *Ill.* i. 466; hairy, leaves ovate-cordate acute entire, peduncles few-fld., sepals elliptic-oblong acute patently hirsute near the base, seeds glabrous. *Meissn. in Mart. Brasil.* vii. 223. *Convolvulus purpureus*, Linn.; *Bot. Mag.* tt. 113, 1005, 1682.

INDIA; ascending to 3–7000 ft. in Kashmir, Sikkim, the Khasia Mts. and W. Deccan Peninsula, probably not a native.—DISTRIB. Tropical America; extensively cultivated in all warm countries.

Resembles the entire-leaved var. of *I. hederacea*; but the leaves are smaller; peduncles often longer and slenderer; pedicels $\frac{1}{2}$ in., umbelled, deflexed in fruit; sepals $\frac{1}{2}$ – $\frac{3}{4}$ in., unequal, without the ligulate termination characteristic of *I. hederacea*. Inhabits very remote parts of the mountains; and has about as good a claim to be regarded as Indian as has *I. hederacea*.

9. *I. laciniata*, Clarke; glabrous, leaves 5–7-partite segments serrate or pinnatifid, peduncles 1–3-fld. shorter than the leaves, corolla-tube long linear. *Pharbitis laciniata*, Dalz. in *Hook. Kew Journ.* iii. 178; *Dalz. & Gibs. Bomb. Fl.* 167.—*Ipomœa* n. 40, *Herb. Ind. Or. H. f. & T.*

WEST DECCAN PENINSULA; Bababoodan Hills, Law; Bombay and Malwar, Dalzell; Belgaum, Ritchie.

Stem slender, creeping or twining. *Leaves* 1–2 in. diam., subdigitate, lobes elliptic or almost linear; petiole $\frac{1}{2}$ –1 in. *Peduncles* mostly 1-fld., thickened upwards in fruit; bracts $\frac{1}{2}$ in., linear. *Sepals* $\frac{1}{2}$ – $\frac{3}{4}$ in., elliptic, somewhat wider in fruit. *Corolla* white, tube 2 by $\frac{1}{2}$ in., purple within, limb $1\frac{1}{2}$ –2 in. diam. *Anthers* scarcely exserted. *Ovary* 3-celled. *Capsule* $\frac{1}{2}$ in., ovoid, subglobose, glabrous. *Seeds* closely, densely furred.

10. *I. dissecta*, Willd. *Phyt.* 5, t. 2, fig. 3; glabrous, leaves digitate, lobes linear-cuneate toothed or pinnatifid, peduncles sub-1-flowered shorter than the leaves, corolla very small. *Benth. Fl. Austral.* iv. 416; *Choisy in DC. Prodr.* ix. 363, partly. *I. coptica*, Roth Nov. Sp. 110; *Choisy. Convolv. Or.* 89, and in *DC. Prodr.* ix. 384; *Dalz. & Gibs. Bomb. Fl.* 166. *Convolvulus copticus*, Linn. *Mant.* 559; *Roxb. Fl. Ind.* i. 477, and *ed. Carey & Wall.* ii. 62; *Wall. Cat.* 1351. *C. stipulatus*, Lamk. *Enc.* iii. 546. *C. Thonningii*, Schum. *Pl. Guin.* 98.

W. INDIA and the DECCAN, not common, Heyne, Shuter, Wight. CEYLON; north of the Island, Gardner.—DISTRIB. Tropical Africa and Australia.

Stems 1–3 ft., prostrate, hardly twining. *Leaves* 1–1 $\frac{1}{2}$ in. diam.; petiole $\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ –1 $\frac{1}{2}$ in.: bracts near the flower, minute; or flowers subsessile amongst the digitate leaflike bracts. *Sepals* $\frac{1}{2}$ in., oblong; in fruit widened, rigid, back often muricate. *Corolla* $\frac{3}{4}$ in., tubular-funnel-shaped, white. *Capsule* $\frac{1}{2}$ in. diam., glabrous, 6-valved, normally 6-seeded. *Seeds* glabrous or very nearly so.

SUBGENUS IV. **Aniseia**, Choisy. in *DC. Prodr.* ix. 429 (genus). Two outer sepals (at least in fruit) much longer than the inner, cordate or sub-

hastate. *Stamens* included. *Ovary* 2-celled, 4-seeded.—Not well distinguishable from *Eupomœa*, in which the outer sepals are usually somewhat larger.

11. **I. uniflora**, *Roem. & Sch. Syst.* iv. 247, *not of Blume*; glabrescent, leaves petioled oblong obtuse, peduncles 1-flowered, sepals ultimately enlarged decurrent, corolla 1 in. campanulate. *I. lanceolata*, *G. Don Gen. Syst.* iv. 282. *Convolvulus uniflorus*, *Lamk. Enc.* iii. 544; *Burm. Fl. Ind.* 47, t. 21, fig. 2. *C. emarginatus*, *Vahl Symb.* iii. 23. *C. Rheedii*, *Wall. Cat.* 1358, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 70; *Wight in Hook. Bot. Miscell.* ii. 106, t. 8. *Aniseia uniflora*, *Chois. Convolv. Or.* 101, t. 2, fig. 9, and in *DC. Prodr.* ix. 431; *Wight Ic.* t. 850; *Dalz. & Gibs. Bomb. Fl.* 163.—*Rheede Hort. Mal.* xi. t. 54.

Throughout INDIA, from Nepal, *Wallich*, and Khasia, *J. D. H.*, to CEYLON, (*Thwaites*) and Malacca (*Griffith, Maingay*); not common, more frequent in the Deccan Peninsula.—DISTRIB. Malaya to Fiji Islands; Tropical Africa.

Creeping in wet places, twining. *Leaves* 3 by 1 in., often emarginate with a mucro, base cuneate; petiole $\frac{3}{4}$ in. *Peduncles* $1\frac{1}{2}$ in.; bracts minute, persistent. *Sepals* in flower $\frac{1}{2}$ – $\frac{1}{2}$ in., outer elliptic, acute; in fruit $\frac{3}{4}$ –1 in., 2 outer subcordate ovate scarious nervose, inner lanceolate. *Corolla* hairy without. *Capsule* $\frac{1}{2}$ in., ovoid, glabrous. *Seeds* glabrous, margins minutely strigose.

12. **I. calycina**, *Benth. in Gen. Pl.* ii. 872; leaves ovate-cordate acute entire, peduncles short few-fl'd., sepals ultimately cordate or sagittate, corolla scarcely 1 in. tubular. *I. sagittata*, *Roxb. Ic. ined. not of Desf.* *I. cariosepala*, *Klotz. in Nub. Pl.* *Convolvulus calycinus*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 471, and *ed. Carey & Wall.* ii. 51; *Wall. Cat.* 2255. *O. Hardwickii*, *Spreng. Syst. curae post.* 60. *Aniseia calycina*, *Chois. Convolv. Or.* 100, and in *DC. Prodr.* ix. 429; *Wight Ill.* t. 168 b, fig. 5, and *Ic.* t. 833; *Dalz. & Gibs. Bomb. Fl.* 163.

DECCAN PENINSULA; frequent; extending to Banda (*Edgeworth*) and the W. Himalaya (*Royle*).—DISTRIB. Tropical Africa.

Stems much twining, villous. *Leaves* 2–3 in., deeply cordate, sparsely hairy or glabrate; petiole $1\frac{1}{2}$ in. *Peduncles* $\frac{3}{4}$ in.; pedicels $\frac{3}{4}$ in.; bracts $\frac{1}{4}$ in., linear. *Sepals* in flower $\frac{1}{2}$ in., unequal, ciliate; outer in fruit $\frac{1}{2}$ by $\frac{1}{4}$ in., lanceolate, hastate. *Corolla* rose or white; mouth funnel-shaped, narrow. *Capsule* $\frac{1}{4}$ in., ovoid, glabrous. *Seeds* villous, margins with long silky hairs.

13. **I. barlerioides**, *Benth. in Gen. Pl.* ii. 872; hirsute, leaves ovate-oblong scarcely acute, peduncles longer or shorter than the petioles 1-fl'd., corolla 2–3½ in. funnel-shaped. *Convolvulus barlerioides*, *Wall. Cat.* 2256. *C. oblongus*, *Wall. Cat.* 1382. *Aniseia barlerioides*, *Chois. Convolv. Or.* 102, and in *DC. Prodr.* ix. 432.

N. W. INDIA, *Royle*; Subsiwaliks, *Edgeworth*; KUMAON, alt. 4000 feet, *Strachey & Winterbottom*. OUDH; *R. Thompson*. CHOTA NAGPORE; *Clarke*. W. DECCAN PENINSULA southward to Courtallam; *Wight, Dalzell, Ritchie, &c.*

Twining. *Leaves* 2–3 in., base obtuse or subcordate; petiole 0–1½, very variable on the same stem. *Peduncles* 1–4 in.; longer than the petioles in the N. Indian plant (*Choisy's* type), hardly any in other S. Indian examples; bracts $\frac{1}{2}$ in., linear. *Sepals* in flower $\frac{3}{4}$ in., lanceolate; in fruit much widened, 2 outer ovate. *Corolla* purple or purplish-white, glabrous or sparsely hairy without; tube very narrow at the base; mouth $2\frac{1}{2}$ in. diam. *Capsule* $\frac{1}{2}$ in., ovoid, glabrous. *Seeds* oblong, villous or pubescent, margins sometimes hirsute.

SUBGENUS V. **Batatas**, *Chois. in DC. Prodr.* ix. 337 (genus). *Corolla* widely tubular-funnel-shaped. *Stamens* included. *Ovary* 4-celled, 4-ovuled.

14. **I. digitata**, Linn.; Meissn. in Mart. Brasil. vii. 278, with all syn.; glabrous, leaves large palmately 5-7-lobed, peduncles many-fld. longer than the petioles, sepals elliptic shortly acute glabrous, seeds woolly with hairs $\frac{1}{4}$ in. long. Chois. in DC. Prodr. ix. 389, char. emend. I. paniculata, Br. Prodr. 486; Blume Bijl. 709; Bot. Reg. t. 62, not of Burm. I. mauritiana, Jacq. Hort. Schoenb. ii. 39, t. 200. I. gossypifolia, Willd. Enum. Hort. Berol. 208. I. eriosperma, Beauv. Fl. Ovar. et Ben. ii. 73, t. 105. I. insignis, Andr. Bot. Rep. t. 635; Bot. Reg. t. 75; Bot. Mag. t. 1790. I. tuberosa, G. F. W. Mey. Esseq. 102. I. plantensis, Bot. Reg. t. 333; Bot. Mag. t. 3685; Chois. in DC. Prodr. ix. 387. Convolvulus paniculatus, Linn. Sp. Pl. 223; Roxb. Fl. Ind. i. 478, and ed. Carey & Wall. ii. 63; Wall. Cat. 1350. C. digitatus, platensis, and insignis, Spreng. Syst. i. 591, 592. C. roseus, Kunth. in Humb. & Bonpl. iii. 108, not of Mill. Batatas paniculata, Chois. Convolv. Or. 54, t. 1, fig. 2, and in DC. Prodr. ix. 339; Wight in Madras Journ. v. 4, t. 11; Dalz. & Gibs. Bomb. Fl. 167. B. edulis, Chois. in DC. Prodr. ix. 339, var. γ only.

TROPICAL INDIA; common, from Bengal and Assam to Ceylon; not in the drier western portion.—DISTRIB. Tropical Asia, Africa, America and Australia, in moist climates.

A large, scandent perennial. Leaves 3-7 in. diam., often lobed nearly to the base; lobes lanceolate or elliptic, often spathulate; petiole 2-5 in. Peduncles often 6 in.; bracts deciduous; flowers not capitate. Sepals $\frac{1}{4}$ - $\frac{1}{2}$ in., wider concave in fruit. Corolla $1\frac{1}{2}$ -2 $\frac{1}{2}$ in., widely campanulate, glabrous, pink-purple. Anthers never twisted. Ovary completely 4-celled, unless perhaps near the top. Capsule $\frac{1}{2}$ in., ovoid, completely 4-celled to the apex, 4-valved, the long wool from the seeds exsert from the fissures.

15. **I. pentaphylla**, Jacq. Ic. Rar. t. 319, not of Cav.; thinly hirsute, leaves digitate, leaflets broad-lanceolate subsessile, peduncles long laxly dichotomous, sepals large elliptic outer patently hirsute, seeds glabrous. Meissn. in Mart. Brasil. vii. 287, with all syn. I. pilosa, Cav. Ic. iv. 11, t. 323, not of Sweet. Convolvulus pentaphyllus, Linn. Sp. Pl. 223. C. hirsutus, Roxb. Hort. Beng. 14, and Fl. Ind. i. 479, and ed. Carey & Wall. ii. 65. C. munitus, Wall. Cat. 1354; Wight in Hook. Bot. Miscell. ii. 104, t. 7. C. nemorosus, Roem. & Sch. Syst. iv. 303. Batatas pentaphylla, Chois. Convolv. Or. 54, and in DC. Prodr. ix. 339; Wight Ic. t. 834; Dalz. & Gibs. Bomb. Fl. 167. Spiranthera pentaphylla, Bojer Hort. Mauriti. 226.

W. INDIA; Hindoostan, Gujerat, W. Deccan Peninsula, frequent.—DISTRIB. Africa, Polynesia, Tropical America; often cultivated.

A twining annual. Leaflets 2-4 in.; petiole 2 in. Peduncles 1-4 in.; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{2}$ -2 in., fulvous-hirsute. Sepals $\frac{1}{2}$ in., obtuse or subacute; in fruit enlarged, sometimes nearly 1 in. Corolla $1\frac{1}{2}$ in., wide-funnel-shaped, glabrous, white or ochroleucous. Ovary completely 4-celled. Capsule $\frac{1}{4}$ - $\frac{1}{2}$ in., ovoid, papery, completely 4-celled; endocarp separating, with a hole opposite the back of each seed.

16. **I. Batatas**, Lamk. Enc. vi. 14; glabrous or sparingly hairy, leaves ovate-cordate acute angular or more or less lobed, peduncles long many fld., sepals elliptic shortly acute glabrous, seeds glabrous. Meissn. in Mart. Brasil. vii. 282. I. Catesbæi, G. F. W. Mey. Esseq. 103. Convolvulus Batatas, Linn.; Roxb. Fl. Ind. i. 483, and ed. Carey & Wall. ii. 69; Blume Bijl. 712; Wall. Cat. 1356. C. indicus, Moris. Hist. ii. sect. 1, t. 3, fig. 4. C. edulis, Thunb. Fl. Jap. 84. C. esculentus, Salisb. Prod. 123. Batatas edulis, Chois. Convolv. Or. 53, and in DC. Prodr. ix. 338. B. xanthorhiza, Bojer Hort. Mauriti. 225.—Rumph. Herb. Amb. v. t. 130. Rheede Hort. Mal. vii. t. 50.

Cultivated in INDIA, but not extensively.—Native of America.

Tubers red, white or rarely yellow. Stem usually hairy. Flowers 2 in. and

upwards, purple. *Ovary* 4-celled. *Capsule* 4-celled, or by suppression 3-1-celled.—*The Sweet Potato*; though that term is given to yams in Bengal. Said to fruit rarely.

SUBGENUS 6. *Eulpomæa*. *Sepals* subequal, or the outer somewhat larger, especially in fruit. *Corolla* funnel-shaped or campanulate, glabrous without or very nearly so. *Stamens* included. *Ovary* 2-celled, 4-ovuled, rarely imperfectly 4-celled near the base. *Capsule* 2-celled, 4-2-seeded, rarely 1-celled and 1-seeded.—This subgenus is designed to include all the species of *Ipomæa* not distinctly referable to any one of the 5 preceding subgenera.

* *Flowers capitate*; *bracts persistent*.

17. ***I. pileata***, Roxb. *Fl. Ind.* i. 504, and *ed. Carey & Wall.* ii. 94; sparsely hairy, leaves ovate-cordate acute entire, heads many-fl'd. enclosed by a large boat-shaped bract, corolla tubular-funnel-shaped pink. *Chois. Convolv. Or.* 74, and in *DC. Prodr.* ix. 365; *Wight in Calc. Journ. Nat. Hist.* viii. 179, t. 5, fig. 5, and *Ic. t.* 1363; *Dalz. & Gibs. Bomb. Fl.* 166. *Convolvulus pileatus*, *Spreng. Syst. curae post.* 61; *Wall. Cat.* 1376.

ASSAM, BENGAL to TENASSERIM; ascending to 4000 feet. DECCAN PENINSULA and CEYLON; frequent.

Stems annual, twining, patently hairy. *Leaves* 2-3 in. diam., deeply cordate, mostly long-petioled. *Peduncles* 1-4 in.; outer bracts 1-2½ in., entire, produced or almost auriculate at each end; inner ovate or subspathulate. *Sepals* elliptic, acute, inner narrower, very hairy. *Corolla-tube* ¾ by ⅓ in., linear-cylindric; mouth 1¼ in., suddenly widened. *Capsule* ¼ in., subglobose, papery. *Seeds* smooth.—Easily known by its boat-shaped outer bract. *I. involucrata*, Beauv. *Fl. Owar. et Ben.* ii. 52, t. 89, of W. Africa has a similar bract, and Choisy (in *DC. Prodr.* ix. 365) doubts if this can be kept distinct. It differs, however, *inter alia*, by the corolla-tube ¼ in. wide.

18. ***I. Wightii***, *Chois. Convolv. Or.* 88, and in *DC. Prodr.* ix. 364; leaves ovate-cordate acute entire angular or sublobate softly villous above white-woolly beneath, heads long-peduncled, outer bracts lanceolate acuminate, corolla middle-sized pink-purple, capsule minutely pubescent. *Wight Ic. t.* 1364. *Convolvulus Wightii*, *Wall. Pl. As. Rar.* ii. 55, t. 171; *Wall. Cat.* 1406. *C. gossypinus*, *Wall. Cat.* 1407.

MTS. of the DECCAN PENINSULA; Nilgherries, Pulneys, Bababoodan Hills, *Wight, &c.* CEYLON; Central Provinces, alt. 2-3000 ft.

Stems twining, fulvous-villous. *Leaves* 3-4 in. diam., sinuate-denticulate, rarely obscurely 3-lobed; petiole 2 in. *Peduncles* 2-5 in.; heads 1-2 in. diam., dense, fulvous-hirsute; outer bracts 1 in., inner shorter linear. *Sepals* ½-¾ in., linear-lanceolate, subequal, fulvous-hirsute, scarcely altered in fruit. *Corolla* 1¼ in., sparsely hairy without. *Capsule* ¼ in. diam., subglobose, papery. *Seeds* puberulous.—*I. pilosa* has the leaves especially whitened beneath, but the flowers are not capitate, and the capsule not pubescent.

19. ***I. bracteata***, *Wight Ic. t.* 1374; hairy, leaves ovate-cordate acute entire, heads peduncled, outer bracts ovate-cordate, corolla small narrow-campanulate purple-pink.

S. DECCAN PENINSULA; Quilon, *Wight*.

Stems weak, twining, patently hairy. *Leaves* 1-2 in. diam., softly thinly hairy on both surfaces; petiole 1½ in. *Peduncles* ½-2½ in.; outer bracts ¾ in., deeply cordate; inner smaller, ovate or elliptic, obtuse. *Sepals* ½ in., spathulate-oblong, inner smaller, linear-lanceolate. *Corolla* ¾ in., nearly glabrous without. *Capsule* not seen.—The sepals are much more unequal (even at flower-time) than in *Wight's* picture; it might be placed in subgenus *Aniseia*. When dry it greatly resembles *Hewittia bicolor*.

VAR. lobata; leaves 3-7-lobed sometimes nearly to the base, lobes narrowed near their bases, capsule $\frac{1}{2}$ in. diam. papery glabrous, seeds ellipsoid minutely adpressedly fulvous-silky with braid-like markings.—S. Deccan Peninsula; *Wight, Stocks, Law*. Wight has named this *I. hepaticifolia*, Burm., from which it recedes in the distinctly-cordate ovate bracts.

20. I. pes-tigridis, Linn.; *Roxb. Fl. Ind., ed. Carey & Wall.* ii. 93; hairy, leaves deeply 5-9-lobed, heads peduncled, outer bracts ovate or elliptic oblong not cordate, corolla medium-sized funnel-shaped pink. *Blume Bijl.* 709; *Wight Ic.* t. 836; *Chois. Convolv. Or.* 73, and in *DC. Prodr.* ix. 363; *Dalz. & Gibs. Bomb. Fl.* 165. *Convolvulus pes-tigridis*, *Spreng. Syst.* i. 592; *Wall. Cat.* 1374. *C. bryoniaefolius*, *Salisb. Prod.* 125. *Convolvuloidea palmata*, *Moench. Meth.* 452.—*Rheede Hort. Mal.* xi. t. 59.

Throughout INDIA from the Punjab to Malacca and Ceylon, frequent in the drier low hills.—**DISTRIB.** Malaya, China, Polynesia, Tropical Africa.

Stems twining, patently hirsute. *Leaves* 1-5 in. diam., hirsute on both surfaces; lobes elliptic, acuminate, narrowed at the base; petiole 1-2 in. *Peduncles* $\frac{1}{2}$ -3 in.; heads dense, fulvous-hirsute, outer bracts 1 in., inner smaller narrower acute. *Sepals* $\frac{1}{2}$ - $\frac{1}{2}$ in., lanceolate, acute, hirsute, hardly enlarged in fruit. *Corolla* $1\frac{1}{2}$ in., tube narrow, mouth suddenly widened, sparsely hairy without. *Capsule* $\frac{1}{4}$ in., ovoid, papery, glabrous. *Seeds* minutely velvety or nearly glabrous.

VAR. hepaticifolia; leaves 3-lobed or angular. *I. hepaticifolia*, Linn. *Sp. Pl.* 230; *Burm. Fl. Ind.* 50, t. 20, fig. 2; *Chois. Convolv. Or.* 74, and in *DC. Prodr.* ix. 363. *Convolvulus hepaticifolius*, *Spreng. Syst.* i. 594.—S. Deccan Peninsula and Ceylon; frequent.

VAR. capitellata; leaves ovate-cordate acute entire. *I. capitellata*, *Chois. Convolv. Or.* 75, and in *DC. Prodr.* ix. 363. *I. tamnifolia*, *Burm. Fl. Ind.* 50, partly (as to the Indian plant) not of Linn. *Convolvulus capitellatus*, *Wall. Cat.* 2250.—Throughout the Deccan extending north to Behar and Hindoostan; not rare.—A complete series connects the *I. pes-tigridis* with its 3-lobate-leaved form, and another connects it with the entire-leaved form. The entire-leaved form has been supposed to be Wight's *I. bracteata*; while on the other hand Wight supposed his *I. bracteata* with lobed leaves to be *I. hepaticifolia*. The two species are easily separable, *I. bracteata* having bracts obtuse outer distinctly cordate: *I. pes-tigridis* bracts acute outer not at all cordate.

21. I. eriocarpa, *Br. Prodr.* 484; hairy, leaves oblong-cordate acute, heads sessile, bracts ovate-linear, corolla small campanulate pink, capsule patently hairy. *Chois. in DC. Prodr.* ix. 369; *Benth. Fl. Austral.* iv. 426. *I. sessiliflora*, *Roth Nov. Sp.* 116; *Wight Ic.* t. 169; *Chois. Convolv. Or.* 76, and in *DC. Prodr.* ix. 366; *Dalz. & Gibs. Bomb. Fl.* 166. *I. hispida*, *Roem. & Sch. Syst.* iv. 238. *I. ligulata*, *Bojer Hort. Maur.* 229. *I. sphærocephala*, *Sweet Hort. Brit. ed. 2*, 372. *I. Horsfieldiana*, *Miq. Fl. Ind. Bat.* ii. 611. *Convolvulus eriocarpus* and *sessiliflorus*, *Spreng. Syst.* i. 598, 599. *C. sphærocephalus*, *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 472, and *ed. Carey & Wall.* ii. 53; *Wall. Cat.* 1344. *C. hispidus*, *Vahl Symb.* 329. *C. Rampania*, *Wall. Cat.* 225 (not now in Wallich's Herbarium).

Throughout INDIA, alt. 0-4000 ft.; common. CEYLON; ascending to 4000 ft.—**DISTRIB.** Afghanistan and Tropics of the Old World.

Stems twining, patently villous. *Leaves* $2\frac{1}{2}$ by 1 in., sparsely hairy on both surfaces; petiole 1 in. *Peduncles* 0, or (in one Hindoostan example of Thomson's) $\frac{1}{2}$ - $2\frac{1}{2}$ in.; heads sometimes few-fl., rarely reduced to one subsessile flower; bracts $\frac{1}{2}$ in., hirsute; sepals similar to the bracts but smaller, unaltered in fruit. *Corolla* $\frac{1}{2}$ in. *Capsule* $\frac{1}{4}$ in., globose. *Seeds* puberulous.

22. I. Stocksii, *Clarke*; hairy, leaves elliptic subacute, heads sessile, bracts lanceolate inconspicuous, corolla small, capsule glabrous.

DECCAN PENINSULA; *Stocks*.

Stems prostrate, twining, patently hairy. *Leaves* 2 in., rhomboid, base obtuse or subcordate; petiole $\frac{1}{4}$ – $1\frac{1}{4}$ in. *Bracts* $\frac{1}{4}$ in., hispid. *Sepals* $\frac{1}{2}$ – $\frac{1}{2}$ in., elliptic-lanceolate, patently hispidulous. *Capsule* $\frac{1}{4}$ – $\frac{1}{2}$ in., ovoid, 2-celled, 4-seeded. *Seeds* furred, margins villous.—Near *I. eriocarpa*.

** *Flowers* pedicelled, cymose, subracemose or solitary.

† *Leaves* undivided or angular or somewhat lobed, rarely deeply.

23. ***I. angustifolia***, Jacq. *Ic. Rar. t. 317, not of Chois.*; glabrous, leaves sessile hastate-oblong or -linear acute, peduncles long 1–3-fld., sepals ovate acuminate, corolla small yellow. *Benth. Fl. Austral. iv. 425. I. denticulata, Br. Prodr. 485; Bot. Reg. t. 317, not of Chois. I. filicaulis, Blume Bijl. 721; Chois. Convolv. Or. 66, and in DC. Prodr. ix. 353; Dalz. & Gibs. Bomb. Fl. 165; Bot. Mag. t. 5426. Convolvulus hastatus and angustifolius, Lamk. Enc. iii. 542, 547. C. filicaulis, Vahl Symb. iii. 24. C. simplex, Pers. Syn. i. 178. C. denticulatus, Spreng. Syst. i. 603. C. linifolius, Wall. Cat. 1389. C. medium, Roxb. Fl. Ind. i. 474, and ed. Carey & Wall. 256; Wall. Cat. 1346, not of Linn. C. Blumii, Dietr. Syn. Pl. i. 675.—Rheede Hort. Mal. xi. t. 55.*

Hills of the DECCAN PENINSULA and CEYLON; extending north to Bundelcund, Edgeworth. KHASIA Mts., alt. 0–3000 ft.; common, and thence to Malacca.—DISTRIB. S. E. Asia, Malaya, Australia, Tropical Africa.

Diffuse, biennial, twining. *Leaves* $1\frac{1}{2}$ –3 in., more or less toothed. *Peduncles* often longer than the leaves; bracts minute, persistent; pedicels long. *Sepals* $\frac{1}{4}$ – $\frac{1}{2}$ in. *Corolla* $\frac{2}{3}$ in., funnel-shaped, eye purple. *Capsule* $\frac{1}{4}$ in., ovoid, papery, glabrous, 2-celled. *Seeds* glabrous.

24. ***I. tridentata***, Roth, *Cat. Bot. ii. 19*; glabrous, leaves sessile hastate-oblong or subquadrate obtuse truncate or 3-toothed, peduncles often as long as the leaves 1–3-fld., sepals ovate acuminate, corolla small yellow. *Chois. Convolv. Or. 65, and in DC. Prodr. ix. 353; Dalz. & Gibs. Bomb. Fl. 165. Evolvulus tridentatus, Linn. Sp. Pl. 392; Burm. Fl. Ind. 77, t. 16, fig. 3. Convolvulus tridentatus, Linn. Sp. Pl. 157; Roxb. Fl. Ind. i. 475, and ed. Carey & Wall. ii. 56; Wall. Cat. 1347.—Rheede Hort. Mal. xi. t. 65.*

DECCAN PENINSULA and CEYLON; frequent; extending north to Chota Nagpore.—DISTRIB. Ava, Banca.

Rootstock woody, giving off numerous, closely-prostrate, elongate stems. *Leaves* usually less than 1 in., sometimes submarginate, mucronate. *Flowers*, capsules and seeds, nearly as of *I. angustifolia*, with which Thwaites (*Enum.* 211) unites it; but it is a smaller plant with smaller flowers, never twining.

25. ***I. linifolia***, Blume *Bijl. 721*; sparsely hairy or glabrate, leaves petioled narrowly oblong lower often subcordate ovate-oblong, peduncles few or many-fld., sepals elliptic obtuse glabrous, corolla small yellow, capsule 1-celled 4-seeded. *Chois. in DC. Prodr. ix. 369; Benth. Fl. Austral. iv. 423. I. setulosa, Zoll. Verz. by Moritz. 51. Convolvulus cæspitosus, Roxb. Hort. Beng. 14, and Fl. Ind. i. 483, and ed. Carey & Wall. ii. 70; Wall. Cat. 1357. C. Bentharii, Wall. Cat. 1393. Hewittia cæspitosa, Steud. Nom. Bot. Skinneria cæspitosa, Chois. Convolv. Or. 105, t. 6, and in DC. Prodr. ix. 435.*

SUBTROPICAL SIKKIM, J. D. H., &c. ASSAM and SILHET, frequent; Wallich, Masters, &c., and thence to MALACCA.—DISTRIB. Malay Archipelago, Australia.

Annual or biennial. *Stems* slender, much twining (creeping, Roxburgh). *Leaves* $1\frac{1}{2}$ –2 $\frac{1}{2}$ in., oblong, narrowed suddenly at both ends; lower often subcordate, sometimes ovate; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Peduncles* 1–3 in., slender; bracts minute, persistent.

Sepals $\frac{1}{4}$ in.; margins, when dry, inflexed above, but hardly acute. *Corolla* $\frac{3}{4}$ in., subcampanulate, glabrous without. *Ovary* 2-celled. *Capsule* $\frac{1}{4}$ in., ovoid, papery, with hardly any trace of the dissepiment near its base. *Seeds* glabrous.

26. **I. chryseides**, *Ker in Bot. Reg. t.* 270; leaves ovate-cordate acute glabrous entire toothed or 3-lobed, peduncles many-fl., sepals elliptic glabrous, corolla small yellow. *Wight Ic. t.* 157; *Dene. in Nouv. Ann. Mus.* iii. 393; *Chois. Convolv. Or.* 87, and in *DC. Prodr.* ix. 382; *Dalz. & Gibs. Bomb. Fl.* 166. *I. dentata*, *Willd.*; *Roem. & Sch. Syst.* iv. 789. *I. subtriflora*, *Zoll. Verz. by Moritz*, 51. *Convolvulus chryseides*, *Spreng. Syst.* i. 598. *C. dentatus*, *Vahl Symb.* iii. 25; *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 62; *Wall. Cat.* 1349. *Lepistemon muricatum*, *Spanoghe in Linnœa* 1841, 339.

Throughout INDIA, alt. 0-4000 ft. and CEYLON, frequent.—DISTRIB. Malaya, S. China, Australia, Tropical Africa.

Stems much twining, glabrous, often muriculate, sometimes in places hairy. *Leaves* 1-2 in.; petiole $\frac{1}{2}$ -2 in. *Peduncles* $\frac{1}{2}$ -3 in.; bracts small, caducous; cymes dense. *Sepals* $\frac{1}{5}$ in., ultimately spreading. *Corolla* $\frac{1}{2}$ - $\frac{3}{4}$ in., funnel-shaped, glabrous without, uniform yellow. *Capsule* $\frac{1}{4}$ in. and upwards, ovoid, somewhat angular, top acute or depressed, 2-celled; wall thicker than in the preceding species. *Seeds* puberulous.

27. **I. polyantha**, *Miq. Fl. Ind. Bat.* ii. 613; sparingly pubescent, leaves ovate-cordate acute entire, cymes peduncled laxly dichotomous many-flowered, sepals broad-elliptic obtuse nearly glabrous, corolla smallish yellow. *Convolvulus polyanthus*, *Wall. Cat.* 1378.

E. BENGAL; Soorma bank, *J. D. H.*; Soonderbund; *Clarke*.—DISTRIB. JAVĀ.

Stems twining, pubescent in places. *Leaves* 2-3 in., deeply cordate, pubescent on the nerves beneath or nearly glabrous; petiole 1-2 in. *Peduncles* 1-4 in.; bracts small, caducous; cymes 2-5 in. diam., minutely pubescent. *Sepals* $\frac{1}{4}$ in. *Corolla* $\frac{3}{4}$ -1 in., subcampanulate, clear yellow or ochroleucous.

VAR. *affinis*; less diffuse, more pubescent, cymes 3-7-fl., sepals pubescent or almost villous. *Convolvulus affinis*, *Wall. Cat.* 1385.—Assam, E. Bengal, Soonderbund; *Wallich, H. f. & T., &c.*, frequent. Distrib. Burma.—Referred by Choisy (in *DC. Prodr.* ix. 380) to *I. gemella*, Roth., with which it can have no near affinity; it is very near *I. chryseides*, but has a larger wider corolla, and much longer pedicels.

28. **I. reniformis**, *Chois. Convolv. Or.* 64, and in *DC. Prodr.* ix. 351, *syn. Linn. excl.*; glabrous or sparingly pubescent, leaves small reniform or ovate-cordate toothed, peduncles 0 or very short few-fl., sepals ovate obtuse glabrescent ciliate, corolla small yellow. *Dalz. & Gibs. Bomb. Fl.* 164. *I. cymbalaria*, *Fenzl in Flora* 1844, 312. *Convolvulus reniformis*, *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 481, and *ed. Carey & Wall.* ii. 67; *Wall. Cat.* 1398. *Evolvulus emarginatus*, *Burm. Fl. Ind.* 77, t. 30, fig. 1; *Linn. ms. in Herb. Prop.*

DECCAN PENINSULA and CEYLON, alt. 0-3000 ft., common; extending northwards to Rajputana and Behar.—DISTRIB. S. E. Asia, Tropical Africa.

Closely creeping, much branched, often rooting from nearly every node. *Leaves* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., often small, broader than long, obtuse, sometimes ovate, occasionally 3-lobed; petiole $\frac{1}{4}$ - $\frac{3}{4}$ in. *Peduncles* usually subobsolete, 1-3-flowered; bracts inconspicuous. *Sepals* $\frac{1}{8}$ in., glabrescent on the back, ciliate, even in fruit. *Corolla* $\frac{1}{2}$ - $\frac{3}{4}$ in., campanulate. *Capsule* $\frac{1}{4}$ in., subglobose, 2-celled; cells often 1-seeded. *Seeds* glabrous, dark chestnut-coloured.—Choisy says this species was *Convolvulus gangeticus*, Linn. *Amen. Acad.* iv. 306 (*Evolvulus*, Linn. *Sp. Pl.* 391), to which species Linnæus assigns "leaves and flowers very hirsute, peduncles capillary."

29. **I. rumicifolia**, *Chois. Convolv. Or.* 65, and in *DC. Prodr.* ix. 351; stems sparsely hirsute, leaves ovate-oblong cordate or subhastate sinuate irregularly angular or sublobate, peduncles short laxly few-fl., sepals elliptic-lanceolate patentely hirsute, corolla very small. *Convolvulus lasiospermus*, *Vis. Pl. Egypt. Nub.* 13, t. 1, fig. 2. *C. hirtus*, *Wall. Cat.* 2254.

MTS. of the S. DECCAN; TRAVANCORE and Nilgherries, *Rottler, Wight, &c.*—DISTRIB. E. Tropical Africa.

Stems annual, twining. *Leaves* 1-2 in., scabrous or sparsely hirsute; petiole $1\frac{1}{2}$ in. *Peduncles* 0- $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in., linear, subpersistent; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ in., acute, widened in fruit. *Corolla* $\frac{1}{2}$ - $\frac{1}{3}$ in., campanulate, white when dry, *Vistani*, probably yellow when fresh. *Capsule* $\frac{1}{4}$ in. and upwards, ovoid, glabrous, usually 4-seeded. *Seeds* velvety.

30. **I. obscura**, *Ker in Bot. Reg. t.* 239; leaves ovate-cordate acute entire nearly glabrous, peduncles long laxly 1-3-fl., sepals ovate subacute nearly glabrous, corolla middle-sized ochroleucous with a purple base, seeds velvety. *Chois. Convolv. Or.* 82, and in *DC. Prodr.* ix. 370, some *syn. excl.*; *Wight in Madras Journ. v.* 6, t. 12; *Dalz. & Gibs. Bomb. Fl.* 166. *I. insuavis*, *Blume Bijl.* 716. *I. ocularis*, *Bartl. in Linnæa*, 1840; *Suppl.* 126. *I. ochroleuca*, *Spanoghe in Linnæa*, 1841, 340. *Convolvulus obscurus*, *Linn.*; *Burm. Fl. Ind.* 44; *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 52, not of *Hassk.*

Throughout INDIA and CEYLON, alt. 0-3000 ft.; common.—DISTRIB. Malaya, Mascarene Islands, E. Africa.

Stems twining, hairy or nearly glabrous. *Leaves* 1-2 $\frac{1}{2}$ in.; petiole 1-2 in. *Peduncles* 1-3 in., often 1-flowered, rarely with so many as 3-flowers; bracts $\frac{1}{2}$ in., lanceolate, subpersistent; pedicels $\frac{1}{4}$ - $1\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ in.; ultimately broader, obtuse, reflexed. *Corolla* $\frac{3}{4}$ -1 in., tube narrow, mouth wide, glabrous, yellow or white with the plaits yellowish, always with the purple spot at the base. *Anthers* never twisted. *Capsule* $\frac{1}{4}$ - $\frac{1}{2}$ in., ovoid, subacute, glabrous, 2-valved, 2-seeded, normally 4-seeded. *Seeds* densely softly brown-velvety; therefore the Indian species is not the *I. obscura* elaborately described by *Hasskari (Pl. Jav. Rar.* 519).

VAR. gemella; adult leaves closely hairy on both surfaces. *Convolvulus gemellus*, *Wall. Cat.* 1383 *type sheet, not of Vahl.*—BENGAL; *Wallich, &c.*, frequent.—*Ipomæa gemella*, *Chois. Convolv. Or.* 87, and in *DC. Prodr.* ix. 380, consists of *Convolvulus gemellus*, *Burm. Fl. Ind.* 46, t. 21, fig. 1 (a Javan plant) and the totally different *C. affinis*, *Wall.*, from E. Bengal and Burma; so far as any Malabar examples are supposed to be *I. gemella*, they are perhaps *I. obscura*.

31. **I. Stocksii**, *Clarke*; leaves ovate-lanceolate cordate subcaudate shortly hairy on both surfaces, peduncles long laxly 1-3 fl., sepals lanceolate acuminate, corolla somewhat large, seeds glabrous.

MALABAR and CONCAN; *Stocks, Law, &c.*

Resembling generally (when dry) *I. obscura*. *Leaves* 3 $\frac{1}{2}$ in., deeply cordate, finely acuminate. *Pedicels* often $1\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ in., in flower sublinear, in fruit lanceolate, sparsely hairy. *Corolla* (very much withered) exceeding 1 in. *Capsule* nearly $\frac{1}{2}$ in., ovoid-oblong, glabrous, 4-valved, 4-seeded.—Referred in *Herb. Ind. Or. H. f. & T.* possibly to a var. of *I. obscura*, which the large flowers and glabrous seeds will not admit. From the unusually narrow sepals it may be the Malabar plant which *Willdenow* (and *Choisy*) have placed with *Burmanni's Convolvulus gemellus*.

32. **I. sibirica**, *Pers. Syn. i.* 183; nearly glabrous, leaves triangular-lanceolate cordate entire or undulate, peduncles shorter than the petioles 1-4-fl., sepals ovate mucronate, corolla small white, seeds glabrous. *Chois. in DC. Prodr.* ix. 377. *Convolvulus sibiricus*, *Linn. Mant.* 203. *C. rupestris*, *Pallas Voy. (ed. Gauthier)* iv. 369, t. 17.

WESTERN HIMALAYA: Kumaon; Naini Tal, alt. 6000 ft., *Strachey & Winterbottom.*—DISTRIB. Siberia, N. China (near *Pekin, Maximowicz*).

Annual, twining. *Leaves* 3 by 2 in.; petiole 2 in. *Peduncles* $\frac{1}{2}$ – $1\frac{1}{3}$ in.; bracts linear, deciduous; pedicels $\frac{1}{2}$ –1 in., racemose or subumbellate. *Sepals* $\frac{1}{2}$ in., glabrous. *Corolla* $\frac{2}{3}$ in., campanulate, glabrous, often yellowish near the base. *Anthers* never twisted. *Capsule* $\frac{1}{4}$ – $\frac{1}{2}$ in., ovoid, glabrous, 2-celled, 2-valved, 4–2-seeded. *Seeds* ellipsoid, glabrous.—The Indian specimen is rather more developed, both in leaf and cyme, than the original Linnæan type, but is identical with the specimens collected by Pallas.

33. *I. poranoides*, Clarke; glabrous, leaves ovate-lanceolate cordate caudate entire, cymes peduncled many-flowered lax, bracts ovate mucronate persistent, sepals ovate obtuse unequal, corolla small white.

SIKKIM and BRITISH BHOTAN; alt. 3–5000 ft., frequent, *Clarke*.

Scandent, twining. *Leaves* 3 by 2 in.; petiole $1\frac{1}{2}$ in. *Peduncles* 1–3 in.; bracts $\frac{1}{4}$ – $\frac{3}{4}$ in., at the divisions of the divaricate cyme. *Sepals* $\frac{1}{4}$ – $\frac{1}{2}$ in., glabrous. *Corolla* $\frac{1}{4}$ in., subcampanulate, glabrous, white, often yellowish near the base. *Anthers* never twisted. *Capsule* $\frac{1}{2}$ in., subglobose, smooth, 2-celled, 2–4-valved, normally 4-seeded. *Seeds* glabrous.—By the prominent persistent bracts, this species is not likely to be confounded with any other *Ipomœa*; but it has probably been passed for *Porana racemosa*, which it somewhat resembles in its scandent habit and numerous white flowers in lax cymes.

34. *I. cynanchifolia*, Clarke; hairy, leaves ovate-lanceolate cordate acuminate entire, peduncles 0, pedicels racemose or subfasciculate, bracts caducous, sepals lanceolate elongate, corolla small rose, capsule glabrous. *Convolvulus cynanchifolius*, *Wall. Cat.* 1399.

SIKKIM and BHOTAN; alt. 2–5000 ft., frequent, *Clarke*.—DISTRIB. Burma.

Scandent, twining. *Leaves* 3 by $1\frac{1}{2}$ in., more or less hairy; petiole 1–2. *Pedicels* $\frac{1}{4}$ in., rigid, fascicled, or forming a raceme 1–2 in., recurved in fruit. *Sepals* $\frac{1}{2}$ – $\frac{1}{2}$ in., hirsute, blackish green, widening in fruit. *Corolla* $\frac{1}{2}$ – $\frac{2}{3}$ in., campanulate, glabrous, with a dark spot at the base. *Anthers* never twisted. *Ovary* 2-celled, 4-ovuled; stigma small, of 2 subsessile globes. *Capsule* $\frac{1}{4}$ – $\frac{1}{2}$ in., subglobose, 2-celled, usually 4-seeded. *Seeds* glabrous.—Regarded by Choisy (in *DC. Prodr.* ix. 366) as identical with *I. eriocarpa*, from his never having seen Wallich's specimens. *I. cynanchifolia* is very near *I. calcinea*, Benth, but the sepals (even in fruit) are not cordate.

35. *I. Glenieii*, Thwaites in litt.; glabrous, leaves subcordate elongate-oblong entire, peduncles 1-flid. ebracteate, sepals ovate subacute, corolla middle-sized subcampanulate.

CEYLON; *Thwaites*.

Creeping, hardly twining. *Leaves* 2 by $\frac{1}{2}$ in., shallowly cordate, gradually narrowed from the very base to the apex, not acuminate, undulate; petiole 1 in. *Peduncles* $\frac{1}{4}$ – $\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ – $\frac{1}{2}$ in., obscurely mucicate. *Corolla* $\frac{3}{4}$ in., tube $\frac{1}{2}$ – $\frac{1}{2}$ in. broad.—Described from a fragment which flowered at Kew in 1871; it appears very distinct.

36. *I. denticulata*, Choisy in DC. Prodr. ix. 379, not of R. Br.; glabrous, leaves ovate-cordate acute entire denticulate angular or somewhat lobed, peduncles short 1–3-flid., pedicels long, sepals elliptic suddenly acute, corolla $1\frac{1}{2}$ in. purple. *Benth. Fl. Austral.* iv. 421. *I. subdentata*, *Miq. Fl. Ind. Bat.* ii. 614. *I. littoralis*, *Thwaites Enum.* 211, not of *Blume*. *I. cymosa*, *Baker Fl. Maurit.* 208, not of *Roem. & Sch.* *I. nicobarica*, *Kurz in Journ. As. Soc.* 1876. pt. 2, 141. *Convolvulus denticulatus*, *Lamk. Enc.* iii. 540.—*Ipomœa*, n. 42, *Herb. Ind. Or. H. f. & T.*

MALAY PENINSULA; from Mergui (*Griffith*) southwards. CEYLON; near the sea at Galle. *Thwaites*. NICOBARS; *Kurz*.—DISTRIB. Malaya, Australia, Polynesia, Seychelles.

Stems trailing, somewhat twining. *Leaves* 1–2 $\frac{1}{2}$ in., deeply cordate, not fleshy;

petiole $1\frac{1}{2}$ in. Peduncles 0– $1\frac{1}{2}$ in., often 1-fl.; bracts $\frac{1}{2}$ in., linear; pedicels often 1 in. or longer. Sepals nearly $\frac{1}{2}$ in., somewhat scariosus. Corolla widely tubular-funnel-shaped. Ovary 2-celled, not at all 4-celled. Capsule globose, glabrous. Seeds smooth.

37. **I. fastigiata**, Sweet Hort. Brit. ed. 2, 372; minutely puberulo-scabrous or glabrate, leaves ovate-cordate acute entire or lower lobed, peduncles long many-fl., pedicels short, sepals elliptic suddenly acute, corolla $1\frac{1}{2}$ –2 in. purple. Chois. Convolv. Or. 84, and in DC. Prodr. ix. 380; Meissn. in Mart. Brasil. vii. 267, with syn. Convolvulus fastigiatus, Roxb. Hort. Beng. 13, and Fl. Ind. i. 468, and ed. Carey & Wall. ii. 48, not of Wall.

BENGAL, Roxburgh. Introduced from America.

Extensively scandent, twining. Leaves 3–4 in., mostly entire (in the Indian plant), those on the runners often lobed; petiole often 3–5 in. Peduncles 1–4 in.; bracts caducous; cymes dense, pedicels rarely exceeding $\frac{1}{2}$ in. Flower and fruit very nearly as of *I. denticulata*, from which it differs little except in its numerous shorter pedicels.—A common American species, introduced in S. E. Asia. Miquel (Fl. Ind. Bat. ii. 616). Roxburgh describes it as a native of the interior of Bengal, and in flower most part of the year, but no one has met with the plant wild.

38. **I. sepiaria**, Koen.; Roxb. Hort. Beng. 14, and Fl. Ind. i. 500, and ed. Carey & Wall. ii. 90; leaves ovate-cordate acute entire glabrous or somewhat pubescent, peduncles long, pedicels short subumbelled clavate in fruit, sepals ovate subobtusely, corolla largeish pale-purple or white with a dark eye, seeds furred. Chois. Convolv. Or. 82, and in DC. Prodr. ix. 370; Wight Ic. t. 838; Dalz. & Gibs. Bomb. Fl. 166, not of Benth. *I. striata*, Roth Nov. Sp. 111. *I. Heynii*, Wall. Cat. 1387 (Choisy, no specimen now in Herb. Wall.). Convolvulus maximus and striatus, Vahl Symb. iii. 26, 28. *C. marginatus*, Lamk. Enc. iii. 558. *C. sepiarius* and *incrassatus*, Wall. Cat. 1384, 1386.—Rheede Hort. Mal. xi. t. 53.

Throughout INDIA; from Hindostan to Malacca, frequent. CEYLON, common.—DISTRIB. Malaya.

Perennial, twining, glabrous or in places pubescent or hirsute. Leaves 1–2½ in., entire or sinuate, rarely lobed, basal lobes usually rounded; petiole 1–2 in. Peduncles $\frac{1}{2}$ –7 in., usually long; bracts small, lanceolate, caducous; pedicels 0–½ in. Sepals $\frac{1}{2}$ in., obscurely pubescent. Corolla often 1½ in. and upwards; tube cylindric, dark purple within; mouth suddenly widened. Capsule $\frac{1}{4}$ –½ in., ovoid, 4–2-seeded.—Convolvulus triflorus, Vahl Symb. iii. 30 (Ipomæa triantha, Roem. & Sch. Syst. iv. 243; Chois. Convolv. Or. 83, and in DC. Prodr. ix. 370), is only known by Vahl's description. Choisy does not see how it differs from *I. sepiaria*; but Vahl states that the pedicels are about as long as the peduncles, which is not the case in *I. sepiaria*. It may have been *Ipomæa denticulata*.

VAR. *stipulacea*; leaves more elongate often angular or lobed sometimes hastate with basal lobes acute, stipules obscure minute, sepals rather larger, corolla shorter, than in *I. sepiaria* type. *I. stipulacea*, Sweet Hort. Brit. ed. 2, 372; Chois. Convolv. Or. 84, and in DC. Prodr. ix. 379. *I. subtrilobans*, Miq. Fl. Ind. Bat. ii. 615. Convolvulus stipulaceus, Roxb. Hort. Beng. 14, and Fl. Ind. i. 484, and ed. Carey & Wall. ii. 71.—Bengal Plain and Chittagong; Roxburgh, &c., not rare.—Miquel's *I. subtrilobans* is intermediate between *I. sepiaria* and this.

39. **I. Beladamboe**, Roem. & Sch. Syst. iv. 233; glabrous or nearly so, leaves ovate-cordate entire, peduncles short or long stout many-fl., sepals ovate obtuse, corolla large purplish or white, seeds glabrous. *I. rugosa*, Chois. Convolv. Or. 64, and in DC. Prodr. ix. 350; Wight Ic. t. 887. *I. repens*, Lamk. Enc. vi. 18, not of Roth. Convolvulus rugosus, Rottl.; Willd. in Act. Berol. iv. 196. *C. flagelliformis*, Roxb. Hort. Beng. 14, and Fl. Ind. i. 481, and

ed. Carey & Wall. ii. 68; *Wall. Cat.* 1397. *C. Beladambu*, *Spreng. Syst.* i. 608, and *curæ post.* 62.—*Rheede Hort. Mal.* xi. t. 58.

S. DECCAN PENINSULA; *Wight, &c.* CEYLON, abundant in damp fields.

Extensively trailing. *Leaves* 3–4 in. diam., subobtusely; petiole 1–2½ in. *Peduncles* ¼–½ in.; bracts ¼ in., lanceolate, deciduous; pedicels ½ in., stout, somewhat thickened upwards in fruit. *Sepals* ½–¾ in., unequal, outer often shorter, glabrous, wrinkled when young. *Corolla* ½–2 in., purple in the dried examples, pure white in Roxburgh's figure. *Capsule* ½ in., globose, glabrous, 4-seeded.

40. ***I. aquatica***, *Forsk. Fl. Æg. Arab.* 44; glabrous or nearly so, leaves elliptic-oblong cordate or hastate or elongate entire or angular sublobed, peduncles long few-fl., pedicels long, sepals ovate obtuse, corolla large purple, seeds minutely closely silky. *I. reptans*, *Poir. Enc. Suppl.* iii. 460; *Blume Bijl.* 714; *Chois. Convolv. Or.* 62, and in *DC. Prodr.* ix. 349; *Dalz. & Gibs. Bomb. Fl.* 164. *I. repens*, *Roth Nov. Sp.* 110. *I. subdentata*, *Miq. Fl. Ind. Bat.* ii. 614. *Convolvulus reptans*, *Linn.*; *Roxb. Hort. Beng.* 14. *C. repens*, *Vahl Symb.* i. 17; *Roxb. Fl. Ind.* i. 432, and *ed. Carey & Wall.* ii. 68; *Blume Bijl.* 713; *Wall. Cat.* 1355, not of *Linn.* *C. Adansonii*, *Lamk. Enc.* iii. 560.—*Rumph. Herb. Ambo.* v. t. 155, fig. i. *Rheede Hort. Mal.* xi. t. 52.

Throughout INDIA, common; abundant in Bengal Plain. CEYLON; borders of tombs, and cult. as a vegetable, *Thwaites*.—DISTRIB. Tropical Asia, Australia, Africa.

Annual; stems trailing on mud, and floating, sometimes to a great length, hollow. *Leaves* 3–6 in.; petiole 1–6 in., usually very long. *Peduncles* 2–7 in., 1–5-flowered; bracts inconspicuous; pedicels often 1–2 in. *Sepals* ½ in., glabrous or nearly so. *Corolla* 2 in., usually pale purple, glabrous. *Capsule* ½ in., ovoid, glabrous, 4–2-seeded. *Seeds* most minutely hairy, or very nearly glabrous.

41. ***I. salicifolia***, *Roxb. Fl. Ind.* i. 498, and *ed. Carey & Wall.* ii. 88; glabrous, leaves short-petioled linear-lanceolate base rhomboid or rounded, peduncles very short 1–3-fl., sepals broadly elliptic subobtusely, corolla large white. *Chois. in DC. Prodr.* ix. 367. *I. Buchananii*, *Chois. Convolv. Or.* 92.

BENGAL; Rungpore, *Hamilton*.

Only known from Roxburgh's description and his *Ic. Ined.* at Kew. Biennial stem twining. *Leaves* 7 by 1 in., acuminate; petiole ½ in. *Peduncles* 0–¼ in.; bracts ½ in., linear-lanceolate; pedicels ½–¾ in. *Sepals* ¾ by ½ in. *Corolla-tube* 1¾ by ½ in., cylindric; mouth 2½ in. diam. *Capsule* nearly ½ in. diam., globose, glabrous. *Seeds* ¼ in., oblong, black, apparently (from the figure) minutely hairy.—Roxburgh describes the capsule as 2-celled, with 3 seeds in each cell, which is hard to believe; in his picture, the stigma is distinctly 2-lobed, while the capsule seems 3-valved.

42. ***I. staphylina***, *Roem. & Sch. Syst.* iv. 249; glabrous, leaves ovate subcordate, peduncles short many-fl., laxly racemose-paniculate, sepals ovate obtuse, corolla middle-sized purplish white, seeds with silky hairs ¼ in. long. *Chois. Convolv. Or.* 78. *I. racemosa*, *Roth Nov. Sp.* 115, not of *Poir.*; *Chois. in DC. Prodr.* ix. 371; *Wight Ill.* t. 168. *Convolvulus malabaricus*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 469, and *ed. Carey & Wall.* ii. 49, all *syn. excl.*; *Wall. Cat.* 1341. *C. racemosus*, *Roem. & Sch. Syst.* iv. 302. *C. Kleinii*, *Spreng. Syst.* i. 606, and *curæ post.* 61. *C. polyanthus*, *Wall. Cat.* 1378. *C. gangeticus*, *Wall. Cat.* 1340, by admixture.

S. DECCAN PENINSULA; common. ASSAM; *Jenkins*. PENANG; *Wallich*.

Shrubby, subsucculent. *Leaves* 4 by 2½ in., subacute, not acuminate, prominently nerved; petiole 1–2 in. *Peduncles* ½–2 in., usually shorter than the petioles, numerous, often paniced towards the end of the branches; bracts small, caducous; pedicels 0–¼ in., mostly short. *Sepals* ½ in., glabrous. *Corolla* 1 in., purplish in the tube, mouth nearly white. *Capsule* ½ in., ovoid, subacute, 4-seeded.

43. **I. campanulata**, Linn.; Chois. *Convolv. Or.* 69, and in *DC. Prodr.* ix. 359; leaves cordate-ovate acute entire glabrous or very nearly so, corymbs compound stout, sepals $\frac{1}{4}$ – $\frac{1}{2}$ in. ovate obtuse puberulous, corolla $1\frac{1}{2}$ –3 in. campanulate purple lobes triangular-lanceolate, seeds with very long silky hair. *Dene. in Nouv. Ann. Mus.* iii. 392; *Wight Ic.* t. 1375; *Dalz. & Gibs. Bomb. Fl.* 165; *Kurz For. Fl.* ii. 218. *Convolvulus campanulatus*, Spreng. *Syst.* i. 608. *O. platypeltis*, Spanoghe in *Linnœa*, 1841, 338.—*Rheede Hort. Mal.* xi. t. 56.

DECCAN PENINSULA; frequent. MALAY PENINSULA; from Prome southwards.—CEYLON; in the warmer parts of the Island.—DISTRIB. Malay Archipelago.

A large twiner; nearly glabrous, young parts hoary. *Leaves* 3–4 in., nerves prominent; petiole 2–3 in. *Peduncles* 1–4 in., stout; bracts early deciduous; corymbs 2–5 in. diam., 10–40-flowered. *Sepals* hoary, in fruit somewhat enlarged $\frac{1}{2}$ in. diam. glabrate. *Corolla* very variable in size, always prominently lobed, glabrous or nearly so. *Capsule* $\frac{1}{2}$ in. diam., globose. *Seeds* with hairs often more than $\frac{1}{2}$ in. long.—Resembles *Rivea tiliaefolia* (Thwaites).

VAR. *illustris*; leaves ovate or oblong cordate or hastate, corymbs often few-flowered, sepals nearly glabrous, corolla often 4 in. shallowly or deeply lobate.—MALAY PENINSULA, from Moulmein southwards.—DISTRIB. Malay Islands.—The size and lobation of the corolla vary so greatly that there may be two species here; a Moulmein example collected by Parish has the corolla $4\frac{1}{4}$ in., very shallowly lobed, the calyx glabrate, and is very different from the Malabar ones with corolla only $1\frac{1}{2}$ in. long. Miquel must be mistaken in saying (*Fl. Ind. Bat.* ii. 606) that Spanoghe's *I. campanulata* cannot be Linnæus' *I. campanulata* because the seeds are woolly; for Linnæus' species is founded on Rheede's picture (*Hort. Mal.* xi. t. 46), which (and the description) attributes silky seeds to the species.

44. **I. Gomezii**, Clarke; leaves ovate-cordate acute entire glabrous, corymbs peduncled few-fl'd., sepals 1– $1\frac{1}{2}$ in. elliptic glabrous, corolla very large.

TAVOY; Gomez. ANDAMANS; Kurz.

A large climber, resembling *I. campanulata*, var. *illustris*, but with a much larger calyx. *Leaves* 3–6 in., sinus wide, nerves prominent; petiole 2 in. *Peduncles* 1–3 in., stout; bracts caducous. *Sepals* in young fruit erect, much imbricate. *Corolla* 4 by 3 in., campanulate.—The Malay *I. peltata*, Choisy, resembles this, but has a smaller calyx and peltate leaves.

45. **I. cymosa**, Roem. & Sch. *Syst.* iv. 241; softly hairy or glabrous, leaves cordate or hastate elliptic or oblong obtuse or shortly acute entire or angular or toothed, peduncles shorter than the leaves, cymes compact, sepals $\frac{1}{4}$ – $\frac{1}{2}$ in. elliptic, corolla middle-sized pure white or tinged yellow, seeds patentely hirsute. *Blume Cat. Gewass. Java*, 50; Chois. *Convolv. Or.* 79, and in *DC. Prodr.* ix. 371; *Bot. Reg.* 1843, t. 24. *I. bifida*, Roth *Nov. Sp.* 118. *I. Heynei* and *Rothii*, Roem. & Sch. *Syst.* iv. 237, 241. *I. Olanda*, Sweet *Hort. Brit.* (2 ed.) 372. *I. caliginosa*, Chois. *Convolv. Or.* 79, and in *DC. Prodr.* ix. 370. *Convolvulus cymosus*, Lamk. *Enc.* iii. 556. *C. blandus*, Roxb. *Hort. Beng.* 13, and *Fl. Ind.* i. 470, and ed. Carey & Wall. ii. 50, 70; *Wall. Cat.* 1342. *C. pentagonus*, Roxb. *Hort. Beng.* 14, and *Fl. Ind.* i. 485, and ed. Carey & Wall. ii. 72; *Wall. Cat.* 1343. *C. Rothii*, Spreng. *Syst.* i. 600. *C. umbellatus*, *Wall. Cat.* 2329.—*Rumph. Herb. Amb.* v. t. 158.

Abundant throughout INDIA (except the N.W. dry area), alt. 0–4000 ft. CEYLON; very common.—DISTRIB. Malaya, Australia, Tropical Africa.

Scandent, twining. *Leaves* $1\frac{1}{2}$ –4 in., nerves prominent subparallel; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in., mostly short. *Peduncles* $\frac{1}{2}$ –2 in.; bracts caducous; pedicels $\frac{1}{2}$ –1 in. *Sepals* obtuse or mucronate, hairy or glabrous. *Corolla* 1– $1\frac{1}{2}$ in., tubular-funnel-shaped; in buds hirsute at the tip. *Capsule* $\frac{1}{2}$ in. diam., globose, glabrous. *Seeds* with blacker, stiffer, more patent hairs than in the allied species.

VAR. *macra*; larger in all parts, peduncles sometimes 4-6 in., sepals $\frac{2}{3}$ in., corolla 2 in.—Sikkim, Assam and Khasia Mts., alt. 0-4000 ft., *Griffith, J. D. H.*, &c.—Leaves 5 by 3 in.; petiole 3-4 in. *Seeds* exactly as of *I. cymosa*, but considered as a variety by *Bentham (Fl. Austral. iv. 423)*.

46. *I. petaloidea*, *Chois. Convolv. Or. 69*, and in *DC. Prodr. ix. 360*; glabrous, leaves ovate acute many of the upper lanceolate, peduncles short, bracts caducous, flowers subracemose, corolla large yellow shaggy without. *Dene. in Nouv. Ann. Mus. iii. 392*. *I. xanthantha, Kurz For. Fl. ii. 219*. *Convolvulus crispatus, Wall. Cat. 1403*.

N. OUDH; *R. Thomson*. All over **PROME** and **PEGU**; *Kurz*.—**DISTRIB.** **TIMOR**.

Large, scandent. *Leaves* 5 by $3\frac{1}{2}$ in., base rounded or subcordate; upper $3\frac{1}{2}$ by $\frac{2}{3}$ in., base obtuse; petiole $1\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ -1 in.; pedicels often 1 in. *Sepals* $\frac{2}{3}$ in., elliptic-ovate, obtuse or subacute, glabrous, hardly altered in fruit. *Corolla* $1\frac{1}{2}$ in., wide-tubed. *Stamens* inserted low down the tube; anthers ultimately twisted. *Capsule* $\frac{1}{2}$ in., ovoid. *Seeds* minutely velvety, margins subvillous.

VAR. *pauciflora*; leaves smaller all oblong-lanceolate, peduncles 1-fl. rarely 2-fl. *Ipomœa*, n. 44, *Herb. Ind. Or. H. f. & T.*—**KUMAON**; *Thomson*.—Though *Dr. Thomson* collected lower parts of the stem, there are no ovate leaves.

47. *I. Turpethum*, *Br. Prodr. 485*; softly pubescent or glabrate, leaves ovate or oblong not acuminate, cymes few-fl., sepals ovate in fruit much enlarged, corolla largeish white, seeds smooth. *Bot. Reg. t. 279*; *Chois. Convolv. Or. 68*, and in *DC. Prodr. ix. 360*; *Dalz. & Gibs. Bomb. Fl. 165*; *Kurz For. Fl. ii. 218*. *I. anceps, Roem. & Sch. Syst. iv. 231*; *Blume Bijl. 714*; *Chois. Convolv. Or. 68*, and in *DC. Prodr. ix. 360*. *I. triquetra, Roem. & Sch. Syst. iv. 231*. *Convolvulus Turpethum, Linn.; Roxb. Hort. Beng. 14*, and *Fl. Ind. i. 476*, and ed. *Carey & Wall. ii. 57*; *Wall. Cat. 1371*; *Bot. Mag. t. 2093*; *Wight in Hook. Bot. Misc. iii. 297, suppl. t. 38*; *Hassk. Pl. Jav. Rar. 518*. *C. anceps, Linn. Mant. 43*. *C. triqueter, Vahl Symb. iii. 30*. *Spiranthera Turpethum, Bojer Hort. Maurit. 226*. *Operculina Turpethum, Manso Brasil. 16, 49*. *Argyreia alulata, Miq. Fl. Ind. Bat. ii. 587*.

Throughout **INDIA**, alt. 0-3000 ft., and **CEYLON**, common.—**DISTRIB.** **S.E. Asia**, **Malaya**, **Australia**, **Polynesia**, **Seychelles**, **Mauritius**.

Stems stout, twining, quadrangular, winged, compressed, or nearly round. *Leaves* 2-5 in., base cordate or obtuse; petiole 1 in. *Peduncles* 1-4 in.; bracts 1 in., oblong, caducous, often pinkish; pedicels $\frac{1}{4}$ -1 in. *Sepals* $\frac{1}{2}$ in., usually softly pubescent; in fruit 1 in., orbicular, concave, scarious or subsucculent. *Corolla* $1\frac{1}{2}$ in., tubular-campanulate. *Anthers* soon twisting. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., globose, normally 4-seeded.

48. *I. biloba*, *Forsk. Fl. Æg.-Arab. 44*; glabrous, leaves orbicular obtuse emarginate or 2-lobed, peduncles 1-3-fl., sepals ovate obtuse, corolla large purple, seeds villous. *I. maritima, Br. Prodr. 486*; *Blume Bijl. 720*; *Bot. Reg. t. 319*. *I. Pes-Capræ, Roth Nov. Sp. 109*; *Chois. Convolv. Or. 63*, and in *DC. Prodr. ix. 349*; *Dalz. & Gibs. Bomb. Fl. 164*; *Meissn. in Mart. Brasil. vii. 256, with syn.* *Convolvulus Pes-Capræ, Linn.; Roxb. Hort. Beng. 14*, and *Fl. Ind. i. 486*, and ed. *Carey & Wall. ii. 74*; *Wall. Cat. 1360*. *C. maritimus, Lamk. Enc. iii. 550*. *C. bilobatus, Roxb. Hort. Beng. 14*, and *Fl. Ind. i. 485*, and ed. *Carey & Wall. ii. 73*; *Wall. Cat. 1359*. *Batatas maritima, Bojer Hort. Maurit. 225*.—*Rumph. Herb. Amb. v. t. 169, fig. i.* *Rheede Hort. Mal. xi. t. 57*.

Throughout **INDIA** and **CEYLON**; near the sea, abundant.—**DISTRIB.** Seashore of both hemispheres throughout the tropics.

Extensively creeping and twining. *Leaves* 1-4 in., often broader than long, fleshy, prominently nerved; petiole 1-4 in. *Peduncle* 1-4 in.; bracts $\frac{1}{2}$ in., lanceolate,

caducous; pedicels often more than 1 in. *Sepals* $\frac{1}{2}$ – $\frac{2}{3}$ in.; in fruit widened. *Corolla* 2 in., tubular-funnel-shaped, glabrous, margin scarcely lobed. *Ovary* 2-celled, not imperfectly 4-celled. *Capsule* $\frac{1}{2}$ in., ovoid, glabrous.

49. **I. carnosæ**, *Br. Prodr.* 485; glabrous or nearly so, leaves lobed or oblong emarginate, peduncles 1–3-fld., sepals ovate obtuse, corolla largeish ochroleucous, seeds villous. *Benth. Fl. Austral.* iv. 419. *I. acetosæfolia*, *Roem. & Sch. Syst.* iv. 246; *Meissn. in Mart. Fl. Brasil.* vii. 255, t. 94. *I. longifolia*, *Benth. Pl. Hartw.* 16; *Bot. Reg.* 1840, t. 21. *I. littoralis*, *Boiss. Fl. Orient.* iv. 112. *Convolvulus littoralis*, *Linn. Sp. Pl.* 227. *C. acetosæfolius*, *Vahl Ecl.* i. 18. *C. arenarius*, *Vahl Symb.* i. 18. *O. carnosus*, *Spreng. Syst.* i. 609. *O. stoloniferus*, *Cyr. Pl. Rar.* i. t. 5. *Batatas littoralis* and *acetosæfolia*, *Chois. Convolv. Or.* 124, and in *DC. Prodr.* ix. 337, 338.

MALACCA; Griffith.—DISTRIB. Tropical seashores of both hemispheres.

Very near *I. biloba*. Leaves often deeply lobed, sometimes subentire emarginate, but then much more elongate than those of *I. biloba*, oblong or linear, or often fiddle-shaped; nerves much more obscure. *Ovary* completely 2-celled, imperfectly 4-celled. *Capsule* and seeds exactly as of *I. biloba*.

50. **I. vitifolia**, *Sweet Hort. Brit. ed.* 2, 372; hairy, leaves cordate palmately 5-lobed, peduncles 1–7-fld., sepals ovate-acute hirsute, corolla middle-sized sulphur-coloured, seeds glabrous. *Blume Bijl.* 709; *Chois. Convolv. Or.* 72, and in *DC. Prodr.* ix. 361; *Dalz. & Gibs. Bomb. Fl.* 165; *Kurz For. Fl.* ii. 219. *I. angularis*, *Chois. Convolv. Or.* 72. *Convolvulus vitifolius*, *Linn. Mant.* 203; *Burm. Fl. Ind.* 45, t. 18, fig. 1; *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 476, and *ed. Carey & Wall.* ii. 61; *Wall. Cat.* 1348. *C. angularis*, *Linn. Mant.* 203; *Burm. Fl. Ind.* 46, t. 19, fig. 2; *Hassk. Pl. Jav. Rar.* 519.

Throughout INDIA (except the dry N.W.); from Sikkim, Assam, Chittagong and Burma, southwards to Ceylon and Malacca.—DISTRIB. Malay Islds.

A large climber. Leaves 2–6 in. diam.; lobes triangular, acute, often toothed or acutely lobed; petiole $\frac{1}{2}$ –2 in. Peduncles 1–4 in. Sepals $\frac{1}{2}$ in., often $\frac{3}{4}$ in. in fruit. Corolla $1\frac{1}{2}$ in., campanulate. Capsule $\frac{1}{2}$ in. diam., depressed globose, membranous, 2-celled, normally 4-seeded.

51. **I. pilosa**, *Sweet Hort. Brit. ed.* 2, 372; hairy, leaves ovate-cordate acute often deeply 3-lobed white woolly beneath, cymes peduncled persistently bracteate, corolla small purple, seeds pubescent margins silky. *Chois. Convolv. Or.* 86, and in *DC. Prodr.* ix. 363; *Wight Ic.* t. 837; *Dalz. & Gibs. Bomb. Fl.* 166. *I. dichroa*, *Chois. in DC. Prodr.* ix. 364. *Convolvulus pilosus*, *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 473, and *ed. Carey & Wall.* ii. 55. *O. albicans*, *Wall. Cat.* 1401. *O. dichrous*, *Roem. & Sch. Syst.* iv. 263.

W, HIMALAYA, alt. 1–3000 ft., PUNJAB and SCINDE; frequent. BENGAL; *Wallicé*. —DISTRIB. Tropical Africa.

Annual, twining, patently hirsute. Leaves 2–4 in., lobes acuminate, often narrower below; petiole 2 in. Peduncles 1–3 in.; bracts $\frac{1}{4}$ in., linear-lanceolate; pedicels usually $\frac{1}{4}$ – $\frac{1}{2}$ in. Sepals $\frac{1}{2}$ in. and upwards, narrow-lanceolate, acuminate. Corolla $\frac{3}{4}$ in., narrowly funnel-shaped, with scattered long hairs without. Capsule $\frac{1}{4}$ – $\frac{1}{2}$ in., ovoid-globose, glabrous, 4-valved, normally 4-seeded.

†† Leaves divided, or very deeply lobed.

52. **I. kentrocaulos**, *Clarke*; glabrous, leaves deeply palmate segments elliptic-lanceolate acuminate entire, peduncles many-fld., sepals 1 in. elliptic-oblong, corolla large, seeds $\frac{1}{2}$ in. glabrous. *I. tuberosa*, *A. Rich. Fl. Abyss.* ii. 67; *Chois. in DC. Prodr.* ix. 362, the old-world plant, not of *Linn.* *O. panicu-*

latus, *Wall. Cat.* 1350, Heyne's *Ipomœa tuberosa* only. *Convolvulus kentrocaulos*, *Steud. in Pl. Schimp.* n. 800. *C. formosus*, *Roeb. Ic. Ined.*

N.W. INDIA; *Royle*. DECCAN PENINSULA; *Rottler, Wight, &c.* CEYLON.—DISTRIB. Malaya, Tropical Africa.

Stem stout, twining, muricate or smooth. *Leaves* 3–5 in. diam.; petiole 2–5 in. *Peduncles* 2–6 in.; bracts deciduous; pedicels $\frac{1}{4}$ –1 in. *Sepals* narrow; in fruit $1\frac{1}{4}$ by $\frac{1}{2}$ in., subpatent, hardly imbricated. *Corolla* 2 in., tubular-campanulate. *Capsule* $\frac{1}{4}$ – $\frac{1}{2}$ in., globose.—In *I. tuberosa*, Linn., the fruiting-sepals are 1–1 $\frac{1}{2}$ in. broad, concave, much imbricate, seeds $\frac{2}{3}$ in., furred; see *Trans. Hort. Soc. Lond.* i. 184, t. 11.

53. ***I. sinuata***, *Ortega Dec.* 84; leaves palmate glabrous or nearly so, leaflets narrowly lanceolate toothed or pinnatifid, peduncles 1–2-fld., sepals nearly 1 in. elliptic-oblong glabrous, corolla middle-sized, seeds glabrous or nearly so. *Chois. in DC. Prodr.* ix. 362. *I. dissecta*, *Chois. l.c.* 363, as to the Indian material, not of *Willd.* *Convolvulus dissectus*, Linn. *Mant.* 204; *Jacq. Hort. Vindob.* ii. 74, t. 159. *C. Kleinii*, *Wall. Cat.* 1377.

Introduced from tropical AMERICA; N.W. India; *Royle*. Hindostan; *Thomson*. Bengal; *Jenkins, Rottler, Wight, &c.*—Native of tropical America, widely spread in the Old World.

Stems twining, hirsute or glabrous. *Leaves* 2–4 in. diam., sometimes hirsute on the midrib. *Corolla* 1 $\frac{1}{4}$ in., campanulate, white, throat purple. *Capsule* $\frac{1}{3}$ – $\frac{1}{2}$ in. diam., glabrous, 2-celled, normally 4-seeded. *Seeds* $\frac{1}{4}$ in.

54. ***I. rhyncorhiza***, *Dalz. in Hook. Kew Journ.* iii. 179; leaves deeply palmate sparsely hispidulous segments oblong lobed or pinnatifid, peduncles 1–2-fld., sepals $\frac{1}{2}$ in. elliptic-lanceolate unequal glabrous, corolla middle-sized yellow. *Dalz. & Gibs. Bomb. Fl.* 167.

The CONCAN; Syhadree Mts. (Bombay), Tulkut Ghat, *Dalzell*; Concan, *Stocks*.

Root tuberous; stems filiform, twining, glabrous. *Leaves* 3 in. diam.; lobes obtuse or mucronate; petiole 1 in. *Peduncles* 2–4 in.; bracts $\frac{1}{2}$ in., linear. *Corolla* 1 $\frac{1}{4}$ in. by 2 in. diam. *Fruit* not known.

55. ***I. quinata***, *Br. Prodr.* 486; leaves palmate, leaflets lanceolate entire, peduncles 1–2-fld., sepals $\frac{1}{2}$ in. elliptic glabrous or nearly so, corolla rather large, seeds glabrous shining apex crested. *Chois. in DC. Prodr.* ix. 385; *Benth. Fl. Austral.* iv. 415. *I. hirsuta*, *Br. Prodr.* 486. *I. pentadactylis*, *Chois. l.c.* *Convolvulus tenuifolius*, *Vahl Symb.* iii. 33. *C. quinatus* and *Brownii*, *Spreng. Syst.* i. 590. *C. pentadactylis*, *Wall. Cat.* 1367. *C. munitus*, *Wall. Cat.* 1354, as to *Hamilton's Convolvulus tenuifolius* only.

CHOTA NAGPORE; frequent, *Clarke*.—DISTRIB. Burma; S. China, N. Australia.

Stems prostrate, hardly twining, patently fulvous-hirsute or glabrous. *Leaves* 3–4 in. diam., glabrous or with patent fulvous hairs; leaflets obtuse or subacute, not acuminate; petiole 1 $\frac{1}{2}$ in., mostly hairy. *Peduncles* shorter than the petioles; bracts $\frac{1}{2}$ in., linear, persistent. *Corolla* 1 $\frac{1}{2}$ in. and upwards, white or purplish. *Capsule* $\frac{1}{2}$ in., ovoid, subacute, glabrous, 2-celled, 4-valved, normally 4-seeded. *Seeds* $\frac{1}{4}$ by $\frac{1}{8}$ in. —Easily distinguished from all other *Ipomœas* by the crest of the seed.

56. ***I. palmata***, *Forsk. Fl. Æg.-Arab.* 43; glabrous, leaves digitate nearly or quite to the base, lobes elliptic or lanceolate subentire, peduncles 3–1-fld., sepals ovate obtuse, corolla large purplish, seeds villous margins woolly. *Chois. Convolv. Or.* ix. 386; *Benth. Fl. Austral.* iv. 415; *Boiss. Fl. Orient.* i. 464. *I. senegalensis*, *Lamk. Ill.* i. 464. *I. stipulacea*, *Jacq. Hort. Schoenb.* ii. 39, t. 199. *I. pendula*, *Br. Ind.* i. 479, and ed. Carey & Wall. ii. 65. *C. heptaphyllus*, Rottl.; Roxb. *Hort. Beng.* 14, and *Fl. Ind.* ed. Carey & Wall. ii. 66; Wall. *Cat.* 1353. *C. lupulifolius*, Griff. *Notul.* iv. 284.

DECCAN PENINSULA with CEYLON; Rottler, Wight, &c. MALACCA; Maingay.—
DISTRIB. Tropical Asia, Africa, Australia, and America.

Perennial, twining, in age often tubercled. Leaves 1–3 in. diam.; petiole 1–2 in. Peduncles often as long as the petioles, often 3-fld.; bracts minute. Sepals $\frac{1}{4}$ in. Corolla $1\frac{1}{2}$ in., and upwards. Capsule nearly $\frac{1}{2}$ in. ovoid, glabrous, 2-celled, 2–4-valved, normally 4-seeded.

57. **I. dasysperma**, Jacq. *Ecl.* i. 132, t. 89; glabrous, leaves pedate lobes 5–7 unequal elliptic or lanceolate subentire, peduncles mostly 1-fld., sepals ovate obtuse, corolla large yellow with a purplish eye, seeds villous margins woolly. Chois. *Convolv. Or.* 90, and in *DC. Prodr.* ix. 386; Hassk. *Retzia*, i. 70. *I. tuberculata*, Ker in *Bot. Reg.* t. 86, not of Roem. & Sch.? *Convolvulus dasyspermus*, Spreng. *Syst.* i. 591. *C. pedatus*, Roxb. *Hort. Beng.* 14, and *Fl. Ind.* ed. Carey & Wall. ii. 63. Wall. *Cat.* 1352 (specimen not in Herb. Wall.).

SIMLA, Lady Balhousie. ROHILCUND; Edgeworth. DECCAN PENINSULA; Rottler, Wight.

Probably a cultivated form of *I. palmata*. Roxburgh only knew it in cultivation. Pedate leaves occur, and 1-fld. peduncles are not rare in *I. palmata*. The only remaining differential character is the colour of the corolla; but this is by no means a pure yellow in *I. dasysperma*; the tube is purplish and there are often purplish streaks on the limb.

IMPERFECTLY KNOWN AND EXCLUDED SPECIES.

1. *I. ? BIPEDUNCULATA*, Clarke; large glabrous twiner, leaves ovate cordate acute, peduncles 2 in. paired in each axil, cymes dichotomous many-fld.—N.W. HIMALAYA; Sirmore, alt. 3–5000 ft., Edgeworth. Leaves 4 in., entire; petiole $2\frac{1}{2}$ in. Peduncles in pairs from each of the 4 axils on the branch, subquadangular; cymes 6–10-fld. bracts 0 in young fruit; pedicels $\frac{1}{4}$ – $\frac{3}{4}$ in. Sepals $\frac{1}{2}$ in., broad-elliptic, shortly acute, striated, glabrous. Corolla not seen. Fruit (imperfectly ripe), much exceeding the sepals, ovoid, glabrous, possibly indehiscent. Seeds 4, glabrous.—The example is imperfect, but can be matched with no other Indian plant.

2. *I. COMPRESSA*, Gussone; Chois. in *DC. Prodr.* ix. 388; wholly villous-hairy, stem twining compressed, leaves ovate-cordate entire, peduncles 1-fld. shorter than the leaves.—Raised from Indian seeds, in Hort. Becon. 1825.

3. *I. CUSPIDATA*, Don. *Prodr.* 98; Chois. in *DC. Prodr.* ix. 388; leaves cordate cuspidate entire pubescent with rounded lobes, peduncles axillary solitary longer than the leaves many-fld., sepals linear acute hairy, style exceedingly short. NEPAL; Hamilton. Flores rose, a little larger than in *I. coccinea*. No Nepal plant with a very short style and linear sepals will answer to this.

4. *I. MULTIFLORA*, Roxb. *Fl. Ind.* ed. Carey & Wall. ii. 89, and *Ic. Ined. in Herb. Kew*; stems woody twining, leaves broad-cordate downy, peduncles as long as the leaves umbelliferous. Common, native in hedges and forests, Roxburgh. Stem woody, twining up and over trees. Leaves 3–4 in. diam., short acuminate; petiole 2–3 in. Peduncles 7–8 in. (in Roxburgh's picture); cyme close, compound; bracts 0; pedicels $\frac{1}{4}$ in. Corolla $2\frac{1}{2}$ in., pale rose. Fruit not described nor depicted.—Roxburgh's picture might do for *Argyreia Hookeri*; but it is not probable that Roxburgh ever obtained that species, and it is hardly possible he would say it was "common in hedges." It is not Wallich's *C. Roxburghii* (Cat. n. 1415), which is the type of *Argyreia Roxburghii*, Chois.

5. *I. OVALIFOLIA*, *Chois. in DC. Prodr.* ix. 357; said to be a native of India. There is no example thence; it is not = *I. microphylla*, Roth Nov. sp. 112, as *Choisy* supposed.

6. *I. SIDÆFOLIA*, *Chois. in DC. Prodr.* ix. 372; is native in America, not in India. It is *Convolvulus zeylanicus*, *Moon; Wall. Cat.* 1379.

7. *I. TRIANTHA*, *Roem. & Sch.* is perhaps *I. sepiaria*, *Koen.* (which see).

6. **LEPISTEMON**, *Blume.*

Character of *Ipomœa* subgenus *Euipomœa*, but filaments dilated at the base into 5 concave scales which arch over the ovary.—Species 4 (1 African, 3 Asiatic).

1. ***L. Wallichii***, *Chois. Convolv. Or.* 61, and in *DC. Prodr.* ix. 348; hairy, leaves ovate-cordate acute entire or 3-lobed, cymes dense many-fl'd. short-peduncled, sepals elliptic-lanceolate acuminate, corolla $\frac{3}{4}$ in. tubular narrower in the middle. *L. flavescens*, *Wight Ic.* t. 1362, not in *Calc. Journ. Nat. Hist.* t. 5, fig. 6, nor of *Blume*. *Convolvulus cephalanthus*, *Wall. Cat.* 1402. *C. binectariferus*, *Wall. in Roxb. Fl. Ind. ed. Carey & Wall.* ii. 47. *Vallis conroversa*, *Spreng. Syst. curæ post.* 65. *Ipomœa Wallichii*, *Steud. Nomencl. Bot.* *Nemodon* sp., *Griff. Notul.* iv. 286.

ASSAM, KHASIA MTS., SILHET, and CACHAR; ascending to 3000 ft.; *Wallich, H. f. & T., &c. Mergui; Griffith.*

Stems stout, scandent, fulvous-villous. *Leaves* 3-5 in., fulvous-hirsute on both surfaces; petiole 1-2 in. *Peduncles* 0- $\frac{1}{2}$ in.; cymes 10-30-fl'd.; bracts $\frac{1}{2}$ in., linear-lanceolate, deciduous; pedicels many attaining $\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ in., patently fulvous-hirsute, acuminate. *Corolla* slightly dilated, glassy at base; tube hairy without; mouth shortly widely funnel-shaped, yellowish, white, or dull grey. *Filaments* short, glabrous above; basal process papillose; anthers not twisted. *Ovary* 2-celled, 4-ovuled; style very short, and stamens in the lower part of the corolla-tube, stigmas 2 subglobose. *Capsule* $\frac{1}{4}$ in., ovoid, glabrous, 4-valved, 2-celled, normally 4-seeded. *Seeds* glabrous.—*L. flavescens*, *Blume*, a Javan species, has the sepals ovate subacute (not acuminate), the corolla rather shorter and wider at the base than in *L. Wallichii*. A *Lepistemon* from Borneo and the Philippines has the cymes almost capitate, densely grey strigose; but these 3 Asiatic species might perhaps be considered vars. of one.

7. **HEWITTIA**, *W. & A.*

A pubescent, twining herb. *Leaves* cordate, entire angular or lobed. *Peduncles* axillary; flowers few subcapitate or solitary; bracts linear-lanceolate. *Sepals* acute, outer larger, enlarged in fruit. *Corolla* campanulate, yellowish with a purple eye; limb 5-plaited. *Stamens* included; filaments linear, bases dilated. *Ovary* hirsute, 1- (or imperfectly 2-), celled, 4-ovuled; style filiform, stigmatic lobes 2 ovate-oblong. *Capsule* globose, 4-valved, 1-celled, normally 4-seeded. *Seeds* glabrous.

1. ***H. bicolor***, *Wight Ic.* t. 835 (by misprint Heivetia), and *Ill.* t. 168, bis fig. 6 (Hewetia). *Convolvulus bicolor*, *Vahl Symb.* iii. 25; *Bot. Mag.* t. 2205; *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 475, and *ed. Carey & Wall.* ii. 57; *Wall. Cat.* 1410. *C. bracteatus*, *Vahl Symb.* iii. 25. *C. involucratu*, *Ker in Bot. Reg.* t. 318, not of *Spreng.* *Ipomœa bicolor*, *Sweet Hort. Brit.* ed. 2, 372. *I. timorensis*, *Blume Bijl.* 711. *I. bracteata*, *Blume Bijl.* 711, not of *Willd.* nor of *Wight*. *I. Weinmanni*, *Roem. & Sch. Syst.* iv. 243. *Calystegia Keriana*, *Sweet Hort. Brit.* ed. 2, 370. *Palmia bicolor*, *Endl.; Dalz. & Gibs.*

Bomb. Fl. 163. *Shuteria bicolor*, *Chois. Convolv. Or.* 104, and in *DC. Prodr.* ix. 435; *Fl. des Serres*, t. 421. *Ariseia Afzelii*, *G. Don. Gen. Syst.* iv. 295. *A. bracteata*, *Hassk. Pl. Jav. Rar.* 516.

S.E. INDIA from Assam and Bombay to the Carnatic and Malacca; frequent.—**DISTRIB.** Malaya, Tropical Africa.

Perennial, pubescent or nearly glabrous. *Stems* twining. *Leaves* 2–4 in., some angular or lobed; petiole $\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ –5 in., 1- or oftener few-flid.; bracts $\frac{1}{2}$ – $\frac{1}{2}$ in., narrowly lanceolate, a little below the calyx. *Sepals* $\frac{1}{2}$ – $\frac{1}{2}$ in., ovate, inner lanceolate, pubescent; in fruit enlarged, subscariose, reticulate. *Corolla* 1 in., somewhat widely campanulate, or shortly 5-lobed, hairy without. *Capsule* $\frac{1}{2}$ in., subglobose, hairy.

8. CALYSTEGIA, R. Br.

Prostrate or twining herbs, glabrous or nearly so. *Leaves* entire or lobed. *Peduncles* 1-flid.; bracts 2, large, enclosing the calyx, persistent. *Sepals* ovate or oblong, inner rather smaller. *Corolla* funnel-shaped or campanulate; limb 5-plaited, subentire. *Stamens* included. *Ovary* 1- (or imperfectly 2-) celled, 4-ovuled; style filiform, stigmatic lobes 2, shortly oblong. *Capsule* globose, 1-celled, normally 4-seeded. *Seeds* glabrous.—Species 7–8, in the warm and temperate regions of both hemispheres.

1. *C. hederacea*, *Wall. Cat.* 1828, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 94; leaves cordate or sagittate entire or lobed, corolla 1 in. subcampanulate pink-purple. *Chois. Convolv. Or.* 103, and in *DC. Prodr.* ix. 434. *C. acetosæfolia*, *Turcz. Fl. Baic.-Dahur.* 2, ii. 289, in note. *Convolvulus Wallichianus*, *Spreng. Syst. curæ post.* 61. *C. acetosæfolius*, *Turcz. in Bull. Mosc.* 1840, 73.

NORTH INDIA from the Punjab and Nepal to Penang, exclusive of the Deccan and Ceylon; abundant in the plains of Bengal.—**DISTRIB.** China, Amurland, Cabul.

Prostrate as a weed of cultivation and climbing 6 ft. in bushes. *Leaves* 1–3 in., very irregular in form; petiole 1 in. *Peduncles* 2 in.; bracts $\frac{1}{2}$ in. ovate. *Sepals* $\frac{1}{2}$ in., oblong, obtuse, glabrous. *Capsule* $\frac{1}{2}$ in., ovoid, subacute, glabrous.

9. CONVOLVULUS, Linn.

Herbs or undershrubs, erect prostrate or twining, sometimes spinous. *Leaves* entire, toothed or lobed. *Peduncles* axillary, 1-many-flid.; bracts narrow, rarely wide prominent. *Sepals* subequal, or the outer wider. *Corolla* campanulate, limb 5-plaited, nearly entire. *Stamens* included. *Ovary* 2-celled, 4-ovuled; style filiform; stigmas 2, distinct, oblong or linear. *Capsule* globose, 2-celled, 4-valved, or breaking irregularly, normally 4-seeded. *Seeds* glabrous, usually smooth.—Species 150, tropical and temperate.

* *Erect or diffuse, not twining* (except sometimes *C. glomeratus*), *stigmas filiform, nearly as long as, or longer than the style.*

1. *C. scindicus*, *Stocks in Hook. Kew Journ.* iv. 173, not of *Boiss. Diagn.*; a tomentose, small, rigid, branched undershrub, leaves small spatulate or elliptic plicate, flowers capitate bracteate, sepals lanceolate densely rufous-hirsute, ovary glabrous. *Boiss. Fl. Orient.* iv. 90. *C. brachyphyllus*, *Boiss. Diagn.* 2, iii. 122.

SCINDE; on rocks, *Stocks*.

Height 1–2-ft.; branches fulvous-tomentose, tips in age subspinescent. *Leaves* $\frac{1}{2}$ –1 in., subentire, very thick, nerves impressed; petiole 0– $\frac{1}{2}$ in. *Heads mostly sessile*

on shortened branches; outer bracts $\frac{1}{2}$ in., elliptic or ovate, not plicate, densely rusty-tomentose. *Sepals* $\frac{1}{4}$ in. *Corolla* $\frac{1}{2}$ – $\frac{2}{3}$ in., widely funnel-shaped, hairy on the folds without. *Fruit* not seen.

2. **C. Aitchisoni**, *Clarke*; patently fulvous-hirsute, leaves fascicled linear lower oblong, flowers capitate bracteate, sepals linear-lanceolate very hirsute. *C. lanuginosus*, *Aitch. Cat. Punjab. Pl.* 98; ? of *Lamk.*

PUNJAB; Jhelum and Salt Range, *Aitchison*.—DISTRIB. Afghanistan.

Rootstock woody, forming tufts; annual flowering stems $\frac{1}{2}$ –4 in. *Radical leaves* $1\frac{1}{2}$ in., linear, or in small examples $\frac{1}{2}$ in. oblong, densely patently hirsute on both sides. *Bracts* $\frac{2}{3}$ in., narrowly lanceolate. *Sepals* $\frac{1}{2}$ in. *Corolla* 1 in., wide-funnel-shaped, hairy on the plaits without. *Ovary* glabrous. *Fruit* not seen.—This cannot be *C. lanuginosus*, *Lamk.* (*Chois. in DC. Prodr.* ix. 401), unless *C. Calverti*, *Boiss.* (*Fl. Orient.* iv. 94), and several other intermediate species be united with it; it is not silky, but abundantly hirsute with hairs $\frac{1}{2}$ in. long. It is undoubtedly closely allied to *C. lanuginosus*, *Lamk.* See *Cav. Ic.* ii. t. 189.

3. **C. microphyllus**, *Sieb.*; *Vis. Pl. Æg.-Nub.* 12; fulvous-villous, leaves linear-oblong or upper elliptic, flowers axillary or on short lateral branches sessile 1–4 together, sepals $\frac{1}{4}$ in. lanceolate densely hirsute, corolla scarcely $\frac{1}{2}$ in. hairy without. *Chois. in DC. Prodr.* ix. 402 (*syn. C. deserti excl.*); *Wight Ic.* t. 1367; *Dalz. & Gibs. Bomb. Fl.* 164; *Boiss. Fl. Orient.* iv. 103.

SCINDE; *Stocks*. GOOJERAT; *Dalzell*.—DISTRIB. Beloochistan to Egypt and Nubia.

Rootstock woody; stems 6–24 in., little divided, patently villous, often floriferous from near the base. *Leaves* $\frac{1}{2}$ –1 in., silky and villous in Sieber's example, subsessile. *Bracts* lanceolate, rufous-hirsute, shorter than the sepals. *Corolla* wide-funnel-shaped, rose-yellow. *Capsule* scarcely $\frac{1}{2}$ in., ovoid. *Seeds* glabrous.

VAR. *Boissieri*; stems and leaves adpressedly rusty-silky, flowers mostly solitary axillary. *C. scindicus*, *Boiss. Diagn.* 2, iii. 123, not of *Stocks*.—Scinde; *Stocks*, *Dalzell*.

4. **C. pluricaulis**, *Chois. Convolv. Or.* 95, and in *DC. Prodr.* ix. 403 (the Plains plant); thinly fulvous-hairy, leaves small linear, flowers 1–3 together axillary pedicelled, sepals $\frac{1}{2}$ in. narrowly linear-lanceolate sparsely hairy, corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. hairy without. *Evolvulus ferrugineus*, *Wall. Cat.* 1316, the *Behar example only*. ? *Ipomæa microphylla*, *Roth Nov. Sp.* 112.

Plains of HINDOSTAN and BEHAR; *Wallich, H. f. & T., &c.*, frequent.

Rootstock woody; stems 3–6 in., slender, wiry, very thinly hairy. *Leaves* $\frac{1}{2}$ by $\frac{1}{2}$ in., subsessile; radical more spatulate, subpetioled. *Pedicels* 0– $\frac{1}{2}$ in.; bracts linear, small. *Sepals* with a linear elongation, so thinly hairy as to appear glabrous to the naked eye. *Corolla* wide-funnel-shaped, pale rose. *Ovary* glabrous.

VAR. *macra*; larger, more densely hairy, leaves oblong, sepals $\frac{1}{2}$ in. elliptic-lanceolate rufous-hirsute, corolla $\frac{2}{3}$ – $\frac{3}{4}$ in., seeds puberulous. *Evolvulus pilosus*, *Roxb. Fl. Ind.* ii. 106. *E. ferrugineus*, *Wall. Cat.* 1316.—PUNJAB, common; from 3000 ft. alt. in Kashmir to Delhi; *Wallich, Royle, Edgeworth, &c.*—Easily separable from *C. pluricaulis*, but except in the larger corolla not distinguishable from *C. microphyllus*.

5. **C. rhynchospermus**, *Hochst*; *Chois. in DC. Prodr.* ix. 405; leaves subsessile oblong sparsely hairy, flowers clustered axillary, sepals lanceolate subobtusely hirsute, corolla $\frac{2}{3}$ in. tubular, mouth narrow funnel-shaped. *Wight Ic.* t. 1308.

SCINDE; *Stocks*, *Dalzell*.—DISTRIB. Cordofan.

Annual; stems 3–10 in., little divided, often flowering nearly their whole length. *Leaves* $\frac{1}{2}$ –1 in. *Flowers* rarely solitary, peduncle 0– $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ – $\frac{1}{2}$ in., and sepals $\frac{1}{2}$ in., not acuminate. *Corolla* hairy without. *Ovary* glabrous. *Capsule* $\frac{1}{2}$ in., ovoid.

Seeds minutely papillose.—There is hardly any difference between the seeds of *C. pluricaulis*, *rhyniospermus*, and *conglomeratus*; the papillæ on the seeds of *C. rhyniospermus* are thicker, or somewhat scale-like.

6. ***C. glomeratus***, *Chois. in DC. Prodr.* ix. 401; leaves subsessile oblong sparsely hairy, heads peduncled bracteate, sepals lanceolate hirsute, corolla $\frac{1}{2}$ in. tubular mouth narrow funnel-shaped. *Wight Ic.* t. 1366; *Boiss. Fl. Orient.* iv. 102.

The PUNJAB, *Vicary*; Scinde, *Stocks*, &c.—DISTRIB. Cabul, Beloochistan to W. Tropical Africa.

Rootstock biennial or perennial; stems 2–3 ft., diffuse, branched, sparsely hairy. *Leaves* $\frac{1}{2}$ –1 $\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ –3 in.; bracts $\frac{1}{2}$ –1 in., leaflike; or the heads sessile on short axillary branches. *Sepals* $\frac{1}{2}$ in., lanceolate, acute. *Seeds* puberulous.—Closely allied to *C. rhyniospermus*, but the flowers more numerous (often 6–10) in the head, the habit much more diffuse, running into the following variety.

VAR. *volubilis*; stems distinctly twining, leaves and heads larger, petiole $\frac{1}{2}$ in.—Punjab; *Vicary*. Scinde; *Dalzell*.

7. ***C. Bottlerianus***, *Chois. Convolv. Or.* 95, and in *DC. Prodr.* ix. 403; silky-villous. leaves sessile linear, peduncles 1–3-fld., sepals ovate suddenly acuminate silky-villous, corolla scarcely $\frac{1}{2}$ in. subcampanulate. *Wight in Madras Journ.* v. 7, t. 13; *Dalz. & Gibs. Bomb. Fl.* 164. *Retzia pilosa*, *Heyne*; *Wall. Cat.* 6669 (not *Evolvulus pilosus*, *Roxb.*)

W. DECCAN PENINSULA, from Bombay to Madura; *Rotiler*, &c.—DISTRIB. Affghanistan.

An erect, branched perennial. *Leaves* 1–2 in. *Peduncles* many, 1 $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in., linear-lanceolate; pedicel (above the bracts) 0– $\frac{1}{2}$ in. *Sepals* $\frac{1}{2}$ in. *Capsule* $\frac{1}{2}$ in. ovoid, glabrous. *Seeds* puberulous.

VAR. *tenella*, *Stocks in Hook. Kew Journ.* iv. 172; sparingly silky not villous, stems strict more slender.—SCINDE; *Stocks*.

** *Stems twining* (see also *C. glomeratus*); *stigmas narrowly oblong or linear, shorter than the style*.

8. ***C. arvensis***, *Linn.; Engl. Bot.* t. 312; glabrous or somewhat pubescent, leaves ovate-cordate, auriculate or hastate, peduncles 1–3-fld., bracts small, sepals elliptic obtuse glabrous or nearly so, corolla middle-sized purplish. *Roxb. Hort. Beng.* 14; *Chois. Convolv. Or.* 97, and in *DC. Prodr.* ix. 406; *Dalz. & Gibs. Bomb. Fl.* 163; *Boiss. Fl. Orient.* iv. 108. *C. Malcolmii*, *Roxb. Hort. Beng.* 14, and *Fl. Ind.* i. 474, and ed. *Carey & Wall.* ii. 55. *C. divaricatus*, *Wall. Cat.* 1422. *C. chinensis*, *Ker in Bot. Reg.* t. 322.

WESTERN INDIA, from Kashmir to the Deccan; a weed of cultivation.—DISTRIB. Nearly all temperate and subtropical regions.

Leaves 1–3 in., lower often lobed; petiole $\frac{1}{4}$ – $\frac{3}{4}$ in. *Peduncles* 1–2 in.; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{2}$ –1 in. *Sepals* $\frac{1}{2}$ in., with or without a mucro. *Corolla* wide-funnel-shaped, glabrous. *Capsule* $\frac{1}{4}$ – $\frac{1}{2}$ in., glabrous.

9. ***C. flavus***, *Willd. Sp. Pl.* i. 852; innovations rusty-pubescent, leaves hastately ovate-oblong angular toothed or lobed, peduncles 1–3-fld., bracts small, sepals elliptic-lanceolate pubescent, corolla small yellowish. *Chois. in DC. Prodr.* ix. 415. *C. rufescens*, *Chois. Convolv. Or.* 97, and in *DC. Prodr.* ix. 408; *Wight Ic.* t. 1365. *Evolvulus hederaceus*, *Burm. Fl. Ind.* 77, t. 30, fig. 2.—*Rheede Hort. Mal.* viii. t. 27.

Hills of S. DECCAN PENINSULA, alt. 3–6000 ft., frequent; *Wight*, &c.

Leaves 1–3 in., in age nearly glabrous; petiole 1 in. *Peduncles* 1 in., not rarely paired in the same axil, pubescent; bracts scarcely $\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ – $\frac{1}{2}$ in.; wider in

fruit. *Corolla* $\frac{1}{2}$ in., hairy at the tip in the bud. *Ovary* and filaments glabrous. *Capsule* $\frac{1}{2}$ in., ovoid, 2-celled, irregularly breaking up. *Seeds* glabrous.

10. ***C. parviflorus***, *Vahl Symb.* iii. 29; pubescent or nearly glabrous, leaves ovate-cordate acute entire, cymes small dense many-fld. peduncled, corolla $\frac{1}{2}$ in. tubular narrow-mouthed pink or white. *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 51; *Chois. Convolv. Or.* 98, and in *DC. Prodr.* ix. 413; *Dalz. & Gibs. Bomb. Fl.* 163; *Benth. Fl. Austral.* iv. 430. *C. asclepiadeus*, *Wall. Cat.* 1396. *Ipomæa paniculata*, *Burm. Fl. Ind.* 50, t. 21, fig. 3. *I. parviflora*, *Pers. Syn.* i. 183, not of *Vahl*.

ASSAM; *Jenkins*. DECCAN PENINSULA and CEYLON; frequent.—DISTRIB. S.E. Asia, Malaya, Australia, Tropical Africa.

Stems slender. *Leaves* $1\frac{1}{2}$ –3 in., shallowly cordate; petiole $\frac{1}{2}$ –1 in. *Peduncles* mostly longer than the petioles; cymes subcapitate; bracts inconspicuous. *Sepals* $\frac{1}{2}$ in., ovate-caudate, pubescent. *Corolla-lobes* short, acute. *Stigmas* short, linear. *Capsule* $\frac{1}{2}$ in., globose, glabrous. *Seeds* glabrous.—Much resembling *Jacquemontia cœrulea* (cultivated often in India), which has a wider mouthed bright-blue corolla and shorter elliptic-oblong stigmas.

11. ***C. microcalyx***, *Clarke*; leaves ovate-cordate acute stellately fulvous-tomentose beneath, cymes compound subsessile, sepals $\frac{1}{2}$ in. elliptic obtuse, corolla $\frac{1}{2}$ in.

Cultivated (in the Calcutta gardens?) from Assam?

Stems slender, elongate, villous, twining. *Leaves* 1–1 $\frac{1}{2}$ in., shallowly cordate, pubescent above; petiole $\frac{1}{2}$ in. *Peduncles* very short, or 0, i.e., peduncles several from each axil, fulvous-tomentose; bracts inconspicuous. *Sepals* subscarious, nearly glabrous. *Corolla* of *C. parviflorus*, glabrous. *Ovary* glabrous; style long, stigmas filiform slightly clavate. *Fruit* not seen.—The examples are noted as cultivated; but, if the plant was not brought in from the Assam jungles, it is not known whence it came.

C. glandulosus, *Wall. Cat.* 2252, and *C. Tarita*, *Wall. Cat.* 2253, are absent from Wallich's Herbarium.

10. **EVOLVULUS**, *Linn.*

Small, hairy herbs, or undershrubs. *Leaves* small, entire. *Flowers* small, 1–3 together, peduncled. *Sepals* subequal, unaltered in fruit. *Corolla* funnel-shaped; limb 5-plaited, subentire. *Stamens* included or exserted, filaments filiform. *Ovary* 2–1-celled, 4-ovuled; styles 2, separate from the base, each cleft into 2 linear or subclavate stigmas. *Capsule* globose, 4–2-valved, normally 4-seeded. *Seeds* glabrous; cotyledons doubly folded radicle incumbent.—Species 70, in all hotter climates, more numerous in America.

1. ***E. alsinoides***, *Linn.*; *Benth. Fl. Austral.* iv. 437, with all *syn. except E. pilosus*, *Roxb.*; sparsely or densely silky-hairy white fulvous or almost rufous, leaves linear oblong or wide-elliptic, sepals $\frac{1}{2}$ – $\frac{1}{3}$ in. lanceolate hairy, corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. blue or white. *Burm. fl. Zeyl.* 9, t. 6, fig. 1; *Wall. Cat.* 1317; *Roxb. Cat. Pl.* (1813), and *Fl. Ind.* ii. 105; *Chois. in DC. Prodr.* ix. 447; *Wight Ill.* t. 168 bis, fig. 10; *Boiss. Fl. Orient.* iv. 113. *E. linifolius*, *Linn.*; *Chois. l. c.* 449. *E. angustifolius*, *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 107. *E. hirsutus*, *Lamk. Enc.* iii. 538, and *Ill.* t. 216, fig. 2; *Chois. l. c.* 447 (*syn. Roxb. excl.*); *Dalz. & Gibs. Bomb. Fl.* 162. *E. sericeus*, *Wall. Cat.* 1316. *Convolvulus valerianoides*, *Blanco. Fl. Filip.* 90.—*Rheede Hort. Mal.* xi. t. 64.

Throughout INDIA and CEYLON, very common; rare in very damp regions.—
DISTRIB. The tropical and subtropical area of the globe.

Perennial; annual branches numerous, wiry, often prostrate. Leaves $\frac{1}{4}$ –1 in., rarely $1\frac{1}{2}$ by $\frac{1}{2}$ in., very variable; petiole 0– $\frac{1}{2}$ in. Peduncles $\frac{1}{8}$ – $1\frac{1}{2}$ in.; bracts small, linear, hairy, persistent; pedicels 0– $\frac{1}{2}$ in. Capsule $\frac{1}{8}$ – $\frac{1}{2}$ in., globose, 4-valved.—The commonest Indian form is the type with leaves $\frac{1}{4}$ – $\frac{1}{2}$ in., oblong or elliptic, moderately silky with white or fulvous hairs. *E. linifolius* (*E. angustifolius*, Roxb.), has linear leaves often 1 in. long. *E. hirsutus*, has thick leaves and is more or less densely hirsute with fulvous or rufescent hairs.

11. PORANA, Burm.

Large climbers. Leaves petioled, ovate, entire. Cymes often in large panicles; flowers purple steel-blue or white; bracts persistent. Sepals in flower small, narrow; in fruit all or 3 much enlarged, scarious, nerved. Corolla campanulate or funnel-shaped, wide- or narrow-mouthed; limb 5-plaited, subentire or lobed. Stamens subincluded, filaments filiform or shortly linear. Ovary 2-celled, 4-ovuled; style long or short, entire with a simple or 2-lobed stigma, or 2-fid with capitate stigmas. Capsule globose oblong or obconic, membranous, indehiscent or 2-valved, 1-seeded. Seed glabrous; cotyledons plaited.—Species 9, from India to N. Australia.

* Flowers large, about an inch long.

1. **P. grandiflora**, Wall. Cat. 1324, and in Roxb. Fl. Ind. ed. Carey & Wall. ii. 41; shoots minutely pubescent, leaves ovate deeply cordate acuminate, racemes minutely bracted, sepals all much enlarged in fruit, 3 more than the others $1\frac{1}{2}$ by nearly $\frac{1}{2}$ in. obtuse. Chois. Convolv. Or. 108, and in DC. Prodr. ix. 436; Kurz in Trimen Journ. Bot. 1873, 138.

TEMPERATE NEPAL and SIKKIM, alt. 5–8000 ft.; Wallich, Griffith, J. D. H., &c.

An extensive, rather slender, glabrous or pubescent climber. Leaves 5 by $2\frac{3}{4}$ in., young villous beneath, old glabrous or puberulous on both surfaces; petiole 3 in. Peduncles 3–4 in.; racemes 2–3 in., 4–12-fid.; bracts $\frac{1}{4}$ in., linear; pedicels $\frac{1}{2}$ in. Sepals $\frac{1}{2}$ in., linear-oblong, puberulous. Corolla mauve; tube $\frac{3}{4}$ –1 in., linear; limb funnel-shaped, subentire, $1\frac{3}{4}$ in. diam., glabrous. Stamens and pistil $\frac{1}{4}$ – $\frac{1}{2}$ in., included in the small swollen base of the corolla-tube. Style linear, stigma subglobose. Capsule $\frac{1}{2}$ in., subglobose, rather longer than broad; 3 larger fruiting sepals subpalately 7–9-nerved; 2 smaller, 1 by $\frac{1}{2}$ in.

2. **P. stenoloba**, Kurz in Trimen Journ. Bot. 1873, 136; nearly glabrous, leaves ovate slightly cordate caudate-acuminate, racemes long-bracted, sepals all much enlarged in fruit, 3 more than the others 1 by $\frac{1}{2}$ in.

TEMPERATE SIKKIM, alt. 5–6000 ft.; on rocks by the Darjeeling road, not unfrequent, Kurz.

Nearly allied to *P. grandiflora*. Leaves very shallowly cordate, caudate, glabrous or minutely hairy above. Bracts 1– $1\frac{1}{2}$ in., ovate-lanceolate, or lanceolate caudate, often petioled; bracteoles 2, minute. Corolla (dry) nearly as of *P. grandiflora*, but "steel-blue," Kurz & King. Capsule not ripe; 3 larger sepals in fruit membranous, 5-nerved; 2 smaller similar, but $\frac{2}{3}$ less.—This differs from *P. grandiflora* in the shallowly cordate leaves, the remarkable bracts, the colour of the flowers and the exceedingly narrow fruit-sepals; but in Gen. Pl. ii. 876 it is considered conspecific.

3. **P. spectabilis**, Kurz in Trimen Journ. Bot. 1873, 136, and For. Fl. ii. 221; fulvous-tomentose, leaves subcordate ovate-oblong, racemes sub-bracteate, 3 sepals greatly enlarged in fruit $1\frac{1}{2}$ by $\frac{1}{2}$ in. 2 altogether suppressed. P. speciosa, Benth. in Gen. Pl. ii. 876.

BRITISH BURMA; Martaban, in tropical forests not unfrequent, *Kurz*.

Branches fulvous-tomentose. *Leaves* 4 by $1\frac{3}{4}$ in., base rounded or scarcely cordate, acute or subobtusely not acuminate, puberulous, woolly beneath; petiole $\frac{3}{4}$ in. *Racemes* terminal, subsessile (lowest bract altogether leaflike); pedicels $\frac{1}{4}$ in. *Sepals* in flower $\frac{1}{5}$ in., linear-oblong, fulvous-tomentose. *Corolla* white, hairy without; tube $\frac{2}{5}$ in., narrowly campanulate; mouth funnel-shaped, subentire, $1\frac{1}{4}$ in. diam. *Style* as long as corolla-tube, stigma subcapitate. *Capsule* $\frac{1}{5}$ in. diam. subglobose; fruiting-sepals oblong, subobtusely, scarious, puberulous, subpalmately 7-9-nerved.

** *Flowers* small, $\frac{1}{4}$ - $\frac{1}{2}$ in. long.

4. ***P. paniculata***, *Roxb. Cor. Pl.* iii. 31, t. 235, and *Fl. Ind.* i. 466, and *ed. Carey & Wall.* ii. 39; densely subtomentose, leaves ovate-cordate acute, cymes subebracteate panicled, 3 sepals greatly enlarged in fruit, the others nearly unchanged. *Don Prodr.* 99; *Wall. Cat.* 1325; *Chois. Convolv. Or.* 107, and in *DC. Prodr.* ix. 436; *Brand. For. Fl.* 342; *Kurz in Trimen Journ. Bot.* 1873, 137, and *For. Fl.* ii. 220. *Dinetus paniculatus*, *Sweet Hort. Brit.* ed. 2, 373.

Throughout INDIA, in jungles alt. 0-3000 ft. from the W. Himalaya and Assam to CEYLON and Tenasserim; less common in the S. Deccan.—DISTRIB. Ava, Java.

A powerful climber, often 30 ft. high. *Leaves* 5 by 3 in., pubescent above; petiole $1\frac{1}{2}$ in. *Panicles* terminating every branchlet with innumerable flowers. *Sepals* in flower $\frac{1}{12}$ in., linear-oblong. *Corolla* $\frac{1}{4}$ - $\frac{1}{3}$ in., campanulate, glabrous, white; limb very shortly lobed. *Filaments* short. *Style* very short, stigma obscurely 2-lobed. *Capsule* $\frac{1}{5}$ in. diam., globose, hairy; 3 enlarged sepals $\frac{3}{4}$ by $\frac{1}{4}$ in. obtuse, pubescent, with one longitudinal and several inarched lateral nerves; 2 others $\frac{1}{4}$ in., linear.—A monstrous form, collected in Sikkim by Sir J. D. H., has fascicled numerous branchlets with very small leaves.

5. ***P. volubilis***, *Burm. Fl. Ind.* 51, t. 21, fig. 1; glabrous except the shoots, leaves ovate subcordate shortly acuminate, cymes subebracteate panicled, sepals in fruit all equal $\frac{1}{2}$ in. subspathulate. *Lank. Ill.* t. 186; *Roxb. Fl. Ind.* i. 465, and *ed. Carey & Wall.* ii. 40; *Blume Bijl.* 723; *Wall. Cat.* 1327; *Don Prodr.* 99; *Wight Ill.* 168 bis, fig. 8, and *Id. t.* 347; *Chois. Convolv. Or.* 106, and in *DC. Prodr.* ix. 436; *Kurz in Trimen Journ. Bot.* 1873, 137, and *For. Fl.* ii. 220.

MALAY PENINSULA from Pegu to Malacca.—DISTRIB. Burma, Siam, Malaya.

A very large climber; branches glabrous, warted. *Leaves* $2\frac{1}{2}$ by $1\frac{1}{2}$ in., base rounded or cordate; petiole $\frac{2}{3}$ in. *Panicles* very large, minutely fulvous-pubescent; pedicels 0- $\frac{1}{4}$ in. *Sepals* in flower $\frac{1}{5}$ in., oblong. *Corolla* $\frac{1}{5}$ in., white; limb distinctly lobed. *Style* bipartite; stigmas small, capitate. *Capsule* $\frac{1}{8}$ in., globose; fruit-sepals with 5-7 longitudinal, not very prominent nerves.—*Kurz* says this extends to Khasia, and Roxburgh, that it grows in various parts of India; but the only examples seen are Malayan or cultivated.

6. ***P. racemosa***, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 466, and *ed. Carey & Wall.* ii. 41; puberulous or nearly glabrous, leaves ovate deeply cordate acute, racemes compound dichotomous, bracts at the forks large cordate persistent, capsule $\frac{1}{5}$ in. ellipsoid longer than broad, fruiting-sepals equal $\frac{1}{2}$ - $\frac{1}{3}$ by $\frac{1}{2}$ in. *Jacq. f. Ecl. ii.* t. 165; *Wall. Cat.* 1326; *Don Prodr.* 98; *Wight Ill.* t. 168 bis, fig. 9, and *Id. t.* 1376; *Chois. Convolv. Or.* 107, and in *DC. Prodr.* ix. 436; *Dalz. & Gibs. Bomb. Fl.* 162?; *Kurz in Trimen Journ. Bot.* 1873, 137. *Dinetus racemosus*, *Sweet Brit. Fl. Gard.* t. 127.

SUBTROPICAL HIMALAYA alt. 2-6000 ft., common; from the North-west (*Royle*) to BHOTAN. KHASIA to MARTABAN; alt. 2-6000 ft., common. DECCAN PENINSULA?

Forming dense, not lofty, masses. *Leaves* 2-3 by $1\frac{1}{2}$ in.; petiole $\frac{3}{4}$ in. *Racemes* lax; bracts at the forks leafy, sessile, scarious in fruit; those at the pedicels $\frac{1}{8}$ in.,

linear. *Sepals* in flower $\frac{1}{8}$ in., linear-oblong, puberulous. *Corolla* $\frac{1}{3}$ – $\frac{1}{2}$ in., lobed nearly half-way, white. *Style* linear; stigmas 2, short, oblong. *Capsule* apiculate, glabrous; fruiting sepals oblong-spathulate, with 3–5 strong longitudinal nerves.—The “Snow-creeper” of the English, one of the most beautiful of Indian plants, the masses of dazzling white flowers resembling snow-patches in the jungle. It is doubtful whether this plant is found wild in the Deccan; Wight’s figure represents it, but the fruit in his herbarium was sent him from N. India. There is no example from the Deccan, all Dalzell’s belong to the next species.

7. **P. malabarica**, Clarke; nearly glabrous, leaves ovate deeply cordate acute, racemes compound dichotomous, bracts at the forks large cordate persistent, capsule $\frac{1}{4}$ in. obovoid, fruit-sepals equal attaining 1 by $\frac{1}{2}$ in. elliptic. *P. racemosa*, Dalz. & Gibs. *Bomb. Fl.* 162.—Porana n. 3, *Herb. Ind. Or. H. F.* & T.

WEST DECCAN PENINSULA; Bombay, Dalzell; Malabar and Concan, Stocks, Law; Canara and Mysore, Law, &c.

Closely allied to *P. racemosa*. *Fruiting-sepals* sometimes only $\frac{2}{3}$ by $\frac{1}{3}$ in., but always differing widely from the much smaller narrow one of *P. racemosa*.

8. **P. truncata**, Kurz in *Trimen Journ. Bot.* 1873, 136; nearly glabrous, leaves ovate deeply cordate acute, racemes compound dichotomous, bracts at the forks large cordate persistent, capsule $\frac{1}{4}$ in. obconoid truncate, fruiting sepals equal $\frac{2}{3}$ by $\frac{1}{3}$ in.

KHASIA Mts., Numklow and Mairung, alt. 4–5000 ft., Griffith (Kew Distrib. n. 5876), &c.

Resembles *P. racemosa*; but is stouter and is intermediate between that species and *T. malabarica*. Kurz attempted to distinguish this by the “depressed-concave” summit of the capsule; but the fact is that the fresh capsule usually has a greatly depressed-conical apiculate summit, which in dried specimens often becomes concave. Possibly *P. racemosa*, *P. malabarica*, and *P. truncata*, are varieties of one; but the characters of the capsule and fruit-sepals seem well-marked, and the material is sufficient.

12. **BREWERIA**, R. Br.

Herbs or undershrubs, large and twining, or small and erect. *Leaves* undivided. *Flowers* in axillary peduncled heads or terminal close panicles, or 1–3 together, sessile and axillary; bracts small. *Sepals* equal or unequal, in fruit scarcely altered (in non-Indian species much enlarged). *Corolla* campanulate or funnel-shaped, limb 5-plaited. *Stamens* included; filaments filiform, bases often dilated. *Ovary* 2-celled, 4-ovuled; styles 2, nearly distinct from the base or united half their length, stigmas capitate. *Capsule* globose or ovoid, normally 4-seeded.—Species 23, in the tropics of both hemispheres, Australia and N. America.

* *Twining*; flowers medium-large yellowish in peduncled cymes; styles united about half their length.

1. **B. cordata**, Blume *Bijd.* 722; rusty-villous, leaves ovate-cordate acute. *Chois. in DC. Prodr.* ix. 438. *B. Roxburghii*, *Chois. Convolv. Or.* 111, and in *DC. Prodr.* ix. 438; *Wight Ic.* t. 1370; *Dalz. & Gibs. Bomb. Fl.* 162. *Convolvulus semidigynus*, *Roxb. Hort. Beng.* 13, and *Fl. Ind.* i. 468, and *ed. Carey & Wall.* ii. 47; *Wall. Cat.* 1405.

WEST DECCAN PENINSULA; from the Concan Ghauts southwards; EAST BENGAL, and the MALAY PENINSULA, from Silhet to Malacca, frequent. CHYLOM, frequent. DISTRIB. Malaya.

A powerful twiner; branches villous. *Leaves* 4 by $2\frac{1}{2}$ in., those on the flowering branchlets ovate-cordate; petiole $1\frac{1}{2}$ in. *Peduncles* about as long as the petioles, 2-5-fld.; bracts $\frac{1}{4}$ in., oblong; cymes subcapitate, rusty-villous. *Sepals* $\frac{1}{3}$ - $\frac{1}{2}$ in., ovate-oblong, subacute, subequal. *Corolla* $1\frac{1}{2}$ in., wide-funnel-shaped, hairy without; limb subentire. *Style* $\frac{2}{3}$ in., united for $\frac{1}{3}$ in. *Capsule* $\frac{1}{2}$ in., subglobose, glabrous, splitting into numerous vertical segments; sepals in fruit somewhat enlarged, ovate, hardly so long as the capsule. *Seeds* about as broad as long, nearly glabrous.

2. **B. elegans**, *Chois. Convolv. Or.* 112, and in *DC. Prodr.* ix. 439; fulvous-villous, leaves elliptic those of the flowering branches oblong or sub-linear none cordate. *Convolvulus elegans*, *Wall. Cat.* 1392.

BRITISH BURMA; *Prome, Wallich.*

Very near *B. cordata*, differing chiefly in the leaves. *Leaves* of the flowering shoots (for 18 in. near their tops) $1\frac{1}{2}$ by $\frac{1}{3}$ in., narrow-oblong, mucronate; lower leaves 3 by $1\frac{1}{4}$ in., obtuse, almost rounded at both ends. *Pedicels* $\frac{1}{4}$ - $\frac{1}{3}$ in., rather longer than in *B. Roxburghii*. *Corolla* as of *B. Roxburghii* but the tube appears more cylindric, less funnel-shaped. *Capsule* not seen.—Material rather scanty for the support of so critical a species.

** *Small, erect; leaves small; flowers small, axillary, 1-3 together white or pinkish; styles distinct very nearly to the base.*

3. **B. evolvuloides**, *Chois. Convolv. Or.* 112, and in *DC. Prodr.* ix. 439; leaves $\frac{1}{3}$ - $\frac{1}{2}$ in. oblong or elliptic nearly glabrous, pedicels $\frac{1}{2}$ - $\frac{1}{3}$ in., capsule $\frac{1}{10}$ - $\frac{1}{8}$ in. *Seddera evolvuloides*, *Wight Ic. t.* 1369. *Evolvulus alsinoides*, *Wall. Cat.* 1317, *by admixture.*

DECCAN PENINSULA; *Heyne*; near Tuticorin, *Wight.*

A very branched, rigid, harsh, small shrub; with a few scattered strigose hairs. *Sepals* $\frac{1}{3}$ in., oblong, nearly glabrous, suberect both in flower and fruit. *Corolla* $\frac{1}{4}$ in. *Capsule* subglobose, shortly pointed, glabrous tipped with a tuft of hairs 4-valved. *Seeds* glabrous.

4. **B. latifolia**, *Benth. in Gen. Pl.* ii. 877; leaves $\frac{1}{4}$ - $\frac{3}{4}$ in. elliptic densely silky, flowers sessile, capsule $\frac{1}{2}$ in. *Seddera latifolia*, *Hochst. & Steud. in Flora*, 1844, *Beibl.* 8, t. 5, fig. B.C.; *Chois. in DC. Prodr.* ix. 440; *Boiss. Fl. Orient.* iv. 114. *Cressa latifolia*, *T. And. in Journ. Linn. Soc. v. Suppl.* 25, *excluding the Deccan synonyms.*

PUNJAB AND SCINDE; *Vicary, Stocks, &c.*—DISTRIB. W. Tropical Asia, E. Tropical Africa.

Dr. T. Anderson thought this plant not specifically separated from the Deccan *B. evolvuloides* by its hairiness and sessile flowers; but the capsule is twice as large, ovoid, and the seeds ovoid-oblong, twice as long as broad. *Sepals* acuminate, densely silky.

13. **NEUROPELTIS**, *Wall.*

A large scandent shrub; shoots rufous-villous or tomentose. *Leaves* alternate, petioled, coriaceous, ovate or oblong. *Racemes* axillary, or subpanicled towards the ends of the branches; flowers numerous, small, pedicelled; bract under the calyx inconspicuous in flower, in fruit enlarged 1 in. or more diam. *Sepals* suborbicular, in fruit hardly enlarged. *Corolla* wide-campanulate, deeply lobed, lobes induplicate-valvate in bud. *Stamens* exserted or included, filaments filiform. *Ovary* imperfectly 2-celled, 4-ovuled; styles 2, separate from the base, shortly linear, stigmas subcapitate or obscurely 2-lobed. *Capsule* globose, 4-valved, 1-seeded, sessile in the middle of the flat bract, *Seed* globose, glabrous, albuminous; cotyledons plaited.—Species 2, the following and an African.

1. **N. racemosa**, Wall. Cat. 1322, and in Roxb. Fl. Ind. ed. Carey & Wall. ii. 44; leaves elliptic or oblong acute or shortly acuminate, racemes 1-6 in. rusty-villous or tomentose dense. Deless. Ic. Sel. v. t. 96; Chois. Convolv. Or. 109, t. 2, fig. 12, and in DC. Prodr. ix. 437; Bedd. Ic. Pl. Ind. Or. t. 291; Kurz For. Fl. ii. 222. N. ovata, Wall. Cat. 1323; Chois. Convolv. Or. 110, t. 2, fig. 13, and in DC. Prodr. ix. 437. N. bracteata and intermedia, Griff. Notul. iv. 285.

MALAY PENINSULA, from Mergui southwards; Wallich, Griffith, Mainqay, &c. MALABAR PLAINS, near Tambacherry Ghat, Beddome.—DISTRIB. Borneo.

Leaves 5 by $2\frac{1}{2}$ in., base obtuse or rhomboid, when young more or less rusty-villous, sometimes on both surfaces, adult glabrous or nearly so, feather-nerved; petiole $\frac{1}{2}$ -1 in. Racemes subsessile, i.e. flowerbearing nearly to the base; pedicels in flower $\frac{1}{2}$ in.; bract minute. Sepals $\frac{1}{8}$ in. Corolla $\frac{1}{4}$ - $\frac{1}{3}$ in., widely campanulate, rufous-villous without. Ovary hairy. Bract in fruit 1- $1\frac{3}{4}$ in. diam., orbicular, base rounded or cordate, scarious, nerved. Capsule $\frac{1}{4}$ in., ovoid, glabrescent.

14. CRESSA.

A very small shrub, erect or diffuse, grey-pubescent. Leaves small, sessile, elliptic, acute. Flowers small, sessile in the upper axils, often in terminal clusters or spikes. Sepals equal, not enlarged in fruit. Corolla small, funnel-shaped, white or rose; lobes 5, subimbricated (not plaited) in bud. Stamens exserted, filaments filiform. Ovary sub-2-celled, 4-ovuled; styles 2, distinct, linear, stigmas capitate. Capsule 2-4-valved, usually 1-seeded. Seed glabrous; cotyledons linear, plicate.

1. **C. cretica**, Linn.; Lamk. Ill. t. 183; Sibth. Fl. Græc. t. 256; Chois. in DC. Prodr. ix. 440; Dalz. & Gibs. Bomb. Fl. 162; Boiss. Fl. Orient. iv. 114. C. indica, Retz. Obs. iv. 24; Roxb. Cat. Pl. (1813), and Fl. Ind. ed. Carey & Wall. ii. 72; Wall. Cat. 2260; Chois. Convolv. Or. 113. C. australis, Br. Prodr. 490.

Throughout INDIA from the Punjab and Calcutta to CEYLON, not common.—DISTRIB. All warm regions.

Stem 6-18 in. Leaves $\frac{1}{4}$ - $\frac{1}{3}$ in. Sepals $\frac{1}{8}$ in. Corolla $\frac{1}{2}$ in.; lobes reflexed. Capsule $\frac{1}{8}$ in.—The Indian plant differs from the common form of *C. cretica* in having 4 (not 1) seeds, according to Retz and Roxburgh.

15. CUSCUTA, Linn.

Leafless twining parasites, yellow or reddish not green. Flowers small, white or rose, fascicled, sessile or shortly pedicelled; bracts 0 or small. Sepals 5-4, subequal, distinct or shortly connate. Corolla ovoid or campanulate; lobes 5-4, short, imbricate in bud. Stamens 5-4, inserted near the throat of the corolla-tube, filaments short linear; anthers oblong, shortly exsert; scales near the base of the filaments or at the base of the corolla, often fimbriate, rarely 0. Ovary completely or incompletely 2-celled, 4-ovuled; styles 1 or 2, stigmas 2. Capsule globose or ovoid, dry or succulent, circumsciss or irregularly breaking up, 4-2-seeded. Seeds glabrous, albumen fleshy; embryo slender, twisted, cotyledons 0 or obscure.—Species 80, in warm and temperate regions.

SUBGENUS 1. **Monogynella**. Ovary, and young fruit, narrowed upwards into a single short style with 2 long stigmas.

1. **C. reflexa**, Roxb. Cor. Pl. ii. 3, t. 104, and Fl. Ind. i. 446, and ed. Carey & Wall. i. 466; flowers subracemose, bracts small fleshy subquadrate,

corolla campanulate deciduous, scales remote from the filaments, style very short, stigmas lanceolate, capsule $\frac{1}{4}$ – $\frac{1}{2}$ in. fleshy circumsciss near the base 4-seeded. *Wall. Cat.* 1319; *Hook. Exot. Fl.* t. 150; *Chois. Convolv. Or.* 116, and in *DC. Prodr.* ix. 454; *Engelm. Cusc.* 68. *C. grandiflora*, *Wall. Cat.* 1318. *Chois. Convolv. Or.* 116. *C. verrucosa*, *Sweet Brit. Fl. Gard.* t. 6. *C. Hookeri*, *Sweet Hort. Brit.* ed. 2, 373. *C. macrantha*, *G. Don Gen. Syst.* iv. 305; *Chois. in DC. Prodr.* ix. 455. *C. elatior*, *Chois. Convolv. Or.* 177.

Throughout INDIA, alt. 0–8000 ft., common; Bengal Plain, abundant. CEYLON; Newera Ellia, *Gardener*.—DISTRIB. Malaya.

Branches stout, fleshy, forming dense yellow masses on low trees and shrubs. *Flowers* 5-merous, in lax racemes 1–4 in. long, also clustered or subspicatæ; pedicels 0– $\frac{1}{4}$ in., often verrucose; bracts $\frac{1}{20}$ in. *Sepals* $\frac{1}{10}$ in., nearly distinct, ovate, obtuse. *Corolla* $\frac{1}{4}$ – $\frac{1}{2}$ by $\frac{1}{2}$ in., subcylindric; lobes short-triangular, reflexed; scales prominent, emarginate, fimbriate. *Stigmas* wide apart. *Capsule* (unripe) acute (corolla early deciduous), ultimately subquadrate obtuse tough fleshy. *Seeds* large, black.

VAR. *anguina*, corolla about half the usual size. *C. anguina*, *Edgew. in Trans. Linn. Soc.* xx. 87.—W. Himalaya; *Edgeworth*. The corolla varies a good deal in size from Wallich's *C. grandiflora* down to *C. anguina*, *Edgw.*; the chain of intermediates is nearly complete.

2. ***C. gigantea***, *Griff. Notul.* i. 243; spikes short subracemose, corolla cylindric deciduous, scales near its base remote from the filaments, style short, stigmas lingulate, capsule $\frac{1}{2}$ – $\frac{1}{5}$ in. membranous circumsciss near the base 2-seeded. *Engelm. Cuscut.* 66; *Boiss. Fl. Orient.* iv. 122.

WESTERN TIBET; *Falconer*.—DISTRIB. Cabul.

Much slenderer than *C. reflexa*. *Flowers* irregularly fascicled or shortly pedicelled, not capitate; bracts $\frac{1}{24}$ in., ovate. *Sepals* $\frac{1}{18}$ in., ovate, obtuse. *Corolla* $\frac{1}{2}$ – $\frac{1}{3}$ in., tube subcylindric; lobes 5, subacute, erect or reflexed; scales elliptic, shortly fimbriate. *Pistil* nearly as of *C. reflexa* but smaller. *Capsule* ultimately subquadrate, obtuse. *Seeds* broadly rhombiform, black.—Founded on n. 683 of *Griff. Herb. Propr.* from Cabul; but the *Kew Distrib.* n. 5899, which also bears Griffith's ticket n. 683, is a *Eucuscuta* with subglobose corolla and two styles, &c.

SUBGENUS 2. ***Eucuscuta***. *Ovary* and young fruit obtuse. *Styles* 2, their bases approximate but separated by a narrow depression which in the fruit becomes a pit.

* *Styles* elongate, stigmas capitate.

3. ***C. hyalina***, *Roth Nov. Sp.* 100, not of *Wight*; cymes or racemes dense, calyx acutely lobed $\frac{2}{3}$ down, corolla-lobes lanceolate acuminate, scales 0. *Engelm. Cuscut.* 40; *Boiss. Fl. Orient.* iv. 121. *C. sulcata*, *Wall. Cat.* 1320 (as to Heyne's examples marked *C. hyalina*). *C. arabica*, *Wight Ic.* 1371, not of *Fresen.* *C. oxypetala*, *Boiss. Diagn.* 2. iii. 130. *C. Boissieri*, *Stocks in Hook. Kew Journ.* iv. 173.

SCINDE; *Stocks*. DECCAN PENINSULA, *Rottler*; Palamcottah, *Wight*.—DISTRIB. Beloochistan; Abyssinia.

Pedicels 0– $\frac{1}{2}$ in.; bracts $\frac{1}{24}$ in., ovate. *Calyx* $\frac{1}{8}$ in. *Corolla-tube* $\frac{1}{12}$ – $\frac{1}{10}$ in.; lobes 5, $\frac{1}{8}$ in., acuminate and even caudate. *Capsule* $\frac{1}{10}$ in., fragile, irregularly breaking up from the base, normally 4-seeded.—A strongly marked plant, certainly *C. hyalina* of *Rottler*, *Engelmann* and *Boissier*; but the description of *Roth*, copied by *Choisy* (in *DC. Prodr.* ix. 460), is greatly at variance with the characters of the plant.

4. ***C. chinensis***, *Lamk. Enc.* ii. 229; cymes or racemes dense, sepals triangular-ovate subobtuse, corolla-lobes ovate obtuse or shortly acute, scales shortly fimbriate. *Chois. in DC. Prodr.* ix. 457; *Wight. Ic.* t. 1373; *Engelm.*

Cuscut. 29; *Boiss. Fl. Orient.* iv. 120. *C. carinata*, *Br. Prodr.* 491; *Chois. l.c.* 460. *C. sulcata*, *Roxb. Fl. Ind.* i. 447; *Wall. Cat.* 1320, *type sheet.* *C. capillaris*, *Wall. Cat.* 1321; *Chois. Convolv. Or.* 117. *C. hyalina*, *Wight Ic. t.* 1372, *not of Roth.* *C. ciliaris*, *Hohenack*; *Boiss. Diagn.* 2. iii. 129. *Grammica aphylla*, *Lour. Fl. Cochinch.* 171.

KASHMIR and CHUMBA; alt. 5–7000 ft., *Clarke.* E. BENGAL; *Wallich.* DECCAN PENINSULA; common. CEYLON; at Colombo.—DISTRIB. Eastwards to Australia and Westwards to Persia.

Resembling *C. hyalina*, but with much less elongate acute corolla-lobes. *Sepals* nearly free, in large examples keeled (*C. sulcata*, *Roxb.* or *C. carinata*, *R. Br.*); in small examples flat.

VAR. *minor*, *Chois.* 3rd Mem. *Convolv. t.* 3, fig. 4; calyx and corolla hardly half so large as in the type. *C. sulcata*, *Wall. Cat.* 1320, n. 3.—Martaban; *Wallich.*—Stems exceedingly slender. Referred in MS. by Engelm. to *C. obtusiflora*, H.B.K. Var. *breviflora*; but the Martaban plant has the calyx divided to the base, and seems merely a weak example of *C. chinensis*, as Wallich regarded it. Engelm. (*Cuscut.* 43) also refers as a Var. of *C. obtusiflora*, H. B. K., a plant collected in Kashmir by Jacquemont n. 876, which is no doubt this.

** *Stigmas elongate or linear often as long as the styles.*

5. ***C. capitata***, *Roxb. Fl. Ind.* i. 448; flowers capitate, corolla ovoid covered with minute papillæ without. *Engelm. Cuscut.* 23.

TEMPERATE W. HIMALAYA, alt. 6–12,000 ft., from Kashmir to Simla; *Jacquemont, Thomson, &c.*—DISTRIB. Cabul.

A slender rose-coloured species. *Sepals* $\frac{1}{20}$ – $\frac{1}{18}$ in., ovate. *Corolla* scarcely $\frac{1}{8}$ in., mouth contracted; lobes 5, small, triangular, suberect; scales small, low in the corolla, slightly fimbriate. *Styles* linear-lanceolate, as long as the short-linear stigmas. *Capsule* $\frac{1}{12}$ in., exceedingly thin and fragile, enclosed by the unchanged corolla, irregularly breaking up from the base. *Seeds* 4, ellipsoid, brown.—An unmistakable species; and, as Engelm. noticed, agrees well with Roxburgh's figure and description: the puzzle is whence Roxburgh got it; he says it grew abundantly on *Crotalaria juncea*, a plant cultivated at or near the sea-level.

6. ***C. europæa***, *Linn.*; *Syme Engl. Bot. t.* 927; flowers in sessile globose heads, calyx-tube shortly obconic lobes 5–4 ovate-triangular, styles shorter than the linear stigmas, capsule circumsciss near the base along a thickened rim. *Engelm. Cuscut.* 18, 19, *with syn.*; *Boiss. Fl. Orient.* iv. 117. *C. major*, *C. Bauh.*; *Chois. in DC. Prodr.* ix. 452. *C. aggregata*, *Roxb. Fl. Ind.* i. 447. *C. capillaris*, *Edgew. in Trans. Linn. Soc.* xx. 86.

TEMPERATE HIMALAYA, alt. 5–12,000 ft., from Kashmir to Sikkim; *Thomson Edgeworth, J. D. H., &c.*—DISTRIB. Europe, Western and Central Asia.

Calyx $\frac{1}{12}$ in. *Corolla-tube* $\frac{1}{12}$ in., ovoid; lobes 5–4, ovate or triangular; scales near the base of the filaments, obtuse or emarginate, crenulate or subentire. *Capsule* $\frac{1}{12}$ in., fragile. *Seeds* usually 4, ellipsoid, brown.

7. ***C. planiflora***, *Tenore*; *Engelm. Cuscut.* 14 *with syn.*; flowers in sessile globose heads, sepals ovate-oblong, corolla-tube longer than the calyx, styles shorter than the linear stigmas, capsule circumsciss near the base along a thickened rim. *Boiss. Fl. Orient.* iv. 116. *C. minor*, *C. Bauh.*; *Chois. in DC. Prodr.* ix. 453. *C. brevistyla*, *A. Rich. Fl. Abyss.* ii. 79; *Engelm. Cuscut.* 17; *Boiss. Fl. Orient.* iv. 117.

SUBTROPICAL W. HIMALAYA, alt. 1–6000 ft.; frequent, descending to the Punjab Plain.—DISTRIB. Mediterranean Region, Central Asia.

Closely resembling *C. europæa*. *Calyx* and *corolla* often glistening from their large lax tissue; whence the Indian examples have been regarded as papillose, and placed wrongly with *C. capitata*. *Corolla-tube* usually much longer than the calyx.

Seeds more fimbriate than in *C. europæa*. *Styles* (in Engelmänn's named examples of *C. planiflora*) short, less than half as long as the stigmas. *C. brevistyla* is not merely "too near" *C. planiflora* as both Engelmänn and Boissier suggest; it is the same thing.

ORDER CII. SOLANACEÆ. (By C. B. Clarke.)

Herbs or shrubs. *Leaves* alternate, often in unequal pairs, rarely clustered, never opposite; entire, lobed or pinnate; stipules 0. *Cymes* lateral, or terminal, axillary or extra-axillary, or pedicels solitary or clustered; bracts and bracteoles 0. *Flowers* regular, hermaphrodite (in *Withania coagulans* dioecious). *Calyx* inferior, 5-, rarely 3-7-merous, in *Nicandra* 5-partite; in fruit usually persistent, often much enlarged. *Corolla* funnel-shaped campanulate, or rotate, often plaited; lobes 5 (in *Datura* sometimes 10), or limb subentire. *Stamens* 5, on the corolla-tube; anthers ovate or oblong, dehiscing by apical pores or longitudinally. *Ovary* 2-celled, or imperfectly 1- or 4-celled, in *Nicandra* 3-5-celled; style linear, stigma capitate or very shortly lobed; ovules very many, on prominent peltate placentas. *Fruit* baccate or capsular, indehiscent circumsciss or valvular, usually 2-celled, many-seeded. *Seeds* compressed, discoid or subreniform, embryo peripheric; or (in *Nicotiana*) seeds scarcely compressed, embryo straight.—Species 1250 in the warmer parts of the whole world.

SUBORDER I. Solanææ. *Corolla-limb* plaited or the lobes valvate. *Fruit* a berry. *Seeds* much compressed, subdiscoid; embryo peripheric.

* *Anthers opening by 2 pores at the apex.*

Leaves entire, lobed or pinnatifid	1.	SOLANUM.
Leaves pinnate	1*.	LYCOPERSICUM.

** *Anthers oblong, dehiscing longitudinally.*

† *Calyx in fruit small.*

Flowers small. Pedicels solitary or paired	2*.	CAPSICUM.
--	-----	-----------

†† *Calyx in fruit enlarged, overtopping the berry.*

Pedicels solitary. Calyx shortly lobed	2.	PHYSALIS.
Flowers clustered, sessile or nearly so	3.	WITHANIA.
Pedicels solitary. Calyx 5-partite	3*.	NICANDRA.

SUBORDER II. Atropææ. *Corolla-lobes* more or less imbricate. *Fruit* a berry. *Seeds* compressed; embryo peripheric.

Pedicels solitary or few together. Calyx and corolla small	4.	LYCIUM.
Pedicels solitary. Calyx foliaceous	5.	ATROPA.
Pedicels clustered, subradical	6.	MANDRAGORA.

SUBORDER III. Hyoscyamææ. *Corolla-lobes* plaited or imbricate. *Fruit* capsular. *Seeds* somewhat compressed; embryo peripheric.

* *Capsule 4-celled, 4-valved, or subindehiscent.*

Flowers solitary. Calyx circumsciss	7.	DATURA.
---	----	---------

** *Capsule circumsciss.*

Pedicels solitary, distant	8.	SCOPOLIA.
Corymb terminal, peduncled	9.	PHYSOCHLAINA.
Flowers unilateral, upper racemose	10.	HYOSCYAMUS.

SUBORDER IV. **Cestrineæ.** *Corolla-lobes* induplicate-valvate. *Fruit* capsular. *Seeds* scarcely compressed; embryo straight.

Flowers paniced 10*. NICOTIANA.

1. SOLANUM, Linn.

Shrubs herbs or small trees, spinous or unarmed. *Leaves* alternate or subopposite in equal pairs, entire lobed or pinnatifid. *Cymes* dichotomous or racemose, lateral or terminal. *Calyx* 5- or 10-lobed, rarely 4-lobed, or subentire, unaltered or enlarged in fruit. *Corolla-tube* short, rotate, rarely campanulate; limb 5- (rarely 4-6-) lobed, plaited in bud. *Stamens* 5 (rarely 4-6) in the corolla-throat, filaments short; anthers oblong, narrowed upwards, connivent into a cone, opening by terminal pores or short slits. *Ovary* 2-celled, rarely (in cultivated forms) 3-4-celled; style columnar, stigma small. *Berry* small or large, globose or elongate. *Seeds* very many, discoid; embryo peripheric.—Species 700, chiefly in the hotter parts of the globe, most numerous in America.

S. tuberosum, Linn. (the Potato) is extensively cultivated in India, from the sea-level up to nearly 8000 feet.

* Unarmed. Sepals not overtopping the berry.

† *Cymes* or *racemes* peduncled; *calyx-teeth* 5 (rarely 4 or 6).

1. **S. nigrum**, Linn.; glabrous or sparingly pubescent, leaves ovate or oblong sinuate toothed or lobed, peduncles extra-axillary, pedicels subumbelled, calyx-teeth small obtuse, corolla white. *Blume Bijl.* 694; *Wall. Cat.* 2615; *Dunal in DC. Prodr.* xiii. 150; *Benth. Fl. Austral.* iv. 446 with syn.; *Kurz For. Fl.* ii. 224. *S. rubrum*, Miller; *Roxb. Fl. Ind.* i. 565; *Nees in Trans. Linn. Mal.* x. t. 73; *Rumph. Herb. Amb.* vi. t. 26, fig. 2.

Throughout INDIA and CEYLON, alt. 0-7000 ft.; common.—DISTRIB. All temperate and tropical parts of the world.

Herbaceous or suffrutescent. *Leaves* $3\frac{1}{2}$ by 2 in., narrowed at both ends; petiole $\frac{3}{4}$ in. *Peduncles* $\frac{1}{4}$ – $\frac{3}{4}$ in.; *pedicels* 5-8, $\frac{1}{2}$ in. *Sepals* $\frac{1}{20}$ in., ovate-oblong; in fruit often obscure, the calyx saucer-shaped. *Corolla* $\frac{1}{2}$ in. diam., nearly glabrous. *Ovary* glabrous, style-base hairy. *Berry* $\frac{1}{4}$ in. diam., globose, red or black, sometimes yellow. *Seeds* $\frac{1}{20}$ in. diam., smooth or nearly so.

2. **S. dulcamara**, Linn.; *Boiss. Fl. Orient.* iv. 285; glabrous or sparingly pubescent, leaves ovate or oblong subentire lobed or lyrate, peduncles extra-axillary, cymes laxly paniced, calyx-teeth small obtuse, corolla purple. *Dunal in DC. Prodr.* xiii. pt. i. 78; *Benth. & Trim. Med. Pl.* 190. *S. lyratum*, Thunb. *Fl. Jap.* 92; *Dunal l. c.* 79. *S. persicum*, Willd. *ms.*; *Dunal l. c.* 79. *S. laxum*, Royle *Ill.* 279 (name only).

TEMPERATE W. HIMALAYA, alt. 4-8000 ft., from Kashmir to Gurwhal, frequent. SIKKIM, Choongtam, J. D. H.—DISTRIB. Europe, W. and Central Asia, China, Japan.

A shrub. *Leaves* 3-5 in., in the Indian examples often cordate-oblong, acute, entire lobed or almost pinnate; petiole 1 in. *Peduncles* $\frac{1}{4}$ -4 in.; cymes 2-5 in. diam.; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. *Calyx* in fruit almost saucer-shaped, lobes in flower $\frac{1}{20}$ in., ovate-oblong. *Corolla* $\frac{3}{8}$ in. diam. *Style* glabrous. *Berry* $\frac{1}{4}$ in. diam., globose. *Seeds* $\frac{1}{8}$ in. diam., smooth.—*S. laxum*, Royle, is a starved state with the panicle almost capillary and flowers about $\frac{1}{8}$ in. diam.

3. ***S. spirale***, Roxb. *Hort. Beng.* 16, and *Fl. Ind.* i. 566; glabrous, leaves elliptic entire acute at both ends, peduncles extra-axillary, pedicels long densely spirally racemed, calyx-teeth minute, corolla white. *Wall. Cat.* 2619; *Nees in Trans. Linn. Soc.* xvii. 40; *Dunal in DC. Prodr.* xiii. pt. i. 146; *Kurz For. Fl.* ii. 227.

ASSAM, KHASIA MTS. and EAST BENGAL; alt. 0-3500 ft., in and near the hills, common.—DISTRIB. Ava.

A herb or undershrub 4-12 feet, resembling a large *S. nigrum*. *Leaves* attaining 8 by 3 in., attenuate at the base, glabrous or scarcely puberulous; petiole $\frac{3}{8}$ in. *Pedicels* numerous, $\frac{1}{2}$ -1 in.; racemes sometimes divided. *Calyx* $\frac{1}{8}$ in., cup-shaped; in fruit saucer-shaped, not enlarged. *Corolla* $\frac{3}{8}$ in. diam., deeply lobed. *Anthers* oblong, scarcely narrowed upwards. *Berry* $\frac{1}{2}$ in. diam., globose, smooth. *Seeds* $\frac{1}{8}$ in. diam., smooth.

4. ***S. vagum***, Heyne in *Wall. Cat.* 2624; leaves elliptic acute at both ends sinuate glabrescent, peduncles extra-axillary, pedicels long sub-racemed, calyx-teeth linear-lanceolate. *Nees in Trans. Linn. Soc.* xvii. 48; *Dunal in DC. Prodr.* xiii. pt. i. 116.

DECCAN PENINSULA; Heyne.

A glabrescent shrub, shoots stellately white-pubescent. *Leaves* 6 by 2 $\frac{1}{4}$ in., very shallowly lobed; petiole 1 $\frac{1}{2}$ in. *Peduncles* $\frac{3}{4}$ in.; racemes dense, sometimes divided; pedicels $\frac{1}{4}$ -1 in., spirally placed. *Calyx-teeth* in flower $\frac{1}{8}$ in.; in fruit $\frac{1}{5}$ in. *Corolla* $\frac{3}{8}$ in. diam., deeply lobed, sparingly pubescent without. *Berry* $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., globose, smooth.—Very closely allied to *S. spirale*.

5. ***S. verbascifolium***, Linn.; *Dunal in DC. Prodr.* xiii. pt. i. 114; stellately woolly, leaves elliptic acuminate entire, corymbs peduncled sub-terminal compound dense, calyx-teeth triangular, corolla white. *Jacq. Hort. Vind.* i. t. 13; *Lour. Fl. Cochinch.* 128; *Wall. Cat.* 2616; *Nees in Trans. Linn. Soc.* xvii. 46; *Wight Ic.* t. 1398; *Dalz. & Gibs. Bomb. Fl.* 175; *Kurz For. Fl.* ii. 225. *S. pubescens*, Roxb. *Fl. Ind. ed. Carey & Wall.* ii. 244; *Blume Bijdr.* 698, not of Willd. *S. erianthum*, Don *Prodr.* 96.

Throughout INDIA, in the Tropical and Subtropical zone; common.—DISTRIB. S.E. Asia, Malaya, N. Australia, Tropical America.

A shrub, or subarborescent, 20 feet high. *Leaves* 7 by 3 in. attenuate at both ends or base subrhomboid; petiole 1-2 in. *Peduncles* stout, 1-4 in.; cymes dichotomously compound, very woolly. *Calyx-lobes* in flower $\frac{1}{12}$ in., thrice as large in fruit, but much shorter than the berry. *Corolla* $\frac{3}{8}$ in. diam., woolly without. *Ovary* hairy, style glabrous. *Berry* $\frac{1}{2}$ in. diam., globose, yellow. *Seeds* $\frac{1}{8}$ in. diam., nearly smooth.

6. ***S. pubescens***, Willd. *Phyt.* 5, t. 3; leaves ovate entire sinuate thinly stellately hairy, racemes lateral and terminal 3-10-flowered, calyx-teeth lanceolate, corolla purple. *Wall. Cat.* 2629; *Nees in Trans. Linn. Soc.* xvii. 60; *Dunal in DC. Prodr.* xiii. pt. i. 127; *Wight Ic.* t. 1402. *S. calycinum*, *Nees l. c.* *S. conanthum*, *Dunal l. c.*

DECCAN PENINSULA and Ceylon; *Wight, Thwaites, &c.*

A shrub or subarborescent; young branches densely stellately woolly, older usually perfectly glabrous. *Leaves* 2-4 in., irregularly obscurely lobed, base rhomboid or shallowly cordate shortly decurrent, young stellately subwoolly, mature thinly hairy

or glabrescent. *Racemes* densely woolly, or villous; pedicels $\frac{1}{2}$ – $1\frac{1}{2}$ in. *Calyx-lobes* $\frac{1}{8}$ – $\frac{1}{5}$ in. in flower, in fruit $\frac{1}{4}$ in. *Corolla* $\frac{3}{4}$ – $1\frac{1}{4}$ in. diam., closely tomentose without. *Anther* of the lowest stamen produced upwards, longer than the others. *Berry* $\frac{1}{3}$ in. diam., globose, smooth. *Seeds* $\frac{1}{8}$ in. diam. and upwards.

VAR. ? *lobata*; leaves lobed very tomentose beneath, flowers smaller.—Khasia Hills.—This example (from Herb. Calcutta, named *S. pubescens* by Kurz) has no fruit, nor prickles. It resembles the unarmed form of *S. Melongena*, but the flowers are too small.

†† *Pedicels* axillary, clustered or solitary, or in a subsessile umbel; calyx-teeth 5–10 or obsolete; corolla glabrous without or nearly so.

7. ***S. subtruncatum***, Wall. Cat. 2620; leaves lanceolate acuminate at both ends entire glabrous or nearly so, flowering calyx cup-shaped entire or obscurely toothed fruiting saucer-shaped entire, corolla $\frac{1}{2}$ in. long. Dunal in DC. Prodr. xiii. pt. i. 180. *S. denticulatum*, Nees in Trans. Linn. Soc. xvii. 41, not of Blume. *S. Neesianum*, Wall.; Nees l. c. 42, not of Wight nor of Dalz.

KHASIA Mts. alt. 3–5000 ft., common; Wallich, Griffith, &c. ASSAM; Jenkins.

A shrub, nearly glabrous. Leaves $6\frac{1}{2}$ by $1\frac{3}{4}$ in., minutely setulose above, afterwards glabrous; petiole $\frac{1}{2}$ in. Pedicels $\frac{2}{3}$ in., 1–7 together. Calyx in flower $\frac{1}{10}$ in. long and broad; teeth 5 or 10, very obscure. Berry $\frac{1}{4}$ in. diam., globose, smooth. Seeds $\frac{1}{18}$ in. diam., subtriangular, smooth.—Perhaps not distinct from *S. Blumei*, Nees (Blume Bijl. 696), which has broader leaves.

8. ***S. bigeminatum***, Nees in Trans. Linn. Soc. xvii. 42; leaves elliptic acuminate at both ends entire glabrous or nearly so, flowering calyx cup-shaped entire or obscurely toothed fruiting saucer-shaped subentire, corolla $\frac{1}{2}$ in. long. Dunal in DC. Prodr. xiii. pt. i. 175. *S. Neesianum*, Dalz. & Gibs. Bomb. Fl. 175, and of Wight Herb., not of Wall. & Nees. *S. cupulatum*, Miq. in Pl. Hohenack. n. 1415. *S. angulosum* and *flexuosum*, Heyne in Herb. Madras.

Mts. of the S. DECCAN; Nilgherries, Travancore; Heyne, Wight, &c. Malabar Ghauts, Ritchie.

Very nearly allied to *S. subtruncatum*. Leaves $6\frac{1}{2}$ by 3 in., membranous, sparsely setulose above, margins minutely ciliate; petiole $\frac{1}{2}$ –1 in. Pedicels 1–6 together, $\frac{3}{4}$ in. Berry $\frac{1}{3}$ in. diam. Seeds $\frac{1}{8}$ in. diam.; testa lax, subsquamose.

VAR. *zeylanica*; leaves smaller less membranous, pedicels shorter rusty-puberulous. *S. membranaceum*, Thwaites Enum. 216, not of Wall.—Ceylon, Gardner, Wight, Thwaites.

9. ***S. laeve***, Dunal Solan. Synop. 22; leaves elliptic-lanceolate acuminate at both ends entire glabrous or nearly so, flowering calyx with 5 linear teeth $\frac{1}{8}$ in., fruiting prominently toothed, corolla $\frac{1}{4}$ in. Nees in Trans. Linn. Soc. xvii. 41. *S. membranaceum*, Wall. Cat. 2625; Nees l. c.; Dunal in DC. Prodr. xiii. pt. i. 143.

NILGHERRIES, Wight; alt. 6000 ft., Clarke.

A nearly glabrous shrub. Leaves $6\frac{1}{2}$ by $2\frac{1}{2}$ in., green, membranous, minutely sparsely setulose above, soon glabrous; petiole $\frac{2}{3}$ in. Pedicels 1–5 together, $\frac{3}{8}$ in. Berry and seeds nearly as of *S. bigeminatum*, from which it hardly differs but by the distinct calyx-teeth.

10. ***S. denticulatum***, Blume Bijl. 697; leaves elliptic-lanceolate acuminate at both ends subentire setulose often pubescent, calyx-teeth usually 7–8 small divaricate, corolla $\frac{1}{2}$ – $\frac{3}{4}$ in. long. Nees in Trans. Linn. Soc. xvii. 41, excl. syn. Wallich; Wight Ic. t. 1397; Dunal in DC. Prodr. xiii. pt. i. 181. *S. membranaceum* and *crassipetalum*, Herb. Wight not of Wall.

Mts. of the DECCAN PENINSULA, alt. 4-8000 ft., and CEYLON, frequent.—DISTRIB. Malay Islands.

A woody, somewhat rigid shrub. *Leaves* 3 by $1\frac{1}{2}$ in., young almost villous, mature setulose above, pubescent often rusty on the nerves beneath; petiole $\frac{1}{2}$ in. *Pedicels* 1-4 together, $\frac{2}{3}$ in. *Calyx-teeth* lanceolate, minute; in fruit $\frac{1}{2}$ in. or 0 on the same shrub. *Berry* $\frac{1}{4}$ - $\frac{1}{3}$ in. *Seeds* $\frac{1}{8}$ in. diam. and upwards, smooth or nearly so.

VAR. *Gouakai*; leaves angular and sometimes with acute lobes $\frac{1}{2}$ in. long. *S. Gouakai*, Dunal in DC. l. c. 177.—Pulney Mts.; Wight. Ceylon; Walker.

11. ***S. biflorum***, Lour. *Fl. Cochinch.* 129, not of *D. Don*; leaves elliptic or oblong acuminate at both ends entire glabrous setulose or pubescent, calyx-teeth 10 in flower $\frac{1}{12}$ in. narrow-lanceolate, corolla $\frac{1}{4}$ - $\frac{1}{3}$ in. Dunal in DC. Prodr. xiii. pt. i. 178; Kurz For. Fl. 224. *S. decemdentatum*, Roxb. Hort. Beng. 16, and *Fl. Ind.* i. 565; Wall. Cat. 2614; Dunal l. c. 179. *S. mollissimum*, Blume Bijl. 698; Nees in Trans. Linn. Soc. xvii. 45; Dunal l. c. 178. *S. decemfidum*, Nees l. c. 43. *S. Zollingeri*, Calleryanum and Osbeckii, Dunal l. c. 176, 178, 179.

SINGAPORE; Wallich. MERGUI and MALACCA; Griffith.—DISTRIB. Malaya and East Ava.

A shrub; shoots flocculose-setose or nearly glabrous. *Leaves* 5 by $1\frac{1}{2}$ in.; petiole $\frac{2}{3}$ in. *Pedicels* 1-6, $\frac{2}{3}$ in. *Flower and fruit* nearly as in *S. denticulatum*, from which it only differs in the longer calyx-teeth.—Very variable in indumentum; Roxburgh describes the leaves as villous, the calyx as pubescent; his Ic. Ined. preserved at Kew represents a glabrous form.

12. ***S. macrodon***, Wall. Cat. 2621; erect, shrubby, leaves elliptic-lanceolate acuminate at both ends entire setulose above, pedicels 1-8 together, calyx-teeth in flower $\frac{1}{2}$ in. linear hispidulous, corolla $\frac{1}{2}$ - $\frac{1}{2}$ in. Nees in Trans. Linn. Soc. xvii. 43; Dunal in DC. Prodr. xiii. pt. i. 180. *S. biflorum*, Don Prodr. 96, excl. syn., not of Lour.

TEMPERATE HIMALAYA, alt. 4-8000 ft., from Nepal to Bhotan, common. KHASIA Mts., alt. 3-5000 ft., common.

A small shrub setulose with jointed, submoniliform, glistening hairs. *Leaves* 6 in. in large examples, or 2 in. in high level forms; petiole $\frac{1}{3}$ - $\frac{2}{3}$ in. *Pedicels* $\frac{1}{2}$ -1 in., mostly 2-6 together, sometimes solitary. *Calyx-teeth* (in flower) terminal, alternate sometimes shorter. *Corolla-lobes* oblong, acute, purple rose or nearly white, with 2 green glandular spots near the base. *Berry* $\frac{1}{4}$ in. diam., globose. *Seeds* $\frac{1}{8}$ in. diam., subtriangular, smooth.

VAR. *lysimachioides*; stems slender procumbent often rooting at the nodes, pedicels solitary. Wall. Cat. 2609, and in Roxb. Fl. Ind. ed. Carey & Wall. ii. 257; Nees in Trans. Linn. Soc. xvii. 44; Dunal in DC. Prodr. xiii. 181.—Temperate Himalaya, from Kumaon (Strachey & Winterbottom) to Bhotan. Khasia Mts. alt. 3-5000 feet.

13. ***S. crassipetalum***, Wall. Cat. 2618, and in Roxb. Fl. Ind. ed. Carey & Wall. ii. 256; erect, shrubby, leaves elliptic-lanceolate acuminate at both ends entire glabrous or sparsely setulose, pedicels 1-8 together, calyx-teeth in flower $\frac{1}{24}$ - $\frac{1}{12}$ in. triangular glabrous or pubescent from a compressed base below the calyx-rim, corolla $\frac{1}{3}$ - $\frac{1}{2}$ in. Nees in Trans. Linn. Soc. xvii. 42. Bassovia? Wallichii, Dunal in DC. Prodr. xiii. 409.

TEMPERATE HIMALAYA, alt. 3-8000 ft.; from Nepal to Bhotan, very common.

A shrub, 2-9 feet. *Leaves* 6 by 2½ in. (sometimes 9-10 in.); usually nearly glabrous, sometimes abundantly flocculose-setulose; petiole $\frac{2}{3}$ in. *Calyx-teeth* in flower below the limb, bases compressed decurrent on the tube, points linear-obtuse divaricate horizontally. *Corolla and berry* nearly as of *S. macrodon*.—The thickening of the petals observed in the few examples of Wallich frequently occurs in this species, but in abnormal flowers with imperfect stamens, and is perhaps due to some

insect. At all events, normal unthickened flowers abound.—Leaves cooked and eaten in Sikkim (*J. D. H.*).

** Prickly, some varieties of *S. Melongena* rarely unarmed.

14. ***S. giganteum***, *Jacq. Coll.* iv. 125, and *Ik. Rar.* ii. t. 328; subarborescent, spinous, leaves oblong cuneate at both ends, and cymes stellately white woolly beneath, cymes terminal dense many-fl'd. stellately white woolly, berry $\frac{1}{2}$ in. diam. glabrous. *Dunal Sol.* 202, and in *DC. Prodr.* xiii. pt. i. 258; *Nees in Trans. Linn. Soc.* xvii. 47; *Bot. Mag.* t. 1921; *Wight & Arn. in Ann. Nat. Hist.* i. 395, t. 13; *Wight Ik.* t. 893; *Dalz. & Gibs. Bomb. Fl.* 175. *S. niveum*, *Vahl Symb.* ii. 41. *S. farinosum*, *Wall. Cat.* 2610, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 255. *S. argenteum*, *Heyne in Herb. Rottler.*

Mrs. of S. DECCAN and CEYLON, alt. 3-7000 ft., frequent; *Wight, Thwaites, &c.*

Often 10-25 feet high; but in cultivation flowers at 4 feet high; stem thick, soft, prickly, stellately white-woolly. Leaves 8 by 3 in., entire, undulate; nerves impressed on the upper surface; petiole 2 in. Pedicels very short, in fruit $\frac{1}{4}$ - $\frac{1}{2}$ in. Calyx-lobes $\frac{1}{20}$ in., triangular, in fruit twice as large. Corolla $\frac{1}{2}$ in. diam., blue; tube nearly as long as the lobes. Ovary puberulous. Seeds $\frac{1}{8}$ in. diam., glabrous.

15. ***S. ferox***, *Linn.*; *Dunal Sol.* 223, and in *DC. Prodr.* xiii. pt. i. 255; densely stellately woolly, leaves ovate with short triangular lobes, racemes lateral dense, corolla white, berry 1-1 $\frac{1}{2}$ in. diam. globose hirsute with needle-like hairs greatly exceeding the ovate-triangular calyx-lobes. *Nees in Trans. Linn. Soc.* xvii. 52 (excl. syn. *S. involucratum*, Blume); *Wight Ik.* t. 1399 (excl. var. *minus*); *Kurz For. Fl.* ii. 226, partly, and excl. var. β). *S. lasiocarpum*, *Blume Bijl.* 701; *Wall. Cat.* 2623; *Dunal Sol.* 222, and in *DC. Prodr.* xiii. pt. i. 252. *S. hirsutum*, *Roxb. Hort. Beng.* 17, and *Fl. Ind. ed. Carey & Wall.* ii. 253. *S. stramonifolium*, *Dunal Sol.* 222, and *DC. Prodr.* xiii. pt. i. 252, not of *Jacq.* nor of *Wall.*—*Rhesde Hort. Mal.* ii. 35.

EASTERN and SOUTHERN INDIA, in the tropical zone, frequent; from Assam to Ceylon and to Tenasserim.—DISTRIB. Hongkong.

Stem herbaceous, stout, 2-4 feet, sub-erect, prickly. Leaves 8 by 6 in., closely villous above, stellately fulvous-woolly beneath, lobes 1 in. deep, prickly especially on the nerves; petiole 2 $\frac{1}{2}$ in. Peduncles usually close below the leaves, short; racemes densely stellately woolly and with needle-like hairs, not prickly. Calyx shortly funnel-shaped; lobes $\frac{1}{4}$ in., ovate-triangular not acuminate. Corolla densely woolly without, lobes $\frac{3}{4}$ -1 in., oblong, acute. Ovary hirsute. Berry yellow, needle-like hairs $\frac{1}{8}$ - $\frac{1}{2}$ in., fulvous, spreading; fruit-pedicels $\frac{1}{2}$ -1 in.; calyx-lobes in fruit unaltered, hardly $\frac{1}{4}$ the length of the berry. Seeds $\frac{1}{8}$ in. diam., nearly smooth.—*S. involucratum* (Blume *Bijl.* 701), the Malay species reduced to *S. ferox* by *Nees*, has the calyx-lobes produced, in fruit 1 in., ovate-linear, with slender prickles, enclosing the berry.

16. ***S. barbisetum***, *Nees in Trans. Linn. Soc.* xvii. 51; hirsute, leaves ovate with short triangular lobes, racemes lateral elongate many-flowered, corolla blue lobes lanceolate acuminate, berry $\frac{1}{2}$ in. diam. globose glabrous enclosed by the prickly calyx. *Dunal in DC. Prodr.* xiii. pt. i. 250. *S. erio-phorum*, *Dunal l.c.* 249. *S. involucratum*, *Kurz For. Fl.* ii. 224, not of *Blume*.

From N. BENGAL and ASSAM to TENASSERIM, in the subtropical region, alt. 1-5000 ft., frequent, *Wallich, Griffith, H. f. & T.*, &c.

In general appearance, and in the leaves, resembling *S. ferox*, but with close clustered fine hairs, scarcely woolly. Racemes 2-6 in.; pedicels very many, $\frac{1}{4}$ -1 in., deflexed after flower. Calyx-lobes $\frac{1}{4}$ - $\frac{1}{2}$ in., oblong-lanceolate. Corolla-lobes very narrow, acute. Calyx in fruit enlarged, tube subglobose with deflexed prickles, teeth closed over the berry. Seeds more than $\frac{1}{8}$ in. diam., minutely villous.

17. **S. khasianum**, Clarke; hirsute, leaves ovate lobed, racemes lateral 1-4-flowered, corolla small lobes lanceolate acuminate, berry 1 in. diam. globose glabrous much longer than the unarmed calyx. *Solanum* n. 14, *Herb. Ind. Or. H. f. & T.*

KHASIA Mts.; Nunklow, *H. f. & T.*

A stout species, in indumentum and leaves resembling *S. barbisetum*. Stem densely yellow-hirsute, and with straight patent prickles $\frac{2}{3}$ in. Leaves 7 by 5 in., deeply lobed, hirsute; prickles $\frac{2}{3}$ in. straight, on both surfaces; petiole 1-2 in. Peduncles hardly any; pedicels $\frac{3}{4}$ in. Sepals in flower $\frac{1}{2}$ in., lanceolate, hirsute, not prickly. Corolla $\frac{2}{3}$ in. diam., nearly glabrous without. Stamens equal. Berries 1-3 on each peduncle; fruit-sepals $\frac{1}{2}$ in., ovate-lanceolate, hirsute, not prickly. Seeds $\frac{1}{8}$ in. diam., smooth.

18. **S. Wightii**, Nees in *Trans. Linn. Soc.* xvii. 51; leaves ovate toothed or lobed hirsute, cymes lateral laxly 1-3-flowered, corolla large tube longer than the lobes, berry glabrous overtopped by the ovate-lanceolate sepals. *Dunal in DC. Prodr.* xiii. pt. i. 1334; *Wight Ic.* t. 841. *S. Hohenackeri*, Van Heurck & Muell. in *Van Heurck Pl.* Nov. 87.

NILGHERY Mts., alt. 4-6000 ft.; Canoor Ghat, *Wight, Gardner, &c.*

Herbaceous; shoots tomentose. Leaves 4 by $1\frac{1}{4}$ in., villous above, more densely beneath, prickles few; petiole 1 in. Peduncles axillary or extra-axillary, short; pedicels $\frac{1}{2}$ -2 in. Calyx-lobes (in flower) $\frac{1}{2}$ in., oblong-lanceolate. Corolla 2 in. diam., blue, woolly without; lobes ovate, shortly acuminate. Style minutely sparsely pubescent. Berry $\frac{1}{2}$ in. diam., globose; sepals in fruit $\frac{3}{4}$ in., without prickles. Seeds $\frac{1}{8}$ in. diam., brown, smooth, without tubercles; the dried testa reticulated by the drying and sinking in of the cells leaving the cell-walls prominent.

19. **S. torvum**, Swartz *Prodr.* 47; stem prickly, leaves ovate sinuate or lobed stellately tomentose beneath without prickles, racemes lateral dense, flowers white, berry $\frac{1}{4}$ - $\frac{1}{3}$ in. diam. globose smooth much exceeding the triangular-oblong unarmed calyx-lobes. *Dunal Sol.* 263, t. 23, and in *DC. Prodr.* xiii. pt. i. 260 (excl. var. γ); *Nees in Trans. Linn. Soc.* xvii. 53 a; *Wight Ic.* t. 345; *Dalz. & Gibs. Bomb. Fl.* 175; *Sendtn. in Mart. Fl. Bras.* x. 94, t. 7, fig. 1-8 with syn.; *Kurz For. Fl.* ii. 225. *S. stramonifolium*, Roxb. *Fl. Ind.* i. 572; *Wall. Cat.* 2627; perhaps of Lamk. in part, not of Jacq. *S. ferrugineum*, Jacq. *Hort. Schoenb.* iii. 46, t. 334; *Dunal Sol.* 36, and in *DC. l. c.* 266. *S. pseudosaponaceum*, Blume *Bijl.* 702; *Dunal in DC. l. c.* 274. *S. Wightii*, Miquel *Pl. Hohenack.* n. 36, not of Nees.

Throughout INDIA in the tropical region, except the western desert area; very common in Bengal.—DISTRIB. Malaya, China, Philippines, Tropical America.

A shrub, 8-12 feet high, or flowering as a herb. Leaves 6 by 4 in., lobes shallow rarely deep, softly hairy above, never prickly; petiole 1 in. Peduncles usually extra-axillary, short; racemes many-fl., often dichotomous; pedicels often $\frac{1}{4}$ - $\frac{1}{2}$ in. Calyx-lobes in flower $\frac{1}{2}$ in., lanceolate, sparingly hairy. Corolla $1\frac{1}{4}$ in. diam.; lobes $\frac{1}{2}$ in., triangular, pubescent without. Ovary and style glabrous. Berry yellow; calyx-lobes patent, not half as long as the berry. Seeds scarcely $\frac{1}{10}$ in. diam., smooth.—This, when dried, has been much confused with the blue-flowered *S. indicum* and *S. Melongena*; the former may be distinguished by the prickly leaves, the latter by the few-flowered cymes with a much larger berry and fruiting-calyx.

20. **S. indicum**, Linn. partly; *Nees in Trans. Linn. Soc.* xvii. 55; leaves ovate sinuate or lobed stellately woolly beneath nerves prickly, racemes lateral many-fl., flowers blue, berry $\frac{1}{2}$ in. diam. globose smooth much exceeding the triangular-oblong calyx-lobes. *Lour. Fl. Cochinch.* 131; *Roxb. Fl. Ind.* i. 570; *Wall. Cat.* 2626; *Wight Ic.* t. 346; *Dunal in DC. Prodr.* xiii. pt. i. 309; *Dalz. & Gibs. Bomb. Fl.* 174; *Kurz For. Fl.* 226. *S. violaceum*, Jacq. *Fragm.*

82, t. 133, fig. 1, *not of Br.* *S. cuneatum*, Moench *Hort. Marb.* 476. *S. canescens*, Blume *Bijd.* 701. *S. pinnatifidum* and *agreste*, Roth *Nov. Sp.* 129, 130. *S. Heynei*, Roem. & Sch. *Syst.* iv. 669. *S. Anguivi*, Bojer; Hook. *Exot. Fl.* t. 199. *S. himalense*, Dunal l. c. 300. *S. Junghuhnii*, Miq. *Fl. Ind. Bat.* ii. 649.—*Burm. Thes. Zeyl.* 220, t. 102; *Rheede Hort. Mal.* ii. t. 36.

Throughout tropical INDIA; very common, ascending to 5000 ft.—DISTRIB. Malaya, China to the Philippines.

An undershrub, 1-6 ft., much branched, very prickly; prickles compressed, stout, often recurved. *Leaves* 3-6 by 1-4 in., subentire or pinnatifid; petiole 1 in. *Peduncles* short, often extra-axillary; pedicels $\frac{1}{2}$ - $\frac{1}{3}$ in., stellately woolly. *Calyx-lobes* in flower $\frac{1}{2}$ in., triangular, acute, very woolly, unarmed or with slender straight spines. *Corolla* $\frac{3}{4}$ -1 in. diam., blue; lobes broadly triangular, tomentose without. *Ovary* usually glabrous; style stellately pubescent. *Berry* yellow; calyx-lobes patent, woolly, prickles often strengthened in fruit. *Seeds* $\frac{1}{2}$ in. diam. and upwards, smooth or very nearly so.—A Nilgherry form is less prickly, has smaller less lobed leaves, and small corymbs of larger flowers. A plant from the Concan is sparsely prickly and has the leaves very sparsely stellate tomentose. A Punjab example of Thomson has branches with very numerous small thin leaves, a monstrosity that occurs in other Indian species of *Solanum*.

VAR. *multiflora*, Wight; rather stronger, more hairy, racemes stouter longer, stellate pubescence of the style extending over the ovary continued on the fruit or deciduous. *S. multiflorum*, Roth *Nov. Sp.* 130; Roem. & Sch. *Syst.* iv. 669. *S. ferox*, var. minus, Wight l. c. t. 1400. *S. torvum*, var. β *inermis*, Nees in *Trans. Linn. Soc.* xvii. 54; var. γ *inermis*, Dunal in *DC. Prodr.* xiii. pt. i. 261. *S. erosum*, Van Heurck & Muell. in Van Heurck *Nov. Pl.* 83.

21. **S. Melongena**, Linn.; Nees in *Trans. Linn. Soc.* xvii. 49; leaves ovate sinuate or lobed stellately woolly beneath prickly rarely all unarmed, cymes lateral few-fl., calyx-lobes lanceolate, flowers blue, berry glabrous exceeding the calyx-lobes in cultivation often large ellipsoid or elongate white yellow or dark-purple. *Lour. Fl. Cochinch.* 130; *Roxb. Fl. Ind.* i. 566; *Wall. Cat.* 2628; *Wight Ill.* t. 166; *Dalz. & Gibs. Bomb. Fl. Suppl.* 61; *Sendtn. in Mart. Brasil. Sol.* 77. *S. incanum*, Linn.; Dunal in *DC. Prodr.* xiii. pt. i. 368. *S. insanum*, Linn. *Mant.* 46; *Roxb. Fl. Ind.* i. 568. *S. zeilanicum*, Scop. *Delic.* t. 1. *S. undatum*, Lamk. *Dict.* iv. 301; Blume *Bijd.* 700; Dunal l. c. 359. *S. Fl.* 175. *S. ferox*, var. β , Kurz *For. Fl.* ii. 226, *not of Linn.*—*Rumph' Herb. Amb.* v. t. 85, and t. 86, fig. 1; *Rheede Hort. Mal.* ii. t. 37, and x. t. 74.

INDIA; generally cultivated.—DISTRIB. Cultivated in the warmer regions of the globe.

Herbaceous, 2-8 ft.; prickly, or sometimes nearly unarmed. *Leaves* 3-6 by 2-4 in.; petiole 1 in. *Peduncles* mostly extra-axillary, often paired, one bearing a perfect flower, the other a short raceme of male flowers; or the raceme may be considered sessile with the lowest flower only perfect. *Calyx-lobes* in flower $\frac{1}{2}$ - $\frac{1}{3}$ in., elliptic or oblong-linear. *Corolla* 1-1 $\frac{1}{4}$ in. diam., shortly lobed, hairy on the plaits without. *Style* stellately pubescent, or glabrous. *Berry* 1-9 in., very variable in cultivation; calyx-lobes enlarged, usually much shorter than the fruit, often prickly.—Not known wild in India, according to Dalzell and Kurz l. c.; A. DC. says it is a native of Asia, not America, and Sendtner l. c. fixes its origin in Arabia; all this appears uncertain. As an escape from cultivation it becomes often intensely prickly, and the peduncle carries 1-5 fruits.—The egg-plant, or Brinjal.

22. **S. coagulans**, *Forsk. Fl. Æg.-Arab.* 47; leaves ovate sinuate or lobed stellately woolly beneath prickly, cymes lateral few-fl., calyx-lobes triangular, flowers blue, berry globose glabrous yellow exceeding the prickly calyx-lobes. *Delile Fl. Æg.* t. 23, fig. 1; *Dunal in DC. Prodr.* xiii. pt. i. 369; *Boiss. Fl. Orient.* iv. 286. *S. sanctum*, *Linn. Sp. Pl.* 269.

W. INDIA; Punjab and Scinde, *Jacquemont*, *Aitchison*, &c.—DISTRIB. S.W. Asia, Arabia, Egypt.

Very near *S. Melongena*, more rigid and tomentose. *Peduncles* paired, one bearing a single perfect flower, the other a raceme of males. *Calyx-tube* campanulate, often in flower-time strongly spinous. *Corolla* as of *S. Melongena*, more woolly without, lobes rather deeper. *Berry* 1 in. diam.

23. **S. sarmentosum**, *Nees in Trans. Linn. Soc.* xvii. 58; sparsely hairy, leaves broadly elliptic subpinnatifid prickly, peduncles extra-axillary 1-2-fl., berry $\frac{1}{2}$ in. diam. globose glabrous overtopped by the enlarged ovate acuminate-caudate sepals. *Dunal in DC. Prodr.* xiii. pt. i. 357. *S. Melongena*, *Wall. Cat.* 2628, letter F only. *S. Jacquini*, *Miq. Fl. Ind. Bat.* ii. 651, excl. *syn.*, not of *Willd.*

PENANG; *Wallich*. MALACCA; *Griffith* (*Kew Distrib.* n. 5914).—DISTRIB. Java, Borneo.

Stem procumbent, somewhat zigzag, not twining; prickles long, straight. *Leaves* 4 by 2 in., obtusely lobed, young sparsely stellately pubescent beneath, mature sparsely hairy or glabrate on both surfaces; petiole $\frac{2}{3}$ in. *Sepals* in flower $\frac{1}{2}$ in., in fruit $\frac{3}{4}$ by $\frac{1}{2}$ in., erect, sparsely hairy, usually prickly. *Corolla* $\frac{3}{4}$ in. diam., stellately pubescent without. *Seeds* $\frac{1}{8}$ in. diam., flocculose-scaly.

24. **S. xanthocarpum**, *Schrad. & Wendl. Sert. Hanov.* i. 8, t. 2; leaves ovate or elliptic sinuate or subpinnatifid glabrescent very prickly, cymes lateral few-fl., corolla blue, berry $\frac{1}{2}$ - $\frac{3}{4}$ in. diam. globose glabrous much exceeding the calyx-lobes. *Dunal Sol.* 231, and in *DC. Prodr.* xiii. pt. i. 302; *Kurz For. Fl.* 224. *S. Jacquini*, *Willd. Sp. Pl.* i. 1041; *Roxb. Fl. Ind.* i. 569; *Wall. Cat.* 2612; *Dunal Sol.* 231; *Nees in Trans. Linn. Soc.* xvii. 56; *Wight Ic.* t. 1401; *Dalz. & Gibs. Bomb. Fl.* 175. *S. diffusum*, *Roxb. Hort. Beng.* 17, and *Fl. Ind.* i. 568; *Wall. Cat.* 2613. *S. virginianum*, *Jacq. Ic. Rar.* ii. 332, not of *Linn.* *S. armatum*, *Br. Prodr.* 446; *Benth. Fl. Austral.* iv. 458, with *syn.*

Throughout INDIA; from the Punjab and Assam to Ceylon and Malacca; common.—DISTRIB. S.E. Asia, Malaya, Trop. Australia and Polynesia.

A very prickly, diffuse herb, 1-4 ft. diam., bright green, mature nearly glabrous. *Leaves* 4-5 by 2-3 in.; spines $\frac{1}{2}$ in., straight; petiole 1 in. *Peduncles* short, mostly extra-axillary; flowers few, all perfect; pedicels and calyx stellately pubescent, or at length glabrous. *Calyx* in flower $\frac{1}{2}$ in.; lobes ovate-oblong, usually prickly, hardly enlarged in fruit. *Corolla* 1 in. diam., pubescent without; lobes shallow. *Berry* yellow, or whitish and green-blotted. *Seeds* $\frac{1}{12}$ in. diam., glabrous.—Has been supposed to extend to Tropical Africa (see *Schweinf. Pl. Nilot.* 25, t. 9); but in the African plant the flowers are larger, the fruit very much larger, the habit different.

25. **S. trilobatum**, *Linn.*; *Burm. Fl. Ind.* 57, t. 22; shoots stellately pubescent, leaves ovate or elliptic irregularly sinuate or lobed prickly soon glabrate, cymes lateral 2-8-fl., corolla blue, berry $\frac{1}{4}$ - $\frac{1}{2}$ in. diam. globose much exceeding the calyx-lobes. *Roxb. Fl. Ind.* i. 571; *Wall. Cat.* 2622; *Dunal Sol.* 225, and in *DC. Prodr.* xiii. pt. i. 287; *Wight Ic.* t. 854; *Dalz. & Gibs. Bomb. Fl.* 175; *Kurz For. Fl.* 224. *S. acetosæfolium*, *Lamk. Dict.* iv. 306; *Dunal Sol.* 226. *S. canaranum*, *Miq. in Pl. Hohenack.* n. 740.

W. DECCAN PENINSULA; from the Concan, southward, &c., frequent. MALAY

PENINSULA; from Arracan to Malacca, in the tidal swamps, frequent. CEYLON; drier parts of the island.

A scandent undershrub, 6–12 ft., nearly glabrous; prickles short, stout, compressed, recurved. *Leaves* 3 by $1\frac{1}{2}$ in., irregularly obtusely sinuate or lobed, base not cordate; petiole $\frac{1}{2}$ – $1\frac{1}{3}$ in. *Peduncles* short, mostly extra-axillary; pedicels $\frac{1}{2}$ – $1\frac{1}{2}$ in., with short, strong, recurved prickles. *Calyx-lobes* $\frac{1}{5}$ in., ovate-oblong, minutely stellately pubescent or glabrate, rarely prickly, hardly enlarged in fruit. *Corolla* $1\frac{1}{4}$ in. diam., pubescent without; lobes triangular-lanceolate, as long as the tube. *Seeds* $\frac{1}{8}$ in., smooth, or very nearly so.

VAR. ? *Griffithii*; leaves $2\frac{1}{2}$ by $\frac{1}{2}$ in. linear.—Malay Peninsula, *Griffith* (Kew Distrib. n. 5915).

26. **S. gracilipes**, *Dcne. in Jacquem. Voy. Bot.* 113, t. 119; minutely stellately pubescent, stem prickly, leaves ovate or orbicular sinuate often subcordate not prickly, peduncles axillary short 1–3-fld. or pedicels subterminal 1–3 together on very short lateral spurs, berry $\frac{1}{4}$ in. diam. globose glabrous exceeding the sublinear sepals. *Dunal in DC. Prodr.* xiii. pt. i. 286; *Boiss. Fl. Orient.* iv. 286. *S. Jacquemonti*, *Dunal l. c.* 287.

WESTERN INDIA; Punjab and Scinde, *Jacquemont*, *Stocks*, *Dalzell*.—DISTRIB. Beloochistan.

An undershrub; prickles short, conical, subrecurved. *Leaves* $1\frac{1}{2}$ in. diam., obtuse, rarely lobed, usually shallowly cordate; petiole $\frac{3}{4}$ in. *Peduncles* very short or 0; pedicels $\frac{1}{2}$ – $1\frac{1}{2}$ in., slender. *Calyx-lobes* $\frac{1}{2}$ in., linear, in fruit $\frac{1}{2}$ in. *Corolla* $\frac{2}{3}$ in. diam., deeply lobed. *Seeds* $\frac{1}{8}$ in. diam., smooth.—This is believed to be *S. cordatum*, *Forsk. Fl. Æg.-Arab.* 47 (*Dunal Sol.* 239, and in *DC. Prodr.* xiii. 373), an Arabian species of which no authentic example can be seen.

27. **S. aculeatissimum**, *Jacq. Coll.* i. 100, and *Ic. Rar.* i. t. 41; prickles very many long straight slender, leaves ovate lobed sparsely hairy, peduncles 1–7-fld. mostly 1-fruited, berry $1\frac{1}{4}$ in. diam. globose smooth, fruiting-calyx small prickly. *Dunal in DC. Prodr.* xiii. pt. i. 244.

SINGAPORE; *G. Thomson*.—DISTRIB. Malaya, Tropical America?

The example of *G. Thomson* (in fruit) is identical with *Zollinger*, n. 529, which is the type of *S. aculeatissimum*, var. *denudatum*. *Dunal l. c.* *Stems* glabrous (in the var. *denudatum*) or minutely puberulous upwards. *Leaves* 3–5 in. *Peduncles* in fruit $\frac{3}{4}$ in. *Calyx* in fruit scarcely $\frac{1}{4}$ in., but very prickly. *Seeds* $\frac{1}{8}$ in. diam., extremely compressed, almost winged.

1*. LYCOPERSICUM, *Miller*.

Tall, pubescent herbs. *Leaves* pinnate; pinnæ toothed or lyrate. *Cymes* peduncled, few-fld. *Sepals* 5–6, narrow, unaltered in fruit. *Corolla* rotate, tube very short; limb 5–6-fld, plaited in bud. *Stamens* 5–6, on the corolla-tube; anthers connivent in an elongate cone, dehiscing by slits. *Ovary* 2–3-celled; style cylindric, stigma small capitate. *Seeds* many, compressed, papillose; embryo peripheric.—Species 3–4, American.

L. esculentum, *Miller*; *Dunal Sol.* 113, t. 3, fig. C., and in *DC. Prodr.* xiii. 26; *Nees in Trans. Linn. Soc.* xvii. 61. *L. cerasiforme*, *Dunal Sol.* 113, t. 3, fig. B., and in *DC. Prodr.* xiii. 26; *Nees l. c.* 62, with several other species of *Dunal*. *Solanum Lycopersicum*, *Linn.*; *Roxb. Fl. Ind.* i. 565; *Wall. Cat.* 2611. *S. Humboldtii*, *Willd. Hort. Berol.* i. 27, t. 27. *S. pseudolycopersicum*, *Jacq. Hort. Vind.* i. t. 11.

Cultivated, and as an escape, in INDIA.—DISTRIB. Native of Tropical America.

Flowers $\frac{2}{3}$ in. diam., yellow; in cultivation 2–6-merous, or “double.” *Berry* $\frac{1}{2}$ in. diam., globose red; or, in cultivation, enlarged, pyriform or depressed globose, very variable.—The Tomato.

2. **PHYSALIS**, *Linn.*

Annual or perennial herbs. *Leaves* alternate, entire sinuate or shortly lobed. *Pedicels* axillary, solitary. *Calyx* campanulate, 5-fid half-way down; in fruit greatly enlarged, loosely enclosing the fruit; teeth small, connivent. *Corolla* campanulate, lurid-yellow, sometimes with purple spots below. *Stamens* 5, attached near the base of the corolla; anthers oblong, shorter than the filaments, dehiscing longitudinally. *Ovary* 2-celled; style linear, stigma obscurely 2-lobed. *Berry* globose. *Seeds* many or few, smooth or tuberculate-rugose, compressed; embryo peripheric.—Species 30, mostly of Tropical America, several introduced in the Old World.

1. ***P. minima***, *Linn.*; *Nees in Trans. Linn. Soc.* xvii. 69; leaves ovate sinuate angular or scarcely lobed, corolla $\frac{1}{4}$ in., fruit-calyx $\frac{1}{2}$ –1 in. ovoid or subglobose. *Roxb. Fl. Ind.* i. 563; *Wall. Cat.* 2633; *Dunal in DC. Prodr.* xiii. pt. i. 445. *P. parviflora*, *Br. Prodr.* 447; *Dunal l. c.* 444. *P. divaricata*, *Don Prodr.* 97; *Dunal l. c.* 444. *P. villosa*, *Roth Nov. Sp.* 122. *P. Rothiana*, *Roem. & Sch. Syst.* iv. 677. *P. Hermannii*, *Dunal. l. c.* 444. *P. pubescens*, *Wight Ill.* t. 166 b. fig. 6, not of *Linn.*—*Rheede Hort. Mal.* x. t. 71.

Throughout INDIA, in the tropical region; common.—DISTRIB. Tropical Asia, Africa and Australia.

An herbaceous, pubescent annual. *Leaves* 2 in.; petiole 1 in. *Pedicels* $\frac{1}{4}$ – $\frac{1}{2}$ in. *Calyx* at flower-time $\frac{1}{4}$ – $\frac{1}{2}$ in.; lobes lanceolate, half the length of the calyx, often hirsute, sometimes glabrescent. *Corolla* clear yellow; or, in the less common form (*P. Hermannii*), spotted within at the base. *Berry* $\frac{1}{2}$ in. diam.; fruit-calyx globose, 5- or 10-ribbed. *Seeds* very many, $\frac{1}{12}$ in. diam., discoid, reticulated, scarcely scabrous.—Roxburgh says that his *S. pubescens* was the same as *P. peruviana*. The sheet of Rottler's marked *S. pubescens* by Heyne is *P. minima* with one piece of *S. peruviana* mixed.

VAR. *indica*; glabrescent, fruiting calyx 5-angular. *Lamk. Dict.* ii. 102; *Nees in Trans. Linn. Soc.* xvii. 70; *Dunal in DC. Prodr.* xiii. pt. i. 443. *P. pseudo-angulata*, *Blume Bijl.* 706; *Dunal l. c.* 444. *P. angulata*, *Wall. mss.*; *Griff. Notul.* iv. 96. *Nicandra indica*, *Roem. & Sch.* iv. 682.—*Rheede Hort. Mal.* x. t. 70.—Throughout INDIA. The true *P. angulata*, *Linn.*, occurs only cultivated in India.

2. ***P. peruviana***, *Linn.*; *Nees in Trans. Linn. Soc.* xvii. 67; leaves ovate sinuate angular or scarcely lobed, corolla $\frac{1}{2}$ in., fruit-calyx 1–1 $\frac{1}{2}$ in. ovoid conic. *Roxb. Fl. Ind.* i. 562; *Wall. Cat.* 2634; *Dunal in DC. Prodr.* xiii. pt. i. 440; *Dalz. & Gibs. Bomb. Fl. Append.* 61. *P. edulis*, *Sims Bot. Mag.* t. 1068. *P. pubescens*, *Don Prodr.* 97.

Throughout INDIA, cultivated.—DISTRIB. Indigenous in Tropical America; extensively cultivated in the Old World.

Resembling *P. minima*, but stouter, flowers and fruit-calyx larger, usually villous or pubescent. *Corolla* with 5 large purple spots near the base within.—Cape Gooseberry of the English denizens.

2*. **CAPSICUM**, *Linn.*

Annual or perennial herbs, glabrous or nearly so. *Leaves* entire or repand. *Pedicels* axillary or 2–3 together. *Calyx* campanulate, subentire or minutely 5-toothed, much shorter than the fruit. *Corolla* rotate; lobes 5, valvate in bud. *Stamens* 5, attached near the base of the corolla; anthers not longer than the filaments, dehiscing longitudinally. *Ovary* 2- rarely 3-celled; style linear, stigma subcapitate. *Berry* very variable in form and size, many-

seeded. *Seeds* discoid, smooth or subscabrous; embryo peripheric.—**DISTRIB.** Species 20, native in America, some cultivated in all warm countries.

1. **C. frutescens**, *Linn.*; *Nees in Trans. Linn. Soc.* xvii. 63; pedicels solitary, berry pendent elongate-oblong often curved red orange or yellow. *Lamk. Ill.* t. 116, fig. 1; *Roxb. Fl. Ind.* i. 574; *Blume Bijl.* 704; *Wall. Cat.* 2642; *Fingerh. Caps.* 17, t. 4, fig. e; *Dunal in DC. Prodr.* xiii. pt. i. 413.—*Rheede Hort. Mal.* ii. t. 56.

Throughout INDIA, universally cultivated.—**DISTRIB.** Cultivated in all the warmer parts of the globe; native place uncertain.—Chilliee of the English denizens.

Fruit often 3 by 1 in., tapering at the end.

2. **C. minimum**, *Roxb. Hort. Beng.* 17, and *Fl. Ind.* i. 574, and *ed. Carey & Wall.* ii. 261; pedicels mostly 2-3 together, berry small suberect elongate oblong. *Wall. Cat.* 2641. *C. fastigiatum*, *Blume Bijl.* 705; *Nees in Trans. Linn. Soc.* xvii. 64; *Dunal in DC. Prodr.* xiii. pt. i. 416; *Wight. Ic.* t. 1617; *Bentl. & Trim. Med. Pl.* t. 188. *C. baccatum*, *Wall. Cat.* 2644.

Throughout INDIA, extensively cultivated.—**DISTRIB.** Malaya cultivated; native place uncertain.

Berries often $1\frac{1}{2}$ by $\frac{1}{2}$ in., red.—Bird's-eye Chilliee of the English denizen.

3. **C. grossum**, *Willd. Sp. Pl.* i. 1051; pedicels solitary nodding in fruit, berry ovoid. *Roxb. Fl. Ind.* i. 574; *Wall. Cat.* 2643; *Fingerh. Caps.* 21, t. 5, fig. c, d, and t. 6, fig. a; *Nees in Trans. Linn. Soc.* xvii. 62; *Dunal in DC. Prodr.* xiii. pt. i. 422.

In INDIA cultivated.—**DISTRIB.** Native place uncertain.

Berry often 3 by 2 in., red.

VAR. *cerasiformis*; berry $\frac{3}{4}$ in. diam., globose. *C. cerasiformis*, *Lumk. Dict.* v. 325; *Roxb. Fl. Ind.* i. 575. *C. chamæcerasus*, *Nees in Trans. Linn. Soc.* xvii. 65; *Dunal in DC. Prodr.* xiii. pt. i. 429.—In India, rarely cultivated.

3. WITHANIA, Pauq.

Unarmed shrubs. *Leaves* entire. *Flowers* axillary, sessile or shortly pedicelled, fascicled or solitary, sometimes diœcious. *Calyx* campanulate, 5-6-toothed, enlarged in fruit, subglobose. *Corolla* campanulate; lobes 3-6, short, valvate in bud. *Stamens* attached near the base of the corolla; anthers oblong, dehiscing longitudinally. *Ovary* 2-celled; style linear, stigma shortly 2-fid. *Berry* globose. *Seeds* very many, discoid; embryo peripheric.—Species 4; the Mediterranean region to the Cape of Good Hope and Bengal.

1. **W. somnifera**, *Dunal in DC. Prodr.* xiii. pt. i. 453; thinly woolly, leaves ovate, calyx-teeth short very acute, flowers hermaphrodite, fruit-calyx inflated papery larger than the berry. *Boiss. Fl. Orient.* iv. 287. *Physalis somnifera*, *Link & Gaertn. Fruct.* ii. 239, t. 131; *Jacq. Ecl.* t. 22; *Sibth. Fl. Græc.* t. 233; *Cav. Ic.* t. 103; *Nees in Trans. Linn. Soc.* xiii. 66; *Wight Ic.* t. 853; *Dalz. & Gibs. Bomb. Fl.* 175. *P. flexuosa*, *Linn.*; *Jacq. Ecl.* t. 23; *Roxb. Fl. Ind.* i. 561; *Wall. Cat.* 2635. *P. arborescens* and *tomentosa*, *Thunb. Fl. Cap.* (ed. *Schultes*) 190, 191.—*Rheede Hort. Mal.* iv. t. 55.

Throughout drier, subtropical INDIA; frequent in the west and Hindostan. rare in Lower Bengal.—**DISTRIB.** Mediterranean region, with the Canaries; Cape of Good Hope.

Erect, 1-5 ft.; branches round. *Leaves* 2-4 in., subacute; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Pedicels* $C-\frac{1}{2}$ in. *Calyx* in flower $\frac{1}{2}$ in., in fruit $\frac{3}{4}$ in. *Corolla* $\frac{1}{4}$ - $\frac{1}{2}$ in., greenish or

lurid yellow. *Filaments* linear; anthers level with the stigma. *Berry* $\frac{1}{4}$ – $\frac{1}{3}$ in. diam. *Seeds* $\frac{1}{12}$ in. diam., smooth.

2. **W. coagulans**, *Dunal in DC. Prodr.* xiii. pt. i. 685; stellately puberulous, leaves oblong obtuse, calyx-teeth triangular, flowers polygamodioecious, fruit-calyx leathery closely surrounding the berry. *Boiss. Fl. Orient.* iv. 288. *Puneeria coagulans*, *Stocks in Hook. Ic. t.* 801; *Wight Ic. t.* 1616.

PUNJAB and SCINDE; frequent. SUTLEDGE VALLEY; alt. 3300 ft., *Thomson*.—DISTRIB. Cabul and Beloochistan.

A somewhat rigid, grey undershrub. *Leaves* 1–2 in., attenuate at the base; petiole indistinct or $\frac{1}{4}$ in. *Pedicels* 0– $\frac{1}{4}$ in. *Calyx* in flower $\frac{1}{2}$ in.; in fruit $\frac{3}{4}$ in., stellately mealy. *Corolla* $\frac{1}{2}$ in., lurid yellow, stellately mealy without. *Male fl.* filaments linear; anthers subexsert; ovary ellipsoid; style 0. *Hermaphrodite fl.*; anthers subsessile, perfect, near the base of the corolla-tube; ovary globose; style linear, stigma level with the mouth of the tube. *Berry* and *seeds* nearly as in *W. somnifera*.—This plant has been found in the act of passing from dimorphism to diceism.—“The Cheesemaker.”

3*. **NICANDRA**, *Adans.*

An annual, glabrous herb. *Leaves* petioled, ovate-lanceolate, toothed or lobed. *Pedicels* axillary, solitary. *Calyx* sub-5-partite; sepals in fruit much enlarged, cordate-ovate, acute, reticulate. *Corolla* campanulate, blue; limb 5-plaited. *Stamens* attached near the base of the corolla, filaments linear; anthers oblong, dehiscing longitudinally. *Ovary* 3–5-celled; style linear, stigma obscurely 3–5-lobed; ovules very many. *Berry* globose, 3–5-celled. *Seeds* very many, compressed, subdiscoid; embryo peripheric.

N. physaloides, *Gaertn. Fruct.* ii. 237, t. 141; *Bot. Mag.* t. 2458; *Dunal in DC. Prodr.* xiii. pt. i. 434. *Atropa physaloides*, *Lin.*; *Jacq. Obs.* iv. t. 98. *Physalis daturæfolia*, *Lamk. Dict.* ii. 102.

SUBTEMPERATE HIMALAYA; alt. 3–6000 ft., from Kashmir to Sikkim, introduced. Mts. of W. DECCAN PENINSULA, introduced.—DISTRIB. Native of Peru; widely cultivated.

Leaves 4–7 in. *Pedicels* 1 in. *Corolla* 1 in. diam. *Sepals* in fruit 1 by $\frac{2}{3}$ in., deeply cordate at the base, overlapping so as to simulate a 5-angular calyx.

4. **LYCIUM**, *Linn.*

Spinous shrubs, glabrous or puberulous. *Leaves* small, alternate or often fascicled at the nodes, entire, linear or oblong. *Pedicels* solitary or fascicled at the nodes; flowers small. *Calyx* campanulate, at first 5-merous, then irregularly 3–5-lobed or 2-lipped; in fruit not enlarged. *Corolla* funnel-shaped; lobes 5–4, imbricate in bud. *Stamens* 5–4, on the corolla-tube; anthers oblong, exsert or included, dehiscing longitudinally. *Ovary* 2-celled; style filiform, stigma subcapitate; ovules few or many. *Berry* small, globose or oblong. *Seeds* several, few or 1, compressed; embryo peripheric.—Species 40; all temperate and subtropical regions, especially S. Africa and S. America.

1. **L. europæum**, *Linn.*; *Sibth. Fl. Græc.* t. 236; leaves linear-oblong, pedicels short, calyx 5-lobed irregularly, corolla-lobes not half so long as the tube, filaments glabrous at their base. *Miers Ill. S. Amer. Pl.* ii. 95, t. 64, fig. B; *Brand. For. Fl.* 345; *Boiss. Fl. Orient.* iv. 288. *L. indicum*, *Wight Ic.* t. 1403; *Miers l. c.* 97, t. 64, fig. E, not of *Retz.* *L. mediterraneum*, *Dunal in DC. Prodr.* xiii. pt. i. 523. *L. sævum*, orientale, and persicum, *Miers l. c.* 95.

99, 100, t. 64, fig. A, B. *L. intricatum*, Boiss.; Dunal in DC. Prodr. xiii. pt. i. 525; Miers l. c. 98, t. 64, fig. E. *L. arabicum*, Schweinf.; Boiss. Fl. Orient. iv. 289.

W. INDIA; alt. 0–5000 ft., frequent.—DISTRIB. Mediterranean region, W. Asia.

A spinous, nearly glabrous shrub. Leaves $\frac{1}{2}$ –1 in. Pedicels shorter or equalling the calyx, rarely longer. Calyx $\frac{1}{2}$ in., often sub-bilabiate; teeth rarely less than 5. Corolla $\frac{1}{2}$ in., from purple to nearly white. Stamens exsert or subincluded. Berry $\frac{1}{2}$ in. diam., subglobose, many-seeded.

2. *L. barbarum*, Linn.; Boiss. Fl. Orient. iv. 289; leaves linear-oblong, pedicels short, calyx 5-lobed irregularly, corolla-lobes more than half as long as the tube, filaments glabrous at their base. Brand. For. Fl. 345; Miers Ill. S. Amer. Pl. ii. 117, t. 69, fig. D. *L. Edgeworthii*, Dunal in DC. Prodr. xiii. pt. i. 525; Miers l. c. 118, t. 69, fig. F. *L. depressum and foliosum*, Stocks in Hook. Kew. Journ. iv. 179.

PUNJAB and SCINDE; alt. 0–3000 ft., Edgeworth, Stocks.—DISTRIB. W. Asia.

This is not *L. barbarum*, Linn., as understood by Dunal (in DC. Prodr. xiii. pt. i. 511); but it is doubtful whether either of these two ought to be separated specifically from *L. europæum*.

3. *L. ruthenicum*, Murray; Dunal in DC. Prodr. xiii. pt. i. 514; leaves linear, calyx lobed irregularly often 3–4-toothed, filaments hairy at their base. Brand. For. Fl. 346; Miers Ill. S. Amer. Pl. ii. 119, t. 70, fig. A; Boiss. Fl. Orient. iv. 290. *L. tataricum*, Pall. Fl. Ross. i. 78, t. 49; Miers l. c. 122, t. 70, fig. A. *L. armatum*, Griff. Ic. Pl. Asiat. t. 415. *L. glaucum*, Miers l. c. 104, t. 66, fig. D.

N. KASHMIR and BALTISTHAN; alt. 6–9000 ft., frequent, Thomson, &c.—DISTRIB. Cabul, Persia, Central Asia.

Thomson regarded this as a var. of *L. europæum*.—*L. turcomanicum*, Turcz. (Boissier Fl. Orient. iv. 290) is said to differ by having a red (not black) berry.

5. *ATROPA*, Linn.

A coarse, lurid, glabrous herb. Leaves entire, elliptic-lanceolate. Pedicels axillary, solitary, nodding. Flowers somewhat large, dirty-purple or lurid yellow. Calyx large, deeply 5-lobed, scarcely larger in fruit. Corolla widely tubular-campanulate; lobes 5, triangular, imbricate in bud. Stamens attached near the base of the corolla, filaments linear; anthers oblong, dehiscing longitudinally. Ovary 2-celled; style linear, stigma obscurely 2-lobed. Berry globose. Seeds many, compressed; embryo peripheric.

A. Belladonna, Linn.; Dunal in DC. Prodr. xiii. pt. i. 464, 690; Syme Eng. Bot. t. 934; Boiss. Fl. Orient. iv. 291; Benth. & Trim. Med. Pl. t. 193. *A. acuminata*, Royle Ill. 279; Miers Ill. S. Amer. Pl. ii. Append. 5, t. 76. *A. lutescens*, Jacquem. ms.

WESTERN HIMALAYA, alt. 6–11,000 ft.; from Kashmir to Simla, Royle, Gen. Munro, &c.—DISTRIB. Europe to the Caucasus and N. Persia.

Leaves 6 in.; petiole $\frac{1}{2}$ in. Pedicels $\frac{1}{2}$ –1 $\frac{1}{2}$ in. Calyx in flower $\frac{1}{2}$ – $\frac{2}{3}$ in. Corolla 1 in.—Leaves are little more acuminate in the Himalayan than in the European plant.

6. *MANDRAGORA*, Juss.

Perennial herbs, stemless except the Himalayan species. Leaves large, petioled, toothed or subentire. Pedicels fascicled, subradical. Flowers large, pale purple, reticulate. Calyx 5-fid half-way down. Corolla campanulate;

lobes broad, imbricate in bud, sinuses induplicate-valvate. *Stamens* 5, filaments linear; anthers oblong, dehiscent longitudinally. *Ovary* 2-celled; style elongate, stigma much dilated. *Berry* globose, juicy. *Seeds* very many, compressed; embryo peripheric.—Species 3 or 4 of the Mediterranean region, and the following.

M. caulescens, *Clarke*; branches 4-8 in., leaves narrowly obovate-oblong sinuate, calyx-lobes triangular ovate. *Anisodus humilis*, *Hook. f. ms.*

ALPINE SIKKIM, alt. 12-13,000 ft.; Lachen and Tangu, *J. D. H.*

Pubescent or nearly glabrous. *Leaves* 11 by 2 in., obtuse, base much tapering. *Pedicels* 1-3 in.; many-fasciated at the apex of the caudex. *Calyx-lobes* in fruit $\frac{2}{3}$ in., subobtus. *Berry* $\frac{2}{3}$ in. diam. *Seeds* $\frac{1}{2}$ in. diam.—The examples are in fruit; and appear closely allied to *M. officinarum*, *Linn.*

7. **DATURA**, *Linn.*

Coarse, rank-scented herbs (the Indian species), glabrous or minutely pubescent. *Leaves* large, entire sinuate or deeply toothed. *Pedicels* solitary; flowers very large, purple or white. *Calyx* long-tubular, herbaceous, 5-toothed at the apex; in fruit circumsciss above the base. *Corolla* long tubular-funnel-shaped, mouth wide; limb plaited, entire or shortly lobed. *Stamens* attached near the base of the tube, filaments filiform; anthers included, linear, longitudinally dehiscent. *Ovary* 2- or spuriously 4-celled; style filiform, stigma 2-lobed. *Capsule* ellipsoid, 4-celled, spinous (in the Indian species, except in *D. fastuosa*, var. *dubia*), 4-valved or irregularly breaking up near the apex. *Seeds* very many, compressed, rugose; embryo peripheric.—Species 10; temperate and tropical regions.

SECT. I. **Stramonium**. *Capsule* deeply 4-valved, often nearly to the base.

1. **D. Stramonium**, *Linn.*; *Bernh. in Linnæa*, 1833, *Litt.* 139; glabrous or farinose puberulous, leaves ovate toothed or sinuate, corolla white teeth 5 linear, capsule equally spinous on all sides. *Wall. Cat.* 2637, and in *Rorb. Fl. Ind. ed. Carey & Wall.* ii. 239; *Dunal in DC. Prodr.* xiii. pt. i. 540; *Syme Eng. Bot.* t. 935; *Boiss. Fl. Orient.* iv. 292; *Bentl. & Trim. Med. Pl.* t. 192. *D. ferox*, *Nees in Trans. Linn. Soc.* xvii. 75, not of *Linn.* *D. Wallichii*, *Dunal l. c.* 539. *Stramonium vulgatum*, *Gaertn. Fruct.* ii. 243, t. 132, fig. 4.

TEMPERATE HIMALAYA; from Kashmir, *Thomson*, to Sikkim, *J. D. H.*—DISTRIB. Nearly throughout the globe, in temperate and warm climates.

A coarse annual, 2-6 ft. *Leaves* 7 by 4 in.; petiole 1 in. *Pedicels* 0- $\frac{1}{4}$ in. *Calyx* 1-1 $\frac{3}{4}$ by $\frac{1}{4}$ - $\frac{1}{2}$ in.; lobes $\frac{1}{4}$ in., ovate-lanceolate. *Corolla* 3-6 in., mouth 1-3 in. diam.; lobes $\frac{1}{4}$ in. *Capsule* 1 $\frac{1}{2}$ by 1 in.; spines $\frac{1}{5}$ in., subulate; calyx-base $\frac{1}{2}$ in., persistent.

VAR. *Tatula*; flowers purple without and within. *D. Tatula*, *Willd. Sp. Pl.* i. 1008; *Sweet Brit. Fl. Gard.* t. 83; *Wall. Cat.* 2640; *Bernh. in Linnæa*, 1833, *Litt.* 140.—Throughout India.—DISTRIB. Nearly as of *D. Stramonium*, from which it is not easily separable.

SECT. II. **Dutra**. *Capsule* subindehiscent, or irregularly dehiscent near the apex.

2. **D. fastuosa**, *Linn.*; *Wight Ic.* t. 1396; leaves ovate entire or deeply toothed glabrous, corolla purple limb shortly 5-6-toothed. capsule nodding or suberect. *Rorb. Fl. Ind.* i. 561; *Wall. Cat.* 2639; *Nees in Trans. Linn. Soc.* xvii. 74; *Dunal in DC. Prodr.* xiii. pt. i. 542. *D. Hummatu*, *Bernh. in*

Linnæa, 1833, *Litt.* 141; *Dalz. & Gibs. Bomb. Fl.* 174.—*Rheede Hort. Mal.* 2, t. 28; *Rumph. Herb. Amb.* v. t. 87, fig. 2.

Throughout INDIA; in waste places, a weed.—DISTRIB. Malaya, Tropical Africa. In America said to be not a native.

Generally resembling *D. Stramonium*; but the flowers are usually larger. *Calyx* attaining 3 in. *Corolla* 7 in. and 5 in. diam. across the mouth. *Capsule* $1\frac{1}{4}$ in. diam., subglobose, equally spinous on all sides.

VAR. *alba*; flowers white or nearly so. *D. alba*, *Nees in Trans. Linn. Soc.* xvii. 73; *Wight Ic.* t. 852; *Dunal in DC. Prodr.* xiii. pt. i. 542; *Dalz. & Gibs. Bomb. Fl.* 174. *D. Metel*, *Roxb. Fl. Ind.* i. 561; *Wall. Cat.* 2639, not of *Linn.*—*Rumph. Herb. Amb.* v. t. 87, fig. 1.—Throughout India.—Distrib. of *D. fastuosa*.

VAR. ? *dubia*; fruit without spines. *D. dubia*, *G. Don Gen. Syst.* iv. 474. *D. Hummatu*, var. *a dubia*, *Bernh. in Linnæa*, 1833, *Litt.* 141. *D. Nilhummatu*, *Dunal in DC. Prodr.* xiii. pt. i. 542.—*Rheede Hort. Mal.* ii. tt. 29, 33.—W. Deccan Peninsula?—This species is founded on the figures of *Rheede*, which represent possibly one of the foreign smooth-fruited species, none of which are wild in India; hence *Bernhard* appended *Rheede's* plant as a var. of a species which is always spinous so far as known.

3. **D. Metel**, *Linn.*; *Bernh. in Linn.* 1833, *Litt.* 143; leaves ovate entire or deeply toothed pubescent, corolla whitish purple downwards limb 10-toothed, capsule nodding. *Bot. Mag.* t. 1440; *Dunal in DC. Prodr.* xiii. pt. i. 543.—*Rumph. Herb. Amb.* v. t. 243.

W. HIMALAYA and Mts. of W. DECCAN PENINSULA; introduced?—DISTRIB. Tropical America; widely naturalised in the Old World.

8. SCOPOLIA, Jacq.

Erect, glabrescent herbs. *Leaves* entire. *Pedicels* axillary, solitary. *Flowers* lurid, nodding. *Calyx* large, campanulate, subtruncate or shortly lobed; in fruit enlarged, overtopping the capsule. *Corolla* widely campanulate, plaited; lobes short, scarcely imbricate. *Stamens* 5, attached near the base of the corolla; filaments filiform, somewhat dilated near the base; anthers ovate, dehiscing longitudinally. *Ovary* sub-2-celled; style linear, stigma thick dilated. *Capsule* globose, circumsciss above the middle. *Seeds* many, reniform, granulate; embryo peripheric.—Species 3; 1 European, 1 Japanese, 1 Himalayan.

S. lurida, *Dunal in DC. Prodr.* xiii. pt. i. 555; leaves large petioled ovate-lanceolate, corolla wide distinctly lobed, fruit-calyx large reticulated limb very shortly lobed. *Physalis stramonifolia*, *Wall. Cat.* 2632, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 242. *Nicandra anomala*, *Link. & Otto Ic. Sel.* 77, t. 35. *Anisodus luridans*, *Link & Otto in note, l. c.*; *Nees in Trans. Linn. Soc.* xvii. 72; *Miers Ill. S. Amer. Pl.* ii., *App.* 18, t. 78. *A. stramonifolius*, *G. Don in Loud. Hort. Brit.* 61. *Whitleya stramonifolia*, *Sweet Brit. Fl. Gard.* t. 125.

CENTRAL HIMALAYA; Nepal, *Wallich*; Sikkim, near Ging, alt. 5000 ft., *Dr. Treutler*.

Branches 3-6 ft., sparingly divided; rusty-tomentose when young, later puberulous or glabrate. *Leaves* 8 by 3 in., acute at both ends, ultimately glabrate; petiole $\frac{1}{2}$ in. *Peduncles* 1 in. *Calyx* in flower $\frac{3}{4}$ in., in fruit attaining 2 by $1\frac{1}{4}$ in.; lobes short, irregular. *Corolla* $1\frac{1}{4}$ by $\frac{3}{4}$ in., lurid yellow or greenish purple. *Ovary* 2-celled, near the top 1-celled. *Capsule* $\frac{3}{4}$ in., lid 1-celled, remainder 2-celled. *Seeds* $\frac{1}{12}$ in.

9. **PHYSOCHLAINA**, *G. Don.*

Erect, nearly glabrous herbs. *Leaves* petioled, subentire. *Corymb* terminal. *Calyx* campanulate, lobes 5 short; in fruit elongated, overtopping the capsule. *Corolla* elongate; lobes 5, short, imbricate in bud. *Stamens* attached at the middle of the tube, filaments filiform; anthers ovate, longitudinally dehiscent. *Ovary* 2-celled; style linear, stigma obscurely 2-lobed. *Capsule* 2-celled; circumsciss above the middle. *Seeds* very many, compressed; embryo peripheric.—Species 4; Central Asiatic.

P. præalta, *Hook. f. Bot. Mag. t. 4600, in note*; leaves ovate-oblong sinuate, corymb compound lax viscid-pubescent, corolla $\frac{3}{4}$ – $1\frac{1}{4}$ in., stamens and style equalling the corolla or $\frac{1}{3}$ in. longer. *Miers Ill. S. Amer. Pl. ii. App. 15.* *P. grandiflora*, *Hook. f. Bot. Mag. t. 4600.* *Belenia præalta*, *Dene. in Jacquem. Voy. Bot. 144, t. 120.* *Hyoscyamus præaltus*, *Walp. Rep. iii. 21.* *Scopolia præalta*, *Dunal in DC. Prodr. xiii. pt. i. 554.*

N. KASHMIR and WESTERN TIBET, alt. 12–15,500 ft., *Munro, Thomson, Strachey & Winterbottom, &c.*—DISTRIB. Kashgar and Yarkand.

Stems 2–4 ft., corymbose upwards. *Leaves* 4–6 by 3 in., irregular, base cuneate or cordate on the same branch; petiole 1–4 in. *Corymb* 2–8 in. diam.; flowers all pedicelled; pedicels $\frac{1}{4}$ – $1\frac{1}{2}$ in. *Calyx* in flower $\frac{1}{3}$ in.; lobes $\frac{1}{8}$ in., lanceolate; in fruit $1\frac{1}{2}$ by $\frac{1}{2}$ in., striate. *Corolla* $1\frac{1}{4}$ by $\frac{1}{2}$ in., tubular-funnel-shaped, in the majority of the wild examples, sometimes shorter, funnel-shaped; in some cultivated examples wider, subcampanulate. *Stamens* and *style* distinctly exserted in nearly all the wild examples. *Capsule* $\frac{1}{2}$ in. diam. *Seeds* $\frac{1}{12}$ in. diam., scrobiculate-reticulate.

10. **HYOSCYAMUS**, *Linn.*

Erect, coarse herbs. *Leaves* sinuate, toothed, or subpinnatifid. *Flowers* unilateral, sessile or pedicelled, lower axillary solitary, upper forming a dense racemose or subscorpioid cyme, upper leaves bract-like. *Corolla* lurid, yellow or greenish purple. *Calyx* urn-shaped, shortly 5-lobed; in fruit enlarged, overtopping the capsule. *Corolla* funnel-shaped; limb oblique, 5-fid, lobes more or less unequal, imbricate in bud. *Stamens* attached about the middle of the corolla-tube, filaments filiform; anthers exserted or subincluded, oblong, dehiscing longitudinally. *Ovary* 2-celled; style filiform, stigma subcapitate. *Capsule* completely 2-celled, or nearly so, circumsciss near the apex. *Seeds* very many, compressed, scrobiculate; embryo peripheric.—Species 9; European, and extending to Central Asia.

1. **H. niger**, *Linn.; Boiss. Fl. Orient. iv. 295*; cauline leaves sessile ovate or oblong sinuate or lobed, flowers subsessile, calyx softly hairy teeth mucronate, corolla 1 in. lurid reticulate-nerved. *Wall. Cat. 2636*, and in *Roxb. Fl. Ind. ed. Carey & Wall. ii. 237*; *Nees in Trans. Linn. Soc. xvii. 77*; *Bot. Mag. t. 2394*; *Dunal in DC. Prodr. xiii. pt. i. 546*; *Bentl. & Trimen Med. Pl. t. 196.* *H. agrestis*, *Kitaibel*; *Sweet Fl. Gard. t. 27.* *H. persicus*, *Buhse Reise Transkauk. 158.*

TEMPERATE WESTERN HIMALAYA, alt. 8–11,000 ft., from Kashmir to Gurwhal; frequent.—DISTRIB. Europe, W. & N. Asia.

Pubescent and more or less hairy. *Leaves* 5 by 2 in. Lower *pedicels* in fruit scarcely $\frac{1}{2}$ in. *Calyx* in flower $\frac{2}{3}$ in., teeth short, triangular; in fruit 1 by $\frac{1}{2}$ in., subcontracted in the middle, teeth somewhat rigid. *Corolla* purple in the base, limb lurid green, purple-veined. *Capsule* $\frac{1}{3}$ in. diam. *Seeds* $\frac{1}{24}$ in. diam.

2. **H. pusillus**, Linn.; Boiss. *Fl. Orient.* iv. 294; cauline leaves petioled ovate or oblong sinuate or lobed, flowers subsessile, calyx striate glabrescent teeth lanceolate mucronate, corolla $\frac{1}{2}$ – $\frac{3}{4}$ in. not reticulate. Dunal in DC. *Prodr.* xiii. pt. i. 550; Jaub. & Spach *Ill.* v. t. 414.

WESTERN TIBET; Ladak; alt. 10,000 ft., Thomson.—DISTRIB. From Egypt to Persia and the Altai.

About a foot high, pubescent, somewhat viscid. Leaves 3–5 by 1–2 in., very irregularly lobed or subentire; petiole $\frac{1}{4}$ – $1\frac{1}{2}$ in. Lower pedicels in fruit sometimes nearly $\frac{1}{4}$ in., usually very short. Calyx $\frac{1}{3}$ in.; in fruit $\frac{3}{4}$ –1 in., funnel-shaped, ribbed, somewhat reticulated, glabrous or sparsely viscid pubescent, teeth $\frac{1}{4}$ in., almost prickly, patent. Corolla yellow, purple in the base. Capsule $\frac{1}{4}$ in. Seeds even smaller than in *H. niger*.

3. **H. muticus**, Linn. *Mant.* 45; cauline leaves petioled ovate or oblong entire or toothed, lower flowers pedicelled, calyx striate pubescent teeth short triangular not acute in fruit, corolla 1– $1\frac{1}{2}$ in. lurid yellow or nearly white. Jaub. & Spach *Ill.* v. t. 415; Boiss. *Fl. Orient.* iv. 293. H. Datora, Forsk. *Fl. Æg.-Arab.* 45. H. betæfolius, Lamk. *Dict.* iii. 329. H. insanus, Stocks in Hook. *Kew Journ.* iv. 178. H. angulatus, Griff. *Ic. Pl. Asiat.* t. 412. Scopolia mutica, Datora and Bovenia, Dunal in DC. *Prodr.* xiii. pt. i. 552, 553.

WEST PUNJAB; Thomson. SCINDE; Stocks.—DISTRIB. Cabul, westwards to Egypt.

Stem 1–3 ft. Leaves 4–7 in., pubescent or somewhat woolly; petiole $\frac{1}{4}$ –3 in. Lower pedicels in fruit $\frac{1}{4}$ –1 in. Calyx $\frac{2}{3}$ in.; in fruit 1 by $\frac{1}{2}$ in., funnel-shaped, ribbed, somewhat reticulate, villous or ultimately glabrous; teeth short-triangular, not spreading. Capsule $\frac{1}{4}$ in. diam. Seeds $\frac{1}{24}$ in. diam.

10*. NICOTIANA, Linn.

Erect, viscidly-pubescent, herbs, shrubs, or trees. Leaves entire or sinuate. Panicles terminal, or racemes compound, subterminal. Calyx ovoid or tubular, 5-fid. Corolla funnel-shaped; lobes 5, induplicate in bud. Stamens attached in the lower part of the corolla-tube, filaments filiform; anthers ovate, dehiscing longitudinally. Ovary 2-celled; style filiform, stigma shortly 2-fid. Capsule 2-, rarely sub-4-, celled, 2-valved to the middle, valves often again splitting. Seeds very many, small, scarcely compressed; embryo nearly straight.—Species 35; American, Australian, and Polynesian.

1. **N. Tabacum**, Linn.; Gaertn. *Fruct.* i. 264, t. 55; leaves large oblong or elliptic base cuneate, corymb compound ultimate branches short, calyx-teeth triangular-lanceolate, corolla linear-funnel-shaped, capsule $\frac{3}{4}$ in. Lamk *Ill.* t. 113; Wall. *Cat.* 2645; Nees in *Trans. Linn. Soc.* xvii. 76; Wight *Ill.* t. 166 bis; Dunal in DC. *Prodr.* xiii. pt. i. 557; Benth. & Trimen *Med. Pl.* t. 191.

Throughout INDIA, cultivated.—DISTRIB. Native in America; cultivated in all warm countries.

Tobacco, though cultivated in nearly every village in Bengal, shows little tendency to spread as a weed. In Cochin China and the Moluccas, Louveirs and Rumphius say it has been known from a remote period.

2. **N. rustica**, Linn.; Dunal in DC. *Prodr.* xiii. pt. i. 563; leaves ovate base obtuse or cordate, panicle close, calyx-teeth triangular subobtuse, corolla cylindric campanulate, berry $\frac{1}{2}$ in. Reich *Ic. Fl. Germ.* t. 1626, fig. 1.

W. PUNJAB; cultivated, Falconer.—DISTRIB. Native of Mexico; cultivated in Europe, Asia, Africa, and America.

3. ***N. plumbaginifolia***, Viv.; *Dunal in DC. Prodr.* xiii. pt. i. 569; leaves oblong or elliptic base narrowed, corymb-branches elongated forming very lax racemes, calyx-teeth triangular-lanceolate acuminate, corolla narrow-linear, capsule $\frac{1}{4}$ in. *N. crispa*, Pers.; *Jacq. Fragm.* t. 84.

BENGAL, a common introduced weed.—DISTRIB. Native of Mexico and the W. Indies.

The only species of *Nicotiana* that has established itself in India.

ORDER CIII. **SCROPHULARINÆ.** (By J. D. Hooker.)

Herbs or shrubs, rarely trees. *Leaves*, all, or the lower only, opposite, rarely all alternate or whorled; stipules 0. *Inflorescence* centripetal or composite; flowers usually irregular. *Calyx* inferior, usually persistent, 5- rarely 4-merous. *Corolla* hypogynous, 4-5-lobed. *Stamens* usually 4, with a rudimentary 5th, rarely 2 or 5; anthers 1-2-celled, cells distinct, or more or less confluent. *Disc* annular, glandular, or cup-shaped. *Ovary* 2-celled (very rarely 1-celled) (*Lathræa*); style simple; stigma capitate, dilated, 2-lobed, or 2-lamellate; ovules many, rarely 2, in each cell, anatropous or amphitropous. *Fruit* capsular, rarely baccate; placentas on a free central axis, or remaining attached to the margins of the valves. *Seeds* small, various in form, hilum lateral or ventral, albumen fleshy (0 in *Wightia*); embryo straight or curved.—DISTRIB. Species about 2000, native of all regions.

In this Order I have departed from the "Genera Plantarum" in introducing *Lathræa* under the Tribe *Euphrasiæ*, instead of retaining it in *Orobanchæ*. This, its proper position, was pointed out by Solms Laubach, in a dissertation which was overlooked when the *Scrophularinæ* of the "Genera" were elaborated. I have also transferred *Campbellia* to *Christisonia*, which is left in *Orobanchæ* till the living plant shall be studied morphologically.

A few non-Indian garden *Scrophularinæ* are more or less frequent near stations, but none seem truly naturalised to any extent except the American *Calceolaria mexicana*, Benth., which is so about Darjeeling and in the Nilgherries.

SERIES A. *Pseudosolanæ*. *Leaves all alternate. Inflorescence simply centripetal. Corolla with the 2 upper lobes exterior in bud.*

TRIBE I. *Aptosimæ*. *Corolla-tube elongate.*

Stamens 2. Viscid herbs 1. ANTICHARIS.

TRIBE II. *Verbascæ*. *Corolla subrotate.*

Stamens 5 2. VERBASCUM.

Stamens 4 3. CELSIA.

SERIES B. *Antirrhinidæ*. *Leaves, at least the lower, usually opposite. Inflorescence centripetal or composite, partial ones centrifugal. Corolla with the 2 (free or connate) upper lobes exterior in bud. Stamens 2 or 4, very rarely 5 perfect.*

TRIBE III. *Antirrhinæ*. *Corolla tubular, tube saccate or spurred. Capsule opening by pores. Inflorescence uniform, centripetal.*

Corolla spurred. Anther-cells distinct 4. LINARIA.

Corolla small, subsaccate. Anther-cells confluent above . . . 5. SCHWEINFURTHIA.

Corolla large, saccate below. Anther-cells distinct 6. ANTIRRHINUM.

TRIBE IV. **Cheloneæ**. *Corolla* tubular, not saccate nor spurred. *Anther-cells* confluent. *Fruit* capsular or baccate. *Inflorescence* compound.

- | | |
|--|------------------|
| Herbs. Calyx deeply 5-fid. Capsule septicidal | 7. SCROPHULARIA. |
| Shrubs. Calyx 5-toothed. Anthers bearded. Capsule
loculicidal | 8. BRANDISIA. |
| A tree. Calyx 3-4-lobed. Anthers glabrous. Capsule
septicidal | 9. WIGHTIA. |

TRIBE V. **Manuleæ**. *Corolla* tubular, not saccate nor spurred. *Anther-cells* divaricate, confluent. *Fruit* capsular. *Inflorescence* centripetal, uniform. *Viscid* herb. Calyx 5-partite 10. SUTERA.

TRIBE VI. **Gratiolæ**. *Corolla-tube* not saccate nor spurred; lobes flat. *Anther-cells* distinct. *Fruit* capsular, rarely indehiscent. *Inflorescence* uniform.

SUBTRIBE I. **Mimuleæ**. *Calyx* 5-toothed or -fid. *Stamens* included; anther-cells contiguous. *Capsule* loculicidally 2-4-valved, or indehiscent.

- | | |
|---|--------------|
| Flowers axillary or the upper racemed. Capsule 2-valved . . . | 11. MIMULUS. |
| Flowers in subsecund racemes. Capsule 2-valved . . . | 12. MAZUS. |
| Flowers few, racemed. Fruit indehiscent, globose . . . | 13. LANCEA. |

SUBTRIBE II. **Stemodieæ**. *Calyx* 5-partite, except *Lindenbergia*. *Stamens* 4, included; anther-cells separate.

- | | |
|---|-------------------|
| Calyx campanulate, 5-fid. Capsule 2-valved | 14. LINDENBERGIA. |
| Calyx-segments unequal. Stamens 4, 2 or all with one im-
perfect anther-cell | 15. ADENOSMA. |
| Calyx-segments equal. Stamens all perfect. Seeds terete . . . | 16. STEMODIA. |
| Calyx-segments equal. Stamens all perfect. Seeds angled . . . | 17. LIMNOPHILA. |

SUBTRIBE III. **Herpestidæ**. *Calyx* 5-partite, imbricate. *Stamens* included; anther-cells contiguous. *Capsule* 2-4-valved.

- | | |
|---|----------------|
| Calyx-segments unequal. Stamens 4 | 18. HERPESTIS. |
| Stamens 2. Valves of capsule with inflexed margins. | |
| No radical leaves | 19. GRATIOLA. |
| Stamens 2. Valves of capsule not inflexed. Leaves radical . . . | 20. DOPATRIUM. |

SUBTRIBE IV. **Vandellieæ**. *Calyx* usually 5-toothed or -partite. *Stamens* 2 upper, usually in the tube, 2 lower in the throat of the corolla, perfect, or reduced to staminodes; anthers conniving or cohering in pairs.

- | | |
|--|-----------------|
| Calyx-segments 5, broad. Stamens 4, all perfect | 21. ARTANEMA. |
| Calyx flat, segments 4, 2 outer very large | 22. CURANGA. |
| Calyx tubular, plaited or winged, obliquely 3-5-toothed or
2-lipped | 23. TORENIA. |
| Calyx-segments 5, free or connate. Stamens 4, all perfect . . . | 24. VANDELLIA. |
| Calyx-segments 5, narrow. Stamens 2, both perfect. Cap-
sule short | 25. ILYSANTHES. |
| Calyx-segments 5, narrow. Stamens 2, both perfect. Cap-
sule long | 26. BONNAYA. |

SUBTRIBE V. **Limoselleæ**. *Calyx* 3-5-toothed or -partite. Two lower *stamens*, perfect, upper 0, or reduced to staminodes; or stamens 3-4, subequal. —Minute and minute-flowered marsh-herbs; flowers usually solitary.

- | | |
|--|------------------|
| Sepals 4, very long and slender. Anther-cells 2, parallel . . . | 27. BYTHOPHYTON. |
| Calyx tubular, 5-fid. Anther-cells confluent. Leaves op-
posite, narrow | 28. MICROCARPÆA. |

- Calyx tubular, 5-toothed. Anthers 1-celled. Leaves opposite, broad, fleshy 29. *PEPLIDIUM*.
 Calyx shortly 3-4-lobed. Anther-cells confluent at the tips. Leaves opposite, fascicled 30. *GLOSSOSTIGMA*.
 Calyx 5-toothed. Stamens 4. Anther-cells confluent. Leaves and pedicels radical 31. *LIMOSELLA*.

SERIES C. **Rhinanthideæ**. *Leaves various. Inflorescence usually centripetal or composite. Corolla-lobes variously imbricate, anterior or lateral usually the outer in bud. Stamens 2 or 4, the 5th very rarely present.*

TRIBE VII. **Digitaleæ**. *Corolla-lobes all flat, usually spreading, the lateral, or one of them, exterior in bud. Anther-cells usually confluent at the tip and spreading below, rarely wholly confluent.—Herbs. Leaves various. Inflorescence simply centripetal.*

SUBTRIBE I. **Sibthorpieæ**. *Corolla subrotate, lobes 4-5 or more. Stamens as many as the lobes, or fewer by one, equal; anthers sagittate or horseshoe-shaped.*

- Calyx 4-8-fid. Corolla 5-8-fid. Creeping herbs 32. *SIBTHORPIA*.
 Calyx 5-partite. Corolla 5-fid. Creeping herb, leaves dimorphic 33. *HEMIPHHRAGMA*.
 Calyx 4-5 partite. Corolla 4-fid. Erect herb 34. *SCOPARIA*.

SUBTRIBE II. **Eudigitaleæ**. *Corolla-tube elongate, ventricose above or below. Stamens 4, didynamous, or 2; anther-cells confluent at the tips or wholly.*

Leaves alternate, linear. Raceme terminal. Stamens 2 35. *CAMPYLANTHUS*.

SUBTRIBE III. **Veroniceæ**. *Corolla rotate or tube campanulate or cylindric, 4-5-lobed. Stamens 2 or 4, exserted (or included in *Wulfenia*), equal; anthers distant; anther-cells parallel or divergent, tips confluent.—Leaves alternate or radical.*

- Flowers dimorphic. Stamens 4. Leaves radical 36. *PICORRHIZA*.
 Corolla-tube cylindric. Stamens 4. Leaves subradical 37. *WULFENIA*.
 Corolla-tube incurved. Stamens 2. Leaves alternate 38. *CALORHABDOS*.
 Corolla-tube short. Stamens 2. Leaves (or the lower) opposite 39. *VERONICA*.

TRIBE VIII. **Gerardieæ**. *Corolla-lobes all flat, spreading, 2 upper usually interior in bud. Anther-cells distinct throughout, bases often mucronate, equal or one imperfect or wanting.—Usually root-parasites, turning black when dry.*

SUBTRIBE I. **Escobedieæ**. *Calyx-lobes valvate. Anthers 2-celled.—Leafy herbs, rarely shrubs.*

Calyx campanulate. Corolla oblique. Spikes bracteate 40. *ALECTRA*.

SUBTRIBE II. **Buchnerieæ**. *Calyx tubular or subcampanulate. Corolla-tube slender, limb spreading. Anthers 1-celled, cell narrow, tip usually mucronate.—Leafy herbs; lower leaves opposite.*

- Calyx tubular, 5-toothed. Corolla-tube straight or sub-curved 41. *BUCHNERA*.
 Calyx tubular, 5-toothed. Corolla-tube abruptly incurved 42. *STRIGA*.
 Calyx subcampanulate, 5-fid. Corolla-tube straight or curved 43. *RAMPHICARPA*.

SUBTRIBE III. EUGERARDIÆ. *Calyx* various. *Corolla-tube* short or broad, rarely slender; limb spreading, upper lobes interior in bud. *Anther-cells* equal, or one smaller and imperfect.—Herbs or shrubs. Leaves all, or the lower, opposite.

- Calyx* spatheaceous, compressed 44. CENTRANTHERA.
Calyx campanulate, 5-toothed. *Anthers* with one cell
 stipitate and empty 45. SOPUBIA.
Calyx campanulate, 5-toothed. *Anther-cells* subequal.
Ovary many-ovuled 46. MICRARGERIA.
Calyx tubular-campanulate. *Anther-cells* equal. *Ovary*
 4-ovuled 47. LEPTORHABDOS.

TRIBE IX. **Euphrasieæ.** *Corolla* 2-lipped, upper lip erect, concave or hooded, interior in bud; lower usually spreading. *Anther-cells* distinct, bases usually mucronate.—Herbs, often parasitic, black when dry. Leaves opposite or alternate. *Inflorescence* centripetal.

* *Cells of ovary more than 2-ovuled. Margins of upper lip of corolla reflexed.*

- Seeds numerous, ovoid, reticulate. Flowers axillary . . . 48. PHTHEIROSPERMUM.
 Seeds numerous, oblong, striate. Flowers spicate . . . 49. EUPHRASIA.
 Seeds numerous, ellipsoid 50. EMMENOSPERMUM.

** *Cells of ovary more than 2-ovuled. Margins of hood of corolla straight.*

- Calyx* 4-toothed or 4-fid. Leaves opposite 51. BAERTSIA.
Calyx split in front, 2-5-toothed. Leaves alternate or
 whorled 52. PEDICULARIS.
 Leaves 0 53. LATHRÆA.

*** *Cells of ovary 2-ovuled.*

- Upper tip of corolla compressed. Leaves opposite . . . 54. MELAMPYRUM.

GENUS OF DOUBTFUL POSITION (NEAR *Wulfenia*?).

- Sepals 5. *Corolla-tube* long. *Stamens* 4, didynamous, included; anthers peltate, cells confluent 55. OREOSOLEN.

TRIBE I. **APTOSIMEÆ.**

1. **ANTICHARIS**, *Endl.*

Erect, small, annual, viscid herbs. Leaves alternate, quite entire. Flowers axillary, solitary. Sepals narrow, subvalvate. *Corolla-tube* long, dilating into the throat; lobes 5, flat, subequal. *Stamens* 2 lower perfect; anthers transverse, curved; staminodes 0. *Style* filiform, stigma obtuse or notched. *Capsule* ovoid or oblong, acuminate, loculicidal and septicidal; valves with inflexed margins separating from the axis. Seeds numerous, minute, ellipsoid, striate; embryo straight.—Species 4, Tropical and S. African, Oriental, and Indian.

1. **A. glandulosa**, *Aschers. in Bericht. Akad. Wiss. Berl.* 1866, 880; densely glandular-hispid, leaves oblong or ovate obtuse, pedicels equalling the calyx or shorter, corolla glabrous, sepals three-fourths as long as the capsule. *Boiss. Fl. Orient.* iv. 423. *Distemon glandulosus*, *Ehrb. & Hempr. mss.*

SCINDE, *Stocks*, *Vicary*.—DISTRIB. Upper Egypt.

A foot high, or less, leafy. Leaves $\frac{1}{2}$ –1 in., narrowed into a short petiole. Flowers

in all the axils. *Corolla* $\frac{1}{2}$ in. long, rosy. *Anthers* narrow, 1-celled, glabrous. *Capsule* $\frac{1}{2}$ in., hispid.—Very near *A. arabica*, Endl.

2. **A. linearis**, *Hochst. in Schimp. Pl. Nub.*; viscidly pubescent, leaves linear acute, pedicels capillary much longer than the calyx, corolla pubescent, sepals about half as long as the capsule. *Aschers. in Bericht. Akad. Wiss. Berl.* 1866, 883; *Boiss. Fl. Orient.* iv. 423. *Doratanthera linearis*, *Benth. in DC. Prodr.* x. 347. *Distemon angustifolius*, *Ehrh. & Hempr. mss.*

PUNJAB PLAIN, *Thomson, Edgeworth*. SCINDE, *Stocks*.—DISTRIB. Westward through Arabia and Tropical Africa to the Cape de Verde Islds.

Usually more slender than *A. glandulosa*. *Leaves* $1-1\frac{1}{2}$ by $\frac{1}{16}-\frac{1}{10}$ in. *Flowers* in all the axils. *Corolla* nearly $\frac{1}{2}$ in. long, rosy. *Anthers* short, 2-celled, hairy. *Capsule* $\frac{1}{4}-\frac{1}{2}$ in., glabrous.

TRIBE II. VERBASCEÆ.

2. VERBASCUM, L.

Erect, tomentose or woolly, usually tall herbs. *Leaves* all alternate. *Flowers* in simple or paniced terminal racemes or spikes, ebracteate, yellow, rarely white or red. *Calyx* 5-lobed or -partite, lobes imbricate. *Corolla* rotate; lobes 5, broad, the upper exterior in bud. *Stamens* 5 (very rarely 4), filaments all or the three upper bearded; anthers transverse or oblique, cells confluent. *Style-top* dilated, stigma simple. *Capsule* globose, oblong, or ovoid, septicidal; valves separating from the axis. *Seeds* numerous, rugose, not winged; embryo straight.—Species about 100; chiefly Mediterranean and Oriental.

V. virgatum, *With. (Wight Ill.* 165, *bis.* f. 1, and *Ic.* t. 1404. *Celsia viscosa*, *Wight Cat.* n. 1599, and *Nees in Trans. Linn. Soc.* xvii. 81, *in part, not of Roth*), a West European species, occurs in the Nilgherries, doubtless as a garden escape.

1. **V. Thapsus**, *Linn.*; *Benth. in DC. Prodr.* x. 225; densely woolly, eglandular, stem simple, leaves oblanceolate very decurrent entire or crenate, flowers in a simple dense woolly spike. *Boiss. Fl. Orient.* iv. 301; *Roxb. Fl. Ind.* i. 461. *V. indicum*, *Wall. Cat.* 2630, and in *Roxb. Fl. Ind. ed. Carey & Wall.* ii. 236; *Nees in Trans. Linn. Soc.* xvii. 79. ? *V. Blatteria*, *T. A. Schmidt in Trimen Journ. Bot.* 1868, 243, *not of Linn.*

TEMPERATE HIMALAYA, alt. 6-11,000 ft.; from Kashmir to Bhotan. WESTERN TIBET; Ladak, *Thomson*.—DISTRIB. Westwards to Britain.

Stem stout, 2-3 ft. *Root-leaves* 6-18 in., cauline oblong, upper acuminate. *Spike* 6-10 in.; bracts longer than the flowers. *Stamens* 5, fertile, 2 glabrous and 3 with white hairs.—As this is the only common Himalayan species, it must be that referred to as *V. Blatteria* by T. A. Schmidt.

VAR. thapsiforme; bracts very long. *V. thapsiforme*, *Schrad.*; *Boiss. l.c.* 301. *V. cuspidatum*, *Schrad.*; *T. A. Schmidt in Trimen Journ. Bot.* 1868, 243.

2. **V. celsioides**, *Benth. in DC. Prodr.* x. 229; glandular-pubescent, lower leaves pinnatisect, upper auricled cordate acuminate, flowers racemose.

KUMAON; at the foot of the hills, *Edgeworth*. The PUNJAB; at Hussan, *Aitchison*.

Stem 2-3 ft. *Leaves* 4-6 in., sessile or petioled, irregularly toothed and lobulate. *Flowers* in a long loose raceme; bracts ovate-lanceolate; pedicels $\frac{1}{2}-\frac{3}{4}$ in. *Sepals* oblong, obtuse. *Corolla* $\frac{1}{2}$ in. diam. *Stamens* 4-5; filaments woolly.—This species, being sometimes tetrandrous, unites *Verbascum* with *Celsia*.

3. **CELSIA**, L.

Characters of *Verbascum*, but stamens 4 (see also *V. celsioides*).

1. **C. coromandeliana**, Vahl *Symb.* iii. 79; finely pubescent or tomentose, glandular above, root-leaves petioled lyrate-pinnatifid, cauline sessile oblong-ovate toothed, racemes simple or paniced, sepals entire or toothed. *Benth. in DC. Prodr.* x. 246; *Roxb. Fl. Ind.* iii. 100; *Wall. Cat.* 2631; *Wight Ill.* t. 165, bis f. 1, right hand, and *lc.* t. 1406; *Dalz. & Gibs. Bomb. Fl.* 176; *Boiss. Fl. Orient.* iv. 358. *C. viscosa*, *Roth Catal. Bot.* ii. 69, and iii. 50; *Wight in Hook. Journ. Bot.* i. (1834) 228, t. 129; *Nees in Trans. Linn. Soc.* xvii. 81, in part.

Throughout INDIA; from the Punjab to Ceylon and Pegu, ascending to 5000 ft.—
DISTRIB. Afghanistan, Ava, China.

Annual. *Stem* 2–3 ft., stout or slender. *Leaves* 2–4 in., the large terminal lobe usually oblong, obtuse, toothed. *Raceme* 1–2 ft.; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in.; bracts ovate, shorter. *Sepals* oblong or ovate. *Corolla* $\frac{1}{2}$ in. diam., yellow. *Filaments* all hairy. *Capsule* subglobose, $\frac{1}{4}$ – $\frac{1}{2}$ in. diam.

4. **LINARIA**, Juss.

Herbs. *Leaves* usually opposite, or whorled below and alternate above. *Flowers* axillary, racemose or spicate, ebracteolate. *Sepals* 5, imbricate. *Corolla* tube spurred in front; upper lip erect, 2-lobed; lower spreading, 3-lobed, throat usually closed by the tumid palate. *Stamens* 4, didynamous, ascending, included; anther-cells distinct, parallel. *Style* filiform, stigma minute. *Capsule* ovoid or globose, 2-celled, each cell or the anterior only opening by an apical pore. *Seeds* numerous, polymorphous.—Species 130, almost exclusively natives of the temperate regions of the old world.

L. striata, DC., a Mediterranean species, has been found in the Khasia Mts. (near Churra), by Clarke, no doubt an escape. *L. triphylla*, Mill., a plant of the same region, also occurs in India according to Bentham (*in DC. Prodr.* x. 274), but I have seen no specimen.

* *Sepals* narrowly lanceolate.

1. **L. ramosissima**, Wall. *Pl. As. Rav.* ii. 43, t. 153, and *Cat.* 3911; perennial, nearly glabrous, branches prostrate slender, leaves alternate petioled ovate-cordate, or lower 6–7-lobed triangular-hastate and upper lanceolate sagittate, pedicels capillary longer than the petiole, spur shorter than the corolla-tube, seeds scabrous. *Benth. in DC. Prodr.* x. 270; *Wight Ill.* t. 165; *Dalz. & Gibs. Bomb. Fl.* 176; *Boiss. Fl. Orient.* iv. 368. *L. Roylei*, *Chavannes Monogr. Antirrh.* 112.

Throughout INDIA, on rocks and stony places, from the Punjab and Scinde to Chittagong and CEYLON; ascending the hills to 5000 ft. DISTRIB. Afghanistan, Ava.

Branches numerous, filiform, spreading from the rootstock. *Leaves* membranous, $\frac{1}{2}$ –2 in., extremely variable. *Flowers* yellow; pedicels 1–1 $\frac{1}{2}$ in. *Sepals* lanceolate. *Corolla* $\frac{1}{2}$ in. long, spur short, tube hairy, upper lip short. *Capsule* with subequal lobes. *Seeds* minute, ovoid.—The var. *ovata*, Benth., with all the leaves ovate-cordate, passes so insensibly into the type that it cannot be retained.

VAR. *pubescens*, Stocks ms.; softly hairy, corolla rather larger and spur rather longer.—This in hairiness resembles *L. cabulica*.

2. **L. cabulica**, Benth. *in DC. Prodr.* x. 270; perennial, softly hirsute, branches prostrate slender, leaves alternate petioled lower ovate subhastate

and lobed, upper lanceolate sagittate, pedicels rigid longer than the leaves, spur longer than the corolla-tube, seeds scabrous. *Boiss. Fl. Orient.* iv. 368.

The PUNJAB, SCINDE and WESTERN HIMALAYA, ascending to 6000 ft., and eastward to Kamptee, *Wight*, and Rotas in BEHAR, *J. D. H.* DISTRIB. Westwards to Persia.

More rigid than *L. ramosissima*, with smaller more entire leaves, and shorter petioles.

3. *L. incana*, *Wall. Pl. As. Rar.* ii. 43; perennial, villous, branches prostrate, leaves ovate or hastate, petiole very short, pedicels rigid often exceeding the leaves, spur much shorter than the corolla-tube, seeds closely roughly pitted.

WESTERN AND CENTRAL HIMALAYA; from Kashmir, alt. 5,500, *Falconer*, &c., to Nepal, *Wallich*.

Habit of *L. cabulica*, but with much larger flowers and capsules, and larger, very different seeds.

** *Sepals linear-spathulate*.

4. *L. minor*, *Désf.*; *Benth. in DC. Prodr.* x. 287; annual, erect, glandular-pubescent, leaves mostly alternate oblong or obovate, pedicels slender, spur shorter than the corolla-tube, seeds oblong truncate ribbed smooth. *Boiss. Fl. Orient.* iv. 383. *Antirrhinum minus*, *Linn.*; *Gaertn. Fruct.* i. 249 to 53.

The PUNJAB PLAIN; *Vicary, Aitchison*. DISTRIB. Westwards to Britain.

Stem 6-18 in., branches ascending. *Leaves* $\frac{1}{2}$ -1 in. obtuse, narrowed into the petiole. *Peduncles* axillary, often exceeding the leaves. *Sepals* enlarging after flowering, nearly equalling the pale purple corolla with a yellow depressed palate. *Capsule* gibbous at the base; cells subequal, opening by ragged pores.

5. SCHWEINFURTHIA, *A. Braun*.

Annual or perennial branched glabrous herbs. *Leaves* nearly always alternate, quite entire. *Flowers* small, axillary. *Sepals* imbricate, the upper largest. *Corolla-tube* subacute; upper lip erect, 2-lobed; lower reflexed 3-lobed; palate closing the throat. *Stamens* 4, didynamous, 5th rudimentary; anther-cells diverging. *Style* filiform, stigma minute. *Capsule* subglobose, fragile, anterior cell many-seeded, bursting irregularly; posterior very small, 3-4-seeded or empty. *Seeds* obconic, 5-winged, furrowed between the ribs.—Species 3, N.E. African and oriental.

1. *S. sphærocarpa*, *A. Braun in Monatsb. Akad. Wiss. Berl.* 1866, 875; robust, glabrous or hairy, leaves orbicular obovate or spatulate fleshy glaucous, pedicels very short, sepals ovate or lanceolate acute. *S. papilionacea*, *Boiss. Fl. Orient.* iv. 387. *Antirrhinum papilionaceum*, *Burm. Fl. Ind.* 121, t. 39, f. 2. *A. glaucum*, *Stocks in Wight Ic.* t. 1459. *Linaria sphærocarpa*, *Benth. in DC. Prodr.* x. 287.

SCINDE; in rocky places; *Stocks, Vicary*. DISTRIB. Beloochistan and Affghanistan.

Perennial; branches 6-12 in. *Leaves* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., obtuse or subacute, narrowed into the short petiole. *Sepals* $\frac{1}{2}$ in. long, equalling the corolla-tubes, enlarged in fruit. *Corolla* dirty-white. *Filaments* hairy at the base. *Capsule* $\frac{1}{4}$ - $\frac{1}{2}$ in. diam. *Seeds* pale.—Sunpât of druggists.

6. **ANTIRRHINUM**, Linn.

Annual or perennial herbs. *Leaves* entire or lobed, lower opposite, upper alternate. *Flowers* solitary and axillary or racemed. *Sepals* 5, imbricate. *Corolla* compressed, base saccate; upper lip erect, 2-lobed; lower spreading, 3-lobed; palate broad, bearded, closing the throat. *Stamens* 4, didynamous; anther-cells distinct, parallel. *Style* filiform, stigma 2-lobed. *Capsule* ovoid or globose; cells many-seeded, anterior opening by one pore, posterior by 2 toothed pores, or both opening by one pore. *Seeds* minute, oblong, truncate, rugose or pitted.—Species 25, of northern temperate regions.

The common Snapdragon (*A. majus*, L.) is stated (*Benth. in DC. Prodr. x. 291*) to be spontaneous in India, but I have seen no specimens.

1. **A. Orontium**, Linn.; *Benth. in DC. Prodr. x. 290*; annual or biennial, slender, erect, leaves linear, flowers axillary subsessile, sepals longer than the corolla. *Boiss. Fl. Orient. iv. 385*. *A. gibbosum*, Wall. *Pl. As. Rav. ii. 44*, and *Cat. 3854*.

PUNJAB PLAIN and WESTERN HIMALAYA, ascending to 4000 ft. (an escape in the Nilgherries).—DISTRIB. Westwards to N. Africa and Britain.

Annual or biennial.

Stem 6–18 in., usually glabrous below and glandular above, branched from the base. *Leaves* 1–2 in., very narrow, rarely oblong-lanceolate. *Flowers* $\frac{1}{2}$ – $\frac{2}{3}$ in., rose-purple. *Sepals* very narrow, spreading. *Capsule* $\frac{1}{2}$ in., pubescent. *Seeds* compressed, face concave, back keeled, margins thickened.

7. **SCROPHULARIA**, L.

Annual or perennial, often foetid herbs. *Leaves* opposite or the upper alternate, often pellucidly dotted. *Flowers* in paniced or thyrsoid cymes, greenish-purple or yellow. *Sepals* 5. *Corolla-tube* globose or ovoid, tumid; lobes 5, short, flat; 4 upper erect, lower spreading. *Stamens* 4, declinate, didynamous, 5th rudimentary or 0; anther-cells adnate to the filament, confluent, bursting transversely. *Disc* oblique. *Style* slender, stigma notched. *Capsule* ovoid, acute or beaked, septicidal. *Seeds* many or few, ovoid, more or less rugose.—Species about 120, of northern temperate regions.

* *Cymes contracted, dense-fld.* *Upper corolla-lobes short, subequal. Stamens included.*—*Leaves broad, entire, ovate or ovate-cordate, petiole not appendaged, nerves distinct.*

1. **S. pauciflora**, *Benth. Scroph. Ind. 17*, and in *DC. Prodr. x. 302*; glabrous or sparsely pubescent, leaves long-petioled ovate-cordate coarsely toothed, flowers crowded in distant leafless cymes, sepals ovate acute shorter than the capsule, stamens included, staminode 0.

CENTRAL AND EASTERN HIMALAYA; Nepal, Wallich; Sikkim, alt. 10–13,000 ft., J. D. H., &c.

Stem 2–3 ft., stout, sparingly branched. *Leaves* 2–4 in., primary and secondary nerves distinct; petiole $\frac{1}{2}$ –2 in. *Inflorescence* 2–8 in. long, stiff; cymes crowded, shortly peduncled; pedicels $\frac{1}{4}$ in. and less. *Corolla* green. *Capsule* $\frac{1}{4}$ – $\frac{1}{3}$ in. long, ovoid, acute. *Seeds* oblong.

2. **S. calycina**, *Benth. Scroph. Ind. 18*, and in *DC. Prodr. x. 304*; glabrous or sparsely pubescent above, leaves shortly petioled ovate or cordate-ovate acute coarsely toothed, flowers crowded in approximate leafless cymes,

sepals lanceolate acuminate, equalling or longer than the capsules. Stamens included, staminode ovate acute. *Veronica*? *thyrsoflora*, *Wall. Cat.* 6393.

WESTERN HIMALAYA; from Kashmir, *Royle*, to Kumaon, *Blinkworth*, alt. 6-12,000 ft.

Stem 1-2 ft., stout, sparingly branched. *Leaves* 1-4 in., sometimes oblong, primary and secondary nerves distinct; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Inflorescence* 2-4 in., stiff; cymes very shortly peduncled; pedicels $\frac{3}{8}$ - $\frac{1}{2}$ in. *Capsule* $\frac{1}{4}$ - $\frac{1}{2}$ in. ovoid, acuminate. *Seeds* oblong.

** *Cymes more or less effuse. Two upper corolla-lobes longer than the others. Stamens included or exerted.*—*Leaves broad, entire, ovate or ovate-cordate, petiole not appendaged (except in S. polyantha), nerves distinct.*

3. ***S. urticæfolia***, *Benth. Scroph. Ind.* 18, and in *DC. Prodr.* x. 306; glabrous or sparsely hairy, leaves petioled ovate or cordate-ovate acute coarsely toothed, cymes open lax-fld. long slender, lower peduncles axillary, upper chiefly opposite panicle spreading, calyx-lobes rounded, stamens included. *Wall. Cat.* 3922.

CENTRAL AND EASTERN HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 7-9000 ft., J. D. H., &c.

Stem 2-3 ft., rather slender. *Leaves* 2-4 in., primary and secondary nerves distinct; petiole $\frac{1}{2}$ -2 in. *Cymes* very slender and lax, lower peduncles 1-3 in.; pedicels divaricate, filiform, bracts very small. *Calyx* hemispheric, cleft half-way down. *Corolla* $\frac{1}{4}$ in. long, greenish-white, 2 posterior lobes longest. *Staminode* obovate. *Calyx-lobes* shorter than the small broadly ovoid acuminate capsule. *Seeds* very minute, broadly oblong, apiculate, broadly furrowed and pitted in the furrows.

4. ***S. obtusa***, *Edgew. ms.*; hoary, leaves shortly petioled ovate or ovate-cordate obtuse crenate, cymes open lax-fld. long-peduncled, lower axillary upper chiefly opposite panicle spreading, calyx-lobes rounded, stamens included. *Herb. Strach. & Winterb., Scroph.* n. 3.

WESTERN HIMALAYA; Kumaon at Almora, alt. 6-6,500 ft., *Edgeworth*, &c.

Stem 2-3 ft., branched, and as well as the leaves beneath and inflorescence clothed with a fine hoary pubescence. *Leaves* 2-3 in., dull-green, primary nerves only distinct; petiole $\frac{1}{2}$ -1 $\frac{1}{2}$ in. *Cymes* longer or shorter than the leaves; peduncles stout, strict; pedicels also stout, divaricate, sometimes 1 in. long. *Calyx* cleft more than halfway down; lobes nearly equalling the small subglobose capsule. *Corolla* yellowish, tube twice as long as the calyx; two upper lobes longest. *Staminode* orbicular. *Seeds* very minute, as in *S. urticæfolia*.

5. ***S. Scopoli***, *Hoppe*; *Benth. in DC. Prodr.* x. 308; glabrous or sparsely pubescent, leaves petioled ovate oblong or cordate-ovate coarsely irregularly toothed or sublacinate, cymes lax-fld. all erect lower axillary, upper alternate in long strict narrow leafless panicles, peduncles and pedicels short very stout erect, sepals orbicular margins scarious, stamens included. *Reichb. Ic. Pl. Germ.* xx. t. 1675, f. 3. *Boiss. Fl. Orient.* iv. 395. *S. glandulosa*, *Waldst. & Kit.* iii. t. 214. *S. auriculata*, *Scop. Fl. Carniol.* i. 446, t. 32, not of *Linn.* *S. decumbens*, *Fisch. & Mey. in Ann. Sc. Nat.* 3, v. 380.

WESTERN HIMALAYA; Kashmir, *Murree* and *Hazara*, alt. 6000 ft.; *Fleming, Clarke*.—DISTRIB. Afghanistan and westwards to Spain.

Stem stout, 2-3 ft., branched, glabrous in Indian specimens. *Leaves* 1-3 in., compoundly toothed or serrate; petiole $\frac{1}{2}$ -1 in. *Cymes* in stiff stout contracted panicles a foot long and upwards. *Corolla* greenish. *Stamens* included; staminode orbicular. *Capsule* ovoid-globose, beaked. *Seeds* rugulose.—A very variable and widely diffused plant. Afghanistan specimens have lobules on the petiole.

6. ***S. elatior***, *Benth. Scroph. Ind.* 18, and in *DC. Prodr.* x. 304; tall, glabrous or glandular above, stem 4-winged, leaves petioled ovate or lanceolate coarsely toothed, cymes spreading peduncled many-fld. in long panicles, peduncles and pedicels spreading, sepals ovate subacute, stamens far exserted. *Wall. Cat.* 3928.

CENTRAL AND EASTERN HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 6-10,000 ft., J. D. H., &c. KHASIA Mts., alt. 4-5000 ft., common.

Tall, very stout, 3-5 ft. high, branched, stem below as thick as the middle finger, wings slender. *Leaves* 5-10 by 1-5 in., rarely subcordate, primary and secondary nerves distinct; petiole stout, 1-3½ in. *Panicle* sometimes much branched from the base, bracts linear; peduncles 1-2 in.; branches and pedicels spreading. *Sepals* not margined, not half the length of the globose-ovoid beaked capsule. *Stamens* twice as long as the corolla; staminode spatulate or 0. *Seeds* as in *S. urticæfolia*.

7. ***S. Edgeworthii***, *Benth. in DC. Prodr.* x. 304; glandular-puberulous, stem obtusely 4-angled, leaves petioled ovate-cordate coarsely crenate-toothed, cymes long-peduncled paniced few- and lax-fld. spreading, sepals ovate acute much shorter than the tubular corolla, stamens shortly exserted.

WESTERN HIMALAYA; Gurwhal, at Musa Paria, alt. 12,000 ft., *Edgeworth*; Kumaon, at Sabu, alt. 8,500 ft., *Strach. & Winterb.*

Apparently a tall species. *Leaves* 2-3 in., primary nerves only distinct; petiole 1-1½ in. *Peduncles* and pedicels spreading in fruit; bracts lanceolate; pedicels 1-1½ in. *Sepals* nearly as long as the subglobose capsule. *Corolla* ½ in. long. *Staminode* spatulate. *Seeds* very minute, irregular, obscurely ribbed and pitted.—The specimens of this plant are insufficient; *Edgeworth's* are in flowers only; the Kumaon ones are more advanced and in fruit, are nearly glabrous with a rather shorter corolla.

8. ***S. polyantha***, *Royle; Benth. Scroph. Ind.* 18, and in *DC. Prodr.* x. 304; glabrous below, viscidly puberulous above, stem obtusely 4-angled, leaves ovate or ovate-cordate crenate, petiole short naked or appendaged, cymes many-fld. suberect or ascending alternate in long leafless thyrsoid panicles, pedicels short, sepals round with broad scarious margins, corolla very short, stamens far exserted. *Wall. Cat.* 9081.

WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 4-11,000 ft., common.

Stem 3-4 ft., stout below. *Leaves* 2-8 in., sometimes pinnatifidly cut towards the base, primary-nerves distinct; petiole ½-1 in., rarely more. *Panicle* 1-2 ft., strict; flowers greenish, amongst the smallest of the Indian species. *Sepals* ⅓ in., half as long as the very broad short corolla, much shorter than the subglobose pointed capsule. *Staminode* spatulate. *Style* filiform. *Seeds* rugulose, larger than in *S. Edgeworthii*.

9. ***S. himalensis***, *Royle in Benth. Scroph. Ind.* 18, and *DC. Prodr.* x. 304; glandular-pubescent above, stem obtusely angled, leaves ovate-cordate or lanceolate crenate, petiole long naked, cymes many- and lax-fld. spreading opposite and alternate in a long rather slender panicle, peduncles and pedicels long slender, sepals rounded obscurely margined or not, corolla very short, stamens far exserted.

WESTERN HIMALAYA, from Kunawur to Kumaon, alt. 5-8000 ft., common.

Very near to *S. polyantha*, but the petioles are longer and not appendaged, and the flowers twice as large; the seeds are similar.

*** *Cymes more or less effuse. Two upper corolla-lobes longer than the others. Stamens hardly exserted. Capsules few-seeded. Seeds oblong, deeply pitted or transversely rugose.—Leaves narrow-obovate-spatulate, coarsely toothed or pinnatisect, nerves often very obscure. (The species are perennial, and very difficult to distinguish satisfactorily.)*

10. **S. lucida**, Linn.; *Benth. in DC. Prodr.* x. 312; glabrous or glandular pubescent above, leaves 1-2-pinnatisect, segments spreading very unequal oblong ovate or lanceolate incised and serrate, cymes ascending shortly peduncled in long contracted panicles, pedicels short, sepals rounded margin broadly scarious, staminode orbicular or reniform. *Boiss. Fl. Orient.* iv. 403. *S. decomposita*, Royle in *Benth. Scroph. Ind.* 18, and in *DC. l.c.* 313. *S. Griffithii*, *Benth. in. DC. l.c.* 312; *excl. var. β*; *Boiss. Fl. Orient.* iv. 410 *excl. syn. Kotschy*.

WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 8-13,000 ft.—DISTRIB. Kashgar, Affghanistan, and westwards to Italy.

Rootstock stout, perennial, stems 2-3 ft., obscurely 4-angled. *Leaves* 1-2 in., segments horizontal, interrupted. *Cymes* few-fl., lower leafy; peduncles $\frac{1}{2}$ - $\frac{3}{4}$ in., pedicels very short; bracts linear. *Sepals* half as long as the corolla, nearly as long as the globose pointed capsule. *Corolla-tube* $\frac{1}{4}$ - $\frac{1}{2}$ in. broad.—I suspect that this is only a form of *S. canina*, Linn.

11. **S. variegata**, Bieb. *Fl. Taur. Cauc.* ii. 78; glabrous below, glandular above, puberulous, leaves shortly petioled obovate-oblong or spathulate obtuse crenate above incised or pinnatifid toward the base with recurved obtuse lobes, cymes erect or ascending few-fl. alternate in long narrow panicles, pedicels very short, sepals rounded margin broadly scarious, staminode large orbicular or reniform. *Reichb. Ic. Pl. Europ.* iii. 53, t. 257; *Benth. in DC. Prodr.* x. 314. *S. depauperata*, *Boiss. Diagn. Ser.* iv. 68; and *Fl. Orient.* iv. 410. *S. Griffithii*, *var. β*, *Benth. l.c.* 312.

WESTERN HIMALAYA, in the drier regions, and WESTERN TIBET; from Kashmir and the Karakorum to Kumaon, alt. 9-14,000 ft., Thomson, &c.—DISTRIB. Asia Minor.

Rootstock perennial; stems 1-2 ft., stout, obtusely 4-angled. *Leaves* 1-2½ in., coriaceous, contracted into a short broad petiole. *Sepals* about half the length of the corolla and of the small globose pointed capsule. *Corolla* $\frac{1}{4}$ - $\frac{1}{2}$ in. long, tube broad.—Probably only a form of *S. lucida*, with more entire leaves. It precisely accords with Reichenbach's figure in all but the greater size.

VAR. ? tenuicaulis; branches and panicles very slender, staminode ovate-lanceolate acute.—Kishtwar, alt. 8000 ft., Thomson. Kashmir at Srinuggur, alt. 7000 ft., Clarke. This is a puzzling plant, probably referable to *S. canina*, L. The habit and foliage are those of *S. variegata*.

12. **S. dentata**, Royle in *Benth. Scroph. Ind.* 19, and in *DC. Prodr.* x. 316; glabrous below, glandular above, nearly black when dry, leaves small petioled obovate-oblong or spathulate obtuse crenate above, entire or incised towards the base, cymes short erect or ascending few-fl. alternate in narrow panicles, pedicels very short, sepals rounded margins obscurely scarious, staminode small narrow. *S. Kotschy*, *Herb. Ind. Or. H. f. & T.*, not of Boiss.

WESTERN HIMALAYA, Kumaon, Royle, Lahul, Capt. Hay. WESTERN TIBET, alt. 12-15,000 ft., Thomson.

Very similar to *S. variegata*, but nearly black when dry, with smaller thicker leaves, and a very small staminode. *Rootstock* stout, branches very numerous, 1 foot, cylindric. *Leaves* 1-1½ in., midrib and nerves very obscure, rather fleshy. *Flowers* smaller than in *S. variegata* or *lucida*. *Capsule* and seeds similar.

13. **S. scabiosæfolia**, *Benth. in DC. Prodr.* x. 313; glabrous or glandular, leaves obovate oblong or subspathulate entire pinnatifid or lobulate, terminal lobe usually large, cymes spreading or ascending alternate rather long few- or many-fl. branches divaricating, flowers very small often spicate, sepals rounded margins scarious, staminode broad. *Boiss. Fl. Orient.* iv. 412.

PUNJAB HILLS, near Peshawur, *Vicary, Aitchison.* WESTERN HIMALAYA and WESTERN TIBET, alt. 10–12,000 ft., *Thomson.*—DISTRIB. Afghanistan.

Rootstock woody, often with many radical petioled pinnatifid or entire obovate or oblong-cordate leaves which are sometimes 5 in. long, and solitary scape-like panicles; thus resembling a *Scabiosa*. In other specimens the stems are slender, 1–2 feet high, and much branched, like those of *S. lucida*, from which the small flowers about $\frac{1}{8}$ in. long, best distinguish it. *S. bicolor*, of Europe, is very near this.—The Beloochistan plant of Stocks referred to it by Boissier may be the same, but it is not in a sufficiently good state for determination.

TRIBE IV. CHELONEÆ.

8. *BRANDISIA*, Hook. f. & Thoms.

Tomentose or scurfy shrubs. *Leaves* opposite, entire. *Flowers* axillary, solitary or 2-nate; pedicels 2-bracteolate. *Calyx* campanulate, 5-toothed. *Corolla-tubes* incurved, dilated above; upper lip broad, concave, erect, broadly 2-lobed; lower spreading, shortly acutely 3-lobed. *Stamens* 4, didynamous, shorter than the corolla, filaments flattened below; anther-cells divergent, margins bearded. *Style* filiform, stigma simple. *Capsule* ovoid, loculicidal, many-seeded, valves separating from the columnar placentiferous axis. *Seeds* linear, testa lax membranous reticulated.—Species 2, a Chinese and the following.

The supposed second species of *Brandisia*, alluded to in the “Genera Plantarum” as a native of Bhotan, has stellate tomentum, lanceolate leaves and a 2-lipped calyx, and cannot be congeneric. It may be a *Wightia*, but the specimens are far too imperfect for determination. The Chinese plant referred to *B. discolor* by Hance, differs in the broad calyx-lobes and corolla; it is *B. Hancei*, H. f.

B. discolor, H. f. & T. in *Journ. Linn. Soc.* viii. 11, t. 4; leaves ovate-lanceolate finely acuminate base rounded or cordate, calyx-teeth subulate. *Kurz For. Fl.* ii. 250, and in *Journ. As. Soc.* 1873, ii. 236.

PEGU, MARTABAN, and TENASSERIM, alt. 3–6000 ft., *Brandis, Parish, Kurz.*

An evergreen half-scandent shrub. *Leaves* 2–3 in., firm, glabrous above, white or fulvous-tomentose beneath with very prominent nerves, petiole $\frac{1}{4}$ in. *Pedicels* longer than the petiole. *Calyx* $\frac{1}{4}$ in. long, tomentose, 5-ribbed opposite the teeth. *Corolla* $\frac{3}{4}$ in., dull purplish brown, tomentose. *Capsule* ovoid, acute, $\frac{1}{2}$ in. long.

9. *WIGHTIA*, Wall.

A tree. *Leaves* opposite or alternate, quite entire, very coriaceous. *Flowers* in axillary thyrsi, large, rosy, pubescent. *Calyx* campanulate, irregularly 3–5-lobed. *Corolla-tube* incurved, upper lip erect, 2-lobed; lower spreading, 3-fid. *Stamens* 4, didynamous, ascending, exserted; anthers oblong, sagittate, cells parallel. *Style* long, tip incurved, stigma simple. *Capsule* oblong or ovoid, septicidal, many-seeded, valves long, separating from the placentiferous axis, which is 2-partite or entire. *Seeds* linear, ascending, nucleus slender, testa membranous broadly winged all round, albumen 0; embryo straight.—Species 3, a Javan, Bornean, and the following.

W. gigantea, Wall. *Pl. As. Rar.* i. 71, t. 81, and *Cat.* 2703; *Benth. in DC. Prodr.* x. 301; *Gamble Cat. Darjeeling Pl.* 58. *Gmelina speciosissima*, *Don Prodr.* 104; *Schauer in DC. Prodr.* xi. 650.

CENTRAL AND WESTERN HIMALAYA; Nepal, *Wallich*; Sikkim, *J. D. H., &c.*; Bhotan *Griffith*.—DISTRIB. JAVA (*Herb. Horsfield*).

A large tree, often half epiphytic, appressed to and grasping the boles of forest trees by roots given off from the trunk, which is sometimes a foot or more in diameter. *Leaves* 6–12 by 3–6 in., ovate lanceolate rounded or elliptic, acute or obtuse, glabrous above and finally beneath; base acute or rounded; nerves 4–6 pair, oblique; petiole 1–1½ in., stout. *Thyrsi* 4–8 in., erect, narrow; peduncle and rachis very stout; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in., 2-bracteolate in the middle, hoary-pubescent. *Calyx* short, $\frac{1}{2}$ in. long and broad, lobes rounded. *Corolla* 1 in. long, mealy. *Stamens* far exerted. *Capsule* ovoid, thinly coriaceous, $1\frac{1}{2}$ in. long by $\frac{3}{4}$ in. broad; columnar axis entire.—The Javan species alluded to in the “Genera Plantarum” differs in the much longer and woody capsules with the columnar axis 2-partite.

TRIBE V. MANULEÆ.

10. *SUTERA*, Roth.

A low diffuse viscid-pubescent herb. *Leaves* pinnatifid, lower opposite, upper alternate. *Flowers* small, axillary and in terminal racemes; pedicels bracteate, ebracteolate. *Sepals* 5, narrow. *Corolla-tube* slender, throat not dilated; lobes 5, small, 2 upper outer in bud and rather smaller. *Stamens* 4, didynamous, included, filaments filiform. *Style* short, stigma obtuse or notched. *Capsule* ovoid-oblong, septicidal, valves bifid. *Seeds* numerous, testa pitted.

S. glandulosa, Roth Bot. Bemerk. 172, and Nov. Sp. 291; Benth. in DC. Prodr. x. 362; Boiss. Fl. Orient. iv. 422; Wight Ic. t. 856; Miquel Fl. Ind. Bat. ii. 676; S. dissecta, Walp. Rep. iii. 271. *Capraria dissecta*, Del. Fl. Eg. i. 95, t. 32, f. 2.

From MAERWAR, Dalzell, BANDA, Edgeworth, BEHAR, J. D. H., and BENGAL, Griffith, to the SOUTH DECCAN, Heyne, but not common.—DISTRIB. Arabia, Egypt, Nubia.

Annual, branched from the base, branches 6–10 in. long. *Leaves* $\frac{1}{2}$ – $\frac{1}{2}$ in., ovate in outline, shortly petioled, segments toothed and cut. *Flowers* axillary all along the branches, sessile or pedicelled, uppermost racemose. *Calyx* $\frac{1}{2}$ in. long. *Corolla* nearly white, about twice as long, glabrous. *Capsule* exceeding the calyx.

TRIBE VI. GRATIOLEÆ.

11. *MIMULUS*, L.

Erect prostrate or creeping herbs. *Leaves* opposite. *Flowers* solitary, axillary. *Calyx* tubular or campanulate, 5-angled, 5-toothed. *Corolla* 2-lipped, upper lip erect or reflexed, 2-lobed; lower spreading, 3-lobed; throat with usually a swollen 2-lobed palate. *Stamens* 4, didynamous; anther-cells divergent, subconfluent. *Style* slender, stigma 2-lamellate. *Capsule* compressed, loculicidal, valves separating from the placentiferous column. *Seeds* numerous, minute, oblong.—Species 40, temperate and tropical.

1. **M. nepalensis**, Benth. Scroph. Ind. 29, and in DC. Prodr. x. 373; prostrate, glabrous, leaves petioled ovate coarsely serrate, calyx truncate 5-toothed, corolla yellow, capsule included. Wall. Cat. 3917; Maxim. Diagn. Pl. Nov. Dec. xix. 401. *M. assamicus*, Griff. in. Madr. Journ. Nat. Sc. iv. 3, and Notul. iv. 92, and Ic. Pl. Ind. Asiat. t. 458, f. 8, 9.

TEMPERATE HIMALAYA; from Nepal, Wallich, to Bhotan, Griffith. ASSAM, on the banks of the Burraumpootra, Griffith.—DISTRIB. Japan.

Stems straggling, 6–10 in. long, stout or slender, sometimes faintly hairy. *Calyx*

very variable in length, breadth, and the size of the teeth, which are always small. Capsule ovate-lanceolate, included.

VAR. 1; leaves $\frac{1}{2}$ –1 in., pedicels usually longer than the leaves, flowers $\frac{3}{4}$ in. long; fruiting calyx straight.—Nepal, Sikkim, and Assam, alt. 1–6000 ft.

VAR. 2; much larger, leaves 1–1 $\frac{1}{2}$ in., pedicels shorter than the leaves, flowers 1–1 $\frac{1}{2}$ in. long, calyx often curved. ? *M. tenellus*, Bunge *En. Pl. Chin.* 49 (*Maxim. l. c.*).—Sikkim, alt. 8–12,000 ft.—Possibly a different species, but intermediate forms occur. The calyx varies from $\frac{1}{4}$ in. long, obconic and straight, to $\frac{3}{8}$ in. long subcylindric and curved with an oblique mouth. Miquel's *M. nepalensis*, var. *japonica*, seems the same as this.

2. *M. orbicularis*, Benth. *Scroph. Ind.* 29, and in *DC. Prodr.* x. 373; creeping, glabrous, leaves petioled orbicular nerveless quite entire, calyx small truncate obscurely 5-lobed, capsule exserted. *Wall. Cat.* 3919.

PEGU and TENASSERIM; Wallich, Griffith, &c.

Stems rather thick, 6–10 in. Leaves $\frac{3}{4}$ –1 in. diam., rather fleshy, base rounded or subacute; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in., very thick. Peduncles equalling the leaves or shorter, stout or slender. Calyx $\frac{1}{4}$ in., campanulate. Corolla $\frac{1}{2}$ – $\frac{3}{8}$ in. Capsule $\frac{1}{3}$ in., elliptic, acute at both ends; style stout, persistent.

3. *M. gracilis*, Br. *Prodr.* 439; erect, glabrous, leaves sessile linear-oblong quite entire or slightly toothed, calyx shortly 5-lobed, capsule included. Benth. in *DC. Prodr.* x. 594. *M. strictus*, Benth. *Scroph. Ind.* 28; *Wall. Cat.* 3918.

WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 1–3000 ft. PUNJAB PLAINS. BENGAL, at Rajmahal, Wallich.—DISTRIB. China, Australia, Tropical and S. Africa.

Stout, branched from the base, 6–12 in. high, branches erect. Leaves radical and cauline, 1 $\frac{1}{2}$ –2 $\frac{1}{2}$ in., rather fleshy, $\frac{1}{2}$ -amplexicaul, obtuse, blackish when dry. Peduncles longer than the leaves, stout. Calyx $\frac{1}{2}$ in. long, tubular, lobes very small rounded. Corolla $\frac{1}{2}$ in. long, white or pale blue. Capsule obovoid.

12. MAZUS, Lour.

Small herbs, often with runners. Leaves opposite below or rosulate, above opposite or alternate. Flowers small, in terminal subsecund racemes; bracts and bracteoles minute or 0. Calyx campanulate, 5-fid. Corolla-tube short, upper lip erect, 2-fid; lower much larger, spreading, 3-fid; throat with a 2-lobed palate. Stamens 4, didynamous; anther-cells contiguous, diverging. Stigma 2-lamellate. Capsule included, globose or compressed, obtuse, loculicidal, valves entire. Seeds numerous, most minute, ovoid.—Species, 4 Asiatic and 1 Australian.

1. *M. rugosus*, Lour. *Fl. Coch.* 385; runners 0, radical leaves obovate-spathulate crenate narrowed into a short petiole, pedicels mostly ebracteate, calyx-lobes half as long as the tube ovate-lanceolate acute, spreading in fruit. Benth. in *DC. Prodr.* x. 375; Boiss. *Fl. Orient.* iv. 424; Sweet *Brit. Fl. Gard.* t. 36; Miquel *Fl. Ind. Bat.* ii. 677; Maxim. *Diagn. Nov. Pl. Dec.* xix. 403. *M. bicolor*, Benth. in *Wall. Cat.* 3913. *M. vandelloides*, Hance; Walp. *Ann.* iii. 193. *Lindernia japonica*, Thunb. *Fl. Jap.* 253. *Hornemannia bicolor*, Willd. *Enum. Hort. Berol.* 654; Reicheb. *Icon. Exot.* 25, t. 37. ? *Columnnea tomentosa*, Roxb. *Fl. Ind.* iii. 98. ? *Stemodia tomentosa*, G. Don *Gen. Syst.* iv. 842. *Tittmannia obovata*, Bunge *Enum. Pl. Chin.* 279. *Vandellia obovata*, Walp. in *Act. Acad. Leopold.* xix. *Suppl.* i. 394. *Gratiola goodeniæfolia*, Hornem. *Hort. Hafn.*

TEMPERATE and SUBTROPICAL HIMALAYA, and Plains of NORTHERN INDIA; from Kashmir to Bhotan, ascending to 7000 ft. KHASIA Mts., alt. 4-6000 ft. BURMA, *Wallich*. UPPER ASSAM, *Griffith*. SOANE RIVER, *J. D. H.*—DISTRIB. Afghanistan, Java, China, Japan, Philippine Islds.

Annual, glabrous or sparsely hairy. Radical leaves numerous, 1-3 in. long, including the petiole, which is rarely as long as the blade, coarsely irregularly crenate-toothed. Flowering-stems numerous from the root, 2-10 in. long, leafless or with alternate spatulate leaves. Racemes 1-6 in., pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. Calyx in fruit $\frac{1}{4}$ - $\frac{2}{3}$ in. diam. Corolla $\frac{1}{4}$ - $\frac{1}{2}$ in. long, blue. Seeds exceedingly minute, pale.—Roxburgh's *Columnnea tomentosa*, referred here by Bentham, can hardly be this.

2. *M. surculosus*, *Don Prodr.* 86; runners rooting with opposite leaves, radical leaves obovate-spathulate coarsely crenate and often subpinnatifid at the base narrowed into a short petiole, pedicels mostly bracteate, calyx-lobes $\frac{1}{2}$ as long as the tube short obtuse or subacute suberect in fruit. *Benth. in DC. Prodr.* x. 375; *Wall. Cat.* 3912; ? *Wight Ic.* t. 1467.

TEMPERATE HIMALAYA; from Kunawar to Bhotan, alt. 3-7000 ft. KHASIA Mts., alt. 4-5000 ft. ? NILGHIEI Mts., *Schmidt, Hohenacker, G. Thomson*.

In its ordinary state very different from *M. rugosus* in the shorter racemes, the often pinnatifid leaf-bases, bracts and calyx; but small specimens of either are difficult to distinguish. The Nilghiri specimens are very small and dense, without runners or bracts, but they have the short-lobed calyx of *M. surculosus*; they may prove specifically different. The figure in Wight's *Icones* represents the calyx very incorrectly.

3. *M. dentatus*, *Wall. Cat.* 3914; runners 0, radical leaves long-petioled elliptic-oblong or ovate sinuate, pedicels bracteate, calyx-lobes $\frac{1}{2}$ the length of the tube rounded ovate or triangular obtuse or acute suberect in fruit. *Benth. Scroph. Ind.* 27, and in *DC. Prodr.* x. 375.

TEMPERATE HIMALAYA; Kumaon, alt. 8000 ft., *Strach. & Winterb.*; Nepal, *Wallich*; Sikkim, alt. 6-8000 ft., *J. D. H., Treutler*. KHASIA Mts.; Nunklow, alt. 5000 ft., *Simons*.

Glabrous or sparsely hairy. Rootstock perennial. Leaves 1-4 in., base acute rounded or subcordate; petiole $\frac{1}{2}$ -3 in. Flowering branches or scapes 3-6 in., erect or decumbent, slender, few-fld., leafless. Flowers distant, $\frac{1}{2}$ -1 in. long; pedicels $\frac{1}{4}$ - $\frac{1}{3}$ in.; bracts setaceous. Calyx $\frac{1}{4}$ - $\frac{1}{2}$ in. long, lobes sometimes longer and acute as in *M. rugosus*. Seeds twice as large as in *M. rugosus*, black.

13. *LANCEA*, *Hook. f. & Thoms.*

A small glabrous herb. Leaves radical and opposite, obovate-oblong or spatulate, quite entire. Flowers in a very short terminal few-fld. raceme, pedicels bracteate. Calyx campanulate, 5-fld. Corolla-tube dilated above; upper lip suberect, concave, 2-lobed; lower large, spreading, 3-lobed, palate 2-convex. Stamens 4, didynamous, subexserted; anther-cells diverging. Style filiform, stigma 2-lamellate. Fruit globose, indehiscent, exserted. Seeds numerous, small, subglobose, testa thin.

L. tibetica, *Hook. f. & Thoms. in Hook. Kew Journ.* ix. 244, t. 7.

ALPINE HIMALAYA and WESTERN TIBET; from Kashmir to Sikkim, alt. 11-16,000 ft., *Thomson, &c.*

Rootstock slender, horizontal, creeping. Leaves rosulate, or opposite on a very short stem 1-4 in. high, 1-3 $\frac{1}{2}$ in. long, obtuse or subacute, narrowed into a $\frac{1}{2}$ -amplexicaul petiole $\frac{1}{4}$ -1 in. long, rather coriaceous, sometimes very obscurely toothed. Flowers

sunk amongst the leaves, pedicels very short, bracts lanceolate. *Calyx-lobes* acute. *Corolla* $\frac{3}{4}$ –1 in. long, blue, lower lip hairy within. *Fruit* the size of a pea, hardly fleshy. *Seeds* brown.

14. **LINDENBERGIA**, *Lehm.*

Annual or perennial herbs, woody below; branches erect, straggling or ascending. *Leaves* opposite or the upper alternate, toothed. *Flowers* axillary or spicate or racemed, bracteate, ebracteolate, yellow. *Calyx* campanulate, 5-fid. *Corolla-tube* cylindric; upper lip the outer, short, broad, notched or 2-fid; lower larger, 3-lobed, spreading, base with two plaits. *Stamens* 4, didynamous, included; anther-cells separate, stipitate, all with pollen. *Capsule* 2-grooved, loculicidal; valves entire, separating from the placentiferous axis. *Seeds* numerous, minute.—Species 8, African, Indian and Malayan.

1. **L. grandiflora**, *Benth. Scroph. Ind.* 22, and in *DC. Prodr.* x. 576; softly hairy, subscent, leaves petioled ovate acuminate coarsely serrate, flowers secund in terminal lax-fid. spikes, calyx-lobes obtuse, ovary villous. *Stemodia grandiflora*, *Ham. in Don Prodr.* 89; *Wall. Cat.* 3924.

SUBTROPICAL HIMALAYA, alt. 2–6000 ft.; from Sirmore to Bhotan, abundant. *PEGU, Kurz.*

A rambling perennial, with flexuous stem and branches. *Leaves* 2–8 in., pubescent on both surfaces; nerves 6–8 pair; petiole $\frac{1}{4}$ – $1\frac{1}{2}$ in. *Spikes* 6–10 in., sometimes paniced; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., ovate, sessile or shortly petioled; flowers 1 in. long, sessile or very shortly pedicelled. *Corolla* pubescent, tube 3 times as long as the calyx. *Capsule* ovoid, tip exserted.

2. **L. Hookeri**, *Clarke mss.*; glabrous except the inflorescence, subscent, leaves petioled elliptic-lanceolate acuminate coarsely serrate, flowers secund in terminal lax-fid. spikes, calyx-lobes acute, ovary glabrous. *Lindenbergia* n. 3, *Herb. Ind. Or. H.f. & T.*

TROPICAL SIKKIM HIMALAYA; foot of the outer hills, alt. 3–4000 ft.; *J. D. H., Clarke.*

Habit of *L. grandiflora*, but more slender and nearly glabrous. *Leaves* 2–3 in., base cuneate; petiole $\frac{1}{4}$ – $\frac{1}{2}$ in. *Spikes* 1–2 in., shortly peduncled, glandular, puberulous; bracts sessile, ovate, acute, about equalling the calyx; lower flowers sometimes shortly pedicelled. *Calyx* cleft to the middle, teeth triangular. *Corolla* 1 in. long, glabrous without, tube nearly straight, two to three times as long as the calyx; upper lip short, 2-fid; lobes of lower rounded, crenate, densely pubescent within. *Anther-cells* sausage-shaped, quite separate, pendulous from the top of the filament.

3. **L. philippensis**, *Benth. in DC. Prodr.* x. 377; softly pubescent or villous above, stout, strict, erect, leaves ovate or ovate-lanceolate, toothed, flowers unilateral in rigid erect dense-fid. spikes or racemes, calyx longer than the bracts, lobes ovate-lanceolate acuminate, ovary villous. *Stemodia philippensis*, *Cham. in Linnæa*, iii. 5. *Stemodia* sp., *Griff. Notul.* iv. 99, and *Ic. Pl. Asiat.* t. 421.

CHITTAGONG, *Clarke.* *PEGU, Kurz.* BURMA; common about pagodas, *Griffith.* TENASSEEIM, *Helper, Lobb.*—DISTRIB. Siam, China, Philippine Islands.

Stem 2–3 ft. *Leaves* 2–4 in., much produced below into a slender petiole about half the length of the blade. *Racemes* or *spikes* 1 ft. and upwards; rachis very stout; flowers shortly pedicelled or not; bracts lanceolate. *Calyx* $\frac{1}{4}$ in. long. *Corolla* $\frac{1}{4}$ – $\frac{3}{4}$ in., pubescent. *Capsule* lanceolate, tip exserted.

4. *L. macrostachya*, *Benth. Scroph. Ind.* 22, and in *DC. Prodr.* x. 376; glabrate or pubescent, stem strict erect stout or slender, leaves elliptic-ovate serrate glabrous, flowers unilateral in rigid erect dense or lax-fld. spikes, calyx longer than the bracts, lobes short acute, ovary pubescent. *Stemodia macrostachya*, *Benth. in Wall. Cat.* 3925; and 3852 *Adenosma cuspidatum*. *L. siamensis*, *Miquel in Herb.*

WESTERN HIMALAYA; on the foot-hills and plains below them, from the Punjab to Oudh, ascending to 4000 ft. MARTABAN, *Wallich*.—DISTRIB. Siam, China.

Perhaps only a variety of *L. philippensis*, but more glabrous, with shorter petioles.

5. *L. abyssinica*, *Hochst. in Herb.*; *Benth. in DC. Prodr.* x. 377; glandular-pubescent or villous, leaves broadly ovate coarsely crenate-toothed, flowers unilateral in lax terminal spikes, calyx shorter than the lower bracts, lobes ovate acute, ovary glabrous.

SCINDE, amongst rocks, *Dalzell*.—DISTRIB. Arabia, Somali country, Abyssinia.

Stem rather slender, 11–18 in., branched. *Leaves* 1–1½ in., and nearly as broad, hairy on both surfaces; petiole ¼–½ in. *Spikes* 3–4 in.; lower bracts leafy, coarsely toothed. *Calyx* ¼ in. *Corolla* ½ in. *Capsule* hardly exserted.

6. *L. Griffithii*, *Hook. f.*; silkily villous, subscaudent, leaves short-petioled ovate-lanceolate acuminate, flowers unilateral in axillary and terminal recurved simple or paniced racemes, calyx much longer than the small bracts, lobes short triangular acute, ovary glabrous.

BHOTAN, *Griffith* (Kew Distrib. 3882).

Stem apparently tall, slender, flexuous, clothed, as are the leaves beneath, petioles and rachis of the racemes, with soft silky appressed hairs. *Leaves* 4–6 by 1½–2 in., pubescent above; petiole ¼–½ in. *Racemes* numerous, 2–4 in.; rachis slender; pedicels very short. *Calyx* ⅙ in. long. *Corolla* twice as long, hairy. *Capsule* turgidly ovoid, tip exserted.—A very distinct species.

7. *L. polyantha*, *Royle in Benth. Scroph. Ind.* 22, and in *DC. Prodr.* x. 377; villously pubescent, erect, leaves small ovate obtuse crenately serrate, flowers unilateral in axillary and terminal leafy spikes, calyx shorter than the ovate bracts, lobes obtuse, ovary pubescent. *Dodartea indica*, *Linn. Sp. Pl.* 883.

NORTHERN INDIA; from the Punjab and N. Scinde to the Concan, Behar and Dacca, common on walls and banks, &c., ascending the Himalaya to 6000 feet.

Stem 12–18 in., often branched from the base; branches erect or ascending, stout or slender. *Leaves* very numerous and uniform up the stem and branches, ½ rarely ⅔ in. long; petiole usually very short. *Spikes* 2–6 in.; flowers and bracts crowded. *Calyx* ⅙ in. long. *Corolla* twice as long. *Capsule* glabrous below, hairy above.—The ovary is certainly hairy.

8. *L. urticæfolia*, *Lehm. in Link. et Otto Abbild.* 95, t. 48; slender, glandularly villous or glabrate, leaves ovate obtuse crenate-serrate, flowers unilateral all axillary and solitary or 2-nate or in lax leafy slender spikes or racemes, calyx shorter than the ovate leafy bracts, lobes obtuse, ovary pubescent. *Benth. Scroph. Ind.* 22, and in *DC. Prodr.* x. 377; *Hook. Ic. Pl.* t. 875; *Dalz. & Gibs. Bomb. Fl.* 176; *Boiss. Fl. Orient.* iv. 425. *Stemodia ruderalis*, *Vahl Symb.* ii. 69; *Roxb. Fl. Ind.* iii. 94; *Wall. Cat.* 3923. *S. muralis*, *Roxb. in Don Prodr.* 89. *Brachycoris parviflora*, *Schrad. Ind. Sem. Gott.* 1830.

Throughout INDIA, on walls and banks, ascending to 6000 ft. in the Himalaya;

from Jamu to the Nilgherries and Tenasserim; not seen from Ceylon or Malacca.—
DISTRIB. Afghanistan, Burma.

Annual, 4–10 in. high, brittle. *Stem* sometimes simple with all the flowers solitary in the axils of large leaves, at others branched, the branches running out into leafy racemes. *Leaves* 1–1½ (rarely 2½) in. long, membranous; petiole ¼–½ in. *Flowers* shortly pedicelled. *Calyx* ⅙ in., lobes recurved. *Corolla* twice as long, sparsely hairy, yellow. *Capsule* hairy above the middle.

15. **ADENOSMA**, Br.

Annual, villous or glandular, aromatic herbs. *Leaves* opposite, rugose, crenulate. *Flowers* axillary or in leafy spikes racemes or heads, bracteolate or not. *Sepals* 5, sometimes very large in fruit. *Corolla-tube* cylindric; upper lip erect, entire or notched; lower spreading, 3-lobed, base not plaited. *Stamens* 4, didynamous, included; anther-cells separate, stipitate, one cell of all the anthers, or of the two anterior anthers only empty. *Style* dilated at the tip, winged below the entire or 2-lamellate stigma. *Capsule* ovoid ellipsoid or lanceolate, 2-grooved, loculicidal and septicidal, 4-valved. *Seeds* many, minute, reticulate.—Species 8 or 9, Asiatic, Malayan and Australian.

* *Flowers axillary; outer fruiting sepals very large, cordate or ovate.*

1. **A. ovatum**, Benth. in *Gen. Pl.* ii. 949; puberulous or glabrate, leaves ovate obtuse crenate-serrate, flowers axillary sessile, 3 outer sepals in fruit very large cordate, 2 inner very small lanceolate. *Herpestis ovata*, Benth. *Scroph. Ind.* 30, and in *Wall. Cat.* 3896. *H. javanica*, Blume *Bijd.* 748. *Pterostigma ovatum*, Benth. in *DC. Prodr.* x. 380; *Miquel Fl. Ind. Bat.* ii. 678.

MALAY PENINSULA; from Tenasserim, Griffith, to Malacca, Wallich.—DISTRIB. Sumatra, Java, Borneo.

Branched from the base, black when dry; branches 6–18 in., often rooting below, ascending. *Leaves* 1–1½ in., base cuneate or subcordate; petiole ¼ in. *Fruiting sepals* ¼–½ in., membranous, reticulate, pubescent; small equalling the lanceolate capsule.

2. **A. subrepens**, Benth. in *Gen. Pl.* ii. 949; sparingly hirsute, leaves ovate crenate, 3 outer sepals in fruit large ovate-lanceolate, 2 inner subulate. *Pterostigma subrepens*, Thwaites *Enum.* 426.

CEYLON; Pasdoon Corle and Nana Welle-Galle, Champion, Thwaites.

Very near to *A. ovatum*, but a coarser, larger, more hirsute plant, with narrower fruiting sepals.

** *Flowers racemose, spicate or capitate; upper fruiting sepal lanceolate, not very large.*

3. **A. cœruleum**, Br. *Prodr.* 443; erect, viscidly hirsute, leaves ovate-subulate simply or doubly crenate, spikes long, flowers blue, upper fruiting sepal lanceolate, the others linear. Benth. *Fl. Austral.* iv. 484. *A. villosum*, Benth. in *Wall. Cat.* 3851. *Pterostigma villosum*, Benth. *Scroph. Ind.* 21, and in *DC. Prodr.* x. 380 (in part); *Miquel Fl. Ind. Bat.* ii. 678. *P. strictum*, Griff. *Natul.* iv. 96, and *Ic. Pl. Asiat.* t. 417, f. 3. *Stemodia cœrulea*, Benth. in *DC. l. c.* 381. *Herpestis lanuginosa*, Blume *Bijd.* 747.

KHASIA MTS., alt. 0–4500 ft., Wallich, Clarke. CACHAR, Keenan. TENASSERIM, SINGAPORE, and MALACCA, Wallich, &c.—DISTRIB. Java, Borneo, Australia.

Stem 1–2 ft., strict. *Leaves* 1½–2½ in., base rounded or cordate; petiole ⅙–1 in. *Corolla* blue. *Fruiting calyx* ½ in. long; sepals variable in width.

4. **A. camphoratum**, *Hook. f.*; stem and leaves glabrous or sparingly pubescent, leaves ovate-lanceolate acute obtusely serrate narrowed into the petiole, racemes glandular-pubescent lax-fld., flowers yellow, upper fruiting sepal lanceolate, the others linear. *Stemodia camphorata*, *Vahl Symb.* ii. 69. *S. lutea*, *Moon Cat. Pl. Ceyl.* 45. *Pterostigma villosum*, *Thwaites Enum.* 218.

CEYLON; south parts of the island, common.

Stem 2-3 ft., rather slender. *Leaves* $2\frac{1}{2}$ -4 in., the petiole quite continuous from the blade and stem. *Racemes* numerous, lateral, ascending; pedicels $\frac{1}{2}$ - $\frac{1}{2}$ in. *Flowers* yellow. *Fruiting calyx* $\frac{1}{2}$ - $\frac{3}{4}$ in.—Miquel refers Vahl's *S. camphorata* to *A. cœruleum*; but its yellow flowers and country both indicate its being *A. camphoratum*.

5. **A. malabaricum**, *Hook. f.*; densely glandular-tomentose, leaves subsessile oblong-ovate subacute serrate, flowers sessile in foliaceous elliptic entire bracts, upper fruiting sepal lanceolate, the others subulate-lanceolate.

MALABAR, *Wight*.

Stem 8-12 in., stout, sparingly branched, leafy throughout its length, the leaves gradually passing into bracts. *Leaves* 1 in., narrowed into a very short petiole, margin entire below the middle. *Bracts*, lower $\frac{3}{4}$, upper $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in., a little longer than the capsule.

6. **A. capitatum**, *Benth. in Gen. Pl.* ii. 949; stout, erect, glandular-villous, leaves shortly petioled ovate or oblong subacute serrate, flowers in axillary whorls and dense cylindric villous spikes or globose heads, sepals lanceolate, upper largest. *Stemodia capitata*, *Benth. in Bot. Reg. under t.* 1470; *Wall. Cat.* 3926. *Pterostigma spicatum*, *Benth. Scroph. Ind.* 21. *P. capitatum*, *Benth. Scroph. Ind.* 21, and in *DC. Prodr.* x. 380. *Erinus bilabiatus*, *Roxb. Fl. Ind.* iii. 92.

OUTER LOWER HIMALAYA, from KUMAON to SIKKIM; BENGAL and ASSAM to MALACCA, TRAVANCORE and CEYLON; usually in rice-fields, absent in the plains of Western India.—DISTRIB. Malaya, Burma, China.

Stem 1-2 ft. *Leaves* often reflexed, 1-2 in., base cuneate; petiole hardly any. *Heads* or spikes $\frac{3}{4}$ -4 in. long, involucrate by floral leaves. *Flowers* blue, densely packed; bracts linear, hardly exceeding the flowers. *Calyx* $\frac{1}{2}$ in. long, villous with long hairs, $\frac{1}{2}$ longer than the ovoid capsule.—The specific names of (*Erinus*) *bilabiatus*, *Roxb.*, and (*Stemodia*) *capitata*, were published in the same year. I give the preference to Bentham, who placed the plant approximately in the right genus.

7. **A. microcephalum**, *Hook. f.*; slender, glandular-hairy, leaves small shortly petioled ovate or elliptic subacute serrulate, flowers usually capitate, heads small axillary and peduncled or interruptedly spicate, sepals lanceolate subequal.

TENASSERIM, *Helfer*; Moulmein, *Lobb.*—DISTRIB. Cambodia.

Stem 6-10 in., erect, simple below, branched paniculately above. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in., base cuneate; petiole $\frac{1}{10}$ in. *Heads* $\frac{1}{3}$ - $\frac{1}{2}$ in. long, sometimes running out into spikes, and lower flowers sometimes solitary and axillary. *Flowers* blue; bracts small, slender. *Calyx* $\frac{1}{2}$ in. long, $\frac{1}{3}$ longer than the ellipsoid acute capsule.—Very near *A. capitatum*, but much smaller, more slender.

8. **A. macrophyllum**, *Benth. in Wall. Cat.* 3853; leaves ovate acuminate crenate-serrate narrowed at the base flaccid glabrescent, corolla twice as long as the calyx. *Pterostigma macrophyllum*, *Benth. Scroph. Ind.* 21, and in *DC. Prodr.* ix. 380.

BURMA; banks of the Irawaddi, *Wallich*.

This plant has not been found in the Wallichian Herbarium.

16. **STEMODIA**, Linn.

Character of *Adenosma*, but anther-cells all polleniferous. *Leaves* sometimes whorled. *Seeds* ellipsoid, terete, black or brown, most minute.—Species about 26, American, African, Asiatic and Australian.

1. **S. viscosa**, Roxb. *Cor. Pl.* ii. 33, t. 163, and *Fl. Ind.* iii. 94; erect, viscidly pubescent, leaves sessile oblong base cordate serrulate, flowers pedicelled axillary and in terminal racemes, corolla twice as long as the calyx. *Wall. Cat.* 3929; *Benth. Scroph. Ind.* 24, and in *DC. Prodr.* x. 381; *Wight Ic.* t. 1408; *Dalz. & Gibs. Bomb. Fl.* 176. *S. maritima*, Heyne in *Wall. Cat.* 3931. *S. arvensis*, Steud. *Nomencl.*

From CENTRAL INDIA and the Soane river throughout the DECCAN.—DISTRIB. Afghanistan.

Erect, branched from the base, 6–18 in. high, aromatic; stem angular. *Leaves* $\frac{1}{2}$ –2 in., rarely ovate or obovate, sometimes very small throughout the plant; floral bracts shorter than the pedicels. *Flowers* very numerous, nearly $\frac{1}{2}$ in. long, 2-bracteolate; pedicels equalling or exceeding the calyx. *Sepals* lanceolate, acute, half as long as the violet corolla. *Capsule* $\frac{1}{2}$ – $\frac{3}{4}$ in. long, equalling the calyx, acuminate.

2. **S. serrata**, Benth. in *DC. Prodr.* x. 381; erect, viscidly pubescent, leaves sessile obovate-oblong acute serrulate, flowers subsessile axillary, corolla one-half longer than the calyx. *Sutura serrata*, *Herb. Hookstett.*

The CONCAN, *Stocks*, Law.—DISTRIB. Nubia, Upper Nile and Senegambia.

A robust leafy annual a foot high and under, usually densely branched from the base; stem obtusely 4-angled. *Leaves* $\frac{1}{2}$ –2 in., narrowed to the sessile base, entire below the middle. *Flowers* often in all the axils, smaller than in *S. viscosa*. *Capsule* linear-oblong.

17. **LIMNOPHILA**, Br.

Glabrous or pubescent often marsh or water plants, aromatic and with transparent dots. *Leaves* opposite or whorled, toothed, cut, or the submersed multifid. *Flowers* pedicelled or sessile, axillary, solitary or racemose or spicate, bracteolate or not. *Sepals* narrow, subequal or the posterior larger. *Corolla-tube* cylindric, upper lip the outer in bud, suberect, entire or 2-fid; lower spreading, 3-fid, base not plaited. *Stamens* 4, didynamous, included; anther-cells usually separate and stipitate. *Style* deflexed at the tip, stigma shortly 2-lamellate. *Capsule* ovoid or oblong, septi- and loculi-cidal, valves bearing placentiferous septa. *Seeds* numerous, small, angular, truncate, reticulate.—Species about 25, African, Asiatic and Australian.

A very variable genus, the foliage and habit of the species depending upon the depth, &c., of the water in which they grow.

* Nerves of leaf pinnate, arching from the midrib. No whorled and pinnatifid or multifid leaves.

† *Flowers sessile or subsessile (sometimes racemose in L. diffusa)*. *Leaves opposite very rarely 3-nately whorled*.

1. **L. Roxburghii**, G. Don *Gen. Syst.* iv. 543, not of Benth.; pubescent or glabrous, leaves all opposite petioled elliptic or ovate obtuse or subacute crenulate coriaceous punctate beneath, nerves strong, flowers axillary sessile in peduncled heads rarely solitary, calyx pubescent, lobes lanceolate finely acuminate not striate in fruit. *L. menthastrum*, Benth. in *DC. Prodr.* x.

386; *Dalz. & Gibs. Bomb. Fl.* 175. *Herpestis rugosa*, *Roth Nov. Sp.* 290. *Capraria gratissima*, *Roxb. Fl. Ind.* iii. 92, (*excl. citat. of Rheede*). *Antirrhinum gratissimum*, *Roxb. Ic. ined.* *Stemodia menthastrum*, *Benth. Scroph. Ind.* 23; *Wall. Cat.* 3927. *Adenosma triflora*, *Seem. Fl. Viti* 284, *not of Nees*.

Watery places in the plains of N. INDIA, and outer HIMALAYA, ascending to 6000 ft., from Chamba to Mishmi; ASSAM, BENGAL, SILHET, CENTRAL INDIA, and the CONCAN and CIRCARS.—DISTRIB. Java, China, the Philippines, Pacific Islands.

Annual, aromatic; root creeping; stems many, 1–2 ft., stout; “nodes under water emitting many fibrous roots or multifid filiform leaves,” *Roxburgh. Leaves* 2–3 in., often rugose, narrowed into a petiole of $\frac{1}{2}$ –1 in.; nerves many, stout. *Flowers* usually in axillary sessile or shortly peduncled heads. *Corolla* $\frac{1}{2}$ in. long, pubescent, blue-purple, mouth yellow. *Capsule* ellipsoid.—*Roxburgh's* drawing identifies this plant with his *Capraria gratissima*. He quotes *Rheede's* *Pola-tajira* (ix. t. 78) for the same, but I have seen no specimens from Malabar, and *Rheede* makes no mention of the aromatic smell and taste, which he could not fail to have noticed if this plant had been under his observation.

2. ***L. balsamea***, *Benth. in DC. Prodr.* x. 386; softly pubescent, leaves all opposite sessile elliptic subacute narrowed at the base obscurely crenulate punctate beneath, nerves slender, flowers axillary in shortly peduncled heads or spikes, calyx hirsute, lobes lanceolate finely acuminate striate in fruit. *Stemodia balsamea*, *Benth. Scroph. Ind.* 23; *Wall. Cat.* 3928.

PEGU, *M'Lelland*. TENASSERIM, *Wallich*; Mergui, *Griffith*.

Stem 1–2 ft., stout. *Leaves* 1–2 in., entire below the middle, nerves 3–5-pair. *Corolla* $\frac{1}{2}$ in., twice as long as the calyx. *Capsule* broadly elliptic, obtuse.—*L. villifera*, *Miquel*, of Sumatra, is probably this.

3. ***L. conferta***, *Benth. in DC. Prodr.* x. 387; erect or procumbent, glabrous except the inflorescence, leaves all opposite sessile or subpetioled oblong or elliptic-oblong obtuse crenate-serrate punctate beneath, base narrowed or subamplexicaul, nerves slender, flowers axillary solitary or in short axillary heads spikes or cymes, calyx glabrate, segments lanceolate finely acuminate striate in fruit. *Dalz. & Gibs. Bomb. Fl.* 177. *L. repens*, *Benth. l. c.* 387. *L. serrata*, *Benth. l. c.* (*the Burma plant only*); *Thwaites Enum.* 218. ? *L. punctata*, *Vahl Enum.* i. 90, and *Bonnaya punctata*, *G. Don Gen. Syst.* iv. 538. *Stemodia sessilis*, *Benth. Scroph. Ind.* 23; *Wall. Cat.* 3939. *S. tenuiflora*, *Benth. Scroph. Ind.* 23; *Wall. Cat.* 3940. *S. repens*, *Benth. in Wall. Cat.* 3935. *Gratiola lucida*, *Heyne*.—? *Rheede Hort. Mal.* ix. t. 78.

Marshes, from ASSAM, BENGAL and CHITTAGONG to TENASSERIM and BURMA; throughout the DECCAN and CEYLON.

A very variable plant; in its larger state diffuse, 12–18 in. long, with subpetioled leaves 1–1 $\frac{1}{2}$ in. long, and often spicate flowers; in its smaller (*St. sessilis*, *Wall.*) short, stout, with quite sessile oblong leaves $\frac{1}{2}$ in. long, and crowded axillary flowers; in its smallest state (*St. tenuiflora*, *Wall.*, and *serrata*, *Bth.*) erect or procumbent, with oblong sessile leaves $\frac{1}{2}$ – $\frac{3}{4}$ in. long and solitary axillary flowers. Between these there are all intermediates. *Thwaites* has reduced all to *Gaudichaud's L. serrata*, a Polynesian plant with solitary flower and sepals not striated.—*Leaves* very minutely punctate, entire below the middle, nerves few, faint. *Corolla* about $\frac{1}{2}$ in. long. *Capsule* as in *L. balsamea*, but much smaller.—*Heyne's Gratiola lucida*, referred here by *Bentham*, is a small creeping form approaching *L. micrantha*.

4. ***L. diffusa***, *Benth. in DC. Prodr.* x. 387, *not of G. Don*; erect or decumbent, pubescent, leaves all opposite petioled elliptic-ovate or oblong-lanceolate subacute crenate-serrate punctate beneath, nerves slender, flowers

in short axillary cymes or long spikes or racemes, calyx hirsute, lobes lanceolate finely acuminate striate in fruit. *L. camphorata*, *Benth. in Wall. Cat.* 3932, and *Scroph. Ind.* 24, not of *Vahl*. *Stemodia cimicina*, *Benth. in Wall. Cat.* 3933.

EASTERN BENGAL to CHITTAGONG, BURMA and TENASSERIM. TRAVANCORE, Wight. CANARA, *Hohenacker*.—DISTRIB. Sumatra.

Closely allied to *S. conferta*, but with pubescent more strongly nerved crenate-serrate leaves, and often racemose flowers.—Roxburgh's *Capraria diffusa* (*Limnophila diffusa*, G. Don) is *Ebermeyera thyrsoidea*, Kurz in Journ. As. Soc. 1870.

5. ***L. micrantha***, *Benth. in DC. Prodr.* x. 387; small, creeping below, glabrous, leaves opposite small sessile entire or subserrate, nerves very obscure, flowers axillary subsessile, calyx $\frac{1}{2}$ in. long glabrous, lobes subulate fruiting striate. *Stemodia micrantha*, *Benth. Scroph. Ind.* 23; *Wall. Cat.* 3936. *Herpestis pygmæa*, *Griff. Notul.* iv. 104.

Marshy places in BENGAL, ASSAM, SILHET, CHITTAGONG and TENASSERIM.—DISTRIB. Cochín-China.

Stem 3–6 in., stout, branching from the root. Leaves crowded, $\frac{3}{4}$ – $\frac{1}{2}$ in., punctate, thick, teeth few. Flowers $\frac{1}{2}$ – $\frac{1}{6}$ in. long, red-purple.—A very distinct little species.

†† Flowers pedicelled. Leaves all opposite.—See also 10, *L. gratissima*; and 11, *L. hirsuta*.

6. ***L. laxa***, *Benth. in DC. Prodr.* x. 388; stem 8–12 in. slender flaccid sparsely hairy, leaves all opposite subsessile or petioled oblong-lanceolate obtuse subcrenate, nerves very slender, flowers solitary axillary, pedicels longer than the calyx, calyx hirsute, lobes subulate fruiting striate. *Herpestis* sp. 2, *Griff. Notul.* iv. 103.

TENASSERIM; at Mergui, *Griffith*; Tavoy, *Parish*. CEYLON, *Walker*.

Stem ascending, rooting at the lower nodes. Leaves $\frac{3}{4}$ – $1\frac{1}{2}$ in., flaccid, narrowed into a short petiole.—Resembles a reduced form of *L. hirsuta*.

7. ***L. erecta***, *Benth. in DC. Prodr.* x. 388; glabrous, stem 4–6 in. subsimple stout erect, leaves all opposite subsessile linear-oblong subserrate, nerves obscure, flowers solitary axillary, pedicels shorter than the calyx, fruiting recurved, calyx $\frac{1}{2}$ in. glabrous, lobes lanceolate acuminate fruiting striate. *Maxim. Diagn. Pl. Nov. Dec.* xix. 406. *Stemodia gratioloides*, *Benth. Scroph. Ind.* 25; *Wall. Cat.* 3938.

BENGAL; Serampore, *Griffith*. TENASSERIM; at Tavoy, *Wallich*.—DISTRIB. China.

A small stout species, with leaves rarely 1 in. long.

8. ***L. pulcherrima***, *Hook. f.*; stem 4–6 in. pubescent, stout, erect or ascending, leaves all opposite sessile elliptic-oblong subcrenate, nerves obscure, flowers axillary solitary, pedicels shorter than the calyx fruiting erect, calyx $\frac{1}{6}$ in. hirsute, lobes subulate acuminate fruiting striate. *L. laxa*, *Benth. in DC. Prodr.* x. 388, in part. *L. villosa* var. *sumatrana*, *Miquel Fl. Ind. Bat.* ii. 68. *Herpestis pulcherrima*, *Griff. Notul.* iv. 104.

BENGAL; at Comilla, *Clarke*. MALACCA, *Griffith*, *Cuming*. SINGAPORE, *G. Thomson*.—DISTRIB. Sumatra.

Very closely allied to *L. laxa* and *L. erecta*, differing from the former in the stout erect habit, and more sessile shorter leaves; and from the latter in the pubescence and the erect fruiting pedicels.

9. ***L. pygmæa***, *Hook. f.*; glabrous, much branched, creeping, branches 4-6 in. divaricate, leaves all opposite sessile oblong-lanceolate acute serrate, nerves very obscure, flowers axillary solitary, pedicels equalling or exceeding the calyx erect in fruit, calyx $\frac{1}{2}$ in. hirsute, lobes subulate-lanceolate fruiting striate. *Herpestis pygmæa*, *Griff. Notul.* iv. 104. *Stemodia diffusa*, *Benth. in Wall. Cat.* 3937.

TENASSEMBIM; at Tavoy, Gomez, Helfer; Mergui, Griffith. MALACCA, Griffith, Cuming.

Very near to *L. laxa*, but much smaller, more glabrous, with leaves less than $\frac{1}{2}$ in. long.

††† Leaves some or most 3-4-nately whorled, sometimes all opposite in *L. gratissima* and *hirsuta*.

10. ***L. gratissima***, *Blume Bijl.* 749; erect, 1-2 ft., glabrous, leaves opposite and 3-nately whorled $\frac{1}{2}$ -amplexicaul linear-oblong subacute serrulate, flowers in axillary and terminal many-fl. racemes rarely solitary, calyx usually shorter than the pedicels glabrate, lobes lanceolate acuminate fruiting striate. *Benth. Scroph. Ind.* 26; *Wall. Cat.* 3906; *Dalz. & Gibs. Bomb. Fl.* 177. *L. punctata*, *Blume l. c.* 750; *Benth. in DC. Prodr.* x. 388; *Miquel Fl. Ind. Bat.* ii. 682; *Maxim. Diagn. Pl. Nov. Dec.* xix. 406. *Gratiola aromatica*, *Pers. Synops.* i. 14. *Ambulia aromatica*, *Lamk. Encycl.* i. 128.—*Rheede Hort. Mal.* x. 6.

Watery places. CACHAR, Keenan. PEGU, Kurz. MALACCA, Maingay. The DECCAN PENINSULA, from the Concan southwards. CEYLON, common.—DISTRIB. Malay and Philippine Islands, China, Japan, N. Australia.

Stem stout, simple, rarely branched above. *Leaves* $1\frac{1}{2}$ -2 $\frac{1}{2}$ in., nerves few and faint. *Racemes* sometimes 1 foot long and paniculately branched, with the flowers whorled, at others few-fl., or flower solitary and axillary; pedicels $\frac{1}{2}$ -1 in., glandular; bracteoles minute. *Calyx* $\frac{1}{2}$ in. long, glandular, fruiting hemispheric. *Corolla* $\frac{1}{2}$ in. long. *Capsule* oblong, acute.—Blume's *L. gratissima* is the typical form of this plant, *L. punctata* being a reduced state with solitary flowers in the axils.

11. ***L. hirsuta***, *Benth. in DC. Prodr.* x. 388; erect, stem 6-18 in. hirsute rarely glabrate, leaves opposite or 3-4-nately whorled sessile or narrowed into a short petiole elliptic linear-oblong or subspathulate serrulate, nerves very obscure, flowers axillary solitary or cymose or paniced at the top of the stem, pedicels long or short, calyx hirsute, lobes lanceolate finely acuminate fruiting striate. *Stemodia hirsuta*, *Heyne*; *Benth. Scroph. Ind.* 24; *Wall. Cat.* 3930. *Ambulia ebracteata*, *Herb. Ham.*

Wet places, from ASSAM to CHITTAGONG and the NICOBAR ISLANDS. DECCAN PENINSULA, from the Concan southwards. CEYLON, common.—DISTRIB. Borneo, China.

Best distinguished from *L. gratissima* by its pubescence, less racemose inflorescence, and more orbicular capsule. There are what appear to be glabrous states of it from Chota Nagpore (Ranchee, alt. 2000 ft., Clarke) and Balaghat (Wight) with always opposite leaves.

12. ***L. polyantha***, *Kurz mss.*; glandular-pubescent, stem slender 6-18 in., leaves 4-nately whorled $\frac{1}{2}$ -amplexicaul linear serrulate, nerves obscure, cymes terminal paniced, flowers very numerous small shortly pedicelled, calyx $\frac{1}{2}$ in., lobes subulate fruiting not striate.

Marshes. SIKKIM TERAI, *Herb. Griffith*; Siligoree, Clarke. PEGU, Kurz.

A graceful species, conspicuous for the copious minute flowers in a subpyramidal inflorescence. *Leaves* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., all whorled except in starved forms. *Peduncles* and

pedicels very slender; bracteoles nearly as long as the calyx. *Corolla* about $\frac{1}{2}$ in. long. *Capsule* obovoid-oblong.

** Leaves with 3-5 parallel nerves running from the base to the tip, or pinnatifid or multifid.

† *Flowers sessile or very shortly pedicelled.*

13. **L. Helferi**, *Hook. f.*; glabrous, 4-6 in., stem or branches very slender ascending, leaves opposite and 3-4-nately whorled sessile linear obscurely serrulate, flowers minute very numerous in peduncled axillary cymes, pedicels shorter than the calyx and peduncles capillary, calyx $\frac{1}{10}$ in. long, lobes subulate erect, fruiting very narrow striate.

TENASSERIM, *Helfer*.

A very elegant little plant, the smallest flowered of any allied to *L. polyantha*, of which it is a glabrous miniature. *Leaves* $\frac{1}{6}$ - $\frac{1}{2}$ in. long. *Pedicels* rarely as long as the narrow calyx. *Corolla* $\frac{1}{8}$ - $\frac{1}{6}$ in. long. *Capsule* obovoid-oblong.

14. **L. hypericifolia**, *Benth. in DC. Prodr.* x. 386; glabrous, stem 1-2 ft. stout erect simple, leaves all opposite and entire $\frac{1}{2}$ -amplexicaul elliptic or ovate-oblong obtuse crenulate, flowers large sessile in the axils of opposite or alternate leafy bracts forming terminal and axillary sessile or peduncled spikes, calyx-lobes ovate acuminate, fruiting membranous not striate. *Cybbanthera connata*, *Ham. in Don Prodr.* 87. *Herpestis connata*, *Spreng. Syst. cur. post.* 234. *Stemodia hypericifolia*, *Benth. Scroph. Ind.* 23; *Wall. Cat.* 3934.

Marshy places in the WESTERN and CENTRAL HIMALAYA, from Kangra, *Edgeworth*, to Nepal, *Wallich*. KHASIA MTS., alt. 4-5000 ft., *J. D. H. & T. T. NILGIRI MTS.*, *Wight*, &c.

Stem rarely branched. *Leaves* all opposite in every specimen, $\frac{1}{2}$ -2 by $\frac{1}{4}$ -in., rather thick, minutely punctate beneath. *Flowers* $\frac{3}{4}$ in. long, rose-purple, pedicels very rarely $\frac{1}{6}$ in. *Corolla* twice as long as the calyx, purple, fruiting membranous. *Capsule* broadly elliptic.—I find no trace of pinnatifid or multifid leaves on any of the numerous specimens.

15. **L. cana**, *Griff. Notul.* iv. 98; stem 6-10 in. very stout hirsute, leaves 3-6-nately whorled sessile upper elliptic or linear-oblong obtuse serrulate 3-5-nerved, lower pinnatifid, flowers sessile crowded in terminal rarely axillary erect leafy spikes with opposite or whorled bracts, calyx-tubes subulate.

EAST BENGAL, in the Jheels, *Griffith, J. D. H. & T. T.*; Dacca and Pubna, *Clarke*.

Stem extensively creeping, sending up erect simple branches. *Leaves* $\frac{3}{4}$ -1 by $\frac{1}{4}$ - $\frac{1}{2}$ in., thick, gradually passing upwards into the bracts which are almost imbricate. *Flowers* quite sessile, violet. *Calyx* $\frac{1}{6}$ in. long, fruiting not seen.—I have referred this very distinct species to Griffith's *L. cana* at Mr. Clarke's suggestion; from the habitat and other characters it may be the true plant, but I have seen no specimens from Griffith, who describes the leaves as 3-nately whorled and the flowers as furnished with 2 most minute tooth-like bracteoles, which latter I do not find. It should be sought for at Jumalapore, Griffith's locality.

16. **L. polystachya**, *Benth. Scroph. Ind.* 25, and in *DC. Prodr.* x. 790; glabrous, floating, upper leaves opposite or 3-4-nately whorled sessile linear or oblong crenulate, lower capillaceo-multifid, flowers sessile in terminal and axillary long-peduncled slender spikes with short bracts. *Wall. Cat.* 3909; *Wight Ic. t.* 860. *Stemodia aquatica*, *Willd. Sp. Pl.* iii. 316. *Conobea indica*, *Spreng. Syst.* ii. 771.

Flooded grounds in the S. DECCAN, *Rottler*, &c.

Stem 1-2 ft. long, slender, erect or ascending from the long floating portion which is densely clothed with the dissected leaves. *Leaves*, upper $\frac{1}{2}$ -1 $\frac{1}{2}$ in., from narrow linear to oblong, 3-5-nerved; in small specimens 4-8 in. high all the leaves are pinnatisect. *Spikes* sometimes divaricately branched, 2-6 in. long; bracts ovate, usually shorter than the flowers. *Calyx* $\frac{1}{2}$ in., quite glabrous, fruiting hemispheric; lobes ovate, acuminate, not striate. *Corolla* much longer than the calyx, white. *Capsule* globose, as long as the calyx.

17. *L. sessiliflora*, *Blume Bijdr.* 750; stem 4-8 in. slender hirsute above rarely glabrate, leaves 3-6 in. a whorl all lobulate or pinnatisect or the uppermost very rarely opposite and entire, flowers axillary solitary sessile or very shortly pedicelled, fruiting calyx hemispheric membranous not striate, lobes ovate long-acuminate. *Benth. Scroph. Ind.* 25, and in *DC. Prodr.* x. 389; *Miquel Fl. Ind. Bat.* ii. 683; *Wall. Cat.* 3902. *Hottonia sessiliflora*, *Vahl Symb.* ii. 36.

Throughout INDIA, in rice-fields and swamps, from the Punjab to Bengal, Central India, Chittagong. CEYLON, common.—DISTRIB. Java, Japan.

Leaves rarely more than $\frac{1}{2}$ in. long, irregularly pinnatifidly gashed or pinnatisect, but not capillaceo-multifid, or rarely so. *Sepals* with long points. *Corolla* $\frac{1}{2}$ in. long. *Capsule* orbicular, turgid, $\frac{1}{8}$ in. diam.—This strongly resembles a sessile-flowered form of *L. gratioloides*, or a short pubescent form of *L. heterophylla* wanting the multifid submerged leaves. Bentham's *L. gratioloides* var. *myrophylloides* seems more akin to this; it is a Ceylon plant with tufted creeping stems and roots, erect rigid branches 4-8 in. high, densely clothed with whorls of short capillaceo-multifid rigid leaves, giving a cylindric form to the branches, which are $\frac{1}{2}$ -1 in. diam. The flowers are sessile or pedicelled in the upper axils. The uppermost leaves are sometimes entire.

18. *L. heterophylla*, *Benth. Scroph. Ind.* 25, and in *DC. Prodr.* x. 390; glabrous, stem elongate slender, uppermost leaves usually opposite small sessile $\frac{1}{2}$ -amplexicaul oblong crenulate, those next below 4-6 in. a whorl pinnatifid, the submerged long capillaceo-multifid, flowers axillary solitary sessile or subsessile, or the uppermost in a short leafy spike, fruiting calyx hemispheric membranous not striate, lobes ovate shortly acuminate. *Wall. Cat.* 3905; *Griff. Notul.* iv. 97, and *Ic. Pl. Asiat.* 416, f. 2. *L. Roxburghii*, var. *tenuior*, *Plant. Hohenack.* 679, not of *Don*. *Columna heterophylla*, *Roxb. Fl. Ind.* iii. 97.

Throughout INDIA and CEYLON, in rice-fields and swamps.—DISTRIB. Borneo, Japan, China.

The much larger size, glabrous stem, abundant multifid leaves, frequent presence of upper opposite and alternate small entire floral leaves, and the shortly acuminate calyx-lobes distinguish this from *L. sessiliflora*, but there are a good many specimens which in a dried state may be referred to either.

VAR. *reflexa*; very slender, submerged leaves short $\frac{1}{2}$ in. very finely divided, lower pedicels longer than the calyx recurved in fruit. *L. reflexa*, *Benth. Scroph. Ind.* 25, and in *DC. l. c.* 389; *Wall. Cat.* 3904.—Tavoy, *Wallich*; Malacca, *Cuming*.

19. *L. tillæoides*, *Hook. f.*; very small, 2-4 in. high, quite glabrous, leaves all whorled $\frac{1}{2}$ - $\frac{3}{4}$ in. long upper pinnatifid lower multifid, flowers numerous axillary solitary, pedicels shorter than the calyx recurved in fruit, calyx not striate in fruit, lobes short triangular acute.

ASSAM; banks of the Kullung river, *Simons*.

A small loosely tufted species, stem and branches slender but rigid, with the whorls of leaves rather distant. Upper flowers sessile, lower pedicelled. *Corolla* $\frac{1}{2}$ - $\frac{3}{4}$ in.

long. *Calyx* hemispheric in fruit, membranous. *Capsule* broadly oblong, nearly as long as the *calyx*.—A very singular little species.

†† *Flowers pedicelled, pedicels usually longer than the calyx.*

20. **L. racemosa**, *Benth. Scroph. Ind.* 26, and in *DC. Prodr.* x. 390; stem 1-2 ft. stout erect, leaves sessile upper opposite or 3-nately whorled $\frac{1}{2}$ -amplexicaul ovate or linear-oblong serrulate, lower capillaceo-multifid, flowers large usually in erect terminal racemes, *calyx*-lobes ovate acuminate, fruiting not striate. *Wall. Cat.* 3907; *Wight Ic.* t. 861; *Dalz. & Gibs. Bomb. Fl.* 177. *L. Benthamiana*, *Miquel Plant. Hohenack.* n. 71 c. *L. Roxburghii*, *Benth. in DC. Prodr.* x. 388, not of *Dpn.* *Cyrrilla aquatica*, *Roxb. Cor. Pl.* ii. 47, t. 189, and *Fl. Ind.* iii. 115.

Pools, &c., in BENGAL; at Dinagapore, *Clarke*. *MAEWAB*; Mt. Aboo, *Kurz*. DECCAN PENINSULA AND CEYLON, common.—DISTRIB. Java.

Stem hirsute or glabrous. *Leaves* $1\frac{1}{2}$ -2 by $\frac{1}{4}$ - $\frac{1}{2}$ in. most minutely punctate beneath, nerves strong. *Racemes* 2-6 in., strict; *pedicels* $\frac{1}{4}$ - $\frac{3}{8}$ in., much longer than the bracts. *Calyx* $\frac{1}{4}$ in.; lobes with slender points, fruiting membranous. *Corolla* $\frac{1}{4}$ in. diam., $\frac{1}{2}$ - $\frac{3}{4}$ in., bluish or purple, fragrant. *Capsule* almost globose.—The upper part of this resembles *L. hypericifolia* with pedicelled flowers; some states are with difficulty distinguished from *C. heterophylla*, and small ones from *L. gratioides*.

21. **L. gratioides**, *Br. Prodr.* 442; glabrous, stem short erect or diffusely branched or elongate and slender, leaves all whorled and pinnatifid or a few upper entire and opposite, or upper pinnatifid and lower multifid, flowers axillary solitary pedicelled rarely subracemose, *calyx* hemispheric in fruit, lobes ovate acuminate not striate. *Benth. Scroph. Ind.* 25, and in *DC. Prodr.* x. 389; *Gaud. in Freyc. Voy.* 447, t. 57, f. 1; *Wall. Cat.* 3901; *Dalz. & Gibs. Bomb. Fl.* 177; *Miquel Fl. Ind. Bat.* ii. 683. *L. trifida*, *Spreng. Syst.* ii. 802. *L. myriophylloides*, *Roth Nov. Sp.* 294. *Gratiola virginiana*, *Linn. Sp. Pl.* 25 (the *Malabar plant*). *G. trifida*, *Willd. Sp. Pl.* i. 104. *Hottonia indica*, *Linn. Sp. Pl.* 208; *Burm. Thes. Zeyl.* t. 55, f. 1. *Hydropityon pedunculatum*, *Seringe in DC. l. c.* i. 422. *Columna balsamea*, *Roxb. Fl. Ind.* iii. 97.—*Rheede Hort. Mal.* ix. t. 85, and xii. t. 36. *Burm. Fl. Zeyl.* t. 55, f. 1.

Throughout INDIA, in swamps, rice-fields, &c.—DISTRIB. Beluchistan, Malayan Islands, China, Australia, Tropical Africa.

In its most common form a simple or branched plant 4-8 in. high, smelling of turpentine, with whorled pinnatifid leaves, $\frac{1}{4}$ - $\frac{3}{4}$ in. long, which in wetter places appear to acquire a few emersed opposite entire leaves at the top of the stem, and numerous capillaceo-multifid ones at its base. The stems are stout or slender. Very small specimens from Rohilkund (Kuttra, *Edgeworth*) have very fine wiry simple stems 3 in. high, and capillary peduncles three times as long as the leaves; others have stout stems and peduncles, the latter shorter than the leaves. *Calyx* $\frac{1}{2}$ - $\frac{1}{3}$ in. long, rarely larger. *Corolla* $\frac{1}{2}$ in.—Large specimens of var. *intermedia* approach *L. racemosa*; short-pedicelled ones are hardly distinguishable from *L. sessiliflora*; and the var. *elongata* is almost identical with *L. heterophylla*. *Bentham's* var. *myriophylloides* does not seem to me distinguishable from the common form of *gratioides*.

VAR. intermedia; stem robust, leaves all close-set, flowers sometimes racemose with opposite entire bracteal leaves.—N.W. India; Moradabad, *Thomson*; Garwhal, *Strachey & Winterb.* (*L. Roxburghii in Herb.*); Subsivaliks, *Edgeworth*; Kangra and Dharmisala, alt. 3-4000 ft., *Clarke*. (Beluchistan, *Stocks*).

VAR. elongata, *Benth. in DC. l. c.*; stem very long, upper leaves opposite entire, submerged capillaceo-multifid. *L. elongata*, *Benth. in Wall. Cat.* 3903.—Oude, *Wallich*; Moradabad, *Thomson*; Deccan, *Heyne*, &c.

22. **L. Griffithii**, *Hook. f.*; glabrous, stems densely tufted, branches

short 1-2 in. densely clothed with short whorled multifid leaves, flowers solitary long-pedicelled, fruiting pedicels deflexed. *L. sessiliflora*, *Griff. Notul.* iv. 99, t. 418, f. 5. *L. gratioloides* var. *myriophylloides*, *Benth. in DC. Prodr.* x. 389 (the Malacca plant). *Quinquelobus* glaber, *Benj. in Linnæa*, xx. 316. *Benjaminia glabra*, *Benj. l. c.* 761.

MALACCA, Cuming, Griffith, Maingay.

A small black densely tufted herb, with creeping tufted stems that send down long rigid roots, and up short stout and stiff or slender flaccid branches. *Leaves* about $\frac{1}{2}$ in. long, usually densely imbricate. *Pedicels* $\frac{1}{2}$ in. and less, slender. *Calyx* $\frac{1}{10}$ - $\frac{1}{8}$ in. long, fruiting not seen. *Corolla* $\frac{1}{2}$ in. long.—This may, as Griffith supposed, be referable to *L. sessiliflora*, as some of the specimens have pedicels shorter than the leaves, but its habit is very singular, it is of remarkably small size, and the specimens from all three collectors agree. It closely resembles a West African white-flowered plant found near Nufa on the Niger by Barter.

DOUBTFUL SPECIES.

L. HYSSOPIFOLIA, *Roth Nov. Sp.* 297; is not determinable; it is a Peninsular species, and possibly *L. gratissima* or *racemosa*.

18. **HERPESTIS**, *Gaertn. f.*

Glabrous, often punctate herbs. *Leaves* entire, or toothed, or submersed and multifid. *Flowers* axillary or racemose, yellow blue or white; pedicels bracteolate or not. *Sepals* 5, upper often very large. *Corolla-tube* cylindrical; lips spreading, upper the outer in bud, notched or 2-lobed; lower 3-lobed. *Stamens* didynamous, included; anther-cells contiguous, distinct. *Style* dilated at the top and 2-lobed or entire. *Capsule* 2-grooved; valves 2 or 4, separating from an entire column. *Seeds* numerous, very minute.—Species about 50, all warm countries.

The Indian species all belong to the section *Bramia*, with subequal corolla-lobes and stamens, sagittate or didymous anthers, and capitate 2-lobed stigma.

1. **H. Monniera**, *H. B. & K.*; *Benth. Scroph. Ind.* 30, and in *DC. Prodr.* x. 410; creeping, leaves obovate-oblong or spatulate quite entire, peduncles longer than the 2-bracteolate calyx, upper sepal ovate, capsule ovoid acute. *Boiss. Fl. Orient.* iv. 426; *Wall. Cat.* 3900; *Dalz. & Gibs. Bomb. Fl.* 178; *Miquel Fl. Ind. Bat.* ii. 685; *Bot. Mag.* t. 2557. *H. spatulata*, *Blume Bijl.* 748. *Gratiola Monniera*, *Linn.*; *Roxb. Cor. Pl.* ii. 41, t. 178, and *Fl. Ind.*, and *Ed. Carey & Wall.* i. 141. *Septis repens*, *Lour. Fl. Coch.* 392. *Bramia indica*, *Lamk. Dict.* i. 459.—*Rheede Hort. Mal.* x. t. 14.

Marshes throughout INDIA, ascending to 4000 ft.; from the Punjab to Ceylon and Singapore, common.—**DISTRIB.** All warm countries.

Quite glabrous, rather succulent; branches 4-10 in. long. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in., sessile, obtuse, entire in the Indian plant, nerves very obscure. *Peduncles* usually longer than the leaves. *Calyx* $\frac{1}{2}$ - $\frac{3}{4}$ in. long. *Corolla* twice as long, lobes subequal. *Capsule* included. *Seeds* pale, irregular.—Mr. Clarke points out to me that the *Calytriplex obovata*, R. & P. of Peru, cited as a synonym of *H. Monniera* in De Candolle's *Prodromus*, is, according to the figure of the authors (overlooked by Benthams), a very different plant.

2. **H. Hamiltoniana**, *Benth. Scroph. Ind.* 30, and in *DC. Prodr.* x. 400; erect, stout, leaves linear-lanceolate entire or subserrate, flowers sessile, upper sepal ovate-cordate, capsule globose. *Wall. Cat.* 3898; *Dalz. & Gibs. Bomb. Fl.* 178. *Cardiophorus decussata*, *Griff. Notul.* iv. 105, and *l. c. Pl. Asiat.* t. 417, f. 1.

Wet places in northern India; from the PUNJAB, ascending to 3000 ft., MALWAR and the CONCAN, to BENGAL, ASSAM and SILHET.—DISTRIB. Senegal.

Quite glabrous. *Stem* about a span high, usually very stout and much branched. *Leaves* $\frac{1}{2}$ –1 in., nerves very obscure. *Calyx* $\frac{1}{2}$ in. *Corolla-tube* hardly exceeding the calyx.

3. **H. floribunda**, *Br. Prodr.* 442; erect, leaves linear-lanceolate entire or obscurely toothed, flowers peduncled, sepals membranous outer very broad upper almost orbicular, capsule globose. *Benth. in DC. Prodr.* x. 400; *Roth Nov. Sp.* 289; *Miqrel Fl. Ind. Bat.* ii. 684. *H. linearis*, *Spreng. Syst. Veg.* ii. 802. *H. lanceolata*, *Wight in Benth. Scroph. Ind.* 30; *Wall. Cat.* 3899. *H. amara*, *Spanoghe in Linnæa*, xv. 332? *Lindernia sesamoides*, *Spreng. new entd.* i. 261.

DECCAN PENINSULA; common in wet places from the Concan southwards, and CEYLON.—DISTRIB. Java, Australia, Tropical Africa.

Nearly glabrous. *Stem* a span high and upwards, more slender than in *H. Hamiltoniana*. *Leaves* $\frac{1}{2}$ –1 in., sometimes linear, at others contracted into a petiole. *Peduncles* about equalling the calyx, very slender, 2-bracteolate below the top, puberulous, as are the reticulate sepals.

19. **GRATIOLA**, *Linn.*

Glabrous or glandular-pubescent herbs. *Leaves* opposite, entire or toothed. *Flowers* axillary, solitary, 2-bracteolate. *Sepals* 5, subequal. *Corolla-tube* cylindric; lips spreading, posterior the outer entire or 2-fid; anterior 3-fid. *Stamens*, 2 posterior perfect included, anther-cells distinct; staminodes 2, filiform or 0. *Style* filiform, stigma deflexed dilated or 2-lamellate. *Capsule* ovoid, loculi- and septi-cidal; valves separating from the placentiferous axis. *Seeds* many, small, reticulate.—Species about 20, chiefly of temperate regions.

1. **G. Griffithii**, *Hook. f.*; glabrous, succulent, erect, leaves elliptic-oblong obtuse 3-nerved entire, flowers sessile diandrous, staminodes 0, capsule globose.

UPPER ASSAM, on moist banks; Gabovo, Nam Senna and Noa Dehing, *Griffith* (*Kew Distrib.* 3915), *Simons*.

Very succulent, branched from the base, 6–10 in. high; branches erect. *Leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in., sometimes obscurely sinuate, most minutely punctate; nerves very slender. *Flowers* minute. *Corolla* $\frac{1}{2}$ in., yellow, tube scarcely exceeding the linear-oblong sepals; lobes short, rounded. *Anther-cells* parallel, shortly oblong. *Capsule* $\frac{1}{2}$ in. diam., membranous. *Seeds* cancellate.—A very interesting plant, as being the only tropical Asiatic representative of the genus.

UNKNOWN SPECIES.

G. CHAMÆDREYS and G. STRIGOSA, *Roth Nov. Sp.* 10, two Peninsular plants of Heyne, are unrecognizable from the descriptions, and no doubt well-known species of other genera.

G. CHAMÆDRIFOLIA, *Lamk. Dict.* iii. 27 (*Limnophila chamædrifolia*, *G. Don Gen. Syst.* 343, is doubtfully referred by Miquel (*Fl. Ind. Bat.* ii. 682) to *Limnophila grattissima* Bl. (under *L. punctata* Bl.), of which it may be a small state.

20. **DOPATRIUM**, *Hamilt.*

Very slender glabrous marsh annuals. *Leaves* few, opposite, lower small, upper pairs remote and minute. *Flowers* small, violet, axillary, solitary; pedicels 0 or filiform, ebracteolate. *Calyx* 5-fid. *Corolla-tube* slender below, throat broad; upper lip the outer, short, 2-fid; lower broad, spreading, 3-lobed. *Stamens*, 2 upper perfect, included; anther-cells parallel, distinct,

equal; staminodes 2, minute. *Style* short, stigma 2-lamellate. *Capsule* small, globose or oblong, loculicidal, valves placentiferous. *Seeds* numerous, very minute, tubercled.—Species 5, African, Asiatic and Australian.

1. ***D. nudicaule***, *Ham. in Benth. Scroph. Ind.* 31, and in *DC. Prodr.* x. 407; very slender, 2–4 in. high, bracts minute acuminate, calyx-lobes acuminate, capsule linear-oblong, pedicel deflexed. *Gratiola nudicaulis*, *Willd. in Act. Berol.* iv. 192. *G. aphylla*, *Roth Nov. Sp.* 7. *G. cuneifolia*, *Roxb. Fl. Ind.*, and *Ed. Wall. & Carey*, i. 142.

SOUTH DECAN; *Heyne*, &c. CEYLON; not uncommon.—DISTRIB. Java, Philippine Islands.

Stem simple or branched from the base. *Leaves*, radical 0, or very few, $\frac{1}{10}$ – $\frac{1}{2}$ in. long, oblong, obtuse; cauline few, minute. *Corolla* $\frac{1}{2}$ in. long. *Capsule* $\frac{1}{4}$ in.

2. ***D. junceum***, *Ham. in Benth. Scroph. Ind.* 31, and in *DC. Prodr.* x. 407; stem 6–10 in., bracts minute obtuse, calyx-lobes oblong obtuse, corolla $\frac{1}{2}$ in., capsule globose. *Dalz. & Gibs. Bomb. Fl.* 178; *Griff. Notul.* iv. 102, and *Ic. Pl. Asiat.* t. 418, f. 6; *Miquel Fl. Ind. Bat.* ii. 686. *Gratiola juncea*, *Roxb. Cor. Pl.* ii. 16, t. 129, and *Fl. Ind.*, and *Ed. Wall. & Carey*, i. 142; *Wall. Cat.* 3892. *Morgania juncea*, *Spreng. Syst.* ii. 803.

Throughout INDIA from the Upper Gangetic plain southwards and eastwards to Assam, Burma, and CEYLON.—DISTRIB. Malay Islands, China, Japan, Philippines, Australia.

Rather fleshy, branched from the base. *Leaves*, radical 0 or few, oblong, obtuse, sometimes 2 in. long, nerves parallel; cauline smaller, in distant pairs. *Flowers* in very distant pairs, rose coloured, sessile or on capillary pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in. erect in fruit. *Capsule* $\frac{1}{2}$ in. diam.

3. ***D. lobelioides***, *Benth. Scroph. Ind.* 31, and in *DC. Prodr.* x. 407; stem 6–18 in., bracts minute obscure, calyx-lobes very short obtuse, corolla $\frac{1}{2}$ in., capsule globose. *Wight Ic.* t. 859. *Gratiola lobelioides*, *Retz Obs.* iv. 7; *Roxb. Fl. Ind.* i. 142; *Wall. Cat.* 3893. *G. hyssopioides*, *Roxb. Cor. Pl.* ii. t. 128, and *Fl. Ind.* i. 141, and *Ed. Wall. & Carey*, i. 142 (not of *Cor. Pl.* iii. t. 203).

SOUTH DECAN, *Heyne*, &c. CEYLON.

Stem stout and fleshy below, sometimes as thick as a goose-quill above and branches very slender. *Leaves*, lower 2–4 pairs obovate-oblong, obtuse, $\frac{1}{2}$ –2 in. long, upper very few distant and small; nerves parallel, very obscure. *Flowers* subracemose, in distant pairs; pedicels capillary, $\frac{1}{2}$ –1 in., spreading in fruit. *Capsule* $\frac{1}{2}$ in. diam.

21. **ARTANEMA**, *Don*.

Erect herbs, angles of stems and leaves above scabrid. *Leaves* opposite, entire or serrate. *Flowers* large, blue, racemose, ebracteolate; bracts foliaceous. *Sepals* 5, acuminate, bare, much dilated. *Corolla-tube* long, broad; upper lip the outer, erect, broad, notched; lower spreading, 3-fid. *Stamens* 4, didynamous, 2 posterior short, included; 2 anterior with long arching filaments dilated at the base; cells confluent at their tips. *Stigma* 2-lamellate. *Capsule* globose, septicidal; valves entire, separating from the placentiferous axis. *Seeds* rugose.—Species 4, tropical Asiatic, Australian and African.

1. ***A. sesamoides***, *Benth. Scroph. Ind.* 39, and in *DC. Prodr.* x. 408; leaves lanceolate more or less petioled, corolla $\frac{1}{2}$ in. long, tube broad. *Wight Ic.* t. 1410; *Dalz. & Gibs. Bomb. Fl.* 181; *Miquel Fl. Ind. Bat.* ii. 686. *Columnea longifolia*, *Linn. Mant.* 90. *Achimenes sesamoides*, *Vahl Symb.*

ii. 71. *Diceros longifolius*, *Pers. Syn.* ii. 164; *Blume Bijl.* 751; *Wall. Cat.* 3884.—*Rheede Hort. Mal.* ix. t. 87.

DECCAN PENINSULA; on the west side, from the Concan southwards. MALAY PENINSULA; from Tenasserim southwards. CEYLON; common, ascending to 3000 ft.—DISTRIB. Sumatra, Java, Philippine Islands, Borneo; Tropical Africa?

A tall herb, 2-3 ft., sparingly branched. *Leaves* 2-4 in., acuminate, entire or serrate. *Pedicels* equalling or exceeding the calyx, which varies from $\frac{1}{4}$ – $\frac{1}{2}$ in. long. *Corolla* lilac. *Capsule* $\frac{1}{4}$ – $\frac{1}{3}$ in. diam.—A tropical Eastern African plant from Zanzibar seems the same, except that the upper leaves are more amplexicaul. A Western African plant more similar in the leaves has crimson flowers.

2. ***A. angustifolium***, *Benth. Scroph. Ind.* 39, and in *DC. Prodr.* x. 408; leaves sessile narrowly lanceolate or linear-lanceolate, corolla $\frac{1}{3}$ – $\frac{1}{2}$ in. long, tube narrow. *Diceros angustifolius*, *Wall. Cat.* 3885.

SINGAPORE; *Wallich, Cuming.*

Very near to *A. sesamoides*, but the leaves are much narrower, the pedicels usually shorter, and flowers much smaller.

22. **CURANGA**, *Juss.*

Diffuse or creeping herbs. *Leaves* opposite, ovate, crenate. *Flowers* in short terminal or pseudo-axillary racemes; pedicels opposite, bracteate, ebracteolate. *Sepals* 4, spreading, upper and lower very large, much enlarged in fruit, lateral small, narrow. *Corolla-tube* short, upper lip broad, arched, notched; lower longer, spreading, 3-fid. *Stamens*, 2 upper perfect, included; anthers cohering, cells divaricate; staminodes 2, clavate. *Stigma* 2-lamellate. *Capsule* orbicular, included in the much enlarged calyx, septicidal, valves separating from the broad placentiferous axis. *Seeds* numerous, rugose.—Species 2, Indian and Malayan.

C. amara, *Juss. in Ann. Mus.* ix. 320; *Benth. in DC. Prodr.* x. 408. *Caranga amara*, *Vahl Symb.* i. 100. *Gratiola amara*, *Roxb. Fl. Ind.*, and *Ed. Wall. & Carey*, i. 136. *Herpestis amara*, *Benth. Scroph. Ind.* 30. *Synphillium torenioides*, *Griff. in Madr. Journ. Nat. Sc.* iv. 1, t. 11. *Tristeria assamica*, *Griff. Notul.* iv. 111.—*Rumph. Herb. Amb.* v. t. 170, f. 1.

SIKKIM HIMALAYA, alt. 3000 ft., *Clarke*. ASSAM and MISHMI, *Griffith*. CACHAR, *Keenan*. CHITTAGONG, *Clarke*. TENASSERIM; at Mergui, *Griffith*.—DISTRIB. Borneo, Philippine Islands, Amboyna.

Annual, glabrous. *Branches* slender, straggling, divaricate, rooting at the lower nodes, 2-3 ft. long. *Leaves* 2-2½ in., obtuse or acute; petiole $\frac{1}{2}$ in., slender. *Racemes* short, few-fid.; pedicels $\frac{1}{4}$ – $\frac{1}{3}$ in. *Calyx* in flower $\frac{1}{2}$ in., in fruit $\frac{1}{2}$ in.; outer sepals broadly ovate-cordate, membranous, reticulate. *Corolla* red-brown. *Capsule* $\frac{1}{2}$ in. diam., compressed.—Foliage very bitter.

23. **TORENIA**, *Linn.*

Glabrous or pubescent herbs. *Leaves* opposite, entire crenate or serrate. *Flowers* axillary or in terminal or pseudo-axillary umbels or racemes; pedicels ebracteolate. *Calyx* tubular, 3-5-winged or plaited or keeled, 2-lipped, or 3-5-toothed. *Corolla-tube* cylindric, dilated above; upper lip erect, concave, notched or 2-fid; lower larger, spreading, 3-lobed. *Stamens*, 4 perfect, 2 upper included, 2 lower appendaged at the base and conniving under the upper lip; anthers touching or cohering in pairs, cells often confluent. *Stigma* 2-lamellate. *Capsule* linear or oblong, included, septicidal; valves separating from the flat placentiferous axis. *Seeds* numerous, rugose

or cancellate.—Species 20, tropical Asiatic and African, one of them also American.

The species 4 to 8 are imperfectly characterized, and are very difficult of discrimination in the dried state.

SECT. I. **Tridens**. *Fruiting calyx* suborbicular, broadly winged.

1. **T. polygonoides**, *Benth. Scroph. Ind.* 39, and in *DC. Prodr.* x. 409; creeping, glabrous, leaves petioled $\frac{1}{2}$ – $\frac{1}{2}$ in. orbicular-ovate serrate, peduncles axillary 2–4-fld. *Miquel Fl. Ind. Bat.* ii. 688. *T. cardiosepala*, *Benth. l. c.* *Herpestis polygonoides*, *Benth. in Wall. Cat.* 3897.

CACHAB, *Keenan*. TENASSERIM; at Tavoy, *Wallich*. SINGAPORE, PENANG and MALACCA, *Griffith*, &c. Bouton told me PENANG (*Miquel*).—DISTRIB. Borneo, Philippine Islands.

A slender straggling herb, branches 6–10 in. *Corolla* $\frac{1}{2}$ in. diam., white and red. *Fruiting calyx* $\frac{1}{2}$ in. long, as long as the pedicel. *Capsule* ovate-lanceolate,

2. **T. mucronulata**, *Benth. in DC. Prodr.* x. 409; creeping, pubescent, leaves petioled $\frac{1}{2}$ – $\frac{3}{4}$ in. ovate acute serrate, peduncles axillary 1–4-fld.

TENASSERIM; at Mergui, *Griffith*.

Very similar indeed to *T. polygonoides*, but pubescent, with rather larger leaves.

SECT. II. **Nortenia**. *Calyx* oblong ellipsoid or linear-oblong, fruiting keeled or winged (often cordate in outline in *T. cordifolia*).

* *Flowers axillary, solitary or 2-nate, or subumbellate at the ends of the branches.*

3. **T. cordifolia**, *Roxb. Cor. Pl.* ii. 52, f. 161, and *Fl. Ind.* iii. 95; suberect, sparsely hairy, leaves petioled ovate serrate, pedicels axillary and subumbellate fruiting slender, fruiting calyx $\frac{1}{2}$ in. ovoid or oblong winged, base rounded or cordate not decurrent, corolla $\frac{3}{4}$ in. long pale blue, lower filaments toothless. *Benth. Scroph. Ind.* 39, and in *DC. Prodr.* x. 409, *in part*; *Bot. Mag.* t. 3715; *Dalz. & Gibs. Bomb. Fl.* 180.

WESTERN HIMALAYA; from Simla to Kumaon, ascending to 6000 ft. CENTRAL INDIA, BEHAR, on Parusnath. The CIRCARS, the CONCAN, PEGU and TENASSERIM.—DISTRIB. Java, China.

Annual, nearly glabrous, 4–8 in. high, usually erect and trichotomously branched from the base; stem and branches almost 4-winged. *Leaves* 1–1 $\frac{1}{2}$ in., glabrous; base cuneate very rarely cordate, petiole rarely as long as the blade. *Pedicels* often longer than the leaves.—Clarke remarks that Bentham describes the filaments as toothed, but that he has never found them so, and that Roxburgh's figure represents them as toothless. *Rheede's Hort. Mal.* ix. t. 68, must be a very different plant. Wight's *T. cordifolia* from Courtallum with long decumbent stems 12–18 in. long, short petioles, and long axillary pedicels seems hardly the same species, but I cannot satisfactorily identify it with any other.

4. **T. peduncularis**, *Benth. in Wall. Cat.* 3956; suberect, sparsely hairy, much branched, leaves petioled ovate crenate-serrate, pedicels axillary and subumbellate fruiting thickened, fruiting calyx $\frac{3}{4}$ in. ovoid or oblong winged, base acute decurrent, corolla $\frac{3}{4}$ in. pale blue, lower filaments toothless or minutely toothed. *T. edentula*, *Benth. in DC. Prodr.* x. 410, *not of Griffith*, and *T. asiatica*, *Scroph. Ind.* 38, *in part*; *Bot. Mag.* t. 4229. ? *T. exappendiculata*, *Regel Gartenfl.* t. 892. *T. alba*, *Hb. Ham.*; *Wall. Cat.* 3961.

CENTRAL and EASTERN HIMALAYA; Nepal, *Hamilton*; Sikkim, ascending to 7000 ft. KHASIA MTS., ASSAM and SILHET; PENANG, *Schomburgk*.—DISTRIB. Java, Philippine Islands.

Closely resembles a large state of *T. cordifolia* in habit and foliage, but the calyx is longer and narrower, with the wings produced on the pedicel, never cordate at the base, and the capsule is longer and narrower. The plate in *Bot. Mag.* is very characteristic. Hamilton's *T. alba* is, I assume, a white-fl. variety.

5. **T. asiatica**, Linn.; *Wight Ic.* t. 862; nearly glabrous or pubescent, diffuse, creeping below, leaves shortly petioled ovate-cordate or lanceolate serrate, pedicels axillary and subumbellate fruiting thickened, fruiting calyx 1 in., narrowly oblong keeled hardly winged, base decurrent, corolla $1\frac{1}{2}$ – $1\frac{1}{4}$ in. blue with very dark violet lateral lobes, longer filaments toothed. *Benth. in DC. Prodr.* x. 410; *Wall. Cat.* 3953 A. B.; *Miquel Fl. Ind. Bat.* ii. 689; *Gaertn. Fruct.* iii. 29, t. 184; *Lamk. Ill.* t. 523; *Bot. Mag.* t. 4249; *Lem. Ill. Hort.* t. 199; *Fl. de Serres* ii. fasc. x. t. 5, and xiii. t. 1342. *Treisteria cordata*, *Griff. Notul.* iv. 109.—*Rheede Hort. Mal.* ix. t. 53.

WESTERN PENINSULA; Nilgherry Mts., *Wight*, &c. TENASSERIM; at Mergui, *Griffith*. CEYLON, abundant.—DISTRIB. Java, China.

Diffusely branched; branches 6–10 in. long, slender. *Leaves* $1\frac{1}{2}$ –2 in., larger and usually more acuminate than in the allied species; petiole rarely more than $\frac{1}{4}$ in. *Fruiting calyx* narrowly winged or keeled.

VAB. *hirsuta*; more pubescent, lower filaments with a very small tooth. *T. hirsuta*, *Benth. in DC. Prodr.* x. 410; *Bot. Mag.* t. 5167. *T. cordifolia*, *Benth. in Wall. Cat.* 3954, not of Roxb. ? *Lamk. Ill.* t. 523, f. 2.—Nilgherry Mts.

VAB. *concolor*; corolla of a uniform dark blue. *T. concolor*, *Lindl. in Bot. Reg.* 1846, t. 62. *T. longiflora*, *Morren in Ann. de Gand.* ii. 441, 471.

VAB. ? *parvifolia*; leaves much smaller longer petioled less acuminate, petiole often as long as the blade. *T. asiatica*, *Thwaites Enum.* 219.—Nilgherry Mts. and Ceylon. This closely resembles *T. bicolor* in habit and foliage, and is, I suspect, specifically distinct from *T. asiatica*.

6. **T. vagans**, *Roxb. Cat.* 1813, and *Fl. Ind.* iii. 96; nearly glabrous, erect or decumbent, diffusely branched, rooting at the lower nodes, leaves $\frac{3}{4}$ –1 in. all shortly petioled, pedicels scattered axillary fruiting thickened, fruiting calyx $\frac{1}{2}$ – $\frac{3}{4}$ in. narrowly linear-oblong keeled not winged, corolla $\frac{3}{4}$ in. pale blue, lobes small, longer filaments toothed. *T. diffusa*, *Don Prodr.* 86; *Wall. Cat.* 3953. *T. asiatica*, *Wall. Cat.* 3953, in part; *Griff. Notul.* iv. 123. *T. hians*, *Roxb. Fl. Ind.* iii. 96. *T. rubens*, *Benth. l. c.* ? *Peristaira grandiflora*, *Griff. Notul.* iv. 118. *Columnnea diffusa*, *Roxb. mss.*

CENTRAL and EASTERN HIMALAYA; Nepal, *Wallich*; Sikkim, ascending to 4000 ft. ASSAM and KHASIA Mts., common; CHITTAGONG, *Clarke*. NILGHERRIES; Conoor, alt. 5000 ft., *Clarke*.—DISTRIB. China.

Except by the usually more diffuse habit, the not winged calyx and the always toothed longer filaments, I do not see how this can well be distinguished from *T. peduncularis*. The flowers are much smaller than in *T. asiatica* and of a more uniform blue, and the leaves also are smaller. I cannot distinguish *T. rubens* as a variety; the characters assigned to it are the short obtuse tooth of the longer filaments, and often red tips to the calyx teeth.

7. **T. hirtella**, *Hook. f.*; pubescent, very slender, diffusely branched, leaves $\frac{1}{2}$ –1 in. very shortly petioled upper usually sessile ovate or ovate-cordate subacute serrate, pedicels solitary axillary fruiting slender, fruiting calyx $\frac{1}{2}$ in. narrowly oblong keeled not winged, corolla $\frac{1}{2}$ in., longer filaments with an obtuse tooth. *T. rubens* var. *hirtella*, *Benth. in Hohen. Pl. Nilig.* 1156, 1157. *T. rubens*, *Thwaites Enum.* 219.

NILGHERRY MTS., *Hohenacker*. CEYLON; *Gardner*, &c., ascending to 2000 ft.

A very distinct species, at once recognizable by the very slender habit and small very shortly petioled leaves. The corolla is small, with short lobes. Thwaites suspects

that this is only a form of *T. asiatica*; if so, they are united by var. *parvifolia* of the latter.

8. **T. bicolor**, *Dalz. in Hook. Kew Journ.* iii. 38; sparsely hairy or glabrous, diffusely branched, leaves $\frac{1}{2}$ –1 in. long-petioled broadly ovate-cordate or rounded crenate-serrate, peduncles axillary fruiting thickened, fruiting calyx $\frac{1}{2}$ – $\frac{3}{4}$ in. very narrow keeled not winged, corolla 1 in. dark blue, longer filaments toothed at the base. *Dalz. & Gibs. Bomb. Fl.* 181. *T. asiatica*, *Herb. Wight* n. 2205, 5986.—*Torenia* n. sp., *Miquel in Pl. Hohenack.* n. 61.

The CONCAN, near Vingorla, *Dalzell*, &c. CANARA, *Hohenacker*. MALABAR, *Wight* (*T. asiatica*, *Kew Distrib.* 2379).

This again, though difficult to define by words, appears to be a very distinct species with the small leaves and straggling habit of *T. asiatica* var. *parvifolia*, the petiole being often as long as the blade. The fruiting pedicels are much thickened, and the calyx is very narrow.—A drawing from Stock's collection represents the flowers as red-purple, but they are described in the Bombay Flora as deep violet with a white under lip.

9. **T. parviflora**, *Ham. in Wall. Cat.* 3958; glabrous, erect or diffuse, branching from the base, leaves all petioled $\frac{1}{2}$ –1 in. ovate or ovate-lanceolate acute serrate, pedicels axillary 2–4 at the nodes shorter than the leaves fruiting thickened, fruiting calyx $\frac{1}{2}$ in. narrowly oblong-lanceolate keeled not winged, corolla $\frac{1}{2}$ – $\frac{1}{2}$ in. blue, longer filaments minutely toothed. *Benth. Scroph. Ind.* 39, and in *DC. Prodr.* x. 410; *Miquel Fl. Ind. Bat.* ii. 689; *Schmidt in Mart. Fl. Bras. Fasc.* xxx. 322, t. 56, f. 1. ? *Peristaira dichotoma*, *Griff. Notul.* iv. 119. *Nortenia Thomassii*, *Cham. & Schl. in Linnæa*, iii. 18.

ASSAM, *Masters*. KHASIA MTS., ascending to 4000 ft., *J. D. H. & T. T. TENASSERIM*; at Tavoy and Moulmein, *Wallich*, &c.—DISTRIB. Java, China, Tropical Africa and America.

Annual, three to eight inches high; branches often decumbent below, and rooting at the nodes. Leaves abruptly narrowed into a petiole $\frac{1}{2}$ – $\frac{1}{4}$ in. long. Pedicels sometimes very short, erect or spreading.—This has the short pedicels of *T. ciliata* and *flava*.

** *Flowers axillary and racemed at the ends of the branches.*

10. **T. flava**, *Ham. in Wall. Cat.* 3957 A. B.; erect or decumbent, sparsely patently hairy or glabrous, leaves sessile or petioled ovate or oblong-ovate obtuse entire or crenate, pedicels usually shorter than the calyx fruiting thickened, flowers axillary and in distant pairs, fruiting calyx $\frac{1}{2}$ – $\frac{3}{4}$ in. elliptic-lanceolate keeled not winged deeply channelled, corolla $\frac{3}{4}$ –1 $\frac{1}{2}$ in. yellow, longer filaments minutely toothed. *Benth. Scroph. Ind.* 38, and in *DC. Prodr.* x. 414; *Miquel Fl. Ind. Bat.* ii. 689; *Bot. Mag.* t. 6700. *T. Bailoni*, *Godfr. in Ill. Hort.* xxv. t. 324; *E. Morren in Belgique Hort.* xxix. t. 1, f. 2. *Peristaira racemosa*, *Griff. Notul.* iv. 120. *Mimulus hirsutus*, *Blume Bijl.* 756.

ASSAM, *Masters*, &c. KHASIA MTS., ascending to 2000 ft., *J. D. H. & T. T. SILHET* and CACHAR, *Wallich*, &c. TENASSERIM, *Lobb, Parish*.—DISTRIB. Sumatra, Siam, China.

Stem usually robust and branched from the base, 6–10 in. high, and branches strict. Leaves 1–1 $\frac{1}{2}$ in., narrowed into the petiole. Corolla yellow, $\frac{1}{2}$ – $\frac{3}{4}$ in., with a purple eye.—In cultivation the stem becomes decumbent and rooting, the flowers axillary and solitary, and the corolla large (see *Bot. Mag.* t. 6700).

11. **T. ciliata**, *Smith in Rees' Cyclop.* v. 36; erect, patently hairy, leaves sessile or petioled ovate or oblong-ovate obtuse entire or crenate,

pedicels longer than or equalling the calyx fruiting thickened, flowers in distant pairs, fruiting calyx $\frac{1}{2}$ – $\frac{3}{4}$ in. elliptic-lanceolate winged, corolla $\frac{3}{4}$ in. blue. *Benth. in DC. Prodr.* x. 411; *Miquel Fl. Ind. Bat.* ii. 689. *T. racemosa*, *Benth. Scroph. Ind.* 38, not of *Griff.* *T. flava*, *Wall. Cat.* 3957 c. *T. cœrulea*, *Miquel Fl. Ind. Bat. Suppl.* 562.

PENANG, Wallich.

Very similar to *T. flava*, but the fruiting calyx is winged, and the corolla blue.

DOUBTFUL SPECIES.

T. EDENTULA, *Griff. in Madr. Journ. Sc.* iv. 4. "Suberect, softly hirsute, leaves petioled ovate-cordate subrugose, flowers pseudo-axillary fasciated and racemed, corolla usually pale blue with yellow spots."—Upper Assam at Suddya, *Griffith.* Bentham (in *DC. Prodr.*) refers his *T. peduncularis* (*Scroph. Ind.*) to this, but Griffith's character of softly hirsute is irreconcilable. It may be *Vandellia mollis*.

TORENIA ?—*Tresteira lanceolata*, *Griff. Notul.* iv. 111, t. 458, f. 6, from Mergui, with terete pubescent stems suffruticose below, is undeterminable.

24. VANDELLIA, Linn.

Herbs, usually annual, glabrous or pubescent. *Leaves* opposite, often toothed, penninerved (except in *V. erecta*). *Flowers* small, axillary or racemose; pedicels ebracteolate. *Sepals* 5, free or connate in a subcampanulate calyx, angles not winged. *Corolla-tube* cylindric; upper lip erect, broad, concave, notched or bifid; lower broader, spreading, 3-lobed. *Stamens* 4, all perfect (except *V. molluginoides*); 2 posterior usually included; 2 anterior with arched filaments appendaged at or towards the base; anthers touching or cohering in pairs under the upper lip, cells divaricate. *Stigma* 2-lamellate. *Capsule* septicidal, valves separating from the placentiferous septum. *Seeds* rugose.—Species about 30, chiefly tropical Asiatic.

* Capsule about equalling the calyx in length, or shorter.

† Calyx in flower 5-cleft to the middle or above it.

1. *V. crustacea*, *Benth. Scroph. Ind.* 35, and in *DC. Prodr.* x. 413; diffusely branched, glabrous or sparsely hairy, leaves shortly petioled ovate or lanceolate, pedicels axillary or subracemose, calyx shortly 5-lobed exceeding the oblong-ovate obtuse capsule. *Dalz. & Gibs. Bomb. Fl.* 180; *Wight Ic.* t. 863; *Miquel Fl. Ind. Bat.* ii. 690. *V. alba*, *Benth. Scroph. Ind.* 35. *Torenia varians*, *Roxb. Fl. Ind.* iii. 96. *T. lucida*, *Ham. in Wall. Cat.* 3962. *T. alba*, *Ham. in Wall. Cat.* 3261, in part. *T. flaccida*, *Br. Prodr.* 440. *Gratiola lucida*, *Vahl Enum.* i. 95. ? *Roxb. Cor. Pl.* ii. 2, t. 202, and *Fl. Ind.*, and *Ed. Carey & Wall.* i. 138. *G. aspera*, *Roth Nov. Pl.* 11. *Peristeira paniculata*, *Griff. Notul.* iv. 119. *Capraria crustacea*, *Linn. Mant.* 87. *Morgania lucida & aspera*, *Spreng. Syst.* ii. 802, 803. *Mimulus javanicus*, *Blume Bijl.* 283. *Hornemannia ovata*, *Link & Otto Ic. Pl. Sel.* i. 9, t. 3. *Tittmannia ovata*, *Reichb. Ic. Erot.* i. p. 27. *Antirrhinum hexandrum*, *Forsk. Fl. Æg. Arab.* 43.—*Rumph. Herb. Amb.* v. t. 170, f. 3.

Throughout INDIA and CEYLON, a weed.—DISTRIB. Tropics of the Old World; rare (introduced?) into the New.

Stem excessively trichotomously branched from the root, 4–18 in. high. *Leaves* $\frac{1}{2}$ –1 in., entire or serrate. *Pedicels* $\frac{1}{2}$ –1 $\frac{1}{2}$ in., slender, strict. *Calyx* $\frac{1}{10}$ in. long in flower, $\frac{1}{8}$ in fruit.—The citation of Roxburgh's *Gratiola lucida* is doubtful; if correct, Roxburgh's figure of the filaments, where the appendages are omitted, is faulty.

2. *V. molluginoides*, *Benth. Scroph. Ind.* 35, and in *DC. Prodr.*

x. 413; glabrous, except the ciliate leaf-axils and calyx, leaves subsessile ovate-lanceolate or oblong base cuneate or rounded margins scabrid, pedicels rigid umbellately fascicled rather longer than the calyx which is 5-cleft to the middle in flower, sepals free in fruit longer than the ovate-oblong capsule. *Torenia molluginoides*, *Benth. in Wall. Cat.* 3960.

BURMA; Mts. of Prome, *Wallich*. PEGU, *Kurz*. TENASSERIM; at Moulmein, *Lobb, Parish*.

A slender laxly branched herb, 1-1½ foot high, with the habit of a *Mollugo* or *Holosteum*. *Leaves* ½ in. long, margin thickened, obsoletely crenate. *Pedicels* often deflexed in fruit. *Calyx* ½ in. long in fruit. Longer *filaments* with a very short obtuse tooth, according to Bentham.—In Moulmein specimens I find 2 perfect stamens, and 2 filiform staminodes hooked near the top.

3. **V. Hookeri**, *Clarke mss.*; diffusely branched, softly hairy all over, leaves sessile or petioled ovate or lanceolate serrate, pedicels axillary and subumbellate at the ends of the branches about as long as the calyx which is 5-cleft to the middle in flower, sepals free or not in fruit hispidly hairy much longer than the oblong capsule.—*Torenia*, n. 10 *Herb. H.f. & T.*

SIKKIM TERAI; at Siligoree, *Clarke*. KHASIA MTS.; in cultivated fields at Pomrang, &c., *J. D. H. & T. T.* PEGU, *Kurz*. BEHAR; at Parusnath, *Thomson, Clarke*.

Branched from the base; the branches divaricate and do not root, are rather robust, 4-8 in. high. *Leaves* ¾-1 in. hairy on both surfaces. *Pedicels* spreading. *Calyx* ¼-½ in. long. *Corolla* blue-purple.—Very near *V. molluginoides*, but larger, with much larger flowers, and leaves with margins not thickened.

†† *Sepals in flower free to the base or nearly so.*

4. **V. elata**, *Benth. Scroph. Ind.* 36, and in *DC. Prodr.* x. 414; slender, suberect or diffuse, glabrous or sparsely hairy, leaves petioled ovate coarsely crenate-toothed, flowers racemose, sepals narrowly lanceolate equalling the broadly oblong capsule. *Tittmannia elata*, *Benth. in Wall. Cat.* 3944.

TENASSERIM; at Tavoy, *Gomez*; Moulmein, *Lobb, Helfer*.

Stem simple or 3-chotomously branched, 6-10 in. high. *Leaves* ¼-½ in.; petiole half as long. *Pedicels* 2-3 times as long as the fruiting sepals, spreading or deflexed, lower with leafy upper with small lanceolate bracts. *Calyx* ⅓ in. long, fruiting ½ in. *Corolla* very minute, hardly exceeding the calyx.

5. **V. multiflora**, *G. Don Gen. Syst.* iv. 549; erect, succulent, glabrous, leaves sessile or narrowed into a petiole oblong or ovate-oblong or obovate obtuse entire or sinuate, flowers racemed, pedicels exceeding the calyx, sepals lanceolate shorter than the orbicular capsule. *Benth. in DC. Prodr.* x. 414. *V. erecta*, *Benth. Scroph. Ind.* 36, *in part.* *Torenia multiflora*, *Roxb. Fl. Ind.* iii. 96. *Tittmannia trichotoma*, *Benth. in Wall. Cat.* 3943.

Plains of BENGAL, not uncommon.

Stem trichotomously branched, 4-6 in. *Leaves* in few pairs, 1-2 in., sometimes spatulate. *Racemes* usually many-flid.; flowers minute. *Calyx* ⅙ in. long, fruiting ⅓ in.

6. **V. hirsuta**, *Benth. Scroph. Ind.* 36, and in *DC. Prodr.* x. 414; erect, succulent, sparsely clothed with spreading hairs, lower leaves petioled ovate or oblong obtuse entire or sinuate upper sessile broader, flowers racemed, pedicels exceeding the calyx, sepals lanceolate longer than the orbicular capsule. *Dalz. & Gibs. Bomb. Fl.* 179. *V. multiflora*, *Herb. Ind. Or. H.f. & T. in part.* *Tittmannia ovata*, *Benth. in Wall. Cat.* 3942. *T. vis-*

cosa, *Reichb. Ic. Exot.* i. 26, t. 38. *Tittmannia* sp. n. 3, *Griff. Notul.* iv. 117. *Hornemannia prostrata*, *Jacq. Ecl.* t. 150.

EASTERN and SOUTHERN INDIA; from Bengal and Sikkim to Ava, and throughout the Deccan Peninsula. CEYLON, near Kornegalle, *Thwaites*.—DISTRIB. Java, Borneo, China, Philippine Islands.

Very similar in habit, foliage and inflorescence to *V. multiflora*, but always hairy. *Corolla* blueish white, according to *Griffith*.

7. **V. scabra**, *Benth. Scroph. Ind.* 36, and in *DC. Prodr.* x. 414; diffusely branched, more or less clothed with long white spreading hairs, leaves subsessile broadly ovate or ovate-cordate serrate or entire, pedicels axillary and terminal much longer than the calyx, sepals lanceolate hirsute or glabrous equalling the orbicular capsule. *Miquel Fl. Ind. Bat.* ii. 692; *Griff. Notul.* iv. 122, and *Ic. Pl. Asiat.* t. 418, f. 4. *V. monnieroides*, *Ham. mss.* *Torenia hirta*, *Cham. & Schl. in Linnæa*, ii. 571. *T. globosa*, *Ham. mss.* *Gratiola pusilla*, *Willd. Sp. Pl.* i. 105. *Columna minuta*, *Roxb. Fl. Ind.* iii. 98. *Tittmannia pusilla*, *Benth.*, and *T. sulcata*, *Hb. Wight, in Wall. Cat.* 3945, 3946 (both in part only). *Bonnaya Vahl.*, and *Stemodia minuta*, *G. Don Gen. Syst.* iv. 538 & 542. *Selago pusilla*, *Thunb. Prodr. Pl. Cap.* 99.

TROPICAL INDIA, and in CEYLON; in rice-fields, &c., abundant.—DISTRIB. Java, Borneo, China, Philippine Islands, S. Africa, Madagascar.

Stem slender and branches 2–4 (rarely 6–8) inches high, rather rigid. *Leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in., sometimes orbicular, acute or obtuse. *Pedicels* capillary, $\frac{1}{4}$ – $\frac{1}{2}$ in., strict, spreading in fruit. *Corolla* about $\frac{1}{2}$ in. long, three times as long as the calyx.

VAR. *laxa*; stem elongate very slender dichotomously branched. *V. laxa*, *Benth. Scroph. Ind.* 36, and in *DC. Prodr.* x. 414; *Dalz. & Gibs. Bomb. Fl.* 179. *Tittmannia pusilla*, *Benth. in Wall. Cat.* 3945 C.—Deccan Peninsula, *Wight*; *Vingorla* (*Dalz. & Gibs.*).—This is, I think, only a drawn up state of *V. scabra*, and hardly even a variety. I have seen no specimen from *Vingorla*.

8. **V. mollis**, *Benth. Scroph. Ind.* 37, and in *DC. Prodr.* x. 414; procumbent, softly villous all over, leaves shortly petioled ovate or ovate-oblong crenate-serrate, pedicels axillary or in axillary or terminal racemes much longer than the calyx, sepals subulate hirsute longer than the oblong capsule. *Tittmannia hirta*, *Benth. in Wall. Cat.* 3948.

SIKKIM HIMALAYA, alt. 3–4000 ft., *J. D. H.*, &c. ASSAM, SILHET and the KHASIA MTS., ascending to 3000 ft.—DISTRIB. S. China.

Stem creeping below, 6–18 in. long, sometimes robust. *Leaves* 1– $1\frac{1}{2}$ in., villous on both surfaces, petiole $\frac{1}{4}$ in. or 0. *Pedicels* very slender, $\frac{1}{4}$ – $\frac{3}{4}$ in. *Sepals* sometimes nearly $\frac{1}{2}$ in. long. *Corolla* with a brown upper and yellow lower lip. *Filaments* hairy at the base, with a process.

9. **V. erecta**, *Benth. Scroph. Ind.* 36, and in *DC. Prodr.* x. 415; erect, quite glabrous, leaves sessile elliptic or oblong obtuse 3–5-nerved entire or obscurely crenate, pedicels axillary longer than the leaves and the sepals, sepals lanceolate or linear rather shorter than the ovoid-orbicular capsule. *Maxim. Diagn. Pl. Nov. Dec.* xix. 413. *V. pyxidaria*, *Maxim. l. c.* 419; *Boiss. Fl. Orient.* iv. 427. *Tittmannia erecta*, *Benth. in Wall. Cat.* 3947. *Lindernia pyxidaria*, *All.*; *Benth. in DC. Prodr.* x. 418; *Gaertn. Fruct.* iii. 34, t. 184, f. 8; *Reichb. Ic. Fl. Germ.* t. 1723; *Lamk. Ill.* t. 522. *L. Kitaibelii*, *G. Don Gen. Syst.* iv. 557. *Ilysanthes gratioloides*, *Regel Fl. Usur.* n. 359, not of *Benth.* (ex *Maxim. l. c.* 420). *Gratiola inundata*, *Kit. in Schultz Fl. Austr.* ii. 32. *G. integrifolia*, *Roxb. Fl. Ind.* i. 137, and *Ed. Carey & Wall.* i. 138.—*Rheede Hort. Mal.* ix. t. 57.

Throughout INDIA; from Kashmir to Assam, Tenasserim and the S. Deccan (not

recorded from Ceylon).—DISTRIB. Siam, China, Japan, Malay and Polynesian Islands, and westwards to France.

Branched from the base; branches divaricate, not rooting, 4-8 in. high. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in. *Pedicels* very slender, usually twice as long as the leaves. *Sepals* $\frac{1}{8}$ - $\frac{1}{6}$ in. long, rather obtuse.—Closely resembles *Ilysanthes parviflora*. So common a plant as this is cannot have escaped the notice of Roxburgh, and I think it must be his *Gratiola integrifolia*. Maximovicz has discussed at length the variations exhibited by this plant, and its passage into the northern *Lindernia pyxidaria*, in which the flowers are sometimes cleistogamous, the filaments straight and sometimes not appendaged. The Indian forms should be carefully studied.

** Capsule much longer than the calyx.

10. **V. nummularifolia**, *Don Prodr.* 86; erect, quite glabrous, leaves sessile or shortly petioled ovate orbicular or obovate obtuse crenate-serrate, pedicels axillary and in subumbellate or few-fld. racemes longer than the leaves, calyx 5-toothed fruiting shorter than the ellipsoid acuminate capsule. *Benth. in DC. Prodr.* x. 416.

SUBTROPICAL HIMALAYA, alt. 2-7000 ft., from Kashmir to Sikkim. KHASIA Mts., alt. 3-4000 ft., *J. D. H. & T. T.*

Simple or branched from the base, the branches not rooting, divaricate, 4-6 in. high. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in., often as broad as long, nerves subflabellate. *Pedicels* $\frac{1}{8}$ - $\frac{1}{4}$ in., very slender. *Calyx* $\frac{1}{8}$ in. long, cleft to the middle, teeth acute, irregularly cleft to the base in fruit. *Corolla* red-purple, lateral lobes of lip white. Lower *filaments* with a broad obtuse tooth. *Capsule* nearly $\frac{1}{4}$ in.

11. **V. sessiliflora**, *Benth. Scroph. Ind.* 37, and in *DC. Prodr.* 416; erect, glabrous or puberulous, leaves sessile rounded or broadly ovate crenate-serrate, flowers sessile or very shortly pedicelled, calyx 5-toothed fruiting shorter than the ellipsoid acute capsule. *V. minima*, *Benth. Scroph. Ind.* 37. *Torenia sessiliflora*, *Benth. in Wall. Cat.* 3959.

SUBTROPICAL HIMALAYA, alt. 2-7000 ft., from Kashmir to Mishmi. KHASIA Mts., alt. 2-4000 ft. AVA, *Wallich*. BEHAR; on Parusnath, *J. D. H., Clarke*.

Probably a sessile-flowered form of *V. nummularifolia*, from which the short pedicels alone distinguish it in a dried state.

12. **V. pedunculata**, *Benth. Scroph. Ind.* 37, and in *DC. Prodr.* x. 416; glabrous, branches long procumbent, leaves shortly petioled ovate obscurely crenate-toothed, pedicels axillary much longer than the leaves and in terminal racemes, sepals free to the base half as long as the linear-lanceolate capsule. *Dalz. & Gibs. Bomb. Fl.* 179; *Griff. Notul.* iv. 120, and *Id. Pl. Asiat.* t. 418, f. 2. *V. Roxburghii* & *cordifolia*, *G. Don Gen. Syst.* iv. 549. *Gratiola cordifolia*, *Vahl Enum.* i. 97; *Don Prodr.* 85. *Bonnaya cordifolia*, *Spreng. Syst.* i. 42. *Tittmannia grandiflora*, *Benth. in Wall. Cat.* 3949. *Torenia diffusa*, *Roxb. Fl. Ind.* ii. 95. *T. varians*, *Griff. Notul.* iv. 125, not of *Roxb.*

Throughout INDIA, and in CEYLON; abundant in rice-swamps.—DISTRIB. Borneo, China, Cochinchina.

Stem sometimes creeping at the base, branches 4-10 in., slender, prostrate. *Leaves* $\frac{1}{2}$ -1 in., obtuse or subacute. *Pedicels* twice as long as the leaves, sometimes $1\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ in., narrowly lanceolate. *Corolla* white, or pale blue with a white spot. Longer *filaments* with a small obtuse tooth. *Capsule* $\frac{1}{2}$ in.—I have seen no specimen of *Bentham* var β *parviflora* from Ceylon. See *Bonnaya peduncularis* and *veronicaefolia* for remarks.

13. **V. angustifolia**, *Benth. Scroph. Ind.* 37, and in *DC. Prodr.* x. 417; diffuse, glabrous, leaves sessile linear or linear-lanceolate obtuse entire

or obscurely toothed, pedicels axillary solitary equalling or exceeding the leaves, sepals free to the base half as long as the linear-lanceolate capsule. *Tittmannia angustifolia*, Benth. in Wall. Cat. 3951. *Torenia calcarata*, Griff. Notul. iv. 124. ? *Lindernia micrantha*, Don Prodr. 85.

SUBTROPICAL HIMALAYA; Kumaon, Edgeworth; Nepal, Wallich. BENGAL, ASSAM, the KHASIA Mts., BURMA and PEGU. CEYLON, not common.—DISTRIB. Sumatra, Java, China, Japan.

Stem sometimes shortly prostrate and rooting at the base; branches erect, divaricating, 6–12 in. high, slender or succulent. *Leaves* $\frac{3}{4}$ –1½ in., rather thick, nerves obscure. *Pedicels* variable in length. *Calyx* $\frac{1}{6}$ –½ in., fruiting $\frac{1}{2}$ as long as the capsule. Longer filaments toothed at the base. *Capsule* linear-lanceolate. See *Bonnaya veronicaefolia* var. *verbenafolia* for a very near ally of this plant.

25. ILYSANTHES, Rafin.

Annual, glabrous, slender marsh-plants. *Leaves* opposite, entire or toothed, parallel-nerved. *Flowers* small, axillary or the upper racemose; pedicels ebracteolate, often reflexed in fruit. *Sepals* narrow. *Corolla-tube* cylindric; upper lip erect, broad, concave, notched; lower larger, spreading, 3-lobed. *Stamens*, 2 upper alone perfect, subincluded, filaments filiform; anthers meeting, cells divaricate; staminodes 2, 2-lobed, one lobe glandular obtuse, the other glabrous of various shapes. *Stigma* 2-lamellate. *Capsule* septicidal; valves entire, separating from the placentiferous septum. *Seeds* numerous, rugose.—Species 8, N. American, S. African, Indian and one S. American.

The staminal characters separating *Ilysanthes* from *Vandellia* are not satisfactory; I should prefer that of the nervation of the leaves, which would remove *Vandellia erecta* (which is hardly recognizable from *I. parviflora*) to this genus.

1. *I. hyssopioides*, Benth. in DC. Prodr. x. 419; erect, simple or diffusely branched, leaves in distant pairs sessile oblong or oblong-lanceolate usually entire 1- or 3-nerved upper linear, pedicels axillary filiform, corolla 3–4 times longer than the calyx, fruiting sepals half the length of the ovate-oblong acute capsule. Dalz. & Gibs. Bomb. Fl. 179; Miquel Fl. Ind. Bat. ii. 695. *Gratiola hyssopioides*, Linn. Mant. 174; Roxb. Cor. Pl. iii. 3, t. 203 (not ii. t. 128, nor of Fl. Ind.). *Morgania hyssopioides*, Spreng. Syst. ii. 803. *Bonnaya hyssopioides*, Benth. in Wall. Cat. 3866 Wight Ic. t. 857.

SILHET, Wallich. KHASIA Mts.; at Nurtiung, alt. 5000 ft., J. D. H. & T. T. DECCAN PENINSULA, abundant. CEYLON, common.—DISTRIB. China.

Usually very slender, 4–18 in. high. *Leaves* $\frac{1}{4}$ –1 in., rather thick, obtuse, seldom toothed. *Pedicels* $\frac{1}{2}$ –1½ in. *Sepals* narrowly lanceolate. *Corolla* $\frac{1}{3}$ –½ in. long, pale blue. *Capsule* $\frac{1}{8}$ in.

2. *I. parviflora*, Benth. in DC. Prodr. x. 419; erect, simple or diffusely branched, leaves sessile ovate elliptic or linear-oblong usually entire 1–5-nerved, pedicels axillary and in terminal racemes filiform, corolla twice as long as the calyx, fruiting sepals shorter than the ovate-oblong acute capsule. *Gratiola parviflora*, Roxb. Cor. Pl. iii. 3, t. 204, and Fl. Ind. i. 140, and Ed. Carey & Wall. i. 141. *Bonnaya parviflora*, Benth. in Wall. Cat. 3867, and Scroph. Ind. 34.

Throughout INDIA; in wet places, from the Punjab to Assam, Bengal and the Deccan Peninsula (not seen from Ceylon).—DISTRIB. Siam, Trop. Africa.

Very near to *I. hyssopioides*, but a shorter stiffer more branched plant, more piously flowering, with usually much shorter pedicels, and white or blue flowers not

half the size.—This differs from *Vandellia erecta* in the reduction of the shorter stamens, and in the longer acute capsule.

3. **I. minima**, *Benth. in DC. Prodr.* x. 420; very small and slender, erect, subsimple, leaves few minute ovate- or elliptic-oblong entire, pedicels axillary capillary, corolla three times as long as the calyx, fruiting sepals equalling the subglobose capsule. *Bonnaya minima*, *Wight Ic. t.* 858, *not of G. Don*.

The DECCAN; at Palamcottah, *Wight*.

Stem 1–3 in., filiform, always simple below. *Leaves* 2–3 pairs, $\frac{1}{10}$ – $\frac{1}{4}$ in., obtuse, quite entire. *Flowers* few, large for the size of the plant; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in. *Corolla* $\frac{1}{4}$ – $\frac{1}{2}$ in. *Capsule* $\frac{1}{10}$ in. diam.—A very elegant minute plant.

4. **I. rotundifolia**, *Benth. in DC. Prodr.* x. 420; diffuse or creeping, leaves sessile broadly ovate elliptic or rounded entire or toothed 3–5-nerved, pedicels axillary shorter or longer than the leaves, corolla twice as long as the calyx, fruiting sepals equalling the globose capsule. *Gratiola rotundifolia*, *Linn. Mant.* 174; *Roxb. Cor. Pl.* iii. 3, t. 204, and *Fl. Ind.* i. 137, and *Ed. Wall. & Carey*, i. 138.

COROMANDEL, *Roxburgh*. CANARA, *Hohenacker*. CEYLON, *Macrae*, &c.—DISTRIB. Mauritius and Madagascar.

Stems or branches 6–10 in., often rooting at the nodes. *Leaves* $\frac{1}{4}$ – $\frac{1}{2}$ in., obtuse or subacute. *Flowers* few, white; pedicels $\frac{1}{4}$ – $\frac{3}{4}$ in. *Corolla* $\frac{1}{2}$ in. long. *Capsule* $\frac{1}{2}$ in.

26. **BONNAYA**, *Link et Otto*.

Annual, quite glabrous herbs. *Leaves* opposite, entire or serrate, pinninerved, nerves very obscure. *Flowers* solitary, axillary, or the upper opposite and racemose, pedicels ebracteolate. *Sepals* 5, narrow. *Corolla-tube* cylindrical; upper lip erect, broad, concave, 2-fid; lower larger, spreading, 3-lobed. *Stamens*, 2 lower only perfect, subincluded, filaments filiform; anthers touching, cells divaricate; staminodes 2, entire, glandular, obtuse. *Stigma* 2-lamellate. *Capsule* narrow, far exserted, septicidal; valves entire, separating from the placentiferous septum. *Seeds* numerous, rugose.—Species 8, tropical African and Asiatic.

Several species of this genus so closely resemble others of *Vandellia* as to render its validity very doubtful.

1. **B. brachiata**, *Link & Otto, Ic. Pl. Sel.* i. 25, t. 11; erect, diffusely branched, leaves sessile oblong obtuse or acute sharply closely deeply serrate, flowers racemed shortly pedicelled, corolla $\frac{1}{4}$ in. long, capsules spreading or erect twice as long as the calyx or more. *Benth. in Wall. Cat.* 3855, and in *DC. Prodr.* x. 420; *Dalz. & Gibs. Bomb. Fl.* 178; *Miquel Fl. Ind. Bat.* ii. 695. *B. serrata*, *Griff. Notul.* iv. 108, and *Bonnaya* sp. l. c. 106. *Gratiola serrata*, *Roxb. Fl. Ind.* i. 139, and *Ed. Wall. & Carey*, i. 140. *B. brachiata* & *pusilla*, *Benth. Scroph. Ind.* 32, 33.—*Rheede Hort. Mal.* ix. t. 59.

Throughout INDIA, from the Punjab to Travancore and Malacca, ascending the Himalaya to 5000 ft. CEYLON, common.—DISTRIB. Java, China, Philippine Islands.

A rather rigid herb, 4–10 in. high; branches divaricate, outer decumbent below. *Leaves* $\frac{1}{2}$ –1 $\frac{1}{2}$ in., margins thickened, teeth mucronate. *Racemes* sometimes 4 in. long, with opposite bracteate flowers; pedicels about equalling the calyx, rigid. *Corolla* red or white. *Capsule* $\frac{1}{2}$ in., slender.

2. **B. reptans**, *Spreng. Syst.* i. 41; prostrate, creeping, leaves

petioled obovate-oblong obtuse sharply serrate, flowers racemed shortly pedicelled, corolla $\frac{3}{4}$ in. long, capsules spreading twice as long as the calyx or more. *Benth. in DC. Prodr.* x. 420; *Wall. Cat.* 3856; *Dalz. & Gibs. Bomb. Fl.* 179. *B. ruelloides* & ciliata, *Spreng. l. c.* *Gratiola ciliata* & ruelloides, *Kæn.*; *Vahl Enum.* i. 97, 99. *G. reptans*, *Roxb. Fl. Ind.*, and *Ed. Wall. & Carey*, i. 140. *Henckelia Roxburghiana*, *Dietr. Sp. Pl.* i. 572.

Eastern India; from NEPAL and SIKKIM (ascending to 7000 ft.) to ASSAM, the KHASIA MTS., CACHAR and TENASSEERIM. MADRAS, *Shuter*. SOUTHERN CANCAN (*Dalzell & Gibson*).—DISTRIB. Java, Philippine Islands.

Stems or *branches* often a foot long, with distant pairs of leaves, slender, diffusely branched. *Leaves* $\frac{3}{4}$ –1½ in., narrowed into the petiole, finely serrate. *Corolla* light purple. *Capsule* 1 in. long, very slender.

3. ***B. veronicæfolia***, *Spreng. Syst.* i. 41; stem creeping or decumbent; branches ascending, leaves subsessile or narrowed into a short petiole oblong or oblong-lanceolate or obovate serrate or subserrate, flowers racemose, corolla $\frac{1}{4}$ – $\frac{1}{3}$ in., capsules erecto-patent twice as long as the calyx or more. *Wall. Cat.* 3857; *Benth. in DC. Prodr.* x. 421; *Wight Ic.* t. 1411; *Dalz. & Gibs. Bomb. Fl.* 178; *Miquel Fl. Ind. Bat.* ii. 696. *B. marginata*, *Spreng. l. c.* *B. rigida* & procumbens, *Benth. in Wall. Cat.* 3859, 3860. *B. Rothii*, *Dietr. Sp. Pl.* i. 556. *B. bracteata*, *Griff. Notul.* iv. 107. *Gratiola veronicæfolia*, *Retz Obs.* iv. 8; *Roxb. Cor. Pl.* ii. 30, t. 154, and *Fl. Ind.* i. 138, and *Ed. Wall. & Carey*, i. 139. *G. marginata*, *Colsm. in Vahl Enum.* i. 98. *G. racemosa*, *Roth Nov. Sp.* 9.

Throughout INDIA; from the Upper Gangetic plain southwards and eastwards to Assam, Travancore and Singapore. CEYLON, common.—DISTRIB. Java, Siam, China, Philippine Islands.

Very variable in habit, but distinguished from *B. brachiata* and *reptans* by the very different serratures of the leaf, which are more distant and less deep. *Corolla* violet (*Roxb.*).

VAR. *grandiflora*; branches short stout, flowers chiefly axillary light blue, capsules smaller hardly twice as long as the calyx. *B. grandiflora*, *Spreng. Syst.* i. 41; *Benth. in DC. Prodr.* x. 421; *Dalz. & Gibs. Bomb. Fl.* 179; *Miquel Fl. Ind. Bat.* ii. 697. *B. pulegiifolia*, *Spreng. l. c.* *B. Wightii*, *Benth. in Wall. Cat.* 3864. *Gratiola grandiflora*, *Roxb. Cor. Pl.* ii. 42, t. 179, and *Fl. Ind.* i. 136, and *Ed. Carey & Wall.* i. 137. *G. pulegiifolia*, *Vahl Enum.* i. 98. *Henckelia grandiflora*, *Dietr. Sp.* i. 573.—I find it impossible to separate this satisfactorily; it inhabits the same area as *B. veronicæfolia* and *Vandellia pedunculata*, which it closely resembles. The name *grandiflora* is not appropriate. *Corolla* light blue (*Roxb.*)

VAR. *verbenaefolia*; branches usually long and slender, leaves narrower subentire or distantly serrate, flowers larger in often elongate naked racemes. *B. verbenaefolia*, *Benth. in DC. Prodr.* x. 421; *Dalz. & Gibs. Bomb. Fl.* 178; *Wall. Cat.* 3858. *Wight Ic.* t. 1412. *B. Roxburghiana*, *Dietr. Sp. Pl.* i. 559. *B. cyanea*, *Griff. Notul.* iv. 107. *Gratiola verbenaefolia* & ciliata, *Colsm. in Vahl Enum.* i. 96, 97. *G. racemosa*, *Roxb. Fl. Ind.* i. 138, and *Ed. Wall. & Carey*, i. 139. *G. Roxburghiana*, *Roem. & Sch. Syst.* i. 123. *Tittmannia Colsmanni* & *Torenia gracilis*, *Benth. in Wall. Cat.* 3950, 3952.—This again is with difficulty separated as a variety from *B. veronicæfolia*, and it inhabits the same area. It bears the same relation to it as *Vandellia angustifolia* (which it closely resembles) does to *V. pedunculata*.

4. ***B. peduncularis***, *Benth. Scroph. Ind.* 34, and in *DC. Prodr.* x. 421, and in *Wall. Cat.* 3865; stems erect slender simple, leaves sessile linear-oblong obtuse nearly entire, pedicels axillary very long solitary slender much longer than the leaves, capsule nearly three times as long as the calyx.

SILHET, *Wallich*.

This, as Bentham suggests, may be a variety of *B. veronicæfolia* var. *grandifolia*,

growing in moist grassy places; if so, it is a remarkable one, the fruiting calyx being much shorter, not above $\frac{1}{8}$ in. long, and the habit is considerably different. It approaches very closely *Vandellia pedunculata*.

5. **B. oppositifolia**, *Spreng. Syst.* i. 41; very short, erect, diffusely branched, leaves sessile linear-oblong obtuse subserrate, pedicels short often shorter than the calyx axillary or the upper racemed reflexed in fruit, corolla $\frac{1}{4}$ in. long, capsule small twice as long as the calyx or more. *Benth. in DC. Prodr.* x. 421; *Wall. Cat.* 3862; *Dalz. & Gibs. Bomb. Fl.* 179. *B. minima*, *G. Don Gen. Syst.* iv. 538. *Gratiola oppositifolia*, *Roxb. Cor. Pl.* ii. 30, t. 155, and *Fl. Ind.*, and *Ed. Wall. & Carey*, i. 139. *G. minima*, *Roth Nov. Sp.* 8. *Henckelia oppositifolia*, *Dietr. Sp. Pl.* i. 572.

DECCAN PENINSULA, *Heyne, Wight, &c.*

A much smaller plant than any of the first four species, and with a somewhat different habit, and very small blue flowers; but beyond the general characters indicated above, I am unable to add anything. The flowers are blue (*Roxb.*).

6. **B. tenuifolia**, *Spreng. Syst.* i. 42; succulent, erect, diffusely intricately branched, leaves sessile linear nearly entire, pedicels axillary and the upper racemed deflexed in fruit, corolla $\frac{1}{2}$ in. long, capsule slender two to three times as long as the calyx. *Benth. in DC. Prodr.* x. 422; *Wall. Cat.* 3863; *Miquel Fl. Ind. Bat.* ii. 698. *B. pusilla*, *Griff. Notul.* iv. 107. *Gratiola tenuifolia*, *Vahl Enum.* i. 95.

BENGAL; at Serampore, *Griffith*. DECCAN PENINSULA, *Rottler, &c.*; Quilon, *Wight*. TENASSERIM, *Griffith*. CEYLON; at Peradenia and Caltura, *Macrae*.—DISTRIB. China.

This appears to be a very distinct species, growing in a tufted manner, probably in marshes, with interlaced branches and slender leaves $1-1\frac{1}{2}$ by $\frac{1}{16}-\frac{1}{8}$ in. The flowers are very small (pale blue, *Griff.*), and the capsules vary from $\frac{1}{4}-\frac{1}{2}$ in. in length.

27. BYTHOPHYTON, *Hook. f.*

A slender submerged glabrous herb. *Leaves* opposite, subulate-lanceolate, quite entire. *Flowers* axillary, shortly pedicelled, ebracteolate. *Sepals* 4, subulate-lanceolate. *Corolla* minute, much shorter than the calyx, subcylindric, membranous, obscurely 2-lipped, 4-lobed. *Stamens*, 2 anterior perfect, included, filaments very short sometimes gibbous; anther-cells parallel. *Ovary* ovoid; style short, curved, stigma subcapitate. *Capsule* much shorter than the sepals, broadly oblong, compressed, obtuse, 2-valved, valves 2-fid or 2-partite. *Seeds* many, narrowly oblong, reticulate.

B. indicum, *Hook. f.* *Micranthemum indicum*, *H. f. & T. in Hook. Journ. Bot.* ix. (1857) 245, t. 7 (*excl. fig. of anthers*).

KHASIA MTS.; marshes at Nonkreem, alt. 4-5000 ft., *J. D. H. & T. T.*

Stems 2-3 in., loosely tufted, flaccid, erect, wholly submerged, terete. *Leaves* $\frac{1}{2}-\frac{3}{4}$ in. long, 3-nerved at the base. *Sepals* $\frac{1}{4}$ in. *Corolla* with the lobes closed over the anthers as in submerged states of *Limosella*. *Stamens* very variable.—A singular little plant, the flowers of which may assume a different character when the marshes dry up. It is clearly the type of a genus, the exact position of which is uncertain. The anthers are erroneously figured as hairy.

28. MICROCARPÆA, *Br.*

A very small slender diffuse or creeping nearly glabrous herb. *Leaves* opposite, sessile, oblong, obtuse, quite entire. *Flowers* minute, axillary,

solitary, sessile, ebracteolate. *Calyx* tubular, 5-angled, 5-fid. *Corolla* very short, tube broad; lobes 5, broad, spreading, 2 upper subconnate. *Stamens*, 2 perfect, filaments filiform; anthers confluent, 1-celled; staminodes 0. *Style* filiform, stigma capitate recurved. *Capsule* included, ovoid, 2-grooved, loculicidal; valves entire, separating from the placentiferous septum. *Seeds* few, ovoid.

M. mucosa, Br. *Prodr.* 436; *Benth. in DC. Prodr.* x. 433; *Miquel Fl. Ind. Bat.* ii. 700. *M. alterniflora*, Blume *Bijd.* 744; *Benth. l. c.* *Pæderota minima*, Koen. in *Retz Obs.* v. 10.

LOWER BENGAL, on the Mahanuddy river, J. D. H. & T. T. TENASSERIM. MALABAR; at Quilon, Wight. CEYLON, not uncommon.—DISTRIB. Java, China, Australia.

Stems tufted and interlaced, 2–4 in. long, rooting at the nodes, angles of stem and calyx sometimes ciliate. *Leaves* $\frac{1}{2}$ – $\frac{1}{4}$ in. long. *Flowers* in one axil only of each pair of leaves, about $\frac{1}{16}$ in. long. *Corolla-tube* shorter than the calyx, as is the minute capsule.

DOUBTFUL SPECIES.

M. DIANDRA, Griff. *Notul.* iv. 101, and *l. c. Pl. Asiat.* t. 417, f. 2, according to the description, differs from the generic character of *Microcarpæa* in the 5-partite calyx; as also from *Glossostigma* and *Limosella*, of which it has the habit. I have seen no specimens; it is a native of Bengal, and may be the following genus.

29. PEPLIDIUM, Delile.

Very small, prostrate or creeping, glabrous herbs. *Leaves* opposite, fleshy, obovate, quite entire. *Flowers* minute, axillary, 1–3-nate. *Calyx* tubular, 5-ribbed, obtusely 5-toothed. *Corolla-tube* short; lobes 5, broad, subequal. *Stamens* 2, included, filaments arched; anthers 1-celled; staminodes 0. *Ovary* 2-celled; stigma dilated, spatulate, recurved. *Capsule* globose or ovoid, septicidal, or bursting irregularly; valves entire or 2-fid, separating from the placentiferous septum. *Seeds* numerous, small, ovoid.—Species 2, an endemic Australian and the following.

P. humifusum, Del. *Fl. Æg.* 4, t. 4, f. 1; flowers subsessile, capsule globose obtuse. *Benth. in DC. Prodr.* x. 422; *Boiss. Fl. Orient.* iv. 427. *Hedyotis maritima*, Linn. f. *Suppl.* 119. *Oldenlandia maritima*, Roth *Nov. Sp.* 97. *Pæderota cochlearifolia*, Koen. mss.; *Wall. Cat.* 3920. *Microcarpæa cochlearifolia*, Sm. in *Rees' Cyclop.*; *Wight in Hook. Bot. Misc.* iii. 95, *Suppl.* t. 29.

S. DECCAN PENINSULA, Koenig, &c.; Pondicherry, Perottet. CEYLON; at Trincomalee, Glenie.—DISTRIB. Kurdistan, Egypt, Australia.

Stems interlaced, 4–8 in. long, rather stout, forming large tufts. *Leaves* $\frac{1}{2}$ – $\frac{1}{4}$ in., usually obovate, sometimes ovate or orbicular, succulent, narrowed into short petioles which are connected by a membrane. *Calyx* about $\frac{1}{16}$ in. long, larger in fruit, membranous with 5 strong ribs. *Corolla-tube* included. *Filaments* thickened and angularly incurved at the base. *Capsule* nearly enclosed in the membranous tubular calyx, membranous, usually bursting irregularly.

30. GLOSSOSTIGMA, Arn.

Very small, glabrous, creeping herbs. *Leaves* opposite or fascicled, linear or spatulate, quite entire. *Flowers* minute, axillary, solitary, ebracteolate. *Calyx* campanulate, obtusely 3–4-lobed. *Corolla-tube* short; lobes 5, subequal. *Stamens* 2 or 4, filaments filiform; anther-cells diverging, tips con-

fluent. *Ovary* perfectly or imperfectly 2-celled; style short, stigma dilated spathulate recurved. *Capsule* included in the calyx, loculicidal; valves entire, separating from a columnar axis. *Seeds* small, ovoid.—Species 3, all Australian, one of them widely dispersed.

G. spathulatum, Arn. in Nov. Act. Nat. Cur. xviii. 355; leaves narrowly spathulate, calyx 3-lobed, stamens 2. *Benth. in DC. Prodr.* x. 426; *Dalz. & Gibs. Bomb. Fl.* 180; *Miquel Fl. Ind. Bat.* ii. 699. *Limosella diandra*, Linn. Mant. 252 (the Indian plant); *Roxb. Fl. Ind.* iii. 91; *Griff. Notul.* iv. 102, t. 458, f. 12. *Microcarpæa spathulata*, *Benth. Scroph. Ind.* 31; *Wight in Hook. Bot. Misc.* ii. 101, *Suppl.* t. 4. *Pæderota minima*, *Retz Obs.* v. 10.

UPPER GANGETIC plain, *Royle, Thomson*. *BEHAR*, J. D. H. *The DECCAN PENINSULA*, common. *CEYLON*, *Gardner*.—DISTRIB. Tropical Africa and Australia.

A very weak densely tufted creeping rooting herb like *Limosella*. *Leaves* $\frac{1}{2}$ – $\frac{1}{4}$ in. long, tapering into a petiole of variable length. *Pedicels* slender, shorter than the leaves. *Calyx* $\frac{1}{4}$ in. long. *Corolla* blue, tube included. *Capsule* about as long as the calyx.—*Griffith's Microcarpæa diandra* differs from this in the sessile flowers and 5-partite calyx.

31. LIMOSELLA, Linn.

Small tufted creeping glabrous marsh- or water-herbs. *Leaves* opposite or fascicled or rarely alternate, long petioled, linear or spathulate, quite entire. *Flowers* minute, axillary, ebracteolate. *Calyx* campanulate, 5-toothed. *Corolla* subrotate or campanulate; lobes 5, subequal. *Stamens* 4, filaments filiform; anthers confluent, 1-celled. *Ovary* 2-celled at the base; style short, stigma incurved capitate. *Capsule* obscurely dehiscent, valves thin. *Seeds* many, small, ovoid, rugulose.—Species 5 or 6, very variable and widely distributed.

L. aquatica, Linn.; *Benth. in DC. Prodr.* x. 426; leaves long-petioled narrowly spathulate, corolla-lobes very short. *Benth. in DC. Prodr.* x. 426; *Boiss. Fl. Orient.* iv. 427; *Gaertn. Fruct.* i. 228, t. 50, f. 3; *Reichb. Ic. Fl. Germ.* t. 1722.

WESTERN HIMALAYA; Kashmir, alt. 5–8000 ft., *Thomson, &c.* WESTERN TIBET; alt. 13000–14500 ft., *Thomson*. DISTRIB. N. and S. temperate regions.

Stems creeping. *Leaves* 1–2 in., long petioled. *Peduncles* shorter than the leaves, recurved in fruit. *Corolla* $\frac{1}{10}$ in., pink or white. *Capsule* globose, $\frac{1}{2}$ in. diam.

TRIBE VII. DIGITALEÆ.

32. SIBTHORPIA, Linn.

Hairy, creeping herbs. *Leaves* alternate, petioled, reniform or rounded, crenate or pinnatifid. *Flowers* small, axillary, solitary or fascicled, ebracteolate. *Calyx* campanulate, 4–8-fid. *Corolla* subrotate; lobes 4–8, spreading, subequal. *Stamens* as many as the corolla-lobes or one fewer; anthers sagittate, touching. *Stigma* capitate. *Capsule* membranous, compressed, loculicidal, valves septiferous. *Seeds* few, plano- or concavo-convex, rugulose.—Species 6, W. Europe, Africa, the Himalaya and Andes.

S. pinnata, *Benth. in Gen. Pl.* ii. 959; leaves deeply pinnatifid or pinnatisect. *Mazus pinnatus*, *Wall. Cat.* 3915. *Ourisia pinnata*, *Benth. Scroph. Ind.* 47. *Hornemannia pinnata*, *Benth. in DC. Prodr.* x. 428.

NEPAL, *Wallich*.

Hirsute all over with soft spreading hairs. *Stems* very slender, 4-8 in. long, straggling, rooting at the nodes. *Leaves* 1-2 in. long, broadly oblong, or ovate, membranous, segments 5-7 obovate-cuneate broadly adnate, tips crenate or lobulate; petiole 1-3 in. *Pedicels* equalling the petiole or longer or shorter, very slender. *Calyx* $\frac{1}{4}$ in., membranous, lobes ovate acute. *Corolla* $\frac{1}{2}$ in. diam.; lobes spatulate. *Fruit* unknown.

33. **HEMIPHRAGMA**, Wall.

A prostrate diffuse pubescent herb. *Leaves* dimorphic; cauline opposite, very shortly petioled, orbicular-cordate or -ovate, or reniform crenate; those on the branches fascicled, acicular, ciliate. *Flowers* axillary, sessile, rosy. *Sepals* 5, narrow. *Corolla-tube* short, slender; lobes 5, rounded, spreading, subequal. *Stamens* 4, on the base of the corolla, equal, filaments short; anthers sagittate, tips of the cells confluent. *Style* short, stigma minute. *Fruit* ovoid, fleshy, shining, at length septicidal, valves entire or 2-fid. *Seeds* numerous, minute, ovoid, smooth.

H. heterophyllum, Wall. *Cat.* 3895, and *Tent. Fl. Nep.* 16, t. 8, and in *Trans. Linn. Soc.* xiii. 612; *Benth. in DC. Prodr.* x. 429.

TEMPERATE HIMALAYA; from Garwhal to Bhotan, alt. 6-12,000 ft. KHASIA MTS., alt. 4-6000 ft.

Stems loosely tufted, creeping, 1-2 feet, very slender. *Leaves* on the stem $\frac{1}{3}$ - $\frac{2}{3}$ in. diam., membranous, hairy on both surfaces; petiole $\frac{1}{10}$ - $\frac{1}{8}$ in.; those on the branches forming tufts or heads, $\frac{1}{10}$ - $\frac{1}{2}$ in. long, rigid, acute, back convex, face deeply channelled. *Flowers* usually sessile in the tufts of the setaceous leaves, rarely of the cauline ones. *Corolla* pink, $\frac{1}{3}$ in. diam. *Fruit* black, polished, $\frac{1}{3}$ in. diam.

34. **SCOPARIA**, Linn.

Branched glabrous or pubescent herbs or undershrubs. *Leaves* opposite or whorled, entire or toothed, punctate. *Flowers* small, white yellow or blueish, solitary or 2-nate, axillary, ebracteolate. *Sepals* 4-5, imbricate in bud. *Corolla* rotate, 4-fid, throat densely bearded; lobes obtuse, subequal. *Stamens* 4, subequal, filaments filiform; anthers subsagittate, cells distinct parallel or diverging. *Style* subclavate, stigma notched or truncate; ovules many. *Capsule* globose or ovoid, septicidal; valves entire, membranous, margins inflexed separating from the placentiferous axis. *Seeds* many, obovoid, angled, scrobiculate.—Species 5 or 6, all American.

S. DULCIS, Linn.; *Benth. in DC. Prodr.* x. 431; glabrous, leaves lanceolate or elliptic-lanceolate narrowed into a short petiole, sepals 4. *Miquel Fl. Ind. Bat.* ii. 699; *Gaertn. Fruct.* i. 251, t. 53, f. 10; *Beaur. Fl. Ow. & Ben.* t. 115; *Voigt Hort. Sub. Calc.* 507.

PLAINS OF BENGAL; abundant, Clarke.—DISTRIB. Tropics of America and sporadically in Africa, Asia and Australia.

A branching annual erect or ascending leafy herb 1-3 ft. high. *Leaves* opposite and 3-nately whorled, variable in width. *Flowers* numerous; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in., slender strict. *Sepals* oblong. *Corolla* $\frac{1}{2}$ in. diam., white. *Capsule* $\frac{1}{2}$ in. diam., globose.—Though now a superabundant Bengal plant according to Mr. Clarke, it was unknown in Roxburgh's time, and occurs in no Indian Herbarium except Clarke's. Voigt mentions it (1845) as found about Serampore, whence probably it has spread quite recently.

35. **CAMPYLANTHUS**, Roth.

Shrub. *Leaves* alternate, linear, fleshy, quite entire. *Flowers* in terminal

racemes, often secund, pedicels 2-bracteolate. *Calyx* 5-fid or -partite. *Corolla-tube* long, slender, incurved; lobes 5, broad, flat, spreading, subequal. *Stamens* 2, included; anther-cells divaricate, tips confluent. *Style* short or long, straight or inflexed, stigma capitate. *Capsule* broad, compressed, septicidal, valves 2-fid. *Seeds* many, orbicular, compressed, notched at the hilum; funicle expanded into a wing that sometimes surrounds the seed.—Species 4, Canaries, Cape de Verds, Arabia, Scinde.

C. ramosissimus, *Wight Ic. t.* 1416; a much branched, rigid, puberulous shrub, leaves linear-oblong or -spathulate, flowers subcorymbose. *Boiss. Fl. Orient.* iv. 433.

SCINDE; limestone hills at Hyderabad, *Stocks*.—DISTRIB. Beluchistan.

A low shrub, branches slender but very stiff, divaricate, spinescent. *Leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in. *Flowers* shortly pedicelled. *Sepals* short, lanceolate, acute. *Corolla* $\frac{1}{2}$ in., tube villous within, lobes acute. *Fruit* not seen.

36. **PICRORHIZA**, *Royle*.

A low more or less hairy herb, with perennial woody bitter stock. *Leaves* subradical, spatulate, serrate. *Flowers* spicate on radical leafy flowering stems, bracteate, ebracteolate, white or blueish, dimorphic (a longer and shorter stamened form). *Sepals* 5, lanceolate, imbricate in bud. *Corolla* of the long stamened form short, membranous, subequally 5-cleft to the middle; lobes ovate, acuminate, ciliate; of the shorter stamened, corolla-tube curved, broad; limb 2-lipped, upper lip longer subgaleate emarginate, lower of 3 shorter ovate acute lobes, the middle one smallest. *Stamens* 4, filaments in the longer stamened very slender, four times as long as the corolla; of the shorter stamened stout, 2 upper shorter than the upper lip of the corolla, with the anthers under the hood, 2 lower exserted; anther-cells subdivergent confluent at the tip. *Ovary* 2-celled, many-ovuled; style of the longer stamened long and slender, stigma simple; of the shorter stamened stouter and shorter, stigma capitate exserted. *Capsule* ovoid, turgid, acute, septicidal and loculicidal, margins of the valves inflexed, exposing the columnar placentiferous axis. *Seeds* of an oblong curved nucleus, enclosed in the large bladdery loose hyaline reticulated testa.

I have described this plant as dimorphic with some hesitation, the pistil and stamens being in both forms so fully developed, though in so far as I have seen the anthers of the short stamened have very scanty and irregularly formed pollen, whilst those of the long stamened have copious pollen. Both forms seem to ripen fruit abundantly.

P. Kurrooa, *Benth. Scroph. Ind.* 47, and in *DC. Prodr.* x. 454; *Royle Ill.* 291, t. 71. *Valeriana?* *Lindleyana*, *Wall. Cat.* 404 (corrected to *Veronica*, p. 23).

ALPINE HIMALAYA; from Kashmir to Sikkim, alt. 9–15,000 ft., common.

Rootstock as thick as the little finger, 6–10 in. long, clothed with withered leaf-bases. *Leaves* 2–4 in., rather coriaceous, tip rounded, base narrowed into a winged sheathing petiole. *Flowering stems* or scapes ascending, stout, longer than the leaves, naked or with a few bracts below the inflorescence. *Spikes* 2–4 in. long, subcylindric, obtuse, many-flowered, subhirsute; bracts oblong or lanceolate, as long as the calyx. *Sepals* $\frac{1}{2}$ in. long, ciliate. *Corolla* of short stamened form $\frac{1}{2}$ – $\frac{3}{4}$ in. long, with longer filaments $\frac{1}{2}$ in. long, of the longer stamened from $\frac{1}{2}$ in., with filaments $\frac{3}{4}$ in. long. *Capsule* $\frac{1}{2}$ in. long.

37. **WULFENIA**, *Jacq.*

Glabrous herbs, with perennial woody stocks. *Leaves* subradical, petioled,

crenate. *Flowers* bracteate, blue, spicate on radical scapes, secund, ebracteolate. *Sepals* narrow. *Corolla-tube* cylindric; lobes 4, erecto-patent, upper 2-fid, lower entire or crenate. *Stamens* 2, inserted between the upper lobes, exserted; anther-cells divergent, tips confluent. *Stigma* capitate. *Capsule* acute, septi- and loculi-cidal, margins of valves inflexed separating from the placentiferous axis. *Seeds* many, ovoid, concavo-convex; testa lax, smooth.—Species 4, one Carinthian, the others W. Asiatic and Himalayan.

W. Amherstiana, *Benth. Scroph. Ind.* 46, and in *DC. Prodr.* x. 455; nearly glabrous, leaves obovate-oblong or -spathulate coarsely crenate or lobulate base narrowed subpinnatifid, racemes long slender very many-fid., sepals lanceolate or setaceous, corolla-lobes narrow. *Pæderota* *Amherstiana*, *Wall. Cat.* 410.

WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 7–11,000 ft.—DISTRIB. Afghanistan.

Rootstock long, as thick as a goose-quill. *Leaves* 2–5 in., midrib puberulous or subhirsute beneath; petiole $\frac{1}{2}$ –1 $\frac{1}{2}$ in., sometimes hairy. *Scapes* 5–10 in., slender, glabrous or sparsely pubescent, naked or with setaceous deciduous bracts. *Flowers* horizontal; pedicels shorter than the calyx; bracts setaceous, equalling the pedicels or longer. *Calyx* $\frac{1}{2}$ in., glabrous. *Corolla* $\frac{1}{2}$ in., lobes lanceolate, acute. *Style* filiform, far exserted.

38. **CALORHABDOS**, *Benth.*

Herbs with a perennial stock and tall stems. *Leaves* alternate, serrate. *Flowers* in dense bracteate axillary and terminal spikes, ebracteolate. *Sepals* lanceolate, acuminate. *Corolla-tube* incurved; lobes 4, erecto-patent, entire, 3 lower smaller, one or both lateral exterior in bud. *Stamens* 2, exserted; anther-cells parallel, at length diverging, obtuse, tips confluent. *Style* filiform, stigma slender. *Capsule* acute, septi- and loculi-cidal; valves 4, with inflexed margins, separating from a placentiferous column. *Seeds* numerous, minute, testa appressed.—Species 3, a Chinese, a Japanese and a Himalayan.

C. Brunoniana, *Benth. Scroph. Ind.* 44, and in *DC. Prodr.* x. 456; erect, leaves sessile lanceolate subserrulate, spike terminal elongate very slender and very dense-fid. *Valeriana* (*Veronica*, p. 23) *Brunoniana*, *Wall. Cat.* 405; V. ? alternifolia, *Wall. mss.*

NEPAL, *Wallich.*

Stem erect, subsimple, stout, nearly glabrous, 1–2 ft. (or more?) *Leaves* upper alone known, 3–4 by 1–1 $\frac{1}{2}$ in., long acuminate, base narrowed. *Spikes* subsessile, 6–10 in., erect, flexuous, glabrous or pubescent; flowers imbricate; bracts small, lanceolate. *Sepals* $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in., tube rather broad, lobes short. *Capsule* as long as the calyx.

39. **VERONICA**, *Linn.*

Herbs or shrubs, rarely trees. *Leaves* opposite, rarely scattered or cauline alternate. *Flowers* solitary, axillary, or in terminal or axillary bracteate racemes, ebracteolate, never yellow. *Calyx* 4–5 partite, the lower segments connate, upper if present smaller. *Corolla* rotate, or tube cylindric; lobes 4–5, spreading, lateral, the outer in bud, upper and lower usually narrowest. *Stamens* 2, exserted; anther-cells parallel or not, obtuse, tips confluent. *Stigma* subcapitate; ovules many, rarely 2 in each cell. *Capsule* 2-grooved, compressed or turgid, dehiscence various. *Seeds* few or many, ovate or globose, plano-concave or boat-shaped, smooth or rugulose, sometimes winged.—Species about 160, rare in the tropics and in America.

* Capsule ovoid or oblong, turgid, slightly laterally compressed. Seeds flattened, plano-convex or biconvex.

1. **V. himalensis**, *Don Prodr.* 92; erect, glabrate, leaves sessile ovate acute coarsely irregularly serrate base rounded, racemes terminal and axillary lax-fld., sepals 4 oblong obtuse, corolla very large, capsules ovoid acute. *Benth. in DC. Prodr.* x. 467. *V. grandiflora*, *Wall. Cat.* 403 (and p. 23).

NEPAL; *Wallich*. SIKKIM; at Yakla, alt. 11,500 ft., *Clarke*.

Perennial? *Stem* 1–2 ft., stout for the genus, simple or nearly so. *Leaves* in distant pairs, 1–2 in., nerves beneath pubescent. *Racemes* erect, 3–5 in.; pedicels about equalling the calyx; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., linear-oblong. *Sepals* $\frac{1}{2}$ in. *Corolla* $\frac{3}{4}$ –1 in. diam., oblong. *Capsule* $\frac{3}{4}$ in. long. *Seeds* minute, irregularly suborbicular, plano-convex, much flattened.

2. **V. deltigera**, *Wall. in Benth. Scroph. Ind.* 45, and *Cat.* 402; stems many from the root erect or ascending pubescent often bifariously, leaves sessile ovate oblong-oblong or oblong-lanceolate serrate, racemes terminal and axillary lax-fld. pubescent, sepals 4 linear-oblong subacute, capsule oblong-ovoid obtuse. *Benth. in DC. Prodr.* x. 475. *V. lanosa*, *Benth. Scroph. Ind. l. c.*, and in *DC. l. c.* 481. *V. rupestris*, *Aitch. & Hemsl. in Journ. Linn. Soc.* xix. 180, t. 25.

WESTERN ALPINE HIMALAYA; from Kashmir to Nepal, alt. 8–12,000 ft.—DISTRIB. Afghanistan.

Perennial rootstock short, woody. *Stems* 6–18 in., rigid, slender, subsimple, ascending, leafy. *Leaves* $\frac{3}{4}$ –1 $\frac{1}{2}$ by $\frac{1}{4}$ – $\frac{3}{8}$ in., very variable in breadth, sometimes inciso-serrate, base rounded or acute. *Racemes* 3–6 in., slender, erect, very many-fld.; lower bracts often leaf-like or lower flowers axillary, upper oblong; pedicels of the lower flowers often $\frac{1}{2}$ – $\frac{3}{4}$ in., of the upper shorter. *Sepals* $\frac{1}{2}$ – $\frac{3}{4}$ in. *Corolla* $\frac{3}{4}$ in. diam. or less, lobes broad. *Capsule* $\frac{1}{2}$ in. long, equalling or shorter than the sepals. *Seeds* smaller than in *V. himalensis*.—The description of the fruit in *DC. Prodr.* is taken from some other plant.

3. **V. ciliata**, *Fisch. mss.*; *Benth. in DC. Prodr.* x. 467; hoary-pubescent all over, stems subsimple erect, leaves sessile ovate or oblong obtuse entire serrate or crenulate, flowers subcapitate, sepals 4 oblong obtuse, corolla small, stamens included, capsule ovoid-oblong obtuse, tip notched. *Ledeb. Fl. Ross.* iii. 240.

ALPINE HIMALAYA; from Kashmir to Sikkim, alt. 11–16,000 ft.—DISTRIB. Central Asia, Siberia.

Annual. *Stem* 4–12 in., stiff, usually quite simple. *Leaves* $\frac{3}{4}$ –1 $\frac{1}{2}$ in., very variable in size and toothing, pubescent on both surfaces. *Flowers* sessile in sessile or peduncled terminal hirsute heads; bracts as long as the calyx. *Sepals* $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ in. diam., lobes broad. *Capsule* very variable in size, as long as the calyx or longer. *Seeds* orbicular, compressed, plano-convex.

4. **V. ? macrostemon**, *Bunge in Ledeb. Fl. Alt.* i. 35; hoary-pubescent, stems flexuous diffuse, leaves sessile elliptic or ovate obtuse entire or obscurely crenate, racemes terminal dense-fld. villous, sepals 4 oblong obtuse, stamens long far exerted, anthers large. *Benth. in DC. Prodr.* x. 479.

WESTERN TIBET; Zanskar, alt. 16,000 ft., *Thomson, Lance*.—DISTRIB. Afghanistan, Central Asia.

Perennial. *Rootstock* slender, creeping, with distant scales. *Stems* few, 3–6 in., branched. *Leaves* $\frac{1}{2}$ –1 in., pubescent on both surfaces. *Racemes* 1–2 in., flowers crowded, subsessile, or lower axillary and longer pedicelled; bracts oblong obtuse. *Sepals* $\frac{1}{2}$ in., villous. *Corolla* $\frac{1}{4}$ – $\frac{1}{2}$ in. diam. *Capsule* not seen.—Without the fruit it is not possible to identify the Indian plant absolutely with the *V. macrostemon*.

Bentham describes the fruit of the latter as obovate emarginate, but in Kirghis specimens it is oblong and notched at the top.

5. **V. lanuginosa**, *Benth. mss.*; densely woolly, stems very short, leaves sessile imbricate orbicular or upper broadly ovate quite entire, flowers in sessile terminal woolly heads, sepals 4 oblong subacute, corolla-lobes spathulate upper orbicular much larger and broader than the others, capsule elliptic notched.

SIKKIM HIMALAYA; Samdong, alt. 16,000 ft., *J. D. H.*

Stem simple, 2-3 in. high, clothed with imbricating leaves and woolly hairs. *Leaves* $\frac{1}{2}$ in. diam., equally woolly on both surfaces. *Flowers* small amongst the upper bracteal leaves. *Sepals* $\frac{1}{2}$ in. long. *Corolla* $\frac{1}{2}$ in. diam. *Capsule* equalling the sepals, pubescent. *Seeds* few, large, oblong, plano-convex.—A very singular species.

** Capsule somewhat compressed laterally, turgid, orbicular, rarely in *V. Anagallis* broadly ovate. *Seeds* biconvex.

6. **V. Anagallis**, *Linn.*; *Benth. in DC. Prodr.* x. 467; glabrous, rarely pubescent, erect, succulent, leaves sessile or lowest petioled oblong oblong-lanceolate or linear-oblong entire or serrate base usually cordate, racemes long axillary, pedicels spreading. *Reichb. Ic. Fl. Germ.* t. 1762; *Boiss. Fl. Orient.* iv. 437. *V. undulata*, *Wall. Cat.* 406, and in *Roxb. Fl. Ind. ed. Carey & Wall.* i. 147. *Veronica* sp., *Griff. Notul.* iv. 126, and *Ic. Pl. Asiat.* t. 419, f. 2.

N.W. INDIA; from the plains of the Punjab to Western Tibet, and from Kashmir to Bhotan, ascending to 9000 ft. in the Himalaya, and 15,000 in Tibet. BENGAL, the KHASIA MTS. and ASSAM. The DECCAN PENINSULA, in the Concan only.—DISTRIB. Europe, Asia, N. and S. Africa, N. America.

Perennial. *Stem* creeping below, from 6-18 in. high, and from the thickness of a sparrow's quill to that of the middle finger. *Leaves* 2-6 by $\frac{1}{2}$ - $\frac{2}{3}$ in. ($1\frac{1}{2}$ in. broad and ovate-cordate in a Kunawur specimen). *Racemes* 3-6 in., slender, lax-flid.; bracts linear-oblong, shorter than the pedicels, which are usually longer than the calyx. *Sepals* $\frac{1}{6}$ - $\frac{1}{4}$ in. long, subacute. *Corolla* $\frac{1}{6}$ - $\frac{1}{2}$ in. diam., pink or purplish. *Capsule* $\frac{1}{8}$ - $\frac{1}{6}$ in. diam., broadly ovate in some Tibetan specimens. *Seeds* ovoid or oblong, biconvex.

VAR. *oxycarpa*; capsules subacute longer than the sepals. *V. oxycarpa*, *Boiss. Fl. Orient.* iv. 438.—Kunawur, alt. 9000 ft., *Thomson*. Persia, Afghanistan.

VAR. *punctata*; dwarf, leaves all petioled ovate serrate or the upper only linear-oblong sessile amplexicaul. *V. punctata*, *Ham. in Don Prodr.* 93; *Benth. in DC. Prodr.* x. 468, in part.—Nepal, *Hamilton*; Bengal at Beaulah and Malda, *Clarke*. Benares, *Wall.* I think there is no doubt of this being a form of *V. Anagallis*, Assam specimens of which and others have similar lower leaves. The Cabul *punctata* of Bentham is, as Boissier has pointed out, nothing but *V. Anagallis*; and his var. β *extensa* is a luxuriant state of the same with larger bracts, sepals, &c.

VAR. *montioides*, *Boiss. Fl. Orient.* iv. 437; dwarf, slender, stems often simple, leaves ovate or oblong, racemes few few-flid. *V. pusilla*, *Benth. in DC. Prodr.* x. 468.—Western Tibet, *Thomson*. Afghanistan. The Herbarium specimens seem to be partly dwarf forms and partly seedlings of *V. Anagallis*.

7. **V. Beccabunga**, *Linn.*; *Benth. in DC. Prodr.* x. 468; glabrous or puberulous, decumbent, succulent, leaves sessile or shortly petioled elliptic or oblong obtuse crenate-serrate base rounded, racemes axillary few- or many-flowered, pedicels spreading. *Reichb. Ic. Fl. Germ.* t. 1701; *Boiss. Fl. Orient.* iv. 438.

WESTERN HIMALAYA; from Kashmir and Rawul Pindee, *Aitchison*, to Kunawur, *Thomson*. WESTERN TIBET, alt. 9-12,000 ft., *Thomson*.—DISTRIB. Afghanistan to Europe, N. Africa (Abyssinia), N. Asia to Japan.

Stem hollow, branches 6-18 in., spreading. *Leaves* 1-2 in., rarely obovate. *Racemes* 2-4 in.; bracts usually shorter than the pedicels. *Sepals* ovate-oblong, subacute. *Corolla* $\frac{1}{2}$ in. diam., blue or pink. *Capsule* and *Seeds* as in *V. Anagallis*.

*** Capsule didymous, lobes globose or flattened, 1- ∞ -seeded. Seeds cup-shaped, or deeply grooved on one side.

8. *V. hederæfolia*, Linn.; *Benth. in DC. Prodr.* x. 490; prostrate, hairy, leaves petioled orbicular-ovate 5-7-lobed, pedicels axillary solitary fruiting decurved, sepals cordate ciliate exceeding the corolla, capsule biglobose, cells 1-2-seeded. *Boiss. Fl. Orient.* iv. 468; *Fl. Dan.* iii. t. 428.

KASHMIR; alt. 6000 ft., Thomson.—DISTRIB. China, Japan, Persia to Syria, N. Africa and all Europe.

Annual. *Branches* numerous, 6-18 in. *Leaves* $\frac{1}{2}$ - $\frac{2}{3}$ in. diam., petiole short dilated upwards, lobes rounded. *Flowers* appearing in succession as the branch elongates, pedicels about equalling the leaves. *Sepals* membranous, acuminate. *Corolla* $\frac{1}{2}$ in. diam., pale blue. *Seeds* large, rugose, subglobose, with a deep pit on the inner face, black.

9. *V. agrestis*, Linn.; *Benth. in DC. Prodr.* x. 487; prostrate, puberulous, leaves petioled ovate cordate or orbicular coarsely crenate-serrate, pedicels axillary solitary as long as the leaves fruiting decurved, sepals ovate, capsule biglobose turgid, cells 4-10-seeded. *Reichb. Pl. Crit.* t. 277; *Boiss. Fl. Orient.* iv. 466. *V. polita*, Fries; *Reichb. Pl. Crit.* t. 246.

Plains of the PUNJAB, and UPPER GANGETIC VALLEY, and WESTERN HIMALAYA, from Kashmir to Kumaon, ascending to 6000 ft. WESTERN TIBET, Iskardo, alt. 9000 ft.—DISTRIB. Europe, N. E. and W. Asia to Japan, China and Loochoo Islands, N. Africa.

Annual. *Branches* numerous, 6-18 in. *Leaves* $\frac{1}{2}$ -1 in. diam.; petiole rarely $\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ in., obtuse, ciliate, fruiting sometimes $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ - $\frac{3}{4}$ in., shorter or longer than the sepals, white or blue. *Capsule* $\frac{1}{4}$ in. diam. *Seeds* oblong or orbicular, cup-shaped, tubercled, pale.—The two forms, *agrestis* proper, with larger leaves, narrower sepals, pale blue or white corolla, and 8-10-seeded capsules, and the subsp. *polita*, with smaller leaves, broader sepals, bright blue corolla, and 16-20-seeded capsule, are probably both Indian.

10. *V. persica*, Poir. *Dict.* viii. 542; prostrate, hairy, leaves shortly petioled oblong or ovate coarsely crenate-serrate base rounded or cordate, pedicels axillary solitary much longer than the leaves, sepals ovate or lanceolate fruiting spreading, capsule much broader than long flattened. *V. Buxbaumii*, Tenore, *Fl. Neap.* i. 7, t. 1; *Reichb. Pl. Crit.* t. 268; *Benth. in DC. Prodr.* x. 487; *Boiss. Fl. Orient.* iv. 465.

WESTERN HIMALAYA; Kashmir, alt. 6000 ft., Falconer, &c. Garwhal, at Mussooree, alt. 7000 ft., Edgeworth.—DISTRIB. Europe, W. and Central Asia, N. Africa.

Annual. *Branches* 6-12 in., tips often ascending. *Leaves* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., obtuse; petiole very variable. *Pedicels* slender, fruiting decurved. *Sepals* $\frac{1}{2}$ in., fruiting much longer than the capsule. *Corolla* $\frac{1}{2}$ in. diam., bright blue. *Capsule* $\frac{1}{2}$ - $\frac{1}{2}$ in. diam., very much broader than long; valves strongly reticulated, cells 5-12-seeded. *Seeds* boat-shaped, deeply pitted.

11. *V. biloba*, Linn.; *Benth. in DC. Prodr.* x. 485; erect or ascending, diffusely branched, puberulous or glabrate, leaves sessile or shortly petioled oblong or ovate-lanceolate acute subserrate, floral oblong-lanceolate quite entire, pedicels axillary longer than the leaves, fruiting spreading or decurved, sepals connate in pairs at the base, ovate acute or acuminate, capsule much broader than long flattened. *Boiss. Fl. Orient.* iv. 464. *V. campylopoda*,

Boiss. Diagn. i. iv. 80, and *Fl. Orient. l. c.*; Reichb. Ic. *Fl. Germ.* vii t. 645.

WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 5–10,000 ft. WESTERN TIBET, alt. 9–15,000 ft.—DISTRIB. Westward to Asia Minor, Soongaria.

Annual. Branches slender, 4–18 in., sparsely leafy, running into very loose racemes. Leaves $\frac{1}{2}$ –1 in., very variable in breadth, teeth few and remote. Pedicels $\frac{1}{4}$ – $\frac{3}{4}$ in. Sepals $\frac{1}{2}$ in., fruiting $\frac{1}{4}$ – $\frac{1}{2}$ in., spreading. Corolla blue, shorter than the calyx. Capsule $\frac{1}{2}$ – $\frac{1}{4}$ in. diam., much smaller than the calyx, cells 2–4-seeded. Seeds oblong, boat-shaped, more or less deeply pitted.—*V. campylopoda* is only a small state with smaller flowers; I cannot distinguish it as a variety even. The seeds of *V. biloba* vary much in depth of pitting. *V. microtheca*, Boiss. & Bal Diagn. Ser. 2, vi. 131, *V. bartsiaefolia*, and *V. elbrusensis*, Boiss. Herb., *V. Griffithii*, Benth. in DC. l. c. 485, *V. argute-serrata*, Regel & Schmalk., and *V. cardiocarpa*, Walp. (*Diplophyllum cardiocarpum*, Kar. and Kir.), all appear to me to be forms of *V. biloba*.

**** Capsule laterally flattened, broadly obcordate, keeled.

† Seeds elliptic, much flattened, biconvex or plano-convex.

12. *V. laxa*, Benth. *Scroph. Ind.* 45, and in DC. *Prodr.* x. 474; glabrous or sparsely pubescent, stems long ascending, leaves sessile ovate or cordate obtuse or subacute coarsely crenate-serrate, racemes axillary peduncled slender, capsule broadly obcordate ciliate. *V. Thunbergii*, A. Gray, *Bot. Japan.* 402.

WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 5–11,000 ft., Royle, &c.—DISTRIB. Japan.

Root perennial. Stems 10–20 in., rather stout, simple, hairy all over or glabrate. Leaves 1–2 in., pubescent on both surfaces. Racemes 3–10 in., lax-fl.; bracts linear-oblong, longer or shorter than the pedicels; pedicels shorter than the calyx. Sepals unequal, enlarged in fruit. Corolla $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. Capsule $\frac{1}{2}$ in. diam., equalling or shorter than the sepals.

13. *V. cana*, Wall. *Cat.* 401; Benth. *Scroph. Ind.* 45, and in DC. *Prodr.* x. 475; pubescent villous or glabrate, stems elongate ascending, leaves petioled ovate or ovate-cordate obtuse crenate-serrate, racemes axillary and terminal peduncled slender, capsule broadly deltoid top 2-lobed. *V. scrophularioides*, Wall. *mss.*

TEMPERATE HIMALAYA; from Chumba to Sikkim, alt. 9–13,000 ft.—DISTRIB. Japan, Formosa.

Root perennial. Stems 6–12 in., simple, usually slender, pubescent all round, or bifariously, or glabrate. Leaves in very few and distant pairs, 1– $1\frac{1}{2}$ in., pubescent on both surfaces or glabrate; petiole $\frac{1}{2}$ – $\frac{3}{4}$ in. Racemes 2–3 in., lax-fl.; bracts small, linear, shorter than the calyx; pedicels equalling or shorter than the calyx. Sepals $\frac{1}{2}$ – $\frac{3}{4}$ in., unequal, linear-oblong. Corolla $\frac{1}{2}$ in. diam., blue. Capsule $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., glabrous or ciliate.—The Sikkim specimens are much more glabrous than the Western, and small specimens have the bifariously pubescent stems.

14. *V. capitata*, Benth. *Scroph. Ind.* 45, and in DC. *Prodr.* x. 481; pubescent, stems short suberect simple, leaves sessile or shortly petioled rounded ovate or shortly oblong obtuse crenate-serrate or subentire, base rounded, flowers in terminal sessile villous umbels or heads, capsule broadly obcordate.

ALPINE HIMALAYA; from Kunawur to Bhotan, alt. 10–14,000 ft.

Annual or roots perennial, 3–6 in. high. Leaves $\frac{1}{2}$ –1 in., usually pubescent on both surfaces, uppermost pair often the largest. Flowers sessile in the uppermost pairs of

leaves, forming a head $\frac{1}{4}$ – $\frac{3}{4}$ in. diam.; pedicels $0\frac{1}{8}$ in. *Sepals* $\frac{1}{8}$ in. long, spatulate-oblong, obtuse. *Corolla* $\frac{1}{4}$ in. diam., blue. *Capsule* $\frac{1}{8}$ in. diam., ciliate.

VAR. ? *sikkimensis*; stem decumbent branched, leaves longer petioled often 2 in. long.—Sikkim; Lachen, alt. 12,000 ft., J. D. H. This looks like a very luxuriant form of *V. capitata* with stems 8–10 in., large membranous leaves and petioles sometimes $\frac{1}{2}$ in. long.

15. **V. javanica**, *Blume Bijd.* 742; pubescent, diffusely repeatedly branched, leaves shortly petioled ovate obtuse crenate-serrate base rounded subcordate or truncate, flowers small in short few-fl. axillary and terminal racemes, capsule very small broadly obcordate or didymous shorter than the calyx. *Miquel Fl. Ind. Bat.* ii. 701; *Benth. in DC. Prodr.* x. 489. *V. Maddeni, Edgew. mss.*

SUBTROPICAL and TEMPERATE HIMALAYA; from Simla to Bhotan, alt. 3–7000 ft. KHASIA Mts., alt. 5–6000 ft., J. D. H. & T. T.—DISTRIB. Java, Loochoo Islands.

Annual. *Stems* very numerous, spreading from the root, ascending, 6–18 in., stout or slender, intricately branched. *Leaves* $\frac{3}{4}$ –1 in., more or less pubescent on both surfaces; petiole $\frac{1}{8}$ – $\frac{1}{2}$ in. *Racemes* subsessile, $\frac{1}{2}$ –1 in., fruiting 1–2 in.; pedicels $\frac{1}{16}$ in., shorter than the small narrow bracts. *Sepals* linear-oblong, obtuse, $\frac{1}{10}$ in. long. *Corolla* $\frac{1}{4}$ in. diam. *Capsule* $\frac{1}{8}$ in. diam., pubescent.

16. **V. verna**, *Linn.*; *Benth. in DC. Prodr.* x. 483; puberulous, glandular upwards, stems short erect simple densely leafy and flowering for most of their length, leaves sessile oblong simple or 3-cleft or pinnatisect, flowers axillary shortly pedicelled, capsule broadly obcordate. *Reichb. Ic. Fl. Germ.* t. 1720, f. 1; *Boiss. Fl. Orient.* iv. 456.

WESTERN HIMALAYA; Kashmir and Jamu, alt. 5–7000 ft., Thomson.—DISTRIB. Europe, N. Asia.

Annual. *Stem* 2–6 in., slender, erect, simple or branched from the base, together with the flowers and leaves forming a cylindric stout spike. *Leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in., imbricate, or the lower distant. *Flowers* small, blue, pedicels very short. *Sepals* linear-lanceolate. *Corolla* pale blue, shorter than the calyx. *Capsule* $\frac{1}{8}$ in. diam., glandular, about as long as the sepals.

17. **V. arvensis**, *Linn.*; *Benth. in DC. Prodr.* v. 483; pubescent, stems simple or diffusely branched, branches ending in long bracteate racemes, leaves very small subsessile ovate-cordate crenate, floral alternate oblong or lanceolate quite entire, racemes dense- or lax-fl., pedicels much shorter than the floral leaves, corolla minute, capsule broadly obcordate glandular-hairy shorter than the calyx. *Reichb. Ic. Fl. Germ.* t. 1720, f. 2; *Boiss. Fl. Orient.* iv. 457.

WESTERN HIMALAYA; from Kashmir and Kishtwar, alt. 7–9000 ft., Thomson, to Garwhal, *Edgeworth*.—DISTRIB. Europe, N. Asia, and N. Africa.

Annual, 6–10 in. high; branches bifariously pubescent, often continuously leafy and floriferous throughout. *Leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in., mostly sessile; floral alternate, linear-oblong or lanceolate, crowded or scattered. *Pedicels* very short. *Sepals* narrow, obtuse, ciliate. *Corolla* pale blue. *Capsule* $\frac{1}{8}$ – $\frac{1}{2}$ in. broad.

18. **V. serpyllifolia**, *Linn.*; *Benth. in DC. Prodr.* x. 482; glabrous or glandular-pubescent, creeping below, branched from the base, branches ending in long bracteate racemes, leaves sessile rounded or oblong subentire, floral alternate oblong quite entire, racemes dense- or lax-fl., pedicels equalling the floral leaves, capsule broadly obcordate, shorter than the calyx glabrous. *Reichb. Ic. Fl. Germ.* t. 1718; *Boiss. Fl. Orient.* iv. 453.

TEMPERATE and SUBALPINE WESTERN HIMALAYA; from Chumba to Kumaon, alt. 8–13,000 ft.—DISTRIB. Europe, N. Asia, N. Africa, N. and S. America.

Perennial. *Branches* 3-10 in., ascending. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in., rather coriaceous. *Racemes* 1-4 in.; lower bracts leaf-like, upper narrow. *Sepals* $\frac{1}{2}$ - $\frac{3}{4}$ in., obovate-oblong, ciliate, shorter than the corolla. *Corolla* $\frac{1}{2}$ in. diam., white or lilac.

TRIBE VIII. GERARDIÆ.

40. **ALECTRA**, Thunb.

Erect, rigid, usually scabrid herbs, black when dry. *Leaves* opposite or the upper (rarely all) alternate, toothed (reduced to scales in *A. Thomsoni*). *Flowers* in terminal spikes or racemes, solitary in the axils of bracts, 2-bracteolate, upper crowded, yellow, or streaked with red or brown. *Calyx* campanulate, subfoliaceous, 5-toothed or -fid, lobes valvate or open in bud. *Corolla-tube* broad; limb oblique; lobes 5, spreading, the lower outer in bud. *Stamens* 4, didynamous; anthers touching in pairs, naked or bearded, cells parallel, bases mucronate. *Style* long, inflexed, stigma elongate tongue-shaped. *Capsule* subglobose, loculicidal, valves entire or 2-fid. *Seeds* very numerous, minute, linear, testa very lax reticulate, nucleus small.—Species 14, tropical American, African and Indian.

1. **A. indica**, Benth. in DC. Prodr. x. 339; scaberulous, leaves sessile or shortly petioled ovate-lanceolate or lanceolate coarsely toothed base cuneate rarely cordate, bracts longer than the sessile flowers. *A. cordata*, Benth. in DC. l. c. (the Himalayan specimen). *Hymenospermum dentatum*, Benth. in Wall. Cat. 3963. *Glossostyles arvensis*, Benth. Scroph. Ind. 49.

TEMPERATE HIMALAYA; from Kumaon to Bhotan, alt. 3-9000 ft. KHASIA MTS., alt. 4-6000 ft. BEHAR; top of Parusnath, Anderson, &c. AVA, Wallich.—DISTRIB. Mauritius.

Stem 6-18 in., naked below, simple, or branched above. *Leaves* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., sparingly coarsely toothed. *Spikes* pubescent, 3-6 in.; flowers crowded; bracteoles ciliate. *Calyx* $\frac{1}{2}$ in. long. *Corolla* $\frac{1}{2}$ in. long, yellow, lobes rounded subequal. *Filaments* ciliate; anthers yellow. *Capsule* shorter than the calyx, subglobose, 4-lobed. *Seeds* linear, nucleus very small in the centre of the transparent sausage-shaped testa.

2. **A. Thomsoni**, Hook. f.; slender, leaves scale-like, flowers racemose, bracts minute.

BEHAR; on Parusnath, alt. 3000 ft., parasitic on a *Strobilanthes*, Thomson.

A very singular plant, resembling the S. African *A. orobanchoides*, Benth. *Stem* rigid but flexuous, 6-15 in. high, simple or branched at the rootstock, hardly scaberulous. *Leaves* represented by a few scattered scales $\frac{1}{10}$ - $\frac{1}{4}$ in. long, the largest oblong, obtuse. *Racemes* 6-10 in., lax-fid.; bracts minute; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in., slender. *Calyx*, fruiting hemispheric, $\frac{1}{2}$ in. diam.; lobes broadly triangular. *Capsule* globose, as long as the calyx. *Seeds* as in *A. indica*, but more minute and elongate-cuneiform.

41. **BUCHNERA**, Linn.

Rigid annual herbs, black when dry. *Leaves*, lower opposite, broad; upper alternate, narrow. *Flowers* sessile, axillary, or in bracteate spikes, 2-bracteolate. *Calyx* tubular, 10-nerved, sometimes 5-ribbed, 5-toothed. *Corolla-tube* slender; lobes 5, flat, subequal, spreading, 2 upper inner in bud. *Stamens* 4, didynamous, included; anthers 1-celled, vertical, dorsifixed, bases obtuse, connative sometimes mucronate. *Style* thickened or clavate above, stigma entire or notched. *Capsule* oblong, loculicidal; valves coriaceous, entire, septiferous, separating from the placentas. *Seeds*

very numerous, obovoid or oblong, reticulated.—Species about 30, widely dispersed in warm countries.

1. **B. tetrasticha**, *Benth. Scroph. Ind.* 41, and in *DC. Prodr.* x. 495; stout, scabrid, root-leaves evanescent, leaves sessile linear-oblong obtuse quite entire, spikes 4-angled stout villous, bracts broadly ovate equalling the calyx. *Wall. Cat.* 3878.

UPPER ASSAM; Mishmi Hills, *Griffith*. TENASSERIM; at Moulmein, *Wallich, Griffith, Helfer*.

Stem simple, 12–24 in., leafy. *Leaves* 1–2½ in., rigid. *Spikes* solitary or several, amentiform, dense-fld., 1–2 by ½–1 in., bracts horizontal. *Calyx* depressed. *Corolla-tube* slender, twice as long as the calyx.

2. **B. cruciata**, *Ham. in Don Prodr.* 91; slender, nearly smooth, root-leaves spreading oblong obtuse, cauline linear entire or toothed, spikes 4-angled pubescent, bracts ovate ciliate equalling or shorter than the calyx. *Benth. in DC. Prodr.* x. 495; *Wall. Cat.* 3879; *Miquel Fl. Ind. Bat.* ii. 702. *B. sumatrana*, *Miquel l. c.* *B. stricta*, *Benth. in Hook. Comp. Bot. Mag.* i. 367, and in *DC. Prodr.* l. c. *B. densiflora*, *Hook. & Arn. Bot. Beech. Voy.* 203.

NEPAL, *Wallich*. KHASIA MTS., alt. 3–5000 ft., *Griffith, &c.* BURMA, *Wallich*.—DISTRIB. Sumatra, Java, China.

Stem 10–18 in., simple or branched upwards. *Leaves*, radical rosulate, 1–1½ in., pubescent, base narrowed; cauline erect, 1–2 in., teeth few and irregular. *Spikes* ½–1 in. by ¼–½ in. *Calyx* longer than in *B. tetrasticha*, half as long as the corolla. *Capsule* longer than the calyx.

3. **B. hispida**, *Ham. in Don Prodr.* 91; slender, hispid, root-leaves obovate or oblong, cauline linear-oblong or lanceolate toothed or entire obtuse, spike slender, flowers distant, bracts narrow. *Benth. in DC. Prodr.* x. 496; *Wall. Cat.* 3875; *Wight Ic.* t. 1413; *Dalz. & Gibs. Bomb. Fl.* 182. *B. Schimperiana*, *Hochst. Pl. Abyss. Exsicc.* n. 23.

WESTERN and CENTRAL HIMALAYA; from Kashmir to E. Nepal, alt. 1–9000 ft. BEHAR, on Parushnath, *J. D. H.* CENTRAL INDIA, at Hazarabagh, *Clarke*. DECCAN PENINSULA, from the Concan southwards.—DISTRIB. Madagascar, Tropical Africa.

Stem 6–18 in., often branched above. *Root-leaves* 1–2 in., cauline usually longer and narrower. *Spikes* 6–10 in., very slender; flowers often distant. *Calyx* hispid, ⅙ in. long, lobes very narrow. *Corolla-tube* not twice as long as the calyx, limb ¼ in. diam. *Capsule* shorter than the calyx.—Wight states that his specimens from Coorg are not hairy, as described in the character of the plant; these I have not found in his Herbarium.

42. **Striga**, *Lour.*

Usually scabrid herbs, discoloured or black when dry. *Leaves*, lower opposite, upper alternate, linear, entire, rarely toothed, sometimes reduced to scales. *Flowers* axillary or the upper in bracteate spikes, often 2-bracteolate. *Calyx* tubular, strongly 5–15-ribbed, 5-toothed or -fid. *Corolla-tube* slender, abruptly incurved at or about the middle or top; limb spreading, 2-lipped, upper lip usually short notched or 2-fid; lower the inner in bud, 3-fid. *Stamens* 4, didynamous; included; anthers 1-celled, vertical, dorsifixed, bases obtuse, connective sometimes mucronate. *Style* thickened above, stigma simple. *Capsule* subglobose or oblong, loculicidal; valves entire, septiferous, separating from the placentas. *Seeds* very numerous, ovoid or oblong, reticulated.—Species about 18, in the hotter regions of the Old World.

* *Calyx* 5-ribbed.

1. **S. orobanchoides**, *Benth. in Hook. Comp. Bot. Mag.* i. 361, t. 19, and in *DC. Prodr.* x. 501; glabrous or pubescent, leaves scale-like, bracts lanceolate hardly as long as the calyx, corolla-tube incurved. *Dalz. & Gibs. Bomb. Fl.* 181; *Wight Ic.* t. 1414. *Buchnera orobanchoides*, *Br. in App. Salt. Abyss., ex Endl. in Flora* 1832, 387, t. 2. *B. hyderabadensis*, *Roth Nov. Sp.* 292; *Wall. Cat.* 3871. *Orobanche indica*, *Spreng. Syst.* ii. 817, not of *Roxb.* *Striga orchidea*, *Hochst. Pl. Nub. Exsicc.* n. 387.

WESTERN INDIA; Scinde, and Marwar, on Mt. Aboo, *Stocks*. The Deccan from the Concan southwards. *Suhunsudhara, Royle*.—DISTRIB. Tropical and S. Africa, Arabia.

Rootstock tuberous; stems 6–10 in., stout or slender, simple or branched, glabrous or pubescent; branches stout, erect. *Leaves* opposite and alternate. *Spikes* variable in length, dense or lax-fl'd. *Calyx-lobes* acuminate. *Corolla* small, 2-lipped, described as white, rosy, blue or red-brown; tube exserted; limb $\frac{1}{4}$ in. diam. *Capsule* subglobose.

2. **S. densiflora**, *Benth. in Hook. Comp. Bot. Mag.* i. 363, and in *DC. Prodr.* x. 502; scabrid or strigose, leaves linear, bracts lanceolate longer than the calyx, corolla-tube incurved. *Dalz. & Gibs. Bomb. Fl.* 181. *Buchnera densiflora*, *Benth. Scroph. Ind.* 41; *Dalz. & Gibs. Bomb. Fl.* 181. *B. asiatica*, L. ? , *Wall. Cat.* 3873 C.

UPPER GANGETIC PLAIN; Saharumpore, *Royle*; Benares, *Madden*. DECCAN PENINSULA, from Guzerat southwards.

Stem 6–18 in., simple or branched; branches erect, stout or slender, sometimes fastigate. *Leaves* $\frac{1}{2}$ –1 by $\frac{1}{16}$ – $\frac{1}{8}$ in., erect. *Spikes* usually slender, sometimes very long with distant flowers; bracts linear. *Calyx* $\frac{1}{8}$ in., lengthening in fruit, lobes subulate. *Corolla* white, tube exserted, limb $\frac{1}{4}$ in. diam. *Capsule* included in the calyx.

** *Calyx* 10–15-ribbed.

3. **S. lutea**, *Lour. Fl. Coch.* 22; scabrid or villous, leaves linear, calyx 10-ribbed. *Benth. in Hook. Comp. Bot. Mag.* i. 363. *S. hirsuta*, *Benth. in DC. Prodr.* x. 502; *Dalz. & Gibs. Bomb. Fl.* 181. *S. coccinea*, and *S. phœnicea*, *Benth. in Hook. l. c.* 364. *S. pusilla*, *Hochst. Plant. Schimp.* *Buchnera asiatica*, *Linn. Sp. Pl. in part*; *Roxb. Fl. Ind.* iii. 31; *Benth. Scroph. Ind.* 40. *B. coccinea*, *Benth. Scroph. Ind.* 40; *Wall. Cat.* 3870. *B. phœnicea*, *Benth. Scroph. Ind.* 40; *Wall. Cat.* 3874. *Campuleia coccinea*, *Hook. Fl. Exot.* t. 203.—*Rheede Hort. Mal.* ix. t. 66.

Throughout WESTERN INDIA and the DECCAN; from Scinde and the Punjab southwards (Kumaon only, in the HIMALAYA, ascending to 6000 ft.) BENGAL. TENASSERIM.—DISTRIB. Siam, Java, China, Arabia, Tropical and S. Africa, Madagascar.

Stem usually slender, 6–18 in., simple or fastigately branched. *Leaves* $\frac{1}{2}$ –1½ in. *Spikes* elongate; flowers usually distant; bracts usually longer than the calyx. *Calyx* rarely 15-ribbed. *Corolla* very variable in size, scarlet, purple, yellow or white; tube twice as long as the calyx, glabrous or nearly so, inflexed at the top. The var. *humilis*, *Benth. in DC. l. c.*, has rather broader leaves and a dense spike.

4. **S. euphrasioides**, *Benth. in Comp. Bot. Mag.* i. 364; and in *DC. Prodr.* x. 503; scabrid or strigose, leaves linear, calyx $\frac{1}{4}$ in. 15-ribbed, lobes as long as the tube, corolla $\frac{1}{3}$ – $\frac{3}{4}$ in. long. *Dalz. & Gibs. Bomb. Fl.* 181; *Miquel Fl. Ind. Bat.* ii. 705. *S. glabrata*, *Benth. in Hook. l. c.* *Buchnera euphrasioides*, *Vahl Symb.* iii. 81; *Roxb. Fl. Ind.* iii. 32; *Wight Ic.* t. 855. *B. angustifolia*, *Don Prodr.* 91. *B. bifida*, *Ham. in Wall. Cat.* 3872. *B. asiatica*, *Linn. Herb. in part*.

Throughout INDIA, in the plains from the Punjab southwards to CEYLON, and eastwards to the Khasia Mts., Pegu and Burma; ascending the Himalaya to 4000 ft. (not seen from the Eastern Peninsula or lower Bengal).—DISTRIB. Java (*Miquel*).

Very variable in habit, from a simple filiform stem 4–6 in., to a stout branched herb 2 ft. *Leaves* $\frac{1}{4}$ –2 in., often 1–2-toothed. *Spikes* interrupted; flowers often distant. *Corolla* white, tube pubescent at the curve. *Calyx* bell- or funnel-shaped in fruit.

5. **S. Masuria**, *Benth. in Hook. Comp. Bot. Mag.* i. 364, and in *DC. Prodr.* x. 503; scabrid, leaves linear, calyx $\frac{1}{2}$ in. narrow 15-ribbed, lobes equalling the tube, corolla-tube 1 in. limb $\frac{3}{4}$ –1 in. diam. *Buchnera Masuria*, *Ham. in Benth. Scroph. Ind.* 41. *B. Wallichii*, *Benth. in Wall. Cat.* 3876.

NEPAL; in the Morung, *Hamilton*. MADRAS; at Guindy, *Shuter*. BURMA; at Promé, *Wallich*.—DISTRIB. China, Philippine Islands.

Stem very slender, 1–2 ft. *Leaves* 1–2 in. *Flowers* distant. *Fruiting calyx* $\frac{3}{8}$ –1 in., tube ventricose, ribs very strong and close.

6. **S. sulphurea**, *Dalz. & Gibs. Bomb. Fl.* 182; very slender, scabrid, leaves linear, flowers mostly axillary, calyx $\frac{1}{2}$ – $\frac{3}{4}$ in., lobes filiform equalling the tube, corolla-tube not exceeding the calyx, limb very small.

The CONCAN; at Seconere hill-fort, *Dalzell*.

Stem 6–12 in. *Leaves* 1–1 $\frac{1}{2}$ in., extremely slender. *Flowers* few, distant, all axillary or the upper subspicate, shorter than the floral leaves. *Calyx* very narrow, fruiting $\frac{3}{8}$ in., tube ventricose, ribs very strong. *Corolla* yellow, limb $\frac{1}{8}$ in. diam.

43. **Rhamphicarpa**, *Benth.*

Erect glabrous herbs. *Leaves*, lower opposite, upper alternate, narrow, entire or pinnatisect. *Flowers* axillary and pedicelled, or in bracteate racemes; bracteoles 1–2 or 0. *Calyx* campanulate, 5-fid, lobes acuminate. *Corolla-tube* slender, long, straight or incurved; lobes 5, broad, spreading, subequal or the upper connate. *Stamens* 4, didynamous, included; anthers 1-celled, vertical, dorsifixed, bases obtuse. *Style* thickened above, stigma simple. *Capsule* compressed at right angles to the septum, usually beaked, loculicidal; valves septiferous. *Seeds* numerous, small, obovoid or oblong, tube reticulate.—Species 6, tropical and S. African, Indian and Australian.

R. longiflora, *Benth. in Hook. Comp. Bot. Mag.* i. 368, and in *DC. Prodr.* x. 504; annual, leaves pinnatisect segments filiform, corolla-tube very long straight, capsule with a slender curved beak. *Dalz. & Gibs. Bomb. Fl.* 182; *Wight Ic. t.* 1415. *Buchnera longiflora*, *Arn. Pugill.* 38.

DECCAN PENINSULA, from the Coeacan southwards.

Very variable in habit and stature, from 2 in. slender and simple, to 10 in. diffusely branched. *Leaves* 1–1 $\frac{1}{2}$ in.; segments few, $\frac{1}{2}$ – $\frac{3}{4}$ in. *Flowers* shortly pedicelled. *Calyx* $\frac{1}{4}$ – $\frac{1}{3}$ in., tube short, lobes lanceolate 3 times as long as the tube. *Corolla* dull white, tube 1–1 $\frac{1}{2}$ in., limb $\frac{2}{3}$ in. diam. *Capsule* $\frac{1}{2}$ in., ovoid, ventricose, beak longer or rather shorter than the cells.—*Bentham* (*Fl. Austral.* iv. 518) unites with this the African *R. fistulosa*, *Benth.*, and an Australian species, but the calyx is much longer in *R. longiflora*, and I think the three are distinct, though very near.

44. **Centranthera**, *Br.*

Annual, rigid, scabrid herbs. *Leaves* opposite or upper alternate, oblong

or linear, obtuse, entire or toothed. *Flowers* axillary or in bracteate spikes or racemes, 2-bracteolate. *Calyx* compressed, spathaceous, split on one side; lobes acute or acuminate, cohering or free. *Corolla-tube* long, incurved, dilated above; limb oblique; lobes 5, broad, subequal, spreading, 2 upper inner in bud. *Stamens* 4, didynamous, included; anthers meeting in pairs, cells transverse, bases spurred or mucronate, one smaller often empty. *Stigma* dilated, acute. *Capsule* ovoid or subglobose, loculicidal; valves entire, placentiferous in the middle. *Seeds* very numerous, oblong-cuneate, testa lax, reticulate.—Species 4, Indian, Malayan and Australian.

1. **C. grandiflora**, *Benth. Scroph. Ind.* 50, and in *DC. Prodr.* x. 525; erect, stout, scabrid, leaves oblong elliptic or narrowly linear, calyx 1 in. oblong inflated acuminate, corolla yellow. *Wall. Cat.* 3880.

SIKKIM HIMALAYA, alt. 1–5000 ft., *J. D. H.*; and KHASIA Mts., alt. 3–5000 ft.

Stem 1–2 ft., branched. *Leaves* sessile, 1–2 by $\frac{1}{2}$ –1 in., rigid. *Flowers* shortly pedicelled. *Calyx-segments* subulate, cohering. *Corolla* $1\frac{1}{2}$ –2 in. long, limb 1 in. diam. *Filaments* hairy. *Capsule* globose.

2. **C. Brunoniana**, *Benth. Scroph. Ind.* 50, and in *DC. Prodr.* x. 525; erect, scabridly hispid, leaves linear-oblong, calyx $\frac{1}{2}$ in. oblong-acuminate, corolla yellow. *Wall. Cat.* 3882. *C. hispida*, *Benth. Fl. Hongk.* 254, the yellow-fl. plant.

MARTABAN and TENASSERIM; at Moulmein, *Wallich*, &c.—DISTRIB. China.

Stem 12–18 in. *Leaves* $\frac{3}{4}$ –2 in. *Flowers* shortly pedicelled. *Corolla* 1 in. long, limb $\frac{1}{2}$ in. diam.

3. **C. hispida**, *Br. Prodr.* 438; erect, hispid, hoary, leaves oblong or linear-oblong, calyx $\frac{1}{3}$ in. ovoid acute, corolla purplish. *Wall. Pl. As. Rar.* i. 39, t. 45, and *Cat.* 3881; *Benth. in DC. Prodr.* x. 525; *Dalz. & Gibs. Bomb. Fl.* 182; *Miquel Fl. Ind. Bat.* ii. 707. *C. nepalensis*, *Don Prodr.* 88. *Digitalis stricta*, *Roxb. Fl. Ind.* iii. 99. *Capraria rigida*, *Hb. Ham.*

Throughout INDIA; from the Punjab, and Kumaon, ascending to 4000 ft., to Canara, Bengal, Tenasserim and Burma. CEYLON, ascending to 3000 ft.—DISTRIB. Java, China, Philippine Islands, Australia.

Stem 1–2 ft. *Leaves* very variable, usually $\frac{1}{2}$ –1 in., and narrowly linear. *Flowers* subsessile. *Corolla* twice as long as the calyx. *Filaments* woolly.

4. **C. procumbens**, *Benth. in DC. Prodr.* x. 525; diffusely branched from the base, rarely erect, hispid, leaves oblong or linear-oblong, calyx $\frac{1}{2}$ in. ovoid-oblong acute, corolla purplish. *C. Brunoniana*, *Thwaites Enum.* 220, not of *Benth.*

DECCAN PENINSULA; from the Concan southwards. CEYLON, ascending to 3000 ft.

Root apparently more than annual. *Stems* rarely simple, erect, 6–10 in., usually with straggling branches 4–8 in. long from the root. *Leaves* $\frac{1}{2}$ –1 by $\frac{1}{6}$ – $\frac{1}{3}$ in. *Flowers* sessile. *Corolla* $\frac{3}{4}$ –1 in.—Possibly a variety of *C. hispida*, but the calyx is much larger.

5. **C. humifusa**, *Wall. Cat.* 3883; dwarf, diffusely branched from the base, glabrous or hispidulous, leaves linear, calyx $\frac{1}{6}$ in. ovoid subacute, corolla yellow. *Benth. in DC. Prodr.* x. 525. *Razumovia tranquebarica*, *Spreng. Syst.* ii. 812. *Torenia lepidota*, *Roth Nov. Sp.* 281.

BENGAL and BEHAR; at Parusnath, *Clarke*. DECCAN PENINSULA; at Tranquebar.

MALACCA, *Griffith*. CEYLON; south end of the island.—DISTRIB. Java, Borneo, China.

Branches slender, 3–6 in. *Leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in. *Flowers* subsessile. *Corolla* $\frac{1}{2}$ – $\frac{1}{3}$ in. long.

45. **SOPUBIA**, *Hamilt.*

Erect herbs. *Leaves* opposite, or the upper alternate, narrow, often lacinate. *Flowers* bracteate, spicate or racemose, pedicels 2-bracteolate. *Calyx* campanulate, 5-toothed or -lobed. *Corolla-tube* short, throat broad; lobes 5, broad, spreading, subequal, 2 upper the inner in bud. *Stamens* 4, didynamous, subincluded; anthers 2 or all meeting in pairs, one cell of each perfect, ovoid, the other small stipitate empty. *Stigma* thickened, sublinguiform, obtuse. *Capsule* ovoid or oblong, tip rounded or compressed, retuse or notched, loculicidal; valves entire or 2-fid, separating from the placentiferous axis. *Seeds* numerous, testa lax.—Species 8 or 9, S. African, Indian, Malayan and Australian.

1. **S. delphinifolia**, *G. Don Gen. Syst.* iv. 560; much branched, scaberulous, leaves pinnatisect, segments filiform, flowers subsessile, calyx-teeth longer than the tube subulate, corolla subcampanulate, capsule rounded at the top. *Benth. in DC. Prodr.* x. 522; *Dalz. & Gibs. Bomb. Fl.* 182. *Gerardia delphinifolia*, *Linn.*; *Roxb. Cor. Pl.* i. 62, t. 90, and *Fl. Ind.* iii. 99; *Wall. Cat.* 3890; *Benth. Scroph. Ind.* 49. *G. Heyneana*, *Benth. in Wall. Cat.* 3891. *Euphrasia Coromandeliana*, *Roth*; *Spreng. Syst.* ii. 775.

BANDA. *Edgeworth*. BEHAR; on Parusnath, *Anderson*. DECCAN PENINSULA, from the Concan southwards. CEYLON, ascending to 4000 ft.

Stem erect, 4-grooved, 3–4 ft., spotted with purple. *Leaves* 1 in., segments few, almost as long, flexuous. *Calyx-lobes* linear, erect. *Corolla* 1–1½ in., rose coloured, limb 1 in. diam. *Filaments*, upper hooked lower horned at the tip. *Capsule* oblong, as long as the calyx.

2. **S. trifida**, *Ham. in Don Prodr.* 88; scaberulous, branched above, leaves linear or filiform lower mostly 3-fid upper entire, flowers pedicelled, calyx-teeth triangular, corolla subrotate, capsule retuse at the top. *Benth. in DC. Prodr.* x. 522. *Gerardia scabra*, *Wall. Cat.* 3889, not of *Linn.*; *Benth. Scroph. Ind.* 49. *G. Sopubia*, *Benth. in Hook. Comp. Bot. Mag.* i. 210.

TEMPERATE AND SUBTROPICAL HIMALAYA; from Kunawur to Sikkim, alt. 3–7000 ft. KHASIA MTS., alt. 3–4000 ft. DECCAN PENINSULA; Nilgherries and Bababoodan Hills, common. CEYLON; elevated parts of the Central province.

Stem slender, 1–2 ft., branches suberect. *Leaves* $\frac{3}{4}$ –1 in., often fascicled. *Pedicels* $\frac{1}{4}$ – $\frac{3}{8}$ in. *Calyx* $\frac{1}{8}$ in., woolly within. *Corolla* $\frac{1}{2}$ in. diam., varying from yellow to purple (*Clarke*).

3. **S. stricta**, *G. Don Gen. Syst.* iv. 559; scaberulous, branched, leaves linear entire or sparingly toothed or cut, flowers pedicelled, calyx-teeth lanceolate acute, corolla subcampanulate, capsule compressed at the top. *Benth. in DC. Prodr.* x. 522. *Gerardia stricta*, *Benth. Scroph. Ind.* 49; *Wall. Cat.* 3887.

SIKKIM HIMALAYA, foot of the hills, *J. D. H. PEGU*, M'Lelland. TENASSEERIM; at Moulmein, *Wallich*. BENGAL; at Sumbulpore, *Griffith*.—DISTRIB. Java.

Stem 8–12 in., rigid, simple or fastigiately branched above. *Leaves* 1–1½ in., scattered and fascicled. *Pedicels* $\frac{1}{8}$ in. *Calyx* $\frac{1}{8}$ in. *Corolla* $\frac{1}{3}$ to $\frac{1}{2}$ in. long, limb as broad.

46. **MICRARGERIA**, Benth.

Rigid, scabrid, erect herbs, black when dry. *Leaves* alternate, or the lower opposite, linear, entire or 3-multifid. *Flowers* small, in the upper axils, or in long terminal spikes, bracteate and 2-bracteolate. *Calyx* campanulate or hemispheric; teeth 5, broad. *Corolla-tube* exserted, dilated above, often incurved; lobes 5, broad, spreading, entire, subequal, 2 upper inner in bud. *Stamens* 4, didynamous, included; anthers free, meeting in pairs, cells distinct subequal attached by their tips, base obtuse. *Stigma* thickened, obtuse. *Capsule* small, globose, loculi- and septi-cidal; valves 4, separating from 2 small globose placentas. *Seeds* numerous, oblong-cuneate, testa lax.—Species 2, a W. African and Indian.

M. Wightii, Benth. in DC. Prodr. x. 509; lower leaves pinnatisect, segments few filiform. *Wight Ic.* t. 1417.

SOUTH DECCAN PENINSULA; *Wight, &c.*

Annual, 8–18 in. high. *Stem* naked below, fastigiately branched above; branches long, slender, erect. *Leaves* $\frac{1}{2}$ in., in scattered fascicles, cut into almost filiform spreading segments $\frac{1}{4}$ – $\frac{1}{2}$ in. long; upper filiform, entire. *Spikes* very long and slender; flowers distant, subsessile; bracts filiform, longer than the calyx; bracteoles linear. *Calyx* $\frac{1}{10}$ in., hemispheric; teeth triangular. *Corolla-tube* $\frac{1}{2}$ in. long, incurved, pubescent, limb as broad. *Capsule* $\frac{1}{8}$ in. diam. enclosed in the calyx.

47. **LEPTORHABDOS**, Schrenk.

Erect, annual, glabrous or glandular-pubescent, twiggly herbs. *Stem* 4-angled. *Leaves* opposite below, alternate above, linear, entire or lacinate or pinnatisect, upper smaller. *Flowers* small, axillary, and in interrupted very slender racemes, bracteate, ebracteolate. *Calyx* tubular-campanulate, 5-toothed or -fid. *Corolla-tube* short; lobes 5, subequal, spreading, broad, entire or notched, 2 upper inner in bud. *Stamens* 4, didynamous, shorter than the corolla; anthers free, cells parallel equal not spurred. *Stigma* shortly dilated, obtuse; ovules 2 in each cell. *Capsule* compressed above at right angles to the septum, obtuse, loculicidal; valves entire, septiferous. *Seeds* 1–2 in each cell, laterally attached, oblong or angled, rugose.—Species 4 or 5, Central Asiatic and N. Indian.

1. **L. Benthamiana**, Walp. Rep. iii. 387; glabrous, inflorescence glandular-puberulous, leaves pinnatisect, segments linear or filiform, calyx-lobes ovate-lanceolate. *L. virgata*, Benth. in DC. Prodr. x. 510; Boiss. Fl. Orient. iv. 470. *L. parviflora*, Benth. l. c. *Gerardia parviflora*, Wall. Cat. 3888; Benth. Scroph. Ind. 48. *Dargeria pinnatifida*, Dene. in Jacq. Voy. Bot. 116.

TEMPERATE WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 5–11,000 ft., Falconer, &c. WESTERN TIBET; Dras, alt. 10,000 ft., Thomson.—DISTRIB. Afghanistan, Persia.

Stem 1–2 ft., slender or rather stout, naked below, simple or fastigiately branched above; branches strict, erect, very slender. *Leaves* 1–3 in., sometimes cut to the base into subequal filiform segments, in others ovate or lanceolate and regularly pinnatisect; segments linear and entire or subpinnatifid. *Racemes* very slender, very many-fid.; pedicels $\frac{1}{10}$ – $\frac{1}{8}$ in.; bracts linear, longer or shorter than the pedicels. *Calyx* $\frac{1}{2}$ in.; lobes lanceolate or triangular-ovate, acute, 5-ribbed in fruit. *Corolla* variable in size, about twice as long as the calyx; limb $\frac{1}{2}$ in. diam. *Capsule* $\frac{1}{8}$ in., as long as the calyx.—I can find no difference between the authentically named specimens of *L.*

virgata and *parviflora*; but there are fruiting specimens from Balti in the Shayuk valley of a plant the capsules of which are nearly $\frac{1}{3}$ in. long.

2. **L. linifolia**, *Walp. Rep.* iii. 388; leaves linear entire or the lowest 3-fid, calyx-lobes linear-lanceolate as long as the tube. *Benth. in DC. Prodr.* x. 510. *Dargeria linifolia*, *Dcne. in Jacquem. Voy. Bot.* 116, t. 121.

KASHMIR, in the upper pine forests, *Jacquemont*.

I have seen no specimens of this, which is probably referable to *L. Benthamiana*. Possibly there is but one species of this genus.

TRIBE IX. EUPHRASIEÆ.

48. **PHTHEIROSpermum**, *Bunge*.

(& 50 **EMMENOSpermum**, *Clarke*.)

Annual or biennial, viscid herbs. *Leaves* opposite, pinnatifid. *Flowers* axillary, solitary, sessile or shortly pedicelled, ebracteolate. *Calyx* campanulate, 5-fid, lobes short narrow. *Corolla* 2-lipped, tube broad, dilated above; upper lip very short, erect, lobes 2 folded back; lower longer, broader, spreading, 2-fid, throat open, palate 2-gibbous. *Stamens* 4, didynamous; anthers beneath the upper lip glabrous, cells equal parallel distinct, bases mucronate. *Stigma* spatulate, shortly 2-lobed. *Capsule* compressed, beaked, loculicidal; valves entire, semiseptiferous, at length separating from the placentiferous column. *Seeds* numerous, ovoid, reticulated.—Species 3, a Chinese and Japanese and 2 Indian.

A new genus (*Emmenospermum*) has been proposed by Clarke (and inadvertently introduced into the key, p. 249) for *P. Parishii*, founded on the seeds being minutely reticulated and not striate, a character not supported by habit or any other. The seeds of *P. chinense* are ellipsoid $\frac{1}{40}$ in. long, with a loose pale reticulated testa; those of *P. Parishii* are about half that size, with a dark close testa. Much greater differences occur in the seeds of all large and many small genera of Scrophularineæ.

1. **P. Parishii**, *Hook. f.*; softly hairy, leaves sessile broadly ovate deeply pinnatifid, lobes obtuse, flowers subsessile, corolla-tube much longer than the calyx, upper lip very short truncate 2-toothed, lobes of lower obcordate.

TENASSERIM; at Moulmein, Koli Mts. and Thoungyne, alt. 5000 ft., *Lobb*; Summit of Moolee, alt. 7400 ft., *Parish*.

Stem 3-8 in., simple or branched from the base or upwards, hairs spreading. *Leaves* $\frac{1}{4}$ - $\frac{1}{3}$ in.; lobes linear, entire or notched. *Calyx* $\frac{1}{6}$ in., glandular, 5-cleft to the middle; lobes linear-lanceolate, obtuse. *Corolla* $\frac{1}{2}$ in. long. *Capsule* $\frac{1}{4}$ in., pubescent. *Seeds* $\frac{1}{80}$ of an inch long, oblong, testa close dark.

2. **P. glandulosum**, *Benth. in Gen. Pl.* ii. 173; glandular-pubescent, leaves sessile 3-partite, segments linear, calyx-lobes unequal, corolla-tube hardly longer than the calyx. *Euphrasia?* *glandulosa*, *Benth. in DC. Prodr.* x. 555.

WESTERN HIMALAYA; (in Garwhal?) at Shioli, alt. 6000 ft., *Edgeworth*.

Stem slender, erect, 3-4 in., simple or branched. *Leaves* $\frac{1}{4}$ - $\frac{1}{2}$ in. *Flowers* few, sessile. *Calyx* $\frac{1}{10}$ in. long. *Corolla* $\frac{1}{6}$ in. wide.—The specimens are quite insufficient for a second analysis of the flower.

49. **Euphrasia**, *Linn*.

Annual or perennial herbs. *Leaves* opposite, toothed lacinate or pal-

matifid. *Flowers* in terminal spikes with large often acutely cut bracts, ebracteolate. *Calyx* tubular or campanulate; lobes 4, equal or connate in pairs, rarely with a minute 5th tooth. *Corolla* 2-lipped, tube dilated above; upper lip erect, concave, 2-lobed, margins replicate; lower larger, not plaited below, 3-lobed, lobes spreading, obtuse or notched. *Stamens* 4, didynamous; anthers beneath the upper lip, cells distinct, parallel, base equally or unequally mucronate or spurred. *Stigma* dilated, entire or with a small dorsal tooth. *Capsule* oblong, compressed, loculicidal; valves septiferous, separating from the placentiferous column. *Seeds* numerous (rarely few), pendulous, oblong, grooved.—Species about 20, of cool regions.

E. officinalis, Linn.; *Benth. in DC. Prodr.* x. 552; annual, pubescent or glabrate, leaves sessile ovate or ovate-cordate deeply crenate-serrate, bracts like the leaves, anthers hairy, cells of posticous ones unequally spurred. *Boiss. Fl. Orient.* iv. 472; *Reichb. Ic. Fl. Germ.* xx. t. 1731, 2. *E. tartarica*, *Fisch. in Spreng. Syst.* ii. 777; *Ledeb. Ic. Fl. Ross.* t. 435. *E. depauperata*, *Benth. in Wall. Cat.* 3886. *E. simplex*, *Don Prodr.* 95.

TEMPERATE HIMALAYA; from Kashmir to Kumaon, alt. 4–13,000 ft.; Sikkim, alt. 10–12,000 ft., *J. D. H.*—DISTRIB. Afghanistan and N. Persia to Europe, N. Central and East Asia to Japan, N. America.

Stem wiry, 6–18 in., simple or sparingly or fastigiately branched, often naked below; branches slender, erect. *Leaves* $\frac{1}{4}$ – $\frac{1}{2}$ in., distant or imbricating, nerves strong. *Spikes* continuous with the foliage, short or long, obtuse, few- or many-fld. *Flowers* very small; bracts imbricating. *Calyx* about equalling the bracts; lobes acute. *Corolla* $\frac{1}{6}$ – $\frac{1}{2}$ in. long, white or lilac, with purple veins. *Anthers* brown. *Capsule* included in the calyx or exserted.—Very variable, attaining a much larger size in the Himalaya than in Europe, and being more constant in foliage. *Benth* distinguishes two Himalayan varieties; *E. tartarica*, with almost orbicular leaves, remote, subacute bracts, and small corollas hardly exserted from the bracts, and *E. vulgaris*, with ovate or oblong obtusely crenate cauline leaves, sharply serrate bracts, and corolla of very variable size. These, which are both widely distributed in Europe and Asia, present no constant characters in India.

50. EMMENOSPERMUM, Clarke.

(See 48, Phtheirospermum.)

51. BARTSIA, Linn.

Annual or perennial herbs. *Leaves* opposite, entire crenate serrate or incised. *Flowers* axillary, spicate or racemose, bracteate, ebracteolate. *Calyx* tubular or campanulate, 4-fld. *Corolla* 2-lipped; tube slender, straight or incurved; upper lip erect, concave, entire or notched, margins not replicate; lower convex or bigibbous at the base, lobes 3 spreading. *Stamens* 4, didynamous; anthers under the upper lip, cells distinct equal parallel, bases usually spurred. *Stigma* obtuse or capitate. *Capsule* loculicidal to the middle or higher; valves entire, placentiferous. *Seeds* numerous, pendulous or horizontal, smooth grooved or winged.—Species about 60, in cool and mountain localities.

B. Odontites, *Huds., Fl. Angl.* 268; annual, erect, scabridly pubescent, leaves sessile lanceolate sparingly serrate, spikes subsecund, lower bracts leafy. *Reichb. Ic. Fl. Germ.* t. 1727. *Odontites rubra*, *Benth. in DC. Prodr.* x. 551. *O. serotina*, *Boiss. Fl. Orient.* iv. 476. *Euphrasia Odontites*, Linn. *E. rubra*, *Pers. Syn.* ii. 150.

KASHMIR, alt. 7–8000 ft., *Clarke*.—DISTRIB. Westwards to Europe and N. Africa; N. and Central Asia to Japan?

Stem 6-18 in., erect or ascending, wiry, 4-angled, paniculately branched; branches ending in leafy spikes. *Leaves* $\frac{1}{2}$ -2 in., very variable. *Calyx* campanulate; lobes ovate, acute, equalling the tube. *Corolla* $\frac{1}{2}$ in., pubescent, pink; upper lip long, entire. *Anthers* exserted, yellow. *Capsule* $\frac{1}{4}$ in., rather longer than the calyx. *Seeds* narrowly oblong.

52. **PEDICULARIS**, Linn.

Annual or perennial herbs. *Leaves* alternate opposite or whorled, simple toothed pinnatifid or pinnatisect. *Flowers* bracteate in terminal spikes or racemes, ebracteolate. *Calyx* tubular or campanulate, entire or split above and often below, 2-5-toothed, lateral teeth free or connate entire or crested, lower small or 0. *Corolla* 2-lipped, tube cylindric; upper lip erect, compressed straight falcate annular or decurved, obtuse acute or beaked, lower with 3 spreading erect or deflexed lobes. *Stamens* 4, didynamous; anthers under the upper lip meeting in pairs; cells distinct, equal, parallel, bases obtuse or rarely awned. *Style* slender, stigma subcapitate. *Capsule* compressed, ovate or lanceolate, falcate or oblique, often obliquely beaked, loculicidal; valves placentiferous, often cohering to the middle. *Seeds* numerous, of various shapes, testa appressed or lax, reticulate pitted striate or ribbed.—Species about 120, northern and mountain plants, with a few S. American and S. Indian.

SERIES I. Cauline leaves whorled, or opposite, or the lower scattered.

* *Upper lip beaked.*

1. **P. pectinata**, Wall. Cat. n. 420; usually tall, stout, glabrous, except the often hairy spike, cauline leaves whorled lanceolate pinnatifid or pinnatisect with serrate segments or 2-pinnatifid, calyx-teeth acute entire, corolla-tube short, upper lip inflated sickle-shaped beak long tip twisted. *Benth. Scroph. Ind.* 52, and in *DC. Prodr.* x. 560.

WESTERN TEMPERATE HIMALAYA; from Kashmir to Kumaon, alt. 7-11,000 ft.—*DISTRIB.* Afghanistan.

Stem 6-18 in., simple or branched. *Leaves* 3-6 in., sometimes 4 in. broad, ovate or oblong; petiole long, slender. *Spikes* 2-6 in., lax-flid.; bracts as long as the calyx, ovate or lanceolate. *Calyx* $\frac{1}{2}$ in. long, inflated in fruit. *Corolla* $\frac{3}{4}$ in., rose-red, beak with a double flexure, as long as the tube. *Filaments* hairy. *Capsule* $\frac{1}{2}$ in., ovoid acute, tip exserted. *Seeds* large, $\frac{1}{2}$ in. long, ridged and deeply pitted, pale.

VAR. pyramidata; stem sometimes 4-fariously hairy, spikes sometimes 1 ft. long. *P. pyramidata*, Royle in *Benth. Scroph. Ind.* 52, and in *DC. Prodr.* x. 560.

2. **P. robusta**, Hook. f.; pubescent, stems short very stout curved ascending, radical leaves many linear coriaceous pinnatifid or pinnatisect, segments oblong crenate, cauline few opposite or alternate, racemes short, bracts pinnatifid, calyx-lobes crenate, corolla-tube not longer than the calyx, upper lip erect inflated then sharply decurved and shortly beaked. *P. pectinata*, Herb. Ind. Or. H. f. & T. (the Sikkim plant only).

ALPINE SIKKIM; Samdong, alt. 15-16,000 ft., J. D. H., *Elwes*.

Rootstock long, stout, cylindric. *Stems* several from the rootstock, 3-6 in. long or less, as thick as a crow-quill, sometimes very short. *Radical leaves* numerous, 2-5 by $\frac{1}{2}$ - $\frac{3}{4}$ in., lobes numerous and close-set; petiole very stout. *Racemes* dense-flid.; bracts leafy, crenate or pinnatifid; flowers $\frac{3}{4}$ in. long. *Calyx* split half-way down, lobes small. *Corolla* red-purple; upper lip $\frac{1}{2}$ in. long; glabrous, lower $\frac{1}{2}$ - $\frac{3}{4}$ in. broad, 3-lobed. *Capsules* $\frac{3}{4}$ in. long, broadly oblong, tip rounded with a lateral point. *Seeds* $\frac{1}{10}$ in. long, subellipsoid, subacute, finely striate, not punctulate, pale.—Clarke collected on Singa-

lelab, in Sikkim, alt. 11,000 ft., a plant with the habit of this, but in fruit only, with straight oblong-lanceolate acuminate capsules 1 in. long, and seeds nearly $\frac{1}{2}$ in. long, striate and punctulate.

3. **P. tenuirostris**, *Benth. Scroph. Ind.* 52, and in *DC. Prodr.* x. 561; tall, erect, leafy, stem glabrous or 4-fariously hairy, cauline leaves whorled sessile lanceolate pinnatifid segments obtuse crenulate, spikes stout dense-fld., bracts ovate caudate-acuminate, corolla-tube exerted or not, upper lip erect inflated then decurved with a long flexuous beak.

WESTERN HIMALAYA; from Kashmir to Lahul, alt. 7-11,000 ft.—DISTRIB. Afghanistan.

Stem 2-3 ft., stout, simple or branched. *Radical leaves* petioled; cauline 4 in a whorl, 2-5 by $\frac{1}{2}$ -2 in., lobes numerous. *Bracts* ciliate or hirsute, exceeding the calyx. *Corolla* yellow, $\frac{3}{4}$ in. long, upper lip much inflated at the base, beak variable; lower broadly obcordate with a small median lobe. *Capsule* not seen.

4. **P. gracilis**, *Wall. Cat.* 413; stem tall slender branched 4-fariously hairy, cauline leaves whorled deeply pinnatifid, segments oblong-lanceolate obtuse serrate crenate or pinnatifid, racemes or spikes slender lax-fld. or flowers all axillary distant, corolla-tube half as long as the calyx, upper lip falcate swollen in the middle, erect with a horizontal flexuous slender beak, much longer than the small lower broadly obovate or orbicular 3-lobed. *Benth. Scroph. Ind.* 52, and in *DC. Prodr.* x. 561. *P. stricta* & *P. Brunoniana*, *Wall. Cat.* 414, 422.

TEMPERATE and ALPINE HIMALAYA; from Kashmir, alt. 6-10,000 ft., to Sikkim, alt. 8-12,000 ft.—DISTRIB. Afghanistan.

Stem 6-24 in.; branches opposite or whorled, simple or divided, all very slender. *Leaves* 1-2 by $\frac{3}{4}$ -1 $\frac{1}{2}$ in., rarely hairy. *Spikes* or *racemes* 3-6 in.; bracts pinnatifid, longer than the calyx; flowers pedicelled or sessile. *Calyx* $\frac{1}{2}$ in.; lobes obtuse or crenulate. *Corolla* rose-purple; tube $\frac{1}{2}$ in., slender, beak decurved as long as the lower lip which is very variable in size and shape. *Capsule* $\frac{1}{4}$ - $\frac{1}{2}$ in., shortly oblong, acute, half or only the tip exerted. *Seeds* very minute, $\frac{1}{30}$ in. long, broadly ovoid, pale, striate and with shallow pits.

VAR. *khassiana*; puberulous or glabrate, leaves very short $\frac{1}{2}$ - $\frac{3}{4}$ in., lobes short close, bracts often shorter than the calyx.—Khasia Mts., alt. 5-6000 ft., *Griffith, &c.*

5. **P. porrecta**, *Wall. Cat.* 423; stem short ascending glabrous or 2-4-fariously hairy, cauline leaves 1-2 pair opposite oblong pinnatifid lobes oblong obtuse serrate, raceme short few-fld., corolla-tube twice as long as the calyx, upper lip sickle-shaped erect inflated then shortly decurved and acutely beaked, as long as the lower lip. *Benth. Scroph. Ind.* 52, and in *DC. Prodr.* x. 561.

ALPINE HIMALAYA; "towards Kashmir," *Royle*; Kumaon, *Wallich*; Sikkim, alt. 14-15,000 ft., *J. D. H.*

Rootstock perennial, stout. *Stems* several from the rootstock, 4-6 in. *Leaves* $\frac{1}{2}$ -1 in., radical petioled, cauline sessile or petioled. *Racemes* 4-6 fld., pubescent; bracts pinnatifid; flowers $\frac{3}{4}$ in. long. *Calyx-lobes* obtuse, crenulate. *Corolla-tube* slender, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Capsule* $\frac{1}{2}$ in., oblong, nearly straight, acute. *Seeds* $\frac{1}{12}$ in. long, subellipsoid, pale, finely striate and punctulate.

6. **P. brevifolia**, *Don Prodr.* 94; pubescent or villous, stem erect simple, leaves few, cauline opposite or whorled oblong pinnatifid lobes short toothed, spikes few-fld. subcapitate, corolla-tube twice as long as the calyx, upper lip falcate erect then inflated with a long straight or decurved beak longer than the lower lip. *Benth. Scroph. Ind.* 53, and in *DC. Prodr.* x. 561. *P. lanigera*, *Wall. Cat.* 419.

ALPINE HIMALAYA; from Kashmir to Sikkim, alt. 13–16,000 ft.

Rootstock stout. *Stem* 4–8 in., stout or slender, rarely glabrate. *Leaves* rarely 1 in.; cauline sessile. *Spikes* 1–1½ in. broad, top rounded; flowers and fruit much as in *P. porrecta*, of which this resembles a hairy form, but the beak is much longer.

7. ***P. flexuosa***, *Hook. f.*: slender, sparsely hairy or glabrate, stems flaccid elongate decumbent diffusely branched, cauline leaves opposite petioled ovate or oblong 2-pinnatifid lobes sharply toothed. flowers axillary and in lax or dense leafy spikes or heads. corolla-tube $\frac{3}{4}$ –1¼ in., limb large, upper lip erect then inflated with a stout horizontal beak shorter than the lower lip. *Pedicularis* n. 5, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; alt. 10–13,000 ft., *J. D. H., Clarke.*

Stems 1–2 ft., curved (dwarf forms 6–8 in. also occur), flexuous. *Leaves* 2–4 in., ovate oblong or oblong-lanceolate, flaccid, irregularly toothed. *Spikes* or racemes usually capitate in flower and fruit, or elongating in fruit; bracts pinnatifid, longer than the calyx. *Calyx* ½ in., lobes crenulate. *Corolla* rosy, tube many times longer than the calyx; limb $\frac{2}{3}$ in. diam. *Capsule* $\frac{1}{3}$ –½ in. long, ovate-oblong or lanceolate, straight, acute. *Seeds* 1½ in. long, ellipsoid, obtuse, smooth or obscurely reticulate, dark.

8. ***P. integrifolia***, *Hook. f.*: softly glandular-pubescent, stems short stout simple, cauline leaves few opposite sessile oblong obtuse crenulate. flower axillary and in short heads, corolla-tube ½ in., upper lip large erect then greatly inflated and narrowed into a very long slender flexuous beak. *Pedicularis* n. 8, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Tungu, alt. 12–14,000 ft., *J. D. H.*

Rootstock very stout. *Stems* 4–6 in., ascending. *Radical leaves* crowded, 1½–2 in., narrowly linear-lanceolate, subacute, margins recurved obscurely crenate, glandular-pubescent on both surfaces; cauline erect, $\frac{3}{4}$ –1 in. *Spikes* capitate, oblong; bracts leaf-like, but broad, as long as the calyx. *Calyx* ½ in., lobes crenate. *Corolla* dark purple, tube twice as long as the calyx; beak longer than the tube, flexuous. *Capsule* not seen.

** *Upper lip of the corolla rounded at the end, not or very shortly beaked.*

9. ***P. globifera***, *Hook. f.*: dwarf, stem stout ascending 4-fariously hairy, leaves whorled short linear-oblong pinnatifid segments crowded crenulate, spikes capitate erect or nodding hirsute many- and dense-fl., corolla-tube short, upper lip short erect, tip rounded sharply deflexed acute or shortly beaked. *Pedicularis* n. 10, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Kongra Lama, alt. 14–15,000 ft., *J. D. H.*

Rootstock stout. *Stems* 2–4 in. *Radical leaves* 1 in., very shortly petioled, lower cauline sessile, ½ in. *Spikes* globose or oblong, top rounded; bracts as long as the calyx, rounded, crenulate; flowers $\frac{1}{2}$ –¾ in. long. *Calyx* ½ in. long, hirsute, lobes obtuse, very short. *Corolla* dark purple; tube broad, half as long again as the calyx; upper lip with a sharply inflexed but hardly beaked tip.—The specimens are from one locality only, and not in fruit; they resemble *P. brevifolia*, Don, a good deal, but the flowers are more numerous and denser, and the upper corolla lip is hardly beaked. *P. Korolkowi*, Regel, is another closely allied plant, differing in the glabrous calyx with longer teeth.

10. ***P. cheilanthifolia***, *Schrenk in Fisch. & Mey. Enum. Pl. Nov. Fasc. ii. 19*; stems erect or ascending simple or branched 4-fariously hairy, cauline leaves whorled petioled linear pinnatifid segments crenate, spike dense- or lax-fl. villous, corolla-tube twice as long as the calyx, upper lip much longer than the lower arched dilated at the apex or not, tip deflexed

obtuse. *Benth. in DC. Prodr.* x. 562. *P. abrotanifolia*, *Herb. Ind. Or. II. f. & T.*, not of *Bieberst.*

WESTERN TIBET; Nubra and Ladak, alt. 11–15,000 ft., *Thomson*, &c.; Balch Pass, N. of Kumaon, alt. 16,500 ft., *Strachey & Winterbottom*.—DISTRIB. Soongaria.

Rootstock stout. *Stems* many, 6–12 in., rarely branched. *Radical leaves* 1–4 by $\frac{1}{2}$ – $\frac{1}{3}$ in., petiole slender, crenatures often callous; cauline opposite and 3–6 in a whorl, $\frac{1}{2}$ –2 in. long. *Spikes* 1–4 in., stout, very villous; bracts longer than the calyx, entire or toothed; flowers $\frac{2}{3}$ in. long. *Calyx* $\frac{1}{4}$ in.; lobes short, obtuse. *Corolla* pink, lower lip small very short. *Capsule* oblong-lanceolate, acuminate, nearly straight, half exserted. *Seeds* $\frac{1}{12}$ in., ellipsoid, subacute, striate and punctate, pale.—Differs from *P. abrotanifolia*, *Bieb.*, in the pink flowers, and long upper lip of the corolla.

11. ***P. verticillata***, *Linn.*; *Benth. in DC. Prodr.* x. 563; sparingly hairy, stems erect or ascending, cauline leaves few whorled sessile or subsessile oblong or linear-oblong pinnatifid segments rather distant ovate subpinnatifid and crenulate, spikes broad short often interrupted, corolla-tube twice as long as the calyx, upper lip small nearly straight subtruncate much smaller than the large broad lower lip. *Jacq. Fl. Austr.* t. 206; *Gaertn. Fruct.* i. 246, t. 53, f. 5; *Reichb. Ic. Fl. Germ.* t. 1762, f. 1–14; *Boiss. Fl. Orient.* iv. 485. *P. Stevenii*, *Bunge in Ledeb. Fl. Alt.* ii. 427.

ALPINE HIMALAYA; Kunawur, *Royle*; Lahul, *Jueschke*; Sanch Pass, alt. 14–15,000 ft., *Ellis*. Sikkim, alt. 11–13,000 ft., *J. D. H.*—DISTRIB. From the Pyrenees to the Himalaya, N. Asia, N. America, and the Arctic regions.

Rootstock rather slender. *Stems* 4–10 in. high. *Radical leaves* 2–3 in., petioled; cauline shorter, whorled. *Spikes* 1–3 in. by $1\frac{1}{2}$ broad, lower whorl of flowers often distant, with leafy bracts, upper dense; bracts usually longer than the calyx, pinnatifid or crenate; flowers $\frac{3}{4}$ in. long. *Calyx* $\frac{1}{4}$ in.; lobes broad, very short. *Corolla* pink-purple; tube broad, lower lip $\frac{1}{2}$ – $\frac{2}{3}$ in. diam. *Capsule* $\frac{1}{2}$ in., oblong-lanceolate, straight, acuminate, twice as long as the calyx. *Seeds* $\frac{1}{16}$ in. long, rather broad, finely striate and punctulate, pale.

12. ***P. denudata***, *Hook. f.*; nearly glabrous, stems long simple very slender, cauline leaves in few distant whorls very short sessile oblong pinnatifid pubescent, segments crenate, spikes elongate interrupted, bracts whorled pinnatifid longer than the flowers, corolla-tube longer than the calyx, upper lip abruptly deflexed longer than the lower, tip subacute. *Pedicularis* n. 11, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Lachen Valley, alt. 12–13,000 ft., *J. D. H.*

Stems solitary or many from the root, 8–12 in., with 1–2 whorls or pairs of leaves. *Root-leaves* evanescent, small, petioled, cauline 4 in a whorl, $\frac{1}{2}$ –1 in. long, obtuse. *Spikes* interruptedly whorled; lower flowers with spreading bracts larger than the cauline leaves; flowers $\frac{1}{2}$ in. long. *Calyx* $\frac{1}{6}$ in.; lobes short, crenate. *Corolla* pink. *Capsule* not seen.—Near *P. verticillata*, differing in the very small lower lip.

13. ***P. mollis***, *Wall. Cat.* 415; tall, stout, erect, hirsute or glabrate, simple or with whorled slender branches, leaves whorled ovate or oblong pinnatifid puberulous segments linear crenate or again pinnatifid, spikes elongate interrupted, calyx-lobes oblong crested, upper lip narrow straight much longer than the lower tip rounded. *Benth. Scroph. Ind.* 53, and in *DC. Prodr.* x. 564; *Bot. Mag.* t. 4599.

ALPINE HIMALAYA and WESTERN TIBET; Nubra, alt. 11–12,000 ft., *Thomson*; Nepal, *Wallich*; Sikkim, alt. 10–14,000 ft., *J. D. H.*

Annual. *Stem* 2–3 ft., sometimes as thick as the little finger, strict, hollow. *Leaves* all cauline in several tiers, 4–5 in a whorl, 1–2 by $\frac{1}{2}$ – $1\frac{1}{2}$ in., segments not crowded. *Spikes* on the branches and main stem 6–16 in., strict; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. long, in superposed but separated whorls; bracts pinnatifid, longer or shorter than the

flowers. *Calyx* $\frac{1}{4}$ in., ovoid; lobes oblong. *Corolla* dark pinkish purple. *Capsule* $\frac{1}{2}$ – $\frac{3}{4}$ in., tip exserted, ovoid, finely acuminate. *Seeds* $\frac{1}{4}$ in., broad, flattened, punctate, pale.—Described as perennial by Bentham, but the root appears to be clearly annual. Resembles *P. gracilis*, especially in fruit.

14. ***P. pycnantha***, Boiss. *Diagn.* i. xii. 45, and *Fl. Orient.* iv. 484; short, stout or slender, sparsely hairy or glabrous, leaves long-petioled, radical many, cauline few opposite and whorled all lanceolate or ovate-lanceolate pinnatifid segments linear acute recurved toothed or subpinnatifid, spikes oblong dense-fl., calyx-lobes subulate, corolla-tube longer than the calyx, upper lip linear straight rather longer than the lower tip rounded. P. Alberti, *Regel, Descr. Pl. Nov. fasc.* vii. 67.

N.W. HIMALAYA; Lahul, Jaeschke; Hazara, alt. 6–7000 ft., Stewart.—DISTRIB. Afghanistan, N. Persia, Turkestan.

Rootstock stout, with fleshy tuberous root-fibres, and crowned with membranous sheaths. *Stems* several, 3–6 in. high. *Radical leaves* 4–6 by 1–1 $\frac{1}{2}$ in.; petiole 1–2 in.; segments very variously and irregularly cut or serrate, rather flaccid; cauline more shortly petioled. *Spikes* 1–4 in.; bracts lanceolate, acuminate, longer than the calyx; flowers $\frac{3}{4}$ in. long. *Calyx* enlarged and $\frac{1}{2}$ in. long in fruit; lobes very variable, narrow, sometimes elongate. *Corolla* pink. *Capsule* shortly oblong, acute, shorter than the calyx. *Seeds* large, $\frac{1}{2}$ in. long, ellipsoid, obtuse, striate and punctate, pale.—Boissier describes the corolla-tube as scarcely longer than the calyx, but in Kotschy's original specimens, and in Stewart's, and in Aitchison's from the Kurrum Valley, the tube is considerably longer.

SERIES II. Cauline leaves alternate.

* Upper lip of corolla beaked.

§ Tube of the corolla shortly exceeding the calyx; upper lip annular or sickle-shaped, hirsute (or glabrate in *P. Clarkei* and *excelsa*).

15. ***P. trichoglossa***, Hook. f.; hirsute or glabrate, stem stout strict erect leafy, leaves alternate sessile linear obtuse pinnatifid to the middle lobes rounded irregularly toothed, spike strict lax-fl., bracts ovate entire, calyx-lobes ovate crenate, corolla purple upper lip annular densely woolly with a glabrous incurved beak. *Pedicularis* n. 27, *Herb. Ind. Or. H. f. & T.*

SIKKIM and E. NEPAL HIMALAYA; Wallanchoon, Momay and Tungu, alt. 12–13,000 ft., J. D. H.

Stem 8–16 in., sometimes as thick as a swan's quill, unbranched. *Leaves* 2–3 by $\frac{1}{2}$ – $\frac{3}{4}$ in., obtuse, lobules very many. *Spikes* 3–6 in.; bracts longer than the calyx, tips sometimes narrowed and crenate; flowers $\frac{3}{4}$ in. long. *Calyx* broadly oblong, villous; teeth ovate-lanceolate, obtuse. *Corolla-tube* not exceeding the calyx; upper lip turgid in the middle; lower with broadly cuneate or orbicular glabrous lobes. *Capsule* $\frac{1}{2}$ in., shortly oblong, obtuse, turgid, nearly included in the calyx. *Seeds* broad, $\frac{1}{10}$ in. diam., irregularly shaped, deeply reticulate, pale.

16. ***P. Clarkei***, Hook. f.; more or less hirsute, stem stout strict erect leafy, leaves alternate sessile pinnatifid, lobes ovate deeply irregularly toothed, spikes strict dense-fl., bracts long pinnatifid, calyx-lobes slender, corolla purple upper lip sparsely hairy abruptly decurved from the middle beak nearly straight. *Pedicularis* n. 28, *Herb. Ind. Or. H. f. & T.*

ALPINE SIKKIM HIMALAYA, alt. 12–13,000 ft.; Yeumtong and Tungu, J. D. H.; Jongri, Clarke.

Stem 16–20 in., sometimes as thick as the middle finger. *Leaves* 3–5 by $\frac{1}{2}$ in., lobes spreading, rachis winged between them. *Spike* 2–6 in.; bracts with a broad base and slender long crenate-pinnatifid tip, usually longer than the calyx and sometimes

than the flowers; flowers $\frac{3}{4}$ in. long. *Calyx* oblong, villous, lobes rather long and slender entire or crenate. *Corolla* red or purple, tube rather longer than the calyx; lower lip small, narrow, shorter than the upper. *Capsule* as in *P. lachnoglossa*. *Seeds* large, very irregularly obtusely angled and compressed, $\frac{1}{2}$ in. long, deeply reticulate, pale.

17. **P. lachnoglossa**, *Hook. f.*; stem simple strict 1-2-leaved, radical leaves petioled linear-lanceolate pinnatisect, segments very many and regular equidistant linear crenate, raceme strict, flowers distant, bracts lanceolate longer than the calyx, upper lip inflated woolly with a straight horizontal or deflexed beak lower with 3 narrow lobes. *Pedicularis* n. 32, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Lachen Valley, alt. 14,000 ft., *J. D. H.*

Rootstock perennial? crowned with slender membranous leaf-sheaths. *Stem* as thick as a crow-quill. *Radical leaves* 4-6 by $\frac{1}{2}$ - $\frac{3}{4}$ in., petiole and rachis slender, segments 30-40, at regular intervals, $\frac{1}{10}$ in. broad. *Racemes* 4-8 in.; bracts slender, crenulate, erect; pedicels very short; flowers appressed to the rachis, $\frac{3}{4}$ in. long, red-purple. *Calyx* $\frac{1}{2}$ in., glabrous, oblong, lobes lanceolate not crested. *Corolla-tube* not exceeding the calyx; upper lip sickle-shaped inflated in the middle, beak straight much larger and longer than the lower, which has 3 small obovate acute ciliate lobes. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in., lanceolate, finely acuminate, twice as long as the calyx. *Seeds* $\frac{1}{2}$ in. long, subellipsoid, base appendaged, dark, faintly striate and punctate.

18. **P. excelsa**, *Hook. f.*; stem glabrous very tall branched leafy, leaves large alternate petioled bipinnatifid or pinnatisect below, pinnae linear-oblong distant, lobes or segments irregularly toothed, racemes long strict many-fld. pubescent, calyx small glabrous teeth very small, upper lip of corolla with villous margins produced into a slender incurved tail longer than the lower tip entire. *Pedicularis* n. 27, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Yeumtong, in the Lachen Valley, alt. 12,000 ft., *J. D. H.*

Stem 2-4 ft., as thick as the middle finger below, shining, hollow; branches ascending, slender, long, incurved. *Leaves* scattered, flaccid, 6-12 by 2-5 in.; pinnae spreading, 1-2 $\frac{1}{2}$ in. long, rachis puberulous winged with lobules between the segments above, naked and slender below; petiole 2-4 in., slender. *Racemes* a foot long and under, rather dense-fld.; bracts pinnatifid, small, pedicels $\frac{1}{5}$ - $\frac{1}{4}$ in.; flowers small, $\frac{1}{2}$ in. long. *Calyx* $\frac{1}{2}$ in., spathaceous, broadly oblong, split to the base, mouth oblique, minutely toothed. *Corolla-tube* not exceeding the calyx; upper lip with an oblong inflated base usually villous along the margins contracted into an incurved tail; lower lip narrow, with a small rounded median lobe. *Capsule* $\frac{3}{4}$ in. long, oblong-ovate, 4 times as long as the calyx, tip rounded with an apiculus at one side. *Seeds* $\frac{1}{2}$ in., black, minutely reticulate.—I regret having no note of the colour of the flower of this majestic species, which was, I believe, red-purple.

§§ Tube of the corolla not or very little longer than the calyx; upper lip quite glabrous.

19. **P. macrantha**, *Klotzsch in Reise Pr. Wald. Bot.* 107, t. 58; nearly glabrous or hairy, stem erect or ascending short or long leafy, leaves radical and alternate long-petioled linear pinnatifid or pinnatisect segments short ovate or oblong toothed or pinnatifid with acute teeth, racemes short dense-fld. or the lower or all the flowers axillary, bracts leaf-like, flowers large pink, calyx-lobes crested, corolla-tube not exceeding the calyx, upper lip sickle-shaped tumid with a short beak, lower very large. *Pedicularis* n. 7, *Herb. Strach. & Winterb.*

WESTERN and CENTRAL HIMALAYA; Nepal, *Hoffmeister, J. Scully*; Garwhal, at Kulhara, alt. 11,000 ft., *Strachey & Winterbottom.*

Root of many fleshy stout fusiform fibres. *Stem* 4-2 $\frac{1}{2}$ in., sometimes as thick as

a swan's quill. *Leaves* 4-6 by $\frac{1}{2}$ - $\frac{3}{4}$ in., flaccid; segments distant; rachis winged or not; petiole often as long as the blade. *Flowers* 1 in. long; pedicels $\frac{1}{2}$ -1 in.; bracts often exceeding the flowers and bipinnatifid. *Calyx* turgid, $\frac{1}{2}$ in. long, lobes large, nerves distinct. *Corolla* with the upper lip large broad, at the base erect or reflexed, then horizontal with an incurved short beak; lower $1\frac{1}{2}$ in. broad, lobes orbicular, the median smallest. *Capsule* (unripe) $\frac{2}{3}$ in. long, oblong-lanceolate, tip exserted rounded with a lateral point.—Resembles *P. megalantha*, but the short corolla-tube and large upper lip are very different.

20. **P. Elwesii**, *Hook. f.*; glabrous or puberulous, stem stout decumbent or ascending, few-leaved, leaves radical and alternate all shortly petioled linear pinnatifid or pinnatisect, lobes oblong short obtuse coarsely crenate or lobulate, racemes short, flowers very large purple, calyx nerveless pubescent lobes crested, corolla-tube not exceeding the calyx, upper lip inflated sickle-shaped with an incurved beak much smaller than the very broad lower lip. *Pedicularis* n. 24, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Lachen Valley, alt. 12-14,000 ft., *J. D. H., Elwes.*

Rootstock perennial? *Stem* as thick as a goose-quill, rarely 1 ft., curved. *Radical leaves* numerous, 5-7 by $\frac{1}{2}$ - $\frac{3}{4}$ in., puberulous beneath; petiole short, $\frac{1}{2}$ - $\frac{3}{4}$ in., stout; cauline similar. *Racemes* very short; bracts foliaceous, pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in.; flowers $1\frac{1}{2}$ in. long. *Calyx* $\frac{1}{2}$ - $\frac{3}{4}$ in., cylindric, puberulous, split $\frac{1}{4}$ way down, mouth with 2 crenate lobes. *Corolla* dark-purple, upper lip with the inflated portion suddenly contracted into the short incurved beak; lower erect enclosing the upper, 1 in. broad, of a small medial and two lateral very large rounded lobes. *Capsule* not seen.—The calyx of this species is quite unlike that of *P. macrantha*, being terete puberulous and without apparent nerves.

§§§ Tube of the corolla more than twice as long as the calyx; upper lip glabrous, sickle-shaped or annular, not inflated in the middle.

21. **P. megalantha**, *Don Prodr.* 94; pubescent or villous, stem tall stout erect leafy, leaves alternate long-petioled oblong-lanceolate pinnatifid, lobes short or long crenate or again pinnatifid, racemes at length lax-fl., bracts pinnatifid, calyx-lobes crested, corolla-tube twice as long as the calyx, upper lip annular gradually narrowed from the base and produced into a long slender tail, lower very large. *Benth. in DC. Prodr.* x. 564; *Wall. Cat.* 411; *Regel Gartenfl.* t. 943.

TEMPERATE and SUBALPINE HIMALAYA; from Kashmir, alt. 7-14,000 ft., to Sikkim, alt. 11-15,000 ft.

Stem 1-2 ft., solitary or several from the root, often as thick as a swan's quill, hollow. *Radical leaves* 2-10 in., 2-pinnatifid; petiole slender; cauline sometimes as long. *Racemes* 4-10 in.; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in.; lower bracts longer than the flowers. *Calyx* $\frac{2}{3}$ in. long, inflated, birsute, nerves strong. *Corolla-tube* very slender, $\frac{2}{3}$ -1 in.; upper lip slender, lower 1 in. broad. *Capsule* $\frac{1}{2}$ - $1\frac{1}{4}$ in. long, half exserted, linear-oblong, acute. *Seeds* $\frac{1}{8}$ in. long, finely reticulate.—The colour of the flowers is variously noted as yellow and rose-pink; in Sikkim they are rose-purple, in Regel's figure they are golden yellow.

22. **P. bicornuta**, *Klotzsch in Reis. Pr. Waldens. Bot.* 109, t. 61; pubescent or hirsute, stem usually very stout tall erect simple leafy, leaves alternate all petioled linear or linear-oblong pinnatifid to the middle lobes rounded crenate or lobulate, spikes or racemes long stout many-fl., bracts crenate, calyx-lobes crested, corolla yellow, upper lip annular produced into a slender curved bifid tail, lower very large. *P. eximia*, *Watt in Journ. Linn. Soc.* xviii. 381, t. 13. *Pedicularis* n. 23, *Herb. Ind. Or. H. f. & T.*

WESTERN ALPINE HIMALAYA and WESTERN TIBET, from Kashmir to Kunawur, alt. 9-13,000 ft., *Falconer, &c.*—DISTRIB. Afghanistan, Yarkand and Kashgar.

Root of stout fleshy fibres. *Stem* 6–24 in. high, often as thick as the thumb; small specimens are stemless, the raceme or spike apparently springing from the root. *Radical leaves* numerous in small stemless specimens, evanescent in large, blade 4–12 by $\frac{1}{2}$ – $1\frac{1}{2}$ in., lobes very many, close-set; cauline leaves like the radical; petiole 1–2 in. *Raceme* often 8 in. long, with many rather crowded flowers; bracts usually shorter than the calyx; pedicels 0– $\frac{3}{4}$ in. *Calyx* $\frac{1}{2}$ – $\frac{3}{4}$ in. long, broadly oblong, laxly hirsute. *Corolla-tube* from a little longer to twice as long as the calyx; upper lip often sigmoid or cyclöid, lower 1– $1\frac{1}{2}$ in. broad. *Capsule* 1– $1\frac{1}{4}$ in. long, oblong-lanceolate finely acuminate, twice as long as the calyx. *Seeds* $\frac{1}{8}$ in. long, pale, striate and reticulate.

23. **P. bella**, *Hook. f.*; dwarf, stemless, or nearly so, radical leaves tufted obovate obovate-oblong or subspathulate crenate densely pubescent, pedicels axillary, corolla dark purple tube long slender, upper lip small annular very much shorter than and enveloped in the very large broad lower. *Pedicularis* n. 22, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; Kongra Lama, alt. 16,000 ft., *J. D. H.*

Root apparently annual. *Leaves* 1 in., narrowed into a broad petiole, densely hoary-tomentose on both surfaces. *Flowers* rather numerous; pedicel $\frac{1}{2}$ – $\frac{3}{4}$ in. *Calyx* $\frac{1}{2}$ in., tubular, hoary; lobes large, rounded, crenate. *Corolla* very large for the size of the plant; lower lip forming a very broadly funnel-shaped cup 1 in. diam., in which the short upper lip nestles. *Capsule* $\frac{2}{3}$ – $\frac{3}{4}$ in. long, narrowly oblong, subfalcate, tip acute oblique. *Seeds* pale, striate and deeply pitted.—A singular and very beautiful species; the corolla resembles that of *P. Perrottetiana*, in its capsular form.

24. **P. siphonantha**, *Don Prodr.* 95; glabrate or sparsely pubescent or hirsute, stems many from the root slender and leafy, rarely solitary with only radical leaves, leaves petioled linear-oblong pinnatifid or pinnatisect, lobes many short crenulate, flowers axillary and in terminal racemes or heads, calyx-lobes crested, corolla pink, tube very slender 3–6 times as long as the calyx, upper lip a slender annular horn gradually narrowed from the base to the point, lower broadly 3-lobed. *Wall. Cat.* n. 417; *Benth. in DC. Prodr.* x. 565. *P. Hookeriana*, *Wall. Cat.* 421; *Benth. Scroph. Ind.* 53, and in *DC. Prodr.* 564. *P. punctata*, *Decne.*, and *P. labellata*, *Jacquem. mss.*, *Decne. in Jacquem. Voy. Bot.* 117, 118, t. 122, 123. *P. himalaica* & *Hoffmeisteri*, *Klotzsch in Reise Pr. Waldem. Bot.* 107, 108, t. 58, 60.

ALPINE HIMALAYA and WESTERN TIBET, from Kashmir to Sikkim, alt. 11–16,000 ft.—DISTRIB. Afghanistan.

Rootstock perennial? *Stems* 2–10 in. erect or ascending. *Leaves* 2–6 by $\frac{1}{2}$ – $1\frac{1}{2}$ in., lobes or segments obtuse, cauline and radical alike. *Racemes* short or long; bracts leaf-like; pedicels of the lower flowers sometimes 1 in. *Calyx* $\frac{1}{2}$ – $\frac{3}{4}$ in., hirsute or glabrate, nerves distinct. *Corolla* rose-pink, tube very slender, sometimes 2 in.; upper lip longer than the broad lower. *Capsule* $\frac{1}{2}$ – $\frac{3}{4}$ in. long, broadly oblong, oblique, acute, half exserted or less. *Seeds* $\frac{1}{12}$ – $\frac{1}{10}$ in.; oblong, obtuse, base apiculate, striate.—Varies greatly in the size of the corolla and length of its tube.

§§§§. Tube of the corolla at least twice as long as the calyx, upper lip sickle-shaped, glabrous, inflated in the middle.

a. *Radical leaves numerous; stem erect or ascending, usually stout.*

25. **P. carnosa**, *Wall. Pl. As. Rar.* ii. 44, t. 154, and *Cat.* 418; hoary-pubescent, or glabrate, stem erect branched at the base long strict leafy, cauline leaves alternate shortly petioled oblong or linear-oblong obtuse narrowed at the base crenate, flowers laxly racemed rose-purple, bracts leafy, calyx-lobes crested, corolla-tube twice as long as the calyx, upper lip arched decurved from the inflated middle acutely beaked. *Benth. Scroph.*

Ind. 54, and in *DC. Prodr.* x. 580. ? *Rhinanthus bifidus*, *Ham. in Don Prodr.* 94.

TEMPERATE HIMALAYA; from Kashmir to Sikkim, alt. 5–9000 ft. KHASIA Mts.; Kala pane, &c., alt. 5–6000 ft., *J. D. H. & T. T.*

Annual. *Stem* 4–18 in., rather slender, strict or flexuous, usually tomentose or villous above, branches ascending. *Leaves* 1–3 by $\frac{1}{2}$ – $\frac{3}{4}$ in., often scabrid, narrowed into the short petiole; radical often elliptic or oblanceolate, cauline narrower; crenatures broad, rounded, sometimes crenulate. *Racemes* or spikes 1–6 in., very lax; bracts often longer than the flowers; pedicels slender very short or 0; flowers $\frac{3}{4}$ in. long. *Calyx* $\frac{1}{2}$ in., narrow in flower, hirsute or glabrous, lobes very short, fruiting broadly oblong. *Corolla-tube* rarely less than twice as long as the calyx; upper lip inflated in the middle, longer than the lower, which is $\frac{3}{4}$ in. broad and shallowly 3-lobed. *Capsule* broadly oblong, acute, shortly exserted. *Seeds* minute, orbicular, $\frac{1}{16}$ in. diam., compressed, black, punctulate.—Bentham refers to this Don's *Rhinanthus bifidus*, which differs in the hirsute upper lip of the corolla according to Don's description. Very near the N. Asiatic and Japanese *P. resupinata*, of which the leaves are sessile, or if petioled broad at the base and doubly crenate.

26. ***P. rhinanthoides***, *Schrenk in Fisch. & Mey. Enum.* 22; glabrous except above, stems short ascending simple 1–2-leaved, radical leaves petioled linear or oblong pinnatifid or pinnatisect, lobes short oblong obtusely lobulate and crenate, racemes short, calyx hirsute strongly nerved, corolla-tube 2–3-times as long as the calyx, upper lip sickle-shaped inflated in the middle with a slender incurved or sigmoid beak. *Benth. in DC. Prodr.* x. 565. *P. elephantoides*, *Benth. Scroph. Ind.* 23, and in *DC. l. c.* 564. *P. Elephas*, *Boiss. Diagn. Ser.* 1, iv. 81, and *Fl. Orient.* iv. 489.

ALPINE HIMALAYA and WESTERN TIBET; from Kashmir to Sikkim, alt. 11–13,000 ft.—DISTRIB. Afghanistan, Central Asia, Persia.

Stems one or more from a perennial? rootstock, 4–10 in., stout, curved, usually quite glabrous. *Radical leaves* 2–3 by $\frac{1}{2}$ – $\frac{3}{4}$ in., lobes variable; petiole usually stout, $\frac{1}{4}$ – $\frac{1}{2}$ in. *Racemes* very short; bracts leaf-like; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in.; flowers 1–1 $\frac{1}{2}$ in. long. *Calyx* $\frac{1}{2}$ in., membranous, sparsely villous, shortly cleft, and with 2 short crenate teeth. *Corolla* pale or bright pink; lower lip $\frac{3}{4}$ –1 in. diam., lateral lobes large rounded, median small. *Capsule* $\frac{3}{4}$ in. long, oblong-lanceolate, straight or curved, obtuse with a lateral point, $\frac{1}{2}$ – $\frac{3}{4}$ in. exserted from the calyx. *Seeds* $\frac{1}{2}$ in. long, oblong, obtuse, obscurely striate and punctulate, base shortly appendaged.—The Afghan specimens have more glabrous calyces and longer capsules.

27. ***P. tubiflora***, *Fisch. in Stev. Monogr. Pedic.* 30; glabrous or nearly so, stems many from the root short leafy, radical leaves very many petioled linear pinnatifid or pinnatisect lobes many short crenate, flowers axillary in very short racemes, bracts leaf-like, calyx glabrous with crested lobes, corolla yellow tube very slender 4–6 times as long as the calyx, upper lobe erect inflated with a slender deflexed flexuous beak. *Benth. in DC. Prodr.* x. 565. *P. tubiformis*, *Klotzsch in Reise Pr. Waldem. Bot.* 106, t. 57.

ALPINE HIMALAYA and WESTERN TIBET; from Kashmir to Sikkim, alt. 11–16,000 ft.—DISTRIB. Central Asia, Siberia, Dahuria.

Rootstock apparently perennial. *Stems* 3–6 in., erect or ascending, stout, often branched. *Leaves* 1–3 by $\frac{1}{4}$ – $\frac{1}{2}$ in., lobes or segments numerous; petiole $\frac{1}{4}$ –1 in., stout. *Racemes* subcapitate; bracts longer than the calyx; flowers 1 $\frac{1}{2}$ –2 $\frac{1}{2}$ in. long; pedicels of the axillary flowers sometimes $\frac{3}{4}$ in. *Calyx* $\frac{1}{2}$ in., lobes large. *Corolla* bright yellow with dark spots on the lower lip; tube slender, sometimes 2 in. long; lower lip $\frac{1}{2}$ – $\frac{3}{4}$ in. broad. *Capsule* $\frac{3}{4}$ –1 in. long, obliquely oblong-lanceolate, acute, $\frac{1}{2}$ or $\frac{3}{4}$ exserted. *Seeds* minute, $\frac{1}{16}$ in. long, narrow, with a basal appendage, black, very obscurely striated.—Habit and long tube of short specimens of *P. siphonantha*, but with a very differently coloured corolla and inflated upper lip.

28. **P. microcalyx**, *Hook. f.*; glabrous below, puberulous above, stem simple 1-2-leaved, leaves long-petioled linear pinnatifid lobes oblong obtuse crenate, flowers few subcapitate, calyx very small teeth crested, corolla-tube 3-4 times as long as the calyx purple upper lip inflated sickle-shaped beak nearly straight decurved. *Pedicularis* n. 25, *Herb. Ind. Or. H. f. & T.*

ALPINE SIKKIM HIMALAYA; Lachen and Samdong, alt. 12-15,000 ft., *J. D. H.*
Stem 4-6 in., solitary, rather slender and flexuous. *Radical* and cauline leaves few, 1-1½ by ¼-½ in., petiole as long as the blade. *Flowers* 5-6 in a head, subsessile, with occasionally an axillary pedicelled one below the head; bracts longer than the calyx, pinnatifid. *Calyx* ⅙ in. long, cupular, membranous, 4-nerved, 4-cleft for ⅓ way down, teeth with crested tips. *Corolla* dingy-purple, tube ⅓ in. or less, upper lip as long as the lower which is ½ in. broad with 3 rounded ciliate lobes, the middle the smallest. *Capsule* ⅓-½ in. long, oblong, acute or acuminate, nearly straight, 3-4 times longer than the calyx. *Seeds* ⅒ in. long, oblong, pale, striate and punctate.—The very small calyx well characterizes this species.

29. **P. asplenifolia**, *Floerke; Willd. Sp. Pl.* iii. 208; nearly glabrous or pubescent, stem 3-6 in., few-leaved, leaves all long-petioled linear obtuse pinnatifid or pinnatisect, lobes close-set crenulate, racemes short few-fl., bracts pinnatifid, calyx large glabrous lobes crested, corolla-tube twice as long as the calyx or less, upper lip large sickle-shaped erect, then inflated with a short acute straight or decurved beak. *Benth. in DC. Prodr.* x. 578; *Reichb. Ic. Fl. Germ.* t. 1743. *P. Portenschlagii*, *Saut. in Reichb. Iconogr.* v. 1, t. 401. *P. asplenifolia*, *Wall. Cat.* 416. *P. Wallichii*, *Bunge in Walp. Rep.* iii. 415.

ALPINE HIMALAYA; Nepal, *Wallich*; Sikkim, Samdong and Tunkra Pass, alt. 14-15,000 ft., *J. D. H.*—DISTRIB. Alps of Central Europe.

Rootstock apparently perennial. *Stems* subsolitary or many from the root, simple, 2-4 in. *Leaves* 1-2½ by ¼ in.; petiole slender, as long as the blade. *Racemes* 3-8-fl.; pedicels ⅓-½ in.; flowers 1½ in. long. *Calyx* ½ in., membranous, lobes short all crested. *Corolla* dingy-purple; tube dilated at the mouth; upper lip ½ in. high, lower ⅔ in. broad, 3-lobed, mid-lobe very small, lateral large rounded. *Capsule* ¾ in. long, obliquely lanceolate, acuminate, twice as long as the calyx. *Seeds* ½ in., elliptic, base appendaged, obscurely striate, dark.

VAR. albiflora; densely tufted, flowers white.—Sikkim; at Kankola, alt. 13,000 ft., *J. D. H.*

? *VAR. pubescens*; densely tufted, pubescent or sparsely villous all over, lower peduncles sometimes radical and 1½ in., flowers larger, corolla-tube sometimes 1 in. long, and lower lip 1 in. diam., capsules ½-1 in. *Pedicularis* n. 20, *Herb. Ind. Or. H. f. & T.*—Sikkim, alt. 14-17,000 ft., *J. D. H.*

b. *Stem long slender flexuous or flaccid leafy; radical leaves evanescent.*

30. **P. flagellaris**, *Benth. in DC. Prodr.* x. 581; softly hairy, stems slender diffuse flexuous leafy, leaves alternate very small shortly petioled ovate or oblong-ovate pinnatisect, segments crenate or toothed, flowers few axillary and subracemose, calyx-lobes crested, corolla pink tube 2-3 times as long as the calyx, upper lip forming a semicircular beaked horn tumid in the middle, lower broadly 3-lobed.

UPPER ASEAM, *Griffith*. SIKKIM HIMALAYA; Lachoong, alt. 10-11,000 ft., *J. D. H.*

Stems prostrate and ascending, 8-18 in. long, simple or sparingly branched, naked below. *Leaves* ¼-½ in.; petiole short, slender; pinnules 3-6 pair, rather recurved, lower sometimes petiolulate. *Racemes* very short; bracts pinnatifid, longer than the calyx. *Calyx* rather narrowly oblong. *Corolla-tube* rather broad or slender; upper lip gradually narrowed to the base and to the acute tip, lower lip about ½ in. diam. *Capsule* (unripe) lanceolate, acuminate, ½ longer than the calyx.

31. **P. furfuracea**, *Wall. Cat.* 412; nearly glabrous throughout, stems flaccid branched sparingly leafy, leaves alternate long-petioled broadly ovate oblong or rounded lobulate or subpinnatifid lobes irregularly toothed, flowers axillary and in lax leafy racemes, calyx-lobes very small, corolla pale pink tube short, upper lip arched beaked. *Benth. Scroph. Ind.* 54, and in *DC. Prodr.* x. 580.

CENTRAL and EASTERN HIMALAYA; Nepal, *Wallich*; Sikkim, margins of woods, alt. 8–12,000 ft., *J. D. H.*, &c.

Perennial? *Stems* 1–2 ft., as thick as a crow-quill, flexuous succulent, with one or two lines of pubescence above. *Leaves* 1–3 by 1–2½ in., membranous, sometimes pinnatisect at the base, glabrous on both surfaces, nearly white with finely reticulated venules beneath; petiole very slender, 1–3 in. *Flowers* scarcely racemose, ¾ in. long; bracts leaf-like; pedicels ⅙–⅓ in., very slender. *Calyx* ¼ in. long, tubular, split on one side. *Corolla* very pale pink, lower lip about ½ in. broad. *Capsule* ½ in. long, ovate-lanceolate, nearly straight, acuminate, twice as long as the calyx. *Seeds* ⅓ in. long, ellipsoid, acute, most minutely reticulate, black.

VAR. *integrifolia*; leaves broadly ovate or rounded irregularly toothed or lobulate, calyx villous, corolla red-purple. *Pedicularis* n. 30, *Herb. Ind. Or. H.f. & T.*—Sikkim, alt. 9–10,000 ft., *J. D. H.*

? 32. **P. curvipes**, *Hook. f.*; quite glabrous, stem very slender long flexuous branched branches long curved, leaves scattered small petioled oblong pinnatifid lobes few incised, flowers axillary, long pedicelled, pedicels recurved in fruit, capsules pendulous.

SIKKIM HIMALAYA; Tumbok, alt. 10,000 ft., *Clarke*.

Stems a foot long; as thick as a sparrow's quill, curving. *Leaves* far apart, ½–1 by ¼–1 in., flaccid, lobes 3–4 pair, rather distant; petiole as long as the blade. *Calyx* ⅙ in. long, mouth oblique, lobes short crenate. *Capsule* ½ in. long, oblong, acute, slightly oblique, half exserted, shorter than the decurved slender pedicel. *Seeds* ⅙ in. long, slender, acute at both ends, obscurely striate, pale.—A remarkable species.

33. **P. fissa**, *Turcz.?*; *Benth. in DC. Prodr.* x. 571; stem stout simple leafy pubescent or glabrate, leaves all petioled lanceolate bipinnatisect segments small cartilaginous toothed, spikes dense-fl. villous, bracts long leaf-like lanceolate crenate, calyx-teeth broad obtuse entire, corolla-tube longer than the calyx, upper lip linear-oblong incurved acutely 2-fid hardly beaked, lower glabrous.

N. KASHMIR; Dras, alt. 10–11,000 ft., *Henderson*.—DISTRIB. Altai, Daburia.

Stem (in the solitary Indian specimen) 8 in., stout, strict. *Radical leaves* 4–5 in., puberulous beneath; petiole very slender, as long as the blade; cauline similar. *Spike* 2 in. long; lower bracts pinnatisect, middle ones 3-fid; lobes lanceolate, crenate, longer than the calyx; flower 1 in. long. *Calyx* ½ in., ventricose, woolly, nerves strong; teeth lanceolate, entire. *Corolla* quite glabrous; upper lip ¾ in. long, tip rounded in front; lower shorter broadly 3-lobed. *Filaments* glabrous.—This closely resembles several other species of the *comosa* group, which, with *P. fissa*, may ultimately prove forms of *P. comosa*, Linn., itself, as may *P. lasiostachys*, Bunge, *rubens*, Steph., and *venusta*, Schangin. From the typical *P. comosa* it differs in the villous calyx, glabrous filaments, and in the lower lip not being ciliate (the latter of which characters seems often wanting in Siberian specimens of *comosa*).

** Upper lip of the corolla rounded at the tip, not beaked.

34. **P. versicolor**, *Wahlb.*; *Steven Monogr. Pedic.* 52; hirsute above, stem short, leaves chiefly radical all petioled linear pinnatifid or pinnatisect, lobes short oblong obtuse crenate, racemes oblong dense-fl., bracts pinnatifid,

calyx-lobes entire or toothed, corolla lemon-yellow upper lip erect linear-oblong slightly incurved longer than the lower. *Benth. in DC. Prodr.* x. 578; *Reichb. Iconogr.* t. 14; *Royle Ill.* t. 72, f. 2.

ALPINE HIMALAYA; from Kashmir, alt. 9–13,000 ft., to Sikkim, alt. 14–15,000 ft. —DISTRIB. Mts. of Central Europe, Arctic Europe, Asia and America.

Rootstock stout, perennial? *Stem* usually solitary, 1–4 in., erect, with 1–2 leaves, rather stout. *Leaves* $1\frac{1}{2}$ – $2\frac{1}{2}$ by $\frac{1}{4}$ – $\frac{1}{2}$ in., glabrous, lobes or segments many; petiole stout or slender, shorter than the blade. *Racemes* 1– $2\frac{1}{2}$ in.; flowers erect, $1\frac{1}{2}$ in. long; bracts often longer than the calyx. *Calyx* $\frac{1}{2}$ in. long. *Corolla* yellow with the upper lip often pink or red, tube twice as long as the calyx; upper lip $\frac{1}{2}$ in., compressed, tip rounded; lower shorter, 3-lobed, $\frac{1}{2}$ – $\frac{1}{3}$ in. diam., deflexed. *Capsule* not seen in Indian specimens.

35. **P. polygaloides**, *Hook. f.*; dwarf. branched from the base, sparsely hairy, leaves few alternate very small petioled oblong pinnatifid lobes short crenate or toothed, flowers axillary pedicelled, calyx-lobes crested, corolla pink tube not exceeding the calyx, upper lip erect straight linear-oblong tip truncate inner angle acute lobes of lower divaricate. *Pedicularis* n. 9, *Herb. Ind. Or. H. f. & T.*

ALPINE SIKKIM HIMALAYA; at Yeumtong, alt. 14,000 ft., *J. D. H.*

Annual, whole plant 1– $1\frac{1}{2}$ in. high; branches rather slender. *Leaves* $\frac{1}{2}$ – $\frac{1}{4}$ in., lobes not numerous; petiole short. *Flowers* scattered, $\frac{1}{2}$ in. long; pedicels $\frac{1}{8}$ – $\frac{1}{4}$ in. *Calyx* $\frac{1}{4}$ in. *Corolla* pink, upper lip as long as the lower, the lateral lobes of which spread at right angles. *Capsule* $\frac{1}{3}$ in. long, oblong, obliquely acute. *Seeds* $\frac{1}{16}$ in., ellipsoid, dark, minutely striate and punctulate.

36. **P. Perrottetii**, *Benth. in DC. Prodr.* x. 565; annual, sparsely pubescent, stems flexuous leafy, leaves alternate petioled oblong pinnatifid lobes oblong subrecurved obtuse crenate, flowers few axillary white, corolla-tube 3–4 in., throat shortly funnel-shaped, upper lip oblong straight much shorter than the lower, tip rounded, *Wight Ic.* t. 1418.

NILGHERRY HILLS; *Perrottet, Wight, &c.*

Stems 5–10 in., rigid but wavy, naked below, rarely branched, sparsely hairy. *Leaves* numerous, $1\frac{1}{2}$ – $2\frac{1}{2}$ by $\frac{1}{2}$ in., obtuse, segments with incurved margins, hairy on both surfaces. *Flowers* subsessile. *Calyx* 1 in. long, tubular, lobes crested. *Corolla-tube* $\frac{1}{4}$ in. diam.; limb $1\frac{1}{2}$ in. diam., cup-shaped. *Capsule* not seen.

37. **P. zeylanica**, *Benth. Scroph. Ind.* 54, and in *DC. Prodr.* x. 580; hoary-pubescent or glabrate, stem tall erect leafy, leaves sessile or petioled linear-oblong or oblong margin lobulate or subpinnatifid lobes rounded crenulate, racemes short or long, bracts pinnatifid, calyx short, teeth crested, corolla-tube hardly exerted, upper lip linear-oblong incurved tip rounded. *Wight Ic.* t. 1419.

DECCAN PENINSULA; Mts. of the Concan, *Stocks*; Nilgherry and Pulney Hills, *Wight, &c.* Ceylon; higher parts of the Central Province, abundant.

Annual, 6–18 in. high. *Stem* stout, simple or branched. *Leaves* 1– $1\frac{1}{2}$ by $\frac{1}{4}$ – $\frac{1}{2}$ in., sometimes contracted into a short petiole. *Racemes* usually elongate, few- or many- and dense- or lax-fl., much elongate in fruit; pedicels short; bracts longer than the calyx; flowers $\frac{1}{2}$ –1 in. long. *Calyx* $\frac{1}{2}$ in. long, cleft to near the base. *Corolla* pink; tube broad; upper lip shorter than the lower which is $\frac{1}{2}$ – $\frac{2}{3}$ in. diam. with 3 broadly rounded lobes. *Capsule* $\frac{1}{2}$ – $\frac{3}{4}$ in. long, obliquely ovate-lanceolate, acuminate, twice as long as the calyx. *Seeds* $\frac{1}{10}$ in. long, broadly ellipsoid or irregular, dark, punctulate.—Habit and foliage of *P. carnosa*.

53. **LATHRÆA**, *Linn.*

Leafless low perennial fleshy white or purplish herbs, black when dry, with

a scaly buried rootstock and short erect scaly stems. *Flowers* biseriate in a secund raceme, bracteate, ebracteolate. *Calyx* campanulate, entire or split in front, 4-fid or -lobed, lobes valvate. *Corolla-tube* arched or nearly straight; lips erect, upper arched entire or notched; lower smaller, truncate, 3-toothed, plaited. *Stamens* 4, anthers under the upper lip; cells equal, parallel, margins bearded, bases mucronate. *Disk* glandular, enlarged, opposite the lower lip. *Ovary* 1-celled; placentas 2, 2-fid; style exserted, decurved, stigma capitate. *Capsule* 2-valved. *Seeds* many, small, globose, rugose.—Species 3, Europe, N. Asia, Himalaya.

1. **L. squamaria**, Linn.; Boiss. *Fl. Orient.* iv. 493; calyx split to the base in front. Reuter in DC. *Prodr.* xi. 40; Reichb. *Ic. Fl. Germ.* t. 1764.

WESTERN HIMALAYA, Falconer. KASHMIR, Banahal, alt. 6000 ft., Thomson; Urrukta, Boyle.—DISTRIB. Europe, Siberia.

Rootstock stout, fleshy, branched. *Stems* 4–10 in., stout scaly. *Raceme* 4–6 in., bracts like the scales, broadly oblong. *Flowers* $\frac{1}{2}$ in. long. *Calyx* 2-lipped, 4-toothed to the middle, teeth subacute. *Corolla* longer than the calyx, arched, lobes short erect, anthers cohering. *Capsule* ovoid.

54. **MELAMPYRUM**, Linn.

Annual erect herbs, black or dark when dry. *Leaves* opposite, narrow, entire or incised at the base. *Flowers* axillary or secund in dense spikes with large often coloured bracts, ebracteolate. *Calyx* tubular, 5-toothed, upper teeth often larger. *Corolla* 2-lipped, tube cylindric; upper lip erect, short, hooded, compressed, margins reflexed or with a tooth on each side; lower longer, erecto-patent, 3-lobed, base 2-gibbous. *Stamens* 4, ascending; anthers under the upper lip, meeting in pairs, cells distinct equal parallel, bases obtuse. *Stigma* simple; ovules 2 in each cell, one sessile the other stipitate. *Capsule* compressed, ovate, oblique, loculicidal. *Seeds* 4 or fewer, funicle swollen.—Species 6, of N. temp. regions.

1. **M. indicum**, Hook. f. & T. in Hook. *Kew Journ. Bot.* ix. 246, t. viii.; slender, scaberulous, leaves petioled lanceolate or ovate-lanceolate, bracts leaf-like scaberulous, racemes lax-fid., flowers puberulous, calyx-teeth equalling the tube, corolla-tube much longer than the calyx slender.

KHASIA Mts., alt. 5–6000 ft., Lobb, J. D. H. & T. T.

A slender twiggy branched herb, 2 ft. high. *Leaves* $\frac{3}{4}$ –1 in., acute, quite entire, petiole $\frac{1}{2}$ in. *Flowers* subsessile, $\frac{3}{4}$ in. long, dark red. *Calyx* $\frac{1}{2}$ in., lobes subacute rather shorter than the tube. *Corolla* puberulous, upper lip almost truncate shorter than the 3-fid lower. *Filaments* puberulous. *Capsule* ovoid, beaked, cells 1-seeded.

GENERA OF DOUBTFUL POSITION.

55. **OREOSOLEN**, Hook. f.

A small, tufted, glabrous, rather fleshy herb. *Stem* short, stout. *Leaves* opposite, subsessile, oblong-obovate, obtuse, coarsely irregularly crenate-serrate, nerves subparallel, midrib obscure. *Flowers* fasciated in the leaf-axils, shortly pedicelled, bracteate, ebracteolate. *Sepals* 4, linear, obtuse, erect, puberulous. *Corolla* straight, tube twice as long as the sepals, tubular-funnel-shaped, mouth dilated, limb short, 2-lipped; lips subequal, upper of two round lobes (the outer in bud); lower 3-lobed, lobes short 2 lateral retuse, median smaller ovate obtuse. *Stamens* 4, inserted in the middle of the tube, filaments erect thickened above, glabrous; anthers small, adnate

to the thickened top of the filament, rounded, 1-celled, included in the tube; staminode subulate, on the upper lip. *Ovary* small, ovate, compressed, style long slender, stigma capitate.

1. **O. Wattii**, *Hook. f. in Hook. Ic. Pl. ined.*

SIKKIM HIMALAYA; Jongri, alt. 14,000 ft., *Watt.*

Stem about 1 in. long as thick as a crow-quill, sheathed by a pair of reduced leaves. *Leaves* 1 in. long, quite glabrous, black when dry with translucent nerves which run straight from and through the broad petiole and unite anastomosing near the top and sides of the leaf. *Flowers* $\frac{1}{2}$ in. long.—Probably belongs to the tribe *Veroniceæ*. The specimens are very imperfect and difficult of analysis, owing to their apparently fleshy texture.

56. **FALCONERIA**, *Hook. f.*

A small scabigerous laxly hairy herb, with the habit of a *Mazus*. *Leaves* radical, petioled, obovate or oblong, crenate. *Flowers* racemed, bracteate, ebracteolate. *Sepals* 5, subequal, linear-obovate. *Corolla* 2-labiate, tube short, decurved, upper lip 2-lobed, lower larger 3-lobed, one lateral lobe exterior. *Stamens* 2, included, filaments straight; anthers 2-celled; cells diverging, free below, united at the top. *Ovary* ellipsoid; style short, stigma capitate.

1. **F. himalaica**, *Hook. f. in Hook. Ic. Pl. t. 1438.*

WESTERN HIMALAYA; Kumaon, *Falconer*; Madhari Pass, alt. 8000 ft., *Strachey & Winterbottom* (*Mazus*, No. 4).

Rootstock short with thick fleshy fibres. *Leaves* 3–5 in., more or less pubescent on both surfaces, tip rounded, base crenate; petiole broad, $\frac{1}{2}$ –1 $\frac{1}{2}$ in. long, winged above. *Scape* stout or slender, longer or shorter than the leaves, leafless, laxly hairy, as is the short loose raceme; bracts small, obovate-oblong or spatulate; pedicels short. *Sepals* $\frac{1}{10}$ in. long. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in. long; tube broadly funnel-shaped, suddenly decurved above the base; lower lip twice as long as the upper, lobes obovate retuse. *Style* included.—Apparently near *Wulfenia*, but differing in the 2-lipped corolla and included stamens. I have named it after the late Dr. Hugh Falconer, F.R.S., Superintendent of the Botanical Garden of Saharumpore and afterwards of Calcutta, to whom *Falconeria*, Royle, now included under *Sapium*, was dedicated.

ORDER CIV. **OROBANCHACEÆ**. (By J. D. Hooker.)

Leafless brown annual white or reddish root-parasites. *Stem* usually simple, stout or slender, scaly. *Flowers* solitary or in spikes or racemes, irregular. *Calyx* spathaceous, or of 4–5 free or connate sepals. *Corolla* hypogynous, tube curved; limb 2-lipped; upper lip arched, lower 3-fid, throat often with 2 villous folds. *Stamens* 4, didynamous, inserted on the corolla-tube; anthers 1–2-celled, cells spurred at the base opening by slits or basal pores, one often imperfect. *Disk* unilateral or glandular or 0. *Ovary* of 2 connate carpels, 1- rarely 2-celled; style long, tip curved, stigma capitate 2-lobed; ovules many, rarely few, anatropous on 2 (rarely more) pairs of free or confluent parietal placentas which sometimes meet in the centre of the ovary. *Capsule* 1-celled, 2-valved, few- or many-seeded. *Seeds* minute, testa pitted or tubercled rarely lax and reticulated, albumen fleshy; embryo ovoid, undivided or 2-fid.—DISTRIB. Genera 11, species about 150, temperate and tropical.

I have removed *Lathræa* from this Order to *Scrophularineæ* (p. 317), and taken *Campbellia* from the latter, uniting it with *Christisonia*.

* *Corolla-lobes all broad, subequal, spreading.*

Calyx spathaceous. Anther-cells unequal	1. ÆGINETIA.
Calyx tubular. Anther-cells unequal	2. CHRISTISONIA.
Calyx campanulate. Anther-cells equal	3. CISTANCHE.

** *Corolla 2-lipped.*

Upper lip 2-lobed, lower 3-lobed	4. OROBANCHE.
Upper lip erect hooded subentire, lower very short	5. BOSCHNIACKIA.

1. ÆGINETIA, Linn.

Leafless herbs with branched or simple naked or scaly scapes or stems. *Flowers* few, large, solitary, or corymbose, ebracteolate. *Calyx* spathaceous, split in front nearly to the base. *Corolla-tube* broad, incurved; limb spreading, obscurely 2-lipped; lobes 5, broad, 2 upper connate. *Stamens* included; anthers with one cell perfect adnate to the filament not spurred at the base, the other cell absent in the upper anthers, empty clavate and deflexed in the lower. *Ovary* 1-celled; placentas large, 2-lobed or multifid, filling the cavity, ovuliferous all over; style slender, stigma large peltate. *Capsule* sub-2-valved. *Seeds* crowded, minute, pitted.—Species 4–5, tropical Asiatic.

1. *Æ. indica*, *Roxb. Cor. Pl.* i. 63, t. 91, and *Fl. Ind.* iii. 30; scape very slender naked, corolla purple, placentas multifid. *Reuter in DC. Prodr.* xi. 43; *Wall. Cat.* 3964; *Benth. Scroph. Ind.* 55; *Wight Ill.* t. 158 b, f. 5, and *Id.* t. 895; *Dalz. & Gibs. Bomb. Fl.* 202; *Griff. Ic. Pl. Asiat.* t. 423. *Orobanche Æginetia*, *Linn. Sp. Pl.* 883.

Throughout INDIA, from the Western Himalaya in Kumaon, ascending to 3500 ft., to Nepal, Assam and the Khasia Mts.; and southwards to Tenasserim, Travancore and CEYLON.—DISTRIB. Burma; China, Japan, Philippine Islands.

Root of fleshy interlaced fibres. *Scapes* solitary or several, 6–16 in. high, with a few scales near the base. *Flowers* solitary. *Calyx* $\frac{3}{4}$ to nearly 2 in. long, acute. *Corolla* 1–2 in., limb 1 in. diam. or less, margins fimbriate. *Anthers* of lower stamens with a thick gibbous obtuse spur behind. *Capsule* as large as a filbert. *Seeds* yellowish-white, testa hyaline lax.

2. *Æ. pedunculata*, *Wall. Pl. As. Rar.* iii. 13, t. 219; scape short stout very fleshy many-fld., flowers on long peduncles bracteate at the base, corolla-tube yellow mouth blue, placentas 2 each of 2 plates. *Reuter in DC. Prodr.* xi. 43; *Wight Ill.* t. 158 b, f. 6, and *Id.* t. 1421. *Æ. abbreviata*, *Ham. in Wall. Cat.* 3965; *Benth. Scroph. Ind.* 95; *Reuter l.c.* *Æ. acaulis*, *Walp. Rep.* 481; *Reuter l.c.* *Orobanche pedunculata*, *Roxb. Hort. Beng.* 45, and *Fl. Ind.* iii. 29. *O. acaulis*, *Roxb. Cor. Pl.* iii. 89, t. 292, and *Fl. Ind.* iii. 29.

Throughout INDIA, on the roots of grasses, from Murree, *Elliott*, Sikkim, *Clarke*, and Assam, to Travancore and Singapore.—DISTRIB. Cochin China, Java.

Whole plant 3–6 in. high, red or yellow. *Stem* very short, as thick as a swan's quill, buried in the soil, giving off numerous alternate pedicelled flowers that rise above the surface of the ground, rarely slender and 1-fld. *Peduncles* 1–4 in., slender to stout, bracteate at the base; bract $\frac{1}{4}$ – $\frac{1}{2}$ in., ovate obtuse. *Calyx* $1\frac{1}{2}$ – $2\frac{1}{2}$ in. long, fleshy, red then yellow white, loaded with mucilage, tip obtuse, acute or shortly beaked. *Corolla-tube* as long as the calyx, yellowish, limb bright violet, lobes crenate and erose. *Anthers* of lower stamens with a large dorsal fleshy decurved horn. *Stigma* broadly cordiform, peltate. *Capsule* ovoid. *Seeds* brown.—Wight's figures represent the placentas as more divided than other analyses show.

2. **CHRISTISONIA**, *Gardn.*

Fleshy, low, scaly, parasitic herbs, with white yellow purple or rose-coloured flowers; stems simple or tufted from a short or long rootstock. *Scales* alternate, obtuse or acute. *Flowers* bracteolate or not. *Calyx* tubular, terete or angular, 5-toothed or -lobed. *Corolla-tube* long, inflated, or funnel-shaped, slightly curved, obscurely 2-lipped, 5-lobed; lobes subequal, rounded, 2 upper (inner in bud) suberect, lower spreading. *Stamens* 4, included or subexserted, filaments stout; anther with one perfect cell and one imperfect which is spurred or appendaged, rarely with both cells perfect. *Disc* 0. *Ovary* 1-celled, with 2 2-partite placentas, or 2-celled from the placentas meeting in the axis; style long, tip incurved, stigma large 2-lobed upper lobe very small lower very large orbicular or clavate; ovules numerous. *Capsule* ovoid or subglobose, loculicidal. *Seeds* minute, crowded, many perfect with striate testa, others imperfect with lax testa; embryo half as long as the albumen.—**DISTRIB.** Species 10, all tropical Asiatic.

There is no character by which *Campbellia* can be separated from *Christisonia*, that of the placentas meeting or not in the axis being one of degree and not accompanied by any other. I find it impossible to determine the species from dried specimens, and have been compelled to resort for their limitation to the descriptions and published figures of Gardner and Wight, and to the fine series of drawings of native specimens in the Kew Herbarium. I have also availed myself of some valuable notes made by Mr. Clarke, who attempted the definition of the species when studying the Indian *Cyrtandraceæ*.

1. **C. tubulosa**, *Benth. in Gen. Pl.* ii. 982; quite glabrous, stems tall flexuous, scales very few distant acute, flowers racemose, pedicels slender ebracteolate, calyx angular, lobes acute, anther-spurs acute, ovary 1-celled, placentas ovuliferous all over. *Oligopholis tubulosa*, *Wight Ic.* t. 1422, and *Ill.* t. 158 b, f. 7.

SOUTH DECCAN; Kurg and Courtallam, *Wight*.

Stem 6–10 in., simple or divided below. *Pedicels* stout, 1–4 in.; bracts obtuse. *Calyx* $\frac{3}{4}$ –1½ in., lobes triangular. *Corolla* 1–2½ in. long, mouth $\frac{3}{4}$ –1½ in. diam., blue?, pubescent without in Wight's figure, glabrous in specimens; lobes rounded, quite entire. *Filaments* pubescent. *Stigma* orbicular; "placentas nearly meeting in the centre, ovuliferous on their opposed faces, confluent below" (*Clarke*).

2. **C. subacaulis**, *Gardn. in Calc. Journ. Nat. Hist.* viii. 162; quite glabrous, almost stemless, scales large acuminate, flowers crowded, pedicels longer than the bracts ebracteolate, calyx-lobes acuminate, corolla-lobes edged with violet, cells of shorter stamens both perfect. *Wight Ic.* t. 1423 (*corrections in text*). *Campbellia subacaulis*, *Benth. in Gen. Pl.* ii. 967. *Æginetia acaulis*, *Walp. Rep.* iii. 481. *Æ. acaulis*, var. β *Thw. Enum.* 221. *Phelipæa subacaulis*, *Benth. Scroph. Ind.* 55; *Reuter in DC. Prodr.* xi. 11.

NILGHERRY MTS. and Courtallam, *Wight*. **CEYLON**; Rambodde district.

Wight's figure represents a plant 4 in. high, with a very short stout stem, clothed with scales 1½ in. long, and a corolla 2 in. long. A drawing sent by Thwaites (in Herb. Kew) is indefinite as to the bracts and calyx, and has a white corolla with an inflated white tube 1½ in. long, and limb as broad edged with violet.—*Filaments* glabrous. *Ovary* 1-celled; placentas nearly meeting in the centre, opposed faces not ovuliferous; larger stigmatic lobe orbicular.

3. **C. Hookeri**, *Clarke mss.*; almost stemless, quite glabrous, scales truncate lacerate, pedicels very short ebracteolate, calyx terete, lobes rounded,

upper anthers 1-celled simple, lower with a greatly thickened connective produced behind into a terete appendage rounded at the tip.

SIKKIM HIMALAYA, in low valleys, and KHASIA Mts., alt. 2-4000 ft., J. D. H. & T. T.

Whole plant 3-4 in. high. *Stem* very stout, covered with brown scales $\frac{1}{2}$ in. long with ragged edges. *Flowers* sessile. *Calyx* 1 in., pale violet with red-brown lobes. *Corolla* 2-2 $\frac{1}{2}$ in. long, inclined; tube white, inflated, throat contracted; limb $\frac{3}{4}$ in. diam., pale violet. *Stamens* included, glabrous; connective of lower anthers white, much longer than the purple cell. *Ovary* 1-celled; placentas 2-partite, the divisions cordate in section, covered all over with ovules; larger stigmatic lobe orbicular.—Described from a drawing made by me in Sikkim.

4. **C. Lawii**, *Wight Ic.* t. 1427; quite glabrous except the corolla, rootstock short tuberous lobed, stems short, scales imbricate, pedicels very short ebracteolate, calyx-lobes acute, corolla pale purple with yellow spots pubescent without and within, anthers acutely spurred, ovary 1-celled, placentas 2-fid. *Dalz. & Gibs. Bomb. Fl.* 202. *Campbellia Lawii*, *Benth. in Gen. Pl.* ii. 967.

The CONCAN; Tanna, *Law, Ritchie*; Salsette and between Ram Ghat and Belgaum, *Dalz. & Gibs.*

Stems 1-3 in., very stout, thickened upwards, clothed with scales. *Calyx* $\frac{1}{2}$ in., tubular, dark brown. *Corolla* 2 in., tubular; tube dull white. limb blueish-purple, yellow within; upper lobes erect, lower horizontal shorter. *Filaments* with minute crisped pubescence, white; anthers pale, posterior cells all fertile, apex subulate with a pore; anterior cell subulate, like an inverted comma. *Stigma* of 2 capitate lobes.—Description chiefly from notes by Dr. Ritchie, who remarks that the figures of the capsule and stigma given by Wight are erroneous, the placenta though approaching being quite free with revolute lobes.

5. **C. calcarata**, *Wight Ic.* t. 1426; glabrous except the corolla, stem elongate, scales ovate obtuse, flowers racemose long-pedicelled ebracteolate, calyx-lobes subacute, corolla blueish-white, tube hairy, anthers 2-celled, one cell barren spurred. *C. Stocksii*, *Hook. Ic. Pl.* t. 836; *Dalz. & Gibs. Bomb. Fl.* 202.

The CONCAN; Tanna and Salsette, *Law, Dalzell, &c.*, parasitic on the roots of *Strobilanthes*.

Probably a more fully developed state of *C. Lawii*.

6. **C. bicolor**, *Gardn. in Calc. Journ. Nat. Hist.* viii. 159; hairy, stem very short, scales ovate acute or subacute, flowers racemose, pedicels long or short 2-bracteolate at the base, calyx-teeth acute, corolla funnel-shaped pale rose or yellow. *Thwaites Enum.* 222. *C. pallida*, *Gardn. l. c.* 160. *Christisonia aurantiaca*, *Wight Ic.* t. 1486.

NILGHERRY HILLS; at Neddawattum, *Wight, &c.* CEYLON; Central Province, alt. 3-4000 ft., *Gardner, &c.*

Stem red-brown, scaly, continuous with a cylindric warted rhizoma as thick as a crow-quill and several inches long. *Scales* $\frac{1}{2}$ in. long, red-brown. *Pedicels* $\frac{1}{2}$ in. *Calyx* orange-brown, about 1 in., terete. *Corolla* 1 $\frac{1}{2}$ -2 in.; tube pale straw-coloured in *Wight's* and *Thwaites'* drawings, limb the same or white. *Stamens* included, filaments pubescent; anthers with the barren cell acutely spurred. *Placentas* in *Wight's* figure (of *aurantiaca*) 2-partite, nearly meeting in the centre, with the opposed faces not ovuliferous.—*Thwaites' B. pallidiflora* (*C. pallida*, *Gardn.*) differs according to his drawing only in the paler corolla-lobes.

7. **C. nellgherrica**, *Gardn. in Calc. Journ. Nat. Hist.* viii. 157; quite glabrous except sometimes the corolla, stem short very stout, scales

densely imbricated below obtuse, flowers densely racemose yellow, pedicels 2-bracteolate, calyx 2-lipped 5-angled, lobes broad obtuse, filaments glabrous, anthers ovoid acute 1-celled, larger stigmatic lobe clavate. ? *C. unicolor*, *Gardn. l. c.* 161; *Thwaites Enum.* 222. *Campbellia cytinoides*, *Wight Ic.* t. 1425; *Thwaites l. c.* 427. ? *C. aurantiaca*, *Wight Ic.* t. 1424. *Phelipæa*? *cytinoides*, *Reuter in DC. Prodr.* xi. 14.

NILGHERRY MTS.; *Strobilanthe* in woods at Pycarrah, Neddawattum, &c., *Wight*. CEYLON; Rambodde, alt. 3-4000 ft., Hunasgiriā range, and Pedrotatagalla, alt. 7000 ft., *Thwaites*, &c.

Whole plant yellow. *Stem* 3-6 in. long, thick, obtusely angled. *Scales* $\frac{1}{2}$ in. *Flowers* 8-12; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in., angular, thick; bracteoles below the middle about $\frac{1}{2}$ in. long, acute, veined, toothed at the tip. *Calyx* $\frac{3}{4}$ in. long. *Corolla* $1\frac{1}{4}$ in. long, funnel-shaped; lobes rounded, quite entire. *Placentas* in *Wight's* drawing of *Campb. cytinoides* nearly meeting in the axis of the ovary, the flat opposed faces without ovules.—*Gardner* described *C. unicolor* from a drawing of which I have seen no copy. Except in the subexserted anthers and obtusely 5-lobed calyx, I do not see how it differs by his description from *C. neilgherrica*. A drawing sent by *Thwaites* of the plant he refers to *C. unicolor* has acute calyx-teeth. In *Wight's Campb. aurantiaca* (referred here by *Clarke*) the corolla is represented as hairy on both surfaces, as are the filament and style; and the anthers are exserted ovate acute, and 2-celled. In his *Campb. cytinoides* the anthers are also exserted ovate and acute, but 1-celled. I find the corolla in *Wight's* specimens to be either perfectly glabrous or pubescent, and the anthers to be ovoid acute 1-celled.

8. *C. tricolor*, *Gardn. in Calc. Journ. Nat. Hist.* viii. 153; quite glabrous, stem slender few-fl., scales few ovate acute, calyx 5-angled narrow, lobes acute, corolla with the upper lip blood-red, lower rose-coloured, throat yellow, filaments glabrous. *Thwaites Enum.* 222.

CEYLON; Central Province, alt. 3-4000 ft., parasitical on *Acanthaceæ*, *Gardner*, &c. *Stems* more slender than in any of the preceding, 2-4 in. high. *Scales* about $\frac{1}{2}$ in. *Calyx* $\frac{3}{4}$ in. long. *Corolla* $2\frac{1}{2}$ in. long, lobes denticulate. *Stigma* with the large lobe orbicular. *Placentas* 2-partite, cordate in section, covered all over with ovules.—A coloured figure apparently of this species in *Jerdon's* collection of drawings represents the corolla as 3 in. long, with a violet upper lip, and pale rose lower one; the calyx pedicels and bracts are red-brown.

VAR. *grandiflora*; corolla larger pale rose-coloured. *C. grandiflora*, *Gardn. l. c.* 155; *Thwaites l. c.* 221.—Ceylon; Adam's Peak, alt. 5000 ft., *Gardner*. *Gardner* gives no other characters but greater size and a uniform rose colour of the flower, whereby to distinguish this from *C. tricolor*; for that of the sterile cell of the anther being ascending (and not deflexed) is, as *Thwaites'* (who suggests *grandiflora* being a variety), a fallacious one.

9. *C. albida*, *Thwaites mss.*; sparsely pubescent, stem very short, scales very obtuse, flowers crowded very shortly pedicelled, calyx 2-bracteolate, lobes rounded, filaments very short, anthers all unequally 2-celled, cells oblong parallel. *Campbellia albida*, *Benth. in Gen. Pl.* ii. 967.

CEYLON; near Hankalla, alt. 6000 ft., *Thwaites*.

Stem 1-2 in., from an elongate warted rhizoma like that of *C. bicolor*, very stout. *Scales* $\frac{1}{2}$ in., obovate, tip rounded. *Flowers* crowded, much smaller than in any of the other species. *Calyx* $\frac{1}{2}$ in. long, pubescent, lobes very short, erose. *Corolla* 1 in., pubescent externally. *Anther-cells* acute below. *Ovary* completely 2-celled; stigma very small, clavate.

3. CISTANCHE, Hoffm. & Link.

Scapigerous herbs, scape or stem simple scaly. *Flowers* in dense spikes, subsessile, 2-bracteolate, yellow violet or purple. *Calyx* broadly tubular-

campanulate; lobes 5, subequal, obtuse. *Corolla-tube* long, incurved, dilated above; limb spreading, oblique, lobes 5 broad, subequal. *Stamens* 4, subexserted; anthers subtransverse, often villous, cells equal parallel, bases obtuse. *Ovary* 1-celled; placentas 4, equidistant or in pairs; stigma broad. *Capsule* ovoid, laterally compressed, 2-valved to the base. *Seeds* numerous, subglobose, reticulately punctate.—Species 12, of the Mediterranean region and N. central and subtropical Asia.

C. tubulosa, *Wight Ic. t.* 1420, bis (*C. lutea* in letterpress); glabrous or pubescent, very stout, scales lanceolate, spike dense-fld., calyx-lobes obtuse, corolla-tube 2–3 times as long as the calyx, filaments hirsute below, anthers woolly not apiculate. *C. lutea*, *Wight Ill. t.* 158 b, f. 4. *Phelipæa tubulosa*, *Schrenk Plant. Æg. Arab. Spec.* 23; *Boiss. Fl. Orient.* iv. 500. *P. calotropidis*, *Walp. Rep.* iii. 462; *Reuter in DC. Prodr.* xi. 13. *Orobanche calotropidis*, *Edgew. in Hook. Journ. Bot.* ii. 285.

PUNJAB and SCINDE.—DISTRIB. Central Asia and westwards to Arabia.

Stem 1–5 ft., often as thick as the wrist, unbranched. *Scales* $\frac{1}{2}$ –1 in. *Spike* 6–10 in., sometimes 3 in. diam.; bracts lanceolate, longer than the calyx, bracteoles narrower and shorter, linear. *Calyx* $\frac{3}{4}$ – $\frac{3}{2}$ in. long. *Corolla* 1–1 $\frac{3}{4}$ in., yellow, much incurved, base slender, tube inflated; mouth $\frac{3}{4}$ –1 $\frac{1}{2}$ in. diam.; lobes short. *Anthers* subexserted, tip rounded or obscurely apiculate. *Placentas* 4, subequidistant.—I doubt this being specifically different from the common *C. lutea*, which extends to Spain and Morocco, for I find an obscure mucro on some of the anthers.

VAR. tomentosa; stem above bracts and calyx sparsely woolly.—Lahore, *Thomson*.

4. **OROBANCHE**, *Linn.*

Scapigerous herbs; scape or stem simple or branched, stout or slender, scales acute. *Flowers* in dense or lax or interrupted bracteate spikes or racemes, bracteoles 2 or 0. *Calyx* unequally 4-fid, or 2-partite from back to front, segments entire or 2-fid with rarely a 5th lobe or segment. *Corolla* broad or long, tube curved dilated above circumsiss at the base; limb 2-lipped; upper lip erect trenulate notched or 2-fid, lower more spreading 3-lobed. *Stamens* included; anther-cells equal, parallel, bases usually mucronate. *Disc* 0, or a gland. *Ovary* 1-celled; placentas 4, equidistant or in pairs; stigma funnel-shaped or peltate, more or less 2-lobed, lobes right and left. *Capsule* 2-valved, valves often cohering with the style. *Seeds* very numerous, globose.—Species about 100, chiefly in the northern and subtropical regions of the Old World.

SECT. I. **Osproleon**, *Wallr.* Bracteoles 0.

* *Calyx* divided to the base posteriorly, entire anteriorly, equally 5-toothed.

1. **O. kashmirica**, *Clarke mss.*; pubescent, stem simple, scales lanceolate, bracts lanceolate longer than the short broadly acutely toothed calyx, corolla pale brown short pubescent, filaments inserted at the base of the corolla pubescent below, anthers minutely hairy.

KASHMIR; at Tilail, alt. 11,000 ft., *Clarke*.

Pale brown, a foot high, stem as thick as a swan's quill or less. *Scales* $\frac{1}{2}$ – $\frac{1}{3}$ in., few and distant. *Spikes* few and lax-fld.; bracts $\frac{1}{2}$ – $\frac{1}{3}$ in. *Calyx* $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ – $\frac{2}{3}$ in., softly pubescent; tube broad, lobes rounded. *Anthers* small, included.

** *Calyx* divided to the base posteriorly and nearly so anteriorly, segments 2-toothed or -lobed.

2. **O. cernua**, *Loeffl.*; *Boiss. Fl. Orient.* iv. 514; puberulous or glabrate, spikes dense, flowers blue, bracts lanceolate shorter than the corolla nerves strong parallel, calyx half as long as the corolla, segments 2-fid to the middle, lobes lanceolate, corolla $\frac{1}{2}$ in. glabrous curved lobes crenate not ciliate, filaments glabrous, anthers nearly so. *Reuter in DC. Prodr.* xi. 32; *Reichb. Ic. Fl. Germ.* t. 1808. *O. indica*, *Wall. Cat.* 3966, *not of Roxb.*; *Benth. Scroph. Ind.* 55, *partly*.

WESTERN HIMALAYA; from Nepal to Kashmir and WESTERN TIBET, alt. 10–12,000 ft. OUDH and PATNA to the Punjab; the DECCAN from the Concan southwards.—DISTRIB. Westwards to N. Africa and Spain; extra-tropical Australia.

Stem stout, 6–12 in., pale brown or blueish. *Scales* ovate, upper acute or acuminate. *Spikes* often half as long as the stem or longer. *Sepals* with long points. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in. long, sometimes puberulous above; 2 upper lobes broad, 3 lower ovate acuminate. *Anther-cells* acuminate. *Style* glabrous, stigmatic lobes short thick.—The anthers are sometimes a little hairy.

3. **O. Hansii**, *Kerner Nov. Pl. Sp.* ii. 15; pubescent, spikes dense, flowers blue, bracts ovate shorter than the corolla, nerves strong parallel, calyx half as long as the corolla, segments 2-fid to the middle, lobes lanceolate, corolla 1 in., nearly straight and glabrous, lobes crenate not ciliate, filaments glabrous, anthers hairy. ? *O. foetida*, *Klotzsch in Reise Pr. Walden.* 111, *not of Desfontaines*.

WESTERN TIBET; Karakoram, alt. 8–12,000 ft., *Clarke*. LAHUL, *Jaeschke*.

This looks like a stout large-flowered var. of *O. cernua*, with deeper blue flowers broader bracts, and more hairy anthers.

4. **O. borealis**, *Turcz. in Bull. Soc. Imp. Nat. Hist. Mosc.* 1842, 420; furfuraceously pubescent, stem stout simple, scales few, spikes rather short dense-fld., bracts ovate-lanceolate equalling or exceeding the flower, calyx half as long as the corolla-tube or less with 4 subulate long and a median very small tooth, corolla pubescent tube broad curved lobes crenate blue, filaments and anthers glabrous. *Ledeb. Fl. Ross.* iii. 321; *Reuter in DC. Prodr.* xi. 32.

WESTERN HIMALAYA, from Murree to Kishtwar, alt. 7–8000 ft., *Thomson, Fleming, &c.* WESTERN TIBET; Karakoram, alt. 13,000 ft., *Clarke*.—DISTRIB. Central Asia.

Stem 6–10 in., rarely more, as thick as a goose-quill. *Scales* $\frac{1}{4}$ – $\frac{3}{4}$ in., oblong or ovate-lanceolate. *Spike* 2–4 in. *Corolla* $\frac{1}{2}$ in.—This is certainly the plant of Turczaninov and Ledebour, which Boissier refers to *Phelipæa lanuginosa*, C. A. Meyer.

5. **O. Solmsii**, *Clarke mss.*; very robust, pubescent, bracts usually longer than the flowers lanceolate, calyx half as long as the corolla, segments bifid to the middle, lobes lanceolate, corolla $\frac{1}{2}$ – $\frac{3}{4}$ in. long yellow puberulous, filaments and anthers glabrous. ? *O. Galii*, *Klotzsch in Reise Pr. Wald. Bot.* 111, *not of Dalz.*

WESTERN HIMALAYA; Kumaon at Tola, alt. 11,500 ft., *Strach. & Winterb.*; Kashmir and Kishtwar, alt. 8–11,000 ft., *Falconer, &c.*

Stem 12–18 in., often as thick as the thumb. *Scales* $\frac{1}{2}$ –1 in., lanceolate. *Spike* 6–10 in., dense-fld.; bracts very variable, narrow. *Corolla* curved, lobes crenulate.—Differs in the yellow flowers from *O. borealis*.

*** *Calyx divided to the base anteriorly and posteriorly, the segments undivided.*

6. **O. epithymum**, *DC.*; *Boiss. Fl. Orient.* iv. 509; glandular-

pubescent, rather slender, spike short lax-fld., bracts about equalling the corolla, calyx-segments ovate-lanceolate 3-nerved entire equalling the corolla-tube, corolla $\frac{3}{4}$ in. long pubescent orange-brown, lobes toothed or crenate not ciliate, filaments glabrous except at the base, anthers sparsely pubescent or glabrous. *Reuter in DC. Prodr.* xi. 21; *Reichb. Ic. Fl. Germ.* t. 1784.

WESTERN HIMALAYA; on grass, thyme, &c., from Kumaon, alt. 13,000 ft., *Strach. & Winterb.* (*Orobanche* n. 4), to Kashmir, alt. 7–11,000 ft.—DISTRIB. W. and Central Asia, Central and S. Europe.

Stem 6–12 in., often tuberous below, rarely as thick as a swan's quill. *Spike* 1–3 in. *Corolla* curved, glandular-pubescent. *Stamens* inserted low down in the tube.

7. ***O. nicotianæ***, *Wight Ill.* 179, t. 158; stout or slender, puberulous, spikes many- and dense-fld., bracts lanceolate as long as the corolla-tube, calyx-segments almost as long subulate-lanceolate entire, corolla $\frac{1}{4}$ in. glabrous tube contracted in the middle, lobes pale blue glabrous crenate, filaments pubescent at the base only, anthers glabrous.

The DECCAN; common in and destructive of tobacco crops, *Wight*.

Stem 8–12 in., as thick as the little finger in *Wight's* specimen, much more slender in his figure, pale brown. *Scales* few, ovate, acuminate. *Spike* longer than the rest of the stem, cylindric, obtuse; bracts many-nerved. *Calyx* puberulous. *Corolla* quite glabrous, lobes small.—The contraction of the middle of the corolla-tube distinguishes this species. *Wight* regards the calyx-segments as bracteoles.

8. ***O. Clarkei***, *Hook. f.*; glandular-puberulous, spike short rather lax-fld., bracts lanceolate half as long as the corolla-tube, calyx-segments nearly as long subulate-lanceolate, corolla 1 in. tube nearly straight not contracted in the middle, lobes blue glabrous crenate, filaments and anthers glabrous.

WESTERN TIBET; Karakoram or Artemisia, alt. 9000 ft., *Clarke*.

This *Clarke* was disposed to regard as a form of *O. nicotianæ*, which differs widely in the smaller flowers, and form of the corolla-tube.

SECT. II. ***Trionychon***, *Wallr.* Bracteoles 2. (PHELIPÆA, *Reut. & Boiss.*)

* *Calyx* divided to the base posteriorly, entire anteriorly.

9. ***O. indica***, *Ham. in Roxb. Fl. Ind.* iii. 27; puberulous or pubescent, stem often branched, spikes usually lax-fld., bracts ovate half as long as the corolla-tube, bracteoles filiform, calyx 4- or 5-toothed, corolla $\frac{3}{4}$ –1 in. pubescent without and within, tube rather slender, lobes blue ciliate, anthers woolly. *Wall. Cat.* 3966, *in part*; *Benth. Scroph. Ind.* 55, *excl. localities*. *Phelipæa indica*, *G. Don Gen. Syst.* iv. 632; *Reuter in DC. Prodr.* xi. 8; *Dalz. & Gibs. Bomb. Fl.* 202. ? *P. ægyptiaca*, *Boiss. Fl. Orient.* iv. 499.

Throughout the plains of INDIA, especially in mustard crops.—DISTRIB. Central and Western Asia.

Stem 4–12 in., sometimes fastigiately branched from the base, often inclined. *Scales* very few, chiefly at the forks. *Spikes* many-fld.; bracts pubescent, lobes subulate. *Corolla* pubescent, $\frac{3}{4}$ –1 $\frac{1}{2}$ in. long; tube straight, almost funnel-shaped. *Filaments* smooth, except at the base; anthers almost woolly.—Probably a form of *O. ramosa*.

10. ***O. ramosa***, *Linn.*; *Boiss. Fl. Orient.* iv. 498; furfuraceously pubescent or glabrate, usually much branched, spikes slender longer than

the stem narrowed upwards, bracts ovate caudate-acuminate shorter than the corolla-tube, calyx half the length of the corolla-tube, lobes slender, subulate from a broad base, corolla pubescent without and within, tube narrow, lobes blue ciliate, filaments glabrous, anthers sparsely crinite or glabrous. *Reichb. Pl. Crit.* 933, 934, and *Ic. Fl. Germ.* t. 152. *Phelipæa ramosa*, *C. A. Mey.*; *Walp. Rep.* iii. 459; *Reut. in DC. Prodr.* xi. 8; *Wight Ic.* t. 1618. *P. ægyptiaca*, *Herb. Ind. Or. H. f. & T.*

KASHMIR, *Falconer*; Jamu and Banahal, alt. 6-7000 ft., *Thomson*.—**DISTRIB.** Westwards to Europe and N. Africa.

Stem 6-12 in., usually thick at the base and at once dividing into rather slender erect branches. *Scales* few. *Spikes* lax-fld.; bracts variable in length and in the length of the slender point; bracteoles filiform. *Corolla* $\frac{1}{2}$ - $\frac{3}{4}$ in. long; tube narrow white.—The slender spikes occupying usually two-thirds of the length of the plant are unlike those of any other Indian species. I suspect that *O. ægyptiaca*, *Pers.*, is the same as this, but I have seen no authentic specimens of it. *Boissier* refers *O. indica*, *Roxb.*, to *O. ægyptiaca*, I think erroneously.

**** Calyx divided to the base anteriorly and posteriorly; segments bifid, lobes subulate.**

11. **O. psila**, *Clarke mss.*; furfuraceously pubescent, stem simple slender, spike short lax-fld., bracts lanceolate as long as the flower, calyx half as long as the corolla blue curved pubescent without and within, lobes copiously ciliate, filaments pubescent, anthers sparsely crinite.

KASHMIR; at Mapanon, alt. 9000 ft., *Clarke*.

Stem 12-18 in., as thick as a goose-quill or less. *Scales* long, $\frac{1}{2}$ -1 in., subulate-lanceolate. *Spike* 2-3 in., obtuse; lower bracts $\frac{3}{4}$ in. long; bracteoles filiform. *Corolla* $\frac{1}{2}$ - $\frac{3}{4}$ in. long, lobes almost villous within, 2 upper rounded, 2 lower elliptic.

5. **BOSCHNIACKIA**, *C. A. Mey.*

Robust, brown, leafless herbs; stem simple, scaly. *Flowers* in dense spikes, or racemes, bracteolate, ebracteolate. *Calyx* cup-shaped, truncate or unequally 5-toothed. *Corolla-tube* incurved; limb 2-lipped, upper lip erect hooded entire or 2-fid; lower very short, 3-lobed. *Stamens* subexserted; anther-cells equal, parallel, bases obtuse. *Ovary* 1-celled; placentas 2-3, 2-partite; stigma dilated, broadly 2-lobed. *Capsule* 2-valved, valves at first cohering with the style. *Seeds* numerous, minute, ellipsoid, subglobose or compressed, testa reticulate.—Species 5, N.E. Asia, N.W. America and the Himalaya.

B. himalaica, *Hook. f. & Thoms. Herb. Ind. Or.*; calyx truncate quite entire, flowers $\frac{3}{4}$ in. long, upper lip of corolla cymbiform entire, lateral lobes of lower minute subulate median obsolete, capsules $\frac{3}{4}$ -1 in., seeds orbicular, testa very lax loosely reticulate.

TEMPERATE and SUBALPINE HIMALAYA, on *Rhododendron* roots; Garwhal and Kumaon, alt. 8-10,000 ft., *Strach. & Winterb.*; Sikkim, alt. 10-13,000 ft., *J. D. H., Clarke*.

Plant 6-18 in. high, pale brown, base tuberous; stem often as thick as the thumb. *Scales* numerous, rigid, $\frac{1}{2}$ - $\frac{3}{4}$ in., oblong or ovate-lanceolate, obtuse or acute. *Racemes* 3-8 in., stout, dense-fld., pale ochreous brown streaked with red brown; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., broadly ovate, acute or obtuse, half as long as the flower or longer; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in., stout. *Calyx-limb* quite entire. *Corolla* puberulous, erect, nearly straight. *Stamens* finally exserted, filaments glabrous except at the very base yellow; anthers small, blueish. *Ovary* with 2 or 3 placentas, each with revolute divisions covered with ovals. *Capsule* ovoid-oblong, thickly coriaceous, irregularly 2-3-valved; pedice

very stout, $\frac{1}{4}$ in. Seeds chaff-like, $\frac{1}{30}$ – $\frac{1}{40}$ in. diam., testa hyaline with large reticulations. —This differs widely from the N.E. Asiatic *B. glabra* in its much larger size, the flowers being twice as large, and the fruit three times. The capsule of *B. glabra* is not longer than the bracts, and its seeds are ellipsoid, $\frac{1}{150}$ in. long, with a close testa.

ORDER CV. **LENTIBULARIÆ.** (By C. B. Clarke.)

Herbs, aquatic or in wet places. *Leaves* radical rosulate, or capillary multifid or obsolete. *Scapes* 1– ∞ -fld.; bracts small or 0. *Flowers* hermaphrodite, purple, yellow, or white. *Calyx* inferior, 2–5-lobed. *Corolla* 2-lipped, spurred; upper lip usually smaller, entire or emarginate, lower 3–5-lobed. *Stamens* 2, attached to the base of the corolla, alternate with the lobes of the lower lip, filaments broad curved; anther-cells 2, ovate, transversely confluent. *Ovary* superior, globose, 1-celled; style short, stigma unequally 2-lobed; ovules very many, on a free basal placenta, anatropal. *Capsule* globose, 2–4-valved, or irregularly breaking up. *Seeds* numerous, small, exalbuminous.—Species 180, in all climates.

Calyx deeply 2-lobed, lobes entire or minutely toothed . . . 1. UTRICULARIA.
Calyx 4–5-lobed, more or less 2-lipped 2. PINGUICULA.

I. **UTRICULARIA**, Linn.

Herbs, floating or terrestrial. *Leaves* many-partite with capillary segments in the floating species, entire in the erect species; minute bladders frequently added. *Scapes* simple or branched; racemes few- or many-fld.; pedicels bracteate and often 2 bracteolate. *Calyx* 2-partite; lobes entire or nearly so, often enlarged in fruit. *Corolla* 2-lipped; upper lip entire or emarginate, lower larger 3–6-lobed; spur curved or straight. *Filaments* broad; anthers ovate, 2- or sub-1-celled. *Style* short, stigma unequally 2-lobed. *Seeds* ellipsoid or obovoid, scrobiculate or glochidiate, rarely reticulate or comose.—Species 150, extending nearly throughout the world.

The numerous small scapose species have evanescent rosulate radical leaves on very short creeping branches; but there are specimens from which it would appear that, when some of such species grow in running water, they may produce elongate branched stems, longer linear leaves, and reduced leaves with bladders.

* Stems floating, leaves submerged divided into capillary segments mostly interspersed with bladders; bracteoles 0.

† *Peduncles* bearing about the middle a cluster of oblong vesicles.

1. **U. stellaris**, Linn. f. *Suppl.* 86; flowers pedicellate yellow, calyx-segments ovate enlarged in fruit, corolla-spur shorter than the lower lip more or less curved pubescent or glabrous. *Rorb. Cor. Pl.* ii. 42, t. 180, and *Fl. Ind.* i. 143; *Wall. Cat.* 6400; *Wight in Hook. Bot. Misc.* iii. 91, *Suppl.* t. 27; *A. DC. Prodr.* viii. 3; *Wight Ic.* t. 1567; *Dalz. & Gibs. Bomb. Fl.* 135; *Boiss. Fl. Orient.* iv. 3. *U. macrocarpa*, *Wall. Cat.* 1494.

Throughout INDIA, in rice-swamps and jheels.—DISTRIB. Malaya, S.E. Asia, N. Australia. Nearly all Africa.

Leaves with bladders. *Peduncles* 2–8 in., erect out of the water, glabrous; whorl of vesicles $\frac{1}{2}$ –1 in. long, formed of the inflated bases of reduced branches with often subfoliaceous tips. *Pedicels* 1–8, $\frac{1}{2}$ in., thickened, usually deflexed in fruit. *Corolla*

$\frac{1}{2}$ in. diam. *Capsule* $\frac{1}{2}$ in.; fruit-sepals $\frac{1}{4}$ – $\frac{1}{2}$ in. *Seeds* thickly discoid, concavo-convex by the inflexion of the entire thin hardly winged margin.

VAR. inflexa; corolla white with violet stripes. *U. inflexa*, *Forsk. Fl. Æg. Arab.* 9; *Delile Fl. Æg.* 4, t. 4, fig. 1; *A. DC. Prodr.* viii. 4; *Boiss. Fl. Orient.* iv. 3. *U. Thonningii*, *Schum. Pl. Guin.* 12.—Bengal; frequent, *Clarke*.—Distrib. N. and Central Africa.—The spur of the corolla is frequently as pubescent and as little curved as in *U. stellaris*. Whether this plant be reckoned species or variety, it is by no means rare in Bengal.

†† *Peduncles ebracteate or with a few obscure scales.*

2. *U. flexuosa*, *Vahl Enum.* i. 198; flowers pedicelled yellow, calyx-segments ovate somewhat enlarged in fruit, corolla-spur nearly as long as the lower lip, margin of the seeds entire inflexed scarcely winged. *Blume Bijl.* 739; *A. DC. Prodr.* viii. 24; *Oliver in Journ. Linn. Soc.* iii. 175. *U. australis*, *Br. Prodr.* 430; *A. DC. l. c.* 6. *U. fasciculata*, *Roxb. Fl. Ind.* i. 143; *Wall. Cat.* 1499; *A. DC. l. c.* 7; *Wight Ic.* t. 1568. *U. confertifolia*, *Don Prodr.* 84; *A. DC. l. c.* 8. *U. inæqualis*, *Benj. in Linnæa*, xx. 304. *U. Blumei*, *Miq. Fl. Ind. Bat.* ii. 994. *U. extensa*, *Hance; Walp. Ann.* iii. 3.

Throughout INDIA; in rice-swamps, tanks, and jheels, common.—DISTRIB. S.E. Asia, Malaya, N. Australia.

Generally resembling *U. stellaris*, but rather larger in all its parts. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. *Calyx-segments* in fruit ovate, spiculate, patent, hardly so long as the capsule. *Seeds* as of *U. stellaris*, but rather larger; margin thin, incurved towards the concave face, described by some authors as winged, by others as wingless.—The branches near the base of the peduncle are sometimes inflated, falsely whorled, bearing reduced leaves, but are always much longer and less bract-like than those of *U. stellaris*.

3. *U. punctata*, *Wall. Cat.* 2121; pedicels slender erect in fruit, flowers blue, capsule thin much longer than the calyx, seeds discoid margin thin sharply toothed. *A. DC. Prodr.* viii. 5; *Wight Ic.* t. 1570; *Oliver in Journ. Linn. Soc.* iii. 175.

PEGU and TENASSERIM; from Rangoon, *Wallich*, to Mergui, *Griffith*, &c.—DISTRIB. Borneo.

Leaves multipinnate, segments capillary, with bladders. *Peduncles* 6 in., 5–15-fld., glabrous; pedicels often $\frac{1}{2}$ – $\frac{2}{3}$ in. *Corolla* $\frac{1}{4}$ in. diam., blue (*Parish*); spur shorter than the lower lip. *Capsule* $\frac{1}{6}$ in., ovoid, obtuse. *Seeds* differing little from *U. stellaris*, but the thin margin is patent or obscurely inflexed towards the concave face, with numerous triangular teeth.

4. *U. exoleta*, *Br. Prodr.* 430; leaves very small bearing bladders, peduncles slender 1–3-fld., flowers small yellow, capsule globose exceeding the fruit-sepals, seeds discoid margin thin patent subentire. *A. DC. Prodr.* viii. 7. *U. diantha*, *Roem. & Sch. Syst. i. Mant.* 169; *Wight Ic.* t. 1569; *Oliver in Journ. Linn. Soc.* iii. 175, not of *A. DC.* *U. diflora*, *Roxb. Hort. Beng.* 4. *U. biflora*, *Roxb. Fl. Ind.* i. 143, not of *Lamk.*, nor of *Wall.* *U. Roxburghii*, *Spreng. Syst.* i. 52. *U. elegans*, *Wall. Cat.* 1502. *U. pterosperma*, *Edgew. in Proc. Linn. Soc.* i. 352.

Throughout INDIA, from the N.W. Himalaya and Assam to Ceylon, not common.—DISTRIB. S.E. Asia, Malaya, N. Australia.

Leaves sometimes 2–3 in., multipinnate, segments capillary, often inconspicuous or very slender, easily detached from the peduncle. *Peduncle* 1–4 in., minutely bracteate near the middle. *Corolla* $\frac{1}{2}$ in. diam., spur slightly exceeding the lower lip. *Capsule* $\frac{1}{2}$ in. diam., thin. *Seeds* subtrapezoidal, much depressed; margin somewhat

inflexed towards the concave face, minutely crenulate.—This species, much confused with species of other sections, is distinguishable by the globose (not compressed ovate) capsule, distinctly exceeding the sepals. The capillary bladder-bearing leaves are often absent in dried specimens; and similar small leaves occur in vegetative states of many of the so-called leafless species.

5. *U. minor*, Linn.; *Reichb. Ic. Fl. Germ.* t. 1826, fig. 1; corolla yellow, spur less than half as long as the lower corolla-lip, capsule globose as long as the calyx. *Lamk. Ill.* t. 14, fig. 2; *A. DC. Prodr.* viii. 7; *Oliver in Journ. Linn. Soc.* iii. 176.

ALPINE W. HIMALAYA; Nubra, alt. 11,000 ft., *Thomson*.—DISTRIB. Europe, W. and Central Asia.

Stems often 4–12 in., leafy. *Peduncles* 3–9 in., 2–8-fld.; usually minutely bracteate. *Corolla* $\frac{1}{2}$ in.; lower lip much longer than the upper.—There are examples from the W. Himalaya and Alpine Sikkim, which may be referable to this species; but being flowerless, they are doubtful.

** *Leaves* at the base of the scape linear or spatulate, often evanescent before flowering. *Calyx-lobes* equal or nearly so. *Seeds* smooth, testa reticulate.

† *Scales of the scape and bracts attached by their bases.*

§ *Flowers purple, blue, or whiteish.*

6. *U. albo-cœrulea*, Dalz. in *Hook. Kew Journ.* iii. 279; glabrous, pedicels $\frac{1}{2}$ in. recurved in fruit, lower lip of corolla $\frac{1}{2}$ in. diam. azure, spur $\frac{1}{2}$ in. narrow-conic, seeds short-ellipsoid obtuse at both ends. *Oliver in Journ. Linn. Soc.* iii. 177; *Dalz. & Gibs. Bomb. Fl.* 135.

CONCAN; *Stocks*; at Vingorla, *Dalzell*.

Scapes 4–8 in., erect, 3–8-fld., leafless at flower-time. *Calyx-lobes* ovate, in fruit $\frac{1}{2}$ in., subacute. Lower lip of *corolla* suborbicular, slightly 4-lobed, upper $\frac{1}{2}$ in.; spur pendent, nearly straight. *Seeds* scrobiculate, i.e. exterior cells of the testa oblong, subparallel to the longer diam. of the seed.

7. *U. arcuata*, *Wight Ic.* t. 1571, fig. 1; glabrous, pedicels $\frac{1}{2}$ in. recurved in fruit, lower lip of corolla $\frac{1}{2}$ in. diam. blue-purple, spur $\frac{1}{2}$ – $\frac{3}{4}$ in. linear curved, seeds ellipsoid. *Oliver in Journ. Linn. Soc.* iii. 177; *Dalz. & Gibs. Bomb. Fl.* 136.

W. DECCAN PENINSULA, from Bombay to Mysore; *Law, Ritchie, &c.*

Scapes 4–8 in., erect, 3–8-fld., leafless at flower-time or nearly so, sometimes bearing bladders on the rudimentary leaves. *Calyx-lobes* ovate, in fruit $\frac{1}{2}$ in., subacute. Lower lip of *corolla* suborbicular, scarcely lobed, upper $\frac{1}{2}$ in.; spur pendent from the base, then much curved forwards. *Seeds* scrobiculate, outer cells of the testa elongate.

8. *U. affinis*, *Wight Ic.* t. 1580, fig. 1; glabrous, pedicels short, lower lip of corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. ovate purple-blue, spur $\frac{1}{2}$ – $\frac{3}{4}$ in. narrow-conic straight, seeds subglobose. *Oliver in Journ. Linn. Soc.* iii. 178. *U. brachypoda*, *Wight Ic.* t. 1578, fig. 1. *U. decipiens*, *Dalz. in Hook. Kew Journ.* iii. 279; *Dalz. & Gibs. Bomb. Fl.* 135.

W. DECCAN PENINSULA, from the Concan southward; *Wight, Law, &c.*

Scapes 2–6 in., erect, 3–6-fld., leafless at flower-time. *Pedicels* $\frac{1}{2}$ – $\frac{3}{4}$ in., suberect in fruit. *Calyx-lobes* ovate, entire; in fruit $\frac{1}{2}$ in. scarcely acute. Lower lip of *corolla* obtuse, scarcely emarginate, upper shorter than the spur; spur nearly at right angles

to the axis of the flower, slightly curved forwards. *Seeds* reticulate, cells of the testa subhexagonal not elongate.

VAR. Griffithii, Oliver; rather larger, scapes sometimes a foot, pedicels stouter, fruiting-calyx $\frac{1}{4}$ in. or more. *U. Griffithii*, *Wight Ic.* t. 1576. *U. cœrulea*, *Benth. Fl. Hongk.* 256, not of *Linn.*—Malay Peninsula, from Mergui to Singapore; *Griffith, Murton, &c.*—Distrib. Borneo, S. China.

9. ***U. cœrulea***, *Linn.*; *Oliver in Journ. Linn. Soc.* iii. 179, not of *A. DC.*; glabrous, pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in., lower lip of corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. blue-purple, spur $\frac{1}{2}$ in. narrow-conic curved, seeds ellipsoid. *U. uliginoides*, *Wight Ic.* t. 1573. *U. pedicellata*, *Wight Ic.* t. 1578, fig. 2, *exclud. seeds.* ? *U. graminifolia*, *Vahl Enum.* i. 195; *DC. Prodr.* viii. 16. ? *U. purpurascens*, *Grah. Cat. Pl. Bombay*, 165.

MTS. of the DECCAN PENINSULA and CEYLON; frequent.

Scapes 2–8 in., suberect, 3–12-fl., leafless at flower-time. *Pedicels* suberect in fruit. *Calyx-lobes* elliptic, acute, lower often minutely toothed; in fruit $\frac{1}{4}$ in. very acute. Lower lip of *corolla* ovate, subacute, upper $\frac{1}{2}$ in.; spur at base projecting backwards nearly in a line with the axis of the flower, then curved forwards. *Seeds* ellipsoid, outer cells of the testa oblong.—*Wight's* specimen of his *U. pedicellata* shows flowers only, and the seeds figured in his *Ic.* t. 1578, fig. 2, must have been taken from *U. affinis*. *Thwaites (Enum.* 171) unites *U. affinis* with *U. cœrulea*, but the latter has much acuter calyx-lobes, and different seeds. As to *U. acula* (*Benj. in Linn.* xx. 314), doubtfully referred by *Oliver* to *U. affinis*, it is perhaps rather *U. cœrulea*, as the lower calyx-lobe is much oftener toothed in this species.

VAR. conferta; spur bent nearly at its base, so that it is pendent almost at right angles to the axis of the flower. *U. conferta*, *Wight Ic.* t. 1575.—**Mts. of the S. Deccan Peninsula, Wight.**

VAR. squamosa; scape with numerous scales (bracts to suppressed pedicels), flowers few subterminal, corolla rather larger than *U. cœrulea* type. *U. squamosa*, *Wight Ic.* t. 1579.—**Nilgherry Mts., Gardner; Sispara, Wight.** The examples are not in fruit.

VAR. Smithiana; scapes 1 foot sometimes twining, lower lip of corolla nearly $\frac{1}{2}$ in., spur $\frac{1}{2}$ in. *U. Smithiana*, *Wight Ic.* t. 1577. *Utricularia* sp. n. 27, *Oliver in Journ. Linn. Soc.* iii. 190.—**Malabar or Coorg; Wight.** This is referred by *Oliver (Journ. Linn. Soc.* iii. 180) to *U. cœrulea*, possibly correctly. *Wight's Ic.* t. 1577 however shows the seeds reticulate not scrobiculate, i. e. the outer cells of the testa are subhexagonal not oblong or elongate. If this is so, *U. Smithiana* is more nearly allied to *U. affinis*, and is probably a distinct species. The figure can hardly be trusted on such a point, and none of *Wight's* examples exhibits fruit.

10. ***U. reticulata***, *Smith Exot. Bot.* t. 119; glabrous, flowers pedicellate often numerous, calyx-lobes acute, in fruit $\frac{1}{2}$ in. decurrent on the pedicel, lower lip of corolla $\frac{1}{2}$ in. blue, spur $\frac{1}{4}$ in. narrowly conic nearly straight, seeds obovoid scrobiculate. *Wall. Cat.* 1493; *A. DC. Prodr.* viii. 19; *Wight Ill.* ii. t. 143; *Oliver in Journ. Linn. Soc.* iii. 180; *Dalz. & Gibs. Bomb. Fl.* 135. *U. uliginosa*, *Wight Ic.* t. 1574, *right-hand plant only.* *U. graminifolia*, *Grah. Cat. Pl. Bombay*, 165, not of *Spreng.* *U. oryzetorum*, *Miq. in Pl. Hohenack.* n. 574.—*Rheede Hort. Mal.* ix. t. 70.

W. DECCAN PENINSULA, from the Concan southwards, and **CEYLON**; frequent.

Scapes usually elongate, 10–24 in., slender, twining, flower-bearing for half their length; small suberect, few-flowered forms (*Wight Ic.* t. 1574, *right-hand plant*) are slenderer than *U. uliginosa*, *Vahl. Pedicels* $\frac{1}{4}$ – $\frac{1}{2}$ in.; bracteoles filiform. Lower lip of *corolla* broadly ovate, scarcely emarginate; upper $\frac{1}{2}$ in. *Seeds* somewhat rhomboid, hilum prominent; cells of the testa oblong, oblique to the long axis of the seed.

VAR. uliginosa (*Vahl Enum.* i. 203); glabrous, flowers pedicelled often numerous, calyx-lobes acute, in fruit $\frac{1}{4}$ – $\frac{1}{2}$ in. decurrent on the pedicel, lower lip of corolla $\frac{1}{2}$ in. blue, spur $\frac{1}{2}$ – $\frac{3}{4}$ in. conic nearly straight, seeds obovoid scrobiculate. *A. DC. Prodr.*

viii. 15; *Wight Ic.* t. 1574, two left-hand plants. *U. humilis*, Heyne; *Wall. Cat.* 1495; *Wight Ic.* t. 1572, not of Vahl. *U. reticulata* var. β , Oliver in *Journ. Linn. Soc.* iii. 180. *U. polygaloides*, Edgew. in *Proc. Linn. Soc.* i. 351.—S. Deccan Peninsula and Ceylon, frequent. Bengal; Burdwan, Edgeworth. Scape 2-6 in., erect, much thicker than in the starved examples of *U. reticulata*. Pedicels $\frac{1}{4}$ in.: bracteoles linear, less pointed than in *U. reticulata*. Seeds as of *U. reticulata*, but smaller and more finely scrobiculate.

11. ***U. scandens***, Benj. in *Linnaea*, xx. 309, partly; minute, twining, glabrous, calyx-lobes in fruit $\frac{1}{8}$ in. obtuse, lower lip of corolla $\frac{1}{8}$ - $\frac{1}{6}$ in. blue, seeds minute obovoid laxly scrobiculate. Oliver in *Journ. Linn. Soc.* iii. 181. *U. volubilis*, *Wight in Herb. Propr.*

Near MADRAS; Madura Hills, *Wight, Shuter*.

Scapes 1-6 in., exceedingly slender, twining on *U. Wallichiana* & *uliginosa*. Pedicels $\frac{1}{8}$ in., scattered. Seeds minute; testa very lax, almost wrinkled, cells large oblong.

VAR. *capillacea*; scape most slender not twining, calyx-lobes in fruit $\frac{1}{12}$ in. very obtuse. *U. capillacea*, *Wall. Cat.* 6399; Oliver in *Journ. Linn. Soc.* iii. 184, not of *Herb. Wight*.—Madras; *Wight*. *U. capillacea*, *Wight Herb.*, is *U. Wallichiana*, *Wight Ic.* t. 1572, fig. 1. The fragments in Wallich's Herbarium ($1\frac{1}{2}$ in. long) of *U. capillacea*, Vahl, and which are said to have come from Wight's Herbarium, appear to have had blue flowers. Wallich seems to have affixed the name *capillacea* on his own, not Wight's authority.

12. ***U. hirta***, Klein; Oliver in *Journ. Linn. Soc.* iii. 183; hairy, flowers subsessile, lower lip of corolla $\frac{1}{4}$ in. blue, spur $\frac{1}{2}$ in. curved. A. DC. *Prodr.* viii. 25. *U. setacea*, *Wall. Cat.* 6398, partly.

DECCAN PENINSULA (Klein). CHOTA NAGPORE; alt. 2000 ft., Clarke. KHASIA MTS.; alt. 3-5000 ft., Griffith, H. f. & T., &c.

Scapes 3-8 in., erect, slender, minutely densely villous. Calyx-lobes orbicular, in fruit $\frac{1}{10}$ in. Capsule $\frac{1}{10}$ in., globose. Seeds minute, ovoid, obscurely scrobiculate.—By the subsessile flowers and small globose capsules this seems allied to *U. racemosa*, as Prof. Oliver states; but the bracts not being produced backwards below their point of insertion, it must be placed here in the artificial arrangement adopted.

§§ Flowers yellow.

13. ***U. bifida***, Linn.; A. DC. *Prodr.* viii. 21; pedicels finally recurved, calyx-lobes in fruit $\frac{1}{4}$ in. ovate obtuse, lower lip of corolla $\frac{1}{4}$ in., spur nearly $\frac{1}{4}$ in. curved, seeds obovoid, testa lax scrobiculate. Oliver in *Journ. Linn. Soc.* iii. 182 (exclud. syn. *U. humilis*). *U. biflora*, *Wall. Cat.* 1498, not of Roxb. *U. diantha*, A. DC. l. c. 21, exclud. most syn. *U. Wallichiana*, Benj. in *Bot. Zeit.* 1845, 213. *U. brevicaulis*, Benj. in *Linnaea*, xx. 303.

Throughout INDIA, from Nepal and Assam to Ceylon and Malacca.—DISTRIB. E. Asia from Japan to Borneo and the Philippines.

Scapes 2-7 in., erect, glabrous, many-fl. Pedicels $\frac{1}{8}$ in. Seeds almost wrinkled owing to the very lax testa; cells of the testa oblong, oblique to the longer axis of the seed.

14. ***U. Wallichiana***, *Wight Ic.* t. 1572, fig. 1; stems very slender often twining, pedicels 0- $\frac{1}{4}$ in. suberect in fruit, calyx-lobes in fruit $\frac{1}{4}$ in. ovate acute, lower lip of corolla $\frac{1}{2}$ in., spur nearly as long, seeds ellipsoid scrobiculate without papillæ or glochidia. Oliver in *Journ. Linn. Soc.* iii. 182. *U. scandens*, Benj. in *Linnaea*, xx. 309, in most part. *U. macrolepis*, *Wight Ic.* t. 1580, fig. 2, exclud. seeds. *U. capillacea*, *Thwaites Enum.* 171, not of Oliver.

Hills of the S. DECCAN PENINSULA and CEYLON; *Wight, Thwaites*, &c.

In his Herbarium Wight has marked his n. 2709 one sheet *U. Wallichii*, the other *U. macrolepis*; of this the seeds exhibit none of the glochidia shown in Wight's figure of *U. macrolepis*, and insisted on in the accompanying description.

VAR. *firmula*, Oliver in Journ. Linn. Soc. iii. 182; stems stouter erect.—Khasia Mts., alt. 3–5000 ft., common. ALPINE SIKKIM, alt. 9–11,000 ft.; Lachen, *J. D. H.*—The Sikkim examples are 1–2 in. high, but appear to be high-level forms of the Khasian plant.

†† *Scales of the scape and bracts produced backwards below their point of insertion.*

15. ***U. verticillata***, *Benj. in Linnæa*, xx. 312; glabrous, scapes often branched, pedicels (many of them) as long as the fruit-calyx, lower lip of corolla $\frac{1}{2}$ in. *Oliver in Journ. Linn. Soc.* iii. 184. *U. bifida*, *Wight Ic.* t. 1584, fig. 2, not of Linn.

MALACCA, *Griffith.*

Scapes 6–10 in. *Pedicels* $\frac{1}{2}$ in. *Calyx-lobes* in fruit $\frac{1}{2}$ in., ovate, obtuse. *Capsule* $\frac{1}{10}$ in., globose. *Seeds* minute, cells of the testa subhexagonal rather than oblong.

16. ***U. rosea***, *Edgew. in Proc. Linn. Soc.* i. 352; flowers subsessile, lower lip of corolla nearly $\frac{1}{2}$ in. exceeding the obtuse spur. *Oliver in Journ. Linn. Soc.* iii. 184.

BENGAL? *Edgeworth.* **CEYLON;** *Gardner.*

The plant here diagnosed is *Gardner's* n. 507, which is the type of *U. rosea*, Oliver. Whether any such plant was ever found in Bengal is doubtful, there being no-type of Edgeworth's to refer to. Oliver quotes for this species *U. racemosa*, *Wight Ic.* t. 1584, fig. 1, which looks more like *U. racemosa*, Wall., with the flower drawn a little large; the seeds are like none of this set, in all of which they are minute with large obscurely-marked scrobiculations. According to Thwaites (*Enum.* 172), *U. rosea*, *racemosa* and *flicaulis* are forms of one species.

17. ***U. racemosa***, *Wall. Cat.* 1496; glabrous, scapes 6–16 in. sometimes branched, flowers subsessile numerous blue lower distant uppermost often subcapitate, lower lip of corolla $\frac{1}{2}$ in. hardly as long as the subacute spur. *A. DC. Prodr.* viii. 21; *Oliver in Journ. Linn. Soc.* iii. 186. *U. complanata*, *Wall. Cat.* 1497. *U. cœrulea*, *A. DC. l. c.* 19; *Wight Ic.* t. 1583, not of Linn.

KHASIA MTS., alt. 3–5000 ft., common. **CHOTA NAGPORE;** *Clarke.* **DECCAN PENINSULA** and **CEYLON;** *Wight, &c.* **PEGU;** *Kurz.*—**DISTRIB.** Cambodia, China.

Flowers often subfasciculate on the spike. *Calyx-lobes* orbicular in fruit, $\frac{1}{10}$ – $\frac{1}{8}$ in., obtuse. Lower lip of corolla blue or whiteish, obscurely 4-lobed. *Capsule* $\frac{1}{10}$ in., globose. *Seeds* minute, obscurely coarsely scrobiculate.

VAR. *flicaulis*; stem slender with fewer scattered flowers. *U. flicaulis*, *Wall. Cat.* 1501; *A. DC. l. c.* 21; *Oliver in Journ. Linn. Soc.* iii. 186. *U. nivea*, *Vahl Enum.* i. 203; *Wall. in Roxb. Fl. Ind. ed. Carey & Wall.* i. 144; *Wight Ic.* t. 1582; *Dalz. & Gibs. Bomb. Fl.* 135. *U. setacea*, *Wall. Cat.* 6398, partly. *U. campestris*, *Miq. in Pl. Hohenack.* n. 596.—From Nepal and the Khasia Mts. to Ceylon and Tenasserim (S.E. Asia and Malaya to Hongkong and Borneo).

*** *Leaves* at the base of the scape orbicular or reniform, persistent. *Calyx-lobes* very unequal. *Seeds* glochidiate (or in *U. kumaonensis* comose).

18. ***U. brachiata***, *Oliver in Journ. Linn. Soc.* iii. 187; scape slender 1–2-fld., leaves reniform slenderly petioled, lower lip of corolla $\frac{1}{4}$ – $\frac{1}{2}$ in. 5-lobed, spur $\frac{1}{2}$ in. linear-cylindric obtuse.

ALPINE SIKKIM, alt. 8-11,000 ft., *J. D. H.*

Scapes 2-3 in. *Leaves* $\frac{1}{2}$ in. diam.; petiole $\frac{1}{2}$ in., linear. *Pedicels* $\frac{1}{2}$ in.; bracts minute, ovate. *Calyx*, upper segment $\frac{1}{10}$ in., ovate, purple. *Corolla* white, yellow-spotted. *Seeds* not seen.

19. ***U. orbiculata***, *Wall. Cat.* 1500; scape slender 1-5-fl., leaves petioled orbicular, lower lip of corolla $\frac{1}{4}$ in. 5-lobed yellowish, spur $\frac{1}{2}$ in. linear-acute, seeds obovoid glochidiate. *A. DC. Prodr.* viii. 18; *Oliver in Journ. Linn. Soc.* iii. 187; *Dalz. & Gibs. Bomb. Fl.* 136. *U. pusilla*, *Grah. Cat. Pl. Bomb.* 165. *U. glochidiata*, *Wight Ic. t.* 1581.

Almost throughout INDIA in the hills: Himalaya Mts., alt. 3-8000 ft., from Nepal to Bhotan, common; Khasia Hills frequent; W. Deccan Peninsula and Ceylon; Tenasserim to Malacca.—*DISTRIB.* Malaya, S. China.

Scapes 2-5 in., slender. *Leaves* $\frac{1}{2}$ in. diam.; petiole $\frac{1}{4}$ in. *Pedicels* $\frac{1}{2}$ in. Lower lip of *corolla* broader than long, with 5 subequal obtuse short lobes (more unequal in an example of Parish from Moulmein); pinkish or whiteish, but the spots or tinge of yellow usually prevailing.

20. ***U. multicaulis***, *Oliver in Journ. Linn. Soc.* iii. 188; scape 1-3-fl., leaves petioled spathulate-orbicular, lower lip of corolla $\frac{1}{2}$ in. 3-4 (sometimes 6-) lobed, spur $\frac{1}{10}$ in. linear-cylindric obtuse.

ALPINE SIKKIM; Lachen, alt. 10-11,000 ft.; Lachong, alt. 6-7000 ft., *J. D. H.*

Tufted; scapes 1-2 in. crowded stouter than those of *U. orbiculata*. *Pedicels* 0- $\frac{1}{2}$ in. *Flowers* pale-flesh colour, throat yellow. *Seeds* not seen.—Allied to *U. orbiculata*, from which it differs at first sight by the much smaller flowers.

21. ***U. furcellata***, *Oliver in Journ. Linn. Soc.* iii. 189; scape 2-6-fl., leaves petioled spathulate-orbicular, lower lip of corolla $\frac{1}{2}$ - $\frac{3}{8}$ in. 4-lobed purplish, spur $\frac{3}{4}$ - $\frac{1}{2}$ in. linear curved.

SIKKIM HIMALAYA; at Darjeeling, alt. 7-9000 ft., frequent (*Herb. Griffith, &c.*).

Scape 2-3 in., slender, resembling that of *U. orbiculata*. Lower lip of *corolla* narrower than broad, purple pink or white, not distinctly yellow. *Seeds* obovoid, glochidiate, as of *U. orbiculata*.—Known in the field from *U. orbiculata* by the smaller, less yellow, flowers.

VAR. minor; scapes $\frac{1}{2}$ -1 in. very slender 1-3-fl.—Temp. Sikkim; Lachen, *J. D. H.* Khasia Mts., Boga Pani, *J. D. H.* These examples were the type of *U. furcellata*, *Oliver*; the plentiful arrival of subsequent material shows the "larger Darjeeling form" referred to by *Oliver* to be the fairly developed state of the species.

22. ***U. kumaonensis***, *Oliver in Journ. Linn. Soc.* iii. 189; scape slender 1-3-fl., leaves petioled spathulate-orbicular, lower lip of corolla $\frac{1}{2}$ - $\frac{1}{6}$ in. 5-lobed, spur $\frac{1}{2}$ in. narrowly cylindric, seeds with a tuft of hairs at each end. *Diurospermum album*, *Edgew. in Proc. Linn. Soc. i.* 351.

TEMPERATE W. HIMALAYA; Kumaon, alt. 7500 ft., near the river Pilti, *Strach. & Winterb.*

Resembling altogether *U. furcellata*; but the lower lip of the corolla is 5-lobed, the spur shorter. The young seeds are ellipsoid, smooth, scabrous-papillose at each end; the ripe seeds have at their end tufts of capillary hairs as long as the seed.

IMPERFECTLY KNOWN SPECIES.

1. *U. MINUTISSIMA*, *Vahl Enum. i.* 204; scape 2-3 in. capillary, bracts basifixed, flowers blue subsessile, calyx-lobes subobtuse. *DC. Prodr.* viii. 16; *Oliver in Journ. Linn. Soc.* iii. 190.—Malacca (*Koenig*). The basifixed scales will not do for *U. racemosa*,

nor the blue flowers for *U. bifida*; and there is no other known Malacca species that will at all suit.

2. *U. FOVEOLATA*, *Edgew. in Proc. Linn. Soc.* i. 351; scape twining leafless 2-6-fl., bracts transfixed, calyx-lobes ovate acute, corolla purple, seeds glistening punctate.—Bengal; *Edgeworth*. Near *U. uliginosa* (ex *Edgew.*), but from the description of the seeds perhaps rather allied to *U. affinis*.

3. *U. ALATA*, *Benj. in Bot. Zeit.* 1845, 212; leafless, scape 1-2 in. 2-3-fl., scales basifixed, calyx-lobes ovate equal subacute decurrent on the pedicel, corolla longer than the calyx, spur conic acute longer than the calyx.—"India" (*Benjamin*). Neither the shape of the corolla-lip, its colour, nor any account of the seeds is supplied.

4. *U. SQUAMOSA*, *Benj. in Bot. Zeit.* 1845, 212; leafless, scape 3 in. 3-fl., scales attached by their middle, flowers subsessile, calyx-lobes equal orbicular-ovate obtuse.—Nepal (*Benjamin*). *Benjamin*'s description fits very well the common *U. racemosa*. This species however must have been so well known to *Benjamin* that he would hardly publish it again under a new name; hence *Oliver* records *U. squamosa* as an indeterminate species.

5. *U. PAUCIFOLIA*, *Benj. in Linnæa*, xv. 309; leaves $\frac{1}{4}$ – $\frac{1}{3}$ in. oblong obtuse, petiole $\frac{1}{4}$ in., scape 4 in., pedicels exceedingly short, calyx-lobes $\frac{1}{8}$ in. equal obtuse.—India (*Benjamin*). Supposed by *Oliver* to be near *U. racemosa*.

6. *U. OBTUSILOBA*, *Benj. in Linnæa*, xx. 312; leaves $\frac{1}{8}$ in. ovate obtuse, petiole $\frac{1}{8}$ in., scapes 3-20 in., scales fixed by their middle, calyx-lobes round obtuse.—Ceylon, Nepal, China (*Benjamin*). Also supposed by *Oliver* to be near *U. racemosa*.

7. *U. ALBIFLORA*, *Griff. Notul.* iv. 168; leafless, scapes simple filiform, pedicels bracteolate at the base, corolla white, lower lip yellow-spotted, spur acutely conic a little longer than the lower lip.—Mergui; *Griffith*.

8. *U. LILACINA*, *Griff. Notul.* iv. 168; leafless, raceme few-fl., fruit-pedicels erect, calyx-lobes equal acute, corolla lilac-blue, lower lip with a yellow spot, spur conic-subulate as long as the lower lip.—Mergui; *Griffith*.

9. *U. CAPILLARIS*, *Don Prodr.* 85; leafless, scape 3-4 in. capillary few-fl., lower calyx-lobe (?) ovate acute longer, corolla blue, spur conic. *DC. Prodr.* viii. 90.—Nepal (*D. Don*).

10. *U. RAMOSA*, *Fahl Enum.* i. 204; leafless, scape few-fl., flowers small, spur conic short, fruit-pedicels recurved. *DC. Prodr.* viii. 25.—Deccan Peninsula (*Koenig*). Doubtfully referred by *Oliver* to *U. flexuosa*; it appears as likely to be *U. cærulea* or one of that section.

U. ambigua is recorded as Indian by *DC.* (*Prodr.* viii. 9) on the faith of a wrong field determination of a specimen by *Wallich*.

II. PINGUICULA, Linn.

Herbs. *Leaves* radical, rosulate, entire. *Scapes* erect. 1-fl., leafless, ebracteate. *Calyx* 4-5-lobed, more or less 2-lipped. *Corolla* 2-lipped, spurred, purple or yellow. *Anthers* ovate, sub-1-celled. *Style* short, stigma very unequally 2-lobed. *Seeds* ellipsoid.—Species 15, all extra-tropical.

P. alpina, *Linn.*; *Reichb. Iconogr.* t. 81, fig. 166; leaves subsessile elliptic sparsely hairy on the upper surface, corolla white yellow-spotted, spur hardly $\frac{1}{2}$ as long as the corolla. *DC. Prodr.* viii. 31; *Oliver in Journ. Linn. Soc.* iii. 190. *U. flavescens*, *Flörke*, and *brachyloba*, *Ledeb.*; *Reichb. Iconogr.* t. 81, fig. 168, 187.

ALPINE HIMALAYA, alt. 11-13,000 ft.; Kumaon, *Strach. & Winterb.*, T.

Anderson; Sikkim, *J. D. H.*—DISTRIB. N. and Alpine Europe; N. and Central Asia.

Leaves $1\frac{1}{2}$ by $\frac{3}{8}$ in. *Scapes* 2-6 in., glabrous. *Corolla* $\frac{1}{3}$ — $\frac{1}{2}$ in. *Capsule* $\frac{1}{4}$ in., ellipsoid, 2-valved. *Seeds* elongate ellipsoid, testa smooth, cells oblong.

ORDER CVI. **GESNERACEÆ.** (By C. B. Clarke.)

Herbs or undershrubs. *Leaves* opposite alternate or solitary, undivided, entire or toothed; stipules 0. *Peduncles* axillary or terminal, rarely 1-fl., bracteate; bracteoles usually small. *Flowers* hermaphrodite, rarely regular. *Calyx-segments* 5, valvate or open in the bud (imbricate in *Monophyllæa*). *Corolla* gamopetalous; tube long or short; segments usually 5, imbricate in the bud. *Stamens* on the corolla-tube mostly didynamous, often 2 only fertile, rarely 5 fertile; anthers 2-celled, often early confluent 1-celled. *Disc* annular or shortly cylindric or 0, sometimes unilateral. *Ovary* 1-celled or sub-2-celled; style linear, stigma small capitate or 2-lobed; placenta parietal, bifid; ovules very many, anatropal. *Fruit* capsular or berried, dehiscent or indehiscent. *Seeds* very many, minute, fusiform or ovoid, smooth; testa reticulate, often striate, albumen 0 or scanty; embryo straight.—Species 800, mostly in S.E. Asia, Polynesia and Tropical America.

The Ordinal character above given is narrowed to the Old World species of the Order, which all belong to the Suborder *Cyrtandrea*. The *Eugesneræ* of the New World have the ovary more or less inferior. The leaf when solitary on the plant is sometimes a highly developed cotyledon.

Subtribe 1. TRICHOSPOREÆ. Seeds tipped with a very long hair. *Capsule* long-linear, loculicidally 2-valved; placenta bifid, recurved, enrolled, covering the seeds, not seed-bearing on their axial faces.

Leaves subentire, fleshy. Stamens 4 perfect, exerted . . .	1. <i>ÆSCHYNANTHUS</i> .
Leaves subcoriaceous. Stamens 2 perfect included . . .	2. <i>LYSIONOTUS</i> .
Leaves membranous, hairy. Stamens 4 perfect included . . .	3. <i>LOXOSTIGMA</i> .

Subtribe 2. DIDYMOCARPÆ. Capsule loculicidally 2-valved, often ultimately 4-valved; placenta deeply intruded nearly meeting, not seed-bearing on their inner faces (except in ****). *Seeds* without hairs.

* *Capsule linear or elongate-lanceolate, valves 2 straight not (or very late) 4-valved, in Didymocarpus frequently subfollicular.*

Stigma oblique, emarginate. Stamens 2 perfect . . .	4. <i>DIDYMOCARPUS</i> .
Stigma ultimately shortly bifid. Stamens 2 perfect . . .	6. <i>CHIRITA</i> .
Leaves several. Stamens 4 perfect . . .	5. <i>DIDISSANDRA</i> .
A 1-leaved herb. Stamens 4 perfect . . .	7. <i>PLATYSTEMMA</i> .

** *Capsule narrowly lanceolate, valves 2 straight soon again bipartite (capsule usually subequally 4-valved).*

A low herb. Leaves opposite. Stamens 4 perfect . . .	8. <i>CHAMPIONIA</i> .
Undershrubs. Leaves alternate. Stamens 4 perfect . . .	9. <i>BEICA</i> .
Flowers capitate. Corolla silky without. Stamens 2 perfect	10. <i>TETRAPHYLLUM</i> .
Cyme lax, few-flowered. Calyx 3-sepalous. Stamens 2 perfect	11. <i>TRISEPALUM</i> .

*** *Capsule linear or elongate-lanceolate, valves (even before dehiscence) spirally twisted.*

Calyx distinctly 2-lipped, sub-3-sepalous . . .	12. <i>PHYLLOBEA</i> .
---	------------------------

Corolla-lobes 5, subsimilar, round 13. BÆA.
Corolla 2-lipped, lower lip larger reflexed 14. ORNITHOBÆA.

**** *Capsule ellipsoid or ovoid, hardly exceeding the calyx, placenta bearing seeds on all sides.*

Caulescent. Stamens 4 perfect 15. KLUGIA.
Caulescent. Stamens 2 perfect 16. RHYNCHOGLOSSUM.
Scapose. Stamens 4 perfect 17. JERDONIA.

Subtribe 3. LEPTOBÆA. Capsule septicidally 2-valved. *Seeds without hairs.*

Twiggy. Cyme-branches capillary 18. LEPTOBÆA.

Subtribe 4. EPITHEMÆA. Capsule circumsciss. *Seeds without hairs.*

A succulent herb. Flowers subcapitate 19. EPITHEMA.

Subtribe 5. EUCYRTANDRÆA. Berry indehiscent, succulent or membranous, breaking up irregularly, in *Cyrtandromœa* sometimes loculicidally 2-valved. *Seeds without hairs.*

Leaf solitary. Flowers racemose. Sepals imbricate. Stamens 4 perfect 20. MONOPHYLLÆA.
Calyx urceolate, enclosing the fruit. Stamens 4 perfect 21. CYRTANDROMÆA.
Calyx plicate. Anthers cruciate. Stamens 4 perfect 22. STAUBANTHERA.
Undershrubs. Leaves all alternate. Stamens 4 perfect 23. ISANTHERA.
Undershrubs. Uppermost leaves opposite. Stamens 4 perfect. 24. RHYNCHOTECHUM.
Undershrubs. Corolla tubular. Stamens 2 perfect 25. CYRTANDRA.

I. **ÆSCHYNANTHUS**, Jack.

Epiphytic undershrubs. *Leaves* opposite, equal, fleshy or leathery, entire rarely obscurely toothed; nerves obscure. *Peduncles* terminal or axillary, 1- or 2-fld., rarely cymose, solitary or clustered; bracts ovate, usually small, sometimes large coloured, deciduous. *Calyx* truncate, 5-fld, or 5-partite. *Corolla* tubular-ventricose, rarely small or greenish; limb 2-lipped. *Stamens* 4 perfect, didynamous; anthers oblong, equalling the corolla or much exerted, usually coherent in pairs by the tips; rudimentary fifth rarely present. *Disc* annular. *Ovary* superior, stipitate, oblong or linear; stigma peltate; placenta deeply inflexed, then recurved bearing the ovules. *Capsule* long-linear, loculicidally 2-valved; valves placentiferous. *Seeds* very many, small, sessile, pendulous, oblong, rugose, with one or more hairs at the end next the hilum, and one at the apex.—Species 52, Indian and Malayan, extending from Kumaon and Ceylon to Hongkong and the Philippines.

Æschynanthus, Jack, was published Jan., 1823; but *Trichosporum*, D. Don, being published July, 1822, has the right of priority; *Æschynanthus*, however, having been accepted for half a century, it would not be expedient to relinquish it.

Sect. 1. **Politrichium**. *Seeds* with many hairs near the hilum, and one hair at the apex.

1. **Æ. longicaulis**, Wall. Cat. 888; glabrous, leaves lanceolate obscurely falcate, sepals narrowly linear-lanceolate. *Br. in Pl. Jav. Rar.* 116; *A. DC. Prodr.* ix. 262.

TENASSERIM; Chappedong, Wallich; Mergui, Griffith; Moulmein, Parish (*Iconed. Kew*).

Stem long, branched, terete. *Leaves* $3\frac{1}{2}$ by $\frac{2}{3}$ in., base cuneate or rhomboid, fleshy, midrib slender, nerves obscure; petiole $\frac{1}{2}$ in. *Pedicels* lateral and terminal, 1-3 together, $\frac{1}{8}$ - $\frac{1}{2}$ in. *Sepals* free, $\frac{1}{3}$ by $\frac{1}{30}$ in. *Corolla* $\frac{2}{3}$ in., glabrous without. *Filaments* much exserted, glandular-hairy. *Capsule* 8 by $\frac{1}{8}$ in. *Seed* $\frac{1}{10}$ in., oblong, rough; hilar hairs 30-40, $\frac{1}{2}$ in. long.

Sect. 2. **Diplotrichium.** *Seeds* with two hairs near the hilum, one at the apex.—*Seeds* in n. 2 unknown, in nn. 3, 7 require verification: nn. 4, 5, 6 are perhaps but one species.

2. **Æ. fulgens**, Wall. Cat. 797; leaves narrowly lanceolate succulent, pedicels terminal clustered, calyx $\frac{1}{2}$ in. nearly glabrous, corolla 2 in. pubescent without. *Br. in Pl. Jav. Rar.* 115; *DC. Prodr.* ix. 261; *Bot. Mag.* t. 4891.

TAYOY; Wallich.

Glabrous except the inflorescence. *Branches* very thick. *Leaves* 5 by 1 in., acute; petiole $\frac{1}{6}$ - $\frac{1}{2}$ in., very thick. *Pedicels* $\frac{1}{2}$ in., nearly glabrous. *Calyx* narrowly tubular; teeth $\frac{1}{12}$ - $\frac{1}{8}$ in., triangular. *Corolla* narrow tubular-funnel-shaped, scarlet, mouth orange purple-marked. *Filaments* far exserted, nearly glabrous. *Seeds* unknown.—Brown assumed the seed to have but one hair at the hilar end, and placed this species (doubtfully) in sect. *Holocalyx*, which the inflorescence and stout stem do not suit.

3. **Æ. Hookeri**, Clarke; glabrous except the corolla, leaves lanceolate, pedicels terminal umbelled, calyx tubular scarlet very shortly obtusely lobed. *Æ. parasitica*, Clarke Comm. & Cyrt. Beng. t. 49, not of Wall.—*Æschynanthus* sp. n. 14, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA; alt. 4-6000 ft., J. D. H., Clarke.

Stem branched, terete. *Leaves* $3\frac{1}{2}$ by 1 in., acuminate, base cuneate, fleshy, midrib beneath broad, nerves obscure; petiole $\frac{1}{3}$ in. *Pedicels* 3-8, $\frac{1}{3}$ - $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in., narrowly oblong; branch after flowering often growing on through the umbel. *Calyx-tube* nearly $\frac{1}{2}$ in., teeth $\frac{1}{8}$ - $\frac{1}{6}$ in. *Corolla* more than 1 in., curved, hairy without, orange-red, the lobes orange black-spotted. *Filaments* far exserted, glandular-hairy; anthers $\frac{1}{6}$ in., narrowly oblong. *Ovary* glabrous; style glandular-hairy. *Capsule* and *seeds* not now at hand; but the species seems very near *Æ. grandiflora*, and (it is believed) was ascertained to belong to sect. *Diplotrichium*.

4. **Æ. grandiflora**, Spreng. Syst. iv. 238; glabrous except the corolla, leaves lanceolate, pedicels clustered, calyx $\frac{1}{2}$ in. lobes shorter than the tube, corolla $1\frac{1}{2}$ in. inflated upwards. *DC. Prodr.* ix. 261; *Bot. Mag.* t. 3843; *Part. Mag.* v. 241, with fig. *Æ. parasitica*, Wall. Cat. 796, partly. *Æschynanthus* sp., Griff. Itin. Notes, 28, n. 427, and *Ic. Pl. Ind. Or.* t. 441 (not descr. of t. 441 in Griff. Notul. iv. 156). *Incarvillea parasitica*, Roxb. Cor. Pl. iii. 88, t. 291, and *Fl. Ind.* iii. 112. *Trichosporum grandiflorum*, Don Prodr. 125.

KHASIA MTS., alt. 0-3500 ft.; Wallich, Griffith, H. f. & T.

Stem terete, branched. *Leaves* 4 by 1 in., narrowed at both ends, often sinuate; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Pedicels* $\frac{1}{8}$ - $\frac{1}{2}$ in., terminal; more rarely on spurs, quasi-axillary. *Calyx* herbaceous; lobes variable, sometimes very short obtuse as in Roxburgh's type, sometimes lanceolate acute as long as the tube. *Corolla* red, lobes orange marked with black-purple, mouth subcontracted. *Filaments* far exserted, glandular-hairy; anthers $\frac{1}{2}$ in., shortly oblong. *Capsule* 6 by $\frac{1}{4}$ in.

VAR. *parasitica*, Wall. Cat. 796, chiefly; leaves narrower, calyx and corolla rather smaller, calyx-lobes acutely lanceolate slightly longer than the tube. *Br. in Pl. Jav. Rar.* 2, p. 115; *Lindl. Bot. Reg.* 1841, t. 49; *Maund. Bot.* iv. t. 167.—Khasia Mts.; Wallich. Whether Wallich's *Æ. parasitica* was Roxburgh's *Incarvillea parasitica* has been long disputed. The type sheet of Wall. Cat. 796 has three

branches on it, whereof one is Roxburgh's plant, the second is that here called Wallich's var. *parasitica*, the third is the remote *Æ. micrantha*. The distributed sheets of Wall. Cat. 766 contain these three plants mixed in varying proportions.

5. *Æ. ramosissima*, Wall. Cat. 799, and *Pl. As. Rar.* i. 55, t. 71; glabrous except the corolla, leaves broadly lanceolate, pedicels clustered, calyx $\frac{1}{2}$ in. lobes lanceolate longer than the tube, corolla 1 in. scarcely contracted at the mouth. *DC. Prodr.* ix. 260; *Past. Mag.* vi. 195, with fig.; *Wight Ill.* t. 159 b, fig. 11, many-haired seed excl.; *Griff. Ic. Pl. Ind. Or.* t. 443, fig. 5; *Clarke Comm. & Cyrt. Beng.* t. 50. *Æ. parviflora*, G. Don *Gen. Syst.* iv. 656; *DC. Prodr.* ix. 261. *Trichosporum parviflorum*, Don *Prodr.* 125.

SUBTROPICAL HIMALAYA, alt. 3–4000 ft.; Kumaon, Strachey & Winterbottom; Nepal, Wallich; Sikkim, J. D. H.

Leaves 4 by $1\frac{1}{2}$ in. Sepals sometimes nearly free, narrowly lanceolate, sometimes united half-way.—Scarcely separable from *Æ. grandiflora* var. *parasitica*, but has broader leaves, and comes from a different area.

6. *Æ. maculata*, Lindl. Bot. Reg. 1841, t. 28; glabrous except the corolla, leaves lanceolate, pedicels clustered, calyx $\frac{1}{2}$ in. lobes lanceolate acute, corolla $\frac{3}{4}$ in. narrow. *DC. Prodr.* ix. 261. *Æ. parasitica*, Wall. Cat. 796, partly.—*Æschynanthus* sp. n. 15, *Herb. Ind. Or. H. f. & T.*

TEMPERATE HIMALAYA, alt. 2–7000 ft., from Nepal to Bhotan, frequent; Lachong Valley, alt. 8000 ft., J. D. H.

Leaves 4 by $1\frac{1}{2}$ in. Pedicels often numerous, sometimes $\frac{1}{2}$ in., sometimes capitate. Calyx (in the typical plant) deeply divided, tube wide subcampanulate, lobes lanceolate; in *H. f. & T.* n. 15, calyx-tube narrow-cylindric teeth sublinear as long as the tube. Anthers (in the typical plant) far exserted; in all the numerous examples of *H. f. & T.* very shortly exserted.—Hardly distinguishable from *Æ. ramosissima*, but by the small calyx.

VAR. *stenophylla*; leaves linear, calyx $\frac{1}{6}$ – $\frac{1}{4}$ in. deeply divided, often pubescent, lobes linear-subulate. *Æschynanthus* sp. n. 18, *Herb. Ind. Or. H. f. & T.*—Khasia Mts., alt. 0–4000 ft., frequent; *H. f. & T.*, &c. Chittagong, alt. 0–1000 ft., *H. f. & T.*

7. *Æ. Griffithii*, Br. in *Pl. Jav. Rar.* 115; glabrous, leaves lanceolate, sepals narrowly linear-lanceolate, corolla $\frac{2}{3}$ in. glabrous without. *DC. Prodr.* ix. 261. *Æ. radicans*, Wall. Cat. 798 partly, not of Jack.—*Æschynanthi* sp., *Griff. Notul.* iv. 156, as to descr. of t. 441?; certainly not *Griff. Ic. Pl. Ind. Or.* t. 441.

INDIA (probably Mergui), Griffith; Tavoy, Wallich.

Stem somewhat slender, elongate, branching, rooting at the nodes, terete. Leaves 3 by $\frac{2}{3}$ in., acuminate, base cuneate, fleshy, midrib beneath scarcely dilated; petiole $\frac{1}{6}$ in. Pedicels 1–2 together, terminal and axillary, $\frac{1}{4}$ in. Calyx divided nearly to the base; lobes $\frac{1}{2}$ by $\frac{1}{2}$ in. Corolla somewhat curved; lobes $\frac{1}{8}$ – $\frac{1}{6}$ in., rounded black purple-marked. Filaments far exserted, minutely glandular-hairy. Seeds not seen.—Examples imperfect; the species is certainly distinct if, as Brown says, “semina extremitate superiore ditricha;” but it exceedingly resembles *Æ. longicaulis*, Wall., from the same place.

Sect. 3. *Haplotrichium*. Seeds with one hair not dilated at its base near the hilum, and one at the apex. Calyx deeply divided.

* Calyx-lobes small, lanceolate, acute, or linear.

8. *Æ. Perrottetii*, A. DC. *Prodr.* ix. 261, not of Wight nor of Gardn.;

glabrous except the corolla, leaves lanceolate base rhomboid or rounded, umbels 2-6-fld., corolla $1\frac{1}{2}$ in. *Jerdon Ic. Ined.*, *Kew*.

“**BOMBAY** (probably in the Ghats of Malabar); *Dalzell, Stocks*. **NILGHERY MTS.**; *Clarke*.

Branches not or scarcely compressed. *Leaves* 3 by $\frac{3}{4}$ in., acuminate, subcoriaceous; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Pedicels* $\frac{1}{2}$ - $\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ in., linear. *Corolla* elongate, narrow, pubescent or subglabrate without, scarlet purple-marked in the lobes. *Filaments* exserted, minutely glandular-hairy. *Capsule* 5 in.

VAR. *malabarica*; leaves attenuate at the base, sepals $\frac{1}{2}$ - $\frac{1}{2}$ in.—*Mts. of W. Deccan Peninsula*, from Panoar Ghaut near Bombay to Courtallum, frequent.

VAR. *Æ. platyculmis*; branchlets much flattened, leaves dense bifarious broad-lanceolate or elliptic, corolla $1\frac{1}{2}$ in. *Æ. ceylanica*, *Wight Ic. t. 1347, not of Gardn.*—*Madras*; Courtallum, *Wight*; Nilghiri and Kurg Mts., *G. Thomson*. *Bombay* (probably in the W. Ghauts), *Stocks*. *Branchlets* with subacute edges, probably closely applied to the branches of trees. *Leaves* $2\frac{1}{2}$ by 1 in., acute at both ends; petiole $\frac{1}{2}$ in., nearly $\frac{1}{2}$ in. broad. *Flowers* and *capsules* nearly as in *C. Perrottetii*.

9. **Æ. ceylanica**, *Gardn. in Calc. Journ. Nat. Hist.* vi. 474; glabrous except the corolla, leaves narrowly lanceolate, umbels usually 2-fld., corolla 1 in., capsule 5 in. *Thwaites Enum.* 206, *excl. syn.*

CEYLON; *Gardner, Thwaites* (C. P. n. 1782, &c.).

Branches not or scarcely compressed. *Leaves* scattered, $3\frac{1}{2}$ by $\frac{1}{2}$ in. (in *Gardner's* example sometimes wider); petiole $\frac{1}{2}$ in. *Pedicels* very generally 2 terminal, 2-4 in *Gardner's* example. *Sepals* $\frac{1}{4}$ in., linear. *Corolla* pubescent or subglabrous.—Differs from *Æ. Perrottetii* by the considerably shorter corolla.

VAR. *pinguis*; leaves smaller succulent thick often obtuse, corolla glabrous without, capsule 2-5 in. *Æ. Perrottetii*, *Gardn. in Calc. Journ. Nat. Hist.* vi. 475, *not A. DC.*—*Ceylon*; *Wight, Walker*. Nilghiri Mts.; near Pycarah, *Wight*.

10. **Æ. micrantha**, *Clarke*; glabrous except the flowers, leaves elliptic or oblong, pedicels 1-5 together, sepals $\frac{1}{2}$ - $\frac{1}{2}$ in. linear pubescent, corolla $\frac{3}{4}$ in. narrow. *Æ. parviflora*, *Clarke Comm. & Cyrt. Beng.* t. 47, *not of G. Don*. *Æ. parasitica*, *Wall. Cat.* 796, *partly*.

SUBTROPICAL HIMALAYA, alt. 2000 ft.; *J. D. H.*, &c. **ASSAM**; *Wallich, Griffith. KHASIA MTS., alt. 4000 ft.; *Churra, H. f. & T.*, &c.*

Branches somewhat slender, elongate, often rooting, divided, glabrous, not compressed. *Leaves* $2\frac{1}{2}$ by 1 in., sometimes smaller, shortly acuminate, base cuneate, coriaceous; petiole $\frac{1}{2}$ in. *Pedicels* $\frac{1}{2}$ - $\frac{1}{2}$ in., terminal, and on lateral spurs, glabrous or early glabrate. *Sepals* laxly sparsely villous, ultimately glabrate. *Corolla* red, mouth orange, lobes purple-marked. *Filaments* far exserted, minutely glandular-hairy. *Capsule* 6 in.—Much resembles *Æ. maculata*, and confused with it, but the seeds are altogether different; in the absence of seeds, *Æ. micrantha* may generally be recognized by the creeping rooting branches and smaller leaves.

11. **Æ. gracilis**, *Parish*; *Clarke Comm. & Cyrt. Beng.* t. 48, *lower fig.*; branches slender, leaves small broad-lanceolate hairy, flowers scattered subsolitary, corolla 1 in. mouth very oblique. *Æschynanthus* sp. n. 13, *Herb. Ind. Or. H. f. & T.*—*Cyrtandra*, *Griff. Ic. Pl. Ind. Or.* t. 429, *fig. 1*, and *Notul.* iv. 160.

SUBTROPICAL E. HIMALAYA, alt. 1-4000 ft., frequent; Sikkim and Bhotan, *J. D. H.*, &c. **ASSAM**; *Griffith. KHASIA MTS., alt. 4000 ft., *H. f. & T.* **CACHAR**; *Keenan. BURMA*; Moulmein, *Parish*; Mergui, *Griffith.*—**DISTRIB.** Ava.*

Branches elongate, rooting, fulvous or reddish with spreading hairs. *Leaves* $\frac{1}{2}$ by $\frac{1}{2}$ in., base cuneate or rounded; petiole $\frac{1}{2}$ in. *Pedicels* $\frac{1}{10}$ - $\frac{1}{3}$ in., solitary, rarely paired, pilose. *Sepals* $\frac{1}{2}$ in., linear, somewhat villous. *Corolla* villous without, scarlet, mouth orange black-marked, deeply 2-lipped, segments of lower lip with reflexed margins. *Filaments* shortly exserted, minutely glandular-hairy. *Capsule* 2-3 in.

12. **Æ. chiritoides**, *Clarke*; branches slender, leaves opposite and ternate small broad-lanceolate hairy, flowers 1-3 together terminal, corolla $1\frac{1}{4}$ in. straight, lobes short subequal.

BHOTAN; *Nuttall*. ASSAM; *Griffith*. ? KHASIA Mts., alt. 4000 ft., *H. f. & T.*

Stems and leaves closely resembling those of *Æ. gracilis*, but the leaves are not rarely ternate. *Pedicels* $\frac{1}{2}$ - $\frac{1}{4}$ in., villous. *Sepals* $\frac{1}{2}$ - $\frac{1}{3}$ in., linear, villous. *Corolla* narrow-tubular below, suddenly expanding into a tubular upper portion $\frac{1}{3}$ in diam., minutely pilose; lobes $\frac{1}{4}$ in., round-ovate, black-marked. *Filaments* included, glabrous. *Ovary* villous.—A most remarkable species, the corolla, both in shape and texture, resembling a *Chirita*. The example of *H. f. & T.* shows leaves only, so that it cannot be confidently referred anywhere.

13. **Æ. levipes**, *Clarke*; branches very slender, leaves small opposite and ternate, narrow-lanceolate hairy, flowers solitary terminal, pedicels smooth, corolla $1\frac{1}{4}$ in.

UPPER ASSAM; Mishmee, on Mt. Laim-planj, *Griffith* (*Kew Distrib.* n. 3815).

Somewhat densely clothed with white or greyish hair on every part except the pedicels. *Branches* elongate, sparingly rooting. *Leaves* $\frac{1}{2}$ by $\frac{1}{4}$ in., subsessile. *Pedicels* $\frac{1}{2}$ in., glabrous even when young. *Sepals* $\frac{1}{4}$ in., linear, flat, thinly herbaceous, sparsely villous. *Corolla* (imperfectly preserved) appears nearly as of *Æ. chiritoides*, but narrower.

14. **Æ. Mannii**, *Kurz ms.*; branches somewhat thick pubescent upwards, leaves small elliptic early glabrate, pedicels axillary subsolitary, corolla $\frac{3}{4}$ in. narrow, mouth subequal.—Cyrtrandracea, *Griff. Ic. Pl. Ind. Or.* t. 429, fig. 2, and *Notul.* iv. 159.

KHASIA Mts.; *Mann*. S.E. ASSAM; Patkoye Mts., *Griffith* (*Kew Distrib.* n. 3816).

Stem short; branches several, 2-10 in., undivided, terete, soon glabrate. *Leaves* densely approximated, $1\frac{1}{2}$ by $\frac{1}{2}$ in., subobtusate at both ends, coriaceous, young hairy, mature dotted; midrib prominent beneath; petiole $\frac{1}{10}$ in. *Pedicels* $0\frac{1}{2}$ in., villous. *Sepals* $\frac{1}{2}$ in., villous. *Corolla* narrowly tubular-funnel-shaped, curved upwards, pubescent without; lobes $\frac{1}{6}$ - $\frac{1}{5}$ in. diam., roundish, black-marked. *Filaments* far exserted, glandular-hairy.—Allied to *Æ. Andersoni* (*Clarke Comm. & Cyrt. Beng.* t. 48, upper fig.), which has hairy leaves attenuated to the petiole: as to the inflorescence, the pedicels of *Æ. Mannii* are often approximated towards the ends of the branches, but they are shorter than those of *Æ. Andersoni*.

15. **Æ. Masoniæ**, *Kurz. ms.*; branches somewhat thick pubescent upwards, leaves small elliptic base rounded glabrous, pedicels axillary subsolitary, corolla $\frac{1}{2}$ in. slender, mouth narrow subequal.

PEGU; hills of the Red Karens, *Mrs. Mason*.

Branches several, 5-10 in., undivided, terete, early glabrate. *Leaves* (in the solitary example) subsessile, ternate, $\frac{3}{4}$ -1 by $\frac{1}{2}$ in., cuneate, widest near the base; midrib prominent beneath. *Corolla* pubescent without; mouth scarcely $\frac{1}{2}$ in. diam.—Very nearly allied to *Æ. Mannii*; the shape of the leaves is different, and the corolla considerably smaller.

** *Calyx*-lobes wide, obtuse, or large (bracts prominent).

16. **Æ. acuminata**, *Wall. Cat.* 6397; glabrous, leaves largeish elliptic acuminate, peduncles subfasciculate 1- or few-fl., calyx deeply divided, lobes $\frac{1}{2}$ in. round, corolla $\frac{1}{2}$ in. yellow-green. *A. DC. Prodr.* ix. 263; *Clarke Comm. & Cyrt. Beng.* t. 45. *Æ. bracteata*, *Benth. Fl. Hongk.* 258, not of *Wall.* *Æ. chinensis*, *Gard. & Champ. in Hook. Kew Journ.* i. (1849), 328.—Cyrtrandracea, *Griff. Itin. Notes*, 78, n. 1151.

SUBTROPICAL EASTERN HIMALAYA, alt. 1-3000 ft.; Sikkim, Bhotan and Upper Assam, frequent, *H. f. & T.*, &c. KHASIA and JAINTIA MTS., alt. 500-3000 ft.; *Wallich*, &c. CACHAR; *Keenan*.—DISTRIB. Hongkong.

Branches long, divided, terete. *Leaves* $3\frac{1}{2}$ -4 by $1\frac{1}{2}$ in., acuminate, base cuneate; petiole $\frac{1}{2}$ in. *Peduncles* 3-7 together, approximate or clustered towards the ends of the branches, $\frac{1}{2}$ - $1\frac{1}{2}$ in., 1-4 fld.; bracteoles at the forks 2, $\frac{1}{4}$ in. diam., broadly ovate; pedicels $\frac{3}{8}$ in. *Calyx* wide at the base, green; lobes persistent, ultimately reflexed. *Corolla* wide-tubular, straight; upper lip erect, green; lower pendent, yellow, sometimes reddish on the margin without. *Filaments* far exserted, minutely glandular-hairy. *Capsule* 6 in.—The Hongkong plant has narrower leaves than the Khasian. Bentham never proposed to unite *Æ. acuminata*, Wall., to *Æ. bracteata*, Wall.; but to refer to the latter certain specimens which had been wrongfully mixed up with those of *Æ. acuminata*.

17. *Æ. bracteata*, *Wall. Cat.* 794; glabrous, leaves largeish elliptic acuminate fleshy, peduncles 1- or several-fld., calyx-lobes $\frac{3}{8}$ in. lanceolate red, corolla $1\frac{1}{2}$ in. scarlet. *DC. Prodr.* ix. 261; *Clarke Comm. & Cyrt. Beng.* tt. 43, 44. *Æ. Paxtoni*, *Lindl. in Journ. Hort. Soc.* iv. 79, with fig. *Æ. Peellii*, *Hook. f. Ill. Himal. Pl.* t. 17.—*Æschynanthi* sp., *Griff. Ic. Pl. Ind. Or.* t. 432, and *Notul.* iv. 156. *Æschynanthoidea*, *Griff. Itin. Notes*, 28, n. 429. *Cyrtandracea*, *Griff. Itin. Notes*, 25, n. 388.

TEMPERATE HIMALAYA, alt. 4-8000 ft.; Sikkim and Bhotan, *Griffith, J. D. H.*, &c. UPPER ASSAM; *Mrs. Mack*. KHASIA MTS., alt. 2-5000 ft., common; *Wallich, Griffith, H. f. & T.*, &c.—DISTRIB. Ava.

Epiphytic; branches long, terete. *Leaves* 4 by $1\frac{1}{2}$ in., from subrotund to narrow-lanceolate, base cuneate or rounded; petiole $\frac{1}{2}$ in. *Peduncles* mostly terminal, often opposite, 1 in., 1-7-fld.; bracts 1 in., elliptic-lanceolate scarlet as are the pedicels and calyces. *Sepals* nearly free, deciduous. *Corolla* nearly glabrous without, lower lip with reflexed lobes. *Filaments* exserted, minutely glandular-hairy. *Capsule* 4-6 in.

18. *Æ. Kingii*, *Clarke*; glabrous, leaves large long elliptic herbaceous, peduncles 3-7-fld., calyx-lobes $\frac{1}{2}$ in. lanceolate caudate-acuminate green.

SIKKIM; alt. 6000 ft., *King*.

Leaves $7\frac{1}{2}$ by 3 in., base broadly rhomboid; nerves 7-8 pair. *Peduncles* 3-nate, 2-2 $\frac{1}{2}$ in.; bracts caducous. *Calyx* persistent in young fruit, base shortly funnel-shaped, membranous. *Corolla* not seen. *Seeds* with one hair at each end.—Seems nearly allied to *Æ. bracteata*, but the texture is very unlike.

19. *Æ. superba*, *Clarke Comm. & Cyrt. Beng.* t. 46; glabrous, leaves large oblong acuminate, umbels dense few-fld., sepals 1 in. broad-oblong obtuse, corolla 2 $\frac{1}{4}$ in. rose-red. *Æ. longiflora*, *Wall. Cat.* n. 795, not of *Blume*.—*Æschynanthus* sp. n. 4, *Herb. Ind. Or. H. f. & T.* *Cyrtandracea*, *Griff. Ic. Pl. Ind. Or.* t. 431, and *Notul.* iv. 160, and *Itin. Notes*, 43, n. 677.

KHASIA MTS., alt. 1500-4000 ft., frequent; *Wallich, Griffith, H. f. & T.*, &c. ASSAM; *Mrs. Mack*.

Stems several fathoms long, branched, scrambling among rocks. *Leaves* 6 by 2 in., base cuneate or rounded; petiole $\frac{1}{2}$ in. *Peduncles* 1 in., terminal and on short axillary spurs, stout; bracts $\frac{3}{4}$ -2 in., ovate-oblong, deciduous, rose-red as is the whole inflorescence; pedicels 1-6, 0- $\frac{3}{4}$ in., subumbelled. *Sepals* thin, deciduous. *Corolla* tubular, curved, mouth slightly oblique. *Filaments* exserted, minutely glandular-hairy. *Capsule* 12-16 in.

Sect. 4. **Holocalyx.** Seed with an apophysis of hyaline large cells and one hair at the hilum, and one hair at the apex. *Calyx* not deeply lobed.—[*Peduncles* short, 2-fld., axillary and terminal, often crowded near

the ends of the branches, at length clavate; bracts 2, small, ovate, deciduous; pedicels longer than the peduncles. Corolla-lobes ovate, obtuse; 2 upper erect, connate; 3 lower reflexed. Filaments glabrous; ovary and style densely glandular-hairy. Flowers (at least in several species), dimorphic, some with the stigma low down in the corolla-tube, others with the stigma exserted; stamens in both about as long as the corolla.]

* *Calyx tubular, longer than broad.*

20. **Æ. radicans**, *Jack in Trans. Linn. Soc.* xiv. 43, *not of Wall.*; stem thinly hairy, leaves small ovate or oblong thinly hairy or glabrate beneath, calyx $\frac{1}{2}$ in. hairy, corolla $2\frac{1}{2}$ in. hairy without. *DC. Prodr.* ix. 262. *Trichosporum radicans*, *Nees in Flora*, 1825, 144; *Blume Bijl.* 764.

MALACCA; *Griffith.*—DISTRIB. From Sumatra to the Philippines.

Stem slender, branching, rooting, hairs spreading fulvous deciduous. *Leaves* 1 by $\frac{3}{4}$ in. ovate, or 2 by $\frac{3}{4}$ in. on the same branch; petiole $\frac{1}{4}$ in. *Peduncles* $0\frac{1}{2}$ in. pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in., villous. *Calyx* subcylindric, somewhat densely covered with spreading, white, multicellular hairs; teeth scarcely $\frac{1}{2}$ in., broadly triangular. *Corolla* scarlet, throat yellow. *Capsule* 5–8 in.

21. **Æ. Lobbiana**, *Hook. Bot. Mag. t.* 4260; leaves small elliptic-oblong glabrous, calyx $\frac{3}{4}$ in. deep purple with white hairs, corolla 2 in. pubescent without.

MALACCA; *Maingay* (*Kew Distrib.* nn. 1218, 1219).—DISTRIB. Java, Borneo.

Branches pendent, glabrous. *Leaves* $1\frac{1}{2}$ by $\frac{1}{2}$ – $\frac{3}{4}$ in., scarcely acute, base rounded, when fresh minutely ciliate, dry glabrous; petiole $\frac{1}{2}$ in., obscurely pilose or glabrous. *Peduncles* axillary and clustered at the ends of the branches, recurved. *Calyx* tubular, scarcely $\frac{1}{2}$ in. diam. upwards, densely covered with spreading glistening hairs; teeth very shallow. *Corolla* scarlet, throat yellow.

** *Calyx obconic broader than long.*

22. **Æ. Wallichii**, *Br. in Benn. Pl. Jav. Rar.* 116; leaves elliptic acuminate or lanceolate glabrous, calyx broadly cup-shaped subentire, corolla 1 in. villous without. *Æ. radicans*, *Wall. Cat.* 798, *type sheet only, not of Jack.*—*Æschynanthus* sp. n. 16, *Herb. Ind. Or. H. f. & T.*

SINGAPORE; *Wallich.* MALACCA; Mt. Ophir, *Lobb.*—DISTRIB. Sumatra.

Stems long, branched, terete, glabrous. *Leaves* 4 by $1\frac{1}{2}$ in., base cuneate or suddenly narrowed, coriaceous; petiole $\frac{1}{4}$ in. *Peduncles* $0\frac{1}{2}$ in.; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in., sparsely hairy. *Calyx-mouth* $\frac{1}{4}$ – $\frac{1}{2}$ in. wide, margin patent. *Corolla* probably crimson. *Capsule* 6 in.

23. **Æ. obconica**, *Clarke*; leaves broadly elliptic narrowed at both ends glabrous, calyx very large obconic hairy subentire, corolla $\frac{3}{4}$ in. villous without.

Peninsula of MALACCA; at Klang in Selangore, *Beccari.*

Calyx $\frac{1}{2}$ in. and upwards in length, otherwise very like *Æ. Wallichii*, in which the corolla is thrice as long as the calyx, whereas in *Æ. obconica* the corolla is much less than twice the calyx.

II. **LYSIONOTUS**, *D. Don.*

Glabrous, epiphytic shrubs. *Leaves* opposite, or ternate, similar. *Cymes* peduncled, many-fld., lax; bracts herbaceous, inconspicuous; bracteoles small. *Sepals* narrowly lanceolate. *Corolla* tubular, inflated at

the middle, straight, 2-lipped; lower lip with 2 folds within. *Stamens* 2 perfect (2 or 3 rudimentary), subincluded; filaments flattened, bent; anthers connivent, connective with an oblong process. *Disc* annular. *Ovary* superior, stipitate, linear; style as long as the stamens, stigma shortly 2-lobed; placentæ deeply inflexed, then recurved and ovuliferous. *Capsule* linear, in the following year splitting loculicidally to the base into 2 (ultimately 2-partite) valves. *Seeds* small, oblong, smooth, with a hair at the apex, pendent by a funicle which when detached resembles the apical hair.—Species 3, in N. India, China and Japan.

1. ***L. serrata***, *D. Don in Edinb. Phil. Journ.* vii. 85, and *Prodr.* 124; leaves elliptic acuminate crenate-serrate or lanceolate herbaceous sinuate, sepals narrowly lanceolate thin. *Bot. Mag.* t. 6538. *L. ternifolia*, *Wall. Pl. As. Kar.* ii. 20, t. 118; *A. DC. Prodr.* ix. 264; *Clarke Comm. & Cyrt. Beng.* t. 52. *Calosacme polycarpa*, *Wall. Cat.* 804.

SUBTROPICAL HIMALAYA, alt. 2-7000 ft.; from Kumaon to Bhotan, common, *Wallich*, &c. ASSAM and KHASIA MTS., alt. 1-4000 ft., common.

Stem 12 in., branched. *Leaves* often ternate, 6 by 2 in., from narrow-lanceolate to elliptic, closely serrate nearly to the base or sinuate; nerves prominent, oblique; petiole $\frac{1}{2}$ in. *Peduncles* often 4 in.; bracts $\frac{1}{2}$ in., ovate; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in. *Sepals* $\frac{1}{4}$ in., in young fruit often enlarged $\frac{1}{2}$ – $\frac{3}{4}$ in. and somewhat connate at the base. *Corolla* 1 in., deep purple or paler, or white with purplish veins. *Capsule* 2-4 in.

2. ***L. conferta***, *Clarke*; branches long, leaves elliptic acuminate subentire very coriaceous. *Æschynanthus conferta*, *Griff. Priv. Journ.* p. 63, *name only*.

S.E. ASSAM; Patkoye Mts., *Griffith* (Kew Distrib. n. 3819).

Branches 18 in. and more, straight, undivided. *Leaves* ternate, entire, minutely crenate towards the apex; nerves obscure, at right angles to the midrib. *Peduncles* and *capsules* nearly as of *L. serrata*; remains of the calyx somewhat coriaceous. *Flowers* not seen.—This may be a var. of *L. serrata*, but no form of this is known with similarly elongate branches and coriaceous leaves.

III. **LOXOSTIGMA**, *Clarke*.

An undershrub, often rooting near the base; branches long. *Leaves* opposite, often unequal, serrate, pilose. *Cymes* peduncled, lax, many-fld.; bracts and bracteoles small. *Sepals* 5, lanceolate. *Corolla* tubular, inflated above the base, straight, yellow; lobes 5, spreading. *Stamens* 4, didynamous, included; anthers 2-celled, connivent in pairs; connective not excurrent; cells elliptic, subparallel. *Ovary* shortly stalked, linear, glabrous; stigma unilateral, obscurely bifid; placentæ deeply inflexed, bifid, revolute. *Capsule* linear, loculicidal for its whole length; placentæ revolute covering the seeds. *Seeds* pendulous, funicle capillary with a single hair at the apex.

L. Griffithii, *Clarke*; leaves elliptic subfalcate acuminate serrate, sepals oblong acute green sometimes denticulate. *Didymocarpus Griffithii*, *Wight Ill.* ii. 182, t. 159, *bad*. *Dichrotrichum Griffithii*, *Clarke Comm. & Cyrt. Beng.* t. 51. *Chirita Griffithii*, *Herb. Ind. Or. H. f. & T.*

SUBTROPICAL HIMALAYA, alt. 3-6000 ft.; from Sikkim to Mishmee, frequent, *Griffith*, *Hook. f.*, &c. KHASIA MTS., alt. 2-4000 ft., *Griffith*, *H. f. & T.*

Thinly pubescent. *Leaves* opposite, often unequal, 7 by 3 in., base acute or unequally rhomboid; petiole $\frac{1}{2}$ – $1\frac{1}{2}$ in., often unequal. *Peduncles* 2-4 in.; bracts $\frac{1}{2}$ in., narrow; pedicels $\frac{1}{4}$ –1 in. *Sepals* $\frac{1}{4}$ in. *Corolla* $1\frac{1}{4}$ by $\frac{1}{2}$ in., minutely hairy. *Anthers* conni-

vent in pairs, connective not appendaged. *Style* subsistent. *Capsule* 2½–5 in.—Wight's example of this was from Griffith in early flower; in his picture cited he guessed the colour of the flower wrong, and added a figure of a seed of some species (probably) of *Didymocarpus*; the figure thus concocted has defied identification until Griffith's specimen in Wight's Herbarium was found.

IV. **DIDYMOCARPUS**, Wall.

Stemless or erect herbs. *Leaves* opposite, alternate, 3–4-nate or crowded. *Peduncles* axillary, many- or few-fld.; bracts rarely conspicuous; pedicels cymose, subumbelled or subracemed in pairs. *Calyx* small, 5-fid or nearly partite. *Corolla-tube* cylindric or ovoid, mouth oblique or subsymmetric; lobes 5, rounded. *Stamens*, 2 perfect, 2–3 rudimentary; filaments glabrous, bent; anthers cohering in pairs; cells 2, ovate, early confluent. *Disc* cylindric or 0. *Ovary* stalked or sessile, narrow; style long or short, stigma peltate emarginate or unilateral oblong rarely 2-lobed; placenta deeply inflexed, then recurved bearing ovules. *Capsule* linear, rarely lanceolate, loculicidally 2-valved or subfollicular, ultimately usually 2- often 4-valved; valves not twisted before dehiscence; placenta on the valves, revolute, concealing the seeds. *Seeds* ellipsoid, small, smooth, minutely reticulate.—DISTRIB. Species 70, in India, Malaya and S. China, 1 in Madagascar.

Sect. 1. **Monophylloides**. Plant very small, 1-leaved.

1. **D. pygmæa**, Clarke; leaf sessile elliptic base cordate, pedicels few short fascicled in its axil.

CENTRAL INDIA; Rewah, Vicary. Chota Nagpore; Lohardugga, Clarke.

Pubescent. *Stem* ½–2 in., slender, curved, bearing one leaf at its apex. *Leaf* (one cotyledon persistent?) 1 by ½ in. or much smaller, falcate, obtuse at both ends, sinuate scarcely crenate, thin; petiole 0 rarely ⅓ in. *Pedicels* ¼ in.; bracts inconspicuous or 0. *Sepals* ⅓ in., linear, somewhat enlarged in fruit. *Corolla* ¼ in., tubular. *Stamens* 2 fertile, 2 linear rudiments, glabrous; anther-cells 2, ovate, oblique, scarcely confluent by their tips. *Ovary* and style villous; stigma small, subcapitate, scarcely 2-lobed. *Capsule* ½–¾ in., nearly straight; 2-valved, and seeds altogether as in *Didymocarpus*.

Sect. 2. **Eudidymocarpus** (Benth. in Gen. Pl. ii. 1022). *Cymes* many-fld., subcorymbose. *Calyx* 5-lobed, or in *D. Mortonii* nearly 5-partite. *Corolla-tube* cylindric.—Species confined to N. and N.E. India.

2. **D. pedicellata**, Br. in Benn. Pl. Jav. Rar. 118; stem hardly any, leaves roundly ovate glabrous glandular-punctate above, calyx divided one-third the way down lobes rounded, capsule 1–1½ in. long-pedicelled. DC. Prodr. ix. 267; Clarke Comm. & Cyrt. Beng. t. 64. *D. macrophylla*, Wall. Cat. 784, partly; Royle Ill. 294, t. 70, fig. 1.

SUBTROPICAL W. HIMALAYA; from Chumba to Kumaon, alt. 2500–5500 ft., frequent, Wallich, Royle, Falconer, &c.

Stem usually 0, sometimes 1½ in. with 2 or 3 pairs of opposite cauline leaves, glabrous; innovations scabrous-puberulous. *Leaves* usually all radical, 3–6 in. diam., crenate-serrate, the points on their upper surface conspicuous black, in age colourless obscure without a lens; petiole 2–5 in. *Scapes* 4 in.; flowers often very many; bracts ¼ in., ovate, often shortly connate. *Calyx* ¼ in., funnel-shaped. *Corolla* nearly 1 in., purple. *Capsule-stalk* ¼–½ in., filiform.

3. **D. macrophylla**, Wall.; Don Prodr. 122; stemless, leaves ovate

softly hairy above glabrate beneath, calyx divided one-third the way down lobes obtuse, capsule nearly 1 in. sessile. *Wall. Cat.* 784, *ch. efly*; *DC. Prodr.* ix. 267; *Clarke Comm. & Cyrt. Beng.* t. 63, *not of Royle*. *D. aromatica*, *Wall. Pl. As. Rar.* t. 141, fig. 4-7, *only*; *Clarke Comm. & Cyrt. Beng.* t. 59, *as to the fruiting plant only*; *not of others*. *D. plicata*, *Don Prodr.* 122. *Henckelia macrophylla & plicata*, *Spreng. Syst., curæ post.* 13, 14.

NEPAL; *Wallich*.

Leaves all radical, 3-6 in. diam., crenate-serrate; petiole 2-5 in., hairy at the base. *Scapes* 4 in., early glabrate; bracts $\frac{1}{2}$ in., ovate. *Calyx* $\frac{1}{2}$ in., funnel-shaped. *Corolla* $\frac{3}{4}$ - $\frac{2}{3}$ in., deep purple. *Ovary* covered with minute sessile glands. *Capsule* narrowed at its base for $\frac{1}{5}$ in. only.—In ripe fruit the scape is glabrous, the two young leaves at its base are densely villous.

4. **D. cinerea**, *Don Prodr.* 122; stem short or 0, leaves ovate-cordate ashy-pubescent above, calyx divided a third of the way down lobes ovate, capsule $1\frac{1}{2}$ in. pedicelled. *D. obtusa*, *Wall. Cat.* 786; *DC. Prodr.* ix. 267; *Clarke Comm. & Cyrt. Beng.* t. 61. *Henckelia cinerea*, *Spreng. Syst., curæ post.* 14.—*Didymocarpus* sp. n. 19, *Herb. Ind. Or. H. f. & T.*

NEPAL, *Wallich*; near River Tambur, *J. D. H.*

Stem none, or $\frac{1}{2}$ in., ashy-pubescent. *Leaves* radical or opposite, 2-3 $\frac{1}{2}$ in. diam., obtuse, crenate, glabrate beneath, nerves pubescent; petiole 4-8 in. *Peduncles* $\frac{1}{2}$ -2 in.; shorter (cymes included) than the leaves, pubescent, later hardly glabrate; bracts $\frac{1}{2}$ in., ovate, ashy-pubescent on both surfaces. *Calyx* $\frac{1}{2}$ in., subcampanulate, sparsely pubescent; teeth obtuse or mucronulate. *Corolla* nearly 1 in., purple paler downwards, sparsely villous or glabrous.

5. **D. Andersoni**, *Clarke Comm. & Cyrt. Beng.* t. 62; stem short 2-4-leaved, leaves ovate-cordate hairy above and on the nerves beneath, flowers capitellate subincluded within purple connate bracts, calyx-lobes very short obtuse, capsule 1 in. sessile.

SIKKIM; alt. 7-9000 ft., *J. D. H.* Kursiong, alt. 4500 ft., *Anderson, &c.*

Stem $\frac{1}{2}$ -1 $\frac{1}{2}$ in., patently villous, at flower-time leafless at the base, with 2 large and usually 2 small leaves at its apex. *Leaves* opposite 6 by 4 in., coarsely crenate-serrate; petiole $\frac{3}{4}$ -1 $\frac{1}{2}$ in. *Peduncles* 3-7 in., villous; bracts $\frac{1}{2}$ in., obovate and with the whole cyme dark purple-red; pedicels very short, concealed by the bracts. *Calyx* $\frac{1}{2}$ - $\frac{3}{4}$ in., funnel-shaped, glabrous, divided scarcely $\frac{1}{2}$ the way down. *Corolla* more than 1 in., fine rose-purple, tube very narrow, mouth 1 in. diam. *Ovary* glabrous. *Capsule* very acute.

6. **D. aurantiaca**, *Clarke Comm. & Cyrt. Beng.* t. 60; stem short 2-4-leaved, leaves ovate villous above, flowers pedicelled orange-red, calyx divided nearly half-way down, capsule $1\frac{1}{2}$ in. pedicelled.

NEPAL; *Wallich*. SIKKIM, alt. 2-4000 ft., *Herb. Griffith, Anderson, &c.*

Stem $\frac{1}{2}$ -2 $\frac{1}{2}$ in., villous. *Leaves* opposite, 3-6 in., acute or obtuse, usually cordate, serrate, beneath glabrous with villous nerves; petiole $\frac{3}{4}$ -2 $\frac{1}{2}$ in. *Peduncles* 4 in., hairy, ultimately scarcely glabrous; bracts $\frac{1}{2}$ in., ovate, scarcely connate; pedicels often 1 in. *Calyx* $\frac{1}{2}$ in., campanulate, more or less purple, glandular-viscid or nearly glabrous. *Corolla* $1\frac{1}{2}$ in., long funnel-shaped. *Ovary* glabrous. *Capsule-stalk* $\frac{1}{2}$ in., linear.

7. **D. oblonga**, *Wall. in Don Prodr.* 123; stem often 4-leaved at the apex, leaves oblong or elliptic coarsely crenate pilose, petioles patently villous, cyme glabrous, calyx divided one-third way down lobes rounded, capsule $\frac{1}{2}$ in. subsessile. *Wall. Pl. As. Rar.* ii. 34, t. 140; *DC. Prodr.* ix. 266;

Clarke Comm. & Cyrt. Beng. t. 56. D. verticillata, Wall. Cat. 783. Henckelia oblonga, Spreng. Syst. curæ post. 13.

NEPAL; Wallich. SIKKIM; Lachen, alt. 7–11,000 ft., and Sinchul, alt. 8500 ft., *J. D. H.*

Stem 2–5 in., villous-pubescent, at flower-time with 4 subverticillate leaves at its apex otherwise leafless; or elongate with 3 or 4 remote nodes, opposite leaves, and both axillary and terminal peduncles. *Leaves* opposite, 4 by $1\frac{1}{2}$ in., subobtusely, closely villous above, glabrous beneath with villous nerves; petiole $\frac{1}{2}$ – $2\frac{1}{2}$ in., patently villous. *Peduncles* 2 in., glandular-pilose, glabrate upwards; bracts $\frac{1}{2}$ in., broad, connate, glabrous, coloured, subpersistent. *Calyx* $\frac{1}{2}$ in., campanulate. *Corolla* $\frac{1}{2}$ in., dark purple.—Recognized by its small capsule.

8. **D. villosa**, *Don Prodr. 123*; stem 4-leaved at the apex very villous, leaves ovate or obovate obtuse crenate closely silky-villous above, cymes glabrous, calyx divided less than half-way down lobes obtuse, capsule nearly $\frac{3}{4}$ in. sessile. *DC. Prodr. ix. 266, not of Clarke. Henckelia villosa, Spreng. Syst. curæ post. 13.*

NEPAL; Wallich.

Stem 2–6 in., densely covered with long spreading hairs, leafless except at the apex. *Leaves* opposite, 2 by $1\frac{1}{2}$ in., beneath villous or nearly glabrous on the lamina; petiole 0– $\frac{1}{2}$ in., patently villous. *Peduncles* 1–3 in.; bracts $\frac{1}{2}$ in., ovate, connate, coloured, glabrous; pedicels $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in., campanulate, glabrous. *Corolla* $\frac{1}{2}$ in. or rather more (apparently black-purple).—Seems very near *D. aromatica*, Wall., which has not the densely woolly stem.

9. **D. aromatica**, *Wall. Cat. 785 chiefly, Pl. As. Rar. ii. 41, t. 141, excl. fig. 4–7*; stem 4-leaved at the apex, leaves ovate or elliptic crenate softly hairy above, lower bracts herbaceous more or less pubescent, cyme glabrous, calyx divided one-third way down lobes rounded, capsule $\frac{3}{4}$ in. sessile. *Clarke Comm. & Cyrt. Beng. t. 59, excl. fruiting plant; not of D. Don; DC. Prodr. ix. 267, partly. D. primulifolia, Don Prodr. 123, partly. Henckelia primulifolia, Spreng. Syst., curæ post. 14, partly.*

NEPAL; Wallich.

Stem 4–6 in., pilose, leafless except at the apex. *Leaves* opposite, 4 by $2\frac{1}{2}$ in., densely softly strigose on both surfaces or glabrate between the nerves beneath; petiole unequal, $\frac{1}{4}$ –2 in. *Inflorescence* shorter than the leaves; peduncles (usually 2) 1–2 in.; lower bracts $\frac{1}{2}$ in., ovate, green, not connate, often denticulate, deciduous; cymes upwards with the pedicels and calyces glabrous. *Calyx* $\frac{1}{2}$ in., campanulate. *Corolla* $\frac{3}{4}$ in., purple, nearly glabrous. *Capsule-stalk* hardly $\frac{1}{18}$ in.—Don confused *D. aromatica*, Wall., with *D. subalternans*, Pl., and described his *D. primulifolia* from both; Brown therefore (in Benn. Pl. Jav. Rar. p. 118) rejected the name *D. primulifolia*.

10. **D. podocarpa**, *Clarke*; stem 4-leaved at the apex, leaves ovate or elliptic crenate minutely pilose above, bracts glabrous, calyx divided $\frac{1}{2}$ way down lobes obtuse, capsule 1– $1\frac{1}{2}$ in. pedicelled.

SUBALPINE SIKKIM; Lachen, alt. 10–12,000 ft., *J. D. H.*; Sinchul, alt. 8000 ft., *J. D. H.*; Singalelah, alt. 8000 ft., *Treutler, &c.*

Stem 2–8 in., ashy-pubescent, leafless except at the summit. *Leaves* opposite, attaining 6 by 4 in., pubescent only on the nerves beneath; petiole 0–1 in., mostly short. *Peduncles* 2–4, 1– $2\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in., wide-rotund, coloured, subconnate; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in., glabrous. *Calyx* nearly $\frac{1}{2}$ in., campanulate. *Corolla* nearly 1 in., purple, glabrous or sparsely pilose without. *Capsule-stalk* longer than, sometimes nearly twice as long as, the calyx.—Differs from the 3 preceding closely allied species by the larger flowers and larger long-pedicelled capsule.

11. **D. subalternans**, *Wall. Cat. 782*; leaves scattered and opposite

ovate or obovate crenate densely pubescent above paler subglabrous beneath, cymes irregular subumbellate viscous-pilose, pedicels short, calyx $\frac{1}{2}$ in. semi-5-fid lobes ovate-triangular, capsule 1 in. pedicelled. *DC. Prodr.* ix. 266, *not of Clarke*. *D. primulifolia*, *Don Prodr.* 123, *partly*. *D. aromatica*, *Don Prodr.* 123; *DC. Prodr.* ix. 267, *excl. all syn., not of Wall., Br., nor Clarke*.

TEMPERATE HIMALAYA; Kumaon, *Wallich*; near Gangootri, alt. 6500 ft., *Strachey & Winterbottom*. Nepal; *Wallich*.

Stem 4-12 in., nearly glabrous; nodes several. *Leaves* opposite alternate and ternate, lower long-petioled (usually alternate), uppermost sessile opposite, 3 by 2 in. *Peduncles* 1-1 $\frac{1}{2}$ in., subumbelled; bracts $\frac{1}{2}$ in., ovate, purplish; pedicels $\frac{1}{4}$ in., sparsely viscous-pilose. *Calyx* funnel-shaped, purplish, glabrous or slightly viscous. *Corolla* $\frac{1}{2}$ in., tubular, somewhat hairy without, purple or pale-purple. *Capsule* often falcate; pedicels up to $\frac{1}{2}$ in.

VAR. curvicapsa; leaves larger, cymes very viscous, bracts and calyx herbaceous, capsule falcate subsessile.—Sikkim; Lachen, alt. 7-8000 ft., *J. D. H.*—Stem exceeding 1 foot. *Leaves* 4 in., glandular-pubescent. *Calyx* $\frac{1}{2}$ in., divided half-way down; lobes lanceolate, acute. *Capsule-stalk* not longer than the calyx.

12. ***D. leucocalyx***, *Clarke*; leaves ovate serrate villous above, calyx small deeply divided lobes white obovate, capsule $\frac{1}{2}$ in. subsessile. *D. villosa*, *Clarke Comm. & Cyrt. Beng.* t. 59, *not of Don*.—*Didymocarpus* sp. n. 17, *Herb. Ind. Or. H. f. & T.*

SIKKIM; alt. 6000 ft., common, *Griffith, J. D. H., &c.* NEPAL; near River Tambur, *J. D. H.*

Stem 2-6 in., hairs patent or deflexed; nodes 1-3. *Leaves* opposite, attaining 6 by 4 in., subacute, often cordate; petiole $\frac{1}{2}$ -4 in. *Peduncles* 2 in., often 4, subumbelled; cyme nearly glabrous, bracts caducous leaving a villous scar. *Flowers* numerous, small. *Calyx* $\frac{1}{10}$ in. *Corolla* $\frac{1}{2}$ - $\frac{1}{2}$ in., violet-purple. *Anthers* minutely pilose.—This plentiful Sikkim species has always been confounded with *Don's D. villosa*.

13. ***D. Mortonii***, *Clarke Comm. & Cyrt. Beng.* t. 65; leaves ovate serrate villous above, calyx divided nearly to the base lobes narrowly oblong, corolla-tube linear limb very oblique wide-expanded, capsule nearly 1 in. sessile.—*Didymocarpus* sp. n. 29, *Herb. Ind. Or. H. f. & T.*

SIKKIM, alt. 5-8000 ft., common, (*Herb. Griffith*), *J. D. H., &c.*

Stem 2-6 in., pilose; nodes 1-3. *Leaves* opposite, attaining 6 by 4 in., scarcely acute, base rounded or cordate; petiole $\frac{1}{2}$ -3 in. *Peduncles* 2-3 in., often several; bracts caducous; bracteoles ovate, green, often concealing the calyx until the flower expands. *Calyx* $\frac{1}{8}$ - $\frac{1}{2}$ in. *Corolla-tube* $\frac{1}{2}$ by $\frac{1}{10}$ in., limb $\frac{1}{2}$ - $\frac{2}{3}$ in. diam., purple. *Ovary* glandular-hairy. *Capsule* straight.

14. ***D. pulchra***, *Clarke*; stem and petioles ashy-puberulous, leaves oblong or elliptic minutely densely pubescent above whitened glabrate beneath, cyme viscous-hairy, calyx divided $\frac{1}{2}$ way down lobes triangular acute, corolla 1 in., capsule 1 $\frac{1}{2}$ in. pedicelled. *D. subalternans*, *Clarke Comm. & Cyrt. Beng.* t. 55, *not of Wall.*

SIKKIM, alt. 6-7000 ft., common, (*Herb. Griffith*), *J. D. H., &c.*

Stem attaining 1 foot; lower cauline leaves long-petioled, often 3-4-nate, uppermost sessile. *Leaves* 4 $\frac{1}{2}$ by 2 in., acute, base often auricled on one side, crenate incised-serrate or nearly entire, coriaceous; nerves beneath raised, pubescent; petiole attaining 2-3 in. *Peduncles* 2-3 in.; bracts more or less foliaceous; bracteoles $\frac{1}{2}$ in., round, coloured; pedicels $\frac{1}{2}$ in. *Calyx* $\frac{1}{4}$ in., rose-purple, viscous-pilose. *Corolla* broadly tubular, sparsely hairy without, violet-purple. *Anthers* minutely hairy. *Ovary* glabrous. *Capsule-stalk* stout, longer than the calyx.—Nearly allied to *D. punduana*.

15. **D. punduana**, *Wall. Cat.* 777; stem and petioles ashy-pubescent, leaves oblong or elliptic crenulate or nearly entire densely puberulous above glabrate whitened beneath, calyx divided $\frac{1}{2}$ the way down lobes ovate obtuse, capsule $1\frac{1}{2}$ in. pedicelled. *DC. Prodr.* ix. 267; *Clarke Comm. & Cyrt. Beng.* t. 53.—*Didymocarpoid* n. 971, *Griff. Itin. Notes*, 63.

KHASIA Mts., alt. 2-4000 ft., frequent; *Wallich, Griffith, H. f. & T., &c. ASSAM*; *Griffith, Mrs. Mack.*

Stem 8-10 in., often with 3-4 petioled leaves in a whorl in its middle and 2 sessile leaves at its apex. *Leaves* coriaceous, base often unequally cordate, glabrous beneath or minutely pubescent on the nerves. Rays of the *cyme* and pedicels subumbellate, less viscous-hairy than in *D. pulchra*. *Calyx* $\frac{1}{6}$ in., nearly glabrous. *Corolla* very sparsely hairy, purple. *Capsules* slightly curved; pedicels $\frac{1}{4}$ in.—Otherwise as *D. pulchra*.

VAR. attenuata; leaves less coriaceous often cuneate at the base, cymes slenderer, bracts narrower, calyx scarcely $\frac{1}{2}$ in., capsule slender pedicel filiform very long.—*Khasia Mts.*, alt. 3-5000 ft., especially in the northern portion of the hills; *Griffith, H. f. & T., &c.*—This may be specifically distinct, for both the capsule and calyx differ, but there are intermediate examples.

16. **D. Hookeri**, *Clarke Comm. & Cyrt. Beng.* t. 54; stem and petioles villous, leaves ovate crenulate softly villous above glabrate (except the nerves) beneath, calyx divided $\frac{1}{2}$ the way down, corolla $\frac{1}{2}$ in. pale, capsule $1\frac{1}{2}$ in.—*Didymocarpus* sp. n. 21, *Herb. Ind. Or. H. f. & T.*

KHASIA Mts., alt. 5000 ft.; Kollong Rock, Moflong, Boga Pani, *H. f. & T., &c.*

Stem 16 in., with usually 3-4 petioled verticillate leaves in the middle, uppermost leaves subsessile. *Leaves* 4 by 3 in. (sometimes much larger), subobtusely, often cordate; petiole $\frac{1}{2}$ -3 in. *Cymes* sparsely hairy; bracts $\frac{1}{2}$ in., round; pedicels 0- $\frac{1}{2}$ in., usually short. *Calyx* $\frac{1}{4}$ in., campanulate. *Corolla* tubular, pale yellow with rose-marks or nearly white. *Capsule* (appearing sessile) narrowing downwards gradually into a thick pedicel.

17. **D. acuminata**, *Br. in Benn. Pl. Jav. Rar.* p. 118; leaves ovate acute serrulate hairy above, calyx tubular glabrous scarcely lobed, corolla $1\frac{1}{2}$ in. tube inflated upwards, capsule 1 in. pedicelled. *DC. Prodr.* ix. 267; *Clarke Comm. & Cyrt. Beng.* t. 58. *Calosacme acuminata*, *Wall. Cat.* 802, partly. *Chirita acuminata*, *A. DC. Prodr.* ix. 269, not of *Br.*—*Chirita* sp. n. 9, *Herb. Ind. Or. H. f. & T.*

KHASIA Mts.; alt. 4000 ft., near Churra, *Wallich, J. D. H. & T. T., &c.*

Stem 6 in., hairy; nodes 1-3. *Leaves* opposite alternate and verticilled, often very unequal, larger 10 by $5\frac{1}{2}$ in., subcordate, glabrous beneath except on the nerves; petiole attaining 4 in. *Peduncles* 1-4, $\frac{2}{3}$ - $1\frac{1}{2}$ in.; cymes 5-8-fl., nearly glabrous; bracts $\frac{1}{2}$ in., glabrous; pedicels $\frac{1}{10}$ - $\frac{1}{3}$ in., mostly short. *Calyx* $\frac{1}{4}$ in. and upwards. *Corolla* glabrous, white or very pale purple; lobes $\frac{1}{4}$ - $\frac{1}{2}$ in., round. *Stamens*, 2 fertile, 2 rudimentary. *Ovary* glabrous; stigma peltate, oblique scarcely emarginate.—The corolla is that of *Chirita*, the capsule of *Didymocarpus*; the stigma is nearly as in *Chirita Kurzii*, from which it can hardly be generically separated.

18. **D. platycalyx**, *Clarke*; leaves oblong or elliptic crenate softly hairy, peduncles 1-5-fl., calyx widely campanulate subentire, corolla 1 in.

TENASSERIM; Moulmein, *Parish.*

Stem 6 in., hairy; nodes 1-3. *Leaves* opposite, 2-4 by $1\frac{1}{4}$ in., subacute, base cuneate or rounded, puberulous beneath; petiole $\frac{2}{3}$ -1 in. *Peduncles* $\frac{2}{3}$ in., axillary, solitary, nearly glabrous; bracts $\frac{1}{4}$ in., broadly orbicular, green, puberulous; pedicels $\frac{1}{2}$ in., puberulous. *Calyx* $\frac{1}{4}$ in., nearly hemispherical; margin undulated, purplish.

Corolla glabrous, tube cylindric violet, limb slightly oblique white; lobes $\frac{1}{4}$ in. diam., obtuse. *Stamens* 2 fertile; anthers oblong-peltate, cohering. *Ovary* minutely hairy, pedicelled elongate; style hardly any, stigma large circular. *Capsule* not seen.

Sect. 3. **Didymanthus**. Caulescent, - sometimes but shortly. *Leaves* distant, upper (at least) opposite. *Peduncles* long; cyme-branches often elongate, subracemose with 2-nate pedicels. *Calyx* sub-5-partite. *Corolla* small or middle-sized; tube narrow or broad at the base. *Disc* 0 or shortly cylindric. *Capsule* 2-valved, rarely at first follicular.—Species of the Malay Peninsula and adjacent islands.

19. **D. mollis**, *Wall. Cat.* 790; leaves elliptic crenate narrowed at both ends hairy above, peduncles long, cyme lax viscous-pubescent, capsule nearly $\frac{3}{8}$ in. sessile. *DC. Prodr.* ix. 266.

BURMA; Mts. near Prome, *Wallich*. CHITTAGONG; at Seetakoond, *J. D. H. & T. T.*

Stem 8 in., villous, near the base hirsute with fulvous deflexed hair. *Leaves* opposite, or the 4 uppermost subverticillate, 4 by $1\frac{1}{2}$ in., acute, membranous, glabrate, beneath hairy on the nerves; nerves 9–11 pair; petiole $\frac{1}{2}$ in., or of the uppermost leaves 0. *Peduncles* subterminal, often 4, 3 in., 12-fld.; pedicels $\frac{1}{8}$ in. *Sepals* $\frac{1}{10}$ in., linear. *Disc* shortly cylindric. *Capsule* symmetrically 2-valved glabrous. *Corolla* not seen.

20. **D. paucinerva**, *Clarke*; leaves elliptic or obovate obtuse crenulate hairy above, peduncles subterminal long, cyme 2–8-fld. lax nearly glabrous, capsule rather more than $\frac{1}{2}$ in. subsessile.

TENASSERIM; at Mergui, *Griffith* (*Kew Distrib.* n. 3853).

Stem 6 in., slender, simple, sparingly pilose except near the base. *Leaves* opposite (or the lower alternate), 2 by 1 in., closely shortly strigose above, glabrous whiter beneath; nerves 5–6 pair, puberulous; petiole $\frac{1}{8}$ –1 in. *Peduncles* 2 in., slender; pedicels $\frac{1}{10}$ – $\frac{1}{3}$ in. *Disc* shortly cylindric. *Capsule* 2-valved, glabrous. *Corolla* not seen.—Appears closely allied to *D. mollis*.

21. **D. cordata**, *Wall. Cat.* 781; leaves cordate deeply crenate fulvous villous on both surfaces, peduncles long, cymes lax subracemose, pedicels distant often in pairs, corolla wide campanulate base gibbous. *DC. Prodr.* ix. 265.

PENANG; *Wallich, Maingay*, n. 1224.

Stem 20 in., fulvous-villous. *Leaves* (at least the upper) opposite, 6 by 4 in., shortly acuminate, base rounded; petiole $1\frac{1}{2}$ in. *Peduncles* 8 in.; cymes often 6 in., glandular-hairy; bracts small, ovate, caducous; pedicels $\frac{1}{2}$ in. *Sepals* $\frac{1}{8}$ in., lanceolate, nearly glabrous. *Corolla-tube* $\frac{1}{4}$ in. long and broad, glabrous; lobes $\frac{1}{4}$ in. diam., round. *Filaments* short; anthers large, 4 cohering. *Disc* 0. *Ovary* glabrous, sessile; style glabrous, stigma small. *Capsule* $\frac{2}{3}$ in., slender, sessile, 2-valved, or sometimes (in *Wallich's* examples) subfollicular (at least at first).

22. **D. barbinerva**, *Clarke*; leaves narrowly obovate minutely crenate glabrous, midrib beneath hirsute, peduncles long, cyme dense glabrate, bracts round, sepals elliptic.

ATTRAN (near Moulmein).

Stem upwards, with the petioles, rufous-villous. *Leaves* (at least the upper) opposite, 6 by $1\frac{3}{8}$ in., suddenly narrowed at the base; nerves 11 pair; petiole $\frac{1}{2}$ –1 in. *Peduncles* 5 in., nearly glabrous; cyme 1– $1\frac{1}{2}$ in. diam., many-fld.; bracts $\frac{1}{4}$ – $\frac{1}{3}$ in. diam.; pedicels short, in fruit sometimes $\frac{2}{3}$ in. *Sepals* $\frac{1}{2}$ in., obtuse. *Corolla* $\frac{1}{2}$ in., widely campanulate (badly preserved, seems nearly as of *D. cordata*). *Stamens* 2 fertile; anthers 2-celled; cells ovate, divaricate, scarcely confluent. *Ovary* glabrous,

sessile; disc 0; style as long as the ovary; stigma small subpeltate. *Capsule* 2 in., narrowly linear, follicular at first, afterwards 2-valved.

23. **D. rufipes**, *Clarke*; stem woody rufous-hirsute, leaves elliptic subacute silvery-hirsute on both surfaces, peduncles long rufous-villous laxly 7-12-fld.

TENASSERIM; at the base of Mooleyit, *Beddome*.

Stem 3 in., densely covered with long red hairs, leafy at the apex. *Leaves* 4 by $1\frac{1}{2}$ in., closely crenate; petiole $0-\frac{1}{2}$ in., rufous-hirsute. *Peduncles* arising below the leaves, 4-5 in.; cyme-branches obscurely or not at all racemose; bracts gone at fruit-time; pedicels $\frac{1}{2}-1\frac{1}{2}$ in. *Calyx-segments* $\frac{1}{2}$ in., densely rufous-hirsute. *Corolla* not seen. *Capsule* 1-1 $\frac{1}{2}$ in., narrowly linear, nearly erect, glabrous, follicular, ultimately 2-4-partite.

24. **D. longipes**, *Clarke*; leaves coriaceous narrowly obovate minutely crenate glabrous villous on the nerves beneath, peduncles very long, cyme laxly subracemose 3-7-fld., corolla more than $\frac{1}{2}$ in. linear-tubular.

MALACCA; Mt. Ophir, *Griffith* (Kew Distrib. n. 3854); *Cuming*, n. 2385; *Main-gay*, n. 2723.

Stem 1-3 in., woody, hirsute, crowded with leaves at the summit. *Leaves* 6 by $1\frac{1}{2}$ in., obtuse, long attenuate at the base sometimes sessile; nerves 6-8 pair, obscure. *Peduncles* attaining 1 foot, nearly glabrous; bracts very small, narrow; pedicels $\frac{1}{10}$ in., in remote pairs. *Sepals* $\frac{1}{10}$ in. *Ovary* and style subglabrous, stigma capitate. *Capsule* 1 in., sessile, ultimately 2-valved.

25. **D. corchorifolia**, *Wall. Cat.* 792; leaves lanceolate or ovate-lanceolate crenulate rusty-villous on both surfaces, peduncles very short 1-4-fld., corolla tubular straight, capsule 2 in. sessile. *DC. Prodr.* ix. 265.

PENANG; *Wallich*, *Maingay*.

Suffrutescent, branched, rufous-villous with deflexed hairs; innovations rufous-hirsute. *Leaves* $2\frac{1}{2}$ by 1 in., acute, base rhomboid, rugose; petiole $\frac{1}{4}$ in. *Peduncles* on short axillary spurs, $\frac{1}{4}-\frac{1}{2}$ in., villous, upwards with the cymes glabrous; bracts $\frac{1}{2}-\frac{1}{3}$ in., round, coloured; pedicels $\frac{1}{2}$ in.; often in pairs. *Sepals* $\frac{1}{2}$ in., ovate or elliptic, obtuse or acute, glabrous, coloured. *Corolla* $\frac{1}{3}$ in., glabrous, scarcely widened upwards. *Ovary* and style glandular-pubescent; disc shortly cylindric. *Capsule* subfollicular, sometimes ultimately 2-valved.

Sect. 4. **Heterobœa**, *Benth. in Gen. Pl.* ii. 1022. *Peduncles* 1-3-fld. short, or not elongate. *Calyx* 5-partite. *Corolla-tube* cylindric. *Disc* short-cylindric. *Capsule* follicular, ultimately sometimes 2-valved.—Species all Malayan.

* *Stem short; leaves crowded, elongate, many-nerved.*

26. **D. crinita**, *Jack in Mal. Misc.* i. ii. 1, and in *Trans. Linn. Soc.* xiv. 33, t. 2, fig. 2; leaves alternate crowded elongate oblanceolate closely serrate villous, corolla $1\frac{1}{2}$ in. narrowly funnel-shaped, capsule 2 in. slender linear villous. *Wall. Cat.* 779; *DC. Prodr.* ix. 265; *Bot. Mag.* t. 4554. *Henckelia crinita*, *Spreng. Syst. curæ post.* 13.

PENANG; *Wallich*, *Helper*. SINGAPORE; *Lobb*.—DISTRIB. Sumatra, Borneo.

Stem suffrutescent, short, thick, hirsute. *Leaves* 6 by 1 in., acuminate, base attenuate, subsessile, thick with shaggy hair; nerves 25 pair. *Peduncles* 1-1 $\frac{1}{2}$ in., axillary or fascicled on shortened lateral spurs, or subconnate with the petiole; bracts minute linear. *Sepals* $\frac{1}{2}-\frac{1}{3}$ in., oblong, villous. *Corolla* nearly straight, scarcely hairy without, pale purplish with yellow lines in the throat. *Capsule* follicular, ultimately 2-valved.

27. **D. platypus**, *Clarke*; leaves alternate crowded sessile oblanceolate sparsely villous base dilated incise-serrate, corolla $1\frac{1}{2}$ in. narrowly funnel-shaped, capsule 2 in. slender linear.—*Chirita* sp. n. 29, *Herb. Ind. Or. H. f. & T.*

MALACCA; *Griffith, Cuming* (n. 2359), &c.; Mt. Ophir (*Herb. Wight*).—DISTRIB. Sumatra.

Leaves 9 by $2\frac{1}{2}$ in., sprinkled above distantly with long hairs; nerves 30 pair, reticulated and villous beneath. *Inflorescence, flowers, and capsules* as of *D. crinita*, of which I suspect that this is a variety.

** *Stem creeping; leaves in opposite distant pairs.*

28. **D. reptans**, *Jack in Mal. Misc.* i. part ii. p. 3, and in *Trans. Linn. Soc.* 14, p. 35; creeping, leaves ovate or elliptic minutely crenate hirsute above with long hairs, peduncles 1-fld., corolla $\frac{1}{2}$ in. nearly glabrous. *Wall. Cat.* 787; *DC. Prodr.* ix. 266. *Henckelia reptans*, *Spreng. Syst.* *curæ post.* p. 14.

PENANG; *Wallich. Maingay, Lobb.* MOULMEIN; *Lobb.*

Stem attaining a foot, branching, villous. *Leaves* opposite, 2 by 1 in., narrowed at both ends, scarcely acute; nerves 6 pair, villous beneath; petiole $\frac{1}{3}$ in. *Peduncles* $1\frac{1}{2}$ in., slender, thinly hairy; bracts small, linear. *Sepals* $\frac{1}{2}$ in., linear, pubescent. *Ovary* and style shortly pubescent. *Disc* short, cylindric. *Capsule* $\frac{2}{3}$ in., follicular, sometimes ultimately 2-valved.

29. **D. marginata**, *Clarke*; creeping, leaves broad elliptic sprinkled with small hairs above ciliate-villous on the margin, peduncles 1-fld., corolla $\frac{1}{2}$ in. villous.

MALACCA; *Lobb.*

Stem villous, rooting at the nodes. *Leaves* $2\frac{1}{2}$ by $1\frac{1}{4}$ in., obtuse at both ends, subentire; petiole 1 in. *Sepals* $\frac{1}{2}$ in., linear.—Very near *D. reptans*; the sepals are twice as long, the corolla hairy, the indumentum of the leaves different.

Sect. 5. **Loxocarpus**. Stemless, or one doubtful species creeping. *Leaves* crowded, nearly entire. *Peduncles* longish, few- or many-fld.; bracts small, narrow. *Calyx* divided nearly to the base. *Corolla-tube* short, limb 2-lipped, wide. *Disc* 0. *Ovary* sessile, pubescent; style as long as the ovary. *Capsule* lanceolate or linear, usually oblique at the base, follicular.—Malayan species. (LOXOCARPUS, *Br. in Benn. Pl. Jav. Rar.* pp. 115, 120.)

30. **D. incana**, *Benth. in Gen. Pl.* ii. 1022; leaves round often subcordate densely white-silky on both surfaces, cyme many-fld., capsule $\frac{1}{4}$ – $\frac{1}{3}$ in. lanceolate base oblique. *Loxonia* ? *alata*, *Wall. Cat.* 809. *Loxocarpus alata*, *Br. in Benn. Pl. Jav. Rar.* 120; *DC. Prodr.* ix. 277.

PENANG; *Wallich, Maingay.* SINGAPORE, *Lobb.*

Scapose. *Leaves* 1–3 in. diam., obtuse, entire or shallow-crenulate; petiole $\frac{1}{2}$ –2 in. *Peduncles* 3 in., white-villous; bracts $\frac{1}{4}$ in., linear; cyme very compound, white silky-villous. *Sepals* $\frac{1}{2}$ in., linear. *Corolla* scarcely $\frac{1}{4}$ in., wide-campanulate, blue. *Ovary* villous; style glabrous. *Capsule* acute, white-villous.

31. **D. semitorta**, *Clarke*; leaves elliptic or ovate silky above, reticulated beneath with broad densely villous nerves, peduncles 1–2-fld., sepals white-pilose, capsule $\frac{1}{2}$ in. doubly curved half twisted round near the base.

MALACCA; Mt. Ophir, *Griffith, Lobb, Maingay.*

Scapose. *Leaves* $1\frac{1}{2}$ by $\frac{3}{4}$ in., obtuse at both ends, entire or obscurely crenate, densely softly silky above, glabrous between the nerves beneath; petiole up to $1\frac{1}{4}$ in.

Peduncles 2½ in., thinly hairy; bracts ½ in., oblong; pedicels ¼ in. *Sepals* ½ in., oblong. *Corolla* ½ in.; tube widely campanulate, limb very oblique. *Ovary* densely pilose; style nearly glabrous.

Sect. 6. **Orthobœa** (*Benth. in Gen. Pl.* ii. 1022). Stemless, or (*D. repens*) creeping. *Leaves* alternate or crowded. *Peduncles* long, many- or few-fld.; bracts small, narrow. *Sepals* linear or narrowly oblong. *Corolla-tube* cylindric or ventricose, not linear. *Ovary* sessile; style about as long as the ovary; disc 0. *Capsule* linear or sublanceolate, sessile, erect or scarcely oblique at the base; follicular, ultimately sometimes 2-valved.—Species of S. Deccan and Ceylon.

32. **D. Rottleriana**, *Wall. Cat.* 778; leaves oblong or elliptic, base attenuate deeply crenate white-villous on both surfaces, corolla ½ in., capsule ½ in. densely villous when young. *Br. in. Benn. Pl. Jav. Rar.* 119.

NILGHIRI and KURG MTS.; *Heyne, &c.*

Leaves 3½ by 1½ in., obtuse, mature herbaceous softly strigose above pilose between the nerves beneath; petiole ¾ in., broad, entire. *Peduncles* 4 in., many-fld. *Sepals* ⅓ in., narrowly oblong, villous. *Corolla* purple with yellow marks; tube short, mouth very oblique. *Ovary* very hairy; style glabrous. *Capsule* very acute.

VAR. Wightii; leaves less deeply crenate thick rugose tomentose, even when old sometimes densely white, woolly, capsule less than ½ in. *D. Rottleriana*, *Wight Ic.* t. 1348; *A. DC. Prodr.* ix. 268. *Rottlera incana*, *Vahl Enum.* i. 88. *Henckelia incana*, *Spreng. Syst.* i. 38.—Shevagherry Hills, near Courtallum; *Wight*.

33. **D. tomentosa**, *Wight Ic.* t. 1349, and *Ill.* t. 159 bis, fig. 1 (*stigma incorrect*); leaves elliptic attenuate at the base crenate tomentose, corolla ½ in., capsule ¾ in. sparsely villous.

HILLS in S. MADRAS; Courtallum, Jamalay, Bolamputti, *Wight*.

Leaves 3 by 2 in., obtuse, white-villous above, cinnamonaceous or ferruginous villous or lanate beneath even when mature. *Corolla-tube* nearly ½ in., curved. *Style* thick, glabrous; stigma large, glabrous.—In other respects resembling *D. Rottleriana* and a variety perhaps of it (*Thwaites Enum.* 207).

VAR. lanuginosa; petiole 0 or very broad, leaves spatulate-orbicular cinnamonaceous tomentose beneath, peduncles long, cymes large.—Courtallum; *Wight*.

34. **D. lyrata**, *Wight Ic.* t. 1350; leaves lyrate, terminal lobe ovate incise-crenate or sublobulate thinly herbaceous villous on both surfaces, corolla scarcely ½ in., capsule ½–¾ in. sparsely villous.

DECCAN PENINSULA; Courtallum, *Wight*.

Leaves attaining 8 in.; petiole nearly 6 in., incise-pinnatifid; limb 2–3 in. diam., base rounded. *Peduncles* 4–6 in., villous. *Flowers* and capsules nearly as in *D. Rottleriana*.—Closely allied to *D. Rottleriana*, rather than to *D. tomentosa*, which has larger flowers and capsules.

35. **D. Humboldtiana**, *Gardn. in Calc. Journ. Nat. Hist.* vi. 477; leaves broadly elliptic, base usually rounded or cordate shallowly crenate thickly tomentose ultimately silky, sepals ⅓ in. pilose, corolla ½ in. *Bot. Mag.* t. 4757.

CEYLON; up to 5000 ft. alt., common, *Gardner, &c.*

Leaves 3 by 1½–2½ in., obtuse, sometimes orbicular, base rarely shortly attenuate; petiole ½–2 in. *Peduncles* 2–4 in., pubescent, many-fld., or sometimes subracemose few-fld. *Corolla* pale purple, puberulous without. *Filaments* of the sterile stamens nearly as long as of the fertile. *Ovary* pilose; style glabrous. *Capsule* ¾ in., often oblique at the base.

VAR. primulifolia, *Thwaites Enum.* 207 (not *D. primulifolia*, *D. Don*); leaves spatulate-elliptic, cymes subracemose slender, corolla scarcely ½ in., sterile filaments

short, capsule slender. *D. primulæfolia*, *Gardn. in Calc. Journ. Nat. Hist.* vi. 478; *Bot. Mag.* t. 5161.—Ceylon; in the Hantam range near Kandy, *Gardner, Thwaites*.—Petiole $\frac{1}{2}$ –2 in. *Sepals* $\frac{1}{2}$ in., narrowly oblong, white-pilose, not tomentose.

VAR. recedens; leaves large, base attenuate, cymes compound.—Ceylon; Wallekelly Hill, alt. 2000 ft., *Beckett*.—Leaves 6 by 4 in., thinly white-strigose above, rusty-pubescent on the nerves beneath, much thinner in texture than in the type; petiole scarcely $\frac{1}{2}$ in. *Peduncles* up to 8 in.

36. ***D. floccosa***, *Thwaites Enum.* 207; leaves obovate crenulate tomentose above pale fulvous-floccose beneath, sepals $\frac{1}{2}$ in. narrowly oblong floccose, corolla-tube ventricose.

CEYLON; alt. 2000 ft., Central Province, near Dolosbage, *Thwaites*.

Leaves 6 by 3½ in., obtuse, attenuate at the base; petiole 2 in. *Peduncles* 6 in., floccose; cyme 7-fld., densely floccose. *Corolla* $\frac{1}{2}$ in., pale purple; mouth contracted. *Capsule* 1 in., linear, follicular.—Nearly allied to *D. Humboldtiana*.

37. ***D. zeylanica***, *Br. in Benn. Pl. Jav. Rar.* 119; leaves long-petioled cordate-ovate or round crenate or serrate densely strigose on both surfaces, cymes few-fld., corolla-tube nearly $\frac{1}{2}$ in. ovoid-cylindric lobes $\frac{1}{4}$ in. *DC. Prodr.* ix. 266; *Thwaites Enum.* 207. *D. longepetiolata*, *Gardn. in Calc. Journ. Nat. Hist.* vi. 475.

CEYLON, alt. 5–6000 ft.; near Adam's Peak, *Walker, Thwaites*.

Leaves 2–3½ in. diam., subobtuse; petiole $\frac{1}{2}$ –5 in. *Peduncles* 2–4½ in., hairy, 3–9-fld. *Sepals* $\frac{1}{2}$ – $\frac{3}{4}$ in., linear, pubescent with yellow hairs. *Corolla* white, tube dark-purple. *Stigma* oblique, orbicular. *Capsule* early glabrate.

38. ***D. ovalifolia***, *Wight Ic.* t. 1351, and *III.* t. 142, fig. 6; leaves ovate crenate white-strigose on both surfaces, peduncles 3–5-fld., corolla broadly campanulate gibbous, base saccate, capsule 1 in.

S. DECCAN PENINSULA; Courtallum, *Wight*; S. Tinnevely, alt. 5000 ft., *Beddome*.

Leaves 3 by 1½ in., obtuse, base rounded, shallowly crenate, above densely beneath chiefly on the nerves strigose; nerves 8–12 pair, parallel; petiole 1–4 in. *Peduncles* 3½ in. *Sepals* $\frac{1}{6}$ in. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in., blue-yellow, nearly glabrous. *Filaments* short; anthers glabrous. *Ovary* pilose; style about as long as the ovary, nearly glabrous, stigma small subcapitate. *Capsule* linear, straight or somewhat oblique at the base.

39. ***D. missionis***, *Wall. Cat.* 6396; leaves ovate or elliptic entire strigose on both surfaces, cymes subracemose many-fld., corolla funnel-shaped nearly symmetric. *DC. Prodr.* ix. 266; *D. membranacea*, *Bedd. Ic. Pl. Ind. Or.* t. 176.

DECCAN, *Herb. Madr.* S. TRAVANCORE; Pachemallay, alt. 2000 ft., *Beddome*.

Leaves 3½ by 1–1½ in., scarcely acute, base rounded, membranous; hairs brown in Wallich's dried example, white in *Beddome*'s fresh ones; nerves 5–6 pair; petiole 1–2½ in. *Peduncles* 8 in., hairy; pedicels 0–½ in., often in distant pairs. *Sepals* $\frac{1}{6}$ – $\frac{1}{4}$ in., lanceolate-subulate, hairy. *Corolla* $\frac{1}{2}$ in., glabrous, pale blue. *Anthers* minutely hairy. *Style* as long as the ovary, glabrous, stigma unilateral oblong. *Capsule* nearly 1 in., linear; subfollicular (*Beddome*), or 2-valved (*DC.*).

40. ***D. repens***, *Bedd. Ic. Pl. Ind. Or.* t. 120; creeping, leaves long-petioled ovate-cordate serrate softly villous on both surfaces, peduncles 1–5-fld.

TRAVANCORE and TINNEVELLY, alt. 1–3000 ft.; *Beddome*.

Stem slender, hairy; nodes distant, rooting, bearing one leaf and one peduncle. *Leaves* 3 by 2 in., acute; petiole 4 in. *Peduncles* 3–5 in., villous; pedicels sub-

racemed in pairs, or (ex Beddome) nearly umbelled. *Sepals* $\frac{1}{10}$ in. *Corolla* $\frac{1}{2}$ – $\frac{3}{4}$ in., tubular, curved, hairy without, blue, *Ovary* hairy; style as long as the ovary, glabrous, stigma oblique subpeltate. *Capsule* not seen.

V. **DIDISSANDRA**, Clarke.

Scapose perennials or suffrutescent. *Stamens* 4 fertile, didynamous. Otherwise as *Didymocarpus*.—Species 7, extending from India to Bornœo.

Sect. 1. **Bœoides**, Benth. Scapose. *Nerves* of leaf very strong beneath, radiating.

1. **D. lanuginosa**, Clarke; stem hardly any, leaves elliptic or ovate, cymes and calyx glabrous or nearly so. *Didymocarpus lanuginosa*, Wall. Cat. 791, not of Maximov.; DC. Prodr. ix. 268; Clarke Comm. & Cyrt. Beng. t. 67.—*Didymocarpoid*, Griff. Itin. Notes, 64, n. 987.

TEMPERATE HIMALAYA, alt. 5–8000 ft., from Simla (Edgeworth) to Bhotan (Griffith) not common; Sikkim, Lachen, J. D. H. KHASIA MTS., alt. 5000 ft.; Kollong Rock, Griffith, H. f. & T., &c.

Stem hardly any, with the base of the petioles and peduncles fulvous-shaggy. *Leaves* crowded, 3 by $1\frac{1}{2}$ in., obtuse, base attenuated, crenate, above decidedly hirsute, beneath when young fulvous-woolly; petiole $\frac{1}{2}$ –1 in., or from the attenuation of the leaf-base 0. *Scapes* 2–6 in., glabrate upwards; cymes young woolly, ultimately glabrate, compound; pedicels $\frac{1}{6}$ – $\frac{1}{2}$ in. *Sepals* $\frac{1}{3}$ in., lanceolate. *Corolla* $\frac{3}{4}$ in., long, hairy, pale blue or purple. *Anthers* peltate, cohering in pairs. *Ovary* glabrous; style minutely pilose. *Capsule* $\frac{3}{4}$ in., often curved.

2. **D. rufa**, King in Hook. Ic. Pl. t. 1437; stem and leaves of *D. lanuginosa*, but cymes densely woolly with brown hair.

EASTERN TIBET; Chumbi (E. of Sikkim), alt. 12,000 ft. (Herb. King).

Possibly only a state of *D. lanuginosa*, but the scape is stouter, pedicels shorter, inflorescence densely woolly, the flowers smaller, calyx shorter and its lobes more obtuse, the only capsule seen not $\frac{1}{2}$ in. long.

Sect. 2. **Cyrtandroides**. Suffrutescent. *Peduncles* short, axillary, clustered, 1–3-fld. *Nerves* of leaf pinnate.

3. **D. frutescens**, Jack in Mal. Misc. i. ii. 1, and in Trans. Linn. Soc. xiv. 39; leaves oblanceolate fulvous-silky beneath, corolla $1\frac{1}{4}$ in., anthers small round. Wall. Cat. 780; DC. Prodr. ix. 265. *Henckelia frutescens*, Spreng. Syst., curæ post. 13.

PENANG; Wallich. MALACCA; Griffith (Kew Distrib. n. 3856), Maingay (Kew Distrib. n. 1222).—DISTRIB. Sumatra.

Branches densely fulvous-villous upwards. *Leaves* opposite, 9 by $2\frac{1}{2}$ in., acuminate, minutely crenate, mature glabrate above; petiole 2 in. *Peduncles* $\frac{1}{2}$ in., silky; bracts $\frac{1}{2}$ in., narrow, silky; pedicels often $2\frac{1}{4}$ in., soon glabrous. *Sepals* $\frac{1}{2}$ in., narrowly lanceolate, silky. *Corolla* $1\frac{1}{4}$ in. long, funnel-shaped, white, villous, soon nearly glabrous. *Anthers* small, round, cohering in pairs, when young of 2 divaricate ellipsoid cells, cells early confluent. *Ovary* glabrous; style minutely hairy. *Capsule* $3\frac{1}{4}$ in.

VI. **CHIRITA**, Ham.

Herbs or low undershrubs. *Leaves* opposite, often unequal, sometimes whorled or alternate, elliptic or ovate, rarely lanceolate. *Cymes* axillary, many- or few-fld., or peduncles 1-fld.; bracts 2, shorter than the flowers, deciduous. *Calyx* 5-fld or sub-5-partite, not very small (except in *C. hamosa*);

lobes acute. *Corolla* tubular-funnel-shaped or ventricose, middle-sized or large (except in *C. hamosa*); tube not very narrow below nor gibbous; limb 2-lipped, lobes 5, rounded. *Stamens* 2 perfect, 2-3 barren, filaments flattened, geniculate; anthers usually applied to the stigma; cells 2, divaricate, ovate, often confluent. *Ovary* linear; style short or long, stigma (when young) oblique peltate, notched on the lower margin; in age upper margin usually produced oblong bifid; placentæ inflexed to the axis, then revolute bearing the ovules. *Capsule* elongate linear (smaller, slender in *C. hamosa*), sessile, loculicidally 2-valved to the base, valves 2-partite in the next season. *Seeds* ellipsoid, smooth, sometimes with a minute boss or process at the end; testa often striated, reticulate.—Species 25, mainly Indian; a few W. Malayan and Chinese.

The foregoing character does not include the Malayan and Chinese species. The genus, even thus narrowly defined, is with difficulty distinguished from *Didymocarpus*. The stigma is said to be subentire in *Didymocarpus*, bifid in *Chirita*, which is roughly true; in *Chirita* it varies greatly with age.

Sect. 1. **Euchirita**. *Calyx* large or middle-sized. *Corolla* $1\frac{1}{4}$ in. or more, funnel-shaped, tubular towards the base, mouth not very oblique nor unequally lipped. *Capsule* more than 2 in. long, not stalked.

* *Species of Ceylon*.

1. **C. Moonii**, *Gardn. in Calc. Journ. Nat. Hist.* vi. 479; leaves whorled lanceolate or elliptic silky villous on both surfaces, peduncles scattered 1-flid., calyx sub-5-partite silky villous, corolla $2\frac{1}{2}$ in. and upwards. *Bot. Mag.* t. 4405. *Martynia lanceolata*, *Moon Cat. Pl. Ceyl.* 45.

CEYLON; Hantam, alt. 4000 ft., *Thwaites*, *Wight*, &c.

Stem 2-3 ft., branched, villous upwards. *Leaves* 4 or 3 in a whorl, 5 by 2 in., minutely denticulate, densely softly hairy, and shining brown in the dried specimens; petiole $\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ -2 in.; bracts 2, small, deciduous near their middle. *Sepals* $\frac{3}{8}$ in. and upwards, narrowly lanceolate. *Corolla* widely ventricose, mouth 2 in. across, minutely hairy without, purple, yellow-striped within. *Filaments* (fertile and sterile) villous at the top. *Ovary* glabrous; stigma obliquely 1-sided, shortly bifid. *Capsule* 4 in. and upwards.

2. **C. Walkeri**, *Gardn. in Calc. Journ. Nat. Hist.* vi. 480; leaves ternate or opposite elliptic acuminate or lanceolate villous on both surfaces, peduncles 5-1-flid., calyx sub-5-partite villous, corolla $1\frac{1}{2}$ in. *C. Walkeriæ*, *Hook. Bot. Mag.* t. 4327.

CEYLON; *Walker*.

Stem 2 ft., branched, villous upwards. *Leaves* 5 by 2 in., as of *C. Moonii*, but less densely hairy; petiole $\frac{1}{2}$ -1 in. *Peduncles* $\frac{1}{2}$ -2 in., once or twice dichotomous, rarely 1-flid.; bracts small. *Calyx* $\frac{1}{2}$ - $\frac{3}{8}$ in. *Capsule* $2\frac{1}{2}$ -5 in.—Closely allied to *C. Moonii*, which differs in the 1-flid. peduncles and larger corolla.

VAB. parviflora; calyx $\frac{1}{2}$ - $\frac{1}{2}$ in., corolla 1 in., capsule 2 in. *Var. β*, *Thwaites Enum.* 207.—Ceylon; *Thwaites*.

3. **C. zeylanica**, *Hook. Bot. Mag.* t. 4182; leaves opposite ovate or elliptic acuminate strigose on both surfaces, peduncles many-flid., calyx sub-5-partite glabrous, corolla 1 in. *C. communis*, *Gardn. in Calc. Journ. Nat. Hist.* vi. 481.

CEYLON; up to 5000 ft. alt. common; *Gardner*, &c.

Stem 18 in., branched, strigose upwards. *Leaves* 3 by 2 in. ovate, or $4\frac{1}{2}$ by 2 in. elliptic, minutely denticulate, sparsely strigose; nerves 9 pair, hirsute beneath;

petiole $\frac{1}{2}$ –2 in. Peduncles 1–4 in., glabrous upwards; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., ovate, glabrous. Sepals $\frac{1}{2}$ – $\frac{3}{4}$ in., elliptic-lanceolate. Corolla 1 in. diam., glabrous without, purple, yellow-striped within. Filaments hairy at the tip. Ovary glabrous; stigma unilateral. Capsule 4 in.

VAR. *angusta*; leaves narrowly lanceolate acute at both ends, nerves 6 pair, flowers somewhat smaller and paler. Var. β , *Thwaites Enum.* 208.—Ceylon; between Galle and Ratnapoora, *Thwaites*.

**** Species of the Himalaya and Khasia Mts.**

4. **C. bifolia**, *Don Prodr.* 90; stem 2-leaved, leaves sessile orbicular-quadrate thinly villous on both surfaces, peduncles 3–1-fld., calyx deeply 5-fid. villous. *Royle Ill.* 204, t. 70, fig. 2; *DC. Prodr.* ix. 269; *Clarke Comm. & Cyrt. Beng.* t. 77. *Calosacme amplexens*, *Wall. Cat.* 306. *Henckelia bifolia*, *Dietr. Sp. Pl.* i. 574.

TEMPERATE W. HIMALAYA, alt. 6000 ft., from Gurwhal to Nepal; *Wallich, &c.*

Stem 3–6 in., simple, at flower-time leafless at the base, 2-leaved at the summit; one or two small bract-like leaves rarely added in the middle of the stem. Leaves equal or unequal, or one suppressed, 3 in. diam., base cordate or in the smaller attenuate, serrate. Peduncles 1–2, rarely more, rising between the two leaves, usually 2-fld., about 1 in.; bracts $\frac{1}{2}$ in., oblong, villous; pedicels $\frac{1}{2}$ in. Calyx $\frac{1}{2}$ in. and upwards, thin, subcorolloid; lobes $\frac{1}{2}$ in., broad-lanceolate. Corolla nearly 2 in., almost straight, ventricose above the calyx, nearly glabrous without, purple-blue, below yellowish. Filaments hairy at the top. Ovary and style pubescent; stigma peltate oblique, notched on the lower side. Capsule not seen.

5. **C. pumila**, *Don Prodr.* 90; small or large, leaves elliptic acuminate mature pilose on both surfaces, bracts ciliate, calyx deeply 5-fid. hirsute with white hairs herbaceous. *DC. Prodr.* ix. 269; *Clarke Comm. & Cyrt. Beng.* t. 74. *C. flava*, *Br. in Benn. Pl. Jav. Rar.* 117. *C. Edgeworthii*, *A. DC. Prodr.* ix. 269. *C. diaphana*, *Royle Ill.* 204, name only. *C. polyneura* var. *a*, *Clarke Comm. & Cyrt. Beng.* t. 75, not of *Miq.* *Calosacme flava*, *Wall. Cat.* 801. *Bonnaya humilis*, *Spreng. Syst., cura post.* 15. *Henckelia pumila*, *Dietr. Sp. Pl.* i. 574.—*Didymocarpus* n. 18, *Herb. Ind. Or. H. f. & T.*

SUBTROPICAL HIMALAYA, alt. 1500–6000 ft., from Simla to Mishmee; plentiful in Sikkim and Bhotan. KHASIA MTS., alt. 1–4000 ft., common.

Stem (in well-developed examples) 20 in., erect, branched; small examples with few or 2 leaves not rare. Leaves opposite, often unequal, $5\frac{1}{2}$ by 2 in., closely serrate, mature hirsute above with white hairs, pubescent beneath; petiole $\frac{3}{4}$ in. Peduncles 2 in., 5–1-fld.; bracts $\frac{1}{2}$ in., ovate or oblong; pedicels $\frac{1}{2}$ in. Calyx $\frac{1}{2}$ in. and upwards; lobes $\frac{1}{2}$ in., narrowly lanceolate. Corolla $1\frac{1}{2}$ in., tubular-funnel-shaped, pubescent without, $\frac{3}{4}$ in. diam., purple-blue, yellowish below, sometimes pale-blue. Stamens glabrous. Ovary and style pubescent stigma unilateral, bifid. Capsule 4 in. and upwards.

6. **C. dimidiata**, *Br. in Benn. Pl. Jav. Rar.* 117; leaves elliptic acuminate mature strigose above glabrous beneath, bracts thinly ciliate, calyx 5-fid. half-way down nearly glabrous whiteish. *C. polyneura*, var. β , *Clarke Comm. & Cyrt. Beng.* tt. 76, 72, not of *Miq.* *Calosacme dimidiata*, *Wall. Cat.* 803.

SIKKIM, BHOTAN, ASSAM, alt. 1500–4000 ft., frequent. KHASIA MTS., alt. 1500–3500 ft., common.

Closely resembling *C. pumila*. Pedicels shorter. Calyx $\frac{3}{4}$ in.; segments $\frac{1}{2}$ in., narrowly lanceolate. Corolla $1\frac{1}{2}$ –2 in., rather larger than of *C. pumila*, white, mouth purple-blue, without the yellow-tinge of *C. pumila*.

7. **C. calva**, Clarke; glabrous, leaves elliptic or oblong acuminate, calyx deeply 5-fid segments elliptic-oblong mucronate. *C. glabra*, Clarke *Comm. & Cyrt. Beng. t. 73, not of Miq.*—Chirita n. 20, *Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA, alt. 5-7000 ft.; Lachen, *J. D. H.*; Darjeeling, *Gamble*.

Stem 6-12 in. *Leaves* opposite, usually very unequal, sometimes alternate, attaining 6 by 2½ in. (often smaller and narrower). base very unequal, minutely denticulate, obscurely ciliate; petiole ½-2 in. *Peduncles* ¾ in., 3-1-fid. *Calyx* ½ in., lobed ¾ the way down; segments herbaceous, obtuse with a mucro. *Corolla* 1½ in., nearly as of *C. pumila*, pale purple-blue, glabrous without. *Ovary* and style glabrous. *Capsule* not seen.

8. **C. macrophylla**, Wall. *Pl. As. Rar. i. 56, t. 72*; leaves ovate or elliptic acute hairy sparsely above more densely on the nerves beneath, peduncles several-fid., calyx and bracts nearly glabrous, corolla long yellow. *DC. Prodr. ix. 269*; *Clarke Comm. & Cyrt. Beng. t. 71*. Calosacme macrophylla, Wall. *Cat. 805*. Henckelia macrophylla, Spreng, *Syst., curæ post. 14*. *H. grandifolia*, Dietr. *Sp. Pl. i. 576*.

TEMPERATE E. HIMALAYA; from NEPAL to Bhotan, alt. 5-8000 ft., frequent.

Stem 4-18 in., pubescent. *Radical leaves* (usually present at flower-time much larger than the cauline) 6 by 3½ in., base cordate, crenate-serrate; petiole 4-9 in. *Peduncles* ¼-5 in.; bracts ¾ in., ovate, serrulate, subglabrous or pubescent only on the nerves beneath; pedicels ¼-2 in., nearly glabrous. *Calyx* ¾-1 in., divided to the middle or nearly to the base; segments ovate-lanceolate or lanceolate. *Corolla* 2 in., tubular, scarcely swollen upwards. *Filaments* glabrous or minutely pilose. *Ovary* glabrous; style minutely pubescent, stigma unilateral deeply bifid. *Capsule* 4 in. and upwards.

9. **C. Kurzii**, Clarke in *Journ. Linn. Soc. xv. 145*; leaves elliptic or lanceolate acuminate, base cuneate strongly serrate hairy on both surfaces, peduncles few-fid., calyx hairy, corolla yellow. *Didymocarpus Kurzii*, Clarke *Comm. & Cyrt. Beng. t. 66*.

SIKKIM HIMALAYA; on the ridge between Sikkim and Nepal, alt. 9000 ft., *J. D. H.*, Kurz, Dr. Treutler, &c.

Stem 8-20 in., thick, villous, crowned by the larger leaves and approximated peduncles. *Leaves* opposite and alternate, attaining 8 by 4 in., acuminate; petiole ½-2 in. *Peduncles* 2-5 in., often 2-5; bracts ½ in., elliptic, villous; pedicels ¼-½ in., villous. *Sepals* nearly free, ½ in., broadly lanceolate, persistent. *Corolla* nearly 1½ in., narrowly funnel-shaped, pubescent, purple-spotted in the throat. *Ovary* and style pubescent; stigma subpeltate, oblique, notched on one side. *Capsule* 2 by ½ in., sessile, villous.

10. **C. urticæfolia**, Ham. in *Don Prodr. 90*; leaves elliptic acuminate sparsely hispidulous above villous on the nerves beneath, peduncles 5-1-fid., bracts nearly glabrous, calyx 5-fid half-way down hispid with white hairs, corolla largeish purple. *DC. Prodr. ix. 268*; *Clarke Comm. & Cyrt. Beng. t. 69*. *C. grandiflora*, Wall. *Pl. As. Rar. i. 43, t. 50*. Calosacme grandiflora, Wall. *Cat. 800*. Henckelia urticæfolia & Wallichiana, Dietr. *Sp. Pl. i. 574*. Gonatostemon Boucheanus, Regel *Gartenfl. 1866, 353, t. 526*.—*Didymocarpus Griff. Notul. iv. 155*.—Cyrtandra, Griff. *Ic. Pl. Ind. Or. t. 436*.

TEMPERATE HIMALAYA, alt. 4500-8000 ft., from Nepal to Bhotan, frequent.

Stem 8-18 in., hairy upwards. *Leaves* opposite, more or less unequal, 5 by 2 in., unequal at the base, serrate; petiole ¾-2 in. *Peduncles* ¾-2 in., sparingly pubescent; bracts ½ in., ovate; pedicels ¼-½ in., nearly glabrous. *Calyx* ¾ in.; lobes ½ in., triangular-lanceolate. *Corolla* nearly 2 in., narrowly funnel-shaped, sparsely hairy,

purple with yellow lines within. *Ovary* glabrous; style minutely pubescent, stigma unilateral deeply bifid. *Capsule* 4 in. and upwards.—The only species of *Chirita* in which the bracts are much less hairy than the calyx.

11. **C. Clarkei**, *Hook. f.*; almost stemless, leaves ovate or elliptic pubescent on both surfaces, calyx divided nearly to the base dusky villous, ovary dusky pubescent.—*Chirita* sp. n. 27, *Herb. Ind. Or. H. f. & T.*

Sikkim; Lachen, alt. 7–8000 ft., *J. D. H.*

Radical leaves $4\frac{1}{2}$ by 3 in., shortly acute, base obtuse, crenate-serrate; petiole $1\frac{1}{2}$ –4 in. *Peduncles* 4 in., upwards (as the whole inflorescence) with many spreading glandular brown hairs; bracts $\frac{1}{2}$ in., oblong; pedicels 3–1, $\frac{1}{2}$ –1 in. *Calyx* scarcely $\frac{1}{2}$ in., segments wide-lanceolate. *Corolla* (not expanded) of *Chirita*, glandular-villous without. *Stigma* subpeltate. *Capsule* elongate linear.—Seems near *C. urticæfolia*, differing in the smaller calyx and indumentum.

12. **C. Hookeri**, *Clarke Comm. & Cyrt. Beng.* t. 70; leaves elliptic acute hairy on both surfaces, peduncles 5–1-fld., bracts villous, calyx large densely hirsute.—*Chirita* sp. n. 22, *Herb. Ind. Or. H. f. & T.*

UPPER ASSAM; Mishmee Hills, *Griffith* (Kew Distrib. n. 3826). KHASIA MTS., *Griffith*.

Resembling generally *C. urticæfolia*. *Peduncles* villous; bracts 1 in., ovate-oblong, herbaceous; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in., villous. *Calyx* $\frac{3}{4}$ in.; lobes $\frac{1}{2}$ in., triangular-lanceolate. *Corolla* nearly as of *C. urticæfolia*; ex *Griffith* “pale blue the lower lip with 2 yellow lines.—Dr. King thinks this may be only a var. of *C. urticæfolia*, the numerous examples of which are however very constant in the comparative glabrousness of their bracts.

13. **C. acuminata**, *Br. in Benn. Pl. Jav. Rar.* 117; leaves elliptic or ovate acuminate hairy on both surfaces, peduncles many-fld., bracts oblong villous, calyx divided hardly half-way down rusty villous. *Clarke Comm. & Cyrt. Beng.* t. 81, not of *A. DC.* *Incarvillea oblongifolia*, *Roxb. Fl. Ind.* iii. 113. *Calosacme acuminata*, *Wall. Cat.* 802. *Babactes oblongifolia*, *DC. Prodr.* ix. 260. *Æschynanthus acuminata*, *G. Don Gen. Syst.* iv. 657.—*Chirita* sp. n. 10, *Herb. Ind. Or. H. f. & T.*

KHASIA MTS., ASSAM, MISHMEE and CHITTAGONG HILLS, alt. 500–3500 ft., common.

Stem 2–6 ft., sometimes frutescent, closely villous upwards. *Leaves* opposite, subequal, 8 by $3\frac{1}{2}$ in. (sometimes larger often much smaller), closely serrulate; petiole $\frac{1}{2}$ –3 in. *Peduncles* $\frac{1}{2}$ –2 $\frac{1}{2}$ in., villous, laxly dichotomous; bracts and bracteoles $\frac{1}{2}$ – $\frac{1}{2}$ in.; pedicels $\frac{3}{4}$ in. *Calyx* $\frac{1}{2}$ in.; lobes scarcely $\frac{1}{2}$ in., ovate, acute. *Corolla* $1\frac{1}{2}$ in., tubular-ventricose, yellowish-white (or fide *Roxburgh* somewhat marked with red), nearly glabrous. Fertile filaments dilated, minutely pilose. *Ovary* and style hairy; stigma subpeltate, oblique, notched on one side, ultimately oblong bifid. *Capsule* 2–2 $\frac{1}{2}$ by $\frac{1}{2}$ in. *Seeds* broadly ellipsoid, umbonate at each end, obscurely ribbed and minutely reticulated.

14. **C. brevipes**, *Clarke*; nearly stemless, densely fulvous hairy, leaves ovate or elliptic acute, peduncles short 1–2-fld., calyx 5-fld half-way down lobes lanceolate. *C. speciosa* var. *a*, *Clarke Comm. & Cyrt. Beng.* t. 79, not of *Kurz.*—*Chirita* sp. n. 21, *Herb. Ind. Or. H. f. & T.*

KHASIA MTS., alt. 1500–4000 ft.; *Griffith* (Kew Distrib. n. 3828), &c.

Rhizome short, creeping with crowded nodes, very hairy. *Leaves* alternate, crowded, attaining 10 by 5 in., serrate; petiole up to 8 in. *Peduncles* $\frac{1}{2}$ –1 in.; bracts $\frac{1}{2}$ in., oblong, densely villous; pedicels $\frac{1}{2}$ –1 $\frac{1}{2}$ in. *Calyx* $\frac{3}{4}$ in., lobes $\frac{1}{2}$ in. *Corolla* nearly 2 in., minutely pubescent without (probably white). *Capsule* 4 in., woody, erect on the rigid thickened pedicel.—*Kurz's C. speciosa* from Yunnan has very

long peduncles, short pedicels and linear calyx-segments: as regards size, *C. brevipes* is often as large as *C. speciosa*.

15. **C. primulacea**, *Clarke Comm. & Cyrt. Beng.* t. 82; almost stemless, softly villous, leaves long-petioled oblong incise-serrate, peduncles numerous short many-fld., calyx divided half-way down densely villous, corolla yellow-white.—*Chirita* sp. n. 16, *Herb. Ind. Or. H. f. & T.*

SIKKIM, alt. 2–3000 ft.; *J. D. H., Anderson, &c.*

Gregarious on steep wet rocks. *Leaves* pendent, 6 by 2½ in.; petiole 2–6 in. *Flowers* forming rosulate clusters; whole inflorescence softly villous. *Peduncles* ½–½ in., 1–2–3-tomous; bracts ½–½ in., oblong; pedicels ½ in. *Calyx* ½ in., lobes lanceolate acute. *Corolla* 1 in. and upwards, narrowly funnel-shaped, minutely pubescent without. *Ovary* and style densely shortly villous, stigma obliquely peltate, lower margin notched. *Capsule* 2 in.

16. **C. monophylla**, *Clarke*; leaf solitary sessile cordate-ovate, peduncle hardly any 1–2-fld., calyx divided half-way down brown-hirsute.—*Chirita* sp. 30, *Herb. Ind. Or. H. f. & T.*

UPPER ASSAM; Mishmee Hills, *Griffith* (Kew Distrib. n. 3832).

Stem 4–10 in., simple, erect, with sometimes 1 or 2 small scale-like leaves in its middle. *Leaf* (at flower-time) 1 in., ovate, acute, at fruit-time 7 in. diam., cordate or shortly peltate, glabrous above, villous on the nerves beneath. *Peduncle* (in the axil of the leaf) scarcely 1 in.; bracts small; pedicels ½–½ in. *Calyx* ½ in. and upwards, white or purple-spotted; lobes ¼–½ in., lanceolate-subulate. *Corolla* 2 in., narrowly funnel-shaped, glabrous without. *Ovary* and style glabrous. *Capsule* 2½ in. *Seeds* of the genus.—From the extraordinary manner in which the solitary leaf continues growing to the period of ripening the capsule, it may be suspected that it is a persistent cotyledon.

17. **C. caliginosa**, *Clarke*; stem long leafy, leaves falcate-elliptic acuminate at both ends pubescent, cymes axillary few-fld. lax, sepals lanceolate much acuminate.

Peninsula of MALACCA; Klang in Selangore, *Beccari*.

Stem 1 foot, pubescent. *Leaves* opposite, 6 by 2½ in., minutely toothed; petiole 1½ in. *Peduncles* 0–¼ in.; bracts and bracteoles 0, or very early caducous; pedicels ¼–2 in., patently pubescent. *Sepals* ¾–1 in., dusky-pubescent. *Corolla* 1½ in.; tube upwards villous with brown hairs, limb within (in the dry specimen) lurid-blue. *Anthers* very large, subquadrate, with long hair. *Ovary* fuscous-pubescent; stigma unilateral, shortly bifid. *Capsule* 3 in., curved, dusky-hairy.—The whole plant is dusky; the habit and inflorescence ally it to the next section, *Microchirita*; but the calyx is large.

Sect. 2. **Microchirita**. *Calyx* about ¼ in., divided nearly to the base into narrow segments. *Corolla* ½–¾ in., tube narrow below much curved above, mouth very oblique, lower lip larger. *Capsule* slender.

18. **C. hamosa**, *Br. in Benn. Pl. Jav. Rar.* 117; leaves ovate or elliptic acute, peduncles connate and adnate to the petiole ebracteolate, capsule slender often much curved. *Clarke Comm. & Cyrt. Beng.* t. 78. *Didymocarpus hamosa*, *Wall. Cat.* 788. *D. cristata*, *Dalz. in Hook. Kew Journ.* iii. 225; *Dalz. & Gibs. Bomb. Fl.* 134.—*Chirita* sp. n. 20, *Herb. Ind. Or. H. f. & T.*

KHASIA MTS., alt. 1–4000 ft., *Wallich, Griffith, H. f. & T., &c.* MARTABAN; *Wallich*. MOULMEIN; *Lobb, Parish*. W. DECCAN PENINSULA; *Stocks, Law, Dalzell*.

Stem ½–20 in., sparingly pilose. *Leaves* opposite, subequal, 6–1 by 4–½ in., base rounded, obscurely crenate, thin, weakly hairy on both surfaces; petiole ¼–½ in.

Peduncles (their free portion) 0– $\frac{2}{3}$ in., hispidulous. *Sepals* $\frac{1}{4}$ in., sublinear, patently hairy. *Corolla* scarcely $\frac{2}{3}$ in.; tube slender, nearly white, mouth pale blue or somewhat rose. *Stigma* distinctly bifid. *Capsule* 1–3 in.

VAR. *unifolia*; stem $\frac{1}{2}$ –1 in., with one leaf at the top and 5–1 flowers. *Chirita* sp. n. 31, *Herb. Ind. Or. H. f. & T.*—Khasia Mts., alt. 500 ft., on the river bank near Terrya Ghant, J. D. H. Moulmein; Thoungyne, *Lobb.*—Extremely unlike the ordinary form of *C. hamosa*, but except in its minute size no distinction can be found. The single leaf is perhaps a persistent cotyledon, carried up as in some other species of the Order; and the plant may be specifically distinct.

VII. PLATYSTEMMA, Wall.

A small, slender herb. *Leaf* 1 (a persistent cotyledon?) sessile, orbicular-cordate, membranous, hairy. *Peduncle* from the leaf-axil, slender, few-fl.; bracts very small, sublinear. *Calyx* wide-campanulate, deeply 5-fid. *Corolla* violet, subrotate, deeply 2-lipped; lips wide-spreading, upper shortly bifid, lower deeply 3-lobed; lobes all wide-oblong, obtuse. *Stamens* 4 perfect, filaments short, curved; anthers cohering by their tips, 2-celled; cells round, divaricate, early confluent, dehiscing by a single short slit. *Ovary* ovoid; disc annular; style linear, much longer than the ovary, stigma small; placentæ deeply intruded, then bifid, branches recurved, bearing ovules on their margins on both faces. *Capsule* narrowly oblong, nearly as in *Didymocarpus*.

P. violoides, Wall. *Cat.* 4410, and *Pl. As. Rar.* ii. 42, t. 151; *Royle Ill.* 294, t. 71, fig. 1; *DC. Prodr.* ix. 279; *Wight Ill.* t. 159 bis, fig. 10. *P. majus*, Wall. *Cat.* 4411, and *Pl. As. Rar.* ii. 42, *in obs.*

TEMPERATE W. HIMALAYA, alt. 6–9000 ft.; from Nepal, *Wallich*, to Simla, *Strachey & Winterbottom*.

Stem $2\frac{1}{2}$ –5 in., pubescent. *Leaf* $1\frac{1}{2}$ – $2\frac{1}{2}$ in., subacute, coarsely serrate, hairy above, glabrous beneath, pubescent on the nerves. *Peduncle* $\frac{1}{2}$ – $1\frac{1}{2}$ in., 1–11-fl.; bracts $\frac{1}{2}$ in., deciduous; cyme usually trichotomous, lateral branches 3-fl.; pedicels 0– $\frac{1}{4}$ in. *Sepals* $\frac{1}{2}$ in., subovate, puberulous. *Corolla* $\frac{1}{2}$ in., lips of equal length. *Capsule* only known from Royle's figure.

VIII. CHAMPIONIA, Gardn.

A low, perennial, erect, hairy herb. *Leaves* opposite, subequal, petioled. *Peduncles* slender; bracts small; cymes lax; flowers white. *Sepals* 5, small, narrow. *Corolla-tube* short; limb spreading, subequally 4-lobed. *Stamens* 4 perfect, filaments short, thick; anther-cells ellipsoid, nearly parallel, slits confluent at their apex. *Ovary* sessile, oblong; disc 0; style linear, stigma subcapitate; placentæ of two plane plates bearing ovules on both faces. *Capsule* oblong, acute, loculicidally 2-valved, valves soon 2-partite; placentæ in fruit hardly altered. *Seeds* minute, ellipsoid, subacute at each end, smooth, minutely striate and reticulated.

C. reticulata, Gardn. *in Calc. Journ. Nat. Hist.* vi. 485; leaves oblong subentire, nerves slender close together.

CEYLON, alt. 3000 ft., frequent.

Stem 2–6 in., undivided, dusky villous upwards. *Leaves* 4 by $1\frac{1}{2}$ in., obtuse or shortly acute, base cuneate, thinly strigose above, dusky-villous on the nerves beneath; petiole $\frac{1}{2}$ in. *Peduncles* 2–3 in., 3–10-fl., hairy; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in., slender. *Sepals* $\frac{1}{10}$ in., linear, hairy. *Corolla-tube* $\frac{1}{12}$ in.; lobes $\frac{1}{4}$ in., widely oblong, glabrous. *Ovary* and style glabrous. *Capsule* $\frac{1}{2}$ by $\frac{1}{12}$ in.; placentæ narrower than the valves, not recurved.

IX. **BÆICA**, Clarke.

Undershrubs. *Leaves* alternate, petioled. *Cymes* much branched, axillary, lax-fld.; bracts small. *Calyx* small, 5-fid or -partite. *Corolla* small, deeply 5-fid, glabrous, widely gibbous at the base, obscurely 2-lipped; lobes subequal, obtuse, purple or white. *Stamens* 4, attached near the base of the corolla-tube, subequal, glabrous, filaments short; anthers 2-celled, not cohering in pairs; cells ellipsoid, subparallel, slits curved coalescent at the top. *Ovary* sessile, narrowly oblong; style as long as the ovary, glabrous, stigma punctiform; disc 0; placentæ deeply inflexed, nearly meeting, then recurved bearing ovules. *Capsule* shortly linear, straight, beaked by the erect style, loculicidal, and soon septicidal; placentæ recurved, enrolling the seeds. *Seeds* very small, ellipsoid, smooth.—Species 5, in Assam, Bhotan and N. Burma.

1. **B. filiformis**, Clarke *Comm. & Cyrt. Beng.* t. 87; innovations nearly glabrous, leaves lanceolate acuminate at both ends mature glabrous, peduncles solitary long, cyme with capillary branches and pedicels nearly glabrous.—*Rhynchotechum* sp.?, *Wall. Cat.* 9079, *in part.* *Chelone filiformis*, *Ham. ms.*

ASSAM; near Goalpara, *Hamilton, &c.* BHOTAN; in Upper Singfo everywhere, *Griffith.* KHASIA Mts.; *Griffith.* CACHAR; *Keenan.*

Branches long, leafy, glabrous to the tip. *Leaves* 7 by 2 in., minutely dentate; petiole $\frac{1}{2}$ –1 in. *Peduncles* 2–4 in.; bracts $\frac{1}{8}$ in., linear. *Calyx* $\frac{1}{2}$ in. *Corolla* $\frac{1}{2}$ in., purple. *Capsule* $\frac{1}{2}$ in.

2. **B. Griffithii**, Clarke *Comm. & Cyrt. Beng.* t. 86; innovations fulvous-silky, leaves lanceolate acuminate at both ends mature fulvous-villous beneath, peduncles short usually 2–3 fascicled, cyme much branched intricate.—*Rhynchotechum* sp.?, *Wall. Cat.* 9079, *in part.* *Chelone rubicunda*, *Ham. ms.*

ASSAM; Goalpara, *Hamilton.*

Leaves 8 by 2½ in., denticulate, mature glabrous above. *Peduncles* 1–2 in., clustered, or peduncle may be considered hardly any branched from the base; cyme branches divaricate and recurved.—Otherwise nearly as *B. filiformis*.

3. **B. fulva**, Clarke *Comm. & Cyrt. Beng.* t. 85; innovations fulvous-woolly, leaves lanceolate acuminate at both ends fulvous-villous beneath, peduncles solitary elongate, bracts fulvous-tomentose.—*Cyrtandracea* n. 328, *Griff. Itin. Notes*, p. 120.

ASSAM; *Masters.* BHOTAN and MISHMEE, alt. 4200 ft., near Chulleree, *Griffith* (*Key Distrib.* n. 3844).

Leaves 7 by 2 in., obscurely denticulate, mature glabrous above or fulvous-pubescent along the nerves. *Peduncles* 4–6 in., fulvous floccose; bracts $\frac{1}{2}$ – $\frac{1}{2}$ in., persistent; pedicels floccose. *Flowers* and capsules nearly as of *B. filiformis*.

4. **B. hirsuta**, Clarke; very shaggy, leaves wide-lanceolate acuminate at both ends densely fulvous-shaggy above, peduncles solitary long, cymes fulvous-hirsute.

UPPER ASSAM?; on the Soondra bank.

Branches thick, shaggy with yellow hair $\frac{1}{4}$ – $\frac{1}{3}$ in. long, dense with leaves. *Leaves* 7 by 2½ in., obscurely denticulate, shaggy above with hairs $\frac{1}{4}$ in. long from tubercular bases, villous beneath; petiole $\frac{1}{2}$ in. *Peduncles* 2–4 in.; bracts $\frac{1}{3}$ in., elliptic or oblong; cymes as though compound umbels. *Sepals* $\frac{1}{2}$ in., linear, shaggy. *Corolla* not seen. *Capsule* $\frac{1}{4}$ in., minutely hairy, 4-valved.

X. **TETRAPHYLLUM**, Griff.

A tawny-villous undershrub; stem elongate, leafless or sparsely scaly below, with 4 leaves whorled at the apex. *Leaves* nearly sessile, ovate, unequal-sided. *Cymes* dense, subcapitate, nearly sessile; bracts elliptic. *Calyx* somewhat large, obscurely 2-lipped, sub-5-partite. *Corolla* widely funnel-shaped, silky, blue; lobes 5, subequal, ovate. *Stamens* 2 perfect, filaments short; anthers 2-celled, apex submucronate; cells ellipsoid, nearly parallel, slits longitudinal. *Ovary* ellipsoid, acute; style linear, stigma small, obscurely 2-lobed; placentæ deeply intruded, 2-partite, revolute, bearing ovules on both sides. *Capsule* narrowly lanceolate, ultimately 4-valved to the base, leaving two ribs united to the style and 4 papery enrolled placentæ. *Seeds* ellipsoid, obtuse at both ends; testa laxly reticulate, appearing rough or scaly.

T. bengalense, Clarke.—*Tetraphyllum*, Griff. *Notul.* iv. 148 (without descr.). *Phyllobœa* sp., *Benth. in Gen. Pl.* ii. 1020.—*Clarke Comm. & Cyrt. Beng.* t. 87 bis.

UPPER ASSAM; *Griffith*. MISHMEE; Namroop, *Griffith* (Kew Distrib. n. 3830). CACHAR (*Keenan*). CHITTAGONG HILLS; *Clarke*.

Stem 4–12 in., duskily woolly, below without leaves or with 1 or 2 pairs of scales 1 in. long; innovations fulvous silky-woolly. *Leaves* 2 pairs at the summit of the stem, 6 by 4 in., acute, base unequal, mature glabrate above, beneath duskily villous at least on the nerves. *Cymes* 10–30-fld. *Sepals* $\frac{1}{2}$ in., lanceolate, fulvous-silky. *Corolla* $\frac{3}{4}$ in.; lobes $\frac{3}{4}$ in. *Stamens* glabrous. *Ovary* (upwards with the style) silky. *Capsule* $\frac{1}{2}$ – $\frac{3}{4}$ by $\frac{1}{10}$ in., acute.

XI. **TRISEPALUM**, Clarke.

Undershrubs; stems short, villous or tomentose. *Leaves* opposite, alternate or crowded, narrowly lanceolate, obscurely toothed. *Peduncles* axillary, elongate, laxly 1–5-fld.; bracts long. *Calyx* 2-lipped; sepals 3, 2 narrow, the third broader shortly 3-lobed. *Corolla* broadly obliquely campanulate, obscurely 2-lipped; lobes 5, ovate, obtuse. *Stamens* 2 perfect, filaments short; anthers large, cordate-ovate, adhering by their faces, 2-celled; slits short, soon confluent. *Ovary* oblong; stigma simple, one-sided; placentæ deeply intruded, bifid, shortly recurved. *Capsule* oblong, shorter than the calyx, loculicidally 2-valved, soon 4-valved, valves not twisted; placentæ shortly recurved, not membranous. *Seeds* minute.—Species 2, in Lower Burma.

1. **T. obtusum**, Clarke; villous. stem very short, leaves opposite and alternate linear-lanceolate, cymes 1–5-fld., calyx-segments oblong obtuse.—*Phyllobœa* sp. *Benth. in Gen. Pl.* ii. 1020.

TENASSERIM; Moulmein, *Lobb*.

Stem 2–4 in., densely leafy, upwards (with the innovations) rufous-woolly. *Leaves* 5 by $\frac{1}{2}$ in., base much attenuated, crenulate, above white-villous, beneath rufous-woolly on the nerves; petiole $\frac{1}{2}$ in. or hardly any. *Peduncles* 1–3 in., flocculose with rufous deciduous wool; bracts $\frac{1}{2}$ in., ovate, somewhat thick, villous or woolly; pedicels hardly longer than the bracts. *Calyx* $\frac{1}{2}$ in.; one lip 2-partite, the other 3-fld; segments rounded, green at the apex, recurved. *Corolla* $\frac{1}{2}$ in., widely funnel-shaped, glabrous; lobes rounded. *Stamens* of the genus. *Style* linear, scabrous from numerous subseasile glands, stigma very shortly 2-lobed. *Capsule-valves* $\frac{1}{2}$ in., oblong, acute, rigid, bearing the placentæ in the middle.

2. **T. acutum**, *Clarke*; stem very short, leaves alternate narrowly lanceolate hairy, cymes laxly 1-3-fld., calyx-segments elongate-lanceolate.

TENASSERIM; at Moulmein, *Parish*.

* *Stem* scarcely 2 in., densely leafy, upwards (with the innovations) rusty woolly. *Leaves* 5 by 1 in., acuminate at both ends, minutely crenate-sinuate, mature puberulous on both surfaces; petiole 2 in. *Peduncles* 2-4 in., puberulous; bracts $\frac{2}{3}$ in., narrowly lanceolate; pedicels $\frac{1}{2}$ -1 in. *Calyx* $\frac{1}{2}$ in., pubescent, one lip 2-partite the other 3-lobed half-way down. *Corolla* $\frac{3}{4}$ in., wide funnel-shaped, glabrous, purple-rose; lobes rounded, 2 upper more blue. *Stamens* of the genus. *Style* linear, pubescent, stigma produced on one side. *Capsule* (immature) oblong, hairy.

XII. **PHYLLOBÆA**, *Benth. partly.*

An erect herb. *Leaves* opposite. *Cymes* peduncled, bracts conspicuous; flowers rose. *Calyx* large, 2-lipped; one lip 2-partite nearly to the base, the other 3-lobed half-way down. *Corolla* wide-campanulate, sub-bilabiate; lobes 5, ovate, nearly equal. *Stamens* 2 perfect, filaments very short; anthers large, round, connivent, 2-celled; cells ovate, divaricate, soon appearing 1-celled, dehiscing by a single short slit; staminodes 2-3 or 0. *Ovary* oblong, acute; disc unilateral; style longer than the ovary, stigma produced on one side; placentæ deeply intruded, bifid, branches much recurved bearing ovules on both surfaces. *Capsule* narrow-lanceolate, longer than the calyx, follicular, afterwards 2-valved; valves twisted; placentæ papery, revolute. *Seeds* ellipsoid, rugose-reticulate.

P. amplexicaulis, *Benth. in Gen. Pl. ii. 1020*; glabrous, stem long, leaves round, petioles winged amplexicaul, cyme-branches densely many-fld., bracts broad almost imbricate. *Bœa amplexicaulis*, *Parish ms.*; *Clarke Comm. & Cyrt. Beng. t. 84*.

TENASSERIM; at Moulmein, *Parish*. PEGU; Kambila-toung, alt. 3200 ft., *Kurz*.

Branches 6-12 in. *Leaves* 6-10 in. diam., shortly acuminate, crenate-sinuate; petiole $\frac{1}{2}$ by $\frac{1}{4}$ in. *Peduncles* 4-6 in., stout, axillary, solitary, often opposite; bracts $\frac{1}{2}$ in., round, connate at the base; cymes dichotomous; branches 2 in., 5-25-fld.; pedicels $0-\frac{1}{2}$ in.; bracteoles similar to the bracts but smaller. *Calyx* $\frac{1}{2}$ in.; lobes herbaceous, spatulate-oblong, obtuse. *Corolla* $\frac{1}{2}$ in. long, $\frac{3}{4}$ in. diam., white suffused with rose. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in., conical upwards, valves twisted into 2 or 3 complete spires.

XIII. **BœA**, *Commers.*

Perennial herbs; caulescent or scapose. *Leaves* opposite or crowded. *Peduncles* axillary, usually long; cymes lax or few-fld.; bracts small. *Sepals* 5, small, narrow. *Corolla* small or middle-sized, widely campanulate, somewhat unequal at the base, glabrous, 2-lipped; lobes 5, ovate, obtuse. *Stamens* 2 perfect, 2-3 rudimentary; filaments short, linear (in the Indian species); anthers 2-celled, often cohering at the apex; cells ovate, divergent at the base, slits usually confluent at the apex. *Ovary* sessile, linear; disc 0; style as long as the ovary, glabrous upwards, stigma small obscurely 2-lobed; placentæ inflexed nearly to the axis, then recurved bearing the ovules. *Capsule* linear, loculicidal; valves 2, twisted; placentæ at first attached to the valves, twisted with them, afterwards separating from the valves, which often again split each into two. *Seeds* minute, ellipsoid, smooth, testa minutely reticulate.—Species 12, Indian, N. Chinese, N. Australian and the New Hebridean.

The generic name was by Commerson spelt originally *Beaua* in ms., and afterwards simplified to *Bea*, also in ms. It was first published in Lamk. Dict. (1783) i. 401, and spelt *Bœa*; afterwards in Juss. Gen. (1789) 121 as *Bœa*. *Bœa* was adopted by Brown, DC., and by Bentham in Gen. Plant., but *Bœa* has priority of publication.

1. ***B. proliza***, *Clarke*; stem short, leaves lanceolate or ovate-lanceolate coriaceous tomentose beneath, peduncle very long, cymes many-fld., capsule $\frac{1}{2}$ in.

PEGU; at Thoungyun, *Kurz*.

Stem $2\frac{1}{2}$ in., closely tomentose. *Leaves* opposite, crowded, 4 by $\frac{3}{4}$ – $1\frac{1}{2}$ in., acute, rhomboid at the base, minutely crenulate, arachnoid above; nerves beneath obscured by tomentum; petiole 1 in. *Peduncle* 9 in., rusty-tomentose; cyme $2\frac{1}{2}$ in. diam., about 50-fld., with deciduous tomentum; pedicels $\frac{1}{2}$ in., puberulous. *Sepals* $\frac{1}{2}$ in., linear, nearly glabrous. *Corolla* not seen. *Capsule* glabrous.

2. ***B. multiflora***, *Br. in Benn. Pl. Jav. Rar.* 120; stem short, leaves narrowly elliptic regularly crenate mature glabrate above villous or lanate on the reticulated nerves beneath, cymes many-fld., capsule $\frac{1}{2}$ in. *A. DC. Prodr.* ix. 272. *B. flocculosa*, *Clarke Comm. & Cyrt. Beng. t.* 83. *Didymocarpus multiflora*, *Wall. Cat.* 793.—*Bœa* sp. nu. 2 and 4, *Herb. Ind. Or. H. f. & T.*

KHASIA Mts., alt. 1–3000 ft.; *Wallich, H. f. & T., &c.* ASSAM; *Griffith. MOULMEIN; Parish.*—DISTRIB. Cochin China.

Stem 1–5 in.; upwards cinnamoneous-tomentose. *Leaves* crowded, 6 by $2\frac{1}{2}$ in., subobtusely, base unequally rhomboid, deciduously floccose above, ultimately nearly glabrous beneath except on the much-elevated nerves; petiole $\frac{1}{2}$ –1 in. *Peduncles* several, 4–7 in., floccose-tomentose; cyme 2–3 in. diam., up to 50-fld., tomentose. *Sepals* $\frac{1}{3}$ in., sublinear. *Corolla* $\frac{1}{2}$ in., puberulous without. *Ovary* densely covered with sessile glands; style glabrous. *Capsule* glandular-puberulous.—In the Khasian plant the nerves of the leaves beneath are thick, tomentose; in the Burmese plant they are beneath slenderer, pubescent; and the branches of the cyme are slenderer.

3. ***B. herbacea***, *Clarke*; leaves nearly sessile distant opposite elliptic acuminate crenate-serrate sparsely pilose on both surfaces, base attenuate, cymes contracted many-fld., capsule $\frac{1}{4}$ in.—*Bœa* n. 3, *Herb. Ind. Or. H. f. & T.*

TENASSERIM; at Moulmein, *Parish*.

Stem 4–8 in., slender, softly hairy. *Leaves* 8 by 3 in., or hardly half these dimensions, often amplexicaul. *Peduncles* 1–4, $2\frac{1}{4}$ in., softly hairy; cymes $1\frac{1}{2}$ in. diam., green, viscidly hairy. *Sepals* $\frac{1}{10}$ in., narrowly oblong, viscidly hairy. *Corolla* $\frac{1}{4}$ in., glabrous. *Ovary* glistening with yellow glands; style glabrous upwards. *Capsule* glandular-viscous, closely reflexed in young fruit.—Excessively variable in the size of the leaves.

XIV. ORNITHOBÆA, *Clarke*.

A caulescent herb. *Leaves* opposite, distant, petioled. *Peduncles* axillary, solitary, short; cymes panicled. *Sepals* 5, not small. *Corolla* tubular, 2-lipped; upper lip of 2 reflexed lobes; lower 3-lobed, two lateral lobes narrow lanceolate patent, middle lobe smaller recurved, with a dense tuft of blue hairs at its base. *Stamens* 2 perfect, 3 rudimentary, filaments short; anthers 2-celled, united at the apex by a short ligule; cells subparallel, broad, scarcely confluent at the apex. *Ovary* sessile, ellipsoid; disc 0; style as long as the ovary, stigma minute sub-2-lobed; placenta deeply inflexed, nearly meeting, then recurved bearing the ovules. *Capsule* narrowly lanceolate, 2-valved, valves twisted before dehiscence; placenta

recurved enclosing the seeds. *Seeds* minute, ellipsoid, smooth; testa striate, reticulate.

O. Parishii, *Clarke*.

TENASSERIM; at Moulmein, *Parish*.

Stem 7 in., slender, pubescent. *Leaves* 6 by 2½ in., elliptic, acute, base unequal, crenate-serrate, thinly softly hairy on both surfaces; petiole 2-4 in. *Cymes* hardly longer than the petiole, solitary from nearly every axil; bracts ½ in., linear; pedicels ½-¾ in., subracemose. *Sepals* ½ in., oblong, green, pubescent, persistent, subreflexed in fruit. *Corolla* nearly ½ in., personate, pale blue, glabrous except the palate. *Capsule* ½ by ¼ in., hairy, green, scarcely acute.—A complete drawing with full analysis of this plant was sent to Sir W. Hooker by Mr. Parish; it resembles a *Bœa* but for the corolla and the broader submembranous capsule, which resembles *Phyllobœa*.

XV. **KLUGIA**, *Schlecht*.

Herbs, rooting at the base, then erect, somewhat succulent. *Leaves* alternate (or subopposite one of the pair reduced to an auricle), acuminate, unequal-sided, cordately auricled on one side of the unequal base, subentire or sinuate, many-nerved. *Racemes* terminal or leaf opposed, many-flid.; bracts 0; bracteoles at the base of the pedicels small, linear; flowers small, short-pedicelled, pendulous. *Calyx* laxly campanulate, 5-angled or -winged, posterior wing often larger produced at the base; lobes 5, shorter or longer than the tube. *Corolla-tube* cylindric; limb 2-lipped; upper lip very small, lower broad, rounded or shortly 3-lobed, blue with 2 yellow marks. *Stamens* 4 perfect, included; anthers approximated by pairs, 2-celled; cells short, divaricate, early confluent. *Ovary* ovoid, glabrous; disc short, cylindric; style longer than the ovary, glabrous, stigma obliquely dilated obscurely 2-lobed; placentæ deeply inflexed, each divided into 2 thick plates, bearing ovules on all sides. *Capsule* included in the calyx, broadly ellipsoid, loculicidal, 2-valved. *Seeds* ellipsoid, truncate at both ends, minutely striate, more or less reticulated.—Species 3 in India, 1 in Mexico.

1. **K. Notoniana**, *A. DC. Prodr.* ix. 276; leaves minutely scabrous-pubescent, posterior wing of the calyx larger produced at the base, lobes shorter than the tube, lower lip of the corolla ¼-½ in. diam. *Wight Ic.* t. 1353, and *Ill.* t. 159 bis, fig. 4; *Gardn. in Calc. Journ. Nat. Hist.* vi. 487. *Wulfenia Notoniana*, *Wall. Cat.* 409; *Tent. Fl. Nep.* 46, obs. *Glossanthus malabaricus*, *Klein; Benth. Scroph. Ind.* 57; *Wall. Cat.* 6394. *G. Notoniana*, *Br. in Benn. Pl. Jav. Rar.* 121. *Rhynchoglossum obliquum*, *Hohenacker*, n. 1165.

S. DECCAN PENINSULA and CEYLON, alt. 2-5000 ft., frequent, *Wight, Thwaites*, &c.

Annual, 12-18 in., usually with a line of hairs down the stem on one side. *Leaves* 5-8 in.; petiole ½-2 in. *Peduncles* ¾-2 in., racemes often 4 in. *Calyx* ⅝ in., somewhat enlarged in fruit; lobes ⅓ in., triangular, mucronate. *Corolla-tube* ½ in., white; lower lip blue, yellow near the two hooded depressions at its base. *Capsule* ½ in. diam.

VAR. glabra; glabrous, leaves more membranous, flowers smaller. *K. glabra*, *Gardn. in Calc. Journ. Nat. Hist.* vi. 489.—Ceylon; alt. 4-5000 ft., *Walker*, &c.—Even the pedicels are glabrous.

VAR. scabra; leaves minutely scabrous not pubescent beneath, flowers capsules and seeds rather smaller than in *K. Notoniana* type. *K. scabra*, *Dalz. & Gibs. Bomb. Fl.* 134. *Rhynchoglossum scabrum*, *Dalz. in Hook. Kew Journ.* ii. 140.—Mts. of S. Deccan Peninsula and Ceylon; *Dalzell, Johnstone, Walker*.

2. **K. zeylanica**, *Gardn. in Calc. Journ. Nat. Hist.* vi. 490; leaves pubescent, calyx subequally 5-winged lobes longer than the tube remarkably acuminate, lower lip of corolla more than $\frac{1}{2}$ in. diam. *A. DC. Prodr.* ix. 276, *name only*. *K. Notoniana*, *Bot. Mag.* t. 4620. *Glossanthus zeylanicus*, *Br. in Benn. Pl. Jav. Rar.* 121, *name only*.

CEYLON; frequent near Kandy, *Gardner, Thwaites, &c.*

Doubtfully distinct from *K. Notoniana* (ex Thwaites Enum. 208); but seems well separable by the long and remarkably acuminate calyx-lobes; the pubescence also is often stellate.

3. **K. ampliata**; leaves glabrate, calyx subequally 5-winged lobes as long as the tube lanceolate, bracteoles persistent conspicuous.

UPPER ASSAM; Mishmee Hills, near Yen, *Griffith* (Kew Distrib. n. 3846).

Stem at least a foot. *Leaves* 6 by 3 in.; petiole $\frac{1}{2}$ –1½ in. *Peduncles* $\frac{1}{2}$ in.; racemes 3 in., scarcely puberulous; bracteoles $\frac{1}{4}$ in. and upwards; pedicels 0– $\frac{1}{4}$ in. *Calyx* (in fruit) $\frac{1}{2}$ in., broadly cylindric. *Capsule* and *seeds* nearly as of *K. Notoniana*.—Corolla not seen: the species resembles *K. Notoniana*, but is larger in all its parts.

XVI. RHYNCHOGLOSSUM, *Blume.*

Herbs, minutely scabrid-pubescent or nearly glabrous. *Leaves* alternate, elliptic, acuminate, unequal-sided, cordate on one side of the unequal base, subentire or sinuate. *Racemes* long, many-fl'd.; bracts 0; bracteoles minute. *Calyx* campanulate, 5-lobed half-way down. *Corolla-tube* cylindric, contracted at the mouth; limb 2-lipped; upper lip short bifid, lower lip longer, 3-lobed. *Stamens* 2 perfect, included; anthers connivent, 2-celled; cells ellipsoid, subparallel, slits ultimately subconfluent at the apex. *Ovary* ovoid; style linear, stigma minutely 2-lobed; placenta deeply intruded, then bifid into 2 thick plates bearing ovules on all sides. *Capsule* included, ellipsoid, membranous, loculicidally 2-valved. *Seeds* narrowly ellipsoid, smooth; testa minutely reticulated.—Species 2, extending from India to the Philippines.

R. obliquum, *Blume Bijl.* 741; corolla $\frac{1}{2}$ in. long, lower lip ovate 2–3 times longer than the upper. *DC. Prodr.* ix. 274. *R. Blumei*, *DC. l. c.* 274. *Wulfenia intermedia*, *Wall. Cat.* 408. *Loxotis intermedia*, *Benth. Scroph. Ind.* 57. *L. obliqua*, *Br. in Benn. Pl. Jav. Rar.* 102, t. 24.

TENASSERIM; at Moulmein, *Wallich, Parish, &c.* MALACCA; *Zippel*.—DISTRIB. Throughout the Malayan Archipelago.

A succulent, membranous herb, very variable in size; height 2–20 in. *Leaves* 1– $\frac{1}{2}$ in.; petiole $\frac{1}{4}$ –2 in. *Racemes* 8 in., or sometimes depauperated and 1–3-fl'd.; bracteoles $\frac{1}{12}$ – $\frac{1}{6}$ in., filiform. *Calyx* $\frac{1}{2}$ in., somewhat enlarged in fruit; lobes lanceolate, sometimes very acuminate, sometimes subtriangular. *Corolla* blue and white, tube slightly incurved, as though hooded in the throat; 2 lateral lobes of the lower lip narrow falcate. *Capsule* $\frac{1}{2}$ in. diam. *Seeds* not striated.

VAR. *parviflora*; lower lip of corolla narrower hardly twice as long as the upper. *R. obliquum*, *Wight Ill.* t. 159 bis, fig. 7; *Clarke Comm. & Cyrt. Beng.* t. 88. *R. zeylanicum*, *Bot. Mag.* t. 1498. *Wulfenia obliqua*, *Wall. Cat.* 407, and *Tent. Fl. Nep.* 45, t. 35. *Loxotis obliqua*, *Benth. Scroph. Ind.* 57.—*Rheede Hort. Mal.* ix. t. 80.—Throughout India; alt. 0–5000 ft., in and near the hills, very common; from Kumaon to Bhotan; in Chota Nagpore and Central India, and in the W. Deccan Peninsula, from Bombay to Ceylon.

XVII. JERDONIA, *Wight.*

A perennial, stemless herb. *Leaves* elliptic, reticulate; petiole long.

Scapes slender, few-fl'd.; bracts small. *Sepals* 5, lanceolate. *Corolla* pale lilac with red lines; tube elongate, swollen upwards; limb oblique, 2-lipped; lobes 5, ovate, obtuse, nearly equal. *Stamens* 4 perfect; filaments short, dilated upwards, 2 spurred; anthers connivent, cohering by their apices, 2-celled; cells ellipsoid, divergent at base, early divaricate and confluent. *Ovary* ovoid; disc annular; style linear, stigma small scarcely 2-lobed; placenta 2-partite into 2 flat plates bearing ovules on both faces. *Capsule* broadly ovoid, acute, loculicidally 2-valved; placenta scarcely altered in fruit. *Seeds* funicled, ellipsoid, subumbonate at the apex, smooth, testa striate coarsely reticulate.

J. indica, *Wight Ic.* t. 1352, and *Ill.* t. 159 bis, fig. 2; *Bot. Mag.* t. 5814.

S. DECCAN PENINSULA; Nilgherry and Anamally Hills, and Bolimputty near Coimbatore, *Wight*.

Stem 2 in., thick, creeping, upwards (with the innovations) rufous-hirsute or woolly. *Leaves* alternate, dense, $2\frac{1}{2}$ by 2 in., obtuse at both ends, entire, rufous-ciliate on the margin, mature glabrate above, rusty puberulous on the nerves beneath; petiole 2-4 in. *Scapes* 2-4 in., rufous-pilose; bracts $\frac{1}{10}$ in., sublinear; pedicels $\frac{1}{10}$ - $\frac{1}{4}$ in., in fruit somewhat thickened upwards. *Sepals* $\frac{1}{10}$ in., rusty puberulous. *Corolla* $\frac{3}{8}$ in.; lobes $\frac{1}{2}$ in. diam. *Filaments* sparsely pilose. *Ovary* and style glabrous. *Capsule* $\frac{1}{8}$ in. long and broad.

XVIII. **LEPTOBCEA**, *Benth.*

Shrubs. *Leaves* opposite, often crowded. *Peduncles* filiform, lax, few-fl'd.; bracts small, linear; pedicels capillary. *Calyx* small, 5-fl'd. *Corolla* small, campanulate, slightly gibbous at the base, white; limb obscurely 2-lipped; lobes 5, subequal, round. *Stamens* 4 perfect, included; anther-cells ellipsoid, divergent at the base, ultimately confluent at the apex. *Ovary* sessile, ellipsoid; disc 0; style linear, stigma small subcapitate; placenta deeply intruded, of 2 plates, bearing ovules on both faces. *Capsule* linear or oblong, septicidally 2-valved; margins of the valves inflexed bearing the placenta, valves soon or late 2-partite. *Seeds* minute, ellipsoid, smooth.—Species 2, in N. and E. Bengal.

1. **L. multiflora**, *Gamble Darjeeling List*, 58; leaves elliptic acuminate at both ends pubescent, capsule $\frac{3}{4}$ in. linear 2-valved late or scarcely at all 4-valved. *Championia multiflora*, *Clarke Comm. & Cyrt. Beng.* t. 68.—*Cyrtandracea* n. 100, *Griff. Itin. Notes*, p. 107.

SIKKIM and BHOTAN, alt. 3000 ft., frequent; *Griffith, J. D. H.*, &c. ASSAM; *Griffith*. KHASIA MTS., alt. 2000 ft., frequent.

A shrub, 2-6 ft. *Leaves* attaining 4 by $1\frac{1}{2}$ in., minutely crenulate, hairy on both surfaces or at least on the nerves beneath; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Peduncles* $\frac{1}{2}$ -1 in., often several fascicled on shortened lateral branches, 1-5-fl'd., pubescent; bracts $\frac{1}{2}$ in., linear; pedicels $\frac{1}{3}$ - $\frac{2}{3}$ in. *Calyx* $\frac{1}{12}$ in., persistent; teeth linear, pubescent. *Corolla* $\frac{1}{4}$ in., glabrous. *Ovary* minutely glandular; style glabrous, about as long as the ovary. *Capsule* glabrous, acute, beaked by the style; valves 2, often remaining attached at the apex or on one side (in the manner of *Loxocarpus*), ultimately again 2-partite.

2. **L. glabra**, glabrous, leaves elliptic acuminate at both ends, capsule $\frac{1}{2}$ in. oblong 2-valved nearly from the first 4-valved. *Cheilosandra leptopus*, *Griff. ms.*; *Benth. in Gen. Pl.* ii. 1025.

UPPER ASSAM; Mishmee Hills, *Griffith* (Kew Distrib. n. 3843).

A shrub, closely resembling *L. pubescens*, but altogether glabrous. *Petioles*

scarcely $\frac{1}{2}$ in. *Capsule* broadly oblong, subobtuse, early dehiscent from the apex into 4 obtuse valves, very nearly as in *Bœica*.

XIX. EPITHEMA, Blume.

Small, succulent, pubescent herbs. *Leaves* few or solitary, lower alternate, upper often opposite. *Peduncles* 1 or several, in the upper axils, free or confluent with the petiole or leaf-base; bract large, solitary, 1-sided, hooded or subspathaceous; flowers in a dense scorpioid raceme; bracteoles small, narrow. *Calyx* campanulate; lobes 5, acute, valvate in bud. *Corolla* small, tubular, 2-lipped, blue or white; lobes 5, not very unequal. *Stamens* 2 perfect; anthers cohering, 2-celled; cells short, divaricate, early confluent. *Ovary* ovoid; disc 1-sided; style filiform, stigma small subcapitate; placenta stalked, peltate, bearing ovules on all sides. *Capsule* globose, membranous, included, circumsciss. *Seeds* oblong or ellipsoid, subacute at both ends, smooth; cells of the testa elongate, often spiral.—Species 5 (or 1), from India to the Philippines, with 1 at Fernando Po.

E. carnosum, Benth. *Scroph. Ind.* p. 57; lower leaf petioled upper opposite nearly sessile sinuate-crenate thinly pubescent, bract rarely hooded, ovary densely pubescent at the apex, seeds narrowly oblong, cells of the testa nearly straight. *DC. Prodr.* ix. 278; *Clarke Comm. & Cyrt. Beng.* t. 90. *Aikinia carnosia*, G. Don *Gen. Syst.* iv. 665.—*Epithema?*, Wall. *Cat.* 9080.

E. SUBTROPICAL HIMALAYA, alt. 1–5000 ft., from Nepal to Bhotan, common; *Wallich*, &c. *KHASIA MTS.*, alt. 500–4000 ft., frequent; *H. f. & T.*, &c.

Stem $\frac{1}{2}$ –14 in. *Leaves* $\frac{1}{2}$ –8 in., ovate-cordate, sparsely laxly villous above, paler nearly glabrous beneath except on the nerves; petiole of the alternate leaf often 2–4 in., of the subsessile leaves rarely $\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ –4 in., free or racemously (not fasciculate) confluent with the petiole or leaf-base; bract $\frac{1}{2}$ – $\frac{3}{4}$ in., truncate; pedicels 0– $\frac{1}{2}$ in.; raceme subincluded in the bract or not; bracteoles minute, linear. *Calyx* $\frac{1}{2}$ – $\frac{1}{6}$ in., hairy; lobes lanceolate or triangular with a linear point. *Corolla* $\frac{1}{4}$ – $\frac{1}{2}$ in., with a ring of hairs within; lobes of the upper lip lanceolate, acute. *Capsule* $\frac{1}{2}$ in. diam.

VAR. dentata; leaves denticulate or sometimes subacutely doubly serrate.—Pegu and Tenasserim; Attaran, *Brandis*; Moulmein, *Parish*, &c.

VAR. hispida; leaves serrulate almost hispid above, seeds broadly oblong. *E. ceylanicum*, *Wight Ill.* t. 159 bis, fig. 3, and *Ic.* t. 1354; *Dalz. & Gibs. Bomb. Fl.* 135.—S. Deccan Peninsula; Courtallum, *Wight*; Nilgherries, *Thomson*; Concan, *Dalzell*, &c.

VAR. zeylanica; calyx larger, seeds twice as heavy as those of *E. carnosum* type. *E. zeylanica*, *Gardn. in Calc. Journ. Nat. Hist.* vi. 492. *E. carnosum*, *Thwaites Enum.* 208.—Ceylon; in the Central Province up to 4000 ft., common; *Gardner*, &c.

VAR. pusilla; small, nearly glabrous, calyx and ovary nearly glabrous, seeds spirally marked by the long cells of the testa.—Bombay?; *Stocks*.

XX. MONOPHYLLÆA, Br.

Succulent herbs; stem simple, having one leaf and several peduncles at the apex. *Leaf* large, sessile, cordate-ovate, entire. *Racemes* lax or dense, simple or divided; bract 0; bracteoles minute. *Sepals* small, round-ovate, imbricate in bud. *Corolla* small; tube cylindric or short; limb 2-lipped, lobes 5. *Stamens* 4, perfect, filaments short; anthers adherent. *Disc* annular. *Ovary* ovoid, glabrous; style short, linear, stigma sub-

capitate; placenta deeply inflexed, then recurved bearing the ovules. *Capsule* membranous, included, irregularly breaking up; placenta left in the centre. *Seeds* ellipsoid, smooth, striated, reticulated.—Species 5, Malayan.

M. Horsfieldii, *Br. in Benn. Pl. Jav. Rar.* p. 121; leaf nearly glabrous, racemes lax, corolla-tube longer than the calyx. *DC. Prodr.* ix. 274.

MALAYAN PENINSULA; Klang in Selangore, *Beccari*.—DISTRIB. Java, Sumatra.

Stem 4 in. *Leaf* 6–8 in. diam., membranous. *Peduncles* 2–5, 1–4 in., nearly glabrous; racemes simple or divided, $\frac{1}{2}$ –4 in.; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in., lower often distant, paired or fascicled. *Sepals* $\frac{1}{10}$ in., glabrous, slightly enlarged in fruit. *Corolla* $\frac{1}{2}$ in. *Anthers* ovate, 2-celled; cells soon confluent at the apex; filaments scabrid-glandular at the apex, not toothed. *Style* subsistent, exerted from the calyx in young fruit.

XXI. CYRTANDROMÆA, Zoll.

Undershrubs, thinly pubescent. *Leaves* opposite, subequal or (in non-Indian species) sometimes unequal, elliptic or oblong, acuminate at both ends, serrate. *Racemes* axillary, small, 1- or few-fl., or elongate many-fl.; pedicels 1-bracteate at base, 2-bracteolate near the middle; bracts and bracteoles small, linear. *Calyx* tubular, 5-ribbed, 5-toothed; in fruit enlarged, membranous, subtruncate. *Corolla* large, white, sometimes with yellow lines in the throat within, glabrous; tube nearly straight; lobes 5, subequal, round, patent. *Stamens* 4, perfect, included, filaments linear; anther-cells 2, oblong, divergent at base. *Disc* obscure. *Ovary* 1-celled (2-celled near the base); placenta nearly meeting in its axis, not there bearing ovules, then recurved ovuliferous; style elongate, stigma of two semicircular plates. *Capsule* included in the inflated calyx, ellipsoid, papery, irregularly breaking up or loculicidal; placenta early free forming a 4-pointed column covered by seeds on all sides. *Seeds* subglobose, testa strongly reticulated by subquadrate cells.—Species 8, Malayan.

1. **C. decurrens**, *Zoll. Syst. Verz. Ind. Arch.* i. 58; leaves elliptic acuminate base much decurrent, racemes many-fl., calyx glabrous, capsule irregularly breaking up. *Loxonia?* *decurrens*, *Blume Bijl.* 776; *DC. Prodr.* ix. 277. *Busea decurrens*, *Miq. Fl. Ind. Bat.* ii. 733. *Cyrtandra acuminata*, *Kurz in Trimen. Journ. Bot.* 1875, 329, not of Wall.

NICOBAR; *Kurz*.—DISTRIB. Java.

A nearly glabrous undershrub, 3–6 ft. high; stem little-divided, leafy at the top. *Leaves* 6 in., serrate nearly from the base; nerves 17–20 pair; petiole hardly any by reason of the much decurrent leaf-base. *Racemes* abbreviated, few-fl., or attaining $3\frac{1}{2}$ in., 20-fl., pendulous; pedicels $\frac{2}{3}$ in.; bracteoles $\frac{1}{2}$ in., linear, glabrous. *Calyx* $\frac{1}{2}$ in., corolloid, white or tinged orange; in fruit $\frac{3}{4}$ –1 in., reticulate. *Corolla* $1\frac{1}{2}$ in. *Capsule* $\frac{1}{2}$ by $\frac{1}{4}$ in., ellipsoid.—Zollinger's specimen agrees with *Kurz's* Nicobar plant; but his description perhaps includes *C. acuminata* as well as *C. decurrens*.

2. **C. acuminata**, *Benth. in Gen. Pl.* ii. 1020; leaves elliptic acuminate, peduncles 1-fl. shorter than the petioles, capsule loculicidal 2-valved. *Cyrtandra?* *acuminata*, *Wall. Cat.* 1808; *DC. Prodr.* ix. 285, name only; not of *Kurz*. *Busea subsessilis*, *Miq. Fl. Ind. Bat.* ii. 734.

PENANG; *Wallich, Porter*. SINGAPORE; *Maingay, Lobb*.—DISTRIB. Sumatra.

An undershrub, 3 ft. high. *Leaves* 4–6 in., serrate nearly from the base, mature sparsely pubescent; nerves 10 pair; petiole $\frac{3}{4}$ in. *Peduncles* pubescent; bracteoles $\frac{1}{2}$ in., linear. *Calyx* $\frac{1}{2}$ in., 5-ribbed, minutely pubescent; in fruit $\frac{3}{4}$ in., reticulate. *Corolla* $1\frac{1}{2}$ in. *Capsule* $\frac{1}{2}$ by $\frac{1}{4}$ in., dehiscent from the apex so as to split the style-base.

3. **C. cymulosa**, *Clarke*; leaves elliptic acuminate petioled, cymes small 1-5-fld. subsessile, calyx nearly glabrous, capsule breaking up irregularly.

TENASSERIM; at Mergui, *Griffith*, *Helser* (Kew Distrib. n. 3827).

Leaves 8 by 3½ in., nearly glabrous, narrowed at the base; nerves 10 pair; petiole ½-¾ in. Cymes scarcely ¾ in., appearing sessile on weak axillary spurs, pubescent. Otherwise as *C. decurrens*, from which it differs in the petioled, much less-nerved leaves.

4. **C. grandiflora**, *Clarke*; leaves petioled elliptic acuminate, peduncles 1-2-fld. with the pedicels nearly 1 in., flowering calyx ¼ in. minutely pubescent.

TENASSERIM; at Moulmein, *Lobb*.

Branch terete, shortly fulvous-pubescent. Leaves 6 by 2 in., both ends much acuminate, serrate, minutely pubescent; nerves 9 pair; petiole ¾ in. Corolla 2½ in. Capsule (and fruit-calyx) as of *C. decurrens*, not perfectly ripe, so that it is not certain whether it opens by valves.

XXII. STAURANTHERA, *Benth.*

Low, succulent, pubescent herbs. Leaves alternate, or opposite one of each pair reduced to a small auricle, falcate, elliptic, acuminate, very unequal-sided. Cymes peduncled, lax, subracemose; bracts small. Calyx wide-campanulate; lobes 5, wide-spreading, subuplicate. Corolla campanulate, spurred or gibbous at the base, somewhat 2-lipped; lobes 5, subequal. Stamens 4 perfect, filaments short; anthers 2-celled, cohering crosswise into a depressed cone; cells diverging at the base, dehiscing on the inner face by slits ultimately confluent at the apex. Disc 0. Ovary sessile, subglobose; style short, stigma broad, margin sublobed; placentæ deeply inflexed, bifid, branches lobed, bearing ovules on both sides. Capsule depressed-globose, overtopped by the calyx, papery, transversely or irregularly breaking up. Seeds minute, obovoid, smooth; testa reticulated, cells often spiral.—Species 4, from Assam and Chittagong to Java and Celebes.

1. **S. umbrosa**, *Clarke Comm. & Cyrt. Beng.* t. 89; leaves alternate, corolla ¼-½ in. gibbous not spurred at the base. *Cyananthus umbrosa*, *Griff. Notul.* iv. 154, and *Ic. Pl. Ind. Or.* t. 437.

UPPER ASSAM; Gubroo Hills, *Griffith* (Kew Distrib. n. 3845).—DISTRIB. Ava.

Stem 4-12 in., occasionally branched, dusky-pubescent. Leaves attaining 8 by 3 in., obscurely crenate, glabrate above, fuscous-pubescent (at least on the nerves) beneath; petiole ½-¾ in. Peduncles ¾-1½ in.; cymes 2-3 in., dusky-pubescent; pedicels ¼-½ in. Calyx ¼-½ in. diam., lobed half-way down; lobes triangular. Corolla white, with blue marks, yellow near the base within. Ovary pubescent. Capsule circumsciss near the base (*Griffith*); placentæ fungose (*Griffith*), but are in the dried state thin.

2. **S. grandiflora**, *Benth. Scroph. Ind.* 57 (by misprint *grandifolia*); leaves opposite, corolla 1 in. spurred at the base. *S. grandifolia*, *Br. in Benn. Pl. Jav. Rar.* 121; *DC. Prodr.* ix. 278; *Bot. Mag.* t. 5409; *Clarke Comm. & Cyrt. Beng.* t. 89 bis. *Glossanthus grandiflorus*, *Benth. in Wall. Cat.* 6395.

PENANG; *Wallich*. CHITTAGONG HILLS; *Clarke*. MOULMEIN; *Parish*.

Stem 4-12 in., dusky-pubescent. Leaves attaining 10 by 4½ in., obscurely toothed, mature nearly glabrate except on the nerves beneath; petiole ½-1 in. Inflorescence and calyx nearly as in *S. umbrosa*. Corolla blue, with yellow marks in the tube within; spur ½ in. Ovary thinly pubescent or glabrous. Capsule ½ in.

broad, breaking up irregularly.—The examples from the Chittagong Hills (without flowers) are more hairy, the leaves beneath closely grey-pilose.

S. ? Brandisi; leaves alternate, pedicels long fascicled in abbreviated cymes, calyx narrow, capsule small longer than broad.

PGU; Thongyun, *Brandis*.

Stem creeping at the base; innovations rusty-silkily woolly. *Leaves* 7 by 4 in., shortly acute, very unequal-sided, somewhat thick, glabrate above, rusty-villous beneath; petiole $\frac{1}{2}$ in. *Pedicels* in fruit $\frac{1}{2}$ – $\frac{3}{4}$ in., glabrous; bracts $\frac{3}{4}$ by $\frac{1}{2}$ in., oblong, obtuse, nearly glabrous. *Sepals* in fruit $\frac{1}{2}$ by $\frac{1}{2}$ in., elliptic, acute, imbricate, shortly united at the base, nearly glabrous. *Capsule* $\frac{1}{2}$ by $\frac{1}{16}$ in., acute, glabrous, papery, indehiscent; placentæ deeply intruded, bifid, branched; plates thin, bearing ovules on both sides. *Seeds* minute, obovoid, smooth.—Probably a new genus, but the flowers are unknown; the leaves are much like those of *Stauranthera umbrosa*; the inflorescence, bracts, calyx and capsule do not suit *Stauranthera*, but *Rhynchotechum*.

XXIII. ISANTHERA, *Nees*.

Small, nearly simple, undershrubs; innovations tawny, silkily woolly. *Leaves* all alternate, broadly oblanceolate, acuminate at both ends. *Cymes* axillary, short-peduncled, towards the end of the stem; bracts narrow. *Sepals* 5, small, narrow. *Corolla* small, shortly campanulate, obscurely 2-lipped; lobes 5, ovate. *Stamens* 4 fertile (sometimes 5 fide *Nees*); filaments short; anthers small, subquadrate, 2-celled, slits marginal, finally confluent at the subemarginate apex. *Disc* very small or 0. *Ovary* ovoid, sessile; style shorter than the ovary, stigma small simple; placentas deeply inflexed, then bifid recurved bearing the ovules. *Berry* small, ovoid or subglobose, fleshy, indehiscent or (fide *Gardner*) ultimately 2-valved. *Seeds* very small, ellipsoid, smooth.—Species 3, in India, Malaya and the Philippines.

A genus which should perhaps be merged in *Rhynchotechum*; differing in having no opposite leaves, a shorter style, and the anthers dehiscent exactly on the margins.

I. permollis, *Nees in Trans. Linn. Soc.* 17, p. 82; leaves nearly entire, nerves 11–19 pair, cymes short-peduncled dense. *Wall. Cat.* 9073; *DC. Prodr.* ix. 279; *Wight Ill.* t. 159 b, fig. 5, and *Id.* t. 1355. I. floribunda, *Gardn. in Calc. Journ. Nat. Hist.* vi. 483. *Cyrtandra* ? lanuginosa, *R. Br. in Wall. Cat.* 7131.

S. MADRAS, *Heyne*; Nilgherries and Courtallum, *Wight*, &c. CEYLON, up to 4000 ft. alt.; *Gardner, Thwaites*, &c.

Stem 8–12 in. *Leaves* attaining $9\frac{1}{2}$ by 4 in.; mature glabrous above, more or less tawny and woolly beneath; petiole $\frac{1}{2}$ –1 in. *Peduncles* scarcely as long as the petioles; cymes $\frac{1}{2}$ –1 $\frac{1}{2}$ in. diam. *Sepals* $\frac{1}{2}$ in., silky, finally nearly glabrous. *Corolla* 1 in., white. *Berry* $\frac{1}{2}$ by $\frac{1}{2}$ in.—In *Wight's* figures the anthers are depicted from an example past flower.

VAR. ? paucinerva; nerves of the leaves 6–8 pair.—*Mergui*; *Griffith* (in *Herb. Wight*).—This might be suspected a misplaced ticket; but out of the abundant Ceylon material, none has few-nerved leaves resembling this.

XXIV. RHYNCHOTECHUM, *Blume*.

Erect, simple undershrubs; innovations tawny, silkily woolly. *Leaves* opposite or lower alternate, usually large. *Cymes* in the lower axils, many-fld., trichotomous or umbellately compound; bracts narrow, inconspicuous.

Sepals 5, small, narrow. *Corolla* small, subcampanulate, purple-rose or white; limb obscurely 2-lipped; lobes 5, subequal, round. *Stamens* 4 perfect, attached near the base of the corolla, filaments short linear curved; anther-cells 2, subparallel below, dehiscent on the inner face, completely confluent at the apex. *Disc* 0 or very small annular. *Ovary* sessile, ovoid; style linear elongate, stigma small; placentæ nearly meeting in the axis of the ovary, there naked, then recurved bearing the ovules. *Berry* small, globose, apiculate, glistening white, pulpy. *Seeds* very small, ellipsoid, smooth.—Species 8, from Bengal through Malaya to the Philippines.

1. *R. parviflorum*, *Blume Bijl.* p. 775; leaves broadly oblanceolate serrate mature glabrate except on the nerves beneath, sepals softly tawny-villous, corolla very small, ovary upwards densely shortly hairy.

JAVA; frequent.

VAR. ? *penangensis*; sepals caudate-acuminate tawny silky in fruit, corolla exceeding the sepals.—PENANG.—The material is a stem with flowers and half-ripe fruit, but no leaves, which has been doubtfully referred to *R. ellipticum*, from which it differs in the indumentum, and the minutely hairy ovary. It is either a large-fl. var. of *R. parviflorum*, or a species nearly allied to it. The peduncles are all opposite at the nodes; in the Java *R. parviflorum* the lower leaves and peduncles are frequently alternate.

2. *R. ellipticum*, *A. DC. Prodr.* ix. 285, *in note*; leaves broadly elliptic or obovate acute minutely dentate mature glabrous above, sepals after flowering patently pilose, corolla $\frac{1}{4}$ in., ovary glabrous or with very few gland-tipped hairs. *Bot. Mag.* t. 5832; *Clarke Comm. & Cyrt. Beng.* t. 91. *Corysanthera elliptica*, *Wall. Cat.* 6411.—*Cyrtandracea*, *Griff. Ic. Pl. Asiat.* t. 439.

SIKKIM, BHOTAN, ASSAM, KHASIA MTS., CACHAR and SILHET; alt. 0-3500 ft. in or near the hills, frequent.

Stem 2-4 ft., thick, cinnamomeous, tomentose or woolly at the apex. *Leaves* opposite, $6\frac{1}{2}$ by $3\frac{1}{4}$ in. (often larger), base cuneate, somewhat coriaceous, whitened beneath, above tawny, silkily woolly, afterwards glabrate, beneath densely cinnamomeous-woolly, afterwards glabrous except the nerves; nerves 15-20 pair, subparallel; petiole $\frac{1}{2}$ -1 $\frac{1}{2}$ in. *Peduncles* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., often 2-4 together (or the peduncle divided from the base), when young tawny-silky, divaricately often umbellately divided. *Sepals* $\frac{1}{2}$ in., narrowly lanceolate, mature squamous or scabrous from the thick spreading hairs, often corolloid, rose. *Corolla* rose-purple, minutely hairy without. *Berry* $\frac{1}{4}$ in. diam.

VAR. *pilosior*; mature leaves above with close short white hairs, sepals patently hispid.—Darjeeling; alt. 3500 ft., *Clarke*.

VAR. *angusta*; leaves narrowly elongate-lanceolate (sometimes 10 by $1\frac{1}{4}$ in.), nerves 10-15 pair.—Cachar; *H. f. & T., Keenan.* MARTABAN; *Parish.*—Possibly a distinct species; see *Hook. f. in Bot. Mag.* t. 5832.

VAR. *Hookeri*; leaves oblong, cymes very dense repeatedly trichotomous.—Chittagong; Seetakoond, alt. 1000 ft., *H. f. & T.*; Demagri, alt. 250 ft., *Clarke.*—Probably only the full form of the preceding variety *angusta*.

3. *R. vestitum*, *H. f. & T.*; *Clarke Comm. & Cyrt. Beng.* t. 92; leaves elliptic acuminate at both ends slightly dentate hirsute on both surfaces, inflorescence very hirsute, corolla $\frac{1}{2}$ - $\frac{3}{4}$ in., ovary glabrous or nearly so. *Corisanthera vestita*, *Griff. Itin. Notes*, 124, n. 426.

SIKKIM and BHOTAN HIMALAYA, ASSAM, KHASIA MTS., alt. 1-3000 ft., not rare; *Griffith, H. f. & T., &c.*

Stem 3 ft., thick, patently hispid upwards. *Leaves* opposite, 9 by $2\frac{1}{2}$ in., hirsute above with long yellow hairs rising from tubercles, more softly hairy beneath; petiole

1 in. *Peduncles* $\frac{1}{2}$ –1 in. *Sepals* $\frac{1}{2}$ in., narrowly lanceolate, patently hispid like the leaves. *Flowers* and berries as of *R. ellipticum*, but a little larger.

4. ***R. latifolium***, *H. f. & T.*; *Clarke Comm. & Cyrt. Beng.* t. 94; leaves oblanceolate or obovate acuminate at both ends subdenticulate mature glabrous above more or less tawny and silkily woolly beneath, cyme 4–6 in. diam. very divaricate compound silkily woolly. *Chelone latifolia*, *Ham. in Herb. Wall.* *Chiliandra obovata*, *Griff. Notul.* iv. 150, and *Ic. Pl. Asiat.* t. 438.

ASSAM, *Wallich, Griffith*; Mishmee Hills, *Griffith*.—DISTRIB. Ava.

Stem thick, silkily woolly upwards. *Leaves* opposite, 8 by 3 in. (sometimes obovate larger); petiole 1 in. *Peduncles* 2 in., stout; cyme umbellately decomposed, many- (sometimes 150-) fld. *Sepals* $\frac{1}{2}$ in., narrowly lanceolate. *Corolla* hardly longer than the calyx, white with the upper lip purple (*Griffith*). *Berry* $\frac{1}{2}$ in. diam. when dry.

5. ***R. alternifolium***, *Clarke*; leaves (except the uppermost pair) alternate elongate elliptic acuminate at both ends denticulate mature nearly glabrous except the nerves, cymes peduncled compound tawny silky.—*Corisanthera* sp., *Griff. ms.*

UPPER ASSAM; Brahmakoond, *Griffith*.

Stem upwards (with the innovations) cinnamoneous, silkily woolly. *Leaves* of the uppermost pair one $7\frac{1}{2}$ by $2\frac{1}{2}$ in., the other $2\frac{1}{2}$ by $\frac{3}{4}$ in.; petiole $1\frac{1}{2}$ in. *Peduncles* 1 in.; inflorescence much as of *R. latifolium*, but less divaricate. *Corolla* distinctly 2-lipped, upper lip longer less deeply divided. *Anthers* largeish, dehiscent on the inner face, minutely glandular at the apex, slits early confluent at the apex. *Style* very long.—This species (with some other Malay plants) entirely annuls the simple distinction given in the Gen. Plant. between *Rhynchotechum* and *Isanthera* of “leaves opposite” and “leaves alternate;” except for the alternate leaves and peduncles it is altogether a *Rhynchotechum*.

6. ***R. calycinum***, *Clarke*; glabrate in fruit, leaves elongate-elliptic nearly entire, cymes short-peduncled very dense, sepals lanceolate prominent.

UPPER ASSAM?; “on the Soondra bank.”

Stem very thick. *Leaves* all opposite, 10 by $3\frac{1}{2}$ in., narrowed at both ends, subcoriaceous, not seen young; petiole 2 in. *Peduncles* 1 in., 2–5-clustered; cymes in fruit subcapitate, very many-fld., glabrate; bracts $\frac{1}{2}$ in., oblong. *Sepals* $\frac{1}{2}$ in. *Corolla* not seen. *Berry* small, glabrous.

XXV. **CYRTANDYA**, *Forst.*

Shrubs or trees. *Leaves* opposite, equal or unequal, or one of each pair rudimentary or wanting. *Flowers* in cymes or heads, peduncled or sessile, axillary; bracts often large or connate into an involucre. *Calyx* free, ovoid or tubular, deciduous or persistent; teeth 5, acute. *Corolla* tubular-funnel-shaped; lobes 5, round, spreading, subequal (in the Indian species). *Stamens* 2 perfect, 2 or 3 rudimentary; anthers included (in the Indian species) 2-celled; cells broad-oblong, subparallel, slits longitudinal. *Disc* annular, or (in non-Indian species) unilateral subquadrate. *Ovary* superior; style long or short, stigma shortly 2-lobed; placenta nearly meeting, then revolute. *Berry* fleshy, ovoid oblong or linear, usually white. *Seeds* very many, minute, ellipsoid, smooth, testa obscurely reticulated.—Species 160, Malayan and Polynesian, from Penang to the Sandwich Islands.

1. **C. dispar**, DC. *Prodr.* ix. 282; leaves apparently alternate petioled lanceolate-obovate, peduncles short, pedicels umbelled, calyx persistent. *C. frutescens*, Wall. *Cat.* 807 partly, not of Jack.

PENANG; Wallich, Maingay.—DISTRIB. Sumatra.

A shrub; branchlets tessellated with imbricate whitened scales, somewhat quadrangular. Leaves opposite, one of the pair reduced to a linear rudiment of the petiole or 0; the other 8 by 3 in., acuminate, base cuneate, glabrate except the rufous-villous nerves beneath; petiole $\frac{1}{2}$ –1 in. Peduncles 0– $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in., lanceolate; pedicels 3–8, $\frac{1}{2}$ – $\frac{3}{4}$ in. Calyx $\frac{1}{2}$ in., fulvous-hirsute, lobed half-way down. Corolla-tube $\frac{1}{2}$ in., slightly curved, fulvous-hirsute without; limb nearly equally 5-lobed. Disc unilateral, quadrangular. Ovary fulvous-pubescent. Berry $\frac{1}{2}$ in., elongate ellipsoid, tipped by the style-base.

2. **C. pilosa**, Blume *Bijd.* 770; leaves opposite subequal sessile obovate-lanceolate, villous above, peduncles very short, flowers involucred capitate, calyx deciduous. DC. *Prodr.* ix. 282.

TENASSERIM; Helfer. SINGAPORE; Lobb.—DISTRIB. Java, Sumatra.

A shrub; branchlets 4-angled; innovations rufous silky. Leaves 7 by 3 $\frac{1}{2}$ in., acute, base narrowed, closely serrate; nerves beneath fulvous-villous. Peduncles scarcely $\frac{1}{2}$ in.; bracts 1 in., united into a spathaceous involucre, deciduous. Calyx $\frac{1}{2}$ in., lobed about half-way down, rufous-hairy. Corolla-tube 1 in., straight, fulvous-silky without, dirty yellow. Ovary and style hairy. Berry $\frac{3}{4}$ in., elongate ellipsoid, beaked by the style-base, tessellated externally (in the dried state).

3. **C. decurrens**, De Vriese *Pl. Ind. Bat. Reinw.* 14; leaves opposite subequal subsessile obovate-lanceolate glabrous above, peduncles very short, flowers involucred capitate. *C. frutescens*, Wall. *Cat.* 807 partly, not of Jack.

PENANG; Wallich.—DISTRIB. Malaya to Borneo.

Hardly specifically separable from *C. pilosa*. The leaves, even in their young stage, are glabrous on the upper surface, and have the lateral nerves more oblique the midrib.

4. **C. bicolor**, Jack in *Trans. Linn. Soc.* xiv. 27; leaves opposite (one usually reduced to a rudiment) long-petioled elliptic, peduncles short deflexed, flowers capitate, calyx deciduous. DC. *Prodr.* ix. 281.

MALACCA; Maingay.—DISTRIB. Sumatra.

An undershrub; stem short, simple, stout; innovations closely fulvous-villous. Leaves 8 by 5 in., base obtuse, rounded or shortly cordate, coriaceous, mature fulvous-silky beneath or ultimately glabrate except on the nerves; petiole 4 in. Peduncles 1–2 in.; bracts $\frac{3}{4}$ in., united into a spathaceous involucre, deciduous. Calyx $\frac{1}{2}$ in., rufous-hairy; lobes $\frac{1}{2}$ in., lanceolate. Corolla 1 $\frac{1}{2}$ in., fulvous-silky without, pale-yellow purple-spotted within (Maingay). Anthers broadly oblong, minutely pilose at both ends. Disc annular. Ovary and style glabrous. Berry $\frac{1}{2}$ in., narrowly ovoid-cylindric.—*C. Blumeana* of the Javan botanists, figured (as *C. pendula*, Blume) in Hook. Ic. Pl. t. 736, is common in Java, and perhaps does not specifically differ; it has white flowers, and the leaves more glabrous beneath.

5. **C. humilis**, Blume *Bijd.* p. 769; leaves opposite (one often reduced to a rudiment) long-petioled elliptic acute, peduncles hardly any, heads involucred, calyx tubular deciduous. DC. *Prodr.* 9, p. 281.

SINGAPORE; Prince (Ic. Ined. Kew).—DISTRIB. Java.

Scarcely differs from *C. bicolor*: The leaves are often rhomboid or crenate at the base, the peduncles very short not decurved.

ORDER CVII. **BIGNONIACEÆ.** (By C. B. Clarke.)

Trees (*Nyctocalos* a large climber, *Amphicome* a herb). *Leaves* opposite, rarely whorled (in *Amphicome* alternate), 1-2-3-pinnate or sometimes undivided. *Panicles* or racemes terminal, rarely on short lateral branches; bracts inconspicuous; flowers showy, hermaphrodite, irregular. *Calyx* gamosepalous, campanulate (in the Indian species), valvate, spathaceous or 2-5-lobed. *Corolla* tubular-ventricose; mouth 2-lipped; lobes 5, subequal or slightly unequal, bilabiate imbricate in the bud. *Stamens* 4, didynamous, rudiment of the fifth often present (5 subequal in *Oroxylum*); inserted at the point where the corolla-tube is suddenly swollen; filaments linear, glabrous or hairy only at the base; anthers 2-celled, included or rarely shortly exerted; cells elliptic or narrowly oblong, dehiscing by longitudinal slits, parallel or divaricate. *Disc* usually cushion-like or annular. *Ovary* subsessile, 2-celled; style long glabrous, stigma of 2 elliptic lobes; ovules in many rows (in *Amphicome* in 1-2 rows) grouped in a double series in each cell, anatropous. *Capsule* mostly elongate, loculicidally or septicidally 2-valved; septum in fruit enlarged, deciduous together with the placenta. *Seeds* compressed discoid (rarely subtrigonal) prominently winged, exalbuminous.—Species 450, in the tropics of the whole world, a few in the warm temperate zones of both hemispheres.

Bignonia macrostachya, *lata* and *glauca*, Wall. Cat. 6504, 6505, 6506, were collected in Ava, not in British India. *Bignonia oxyphylla*, DC. Prodr. ix. 169, is said to be from India in Wallich's Herbarium. There is no plant under that name now in Wallich's Herbarium, nor is it likely that any tree of the genus *Bignonia* is wild in India.

I. **NYCTOCALOS**, *Teysm. & Binn.*

Large glabrous climbers. *Leaves* opposite, 3-foliolate; leaflets petioled, entire. *Peduncle* terminal, long, few-fl. *Calyx* tubular-campanulate, truncate or with 5 short teeth. *Corolla* large, white; tube very long; segments 5, round. *Stamens* (in the Assam species) 4, didynamous,

attached near the top of the corolla-tube; anther-cells distinct, narrowly oblong, pendulous. *Capsule* oblong, flattened parallel to the septum, septicidally 2-valved. *Seeds* thinly discoid, completely surrounded (except at their base) by a hyaline entire wing.—Species 3, 2 in Malaya, 1 in Assam.

The Malay species, on which the genus is founded, are described and figured with 5 fertile stamens, having the anther-cells combined. The Assam species constitutes a marked sub-genus.

N. Thomsoni; *Hook. f. Bot. Mag. t.* 5678.

ASSAM; Gowhatty Hills, *Jenkins*; Mikir Hills, *Simons*.

Leaflets 6 by 3 in., broadly elliptic, caudate-acuminate, rhomboid at the base; petiolule $\frac{1}{2}$ –2 in.; petiole 4 in. *Peduncles* 6 in.; bracts $\frac{1}{2}$ in.; pedicels 6, $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ by $\frac{1}{2}$ in.; teeth 5, $\frac{1}{10}$ in., linear. *Corolla-tube* 7 by $\frac{1}{2}$ in., mouth $2\frac{1}{2}$ in. diam. *Anthers* subexsert, yellow; connective minutely mucronate; rudiment of the fifth stamen present. *Disc* small, cushion-like. *Style* 7 in.; stigma tongue-shaped, subcapitate. *Capsule* 6 by 2 in.; valves leathery, almost woody; septum ultimately free, simple, flat. *Seeds* $\frac{1}{2}$ – $\frac{1}{4}$ in. diam., or including the wing 1 in. diam.; those attached on opposite margins of the septum much overlapping.

II. **MILLINGTONIA**, *Linn. f.*

An erect tree; bark corky. *Leaves* opposite, 2–3-pinnate. *Panicles* many-flid., terminal on the pendent branches. *Calyx* small, campanulate; teeth 5, obscure. *Corolla* white; tube long, slender; lobes 5, subequal, ovate, acute, subvalvate. *Anthers* of 1 ovate cell, the second cell appearing as a small hook. *Capsule* linear, compressed parallel to the septum, septicidally 2-valved. *Seeds* thinly discoid; wing hyaline, broad.

M. hortensis, *Linn. f. Suppl.* 291; *DC. Prodr.* ix. 182; *Wight Ill.* 161 *bis*, fig. 6, *bad*; *Bureau Monogr. Bign.* t. 8; *Bedd. Fl. Sylv.* t. 249 (*anthers wrong*); *Brand. For. Fl.* 347; *Kurz For. Fl.* ii. 238. *Bignonia Azedarachta*, *Koen. Ann. Bot.* i. 178. *B. suberosa*, *Roxb. Cor. Pl.* iii. 11, t. 214, and *Fl. Ind.* iii. 111; *Wall. Cat.* 6513.

BURMA; in the tropical forests from Ava to Tenasserim, fide *Kurz*.—DISTRIB. Planted extensively in India, and in other tropical countries. Perhaps wild also in Central India and on the Upper Godavery.

An erect tree, 80 ft., lanceolate in outline, branches drooping. *Leaves* 2–3 ft.; leaflets 2–3 in., ovate-lanceolate, acuminate, sinuate or crenate, young pubescent, mature nearly glabrous; petiolules of the upper tertiary leaflets hardly any. *Peduncles* 1–3 in.; panicles 10 by 6 in.; bracts inconspicuous. *Calyx* $\frac{1}{2}$ in. *Corolla-tube* 2–3 by $\frac{1}{2}$ in.; mouth 1 in. diam. *Stamens* shortly exsert, glabrous; anthers white. *Disc* small, cushion-like; stigma exsert, of 2 small ovate plates. *Capsule* 12 by $\frac{1}{2}$ in., acute at both ends; valves woody; septum ultimately free, simple, flat; seeds including the wing 1 by $\frac{1}{2}$ in.; wing narrow at the apex, 0 at the base; seeds attached on opposite margins of the septum much overlapping.

III. **OROXYLUM**, *Vent.*

A glabrous tree. *Leaves* opposite, large, 2–3-pinnate; leaflets ovate, entire. *Raceme* terminal, long. *Calyx* large, leathery, campanulate, truncate or obscurely toothed. *Corolla* large, campanulate-ventricose, white or purplish; lobes 5, subequal, round, crisped, toothed. *Stamens* 5; anthers glabrous, 2-celled; cells parallel, oblong. *Capsule* large, linear, compressed parallel to the septum, septicidally 2-valved. *Seeds* thinly discoid; wing hyaline, broad.

O. indicum, *Vent. Dec. Gen. Nov.* 8; *Kurz For. Fl.* ii. 237. *Bignonia indica*, *Linn. Sp. Pl.* 871; *Lamk. Dict.* i. 423; *Roxb. Fl. Ind.* iii. 110; *Wall. Cat.* 6514; *Bedd. For. Man.* 148. *B. pentandra*, *Lour. Fl. Cochinch.* 379. *Spathodea indica*, *Pers. Syn.* ii. 173. *Calosanthos indica*, *Blume Bijdr.* 760; *DC. Prodr.* ix. 177; *Wight Ic.* t. 1337; *Dalz. & Gibs. Bomb. Fl.* 161; *Bureau Monogr. Bign.* t. 9; *Brand. For. Fl.* 347.—*Rheede Hort. Mal.* i. t. 43.

Throughout INDIA, alt. 0–3000 ft., from the Himalaya to Ceylon and Malacca, common; not in the western drier area, but in the Terai west to the Chenab (*Brandis*).—DISTRIB. Malaya, Cochin China, Ava.

Attains 25–40 ft. (Roxburgh says “one of the tallest trees on the Coromandel coast,” concerning which there must be some mistake); bark thick., *Leaves* 2–4 ft. diam., ternately bipinnate; leaflets 5 by 3–4 in., acuminate; petiolule short. *Peduncle* 1 foot, thick; raceme 10 in.; pedicels $\frac{1}{2}$ –1 in. *Calyx* 1 by $\frac{3}{4}$ in., fleshy. *Corolla* $2\frac{1}{2}$ in., fleshy; mouth 2–3 $\frac{1}{2}$ in. diam. *Stamens* shortly exsert; base of filaments woolly; fifth filament rather shorter than the other 4; anther-cells divergent below; connective with a short mucro. *Disc* large, fleshy. *Style* $2\frac{1}{2}$ in.; stigma $\frac{1}{2}$ in. wide, of 2 semicircular plates. *Capsule* 1–3 ft. by 2–3 $\frac{1}{2}$ in., hardly $\frac{1}{2}$ in. thick, margins somewhat incurved; valves woody; septum flat. *Seeds* including the wing attaining 3 by $1\frac{3}{4}$ in. (usually smaller), winged all round except at the base; those attached on opposite margins of the septum scarcely overlapping.

IV. **TECOMA**, *Juss.*

Shrubs or small trees, erect or scandent. *Leaves* usually opposite, in the 1 Indian species simple, in others compound. *Racemes* or panicles terminal. *Calyx* tubular-campanulate, subequally 5-toothed. *Corolla* tubular-ventricose, orange or red; lobes 5, round, subequal. *Capsule* linear or narrow, loculicidally 2-valved, somewhat compressed at right angles to the septum. *Seeds* thinly discoid; wing hyaline, broad.—Species 24, in the tropics of the whole world, mostly American.

T. undulata, *G. Don Gen. Syst.* iv. 223; leaves narrowly oblong entire undulate. *DC. Prodr.* ix. 222; *Dalz. & Gibs. Bomb. Fl.* 161; *Brand. For. Fl.* 352; *Boiss. Fl. Orient.* iv. 80. *T. ? glauca*, *DC. l. c.* 223. *Bignonia undulata*, *Smith Erot. Bot.* i. 35, t. 19; *Roxb. Fl. Ind.* iii. 101; *Wall. Cat.* 6498. *B. glauca*, *Dene. in Jacquem. Voy. Bot.* 137, t. 142. *Tecomella undulata*, *Seem. in Seem. Journ. Bot.* i. 18.

WESTERN INDIA, alt. 0–3000 ft.; Scinde, Punjab, Guzerat, Rajputana, extending eastwards to the Jumna.—DISTRIB. Beloochistan, Arabia.

A shrub or small tree; innovations stellately grey-puberulous, otherwise glabrate. *Leaves* 6 by $1\frac{1}{2}$ in., obtuse; petiole $\frac{3}{4}$ in. *Corymbs* few-fl., mostly on shortened lateral branches; pedicels $\frac{1}{2}$ – $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in.; lobes hardly $\frac{1}{2}$ in., broad, obtuse. *Corolla* $1\frac{1}{2}$ in., orange. *Stamens* scarcely exsert, glabrous; anther-cells distinct, pendulous, narrowly oblong. *Disc* cup-shaped. *Stigma* spatulate, sub-2-lobed. *Capsule* 8 by $\frac{1}{2}$ in., slightly curved; valves tough, thin. *Seeds* (including the wing) 1 by $\frac{1}{2}$ in., wing very narrow round the apex of the seed, 0 at its base.

V. **DOLICHANDRONE**, *Seem.*

Trees, glabrous or tomentose. *Leaves* opposite, 1-pinnate. *Racemes* or panicles terminal. *Calyx* in aestivation closed, at flower-time cleft to the base on one side, spathaceous. *Corolla-tube* long or short; lobes 5, subequal, round, crisped crenate or incised. *Capsule* elongate, terete or somewhat compressed, loculicidally 2-valved, sub-4-celled. *Seeds* thinly discoid, on

each side broadly winged.—Species 12, in the hotter parts of Africa, Asia and Australia.

1. **D. stipulata**, *Benth. in Gen. Pl.* ii. 1046; leaflets elliptic caudate-acuminate, calyx densely woolly or floccose, corolla yellow-brown, narrow part of its tube 1 in., wings of the seed membranous. *Bignonia stipulata*, *Roxb. Fl. Ind.* iii. 108. *Spathodea stipulata*, *Wall. Cat.* 6518, letters A, D, and part C, and *Pl. As. Rar.* iii. 20, t. 238; *DC. Prodr.* ix. 205; *Kurz For. Fl.* ii. 234. *Markhamia stipulata*, *Seem. in Seem. Journ. Bot.* i. 226.

PEGU; Rangoon, *M'Lelland*; extending thence north to Ava (*Kurz*).

A tree, 30–40 ft.; branchlets and inflorescence with yellow or brown, easily separable, wool. *Leaves* 1–1½ foot; leaflets 3–5 pairs, 6 by 3 in., entire or distinctly serrulate, mature nearly glabrate or with yellow or brown wool adherent; stipules 0, but rudimentary leaves ½–1 in. diam. are often developed in the axils. *Raceme* short, stout, 4–10-fl.; pedicels ½–1 in. *Calyx* ¾–1¾ in., leathery, densely hirsutely woolly or deciduously fleecy. *Corolla* 2–3 in., narrow portion of the tube constricted at the top, then suddenly dilated into a campanulate portion 1 in. long; lobes ¾ in., crisped-crenate. *Anther-cells* large, elliptic, separate, pendulous, attached below their tips. *Capsule* 18–24 by 1 in., thickly tomentose floccose. *Seeds* 1¾ by ½ in. (including the wings).

VAB. *velutina*; leaves serrulate, calyx tawny velvety. *Spathodea velutina*, *Kurz in Journ. As. Soc.* 1873, pt. 2, p. 90, and *For. Fl.* ii. 235.—Pegu; *Kurz*.—Not seen; *Kurz* says it only differs from *D. stipulata* in having the leaves serrulate (not entire), the calyx tawny velvety (instead of tawny villous); which characters can be seen in several standard examples of *D. stipulata*.

2. **D. Rheedii**, *Seem. in Seem. Journ. Bot.* viii. 380; glabrous or minutely puberulous, leaflets elliptic much acuminate, corolla white, narrow portion of its tube 3–5 in., wings of the seed corky. *Bignonia spathacea*, *Linn. f. Suppl.* 283. *B. longissima*, *Lour. Fl. Cochinch.* 380? *Spathodea longiflora*, *Vent. Choix.* n. 40, *in obs.* *S. Rheedii*, *Wall. Cat.* 6516; *DC. Prodr.* ix. 206; *Wight Ic.* t. 1339; *Bedd. For. Man.* 168; *Kurz For. Fl.* ii. 234. *S.?* *Loureiriana*, *DC. l. c.* 209? *S. Diepenhorsti*, *Miq. Fl. Ind. Bat.* ii. 754.—*Rheede Hort. Mal.* vi. t. 29.

MALABAR, *Wight*; common in the plains, *Beddome*. MALAY PENINSULA from Prome to Malacca, common; *Wallich, Griffith, &c.* ANDAMANS; *Kurz*. CEYLON; *Thwaites*.—DISTREB. Malay Archipelago.

A tree, attaining 50–60 ft. *Leaves* a foot long; leaflets 3–4 pairs with an odd one, 2–3 in., rhomboid, often unequal at the base; petiolule ½ in. *Corymbs* few- (sometimes 1-) fld., short-peduncled; pedicels ½–1 in., stout. *Calyx* 1½ in. *Corolla* 4–7 in., white; tube campanulate near the mouth; segments 1 in., crenate-toothed. *Anther-cells* large, elliptic, separate, divaricate. *Capsule* 18 by ¾–1 in., nearly straight, not ribbed. *Seeds* (including the wings) ¾ by ½ in., rectangular.

3. **D. crispa**, *Seem. in Seem. Journ. Bot.* viii. 381, *excl. some syn.*; glabrous or innovations puberulous, leaflets 5–7 shortly acuminate petioluled, corolla white tube 1–2 in. cylindric, pod slightly compressed. *Bignonia crispa*, *Ham. in Roxb. Fl. Ind.* iii. 103. *Spathodea crispa*, *Wall. Cat.* 6515; *DC. Prodr.* 9, p. 206; *Brand. For. Fl.* 350; *Bedd. For. Man.* 168.

S. DECCAN PENINSULA; Coimbatore, Paulghat, *Wight, &c.*

A tree, 40–60 ft. *Leaves* 8–12 in.; leaflets 2–4 in., broadly elliptic; petiolule 0–½ in. *Corymbs* short-peduncled 1–7-fl.; pedicels ½–1½ in. *Calyx* ¾–1 in., rusty puberulous when young, soon glabrate. *Corolla-tube* ½–¾ in. diam.; mouth 2 in. diam.; lobes rounded, crisped-crenate. *Anther-cells* oblong, separate, divaricate.

Capsule 12 by $\frac{3}{8}$ in., valves woody, speckled, smooth. *Seeds* $1\frac{1}{2}$ by $\frac{1}{2}$ in., sub-rectangular, wings membranous.—The Calcutta Botanic Garden specimen in *Herb. Wallich* has the mature leaves, petioles and corymbs softly ashy pilose. As to the synonyms of older authors adduced by Seemann, several are described as hirsute plants; while *Bignonia spathacea*, Linn. f., is founded on *Rheede Hort. Mal.* vi. t. 29, which Seemann himself refers to *D. Rheedii*.

4. *D. falcata*, *Seem. in Seem. Journ. Bot.* viii. 381; grey pubescent or shortly villous, leaflets 5-7 mostly obtuse, corolla white tube 1-1 $\frac{1}{2}$ in. slender below, pod much compressed. *Bignonia spathacea*, *Roxb. Cor. Pl.* ii. 24, t. 144 (*excl. capsule*), and *Fl. Ind.* iii. 103. *B. atrovirens*, *Roth Nov. Sp.* 284. *Spathodea falcata*, *Wall. Cat.* 6517; *DC. Prodr.* ix. 206; *Dalz. & Gibs. Bomb. Fl.* 160; *Bedd. Fl. Sylv.* t. 71; *Brand. For. Fl.* 350, partly. *S. atrovirens*, *Spreng. Syst.* ii. 835.

DECCAN PENINSULA; Mysore and Vellyengry Hills, *Wight*; Belgaum, *Ritchie*, &c.

A tree, 20-50 ft. *Leaves* 3-6 in.; leaflets $\frac{1}{2}$ -1 $\frac{1}{2}$ in., obovate or round elliptic, rarely with a small obtuse point; petiolule 0, rarely $\frac{1}{4}$ - $\frac{1}{2}$ in. *Corymbs* few- (mostly 3-1-) fld.; subsessile; pedicels $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ - $\frac{3}{4}$ in., of the expanded flowers softly grey-pubescent. *Corolla* nearly as of *D. crispa*, but the tube hardly $\frac{1}{10}$ in. diam. downwards. *Anthers* included, cells nearly parallel, differing much from those of *D. crispa*; this may be a sexual character, but is so in all the examples, as in the figure of *Beddome*. *Capsule* (and seeds) nearly as in *D. crispa*, but more compressed and usually more curved.

5. *D. Lawii*, *Seem. in Seem. Journ. Bot.* viii. 380; glabrous or innovations minutely puberulous, leaflets 5-7 subsessile, corolla white tube 1-1 $\frac{1}{2}$ in. slender, pod compressed. *D. serrulata*, *Seem. l. c.* 383 (*as to the Central Indian tree*). *Spathodea falcata*, *Brand. For. Fl.* 350. *S. crispa*, *Bureau Monogr. Bign.* t. 27.

BOMBAY and CONCAN; *Law*. CENTRAL PROVINCES; *Edgeworth, Dr. Stewart, R. Thompson*. RAJPUTANA; *Meywar, Dr. Brandis*.

Considered by *Dr. Brandis* as a glabrous var. of *D. falcata*. The leaflets are sessile, often larger than those of *D. falcata*, and (mostly) very shortly acuminate. The one capsule seen is very nearly straight. The Central Indian example of *Edgeworth*, referred by *Seemann* to the Burmese *Stereospermum serrulatum*, has (as not rarely in *D. falcata* and *D. Lawii*) a few obscure teeth to the leaflets.

6. *D. arcuata*, *Clarke*; pubescent or subfloccose, leaflets 9-11 roundish elliptic, corolla white tube 1 $\frac{1}{2}$ -2 $\frac{1}{2}$ in. narrowly cylindric. *Spathodea arcuata*, *Wight Ic.* t. 1340; *Bedd. For. Man.* 169. *S. crispa*, *Dalz. & Gibs. Bomb. Fl.* 160.

S. MADRAS; Coimbatore and Ootacamund, *Wight, Beddome*.

Leaves 6-12 in.; leaflets 2-3 in., obtuse at both ends, sometimes with a short micro, floccose-pubescent on both surfaces; petiolule 0- $\frac{1}{2}$ in. *Calyx* 1 in., floccose-pubescent. *Corolla* 3 in., mouth 2 in. diam., lobes crisped crenate. *Anthers* included, cells nearly parallel. *Capsule* not seen.—United with *D. crispa* by *Seemann* and *Dalzell*.

VI. HETEROPHRAGMA, DC.
